Tracey Braun
Director
Manitoba Conservation
Government of Manitoba

Dear Tracey Braun

I would like to request an Notice of Alteration to our Environmental License for ErosionControlBlanket.com in Riverton Manitoba condition #27- Solid Waste.

We would like permission to take about 20 truckloads of our waste straw (clean) to be burnt at Roy and Carol Gudmundson's property at SW 15-23-4E. They are applying for a burn permit and it is attached.

The burn area is 300 meters from the nearest house, and we would like to haul these 20 loads in the next 10 days to help us keep up with the straw waste generation at the plant. We have grown to double the production and sales over last year and this influx of new orders has generated more waste than we anticipated. Bifrost Arborg Riverton Landfill (BAR) has been taking our material and burning but we are finding that due to BAR staffing issues and our delivery schedule we are falling behind in what we can dispose. This accumulating waste is creating a large fire hazard on our property and a serious risk to our business.

If allowed to take this clean straw to this alternative burn spot, we will be able to reduce the risk of fire to our business. We anticipate that once we get ride of the excess on our property we should be able to maintain disposal at BAR.

Thanks
