i) Time Frame to Resolve

Short-term
Water systems listed as short-term are taking immediate steps to address the advisory. The majority of advisories in this category are issued due to minor operational problems that can be easily addressed in a timely manner. Also under this category are water systems that have been under advisory for a longer period of time and are in the process of upgrading their water supply to address the advisory.

Medium-term
Water systems listed as medium-term are taking steps to address the advisory within a two to three year period. The majority of advisories in this category are issued due to minor treatment problems that require the installation of basic treatment equipment.

Long-term
Water systems listed as long-term require significant financial capital funding to address major operational and treatment problems. The majority of the advisories in this category were issued due to a lack of critical treatment processes.

DISCLAIMER: While every effort is being made to maintain this advisory list updated, conditions may arise at times that may prevent recent information from being displayed in a timely manner. Users of this list, if concerned, are advised to contact the local Drinking Water Officer, or the Regional Health Authority for more detailed information.
