**Subject:** Hespler Enterprises - Reservoir Expansion File: 5651.00

Hello! An update on the progress of the environmental assessment process and a request for a small amount of additional information:

No public comments on your proposal were received. Several comments were received from our Technical Advisory Committee of provincial and federal government departments. As a result of these comments, I am requesting a brief response on the following two items:

1. The proposal describes nitrogen fertilization practices, but does not mention phosphorus fertilization. Please outline the planned phosphorus application practices to be used.
2. Is any of the land currently tile drained? Is any tile drainage planned?

In addition, the following comments from Manitoba Infrastructure and Transportation are provided for your information. No response to these items is needed.

- Since part of the proposed development is adjacent to Provincial Trunk Highway (PTH) 23, the proponent should be informed that a permit may be required from the Highway Traffic Board for construction of a new access road or modification to or relocation of an existing one onto PTH 23. A permit may also be required for placement or modification of any structure (including, but not limited to, signage), on, under or above the ground within 76.2 metres (250 ft) of the edge of the highway's right-of-way.
- A permit may be required from MIT for any planting within 15.2 metres (50 ft) of the edge of the highway's right-of-way or for any discharge onto the highway ditches.
- An agreement with MIT may also be required for any utilities above or under the highway's right-of-way.

For clarification and further information, the proponent may contact Mr. Wesley Turk at (204) 871-2239 or at [Wes.Turk@gov.mb.ca](mailto:Wes.Turk@gov.mb.ca).

I will prepare a draft licence for your review shortly.

Bruce.
