103/10-05-002-26W1	12-04-002-26W1		

**NOTE 1:**

The wells will be drilled from a common pad.

Each pad will have a satellite set-up with:

- Group/test production header
- Test separator equipped with a charted gas meter, emulsion (oil and water) meter, and proportionate sampler for determination of BS&W percentage.
- 6" or 8" emulsion group line to connect with the 16-03 Main Battery.

Each well will have a 24-hr test conducted on a monthly basis.
