### Introduction

Mancozeb is a commonly used fungicide in agriculture. It is effective against a wide range of fungal diseases and is often used in combination with other fungicides to provide broad-spectrum protection. Mancozeb has a systemic mode of action, meaning it is absorbed by the plant and moves through the plant to the sites of disease development. This allows for effective control of fungal infections even when applied at or near symptom development. Mancozeb is a key component in many soil drenches, foliar sprays, and drenches, and can be used on a variety of crops including fruits, vegetables, and ornamentals. It is particularly useful for control of soilborne and systemic fungal diseases. However, due to its broad-spectrum activity, it is important to rotate with other fungicides to reduce the risk of resistance development. Mancozeb is also known for its low mammalian toxicity and low environmental mobility, making it an environmentally friendly option for pest management. It is recommended for use in integrated pest management programs as it can be effective against many fungal pathogens without negatively impacting beneficial insects or other non-target organisms.

Integrated Plant Disease Management

Cereal Leaf Diseases

Cereal leaf diseases affect both the yield and quality of cereals. The following management practices are recommended for effective control of leaf diseases in all cereal crops.

- **Scouting:** Scout fields prior to, during, and following flag leaf emergence to check for disease levels. Flag and upper leaves are responsible for 50 per cent or more of grain-fill.
- **Crop Rotation:** Rotate crop types (e.g. cereal (wheat)/oilseed/cereal/barley)/pulse) to reduce the build-up of disease inoculum in crop residue. If at all possible, do not seed the same crop in back to back years. When a short rotation is absolutely necessary, seed in the second year a variety that is more resistant to an anticipated disease problem.
- **Resistant Varieties:** Provincial crop/seed guides provide a comprehensive listing of the performance of adapted varieties, including their resistance status to specific diseases.
- **Foliar Fungicides:** Foliar fungicides, applied at the proper time in accordance to manufacturers’ Pesticide Product labels, can control cereal leaf diseases and help to attain target yields. The greatest benefit occurs when disease pressure is high or with varieties that have poor resistance.
- **Spraying Practices:** Foliar fungicides should be applied preventively, before disease is well-established in a crop and already causing crop loss. Good spray coverage with minimal drift is essential. Ideally, the best time to spray is when the wind is light, humidity is above 60 per cent and air temperature is between 10 and 25°C.

Ergot of Cereals

Ergot is a fungal disease that affects most cereals and grasses in Canada. Ergot bodies contain toxic alkaloids; they should never be consumed by humans or fed to animals. Ergot is a particularly damaging disease of rye, and has also been observed sporadically over the years on cereals and grasses in the prairie provinces. After an ergot outbreak, crop residue and soil become contaminated with a higher load of ergot bodies, placing nearby grasses and cereal crops at greater risk of infection in the following seasons. This risk increases further when cool, moist weather conditions promote ergot spore production and/or when cereals experience an extended period of flowering or an induction of floret sterility due to any of a variety of agronomic or environmental factors. Once ergot is present, little can be done to control the disease in the field, so prevention is important. Planting seed contaminated with ergot bodies can potentially spread disease to previously clean fields and there are no seed treatments registered; therefore only clean, healthy seed should be used. During the field season, nearby grasses may be mowed to remove additional hosts. Prior to harvest, fields should be scouted to determine where ergot has developed, such as headlands, and those areas should be harvested separately. Viability of ergot bodies decreases after one to two years.

Fusarium Head Blight of Cereals

Fusarium head blight (FHB) causes a reduction in yield as a result of floret sterility and the loss of light weight cereal kernels during combining. More important is the effect on grain quality and food safety due to production of myco- toxins, including deoxynivalenol (DON) and vomitoxins. In Manitoba, FHB occurs throughout all crop regions and will damage wheat crops whenever environmental conditions favour the disease. In Saskatchewan, FHB has been established in eastern regions for several years, but occurs across the province, particularly in wet years.

- **Field Management of FHB:** Weather is by far the greatest factor in development of FHB. The disease is most likely to develop when the plants are flowering, temperatures range from 15 to 30°C and high moisture is continuous for 48 to 60 hours. If conditions remain warm and moist, the pathogen can continue to sporulate and spread to other kernels or heads. Under these optimum conditions, crop management has little impact on FHB outbreaks. Production practices, which lead to reduced tillering and shortened flowering duration, could reduce the risk period of FHB infection.
- **Crop Rotation and Crop Selection:** A break of at least one year – preferably two years – is advised between cereal, grass and corn production. In fields of wheat on wheat stubble, the incidence of FHB was about one and a half times higher than in fields of wheat planted into pulse crop residue. Regardless of the rotation, producers should consider planting cereals that are less susceptible to FHB. Results from previous years show that durum and soft white wheat varieties are more susceptible than hard red spring wheat varieties. Barley is more resistant than wheat, and oat is more resistant than either wheat or barley. Refer to provincial seed guides for FHB disease ratings for each variety. Planting two or more varieties of wheat with differing flowering times or varying planting dates will help reduce the risk of infection. Susceptible crops should not be planted on infected corn stubble. Corn trash is slower to decompose than cereal trash, and acts as a source of inoculum for a much longer time period.

Late Blight of Potatoes

One of the major threats to Manitoba and Saskatchewan's potato industry is the fungal disease late blight. At present, there is no fungicide registered for use on potatoes that is capable of eradicating the fungus from infected plants. As a result, producers are forced to adopt preventive management to control this disease. One of the main components of this strategy is the application of fungicides at specified spray intervals. This interval varies with the type of fungicide used. Shortening or lengthening of this interval should be based on current weather conditions and the status of the disease in the crop.

In Manitoba, potato producers can make use of a weather-based late blight risk forecasting program. The purpose of this program is to predict when environmental conditions are most conducive to disease development and issue warnings based on those parameters.
Accurate weather monitoring and scouting techniques are very important for achieving the most effective use of fungicides. Combining precise weather forecasting with spray interval scheduling may lower input costs for the farmer and lead to a more productive, higher quality crop. These weather monitoring systems monitor key environmental variables, such as relative humidity, temperature, leaf wetness and precipitation.

The following practices are recommended for effective disease management:

- **Scouting:** To effectively schedule preventative fungicide applications and eliminate unnecessary fungicide use, local weather forecasts should be used to identify conditions conducive to disease development. Scout fields regularly to identify diseases and pests that may be developing. Low areas in rolling or hilly fields and in wind-protected area near trees lines should be specially checked.

- **Crop Varieties:** *(There are no known commercial resistant varieties currently available in Canada).* Where practical, the use of short season varieties may help reduce the period of use for fungicides.

- **Healthy Seed:** Obtain seed from sources with effective disease management practices. The use of certified seed is legislated in Manitoba and Saskatchewan. Grade seed carefully while cutting and discard suspicious looking tubers and seed pieces.

- **Cull Clean-up:** Avoid leaving tubers, including debris or slivers from seed cutting, in cull piles for any length of time. Follow a program of sanitation for storage facilities and equipment to eliminate sources of the disease. Dispose of cull piles in an approved manner so they do not serve as a source of disease inoculum for future infections. Dispose by burying, using a cover, spreading out on the field over winter, or feeding to livestock.

- **Sanitation:** Follow a program of sanitation for storage facilities and equipment to eliminate sources of disease. Sanitation consists of cleaning and disinfecting all equipment, storage, and tools that contact potatoes from seeding through harvest and storage. Since most disinfectants are inactivated by soil and plant debris, it is essential that equipment and storage is thoroughly cleaned with a pressure washer or steam cleaner with detergent before disinfectant is applied. Treated surfaces should remain wet for at least 20 minutes for the disinfectant to destroy disease organisms.

- **Cultural Practices and Rotation:** Use proper cultural practices including a one in four year potato crop rotation; proper hilling to reduce disease and greening in tubers; manage irrigation to avoid an excess or deficit of soil moisture; schedule irrigation throughout the day so it is not extending the natural dew period and prolonging leaf wetness; if late blight is discovered destroy hot spots of infected fields; control weed hosts (especially nightshades) and remove and destroy volunteer potatoes. Use appropriate weed control practices in rotational crops to control those weeds that may be hosts of diseases in potatoes.

- **Foliar Fungicides:** Preventative fungicide applications are most effective in controlling late blight. Follow product label guidelines for most efficient and safe use of products. Labels of newly registered products also provide information on resistance management. In this context – medium to high risk of resistance fungicides (e.g. Group 7 - boscalid and Group 11 – stobilurins) should be rotated or mixed with low risk fungicides (e.g. mancozeb (M3) and chlorothalonil (M5)).

- **Farm Visits:** The following recommendations are provided to prevent the spread of potato diseases from field to field or between farms. All people serving the potato industry should use these sanitary practices.
  1. Contact the grower for permission to enter fields and other facilities on the farm.
  2. Keep your vehicle clean and whenever possible, avoid driving your vehicle into fields or potato handling areas.
  3. Carry a boot brush and a supply of disinfectant in your vehicle at all times. Quaternary ammonia (General Storage Disinfectant) is recommended as it is also registered for bacterial ring rot disinfection.
  4. Wear coveralls or other protective outerwear that can be discarded or disinfected regularly.
  5. Clean, washable, footwear is recommended and rubber boots are preferred.
  6. Clean, wash, and disinfect your boots thoroughly on arrival at each field/farm/storage shed and before leaving.
  7. Remove dirty outerwear, including boots before entering your vehicle.
  8. Any tools to be used during the farm call (potato forks, shovels, soil probes, knives, etc.) should be cleaned and disinfected before and after use.
  9. Maintain a detailed logbook of field/farm/storage shed visits.

### Canola Diseases

**Sclerotinia stem rot** has been one of the most prominent diseases affecting canola in Manitoba and Saskatchewan for the past 25 years. An important factor for disease development is environmental conditions. The disease is much more widespread and severe during wet years. Fungicide applications are an important element in controlling the development and spread of Sclerotinia stem rot. Fungicide spray decisions are based on soil moisture, weather conditions, crop stage and density, and disease history. The Sclerotinia resting bodies (sclerotia) require moist soil conditions for up to 10 days for germination to occur and the spore-bearing structures (apothecia) to form. Usually these conditions do not occur until the crop canopy closes. The spores released from the apothecia utilize the canola petals as a food source and fall into the canola canopy where they infect plants. Lesions form up and down the stem, wilting leaves and eventually killing the plant. Fungicide should be applied between the 20 to 50 per cent flower stages to protect the petals from being colonized by the spores.

**Blackleg** caused by *Leptosphaeria maculans* affects canola and most crucifer field and vegetable crops. After many years of low incidences, due to resistant canola varieties grown in the prairie provinces, the disease is gaining importance again. High frequency of canola in crop rotations, accompanied by changes in the pathogen populations, has led to higher incidences and severities in some fields. For an effective control, a 4 year crop rotation is highly recommended.

**Clubroot** is a soil-borne disease caused by a microbe, *Plasmodiophora brassicae*. Clubroot affects the roots of cruciferous field crops such as canola, mustard, and camelina, as well as...
cruciferous vegetables and weeds. Clubroot has become a significant problem for canola growers in some areas of Alberta and the pathogen has been detected in Saskatchewan and Manitoba. Clubroot is a regulated pest in Saskatchewan under The Pest Control Act. Currently there is no provincial legislation that regulates clubroot in Manitoba.

Invasion of the interior of the host roots alters hormone balance and leads to increased cell division and growth, resulting in clubroot galls. These deformed roots have a reduced ability to absorb water and nutrients leading to stunting, wilting, yellowing, premature ripening and shrivelling of seeds. The cause of these above-ground symptoms can be confirmed by digging up suspect plants to check roots for gall formation. Clubroot affects canola yield and quality to a similar degree as other diseases affecting water and nutrient uptake, and its impact depends on soil conditions and the growth stage of the crop when infection occurs. Spore germination, infection and disease development are favoured by warm soils, high soil moisture and low soil pH; however, the disease can still occur under conditions outside of the optimum parameters. Infected roots will eventually disintegrate, releasing resting spores into the soil, which may then be transported by wind, water erosion, animals/manure, shoes/clothing, vehicles/tires or earth tag on agricultural or industrial field equipment. Resting spore numbers will decline over time when non-host crops are grown, but a small proportion can survive in soil for up to 20 years. Clubroot is primarily a soil-borne disease; it does not infect seed but it may be found in soil attached to seed or other plant parts. There are currently no seed treatments or foliar fungicides registered for control of clubroot on canola.

The following best practices are recommended for prevention and management of clubroot:

1. **Plant susceptible crops, including resistant varieties, no more than once every four years.** Although crop rotation will not prevent the introduction of clubroot to fields that are free of the pathogen, it will restrict clubroot development by limiting the increase of clubroot resting spores and preventing the increase of clubroot inoculum, as well as help alleviate the impact of other plant pathogens.

2. **Scout crops regularly and carefully.**
   - Identify suspicious above-ground symptoms including wilting, stunting, yellowing and premature ripening of canola or other susceptible crops.
   - Field entrances and approaches are likely to be contaminated with clubroot spores first. Therefore, symptoms will often appear there first.
   - Confirm cause of above-ground symptoms by checking the roots for galls.
   - Send sample of symptomatic plants into a commercial lab for confirmation of diagnosis.

3. **Practice good sanitation by restricting movement of potentially contaminated soil to non-contaminated regions.**
   - For Saskatchewan and Manitoba producers, this means restricting entry into their fields of vehicles, field machinery or oil rig equipment with earth tag from infested regions unless it has been properly sanitized. Ask questions about where the equipment is from and what sanitation measures have been used before the equipment left the infested area, dealer or auction site.
   - Cleaning steps may include: removal of crop debris and soil, washing of equipment with a power washer using hot water or steam and misting with disinfectant (1 to 2 per cent bleach solution), followed by an additional rinse with water.
   - Other agricultural products, which could carry soil, should be carefully checked for excess soil and if possible be from clubroot free areas.

For more information on clubroot, visit [www.clubroot.ca](http://www.clubroot.ca), [www.saskatchewan.ca](http://www.saskatchewan.ca), or [www.gov.mb.ca/agriculture](http://www.gov.mb.ca/agriculture).

**Pulse Crop Diseases**

There are a variety of pulse crops produced in Manitoba and Saskatchewan including field pea, field bean, lentil, chickpea and soybean. Pulse crops are adapted to different regions and will require unique agronomic and disease management practices.

Some diseases will attack all pulse crops, e.g. sclerotinia (white mould) and seedling/root rots caused by *Aphanomyces euteiches, Pythium, Rhizoctonia, Fusarium* and *Botrytis* species. Some diseases may occur on more than one type of pulse crop, but the pathogen species infecting each is often specific to that crop. This is the case for the ascochyta blights, powdery mildews and anthracnose. It is important to source information on pulse disease control from grower organizations such as the Saskatchewan Pulse Growers ([www.saskpulse.com](http://www.saskpulse.com)), Manitoba Pulse Growers ([www.manitobapulse.ca](http://www.manitobapulse.ca)), provincial specialists, and field diagnostic guides. Most foliar diseases are favoured by warm, moist conditions and lush crop canopies, but root rots and powdery mildew can be present in dry years as well. In general, pulse disease management will need to include the following practices:

- **Use of clean seed and seed treatments:** Plant certified seed or seed that has been tested at an accredited lab and known to have high germination and zero or acceptable levels of seed-borne disease. Seed treatments will help protect seed and seedlings from low levels of seedborne and soilborne pathogens. However, there are no seed treatments registered for control of *Aphanomyces euteiches*.

- **Crop Rotation:** It is important to keep at least three years between the same type of pulse crop to allow for the breakdown of crop residue on which disease pathogens survive. Longer rotations may be required for *Aphanomyces euteiches*, due to long-lived resting spores in the soil. Since there are diseases that affect more than one type of pulse crop, it is still important to maintain at least two years between different pulse crops.

- **Crop Varieties with Disease Resistance:** Refer to provincial seed guides for varieties adapted to your region. When available, choose varieties with disease resistance.

- **Scouting and Foliar Fungicide Application:** Begin crop scouting at the vegetative stages for aggressive diseases such as ascochyta blight in chickpea. Scout for other foliar diseases at early bloom, e.g. ascochyta blight and anthracnose in lentil. It is too late to apply fungicide to control sclerotinia (white mould) once symptoms are observed, and/or the canopy has closed, so forecasting to determine risk is necessary.

- Use foliar fungicides only when disease risk and potential loss are significant. Rotate fungicides or use tank mixes from different fungicide groups to prevent development of resistant pathogen populations.
Effects of Weather

Do not apply foliar fungicides during periods of dead calm or when winds are gusty. Avoid application immediately after a rainfall and delay spraying if rainfall is imminent. Contact fungicides are always more sensitive to wash-off by rainfall than systemic fungicides, because their mode of action relies on drying on the leaf surface. Failure of a contact fungicide to dry on the leaf surface may result in a loss in efficacy. Systemic fungicides are less sensitive than contact fungicides, but still need sufficient drying time and fully absorbed by plants prior to rainfall. Consult the label or product manufacturers for rainfast period for individual products.

Pathogen Resistance (Insensitivity) Management

Any fungal pathogen population may contain strains naturally insensitive to a fungicide and other fungicides within the same Group. A gradual or total loss of disease control may occur over time if these fungicides are used repeatedly in the same fields. Other resistance mechanisms that are not linked to site of action but specific for individual chemicals, such as enhanced metabolism, may also exist.

To delay fungicide resistance/insensitivity:

- Where possible, rotate the use of a fungicide, (and others within the same Group) with different Groups that control the same pathogens.
- Where possible, tank mix fungicides with a high risk of developing insensitivity with other fungicides from a different Group.
- DO NOT apply more than the maximum number of applications listed on the label. Avoid consecutive sprays of a fungicide, or other fungicides in the same Group, in a season.
- Fungicide use should be based on an integrated pest management (IPM) program that includes scouting and accurate recording related to pesticide use and crop rotation. An IPM program also considers cultural, biological and other chemical control practices.
- Monitor treated fungal populations for signs of fungicide insensitivity. If disease continues to progress after treatment with a product, DO NOT increase the use rate. Discontinue use of the product and switch to another fungicide with a different target site of action.
- Contact your local regional crops specialist or certified crop advisor for any additional pesticide management and/or IPM recommendations for specific crops and disease problems in your area.

Fungicide Modes of Action

Why are fungicides needed?

- Control of disease during crop establishment.
- Increase productivity of crop (photosynthesis) and/or reduce blemishes.
  - Maintain yield and/or market value.
- Improve storage life and quality of harvested plants / grain / produce.
  - Prevent spoilage and/or production of mycotoxins.

How do fungicides work?

There are several ways to define ‘mode of action’:

- **Timing:**
  - Preventative: fungicide must be present on plant surface before the pathogen and repeated applications are required to protect new growth.
  - Curative: pathogen may already be present (post-infection, pre-symptom kick-back activity).
  - Eradicant: (post-symptomatic activity).
  - Inhibitive: prevents spore germination or sporulation.

- **Placement:**
  - Contact (AKA protectant): immobile – must come in direct contact with the pathogen.
  - Systemic (AKA penetrant): mobile – can move within plant.

- **Movement:**
  - Intra-plant Movement: within crop via vapour phase or redistribution by rain.
  - Passive Absorption – by diffusion.
  - Apoplastic Movement: xylem-mobile; move within free space and cell walls, upward through the transpiration stream (with water).
  - Symplastic Movement: phloem-mobile (common characteristic of herbicides and insecticides but very few fungicides).

- **Spectrum:**
  - General, Non-specific, or Broad Spectrum: fungicide affects pathogen in multiple ways.
  - Specific or Narrow Spectrum: fungicide targets a specific metabolic site in pathogen or against critical enzyme or protein. Genetic changes or naturally insensitive fungi have a greater chance to overcome the fungicidal effect (resistance/insensitivity).

- **Composition:**
  - Inorganic Fungicides: sulfur or metal ions such as copper.
  - Organic Fungicides: contain carbon atoms.
  - Biopesticides: suppressing pest populations using naturally occurring organisms or natural products derived from plants.

- **Biochemistry:**
  - Primary basis to classify fungicides, developed by Fungicide Resistance Action Committee (FRAC) using their general Mode of Action on fungi and their chemistry.
  - All fungicides within a group share a common mode of action and resistance mechanism.
  - Fungicides within a group may have different chemical structures.
  - Resistance management strategies required wherever resistance is known or there is a risk of resistance development.
  - See Table 1.

</tr>
</tbody>
</table>

Application Information:
- **Water Volume**: Use sufficient water to obtain thorough coverage of plants.
  - **Ground**: minimum 45 L per acre.
  - **Aerial**: minimum 20 L per acre.

How it Works:
The active ingredient picoxystrobin is a broad spectrum strobilurin fungicide and is to be used as a preventative application when environmental conditions are favorable for disease development. Picoxystrobin has curative and locally systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
- **Herbicides**: *Travallas* spring wheat (including durum) and barley.

Corteva Agriscience Agriculture Division of DowDuPont supports the following mixes that are not on the *Acapela* label:
- **Herbicides**: Assure II, Barricade II, Refine SG +/- Perimeter II
- **Insecticides**: Coragen

Restrictions:
- **Resistance management**: Refer to page 426.
- **Maximum number of applications**:
  - **Dry legumes and canola**: DO NOT exceed 1 application before switching to a fungicide with a different mode of action; maximum season use rate is 700 mL per acre.
  - **Cereal grains, soybean**: DO NOT exceed 1 application before switching to a fungicide with a different mode of action; maximum season use rate is 1100 mL per acre.
  - **Corn**: DO NOT exceed 1 application before switching to a fungicide with a different mode of action; maximum season use rate for field, seed or popcorn is 1100 mL per acre and sweet corn is 1400 mL per acre.
- **Grazing**: No restrictions listed.
- **Preharvest interval**:
  - **Dry legumes and soybean**: 14 days
  - **Cereal grains**: 45 days (7 days for forage, 14 days for hay)
  - **Corn**: 7 days
  - **Canola**: 28 days
- **Re-entry**: DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping**: Crops that are on the product label may be replanted immediately after harvest. All other crops – 10 months following last application of picoxystrobin.
- **Storage**: Store product in original container only, away from other pesticides, fertilizer, food or feed. Not for use or storage in or around the home. Keep container closed. To prevent contamination, store this product away from food or feed.
- **Environment**: Observe prescribed buffer zones. Minimize off-target drift to reduce the effects on beneficial insects at the field boundary. DO NOT apply to areas prone to run-off and delay spraying if heavy rainfall is forecast.

Hazard Rating:

None listed.

For an explanation of the symbols used here see pages 7 and 8.
Allegro 500F

Company:
Syngenta Canada – PCP#27517

Formulation:
40% fluazinam.
  • Container size - 2 x 10 L

Crops, Diseases, Rates and Timing:

<table>

<tbody>
<tr>
<td>Potato</td>
<td>Late blight <em>(Phytophthora infestans)</em></td>
<td>160 mL</td>
<td>Begin applications when plants are 15 to 20 cm tall or when conditions favour disease development. Repeat application at 7 to 10 day intervals.</td>
</tr>
<tr>
<td></td>
<td>Sclerotinia stem rot <em>(Sclerotinia sclerotiorum)</em></td>
<td>160 to 240 mL</td>
<td>Begin applications at full bloom. Repeat application intervals of 7 to 10 days.</td>
</tr>
<tr>
<td>Dry bean</td>
<td>White mould <em>(Sclerotinia sclerotiorum)</em></td>
<td>240 to 405 mL</td>
<td>Begin applications when plants are at early to mid-bloom (10 to 50% bloom). Repeat application 7 to 10 days later.</td>
</tr>
<tr>
<td>Soybean</td>
<td>White mould <em>(Sclerotinia sclerotiorum)</em></td>
<td>180 to 470 mL</td>
<td>For suppression of white mould use 180 mL rate. For control of white mould use 355 to 470 mL rate. Begin application at the R1 (early bloom) to R2 (full bloom) stage of development and if needed, again 10 to 14 days later at early pod formation (R3).</td>
</tr>
</tbody>
</table>

Application Information:
  • Water Volume:
    • Ground: 80 to 240 L per acre. Spray volumes vary with amount of plant growth; apply in sufficient water to obtain adequate coverage of foliage.
    • Aerial: For potatoes, soybean and dry bean minimum of 18 L per acre.

How it Works:
The active ingredient fluazinam is a pyridinamine fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Note: Syngenta Canada supports the following mixes that are not on the Allegro 500F label. Apply mixes according to the most restrictive use limitations for either product:
  • Herbicides: Reglone (potato)
  • Fungicides: Quadris
  • Insecticides: Matador (dry bean)

Restrictions:
  • Resistance management: Refer to page 426.
  • Maximum number of applications:
    • Bean and soybean – DO NOT exceed 2 applications of this product per season.
    • Potato – DO NOT exceed 3 consecutive applications or 10 total applications of this product per season.
  • Grazing: No restrictions listed.
• Preharvest interval: 14 days (potatoes); 30 days (dry bean). DO NOT apply after growth stage R3, early pod formation in soybean.
• Re-entry: DO NOT re-enter treated areas within 24 hours of application.
• Re-cropping: Can be replanted with potatoes as soon as practical after the last application, 30 days for other root crops and leafy vegetables, and 70 days for all other crops. Fluazinam will carry over, DO NOT use in areas treated with this product during the previous season.
• Storage: Store product in a dry place separate from other pesticides, fertilizer, food, and feed.
• Environment: DO NOT contaminate aquatic habitats when cleaning and rinsing spray equipment or containers. DO NOT overspray non-target terrestrial or aquatic habitats.

Hazard Rating:

⚠️ Caution – Poison
⚠️ Warning – skin irritant. Potential skin sensitizer.

For an explanation of the symbols used here see pages 7 and 8.

### Aprovia Top

**Fungicide Group**

7, 3

Refer to page 427

**Company:**
Syngenta Canada – PCP#31526

**Formulation:**

78 g per L benzovindiflupyr and 117 g per L difenoconazole formulated as an emulsifiable concentrate.

- Container size - 4 x 3.78L

**Crops, Diseases, Rates and Timing:**

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases</th>
<th>Application Rate (per acre)</th>
<th>Application Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Control of early blight (<em>Alternaria solani</em>)</td>
<td>260 to 390 mL</td>
<td>Begin applications prior to disease development and continue throughout the season on a 7 to 14 day interval.</td>
</tr>
<tr>
<td></td>
<td>Suppression of brown spot (<em>Alternaria solani</em>)</td>
<td></td>
<td>For early blight, use the high rate and short application interval under high disease pressure. Make no more than two consecutive applications before switching to a non-Group 7 and 3 fungicide.</td>
</tr>
</tbody>
</table>

**Application Information:**

- Water Volume:
  - **Ground:** Use a minimum water volume of 60 L per acre
  - **Aerial:** Use a minimum water volume of 20 L per acre

**How it Works:**

The active ingredient benzovindiflupyr is a succinate dehydrogenase inhibitor (SDHI) fungicide with broad spectrum activity. The active ingredient difenoconazole is a demethylation inhibitor (DMI) fungicide. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

None registered.
Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT make more than 2 applications by air or more than 4 applications by ground. If applications are made by one method (ground or air), all consecutive applications must be made by the same method. It is not acceptable to mix aerial and ground applications in the same calendar year.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** 14 days.
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** There is no plant back restriction for potatoes, tuberous and corm vegetables, fruiting vegetables, cucurbit vegetables and plants in the rapeseed sub group. A plant back restriction of 60 days is required for cereals (wheat, barley, oats, rye, triticale) and corn. A plant back restriction of 6 months (180 days) is required for all other crops intended for food and feed.
- **Storage:** Keep in original container, tightly closed, during storage. Store in a cool, dry, well-ventilated area away from feed and foodstuffs and out of the reach of children and animals. To prevent contamination, store this product away from food or feed.
- **Environment:** Toxic to aquatic organisms and non-terrestrial plants. Observe buffer zones outlined in the label.

Hazard Rating:

- Danger Poison – Eye irritant

For an explanation of the symbols used here see pages 7 and 8.

</tbody>
</table>

* Suppression of white mould in lentils for Quadris only
**DO NOT apply by air.

Application Information:

- Water Volume:
  - **Ground**: Use sufficient water volume to obtain adequate coverage. Use minimum 40 L per acre. In-furrow treatment in 20 to 56 L per acre.
  - **Aerial**: Use minimum of 18 L per acre. Ensure uniform application.

How it Works:

The active ingredient azoxystrobin is a methoxyacrylate compound (strobilurin) with broad spectrum contact and systemic activity. To be used as a preventative and curative fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

Insecticides: For legumes and field corn, Quadris and Azoshy 250 SC may be tank-mixed with Matador 120EC insecticide. For control of potato diseases and insects, Quadris and Azoshy 250SC can be tank-mixed with Actara 240 insecticide. Consult each label for pests controlled, appropriate timing, precautions, and specific application instructions.

Fungicides: For the control of early blight of potato, Quadris and Azoshy 250 SC may be tank-mixed with Bravo 500. For control of Rhizoctonia stem, stolon canker and black scurf in potato, Quadris and Azoshy 250 SC can be tank-mixed with Ridomil Gold 480EC. For control of ascochyta blight in chickpea, Quadris and Azoshy 250 SC must be tank-mixed with Bravo 500. Azoshy 250 SC and Quadris may be tank-mixed with Tilt 250E in legumes (including soybean), wheat and barley.

- **Note**: Syngenta Canada supports the following mixes with Quadris that are not on the Quadris label. Apply mixes according to the most restrictive use limitations for either product:
  - **Fungicides**: Allegro 500F
**Cabrio Plus**  

**Company:**  
BASF Canada – PCP#30395

**Formulation:**  
5% pyraclostrobin and 55% metiram formulated as a water dispersible granule.  
- Container size - 20 kg

**Crops, Diseases, Rates and Timing:**  
Control of early blight (*Alternaria solani*) and late blight (*Phytophthora infestans*) in potato. Application should begin prior to row closure or when conditions become favourable for the development of disease. For early blight apply on a 7 to 14 day interval and for late blight apply on a 7 to 10 day interval.

**Rates:**  
Apply at 0.91 to 1.35 kg per acre.

**Application Information:**  
- **Water Volume:**  
  - Ground: minimum 80 L per acre.  
  - Aerial: minimum 20 L per acre.

**How it Works:**  
The active ingredient metiram is a dithiocarbamate fungicide with contact activity. The active ingredient pyraclostrobin is a member of the strobilurin class of chemistry used as a broad spectrum fungicide. For more information refer to “Fungicide Modes of Action” on page 426.
Tank Mixes:
None registered.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 3 applications of this product per season.
- **Grazing:** Crop can be grazed or fed to livestock.
- **Preharvest interval:** 3 days.
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** A plant back interval of 14 days is required for all crops not listed on the label.
- **Storage:** Store in original tightly closed container.
- **Environment:** Avoid run-off from treated areas into aquatic areas. Toxic to aquatic organisms, non-target terrestrial plants and small wild animals.

Hazard Rating:
- 🚥 Warning – Poison
- ⚠️ Warning – Eye and Skin irritant

For an explanation of the symbols used here see pages 7 and 8.

---

**Cantus WDG Fungicide**

**Company:**
BASF Canada – PCP#30141

**Formulation:**
70% boscalid formulated as a water dispersible granule.
- Container size - 4 x 2.83 kg

**Crops, Diseases, Rates and Timing:**

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases</th>
<th>Application Rate (per acre)</th>
<th>Application Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Early blight (<em>Alternaria solani</em>)</td>
<td>70 to 130 g</td>
<td>Apply prior to disease development and at 14 day intervals if conditions continue to favour disease development.</td>
</tr>
</tbody>
</table>

**Application Information:**
- **Water Volume:**
  - **Ground:** Use a minimum water volume of 40 L per acre and ensure thorough coverage of foliage.
  - **Aerial:** Use a minimum water volume of 16 L per acre and ensure thorough coverage of foliage.
  - **Pivot and Sprinkler Irrigation:** DO NOT exceed 0.64 cm (1/4 inch) or 25,700 L per acre. Apply only through sprinkler systems including centre pivot, lateral move, end two, side (wheel) roll, traveler, big gun, solid set, or hand move irrigation systems. The system must contain functional valves to prevent water source contamination from backflow.

**How it Works:**
The active ingredient boscalid is a carboxamide (SDHI) fungicide with systemic activity. It inhibits spore germination, mycelia growth and sporulation of the fungus on the leaf surface. To be used as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.
Tank Mixes:
None registered.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** 4 applications per season on potatoes.
- **Grazing:** No restriction listed.
- **Preharvest interval:** 30 days
- **Re-entry:** DO NOT re-enter treated area for 12 hours after application or until dry.
- **Re-cropping:** A plant back restriction of 14 days is required for all crops not on the label.
- **Storage:** Store in a cool, dry, locked, well-ventilated area without a floor drain.
- **Environment:** Toxic to aquatic organisms and non-target terrestrial plants. DO NOT apply to areas where runoff is likely to occur, or near any body of water. Avoid drifting of spray onto any body of water or other non-target areas. Specified buffer zones should be observed.

Hazard Rating:

*A case can treat 40 acres after heading (suppression of FHB) or 60 to 80 acres before heading (leaf disease). A drum can treat 320 acres after heading (suppression of FHB) or 460 to 640 acres before heading (leaf disease).*

*Corn includes field corn, sweet corn, popcorn and seed production corn.*

### Application Information:
- **Water Volume:**
  - **Ground:** minimum 40 L per acre.
  - **Aerial:** minimum 20 L per acre.
  - Consult nozzle manufacturers for specific nozzle and pressure recommendations.

### How it Works:
The active ingredient, metconazole, is a broad spectrum triazole demethylation inhibitor (DMI) fungicide with systemic activity. For more information refer to "Fungicide Modes of Action" on page 426.

### Tank Mixes:
None listed.
Restrictions:

- **Resistance management**: Refer to page 426.
- **Maximum number of applications**:
  - *Wheat, oat, rye, barley, corn* – DO NOT exceed 1 application of this product per season.
- **Grazing**: All crops can be grazed or fed to livestock.
- **Preharvest interval**:
  - *Wheat, barley, oat, rye* – 30 days
  - *Field corn grain* – 20 days
  - *Sweet Corn* – see label harvesting restrictions
- **Re-entry**:
  - *Wheat, barley, oat, rye* – DO NOT re-enter treated areas within 12 hours of application.
  - *Corn* – DO NOT re-enter treated area for 12 hours or up to 3 days depending on re-entry activity (see label instructions).
- **Re-cropping**: A plant back interval of 35 days is required for all crops not listed on the label.
- **Storage**: Store in original tightly closed container. Protect from freezing.
- **Environment**: Avoid run-off from treated areas into aquatic areas. Toxic to aquatic organisms, non-target terrestrial plants and small wild animals.

Hazard Rating:

- Warning – Eye irritant

Check label for first-aid information.

</tr>
</tbody>
</table>

Application Information:

- **Water Volume**: Volume will vary with crop and amount of plant growth. Use sufficient water to obtain adequate coverage of foliage.
  - **Ground**: Spray volume will usually range from 90 to 640 L per acre for dilute sprays and 20 to 40 L per acre for concentrate sprays.
    - **Chickpea**: 90 L per acre. Ground application only.
  - **Aerial**: Use minimum of 12 L per acre.

How it Works:

The active ingredient chlorothalonil is a chloronitrile fungicide with multi-site contact activity. For more information refer to “Fungicide Modes of Action” on page 426.
Tank Mixes:

DO NOT combine with pesticides, surfactants or fertilizers unless prior use has shown the combination is physically compatible and non-injurious under your conditions of use.

Fungicides: For control of early blight in potato, Bravo 500 may be tank-mixed with 200 mL per acre Quadris. DO NOT apply sequential applications of this tank-mix and DO NOT exceed 3 tank-mix applications per season. DO NOT apply to potatoes later than 2 days before harvest. For control of early blight, late blight, and botrytis vine rot in potato and for suppression of storage rots, pythium leak and pink rot, in potato Bravo Zn may be tank mixed with 80 mL per acre Ridomil Gold 480 EC or Ridomil Gold 480 SL.

Herbicides: On lentils, DO NOT apply in combination with Poast herbicide and Merge surfactant or within 48 hours of the application of Poast and Merge.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - Lentil – DO NOT exceed 2 applications of this product per season.
  - Wheat, pea, chickpea – DO NOT exceed 3 applications of this product per season.
  - Potato (Echo 90DF) – DO NOT exceed 12 applications of this product per season.
- **Grazing:** DO NOT graze treated areas. DO NOT feed straw from treated crops to livestock.
- **Preharvest interval:**
  - Potato – 1 day
  - Lentil – 48 days
  - Chickpea – Bravo 500 - 14 days, Echo 720 - 48 days
  - Wheat – 30 days
  - Pea – 32 days
- **Re-entry:** DO NOT re-enter treated area within 48 hours of application. If required, and at least 4 hours have passed since application, individuals may re-enter treated area for short-term tasks not involving hand labour. Long pants, long-sleeved shirt, and chemical resistant gloves must be worn.
- **Re-cropping:** None.
- **Storage:** DO NOT store near feed or food stuffs. Store in a cool, dry, ventilated place. Protect from excessive heat.
- **Environment:** DO NOT apply if weather conditions favour drift from area being treated. DO NOT contaminate lakes, streams or ponds. Observe a buffer zone of 100 m for aerial applications and 15 m for ground applications to protect aquatic systems.

Hazard Rating:

- Caution – Poison
- Warning – Causes severe eye damage

For an explanation of the symbols used here see pages 7 and 8.

Contans WG

Company:
Bayer, distributed by UAP - PCP#29066

Formulation:
Wettable Granules - 5.30% Coniothyrium minitans strain CON/M/91-08. Contains minimum of 1 x 10⁹ cfu per gram.
- Container size - 20kg

Fungicide Group
Not classified, biofungicide

Refer to page 427
Crops, Diseases, Rates and Timing:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases</th>
<th>Application Rate (per acre)</th>
<th>Application Timing</th>
</tr>
</thead>
</table>
| Pre-plant - Soils where canola, sunflower, safflower, dry bean or soybean will be planted | White mould or sclerotinia stem rot (*Sclerotinia sclerotiorum*) and rots caused by *S. minor* | 400 to 800 g | Prior to planting of spring crop; three months before the typical onset of sclerotinia stem rot or white mould.  
In fall, prior to spring planting of susceptible crop. After application to the soil, the product should be incorporated to within 5 cm of the topsoil. Incorporation should take place as soon as possible after application (within 1 week maximum). |
| | | 800 to 1600 g | If soil incorporation is to a depth greater than 5 cm, higher rate should be applied. |
| Postharvest - On harvest residue of susceptible crops | | 200 to 400 g | Prior to the next soil treatment, the residues of the susceptible crops in rotation can be also treated to help reduce inoculum loads of sclerotia in the field. |

Application Information:

- Use sufficient water volumes to give thorough coverage of the soil surface and/or the crop residue (10 gallons per acre of water volume).
- DO NOT allow spray mixture to stand overnight or for prolonged periods; should be used within 24 hours of being prepared.
- After incorporation, treated soils should not be disturbed to avoid bringing untreated sclerotia from lower soil depths to the top soil layer.
- As part of an overall long-term pest management strategy, it is recommended to use other management practices along with Contans WG such as in season foliar fungicide applications and proper crop rotations.
- DO NOT apply by air.

How it Works:
The active ingredient, *Coniothyrium minitans*, is a fungus that infects the sclerotia of *Sclerotinia sclerotiorum* and *S. minor*. Infection of sclerotial bodies prevents production of ascospores and mycelial structures that infect plants. Regular use of Contans WG in successive years within a long-term management strategy will improve disease control.

Tank Mixes:
DO NOT tank-mix with fungicides or fertilizers. Also, DO NOT tank mix with acids, alkalines or any product that attacks organic materials. Contact UAP for more information on what products are compatible with Contans WG.

Restrictions:

- Resistance management: Refer to page 426.
- Maximum number of applications: No restrictions listed.
- Grazing: No restrictions listed.
- Preharvest interval: Can be applied up to and including the day of harvest.
- Re-entry: No restrictions listed.
- Re-cropping: No restrictions listed.
- Storage: Maximum storage period of one year at 4°C or below. Up to 6 weeks at temperatures between 4°C and 23°C. Store in a dry area inaccessible to children. Store in original container away from food or feed.
- Environment: DO NOT apply this product directly to freshwater habitats, estuarine/marine habitats. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

Hazard Rating:

Caution – Potential Sensitizer

For an explanation of the symbols used here see pages 7 and 8.
Foliar Fungicides

Copper 53W/Copper Spray/Cueva/Parasol WG

Company:
W. Neudorff GmbH KG (Cueva – PCP#31825), Distributed by Engage Agro Corporation
Loveland Products Canada, (Copper 53W – PCP#09934, Copper Spray – PCP#19146)
Nufarm Agriculture Inc. (Parasol WG – PCP#29063)

</tr>
</tbody>
</table>
Application Information:
- **Ground**: Use enough water to ensure thorough coverage. As noted on the labels, 400 L per acre (Copper 53W and Copper Spray); boom height must be 60 cm or less above the crop or ground (Cueva).
- **Aerial**: DO NOT apply by air

How it Works:
The active ingredients containing copper are inorganic fungicides with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Restrictions:
- **Resistance management**: Refer to page 426.
- **Maximum number of applications**:
  - **Cueva**: DO NOT exceed 15 applications per year.
  - **Bean (Parasol WG)** – DO NOT exceed 6 applications per season.
  - **Potato (Parasol WG)** – DO NOT exceed 10 applications per season.
- **Grazing**: No restrictions listed.
- **Preharvest interval**: Do not apply within one day of harvest.
- **Re-entry**:
  - **Copper 53W, Copper Spray, and Parasol WG** – DO NOT re-enter treated areas within 48 hours of application
  - **Cueva** – 4 hours
- **Re-cropping**: No restrictions listed.
- **Storage**: Store in original container in a cool, dry, well ventilated area. To prevent contamination store this product away from food or feed. Protect from freezing. Keep away from heat, fire, and sparks.
- **Environment**: DO NOT apply or allow to drift onto streams or any body of water. To reduce runoff from treated areas into aquatic habitats avoid application to areas with a moderate to steep slope, compacted soil, or clay. Avoid application when heavy rain is forecast. Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.
- **Toxicity**: Toxic to birds, small wild mammals and aquatic organisms (indicated on Cueva label).

Hazard Rating:
- ![Warning](Warning Icon) – Poison – (Copper 53W, Copper Spray)
- ![Caution](Caution Icon) – Poison – (Parasol WG)

For an explanation of the symbols used here see pages 7 and 8.
Application Information:
- Water Volume:
  - Ground: minimum 40 L per acre.

How it Works:
The active ingredient sulphur is an inorganic fungicide with multisite activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- Resistance management: Refer to page 426.
- Maximum number of applications: DO NOT exceed 8 applications of Cosavet DF Edge per season.
- Grazing: No restrictions listed.
- Preharvest interval: 1 day
- Re-entry: DO NOT re-enter treated areas within 24 hours of application.
- Re-cropping: No restrictions listed.
- Storage: Store in a cool, dry, locked and well-ventilated area without a floor drain.
- Environment: No restrictions listed.

Hazard Rating:
None listed.

Cotegra

Company:
BASF Canada – PCP#32530

Formulation:
250 g per L boscalid and 150 g per L prothioconazole formulated as a suspension concentrate.
- Container size - 2 x 9.6 L per case

</tr>
</tbody>
</table>

Application Information:

- **Water Volume:**
  - **Ground:** Use a minimum water volume of 40 L per acre and ensure thorough coverage of foliage.
  - **Aerial:** Use a minimum water volume of 20 L per acre and ensure thorough coverage of foliage.

How it Works:

The active ingredient boscalid is a carboxamide (SDHI) fungicide with systemic activity. The active ingredient prothioconazole is a triazole fungicide with broad-spectrum systemic activity. To be used as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - Canola, mustard, dry bean, chickpea, lentil, pea, soybean – DO NOT exceed 2 applications of this product per season.
- **Grazing:** All crops can be grazed or fed to livestock 7 days after application.
- **Preharvest interval:**
  - Beans, chickpea, lentil, pea, soybean - 21 days
  - Canola, rapeseed, and oriental mustard – 36 days
- **Re-entry:** DO NOT re-enter treated area for 24 hours after application.
- **Re-cropping:** A plant back restriction of 14 days is required for all crops not on the label. 30 days for all crops NOT on the label.
- **Storage:** Store the leftover product in original tightly closed container. Protect from freezing. Store in a cool, dry, locked, well-ventilated area without a floor drain.
- **Environment:** Toxic to aquatic organisms. Observe buffer zones and DO NOT apply to any body of water or where runoff is likely to occur.

Hazard Rating:

⚠️ Caution Poison

For an explanation of the symbols used here see pages 7 and 8.
Crops, Diseases Timing:
Control of late blight (*Phytophthora infestans*) in potato. Initial applications should start when local conditions indicate that late blight is imminent. Make additional applications at 5 to 7 day intervals; however, at least 20 days must pass between the second and third application.

Rate:
Apply *Curzate 60 DF* at 90 g per acre
Plus
*Manzate DF or Manzate Pro-Stick* at 540 g to 650 g per acre

Application Information:
- **Water Volume:**
  - **Ground:** Utilize sufficient water to obtain thorough coverage - 80 to 400 L per acre.
  - **Aerial:** Apply by air with a minimum water volume of 20 L per acre.

How it Works:
The active ingredient cymoxanil is a cyanoacetamide-oxime fungicide with locally systemic activity. To be used as a preventative, curative and inhibitive (antisporulant) fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
DO NOT use *Curzate 60 DF* alone. Use only in a tank mix with *Manzate DF or Manzate Pro-Stick*.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 4 applications of this product per season.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** 8 days
- **Re-entry:** DO NOT re-enter treated areas within 24 hours of application.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store product in original container in a secure, dry area away from food or feed. Protect against humid air and water. Not for use or storage in or around the home. Keep container tightly closed.
- **Environment:** A buffer zone of 50 m is required between the down-wind edge of the boom and sensitive aquatic habitats such as ponds, lakes, rivers, streams, and wetlands. DO NOT contaminate these habitats when cleaning and rinsing equipment or containers. DO NOT clean sprayer near well or water source or near desirable vegetation.

Hazard Rating:
- Danger – Poison
- Caution – Eye irritant
For an explanation of the symbols used here see pages 7 and 8.

**Delaro 325 SC**

**Company:**
Bayer – PCP#31533

**Formulation:**
175 g per L of prothioconazole and 150 g per L of trifloxystrobin formulated as a suspension concentrate.

**Delaro 325 SC**

**Fungicide Group**
3, 11
Refer to page 427

</table>

Application Information:

- Water Volume:
  - **Ground:** minimum 40 L per acre.
  - **Aerial:** minimum 20 L per acre.

How it Works:

The active ingredient prothioconazole is a triazole fungicide with broad spectrum systemic activity. The active ingredient trifloxystrobin is a strobilurin fungicide with broad spectrum preventative activity. For more information refer to "Fungicide Modes of Action" on page 426.

Tank Mixes:

None registered.

Bayer supports the following mixes that are not on the Delaro 325 SC label. Apply mixes according to the most restrictive use limitations for either product:

- **Insecticides:** Decis, Lorsban, Matador

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 2 applications of Delaro 325 SC per season in field pea, chickpea, lentil, soybean and corn. DO NOT exceed 1 application of Delaro 325 SC per season in flax.
- **Grazing:** No restrictions listed.
Double Nickel LC/Double Nickel 55

Company:
Distributed by UAP – (Double Nickel LC; Double Nickel 55)

Formulations:
Double Nickel LC (PCP#31887): $1 \times 10^{10}$ Bacillus amyloliquefaciens strain D747 spores/mL (minimum) formulated in an aqueous suspension.
- Container size - 500 L

Double Nickel 55 (PCP#31888): $5 \times 10^{10}$ Bacillus amyloliquefaciens strain D747 spores/g formulated in a water dispersible granule.
- Container size - 4 x 2.26 kg

</tbody>
</table>

Preharvest interval:
- Field pea, chickpea, lentil – 30 days
- Soybean – 20 days
- Corn – 14 days
- Flax – 36 days

Re-entry: DO NOT re-enter treated areas within 12 hours of application.

Re-cropping: Crops listed on label, corn, cereals and sugarbeet may be planted immediately following last application. DO NOT plant any other crops within 30 days of application of Delaro 325 SC.

Storage: Store this product away from food or feed. Keep away from fire or open flame or other sources of heat. Do not store at temperatures below freezing. If stored for 1 year or longer, shake well before using. Store away from feed, seed, fertilizer, plant and foodstuffs. Do not store in or around the home. Keep in original container during storage.

Environment: Toxic to aquatic organisms and non-target terrestrial plants. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. DO NOT apply to areas where runoff is likely to occur.

Hazard Rating:

⚠️ Caution – Eye irritant
Potential Skin Sensitizer

For an explanation of the symbols used here see pages 7 and 8.

<tr>
<td></td>
<td></td>
<td></td>
<td>conditions for disease development persist.</td>
</tr>
</tbody>
</table>

Application Information:

- **Foliar**: Mix in sufficient volume of water to achieve thorough coverage of the crop canopy with minimal runoff.
- **For control of early blight, black scurf in potato and white mould in soybean**: Apply lower rate under low disease pressure or to smaller, newly emerged plants. Higher rates may be applied when disease pressure is moderate to high or when environmental conditions and plant stage are conducive to rapid disease development. Apply more frequently (3 to 7 days) or rotate with other fungicides for improved performance.
- **Soil application**: Apply by banded/in-furrow application. Mix the required amount of product in water and apply as banded spray (10 to 15 cm wide) or seedrow drench centered over the furrow. Apply directly over the seeds in the furrow just before seeds are covered with soil. Refer to the product labels for the table with application rates for different row spacing’s.

How it Works:

The active ingredient, *Bacillus amyloliquifaciens* strain D747, is a beneficial bacterium with broad spectrum activity. *B. amyloliquifaciens* colonizes the plant surfaces preventing establishment of disease-causing fungi and bacteria.

Tank Mixes:

None registered.

Restrictions:

- **Resistance management**: Refer to page 426.
- **Maximum number of applications**: Can be applied every 3 to 10 days as long as conditions favor disease development.
- **Grazing**: No restrictions listed.
- **Re-entry**: No restrictions listed.
- **Re-cropping**: No restrictions listed.
- **Storage**: Store in original container away from children and direct sunlight, at 4 to 25°C for up to one year. Do not contaminate feed/food.
- **Environment**: To reduce runoff into aquatic habitats, avoid application when heavy rain in forecast. Runoff can also be reduced by including a vegetative strip between the treated area and edge of water body.

Hazard Rating:

Possible eye irritant and may cause sensitization.
Company:
BASF Canada – PCP#32746

</tbody>
</table>

* Product label indicates a lower rate but the product is not marketed at this rate due to fungicide stewardship of the individual components and resistance management.

DO NOT make sequential applications of Dyax. If disease persists or weather conditions are favourable for disease development, make a second application 10 to 14 days later, with a fungicide that contains a different mode of action. Use the shorter interval when disease pressure is high.

Application Information:
- Water Volume:
  - *Ground*: minimum 40 L per acre.
  - *Aerial*: minimum 20 L per acre.
How it Works:
The active ingredient fluxapyroxad is a carboximide (SDHI) fungicide with system activity. The active ingredient pyraclostrobin is a strobilurin fungicide with broad spectrum contact and systemic activity. To be used as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 1 sequential application of this product per season with a maximum of two total applications per season.
- **Grazing:** All crops on this label can be grazed or fed to livestock. Observe the minimum pre-harvest intervals for each crop.
- **Preharvest interval:**
  - *Field pea, lentil, chickpea, faba bean, dry bean* – 30 days
  - *Soybean* – 21 days
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** Crops listed on label, tuberous and corm vegetables, fruiting vegetables, pome fruits and stone fruits may be planted immediately following last application. A plant-back interval of one year is required for all other crops.
- **Storage:** Store this product away from food or feed.
- **Environment:** Maintain specified buffer zones. Toxic to aquatic organisms, small mammals, and non-target terrestrial plants.

Hazard Rating:
- 🌿 Danger Poison – Skin irritant
For an explanation of the symbols used here see pages 7 and 8.

Elatus

Company:
Syngenta Canada

Formulations:
The Elatus package has 2 components:
- *Elatus A Fungicide* (PCP #31973): 250 g/L azoxystrobin, formulated as a suspension
- *Elatus B Fungicide* (PCP #31977): 100 g/L benzovindiflupyr, formulated as an emulsifiable concentrate

Fungicide Group
7, 11
Refer to page 427
## Crops, Diseases, Rates and Timing:

</tr>
</tbody>
</table>

As of January 1, 2019, www.keepingitclean.ca indicates that grain from pulse crops treated with this product may have market access concerns. Please see page 10 for more information AND consult potential grain buyers before using this product.

### Application Information:
- If disease pressure is high, use the highest rate and shortest application interval. For best results, use sufficient water volume to provide thorough coverage.
- **Ground:** minimum of 40 to 80 L per acre water volume is recommended.
- **Aerial:** minimum of 18 L per acre water volume is recommended.
- Use sufficient water to obtain thorough coverage of plants. DO NOT apply under periods of dead calm. Avoid application of this product when winds are gusty.

### How it Works:
The active ingredient azoxystrobin is a methoxyacrylate compound (strobilurin) broad spectrum contact and systemic activity with preventative and curative applications. The active ingredient benzovindiflupyr is a succinate dehydrogenase inhibitor (SDHI) fungicide with broad spectrum activity. For more information refer to “Fungicide Modes of Action” on page 426.
Tank Mixes:
The Elatus package has 2 components. Add Elatus A (SC) and any additional SC formulation mix partners prior to adding Elatus B (EC) and any additional EC formulation mix partners.

It is not recommended to combine solid (WG or DF) formulations with liquid tank mix partners within a single batch. Batch mix any WG or DF formulation mix partners before Elatus A (SC) and any additional SC formulation mix partners. Any SN or SL formulation mix partners should be added by induction or an additional batch mix after the EC (Elatus B) and any additional EC formulation mix partners.

Restrictions:
Note that Elatus contains 2 components with separate labels. Follow the most restrictive precautions, restrictions, and directions found on each of the Elatus A and Elatus B labels.

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT apply consecutive applications and DO NOT apply more than 2 applications per season.
- **Grazing:** DO NOT feed dried pea vines to livestock.
- **Preharvest interval:** DO NOT apply on pulse crops within 15 days of harvest. DO NOT apply on soybean within 14 days of harvest.
- **Re-entry:** DO NOT re-enter fields for 12 hours after application.
- **Re-cropping:** Potatoes, pulse crops (including dried pea and bean subgroup), soybean, fruiting and curcurbit vegetables, cereals (wheat, barley, oat, rye, triticale), corn, and rapeseed (including canola, mustard, flax, and borage) may be planted immediately after last application as long as they are also registered for use with azoxystrobin products. All other crops intended for food and feed may be planted 180 days after last application of Elatus.
- **Storage:** Store product in original container only, away from other pesticides, fertilizer, food or feed. Not for use or storage in or around the home. Keep container closed. To prevent contamination, store this product away from food or feed.
- **Environment:** DO NOT use to control aquatic pests. Elatus A is extremely phytotoxic to certain apple varieties. DO NOT use where spray drift may reach apple trees.

Hazard Rating:

⚠️ Warning Poison - corrosive to eyes and skin

For an explanation of the symbols used here see pages 7 and 8.
Application Information:

- Water Volume:
  - **Ground:** minimum 80 L per acre.
  - **Aerial:** minimum 20 L per acre.
- A spreader sticker may be used if needed. DO NOT apply during periods of dead calm.

How it Works:

The active ingredient mancozeb is a dithiocarbamate fungicide with multi-site contact activity. The active ingredient chlorothalonil is a chloronitride fungicide with multi-site contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT apply more than 22.4 kg per acre.
- **Preharvest interval:** 1 day
- **Re-entry:** DO NOT re-enter treated areas within 48 hours of application.
- **Re-cropping:** No restrictions listed.
- **Storage:** Never allow to get wet.
- **Environment:** To reduce runoff from treated areas into aquatic habitats avoid application to areas with a moderate to steep slope, compacted or heavy clay. Avoid application when heavy rain is in the forecast.
- **Toxicity:** Toxic to aquatic organisms.

Hazard Rating:

⚠️ Warning Poison – Eye irritant

For an explanation of the symbols used here see pages 7 and 8.

</tr>
</tbody>
</table>

Application Information:
- **Water Volume:**
  - *Ground:* Apply in a minimum of 80 L of water per acre.
  - *Aerial:* Apply in a minimum of 20 L of water per acre.

How it Works:
The active ingredient fluoxastrobin is a systemic fungicide that works by interfering with respiration in plant pathogenic fungi, and is a potent inhibitor of spore germination and mycelial growth. For more information refer to "Fungicide Modes of Action" on page 426.

Tank Mixes:
- **Wheat and Barley:** propiconazole, tebuconazole, *Caramba, Proline 480 SC, Prosaro 250 EC.*
- **Corn:** propiconazole (field, seed, sweet), chlorothalonil (sweet corn only).
- **Soybean:** propiconazole, tebuconazole
- **Potatoes:** chlorothalonil, mancozeb, metiram.

Refer to tank mix partner labels for use in directions, restrictions and precautions.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - *Wheat, Barley, Corn, Soybean* – 2 applications per year
  - *Potatoes* – 3 applications per year
- **Grazing:** Do not apply within 7 days of harvest for hay and forage. If wheat forage will be harvested, make only one application.
- **Preharvest interval:**
  - *Barley, wheat* – 40 days
  - *Potatoes* – 7 days
  - *Corn* – 30 days (grain) or 7 days (sweet)
  - *Soybean* – DO NOT apply later than R6 (full seed)
- **Re-cropping:**
  - Cereal grains and forage grasses may be planted following a 30 days plant back interval.
  - Canola, flax and sunflower may be planted following a 180 days plant back interval.
  - All crops on the *Evito 480* label may be planted immediately following harvest.
  - Alfalfa may be planted following a 30 days plant back interval.
  - For all other crops, DO NOT plant back within one year of the last field application.
Foliar Fungicides

- **Storage**: Store in cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, or feed. Store in original container and out of reach of children, preferably in a locked storage area. *Evito 480* is not affected by freezing.
- **Environment**: Toxic to aquatic organisms. Observe butter zones as specified on the label. To reduce runoff from treated areas into aquatic habitats avoid application to areas with a moderate to steep slope, compacted soil, or clay.

**Hazard Rating:**
Potential skin sensitizer.

---

**Fontelis**

**Fungicide Group**: 7

**Company**:
Corteva Agrisciences Agriculture Division of DowDuPont – PCP#30331

**Formulation**:
200 g per L penthiopyrad formulated as a suspension.
- Container size - 4 x 3.79 L jug

**Crops, Diseases, Rates and Timing**:

<table>
<thead>
<tr>
<th>Crop</th>

<tbody>
<tr>
<td>Alfalfa</td>
<td>Sclerotinia stem rot (<em>Sclerotinia sclerotiorum</em>)</td>
<td>500 to 700 mL</td>
<td>Begin applications prior to disease development and continue on a 7 to 14 day interval. Use higher rate and shorter interval when disease pressure is high.</td>
</tr>
</tbody>
</table>

**Application Information**:
- **Water Volume**:
  - *Ground*: 45 L per acre.
  - *Aerial*: 16 L per acre.
- Use sufficient water to obtain thorough coverage of plants. DO NOT apply under periods of dead calm. Avoid application of this product when winds are gusty.

**How it Works**:
The active ingredient penthiopyrad is a carboxamide fungicide with broad spectrum, locally systemic and curative properties recommended for foliar and soil borne plant diseases. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes**:
None registered.

**Restrictions**:
- **Resistance management**: Refer to page 426.
- **Maximum number of applications**: DO NOT exceed two sequential applications of this product before switching to a fungicide with a different mode of action. DO NOT exceed 1.4 L per acre in one season.
- **Grazing**: No restrictions listed.
- **Preharvest interval**: 14 days
- **Re-entry**: DO NOT re-enter treated areas until 12 hours after application.
- **Re-cropping**: Crops and crop groups on the *Fontelis* label as well as the following crops may be planted immediately after harvest: canola, cereal grains crop group, corn, cotton, legume vegetables crop subgroup, soybean, sugarbeet, tuberous and corm vegetables and leaves crop subgroup. All other crops cannot be planted until 12 months after the last application.
- **Storage**: Store product in original container only, away from other pesticides, fertilizer, food or feed. Not for use or storage in or around the home. Keep container closed.
- **Environment**: This product is toxic to aquatic organisms. When using *Fontelis*, consult the product label for buffer zones.

**Hazard Rating**:
Potential Skin Sensitizer
Company:

BASF Canada – PCP#32026

Formulation:

500 g per L of dimethomorph formulated as a suspension concentrate.

- Container size - 2 x 4.5 L

Crops, Diseases, Rates and Timing:

<table>
<thead>
<tr>

</tr>
<tr>
<td></td>
<td>Tuber blight <em>(Phytophthora infestans)</em></td>
<td>182 mL</td>
<td>Apply after first desiccation to target stem lesions to reduce tuber blight.</td>
</tr>
</tbody>
</table>

Application Information:

- **Water Volume:**
  - **Ground:** Use a minimum water volume of 20 L per acre
  - **Aerial:** Use a minimum water volume of 80 L per acre.

How it Works:

The active ingredient dimethomorph is a carboxylic acid amide fungicide with contact, systemic and antisporulant activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

**Fungicides:** For resistance management and early blight control *(Alternaria solani)*, *Forum* must be tank-mixed with one of *Polyram DF*, *Dithane DG Rainshield* or *Bravo* at the product label rate.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 3 applications.
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** DO NOT plant a new crop in the treated area within 120 days of the last application.
- **Storage:** Store under cool and dry conditions in secure, well-ventilated buildings, away from foodstuffs and animal feed and out of reach of children.
- **Environment:** Toxic to aquatic organisms and mammals. Observe buffer zones outlined in the label.

Hazard Rating:

⚠️ Danger – Poison

For an explanation of the symbols used here see pages 7 and 8.
Fullback 125SC

Company:
FMC Corporation – PCP#31679
Distributed by: Engage Agro Corporation

Formulation:
Flutriafol 125.08 g per L formulated as a suspension concentrate.

Crops, Diseases, Rates and Timing:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases</th>
<th>Application Rate (per acre)</th>
<th>Application Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Soybean</td>
<td>Cercospora blight and leaf spot</td>
<td>207 to 414 mL</td>
<td>Apply as a broadcast foliar spray to soybean plants in R3 growth stage (early pod fill) or when environmental conditions are favourable for disease development. Apply second application if conditions are conducive for heavy disease development. Use the higher rate and shorter spray interval under severe sustained disease pressure. Spray Interval 14 to 21 days</td>
</tr>
</tbody>
</table>

Application Information:
- **Water Volume:** minimum 40 L per acre.
- **ASABE medium** droplets. Boom height must be 60 cm or less above the crop.
- **DO NOT apply** by air

How it Works:
Flutriafol is a demethylation inhibitor with contact and systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
*Fullback 125SC* may be tank mixed with *Headline EC Fungicide* at the label rates for resistance management. If compatibility is in question, use the compatibility jar test before mixing the entire tank.

Restrictions:
- **Resistance management:** Refer to page 426.
  - **Rainfall:** Within 2 hours may reduce effectiveness.
- **Maximum number of applications:** DO NOT apply more than 828 mL per acre per season. Do not apply more than 3 applications per growing season. Only one application at 414 mL per acre may be made to any one field during a single growing season. Apply only to soybean harvested for dry seed. Flutriafol is persistent and may carryover. It is recommended that any products containing flutriafol not be used in areas treated with this product during the previous season.
- **Grazing:** DO NOT feed forage or hay to animals or permit animals to graze.
- **Preharvest interval:** DO NOT apply within 21 days of harvest.
- **Re-entry:** 12 hours.
- **Re-cropping:** Labeled crops may be planted anytime. Field corn, popcorn may be planted 150 days after application and sweet corn may be planted 200 days after application. All other unlabeled crops may be planted 365 days after application.
- **Storage:** Store unused product in original container in a cool, dry area. Do not contaminate water, food or feed by storage, disposal or cleaning of equipment. Shelf life of *Fullback 125 SC* is 3 years.
- **Environment:** Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. See label for more information on ground water contamination and surface water advisory. Avoid application when heavy rain is forecast. Toxic to aquatic organisms and non-target terrestrial plants. Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.

Hazard Rating:
**Potential Skin Sensitizer.**
Keep out of reach of children and prevent access by unauthorized personnel.
Gavel 75 DF

Company:
Gowan Canada - PCP#26842

Formulation:
66.7% mancozeb and 8.43% zoxamide formulated as a dry flowable.
- Container size - 13.6 kg

Crops, Diseases Timing:
Control of early blight (*Alternaria solani*) and late blight (*Phytophthora infestans*) in potato. Optimum disease control is achieved when the fungicide is applied in a regularly scheduled preventative spray program. Begin applications at the first sign of disease or when blight is reported in the area. Apply at 0.90 kg per acre every 7 days under high disease pressure when either disease is present or environmental conditions favour continued disease development.

Apply at 0.70 kg per acre every 7 days under low disease pressure and environmental conditions unfavorable for disease development.

Rate:
Apply at 0.70 to 0.90 kg per acre.

Application Information:
- Thorough, uniform coverage is essential for good disease control.
- **Water Volume:**
  - **Ground:** 90 L per acre.
  - **Aerial:** 18 to 36 L per acre. Use 36 L of water under high disease pressure to provide better crop coverage.

How it Works:
To be used as a preventative fungicide application. The active ingredient zoxamide is a benzamide fungicide with contact activity. The mancozeb component is a dithiocarbamate fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 6 applications of this product per season.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** 3 days
- **Re-entry:** DO NOT re-enter treated areas within 48 hours of application.
- **Re-cropping:** A 30 day plant back interval (PBI) is required for leafy vegetables and root and tuber vegetables. For all other crops not included on the label, the PBI should be 140 days.
- **Storage:** DO NOT allow product to freeze. Keep away from fire and sparks. Store in a cool, dry, well ventilated place away from feed or food.
- **Ground application:** a buffer zone of 25 m for application by ground sprayer should be established between the last spray swath and the edge of aquatic systems. A buffer zone of 5 m for application by ground sprayer should be established between the last spray swath and the edge of terrestrial habitats such as hedgerows, windbreaks, woodlots, vegetative strips and other vegetation. This pesticide is toxic to fish.
- **Aerial application:** a buffer zone of 20 m is required between the downwind edge of the boom and the closest edge of sensitive aquatic habitats.

Hazard Rating:
⚠️ Caution – causes moderate eye irritation
For an explanation of the symbols used here see pages 7 and 8.
Iprodione
Rovral Flo/Overall 240 SC/Prodex SC

Company:
FMC Corporation (Rovral Flo - PCP#29315)

</tr>
</tbody>
</table>

* Lower rate recommended for most crops; use higher rate for fields with history of severe disease pressure and dense crop stands.

Application Information:
- Water Volume: Good coverage of the plants is essential.
  - Ground: 40 L per acre.
  - Aerial (Canola only): minimum 18 L per acre.

How it Works:
The active ingredient iprodione is a dicarboximide fungicide with contact activity. To be used as a preventative and eradicant fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.
Restrictions:

- **Resistance management**: Refer to page 426.
- **Maximum number of applications**: DO NOT exceed 2 applications of this product per season.
- **Grazing**: DO NOT use treated alfalfa for animal feed.
- **Preharvest interval**: 38 days.
- **Re-entry**: No restrictions listed.
- **Re-cropping**: No restrictions listed.
- **Storage**: DO NOT freeze.
- **Environment**: DO NOT apply directly to water. DO NOT contaminate sensitive areas through spray drift, direct application, disposal of waste or cleaning equipment. Observe specified buffer zones.

**Hazard Rating:**

- **Caution – Poison**
- **Warning – Skin and Eye Irritant**

For an explanation of the symbols used here see pages 7 and 8.

</table>

* Do not apply by air

**Application Information:**

- **Water Volume:**
  - *Ground:* Use a minimum volume of 40 L per acre and ensure thorough coverage of foliage.
  - *Aerial:* Use a minimum volume of 20 L per acre and ensure thorough coverage of foliage.

**Restrictions:**

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - *Alfalfa* – Do not exceed one application of this product per season.
  - *All other crops* – do not exceed 2 applications per season and rotate applications with a fungicide that contains a different mode of action.
- **Grazing:** Do not feed alfalfa hay or forage to livestock. All other crops on this label can be grazed – follow pre-harvest interval.
- **Preharvest interval:**
  - *Field pea, lentil, chickpea, faba bean* – 30 days
  - *Canola* – 21 days
  - *Alfalfa* – not applicable
- **Re-entry:** DO NOT re-enter treated areas until 12 hours after application.
- **Re-cropping:** All labelled crops and the tuberous and corm vegetables, fruiting vegetables, pome fruits and stone fruits may be planned immediately following the last application. A plant back restriction of 14 days for all other crops not on label.
- **Storage:** Store in a cool, dry, locked, well-ventilated area away from food or feed.
- **Environment:** DO NOT apply to any water body. Toxic to aquatic organisms and non-target terrestrial plants. Observe buffer zones outlined in the label.

**Hazard Rating:**

- 🦒 Caution Poison – Potential Skin Sensitizer
- ⚠️ Warning – Eye Irritant

For an explanation of the symbols used here see pages 7 and 8.

</tbody>
</table>

* For the control of ascochyta blight in chickpea, Lance should be mixed with 160 to 240 mL per acre Headline EC.
Application Information:

- **Water Volume:**
  - **Ground:** Use a minimum water volume of 40 L per acre and ensure thorough coverage of foliage.
  - **Aerial (registered for all crops but field pea):** Use a minimum water volume of 16 L per acre and ensure thorough coverage of foliage.
  - **Pivot and Sprinkler Irrigation:** DO NOT exceed 0.64 cm (1/4 inch) or 25,700 L per acre. Apply only through sprinkler systems including centre pivot, lateral move, end two, side (wheel) roll, traveler, big gun, solid set, or hand move irrigation systems.

How it Works:

The active ingredient boscalid is a carboxamide (SDHI) fungicide with systemic activity. To be used as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

**Insecticides:** For control of corn borer in succulent beans, Lance can be tank-mixed with Matador 120 EC at 37 mL per acre.

**Fungicides:** For the control of ascochyta blight on chickpea, Lance at rate of 140 to 170 g per acre should be applied with 160 to 240 mL per acre Headline EC.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - **Sunflower** – DO NOT exceed 1 application of this product per season.
  - **Canola, mustard, dry bean, chickpea, lentil, pea** – DO NOT exceed 2 applications of this product per season.
  - **Alfalfa** – DO NOT exceed 3 applications of this product per season.
- **Grazing:** All crops except alfalfa (grown for seed) can be grazed or fed to livestock.
- **Preharvest interval:**
  - **Beans, canola, chickpea, lentil, pea** - 21 days
  - **Alfalfa** - not applicable
- **Re-entry:** DO NOT re-enter treated area for 12 hours after application or until dry.
- **Re-cropping:** A plant back restriction of 14 days is required for all crops not on the label.
- **Storage:** Store in a cool, dry, locked, well-ventilated area without a floor drain.
- **Environment:** DO NOT apply to any body of water. Avoid drifting of spray onto any body of water or other non-target areas. Specified buffer zones should be observed.

Hazard Rating:

- Caution Poison – Potential Skin Sensitizer
- Warning – Eye Irritant

For an explanation of the symbols used here see pages 7 and 8.

---

**LifeGard WG**

**Company:**
Certis USA, distributed by UAP – PCP#32526

**Formulation:**
40% Bacillus mycoides (strain J) formulated as a wettable granule. Guarantee – 3 x 1010 spores per gram.

- Container size - 0.454 kg
Crops, Diseases, Rates and Timing:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Suppressed</th>
<th>Application Rate</th>
<th>Application Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Suppression of early blight (<em>Alternaria solani</em>), late blight (<em>Pytophthora infestans</em>)</td>
<td>Apply at a concentration of 0.33 g per L of water. The amount of <em>LifeGard WG</em> applied will depend on the spray volume used to adequately cover the crop. Do not apply less than 28 grams of <em>LifeGard WG</em> per acre.</td>
<td>Repeat applications at 7 day intervals. Apply at 7 to 14 day intervals. Use the shorter interval when high disease pressure is anticipated.</td>
</tr>
<tr>
<td></td>
<td>Partial suppression of sclerotinia stem rot (<em>Sclerotinia sclerotiorum</em>)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note: *LifeGard* is most beneficial when applied in alternation with other foliar fungicides that are registered for the specific use/pathogen.

Application Information:

- **Water Volume:**
  - 20 to 100 L per acre. Use water volumes to give good canopy penetration and coverage of plant parts to be protected.

How it Works:

*Bacillus mycoides* is a bacterium bio-fungicide that works as a host plant defence inducer. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** No restrictions listed.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** 0 days
- **Re-entry:** 4 hours
- **Re-cropping:** No restrictions listed.
- **Storage:** Store in a dry area inaccessible to children in the original container. Store at or below 25°C. Use within 6 months.
- **Environment:** May be toxic to bees. Bees can be exposed to direct treatment, drift or residues on flowering crops or weeds. DO NOT apply to flowering crops if bees are visiting the treatment area. Minimize spray drift to reduce harmful effects on bees in habitats close to the application site. To reduce runoff from treated areas into aquatic habitats, avoid application to areas with a moderate to steep slope, compacted soil or clay. Avoid application when heavy rain is in the forecast. Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated rea and the edge of the water body.

Hazard Rating:

⚠️ Danger – Eye irritant, potential sensitizer

For an explanation of the symbols used here see pages 7 and 8.

---

**Luna Tranquility**

**Company:**
Bayer – PCP#30510

**Formulation:**
125 g per L fluopyram and 375 g per L pyrimethanil formulated as a suspension concentrate.
  - Container size - 2 x 4.86 L

**Fungicide Group**
7, 9

Refer to page 427
Crops, Diseases, Rates and Timing:

<td>Suppression of black dot (<em>Colletotrichum coccodes</em>)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Application Information:

- Water Volume:
  - **Ground**: Use a minimum water volume of 80 L per acre and ensure thorough coverage of foliage.
  - **Aerial**: Use a minimum water volume of 20 L per acre and ensure thorough coverage of foliage.

How it Works:

The active ingredient fluopyram is a carboxamide fungicide with systemic activity. The active ingredient pyrimethanil is an anilinopyrimidine fungicide with contact and systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Restrictions:

- **Resistance management**: Refer to page 426.
- **Maximum number of applications**: DO NOT apply more than 1.3 L per acre of this product per season.
- **Grazing**: No restriction listed.
- **Preharvest interval**: 7 days
- **Re-entry**: DO NOT re-enter treated areas until 12 hours after application.
- **Re-cropping**: A plant back restriction of 30 days is required for canola, cereal grains, corn, soybean, dry bean, chickpea, lentil, and alfalfa.
- **Storage**: DO NOT store below freezing. If stored for one year or longer, shake well before using. Store the tightly closed container away from feeds, seeds, fertilizer, plants and foodstuffs. Keep the product in the original container during storage.
- **Environment**: Toxic to aquatic organisms and birds. DO NOT apply directly to water, to areas where surface water is present, or to intertidal areas below the high water mark. Observe buffer zones outlined in the label.

Hazard Rating:

None listed.
Mancozeb

Dithane Rainshield/Manzate Pro-Stick/Penccozeb 75 DF

Company:

Corteva Agrisciences Division of DowDuPont (Dithane Rainshield – PCP#20553)

United Phosphorus Inc (Manzate Pro-Stick – PCP#28217, Penccozeb 75 DF – PCP#25397)

Formulations:

Dithane Rainshield - 75% mancozeb formulated as a water dispersible granule.
- Container size - 3.5 to 544 kg

Manzate Pro-Stick - 75% mancozeb formulated as a dry flowable.
- Container size - 10 to 20 kg

Penccozeb 75 DF - 75% mancozeb formulated as a wettable granule.
- Container size - 2.5 to 250 kg

Crops, Diseases, Rates and Timing:

</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Early blight (Alternaria solani), late blight (Phytophthora infestans)</td>
<td>0.45 to 0.9 kg</td>
<td>Apply at 0.45 kg per acre rate when plants are 10 to 15 cm high; increase to 0.7 kg per acre as plants increase in size, and 0.9 kg per acre at row closure. Apply every 7 to 10 days. Spray interval may be reduced to 5 to 6 days during periods of wet weather favouring late blight and/or vigorous crop growth.</td>
</tr>
<tr>
<td>Wheat</td>
<td>Tan spot (Pyrenophora tritic- repentis), leaf rust (Puccinia recondita), septoria leaf blotch (Septoria tritici)</td>
<td>0.45 to 0.9 kg</td>
<td>Apply 0.45 kg per acre early (when crop is in the 3-leaf to tillering stage); apply 0.9 kg per acre later (when head is fully emerged, but prior to flowering).</td>
</tr>
<tr>
<td>Lentil</td>
<td>Anthracnose (Colletotrichum truncatum), ascochyta blight (Ascochyta lentis)</td>
<td>0.9 kg</td>
<td>Apply first application before flower when bud formation is evident; apply second application 10 to 14 days later at early to mid-bloom but prior to row closure. A third application may be applied 10 to 14 days later.</td>
</tr>
<tr>
<td>Alfalfa (for seed)</td>
<td>Leaf and stem spot diseases (Pseudopeziza medicaginis)</td>
<td>0.6 kg</td>
<td>Apply first application prior to 50% bloom; apply second application 7 to 10 days later; apply third application 10 days after second.</td>
</tr>
</tbody>
</table>

Application Information:

- **Water Volume:** Thorough uniform coverage is essential for good disease control.
- **Ground:** 40 L per acre (wheat); 40-80 L per acre (lentil).
- **Aerial:** 16 L per acre (wheat, lentil, potato).

How it Works:

The active ingredient mancozeb is a dithiocarbamate fungicide with multi-site contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

**Fungicides (potato only):** For late blight control, Manzate Pro-stick can be tank-mixed with Curzate 60 DF.
Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - **Wheat** – DO NOT exceed 2 applications of this product per season.
  - **Lentil, alfalfa** – DO NOT exceed 3 applications of this product per season.
- **Grazing:** DO NOT graze or feed treated crop or straw to livestock. DO NOT graze or cut treated alfalfa for hay.
- **Preharvest interval:**
  - **Potato** - 1 day
  - **Lentil** - 35 days
  - **Wheat** - 40 days
- **Re-entry:** DO NOT re-enter treated areas within 24 hours of application.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store in cool, dry, well-ventilated place. Keep away from fire and sparks.
- **Environment:** Toxic to aquatic organisms. DO NOT contaminate any body of water by direct application, drift or by cleaning equipment.

Hazard Rating:

- **Warning – Poison**
- **Danger – Eye irritant**

For an explanation of the symbols used here see pages 7 and 8.

---

**Nexicor**

**Fungicide Group**

3, 7

Refer to page 427

**Company:**

BASF Canada – PCP#32678

**Formulation:**

30 g per L fluxapyroxad, 200 g per L pyraclostrobin and 125 g per L propiconazole formulated as a emulsifiable concentrate.

- Container size - Case (2 x 8 L)

</tr>
<tr>
<td>Canola</td>
<td>Blackleg (<em>Leptosphaeria maculans</em>)</td>
<td>200 mL</td>
<td>To maximize yield in canola, it is important to protect young seedlings from blackleg infections. Apply <em>Nexicor</em> at the 2 to 6 leaf stage. Apply a maximum of one <em>Nexicor</em> application per year.</td>
</tr>
</tbody>
</table>
**How it Works:**

The active ingredient fluxapyroxad is a SDHI fungicide with systemic activity. The active ingredient pyraclostrobin is a member of the strobilurins class of chemistry used as a broad spectrum fungicide. The active ingredient propiconazole is a triazole fungicide with broad spectrum systemic activity. Best utilized as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

**Herbicides:** In Canola, Nexicor can be tank mixed with the following herbicides: Odyssey WDG Herbicide, Odyssey Ultra Herbicide tank mix (components of Odyssey Ultra A and Odyssey Ultra B), or Ares in Clearfield canola, Liberty Herbicide (150 SN or 200 SN) in glufosinate ammonium tolerant canola (eg: LibertyLink canola), registered glyphosate herbicides in glyphosate tolerant canola (eg: Roundup Ready canola), Equinox EC Herbicide in canola and Poast Ultra in canola.

**Restrictions:**

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 1 application of this product per season.
- **Grazing:** All crops can be grazed within 3 days of application.
- **Preharvest interval:** 45 days for cereals; 30 days for canola.
- **Re-entry:** DO NOT re-enter treated areas within 12 hours after application.
- **Re-cropping:** A plant back interval of 35 days is required for all crops not listed on the label.
- **Storage:** Store in original tightly closed container. Protect from freezing. Store this product away from food or feed.
- **Environment:** Observe buffer zones specified on the label. Do not apply on any body of water and prevent cleaning of equipment and reduce risk of runoff from treated areas into aquatic habitats by avoid application to areas with a moderate to steep slope, compacted soil. Toxic to aquatic organisms and non-target terrestrial plants.

**Hazard Rating:**

- Warning – Poison
- Skin and eye irritant.

For an explanation of the symbols used here see pages 7 and 8.

---

**Orondis Ultra**

**Company:**
Syngenta Canada – PCP#32805

**Formulation:**
250 g per L mandipropamid and 30 g/L oxathiapiprolin formulated as a suspension concentrate.

**Crops, Diseases, Rates and Timing:**

Control of late blight (*Phytophthora infestans*) on potato. Begin applications prior to disease development. Continue applications on 7 to 10 day interval.

**Rates:**
0.16 to 0.24 L per acre.

**Application Information:**

- **Water Volume:**
  - *Ground:* Use a minimum water volume of 40 L per acre.
  - *Aerial:* Use a minimum water volume of 18 L per acre.
How it Works:
The active ingredient mandipropanid is a carboxylic acid amide (CAA) fungicide with contact and systemic activity. To be used as a preventative and inhibitive (prevents spore germination) fungicide application. The active ingredient oxathiapiprolin is an oxysterol binding protein homologue inhibitor with activity against diseases caused by oomycete fungi. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 4 applications of this product per season.
- **Grazing:** No restriction listed.
- **Preharvest interval:** 14 days
- **Re-entry:** DO NOT re-enter treated areas until 12 hours after application.
- **Re-cropping:** There is no re-cropping restriction for all crops listed on the Orondis Ultra label. The re-cropping restriction is 30 days for all other crops and 180 days for legume vegetables except succulent peas.
- **Storage:** Keep in the original container, tightly closed during storage. Store in a cool, dry, well-ventilated area away from feed and foodstuffs and out of the reach of children and animals. To prevent contamination store this product away from food or feed.
- **Environment:** Toxic to aquatic organisms. To reduce runoff into aquatic habitats avoid application to areas with a moderate to steep slope, compacted soil, or clay. Runoff into aquatic habitats may be reduced by including a vegetative strip between the treated area and the edge of the water body.

Hazard Rating:
None listed.

</tbody>
</table>

*Not recommended for use on potatoes intended for seed.*

**Chemigation application for *Confine Extra* only.**
Application Information:

- **Water Volume:**
  - **Ground:**
    - *Confine Extra* - minimum of 40 L per acre
    - *Rampart* - minimum 120 L per acre
  - **Aerial:**
    - *Confine Extra* - DO NOT apply by air
    - *Rampart* - minimum of 40 L per acre

How it Works:
The active ingredient mono- and di-potassium salts of phosphorous acid is a phosphonate fungicide with systemic activity to suppress pathogen inoculum. To be used as a preventative fungicide application on harvested tubers. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- **Resistance management:** Refer to page 426.
- **Preharvest interval:** DO NOT apply within 1 day of harvest.
- **Re-entry:** No restrictions listed.
- **Re-cropping:** No restrictions listed.
- **Storage:** DO NOT store near food or feed.
- **Environment:** DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of waste.

Hazard Rating:
⚠️ Caution – Eye irritant
For an explanation of the symbols used here see pages 7 and 8.

<td>1.2 L per acre</td>
<td>At crop emergence followed by a second application 14 days later or in-furrow at planting followed by a second application at crop emergence.</td>
</tr>
</tbody>
</table>

Application Information:

- **Water Volume:**
  - **Ground:**
    - *Potato:* Minimum of 12 L per acre for in-furrow treatment and minimum of 81 L per acre for foliar applications.
    - *Field pea:* Minimum of 40 L per acre.
  - **Aerial:**
    - *Potato:* Minimum of 20 L per acre

How it Works:

The active ingredient mono- and dibasic sodium, potassium, and ammonium phosphite is a phosphonates fungicide with systemic activity to suppress pathogen inoculum. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

- **Pink rot:** *Ridomil Gold 480SL* (in-furrow), *Ridomil Gold MZ* and *Ridomil Gold Bravo Twin Pack* (foliar)
- **Late Blight:** May be tank mixed with one of the following fungicides: *Bravo 500, Bravo ZN, Echo 720, Echo 90DF, Ridomil Gold Bravo Twin Pack, Dithane Rainshield, Manzate Pro-Stick, Gavel 75DF, Penncozeb 75DF*

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - *Potato:* DO NOT exceed 7 applications of this product per season.
  - *Field pea:* DO NOT exceed 2 applications of this product per season.
- **Grazing:** Do NOT graze treated fields or feed treated forage to livestock.
- **Preharvest interval:**
  - *Potato:* May be applied up to the day of harvest and post harvest.
  - *Field pea:* preharvest interval is 21 days.
- **Re-entry:** Re-entry interval after application is 12 hours.
- **Re-cropping:** No restriction listed.
- **Storage:** Store in a cool, dry, secure and well ventilated area. To prevent contamination, store this product away from food or feed. Keep pesticide in original container. Not for use in or around home. Do not store near open flame.
- **Environment:** Avoid run-off from treated areas into aquatic areas.
  - To reduce runoff from treated areas into aquatic habitats, avoid application to areas with a moderate to steep slope, compacted soil, or clay.
  - Avoid application when heavy rain is forecast.
  - Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.
- **Toxicity:** Toxic to aquatic organisms, non-target terrestrial plants and small wild animals.

Hazard Rating:

⚠️ Caution – Skin irritant

For an explanation of the symbols used here see pages 7 and 8.
Polyram DF  

**Company:**
BASF Canada – PCP#20087

**Formulation:**
80% metiram formulated as a water dispersable granule.
- Container size - 1 to 25 kg

<td>Late blight (<em>Phytophthora infestans</em>), early blight (<em>Alternaria solani</em>)</td>
<td>Apply at 7 to 10 day intervals using 445 to 705 g per acre until plants cover row. Then increase the rate to 910 g per acre until tops are killed. OR Apply at 5 to 7 day intervals using 445 to 705 g per acre starting when plants are 15 cm high and continuing until tops are killed. With either option, use the shorter intervals when conditions are favourable for infection.</td>
</tr>
</tbody>
</table>

**Application Information:**
- Water Volume:
  - *Ground:* none listed.
  - *Aerial:* minimum 20 L per acre.

**How it Works:**
The active ingredient metiram is a dithiocarbamate fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**
None registered.

**Restrictions:**
- Resistance management: Refer to page 426.
- Preharvest interval: DO NOT apply within 1 day of harvest.
- Re-entry: No restrictions listed.
- Re-cropping: No restrictions listed.
- Storage: Store in original, tightly-closed container. DO NOT store near food, feed, seed, or fertilizers. Store in cool, dry, locked, well-ventilated area without floor drain.
- Environment: DO NOT apply to any body of water. Avoid drifting of spray onto any body of water or non-target area. Specific buffer zones should be observed.

**Hazard Rating:**
Potential skin sensitiser

</tr>
</tbody>
</table>

**Application Information:**

- **Water Volume:**
  - *Ground:* minimum 40 L per acre.
  - *Aerial:* minimum 20 L per acre.

DO NOT make sequential applications of *Priaxor*. If disease persists or weather conditions are favourable for disease development, make a second application 10 to 14 days later, with a fungicide that contains a different mode of action. Use the shorter interval when disease pressure is high.
Crops, Diseases, Rates and Timing continued:

How it Works:
The active ingredient fluxapyroxad is a carboximide (SDHI) fungicide with system activity. The active ingredient pyraclostrobin is a strobilurin fungicide with broad spectrum contact and systemic activity. To be used as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

Herbicides: In all canola systems, Priaxor can be tank mixed with Poast Ultra and Equinox. In Clearfield canola and Clearfield canola quality Brassica juncea, Priaxor can be tank mixed with Odyssey, or Odyssey plus Equinox. BASF Canada also supports the tank mix of Priaxor with Odyssey DLX, Odyssey Ultra, Tensile, and Ares in Clearfield canola. In Liberty Link canola, Priaxor can be tank mixed with Liberty. In Roundup Ready canola, Priaxor can be tank mixed with glyphosate herbicides.

Fungicides: In canola and mustard, Priaxor can be tank mixed with Lance WDG Fungicide at 140 g per acre at 20 to 50% bloom to control sclerotinia stem rot and suppress alternaria black spot.

Restrictions:

- Resistance management: Refer to page 426.
- Maximum number of applications: DO NOT exceed 1 sequential application of this product per season.
  - Alfalfa, forage grasses – DO NOT exceed 1 application of this product per season.
  - Barley, oat, rye, wheat, triticale, corn, soybean, canola, mustard, sunflower, flax, soybean, field pea, lentil, chickpea, faba bean, dry bean – DO NOT exceed 2 applications of this product per season.
- Grazing: DO NOT feed grass hay or forage to livestock. All other crops on this label can be grazed or fed to livestock.
- Preharvest interval:
  - Barley, rye, wheat, oat – apply no later than the end of flowering
  - Field pea, lentil, chickpea, faba bean, dry bean – 30 days
  - Corn, soybean, canola, sunflower, flax – 21 days
  - Forage grasses – 14 days
  - Sweet corn – 7 days
  - Alfalfa – not applicable
- Re-entry: DO NOT re-enter treated areas within 12 hours of application.
- Re-cropping: Crops listed on label, tuberous and corm vegetables, fruiting vegetables, pome fruits and stone fruits may be planted immediately following last application. DO NOT plant any other crops within one year of application of Priaxor.
- Storage: Store this product away from food or feed.
- Environment: Maintain specified buffer zones. Toxic to aquatic organisms, small mammals, and non-target terrestrial plants.

Hazard Rating:

Danger Poison – Skin irritant

For an explanation of the symbols used here see pages 7 and 8.

Proline 480 SC

</thead>
</table>
| Lentil | Control of ascochyta blight (*Ascochyta lentis*)  
White mould (*Sclerotinia sclerotiorum*) | 125 to 170 mL² | Apply at the beginning of flowering or at the first sign of disease.  
A maximum of 340 ml/ac can be applied per crop year for lentil.  
After the initial application, 1 additional application may be made 10 to 14 days afterwards if conditions remain favourable for continued or increased disease development.  
Apply the higher rate when conditions favour disease development or when growing less disease resistant varieties.  
Maximum of two applications per year. |
| Flax (linseed), borage | Control of sclerotinia stem rot (*Sclerotinia sclerotiorum*) | 125 to 150 mL² | Apply at 20 to 50% bloom. Best protection will be achieved when the fungicide is applied prior to petals beginning to fall, allowing the maximum number of petals to be protected. Use high rate in fields with a history of heavy disease pressure or for dense crop stands. |
| Sunflower¹ (excluding those for export), safflower | Suppression of sclerotinia head rot (*Sclerotinia sclerotiorum*) | 170 mL¹ | Apply when crop is in 10 to 50% disk flower bloom stage. |

¹ Apply with non-ionic surfactant, i.e. *AgSurf* or *Agral 90* at 0.125% v/v.  
² May be applied with the lowest rate of non-ionic surfactant, i.e. *AgSurf* or *Agral 90*.

Application Information:

- DO NOT apply during periods of dead calm or when winds are gusty. Ensure uniform coverage.
- **Water Volume:**
  - *Ground*: minimum 40 L per acre.  
  - *Aerial*: minimum of 20 L per acre. Follow detailed label recommendations for aerial application.

How it Works:

The active ingredient prothioconazole is a triazole fungicide with broad-spectrum systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Bayer supports the following mixes that are not on the *Proline 480 SC* label. Apply mixes according to the most restrictive use limitations for either product:
- **Insecticides:** *Decis, Lorsban, Matador, Sevin XLR*

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - *Corn, flax, borage, sunflower, soybean, safflower* – DO NOT exceed 1 application of this product per season.  
  - *Wheat, barley, oat, canola, lentil* – DO NOT exceed 2 applications of this product per season.  
  - *Chickpea* – DO NOT exceed 3 applications of this product per season.
- **Grazing:** No restrictions listed.
- **Preharvest interval:**
  - *Barley, wheat, oat, rye, triticale, millet* – 30 days  
  - *Canola, flax, borage* – 36 days  
  - *Chickpea, lentil* – 7 days  
  - *Corn* – 14 days  
  - *Soybean* – 20 days  
  - *Sunflower, safflower* – 45 days
• **Re-entry:** DO NOT re-enter treated areas within 24 hours of application.
• **Re-cropping:** May be re-planted with any crop specified on the label as soon as practical. For crops not listed, wait 30 days.
• **Storage:** DO NOT store at temperatures below freezing. Keep in original tightly closed container and store away from feeds, seeds, fertilizer, plants and food stuffs. Keep away from sources of heat. Shake well before using if stored for more than 1 year.
• **Environment:** Toxic to aquatic organisms. DO NOT apply directly to freshwater, estuaries or marine habitats. DO NOT contaminate bodies of water by cleaning of equipment or disposal of wastes. Observe the specified buffer zones.

**Hazard Rating:**

⚠️ Caution – Poison

For an explanation of the symbols used here see pages 7 and 8.

• Water Volume:
  • Ground: minimum 80 L per acre.
  • Aerial: 16 to 20 L per acre.

How it Works:

The active ingredient propiconazole is a triazole fungicide with broad spectrum systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

Herbicides: In wheat and barley only, propiconazole may be tank-mixed with one of the following: 2, 4-D amine, MCPA amine, Buctril-M or Parmer and in wheat only, may be applied with Horizon 240EC. In wheat and barley only, Pivot 418 EC, Co-Op Pivot and Fitness may be tank-mixed with Logic M or Brotex 240; Pivot 418 EC, Co-Op Pivot, Bumper 432 EC, Fitness or Nufarm Propiconazole Fungicide may be tank-mixed with Badge or Bromotril 240 EC. In spring wheat and barley only, Tilt 250E or Propel may be tank-mixed with Axial 100EC. Refer to labels for tank-mix precautions.

Tank Mixes:

Fertilizers: Propiconazole may be applied with up to 4 kg per acre (9 lb per acre) of actual nitrogen. The appropriate amount of urea can be dissolved in water and added to the spray tank before adding the fungicide. Excessive nitrogen or application during hot weather may result in crop injury. DO NOT add nitrogen when tank-mixing propiconazole with a herbicide.

Tank Mixes:

Insecticides: In field corn, propiconazole can be tank-mixed with one of the following: Matador 120EC/Silencer 120EC or Ripcord. In legumes, Tilt 250E or Propel can be tank-mixed with Matador 120EC.

Note: Syngenta Canada supports the following mixes that are not on the respective labels. Apply mixes according to the most restrictive use limitations for either product. Application of unlabeled tank-mixes is permitted as long as both products are registered and being used within their registered use pattern (e.g., application rate, application timing, number of applications per season, pre-harvest interval, pest claim etc.).

Propel Tank Mixes:
  • Herbicides: Axial, Broadband, Horizon NG

Tilt Tank Mixes:
  • Herbicides: Liberty, Sierra 2.0, Broadband

Restrictions:

• Resistance management: Refer to page 426.
• Maximum number of applications:
  • Wheat, barley, corn, bean, legume, timothy – DO NOT exceed 2 applications of this product per season.
• Grazing: DO NOT graze animals on treated green crops within 3 days of application. DO NOT feed straw treated with herbicide tank mixes to livestock. DO NOT treat soybean seed for animal feed.
• Preharvest interval:
  • Wheat, oat, barley - 45 days
  • Canola - 60 days
  • Corn - 14 days if tank-mixed with an insecticide
  • Soybean - 50 days
  • Bean - 28 days
  • Timothy - 14 days
• Re-entry: DO NOT allow entry into treated area until dry or for 12 hours; whichever is greater.
• Re-cropping: No restrictions listed.
• Storage: DO NOT freeze. Store products away from food or feed.
• Environment: Toxic to aquatic organisms. DO NOT contaminate any body of water by direct application, drift or by cleaning equipment.

Hazard Rating:

⚠ Warning – Poison (Bumper 432 EC, Pivot 418 EC, Co-Op Pivot, Nufarm Propiconazole Fungicide)
⚠ Caution – Poison (Tilt 250 EC, Propel, Propi Super 25 EC)
⚠ Warning – Eye and Skin Irritant
  Potential Skin Sensitizer
For an explanation of the symbols used here see pages 7 and 8.
**Propulse**

**Company:** Bayer – PCP#30511

</tbody>
</table>

**Application Information:**
- **Water Volume:** Use sufficient water and spray pressure to provide thorough and uniform coverage of plants. DO NOT apply under periods of dead calm. Avoid application of this product when winds are gusty.
- **Ground:** minimum 40 L per acre.

**How it Works:**
The active ingredient prothioconazole is a triazole fungicide with broad-spectrum systemic activity. The active ingredient fluopyram is a carboxamide fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**
None registered.

**Restrictions:**
- **Resistance management:** Refer to page 426. Make no more than 2 sequential applications before switching to a fungicide with a different mode of action.
- **Maximum number of applications:** DO NOT apply more than 605 mL per acre per season.
- **Grazing:** DO NOT graze treated area, and do not harvest for forage or hay for 7 days after application.
• Preharvest interval: DO NOT apply within 14 days of harvest.
• Re-entry: DO NOT re-enter treated areas until 24 hours after application.
• Re-cropping: DO NOT replant to alfalfa for 14 days after application. Dry beans, faba beans, chickpeas, guar, lentils, cereals, corn, soybeans, peanuts, curcurbit vegetables, oilseeds, tuberous and corn vegetables and sugarbeets may be rotated anytime following the last application of Propulse fungicide. All other crops may be replanted 30 days following the last application.
• Aerial Application: DO NOT apply by air.
• Storage: Store product in original container only, away from other pesticides, fertilizer, food or feed. Not for use or storage in or around the home. Do not store below freezing. If stored for one year or longer, shake well before using.
• Environment: This product is toxic to birds and aquatic organisms. When using Propulse consult the product label for buffer zones.

Hazard Rating:
None listed.

Prosaro 250 EC/Prosaro XTR
Fungicide Group 3
Refer to page 427

Company:
Bayer – (Prosaro 250 EC – PCP#29821; Prosaro XTR – 32824)

*NOTE: Prosaro 250EC is no longer manufactured but product still remains in the distribution system. This product may be removed from future editions.

Formulation:
Prosaro 250 EC and Prosaro XTR: 125 g per L prothioconazole and 125 g per L tebuconazole, formulated as an emulsifiable concentrate.
• Container size - 6.5 litres; 104 L tote

Crops, Diseases, Rates and Timing:

<tr>
<td>Barley*</td>
<td>Control of net blotch (Pyrenophora teres), scald (Rhynchosporium secalis), spot blotch (Cochliobolus sativus), septoria leaf blotch (Septoria passerinii), leaf rust (Puccinia hordei), stem rust (Puccinia graminis), stripe rust (Puccinia striiformis), powdery mildew (Erysiphe graminis) Suppression of fusarium head blight (FHB) (Fusarium spp.)</td>
<td>325 mL</td>
<td>FHB: apply within the time period when 70 to 100% of barley heads on the main stem are fully emerged to 3 days after full head emergence. Application at this timing will also control the listed leaf diseases.</td>
</tr>
<tr>
<td>Oat</td>
<td>Control of crown rust (Puccinia coronata), stem rust (Puccinia graminis), stagonospora leaf blotch (Stagonospora nodorum), black stem (Stagonospora avenae syn. Septoria avenae)</td>
<td>325 mL</td>
<td>Apply as a preventative foliar spray when the earliest disease symptoms appear on leaves and stems. Fields should be observed closely for early disease symptoms, particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development</td>
</tr>
</tbody>
</table>

*Prosaro 250 EC and Prosaro XTR may be applied sequentially after an application of Folicur 250EW. The minimum interval between applications is 7 days.
Application Information:
- DO NOT apply during periods of dead calm or when winds are gusty. Ensure uniform coverage.
- Water Volume:
  - Ground: minimum 40 L per acre.
  - Aerial: minimum 20 L per acre. Follow detailed label recommendations for aerial application.

How it Works:
The active ingredients prothioconazole and tebuconazole are demethylation inhibitors with broad-spectrum systemic activity. To be used as a preventative fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.
Bayer supports the following mixes that are not on the Prosaro 250 EC label. Apply mixes according to the most restrictive use limitations for either product:
- Insecticides: Lorsban

Restrictions:
- Resistance management: Refer to page 426.
- Maximum number of applications: DO NOT exceed 1 application of this product per season.
- Grazing: DO NOT allow livestock to graze or feed green forage to livestock prior to 6 days after treatment with Prosaro 250 EC fungicide. Straw cut after harvest may be fed or used for bedding.
- Preharvest interval: 36 days
- Re-entry: DO NOT re-enter treated fields until 12 hours post-application.
- Re-cropping: Treated areas may be replanted with any crop specified on the label and soybean as soon as practical after last application. For oat, DO NOT plant back within 30 days of application. For all other crops, DO NOT plant back until 120 days after application. Tebuconazole is persistent and will carryover. It is recommended that any products containing tebuconazole not be used in areas treated with this product during the previous season.
- Storage: DO NOT store in or around the home. DO NOT store at temperatures below freezing. Keep in original tightly closed container and store away from feeds, seeds, fertilizer, plants and food stuffs. Keep away from sources of heat. Shake well before using if stored for more than 1 year. DO NOT contaminate water, food, or feed by storage or disposal.
- Environment: Toxic to birds, small wild animals, aquatic organisms, and non-target plants. As this product is not registered for the control of pests in aquatic systems, DO NOT use to control aquatic pests. DO NOT apply to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff is hazardous to aquatic organisms in neighbouring areas. To reduce runoff from treated areas into aquatic habitats, avoid application to areas with a moderate to steep slope, compacted soil, or clay. Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body. Follow buffer zones as per the product label.

Hazard Rating:
- Danger Eye irritant
- Caution – Skin irritant

For an explanation of the symbols used here see pages 7 and 8.

</table>

* BASF Canada does not recommend use of *Headline EC* alone on potato due to potential for fungicide resistance.

** Minor use label expansion.

Application Information:

- Water Volume:
  - **Ground:** Use a minimum water volume of 40 L per acre on oilseeds, cereals, pulses, alfalfa and grasses; use 80 L per acre on potatoes. Ensure thorough coverage of foliage.
  - **Aerial:** Use a minimum water volume of 20 L per acre. Ensure thorough coverage of foliage. DO NOT apply more than 160 mL per acre by aerial application.
  - **Pivot or Sprinkler irrigation (Headline EC):** DO NOT exceed 0.64 cm (1/4 inch) (63,500 L) per hectare. DO NOT apply registered tank mixes in potato, chickpea, and canola by pivot or sprinkler irrigation. Apply only through overhead sprinkler systems including centre pivot and lateral move containing low pressure drop nozzles.

How it Works:

The active ingredient pyraclostrobin is a strobilurin fungicide with broad spectrum contact and systemic activity. To be used as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

*MPower Spade:* no registered tank mixes.

*Herbicides:* *Headline EC* at a rate of 120 to 160 mL per acre can be tank mixed with *Odyssey* on canola quality *Brassica juncea* with Clearfield trait, *Ares, Odyssey, Odyssey DLX*, and *Tensile* on Clearfield canola, *Liberty Herbicide* (150SN or 200SN) in glufosinate ammonium tolerant canola (eg: LibertyLink canola), registered glyphosate herbicides in glyphosate-tolerant canola (eg: Roundup Ready), *Poast Ultra* in canola, and *Equinox EC* in canola and canola quality *Brassica juncea*. 
**Fungicides:** On chickpea, *Headline EC* at a rate of 160 to 240 mL per acre must be applied in tank-mix with 140 to 170 grams per acre *Lance* for control of ascochyta blight. On potatoes, *Headline EC* at rates of 180 to 270 mL per acre may be applied in tank-mix with *Bravo 500* at label rates, additional use recommendations, restrictions, and precautions for the control of late blight. On canola, *Headline EC* can be tank mixed with *Lance Fungicide* at 142 grams per acre at 20 to 50% flowering to control sclerotinia stem rot and suppress black spot.

**Restrictions:**

- **Resistance management:** Refer to page 426.
- **Note:** BASF Canada does not recommend use of *Headline* alone on potato due to potential for resistance.
- **Maximum number of applications:** DO NOT exceed 1 sequential application of *Headline EC* or *MPower Spade* per season. Any subsequent applications of this product must be in combination with a fungicide that contains a different mode of action.
  - **Alfalfa** – DO NOT exceed 1 application per season.
  - **Canola, rapeseed, canola quality Brassica juncea, mustard, flax, dry bean, faba bean, lentil, field pea, chickpea, bluegrass, fescue grass, ryegrass, corn, sunflower** – DO NOT exceed 2 applications of this product per season.
  - **Potato** – DO NOT exceed 3 applications per season.
- **Grazing:** DO NOT graze treated corn crops within 6 days of last application. DO NOT feed alfalfa hay or forage to livestock. All other crops listed can be grazed or fed to livestock.
- **Preharvest interval:**
  - *Barley, rye, wheat, oat* – apply no later than the end of flowering
  - *Corn* – 7 days
  - *Pulses* – 30 days
  - *Forage grasses* – 14 days
  - *Alfalfa* – not applicable
  - *Oilseeds* – 21 days
  - *Potatoes* – 3 days
  - *Soybean* – 21 days
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** Crops listed on label may be planted immediately following last application. Wait 14 days before planting all other crops.
- **Storage:** Store in a cool, dry, locked, well-ventilated area without a floor drain. DO NOT freeze.
- **Environment:** Avoid overspray or drift to sensitive habitats. Maintain specified buffer zones. DO NOT spray non-target terrestrial or aquatic habitats.

**Hazard Rating:**

![Danger – Poison](image)

**Application Information:**

- **Water Volume:**
  - *Ground:* Use sufficient water volume to obtain adequate coverage. Use minimum 60 L per acre.
  - *Aerial:* Use sufficient water volume to obtain adequate coverage. Use minimum 60 L per acre.

**How it Works:**

The active ingredient azoxystrobin belongs to a strobilurin group of fungicides and difenconazole is a triazole fungicide. Together they provide broad spectrum preventative and systematic. To be used as a preventative and curative fungicide application. For more information refer to "Fungicide Modes of Action" on page 426.

**Tank Mixes:**

None registered.

**Restrictions:**

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed three applications per season.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** 14 days
- **Re-entry:** DO NOT re-enter treated areas until 12 hours after application.
- **Re-cropping:** DO NOT plant any other crop for a period of 60 days following application to the preceding crop unless *Quadris Top* or *Inspire* are registered for that crop.
- **Storage:** Store in cool, dry place. Do not store food, beverages or tobacco products in storage area.
- **Environment:** This product is toxic to aquatic organisms (or invertebrates), fish and mammals. Observe buffer zones outlined in the label.

**Hazard Rating:**

⚠️ Caution – Eye irritant

As of January 1, 2019 www.keepingitclean.ca indicates that grain from canola crops treated with this product may have market access concerns. Please see page 10 for more details AND consult potential grain buyers before using this product.

*NOTE: Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for fungicide performance. Those who apply these uses do so at their own risk.

Application Information:
- DO NOT apply during periods of dead calm or when winds are gusty. Ensure uniform coverage.
- Water Volume:
  - *Ground*: minimum 80 L per acre.
  - *Aerial*: minimum 20 L per acre.
- Consult nozzle manufacturers for specific nozzle and pressure recommendations. Ensure thorough coverage for optimal disease control/suppression.

How it Works:
The active ingredient metconazole is a broad spectrum triazole demethylation inhibitor (DMI) fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- Resistance management: Refer to page 426.
- Maximum number of applications:
  - *Canola* – DO NOT exceed more than 115g per acre of this product per season.
  - *Dry bean, field pea, chickpea, lentil* – DO NOT exceed 2 applications of this product per season.
  - *Sunflower* – DO NOT exceed 2 applications of this product per season.
  - *Potato* – DO NOT exceed 3 applications of this product per season at the high rate. DO NOT exceed 4 applications of this product per season at the low rate.
• **Grazing:** No restrictions listed.
• **Preharvest interval:**
  - *Potato* – 1 day
  - *Dry bean, field pea, chickpea, lentil* – 21 days
  - *Canola* – 45 days
  - *Sunflower* – 21 days.
• **Re-entry:**
  - *Potato* – DO NOT re-enter treated areas within 12 hours of application.
  - *Canola* – DO NOT re-enter treated areas within 12 hours of application.
  - *Dry bean, field pea, chickpea, lentil* – DO NOT re-enter treated areas within 1 day of application.
  - *Sunflower* – DO NOT re-enter treated area within 6 days of application.
  - Re-entry intervals maybe longer for more intensive activities in potatoes and legume crops, see label for complete list of re-entry periods.
• **Re-cropping:** A plant back interval of 30 days is required for all crops not listed on the Quash label.
• **Storage:** Store in original tightly closed container. Protect from freezing. Store in cool, dry place. Store this product away from food or feed.
• **Environment:** Avoid run-off from treated areas into aquatic areas. Toxic to aquatic organisms, non-target terrestrial plants and small wild animals.

### Hazard Rating:

![Caution – Poison](image)

Check label for first-aid information.

For an explanation of the symbols used here see pages 7 and 8.

<td></td>
<td></td>
</tr>
</tbody>
</table>

*Suppression only at rates less than 304 mL per acre*
Application Information:

- **Water Volume:**
  - **Ground:** Apply in a minimum of 18 L of water per acre for legume vegetables and soybean. Apply in a minimum of 40 L of water per acre for other crops.
  - **Aerial:** Apply in a minimum of 18 L of water per acre.

How it Works:

The active ingredient azoxystrobin is a methoxyacrylate compound (strobilurin) with broad spectrum contact and systemic activity. The active ingredient propiconazole is a triazole fungicide with broad-spectrum systemic activity. To be used as a preventative and curative fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

**Insecticides:** *Quilt* can be tank-mixed with insecticide *Matador 120EC* for foliar disease and insect control in cereals. Consult each label for pests controlled, precautions, and specific application instructions.

Note: Syngenta Canada supports the following mixes that are not on the *Quilt* label. Apply mixes according to the most restrictive use limitations for either product. Application of unlabelled tank-mizes is permitted as long as both products are registered and being used within their registered use pattern (e.g., application rate, application timing, number of applications per season, pre-harvest interval, pest claim etc.).

  - **Herbicides:** *Axial, Broadband* + registered tank mixes, *Horizon NG, Sierra*
  - **Fungicides:** *Quadris*

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:**
  - *Canola* – DO NOT exceed 1 application of this product per season.
  - *Soybean, dry bean, faba bean, chickpea, field pea, lentil, barley, wheat, rye, triticale, oat, corn* – DO NOT exceed 2 applications of this product per season.
- **Preharvest interval:**
  - *Soybean and dry legume vegetables, canola* – 30 days
  - *Succulent podded and shelled legume vegetables* – 15 days
  - *Soybean hay and dry pea hay* – 14 days
  - *Wheat, barley, rye, triticale, and oat* – 45 days
  - *Field corn, sweet corn, and popcorn* – 14 days
- **Re-entry:** DO NOT re-enter treated fields within 12 hours of application.
- **Re-cropping:** Oat and rye may be planted 45 days after *Quilt* application. DO NOT plant any other crop intended for food, grazing, or any component of animal feed or bedding within 105 days of *Quilt* application to the preceding crop unless the second crop appears on the *Quilt* label.
- **Storage:** Store in a cool, dry, well ventilated area away from feed and foodstuffs, and out of reach of children and animals. DO NOT store at temperatures below freezing. Keep in original container, tightly closed, during storage.
- **Environment:** Azoxystrobin is persistent and will carry over. *Quilt* is toxic to aquatic organisms and is extremely phytotoxic to certain apple varieties. Avoid spraying when the wind is blowing towards a nearby sensitive crop, garden, terrestrial habitat (such as shelterbelt), or aquatic habitat. DO NOT contaminate irrigation or drinking water supplies by cleaning of equipment or disposal of wastes. Avoiding spray drift is the responsibility of the applicator.

Hazard Rating:

⚠️ Caution – Poison and skin irritant

For an explanation of the symbols used here see pages 7 and 8.
Company:
ISK Biosciences Corporation; distributed by Engage Agro Corporation – PCP#30716

Formulation:
400 g per L cyazofamid formulated as a suspension concentrate.
  • Container size - 500 mL and 200 L

Crops, Diseases and Timing:
Control of late blight (Phytophthora infestans) on potato. Begin applications on a 7 day schedule when warning systems forecast disease infection periods or at row closure. Use the low rate under low disease pressure and increase the rate as disease pressure and/or crop development increases, up to the maximum rate. For late blight tuber rot control, ensure that the last 2 to 3 applications prior to desiccation are made at the maximum rate following resistance management practices.

Rates:
40 to 80 mL per acre. Ranman 400SC should be tank mixed with a non-ionic or organo-silicone surfactant (such as Sylgard 309 at 60 mL per acre).

Application Information:
  • DO NOT make sequential applications. After one application alternate with at least one application of fungicide with a different mode of action.
  • Water Volume:
    • Ground: Apply in a minimum of 20 L of water.
    • Aerial: Use sufficient volume to obtain coverage of the foliage, 80 to 240 L per acre.

How it Works:
The active ingredient cyazofamid is a cyanoimidazole fungicide with contact activity. To be used as a preventative fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
  • Resistance management: Refer to page 426.
  • Maximum number of applications: DO NOT exceed 6 applications of this product per season.
  • Grazing: No restrictions listed.
  • Preharvest interval: 7 days
  • Re-entry: DO NOT re-enter treated areas within 12 hours of application.
  • Re-cropping: A plant back interval of 30 days is required.
  • Storage: Store product in original container in a secured dry place separate from other pesticides, fertilizer, food and feed.
  • Environment: 20 m (fixed wing) and 15 m (helicopter) buffer zones for aerial applications in proximity of terrestrial habitats. For freshwater and marine habitats buffer zones for aerial are the same as field sprayer applications.

Hazard Rating:
None listed.
Reason 500SC  
Fungicide Group 11  
Refer to page 427

Company:
Bayer – PCP#27462

Formulation:
500 g per L fenamidone formulated as a suspension concentrate.
  • Container size - 2 L

Crops, Diseases and Timing:
Control of early blight (*Alternaria solani*) and late blight (*Phytophthora infestans*) on potato. Begin application when plants are 15 to 20 cm high or when disease threatens. Apply a fungicide with a different mode of action within 7 to 10 days after each application using the shorter interval when conditions favor disease development. Ensure even application.

Rates:
Apply at 80 mL per acre as a tank mix with either *Dithane DG* at 500 g per acre or *Bravo 500* at 500 mL per acre.

*When using other formulations of mancozeb, adjust application rates to apply 375 g active ingredient per acre.

Application Information:
  • Water Volume:
    • *Aerial:* Use minimum of 14 L per acre at a pressure no less than 300 kPa.

How it Works:
The active ingredient fenamidone is a strobilurin fungicide with contact activity. To be used as a preventative and inhibitive (spore germination and antisporulant) fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Fungicides: To be applied ONLY as a tank-mix with mancozeb fungicides or *Bravo 500*. Follow mixing instructions provided on the label.

Restrictions:
  • Resistance management: Refer to page 426.
  • Maximum number of applications: DO NOT exceed 6 applications or 0.48 L per acre of this product per season.
  • Grazing: No restrictions listed.
  • Preharvest interval: 14 days
  • Re-entry: DO NOT re-enter treated areas until residues have dried.
  • Re-cropping: A 30 day plant-back interval is required for potato and all other crops.
  • Storage: DO NOT allow product to freeze. If stored more than 1 year, shake well before using. Keep away from fire, open flame or other sources of heat. Store in tightly closed container away from fertilizer, seeds, feed or food
  • Environment: For ground application maintain an 8 m buffer zone between areas sprayed and aquatic systems. For aerial application allow a 10 m buffer. Toxic to fish and other aquatic organisms; DO NOT apply where runoff is likely to occur.

Hazard Rating:

⚠️ Caution Poison – Eye Irritant

For an explanation of the symbols used here see pages 7 and 8.
Regalia Maxx

Company:
Marrone Bio Innovations – PCP#30199
Distributed by Engage Agro Corporation

Formulation:
20% extract of Reynoutria sachalinensis formulated as a suspension concentrate.
  • Container size - 4 x 5 L

Crops, Diseases and Timing:
Partial suppression of septoria leaf blotch (Septoria tritici) in wheat. Apply preventatively or when disease systems first appear after initial jointing. Repeat applications in 7 to 14 day intervals depending upon crop growth and disease pressure.

Rates:
0.25% v/v in 160 to 240 L of water per acre.

Application Information:
• DO NOT apply by air. When environmental conditions and plant stage are conducive to rapid disease development use Regalia Maxx in a rotational program with other registered fungicides.
• Water Volume:
  • Ground: minimum of 160 to 240 L per acre

How it Works:
Reynoutria sachalinensis is a plant extract to induce the plants’ natural defense mechanisms against certain fungal and bacterial disease. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
• Resistance management: Refer to page 426.
• Maximum number of applications: No maximum number of applications specified.
• Grazing: No restrictions listed.
• Preharvest Interval: May be applied up to the day of harvest.
• Re-entry: DO NOT re-enter into treated areas until the spray is dried.
• Re-cropping: No restrictions listed.
• Storage: Store in original tightly closed container.
• Environmental Hazards: DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

Hazard Rating:
None listed.
**Revus**

**Company:** Syngenta Canada – PCP#29074

**Formulation:**
250 g per L mandipropamid formulated as a suspension concentrate.
- Container size - 4 x 3.78 L

**Crops, Diseases and Timing:**
Control of late blight (*Phytophthora infestans*) on potato. Begin applications prior to disease development. Continue applications on 7 to 10 day intervals, following resistance management guidelines.

**Rates:**
0.17 to 0.24 L per acre. The use of a non-ionic adjuvant (0.25% v/v) is recommended.

**Application Information:**
- **Water Volume:**
  - **Ground:** Use a minimum water volume of 40 L per acre. In situations where dense canopy or pest pressure is high, use greater water volumes.
  - **Aerial:** Use a minimum water volume of 18 L per acre.
  - **Nozzles:** DO NOT apply using any type of ultra low volume (ULV) spray system.

**How it Works:**
The active ingredient mandipropamid is a carboxylic acid amide (CAA) fungicide with contact and systemic activity. To be used as a preventative and inhibitive (prevents spore germination) fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**
Fungicides: Bravo 500

**Restrictions:**
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 4 applications of this product per season.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** 14 days
- **Re-entry:** DO NOT re-enter treated area within 12 hours of application.
- **Re-cropping:** DO NOT plant any crop which is not registered for use with Revus for a period of 30 days after the last application.
- **Storage:** Store in a cool dry place away from food, beverages, and tobacco products.
- **Environment:** To reduce runoff into aquatic habitats avoid application to areas with a moderate to steep slope, compacted soil, or clay. Runoff into aquatic habitats may be reduced by including a vegetative strip between the treated area and the edge of the water body.

**Hazard Rating:**
- Caution – Poison
- Warning – Skin Irritant
- Potential Skin Sensitizer

For an explanation of the symbols used here see pages 7 and 8.
Ridomil Gold Products

Company:
Syngenta Canada

- (Ridomil Gold/Bravo – PCP#26443; Ridomil Gold SL/Bravo – PCP#29239; Ridomil Gold 480EC – PCP#25384; Ridomil Gold 480SL – PCP#28474)

Formulations:

**Ridomil Gold/Bravo** - 500 g per L chlorothalonil and 480 g per L metalaxyl-M.
- Container size - 8.83 L jug twin-pak

**Ridomil Gold SL/Bravo** - 500 g per L chlorothalonil and 480 g per L metalaxyl-M formulated as a soluble concentrate.
- Container size - 8.83 L jug twin-pak

**Ridomil Gold 480EC** - 480 g per L metalaxyl-M formulated as an emulsifiable concentrate.
- Container size - 4 x 3.78 L jugs

**Ridomil Gold 480SL** - 480 g per L metalaxyl-M formulated as a solution.
- Container size - 10 x 0.5 L or 4 x 3.78 L jugs

Crops, Diseases, Rates and Timing:

<table>
<thead>
<tr>

<tr>
<td>Potato</td>
<td><strong>Ridomil Gold/Bravo, Ridomil Gold SL/Bravo:</strong> Early blight (<em>Alternaria solani</em>), late blight (<em>Phytophthora infestans</em>), late blight tuber rot, botrytis vine rot (<em>Botrytis cinerea</em>) Suppression of pythium leak (<em>Pythium</em> spp.) and pink rot (<em>Phytophthora erythroseptica</em>)</td>
<td><strong>Ridomil Gold/Bravo, Ridomil Gold SL/Bravo:</strong> One 8.83 L jug treats 10 acres. The entire contents of the jug must be added to the spray tank or an improper mixture will result.</td>
<td>Begin preventive applications early in the season when conditions are favorable for disease (before infection), no later than when the plant foliage meets within the row uniformly across the field. Apply a second and third application at 14 day intervals. Other registered contact fungicides should be applied 7 days after each application.</td>
</tr>
<tr>
<td></td>
<td><strong>Ridomil Gold 480EC, Ridomil Gold 480SL:</strong> Suppression of pink rot (<em>Phytophthora erythroseptica</em>) as in-furrow treatment.</td>
<td><strong>Ridomil Gold 480EC, Ridomil Gold 480SL:</strong> 4 mL per 100 m row, applied in-furrow at planting.</td>
<td></td>
</tr>
</tbody>
</table>

Application Information:

- **Water Volume:**
  - **Ground:** use sufficient water to ensure thorough coverage of foliage. Use a water volume of 90 to 640 L per acre.
  - **In-furrow treatment:** use a minimum of 12 L per acre. For tank mixes with *Quadris* water volume should be 20 to 56 L per acre.
  - **Aerial:** use a minimum water volume of 20 L per acre.

How it Works:

The active ingredient metalaxyl is an acylaniline fungicide with systemic activity. The active ingredient chlorothalonil is a chloronitrile fungicide with contact activity. To be used as a preventative fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

*Ridomil Gold/Bravo, Ridomil Gold SL/Bravo* - None registered.

*Ridomil Gold 480EC, Ridomil Gold 480SL* - May be tank mixed with *Quadris* for in-furrow treatment to control rhizoctonia stem rot, stolon canker, black scurf and suppression of pink rot.
Restrictions:

- **Resistance management**: Refer to page 426.
- **Maximum number of applications**:
  - **Ground/aerial** *(Ridomil Gold/Bravo, Ridomil Gold SL/Bravo)* – DO NOT exceed 3 applications of this product per season.
  - **In-furrow** *(Ridomil Gold 480EC, Ridomil Gold 480SL)* – DO NOT exceed 1 application of this product per season.
- **Grazing**: No restrictions listed.
- **Preharvest interval**: 14 days for Ridomil Gold SL/Bravo
- **Re-entry**: Ridomil Gold 480EC, Ridomil Gold 480SL – DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping**: A plant back interval of 30 days for root crops is required after the in-furrow application.
- **Storage**: Protect from excessive heat.
- **Environment**: DO NOT apply where runoff is likely to occur. DO NOT use on coarse textured gravelly soils, soils with less than 2% organic matter or in areas where the water table may be high. Avoid application by ground or air near or around bodies of water. DO NOT contaminate streams or ponds by spray drift, by cleaning equipment, or disposal of wastes. A buffer zone of 100 m for aerial application and 15 m for ground application should be observed to protect water bodies.

Hazard Rating:

*Ridomil Gold 480SL*

- Caution Poison. Warning – Eye irritant, skin irritant

For an explanation of the symbols used here see pages 7 and 8.

---

**Scala SC**

**Fungicide Group 9**

*Refer to page 427*

**Company:**
Bayer – PCP#28011

**Formulation:**
400 g per L pyrimethanil formulated as a suspension concentrate.
  - Container size – 6.07 L

**Crops, Diseases and Timing:**
Control of early blight *(Alternaria solani)* on potato. Apply when plants are 15 to 20 cm high or when disease threatens. Repeat applications at 7 to 14 day intervals or as necessary to maintain disease control. If severe disease conditions exist, use the 7 day interval. Minimum spray interval is 7 days. Ensure complete coverage.

**Rates:**
Apply at 300 mL per acre as a tank mix with Bravo 500.

**Application Information:**
- **Water Volume**:
  - **Ground**: minimum of 120 L per acre.
  - **Aerial**: minimum of 14 L per acre.
**How it Works:**
The active ingredient pyrimethanil is an anilinopyrimidine fungicide with contact and systemic activity. To be used as a preventative fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**
**Fungicides:** To be applied ONLY as a tank mix with *Bravo 500*. Follow mixing instructions provided on the label.

**Restrictions:**
- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 6 applications or 2.4 L per acre of this product per season.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** 7 days
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** A 30 day plant-back interval is required for potatoes and wheat and 130 days for all other crops.
- **Storage:** DO NOT allow product to freeze. If stored more than 1 year, shake well before using. Store in tightly closed container away from fertilizer, seeds, feed or food.
- **Environment:** Maintain a 1 m buffer zone between areas sprayed and aquatic systems. Toxic to aquatic organisms. DO NOT apply where runoff is likely to occur.

**Hazard Rating:**

⚠️ Caution Poison – Skin irritant

For an explanation of the symbols used here see pages 7 and 8.

### Sercadis

**Company:**
BASF Canada – PCP#31697

**Formulation:**
300 g per L fluxapyroxad formulated as a suspension concentrate.
- Container size - 2 x 1.35 L

**Crops, Diseases, Rates and Timing:**

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Application Rate (per acre)</th>
<th>Application Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Rhizoctonia canker (<em>Rhizoctonia</em> spp.)</td>
<td>135 mL</td>
<td>Apply in-furrow.</td>
</tr>
<tr>
<td></td>
<td><em>Early blight</em> (<em>Alternaria solani</em>)</td>
<td>68-135 mL</td>
<td>Apply to foliage prior to disease development.</td>
</tr>
<tr>
<td></td>
<td><em>Sclerotinia stem rot</em> (<em>Sclerotinia sclerotiorum</em>)</td>
<td>135 mL</td>
<td>Apply at the beginning of flowering. Apply a second time 7 to 14 days later is disease persists or weather conditions are favorable for disease development.</td>
</tr>
</tbody>
</table>

**Application Information:**
- **Water Volume:**
  - **Ground:** minimum 40 L per acre.
  - **Aerial:** minimum 20 L per acre.
How it Works:

The active ingredient fluxapyroxad is a carboximide (SDHI) fungicide with system activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

In foliar applications always tank mix Sercadis with an alternate mode of action effective against the targeted disease. BASF Canada supports the tank mix of Sercadis with Polyram DF, Dithane and Bravo in potato. In foliar applications, the use of a non-ionic surfactant at 0.125 v/v is recommended.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed 3 applications of this product per season
- **Grazing:** No restrictions listed.
- **Preharvest Interval:** 7 days
- **Re-entry:** Re-entry interval after application is 12 hours.
- **Re-cropping:** Tuberous and corm vegetables, sugar beets, legume vegetables, fruiting vegetables, pome fruits, stone fruits, cereal and oilseeds may be planted immediately following the last application. A plan-back interval of one year is required for all other crops.
- **Storage:** Store this product away from food or feed.
- **Environmental Hazards:** Observe buffer zones specified on label. The use of this chemical may result in contamination of ground water, particularly in areas where soils are permeable (for example sandy soils) and/or the depth of the water table is shallow.
- **Toxicity:** Toxic to aquatic organisms and small mammals

Hazard Rating:

Warning – contains the allergen soy

</tr>
</tbody>
</table>

Application Information:

- **Water Volume:**
  - Use water volumes to give good canopy penetration and coverage of plant parts to be protected.
  - Ground application only for all crops, except canola (ground or air).

How it Works:

\textit{Bacillus subtilis} is a bacterium that works as a bio-fungicide to prevent infection of labeled diseases by multi-site biochemical activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** No restrictions listed.
- **Grazing:** No restrictions listed.
- **Preharvest interval:** Can be applied up to and including the day of harvest.
- **Re-entry:** No restrictions listed.
- **Re-cropping:** No restrictions listed.
- **Storage:** Maximum storage period of two years at room temperatures up to 25°C. Store in a dry area inaccessible to children. Store in original container.
- **Environment:** DO NOT contaminate water, food, or feed by storage and disposal.

Hazard Rating:

None listed.

Potential skin sensitizer.
Serenade Soil

Company:
Bayer – PCP#30647

Formulation:
1.34% Bacillus subtilis (QST 713 strain) formulated as a wettable powder.
- Container sizes – 9.46L, 511L

Crops, Diseases and Timing:
Suppression of rhizoctonia root rot, black scurf and stem canker (Rhizoctonia solani), phytophthora root rot and pink rot (Phytophthora erythroseptica), pythium root rot (Pythium spp.) and fusarium root rot (Fusarium spp.). Apply in furrow at planting.

Rates:
Apply at 1.1 to 5.7 L per acre in furrow at seeding.

Application Information:
- Water Volume:
  - Apply as an in-furrow spray in the appropriate amount of water per acre for crop at planting.

How it Works:
Bacillus subtilis is a bacterium that works as a bio-fungicide to prevent infection of labeled diseases by multi-site biochemical activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- Resistance management: Refer to page 426.
- Maximum number of applications: No restrictions listed.
- Grazing: No restrictions listed.
- Preharvest interval: Can be applied up to and including the day of harvest.
- Re-entry: No restrictions listed.
- Re-cropping: No restrictions listed.
- Storage: Maximum storage period of two years at room temperatures up to 25°C. Store in a dry area inaccessible to children. Store in original container.
- Environment: DO NOT contaminate water, food, or feed by storage and disposal.

Hazard Rating:
None listed.
Potential skin sensitizer.
Tanos 50 DF

Company:
Corteva AgriScience Division of DowDuPont – PCP#27435

Formulation:
25% famoxadone and 25% cymoxanil formulated as a dry flowable.
  - Container size - 4 x 3.4 kg

Crops, Diseases and Timing:
*Potato* - Early blight (*Alternaria solani*) and late blight (*Phytophthora infestans*). Make the first application following one or two applications of a preventative broad spectrum fungicide such as chlorothalonil or mancozeb. A minimum 12 day application interval must pass between the first and second application of Tanos 50 DF. A minimum 24 day application interval must pass between the second and third application of Tanos 50 DF. Fungicides other than Tanos 50 DF may be used as necessary to protect the crop during these intervals.

Rates:
225 to 340 g per acre.

Application Information:
- Water Volume:
  - *Ground*: Use sufficient water to obtain thorough coverage. With a conventional sprayer use no less than 100 to 120 L per acre. With an air-assisted sprayer use no less than 44 L per acre.
  - *Aerial*: minimum 20 L per acre.

How it Works:
The active ingredient cymoxanil is a cyanoacetamideoxime fungicide with locally systemic activity. The active ingredient famoxadone is a strobilurin fungicide with broad spectrum activity. To be used as a preventative, curative and inhibitive (against sporulation) fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Tank mix solutions containing boron may affect product solubility. When using boron containing solutions, add the correct amount of Tanos 50 DF first and boron containing solution last.

Restrictions:
- **Resistance management**: Refer to page 426.
- **Maximum number of applications**: DO NOT exceed 6 applications of this product per season.
- **Grazing**: No restrictions listed.
- **Preharvest interval**: 14 days
- **Re-entry**: DO NOT re-enter treated areas within 24 hours of application.
- **Re-cropping**: Crops that are on the product label may be planted back at any time. A 30-day plantback interval is required for cereal grains. All other crops may be planted following a 1 year interval.
- **Storage**: Store product closed in original container only. Protect against humid air and water. Avoid contact with food, drink and livestock feed material.
- **Environment**: Toxic to fish and aquatic organisms. Observe prescribed buffer zones. Toxic to birds, mammals and harmful to beneficial arthropods. Minimize off-target drift to reduce the effects on wildlife at the field boundary. DO NOT apply to areas prone to run-off.

Hazard Rating:

![Warning Poison – Eye irritant](Warning.png)

For an explanation of the symbols used here see pages 7 and 8.
**Company:**

Bayer (*Folicur 250EW* – PCP#29820, *Palliser* – PCP#30491)

Nufarm Agriculture Inc. (*Hornet 432 F* – PCP#32500)

*NOTE: Folicur 250EW is no longer manufactured but product still remains in the distribution system. This product may be removed from future editions.*

**Formulations:**

*Folicur 250EW* – 250 g per L tebuconazole formulated as an emulsion in water.
- Container size - 8.1 L

*Palliser* – 432 g per L tebuconazole formulated as a suspension.
- Container size - 9.46 L

*Hornet 432 F* – 432 g per L tebuconazole formulated as a suspension.

</tr>
</tbody>
</table>

**Timing of application is critical:**
Apply within the time period from when at least 75% of the wheat heads on the main stem are fully emerged to when 50% of the heads on the main stem are in flower.

**Spray coverage is essential for optimum efficacy:** Spray equipment must be set to provide good coverage to heads (e.g. forward and backward mounted nozzles, or nozzles that have a two-directional spray).

**Use the higher rate when weather conditions are conducive for disease.**

* Palliser and Hornet 432 F are recommended to be used with a registered non-ionic surfactant, such as Agral 90 or AgSurf, at 1.25 L per 1000 L of spray solution.
** Folicur 250EW and Hornet 432F may be applied in sequence with Prosaro 250 EC and Prosaro XTR. The minimum interval between applications is 7 days.
*** Palliser and Hornet 432 F are not registered for control of frogeye leaf spot in soybean.
**** Palliser and Hornet 432 F are not registered for control of powdery mildew in soybean.

Application Information:

- **Water Volume:**
  - **Ground:** minimum 40 L per acre. Ensure thorough coverage of all wheat heads. Avoid excessive water volumes (maximum 80 L per acre) at flowering time because this can increase the risk of infection.
  - **Aerial:** minimum 19 L per acre.

How it Works:

The active ingredient tebuconazole is a triazole demethylation inhibitor (DMI) fungicide with systemic broad-spectrum activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

- **Herbicides:** In spring wheat and barley, Palliser or Hornet 432 F may be tank-mixed with Refine Extra for leaf diseases and respective weeds controlled (consult labels). In spring wheat only, Palliser or Hornet 432 F may be tank-mixed with Buctril M for leaf diseases and respective weeds controlled (consult labels).

- **Insecticides:** For control of orange wheat blossom midge (Sitodiplosis mosellana) in wheat, Palliser or Hornet 432 F may be tank mixed with Lorsban 4E labeled rates. See respective labels for directions and use precautions.

- **Fungicides:** None registered.

Bayer also supports the following mixes that are not on the Folicur 250EW label. Apply mixes according to the most restrictive use limitations for either product:

- **Insecticides:** Decis, Lorsban, Sevin XLR

Nufarm Agriculture Inc. also supports the following mixes that are not on the Hornet 432F label. Apply mixes according to the most restrictive use limitations for either product:

- **Insecticides:** Decis, Matador

Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed one application of this product per season.
- **Grazing:** DO NOT allow livestock to graze or feed green forage to livestock prior to 6 days after treatment. Straw cut after harvest may be fed or used for bedding.
- **Preharvest interval:**
  - Soybean – 20 days
  - Barley, oat and wheat – 36 days
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** Treated areas may be replanted immediately following harvest with any crop listed on the Folicur 250EW and Hornet 432 F labels. For crops not listed on these labels, DO NOT replant treated areas for 120 days after last application.
- **Storage:** Store in a cool, dry place and prevent cross contamination with other pesticides, fertilizers, food and feed.
- **Environment:** Any products containing tebuconazole should not be used in areas treated with this product during the previous season (use only in alternate years). This product is toxic to birds, small wild animals, aquatic organisms, and non-target plants.
  - DO NOT apply directly to water, or to areas where surface water is present. Maintain a buffer zone of 30 m near aquatic areas.
  - Do NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.
Hazard Rating:

⚠️ Danger – Skin irritant
/alert Caution – Eye irritant

For an explanation of the symbols used here see pages 7 and 8.

</tbody>
</table>

**Application Information:**

- **Water Volume:**
  - *Ground:* minimum 40 L per acre.
  - *Aerial:* minimum 18 L per acre.
- DO NOT apply during periods of dead calm.
- DO NOT apply aerially when wind speed is greater than 16 km per hour.

**How it Works:**

Topnotch is composed of two active ingredients; azoxystrobin and propiconazole. Both active ingredients have systemic activity and this mixture can be used for broad spectrum coverage and preventative purpose. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

None registered.

**Note:** ADAMA Canada supports the following mixes that are not on the Topnotch label. Apply mixed according to the most restrictive use limitations for either product:

- **Herbicides:** Axial, Broadband, Clodinafop (Ladder, Ladder All-In), Sierra 2
- **Insecticides:** Silencer 120 EC
Restrictions:

- **Resistance management:** Refer to page 426.
- **Maximum number of applications:** DO NOT exceed one application of this product per year.
- **Preharvest interval:**
  - *Cereals and straw* – 45 days
  - *Forage and hay* – 30 days
- **Re-entry:** DO NOT re-enter treated areas within 12 hours of application.
- **Re-cropping:** A plant back interval of 105 days is required for all crops not listed in this label. Oat and rye may be planted 45 days after application.
- **Storage:** Store in original tightly closed container in a cool dry, well ventilated area away from feed and foodstuffs. DO NOT store below 0˚C.
- **Environment:** Avoid run-off from treated areas into aquatic areas. Toxic to aquatic organisms, certain beneficial insects and may leach to ground water. Avoid application when heavy rain in forecast.

Hazard Rating:

⚠️ Caution Poison – Eye and Skin irritant

For an explanation of the symbols used here see pages 7 and 8.

---

**Trivapro**

*Trivapro is a co-pack of Trivapro A and Trivapro B. At the rates of application for Trivapro, not all diseases listed in the labels of the individual component (Trivapro A and Trivapro B) will be controlled. Please refer to the table below.*

**Company:**

Syngenta Canada – *Trivapro A* PCP#32184; *Trivapro B* PCP#32185

**Formulations:**

*Trivapro A:* 75 g per L azoxystrobin and 125 g per L propiconazole formulated as a suspension.
- Container size - 2 x 8.1 L (case), 320 L (bulk)

*Trivapro B:* 100 g per L benzovindiflupyr formulated as an emulsifiable concentrate.

- Water Volume:
  - *Ground*: minimum of 40 L per acre.
  - *Aerial*: minimum of 20 L per acre.

How it Works:
The active ingredient metconazole is a broad spectrum triazole demethylation inhibitor (DMI) fungicide with systemic activity. The active ingredient pyraclostrobin is a strobilurin fungicide with broad spectrum contact and systemic activity. Best utilized as a preventative application when environmental conditions are favourable for disease development. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- *Resistance management*: Refer to page 426.
- *Maximum number of applications*: DO NOT exceed 2 applications of this product per season.
- *Grazing*: No restrictions listed.
- *Preharvest interval*: Apply no later than end of flowering.
- **Re-entry:** DO NOT re-enter treated areas within 6 days.
- **Re-cropping:** A plant back interval of 35 days is required for all crops not listed on the label.
- **Storage:** Store in original tightly closed container. Protect from freezing.
- **Environment:** Avoid run-off from treated areas into aquatic areas. Toxic to aquatic organisms, non-target terrestrial plants and small wild animals.
  - For ground application, buffer zones must be 1 m for protection of terrestrial habitats and aquatic habitats greater than 1 m deep and buffer zones must be 5 m from aquatic habitats less than 1 m deep.
  - For aerial application, buffer zones must be 10 m for protection of terrestrial habitats and aquatic habitats greater than 1 m deep and buffer zones must be 250 m from aquatic habitats less than 1 m deep.

**Hazard Rating:**

- Danger – Poison
- Eye and skin irritant

For an explanation of the symbols used here see pages 7 and 8.

---

### Vertisan*

**Fungicide Group**

7

Refer to page 427

**Company:**

Corteva Agriscience Agriculture Division of DowDuPont – PCP #30332

**Formulation:**

200 g per L penthiopyrad formulated as an emulsifiable concentrate.

* **NOTE:** This product is no longer manufactured but product still remains in the distribution system. This product may be removed from future editions.

**Crops, Diseases, Rates and Timing:**

</table>

* Use higher rate and shorter interval when disease pressure is high.

Application Information:

- Water Volume:
  - Ground: 45 L per acre.
  - Aerial: 16 L per acre. Use sufficient water to obtain thorough coverage of plants. DO NOT apply under periods of dead calm. Avoid application of this product when winds are gusty.

How it Works:

The active ingredient penthiopyrad is a carboxamide fungicide with broad spectrum, locally systemic and curative properties recommended for foliar and soil borne plant diseases. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Restrictions:

- Resistance management: Refer to page 426. Make no more than 2 sequential applications before switching to a fungicide with a different mode of action.
- Maximum seasonal use rate:
  - Canola, dry legumes, soybean – 1.2 L per acre
  - Cereal grains, corn – 1.4 L per acre
  - Sunflower – 1.8 L per acre
  - Potato – 2 L per acre
- Grazing: Cereals, corn and soybean may be used for grazing or forage 0 days after the last application.
- Pre-harvest interval: DO NOT apply within the following number of days prior to harvest:
  - Canola and dry legumes – 21
  - Soybean and sunflower – 14
  - Corn and potato – 7
  - Cereal grains – no restriction
- Re-Entry: DO NOT re-enter treated areas until 12 hours after application. For corn detasselling do not enter treated areas for 3 days.
- Re-cropping: Crops and crop groups on the Vertisan label as well as the following crops may be planted immediately after harvest: alfalfa, low growing berries (strawberries), Brassica (cole) leafy vegetable, bulb vegetable (onion), cucurbit vegetables (cucumber, melons, squash), fruiting vegetables (tomato, pepper), leafy vegetables (lettuce, celery, spinach), legume vegetables (succulent), root vegetables (carrot, radish, turnip). All other crops cannot be planted until 12 months after last application.
- Storage: Store product in original container only, away from other pesticides, fertilizer, food or feed. Not for use or storage in or around the home. Keep container closed.
- Environment: This product is toxic to aquatic organisms. When using Vertisan consult the product label for buffer zones.

Hazard Rating:

⚠️ Danger – Eye irritant and skin irritant
Potential skin sensitizer

For an explanation of the symbols used here see pages 7 and 8.
Zampro

Fungicide Group
40, 45

Company:
BASF Canada – PCP#30321

Formulation:
225 g per L dimethomorph and 300 g per L ametoctradin formulated as a suspension concentrate.
- Container size - 4 x 4.14 L

Crops, Diseases, Rates and Timing:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Application Rate (per acre)</th>
<th>Application Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Late blight (<em>Phytophthora infestans</em>)</td>
<td>320 to 400 mL</td>
<td>Begin applications prior to disease development and continue on a 5 to 10 day interval. Use the higher rate and shorter interval when disease pressure is high. The addition of a spreading/penetrating adjuvant is recommended to improve disease control performance.</td>
</tr>
<tr>
<td></td>
<td>Tuber blight (<em>Phytophthora infestans</em>)</td>
<td>400 mL</td>
<td>When used in accordance to label recommendations, Zampro also reduces tuber blight when applied immediately prior to or after vine kill.</td>
</tr>
</tbody>
</table>

Application Information:
- Water Volume:
  - *Ground:* minimum 80 L per acre.
  - *Aerial:* minimum 20 L per acre.

How it Works:
The active ingredient dimethomorph is a carboxylic acid amide fungicide with contact, systemic and antisporulant activity. The active ingredient ametoctradin is a quinone x inhibitor fungicide with contact and antisporulant activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None registered.

Restrictions:
- Resistance management: Refer to page 426.
- Maximum number of applications: DO NOT exceed 3 applications of this product per season.
- Grazing: No restrictions listed.
- Preharvest Interval: 4 days
- Re-entry: Re-entry interval after application is 12 hours.
- Re-cropping: A plant back interval of 30 days is required for all crops not listed on the label.
- Storage: Store in original tightly closed container. Protect from freezing.
- Environmental Hazards: Avoid run-off from treated areas into aquatic areas. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.
- Toxicity: Toxic to aquatic organisms.

Hazard Rating:

⚠️ Warning Poison – Eye irritant

For an explanation of the symbols used here see pages 7 and 8.

* Product is to be applied at this rate only by a professional applicator using equipment which will assure complete and uniform coverage.

Application Information:
For use prior to storage or as a seed treatment. Mix the recommended amount of Agrox FL with the amount of water required for the slurry treater equipment to be used. Seed treated by the slurry method should not be bagged or stacked until it has dried. A colourant must be added to this product to colour the treated seed.

How it Works:
The active ingredient captan is a phthalimide fungicide with multi-site protective activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to page 426.
- **Labeling**: Treated seed must be labelled, “This seed has been treated with Agrox FL. Poisonous to man and animals. DO NOT use for food or feed. DO NOT sell to oil mills.”
- **Grazing**: No restrictions listed.
- **Re-cropping**: No restrictions listed.
- **Storage**: DO NOT freeze. Product must be stored at ambient temperatures above 0°C and must not be stored with herbicides, feed, food or fertilizer.
- **Environment**: DO NOT contaminate food, feed, or any body of water.
- **Compatibility with Rhizobia-based inoculants**: No information listed.

Hazard Rating:
Caution – Poison
For an explanation of the symbols used here see pages 7 and 8.
Apron Advance/Apron Maxx RTA + Vibrance 500FS (Co-pack)

Apron Maxx RTA is only available as part of a co-pack with Vibrance 500FS (sedaxane fungicide, page 586), Cruiser Maxx Vibrance Pulses (thiamethoxam, fludioxonil, metalaxyl-M and S-isomer, sedaxane, page 540), Vibrance Maxx RTA (fludioxonil, metalaxyl-M and S-isomer, Page 587)

<td>–</td>
<td>325 mL + 10 mL</td>
</tr>
</tbody>
</table>

* Soybean is a registered crop for treatment with Apron Maxx RTA only.

Application Information:

Apron Advance is a seed treatment formulation for use in commercial seed treatment plants, and for on-farm treatment using auger treating only; do not use in hopper box or seed drill. Apron Maxx RTA is a ready-to-apply seed treatment formulation for use in commercial seed treatment plants and for on-farm treatment using standard gravity flow or mist type seed treatment equipment. Also used in treat-on-the-go air seeders.

These products contain a pigment which will colour the treated seed. However, users are responsible for ensuring that the treated seed, when dried and ready for bagging, storage or seeding has an unnatural colour. If the pigment contained in the formulation does not colour the seed adequately, additional colourant must be added to the mixture while treating the seed. Ensure uniform coverage of the seed, as uneven seed coverage may not give the desired level of disease control. Treatment of highly damaged seed or seed known to be of low vigour and poor quality may result in reduced germination and/or reduction of seed and seedling vigour. Allow the seed to dry before bagging, storing or seeding.

How it Works:

Fludioxonil is a phenylpyrrole fungicide with contact activity. Metalaxyl-M is an acylalanine fungicide with systemic activity against diseases caused by the Oomycetes, including Pythium damping-off. Thiamendazole is a benzimidazole fungicide with both contact and systemic activity. Sedaxane is a succinate dehydrogenase inhibitor fungicide with preventative and systemic activity that inhibits fungal metabolism by binding to the succinate dehydrogenase enzyme to disrupt cellular respiration and energy generation. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

Apron Maxx RTA is available in a co-pack with Vibrance 500 FS (Vibrance Maxx). Follow the label directions for each product and use the most restrictive precautions and limitations.

No other tank mixes listed.

Restrictions:

Resistance management: Refer to page 426. Experience has shown that strains of fungus resistant to metalaxyl-M may develop. Failure to control the disease will likely result in crop damage and/or yield losses. If disease appears in a treated field, consult the government extension specialist immediately.

- **Labeling**: All seed treated with Apron Maxx RTA + Vibrance 500 FS must be labelled “This seed has been treated with fludioxonil metalaxyl-M and sedaxane fungicides. DO NOT use for food, feed or oil purposes”. All seed treated with Apron Advance must be labelled “This seed has been treated with thiamendazole, fludioxonil and metalaxyl-M and S-isomer fungicides. Do not use for food, feed or oil purposes”.
- **Grazing**: No restrictions listed.
- **Re-cropping**: DO NOT plant any crop other than soybean, dry bean, chickpea, lentil or dry pea within 30 days to fields in which treated seed was planted.
- **Storage**: Store away from feeds and feedstuffs. Store between 0 and 30°C. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned up.
- **Environment**: This product is toxic to fish and other aquatic organisms. Do not apply directly to aquatic habitats; do not contaminate water by cleaning of equipment or disposal of wastes. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned up.
• **Compatibility with Rhizobia-based inoculants**: These products are compatible with Rhizobia-based inoculants. Check with inoculant manufacturer for details and refer to product labels prior to use. Mixing with inoculants may increase drying time while treating. Recalibrate the seed drill before planting treated seed.

**Hazard Rating:**
None listed.

---

**Clothianidin**

*NipsIt INSIDE 600 Insecticide/Poncho 600 FS/Titan*

Poncho 600 FS is available to commercial seed treaters only. NipsIt INSIDE 600 Insecticide is available for on-farm seed treatment for wheat and potato only. Titan is available for on-farm seed treatment.

**Company:**
Valent Canada Inc. distributed by Nufarm Agriculture (NipsIt INSIDE 600 Insecticide – PCP#28975)
Bayer (Poncho 600 FS – PCP#27453; Titan – PCP#27449)

**Formulation:**
600 g per L clothianidin formulated as a suspension.

- *NipsIt INSIDE 600 Insecticide* container size – 3.78 L
- *Poncho 600 FS* container size – 56.8 L, 100 L, 113 L, 200 L, 1000 L
- *Titan* container size – 1 L, 3.8 L, 10 L, 200 L, 1000 L

</tbody>
</table>

¹ Increasing rates for low, moderate and severe flea beetle pressure.
² Rate of 17 mL per 100 kg of seed provides wireworm suppression only. Use higher rates of 33 to 100 mL per 100 kg of seed on wheat seed to be planted into fields known to have a history of severe wireworm infestations.
³ NipsIt INSIDE 600 insecticide and Poncho 600 FS only.

**Application Information:**

*Poncho 600 FS* is for use in commercial seed treatment facilities with closed transfer systems only. *Poncho 600 FS* DOES NOT contain a colourant. An appropriate colour must be added when this product is applied. Seed treatment must be thoroughly agitated to ensure uniform mixing of product prior to and during application. Treatment of highly mechanically scarred or damaged seed or seed known to be of low vigour and poor quality may result in reduced germination and/or reduction of seed and seedling vigour.

*Titan* is a seed piece treatment. Apply specified rate as a diluted spray onto seed pieces using a well contained, shielded spray system to prevent the loss of any liquid. Apply only in areas with adequate ventilation or in areas equipped to remove spray mist or dust. Agitate or stir spray solution as needed. For optimal insect control good coverage of seed pieces is required. DO NOT dilute with any more than 6 parts water to 1 part *Titan*. Plant seed pieces as soon as possible after cutting and treating.
In canola, rapeseed, Ethiopian mustard (Brassica carinata) and corn NipsIt INSIDE 600 Insecticide is for use with commercial seed treaters (facilities and mobile treaters) with closed transfer including closed mixing, loading, calibrating and closed treatment equipment only. No open transfer of NipsIt INSIDE 600 Insecticide.

In wheat, NipsIt INSIDE 600 Insecticide is for use in commercial seed treatment facilities (with closed transfer including closed mixing, loading, calibrating, and closed treatment equipment only) and for use on-farm (open transfer including open mixing, loading, calibrating, and open treatment equipment is allowed).

NipsIt INSIDE 600 Insecticide contains no colourant. An appropriate colourant must be added when this product is applied.

How it Works:
Clothianidin is a chloronicotinyl insecticide with systemic activity. For more information refer to “Insecticide Groups Based on Modes of Action” on page 600.

Tank Mixes:
None listed for Poncho 600 FS or Titan.

Nufarm Agriculture supports the following seed treatment mixes that are not on the NipsIt INSIDE 600 Insecticide label:
- **Wheat** – For enhanced wireworm protection, an additional 17 to 83 mL of NipsIT INSIDE 600 can be tank-mixed with NipsIT SUITE Cereals OF Seed Protectant.
  - Follow the label directions for each product and use the most restrictive precautions and limitations.

Restrictions:
Resistance management: Refer to page 599. DO NOT make any subsequent application of a group 4 insecticide (in-furrow or foliar application) following treatment with any of these products.

**Note:** When using a seed flow lubricant for planting corn and soybean seed treated with neonicotinoid insecticides (containing the active ingredients clothianidin, imidacloprid or thiamethoxam), use only a dust-reducing fluency agent. Talc and graphite are not permitted.

- **Labeling:** Treated seed must be labelled as follows: “This seed has been treated with clothianidin. DO NOT use for food, feed or oil processing. Store away from feeds and other foodstuffs.
- **Grazing:** None listed.
- **Re-cropping:**
  - For Poncho 600 FS, corn and canola may be replanted at any time.
  - For Titan, corn, and canola and potatoes may be replanted at any time.
  - For all products, a one year plant back interval is required for leafy, root and tuber vegetables.
  - A 30-day plant back is required for cereals, grasses, nongrass animal feeds, soybeans and dry beans.
  - For NipsIt INSIDE 600 Insecticide registered crops may be replanted at any time. A 30-day plant-back interval is required on cereals (except wheat), grasses, non-grass animal feeds, soybeans and dry beans.
- **Storage:** Protect products from freezing. DO NOT contaminate water, food or feed by storage, disposal or by cleaning of equipment. Store in a cool place. DO NOT store in direct sunlight. Store away from food or feed. DO NOT store treated seed above 25°C or in direct sunlight. Treated seed stored for periods in excess of 9 months should be tested for germination before planting.
- **Environment:** These products are toxic to aquatic invertebrates. DO NOT apply directly to water or to areas where surface water is present. DO NOT contaminate water when disposing of equipment wash waters. These products are toxic to birds and mammals. Any spilled or exposed seeds should be incorporated into the soil or otherwise cleaned up from the soil surface.

Hazard Rating:
- **Warning** – Poison

For an explanation of the symbols used here see pages 7 and 8.

---

**Cruiser 5FS**
Contains insecticide only. On-farm use for cereals and pulses up to a maximum application rate of 30 g per 100 kg seed. Higher application rates for commercial seed treaters only.

**Company:**
Syngenta Canada Inc. – PCP#27045
Formulation:
47.6% thiamethoxam formulated as a suspension.
- Container sizes - 23.4L and 56.78 L

¹ Use the higher rate for fields that have a history of moderate to severe insect pressure or when insect populations are high
² Use lower rate for early season suppression of wireworms. For control and/or moderate to high pressure, treat crops at higher rate.
³ The higher rate must be applied by commercial treaters using closed transfer

Application Information:
For small-grain cereals (except oats) and pulse crops, Cruiser SFS may be applied on-farm or by commercial seed treaters. For all other crops, application must be performed in commercial seed treatment facilities. A red colourant MUST be added when Cruiser SFS is applied to grain. Allow the seed to dry before bagging or storing in bulk containers.

How it Works:
Thiamethoxam is a seed treatment insecticide in the neonicotinoid class of chemistry that controls listed chewing and sucking insects through contact and systemic activity. Refer to “Insecticide Groups Based on Modes of Action” on page 600.

Tank Mixes:
For control of seed and soil-borne diseases, Cruiser SFS can be mixed with fungicide seed treatments in a closed transfer system. Refer to label for details. Follow the label directions for each product and use the most restrictive precautions and limitations.

Restrictions:
Resistance management: Refer to page 599.

NOTE: When using a seed flow lubricant for planting corn and soybean seed treated with neonicotinoid insecticides (containing the active ingredients clothianidin, imidacloprid or thiamethoxam), use only a dust-reducing fluency agent. Talc and graphite are not permitted.
• **Labelling:** All seed must be labelled “Seed treated with thiamethoxam insecticide. DO NOT use for food, feed or oil processing.” Consult label for additional labelling requirements.
• **Grazing:** DO NOT graze or feed livestock on treated areas for 45 days after planting.
• **Re-cropping:** No restrictions listed.
• **Storage:** Store away from food and feed. Ideal storage temperature is above freezing and below 30°C. If product should freeze, bring to room temperature, then ensure the contents are mixed well prior to application.
• **Environment:** Products are toxic to aquatic invertebrates and fish. DO NOT apply directly to water or areas where surface water is present. DO NOT contaminate food, feed, domestic or irrigation water supplies, lakes, streams and ponds. If treated seed is accessible to birds or spilled outdoors, promptly clean up or bury to prevent ingestion.

**Hazard Rating:**

⚠️ Caution – Poison

For an explanation of the symbols used here see pages 7 and 8.

---

**Cruiser Maxx Corn**

*Available to commercial seed treaters only.*

Cruiser Maxx Corn is a co-pack containing Maxim Quattro (thiabendazole, azoxystrobin, metalaxyl-M and S-isomer and fludioxonil fungicides, page 563) and Cruiser 5FS (thiamethoxam insecticide, page 535). For more detailed information on component products, consult product pages listed above.

**Company:**

Syngenta Canada Inc. *(Maxim Quattro – PCP#29871, Cruiser 5FS – PCP#27045)*

**Formulations:**

*Maxim Quattro:* 26.5% thiabendazole, 3.32% fludioxonil, 2.65% metalaxyl-M and S-isomer, and 1.33% azoxystrobin formulated as a liquid suspension treatment.
- Container sizes - 5 L to bulk

*Cruiser 5FS:* 47.6% thiamethoxam formulated as a suspension.
- Container sizes - 23.4L and 56.78 L

**Crops, Diseases, Insects and Rates:**

<td>Black scurf (<em>Rhizoctonia solani</em>)</td>
<td>Colorado potato beetle, aphids, and potato leafhopper</td>
<td>20 mL</td>
</tr>
</tbody>
</table>

Application Information:
Apply as a water-based slurry utilizing standard slurry seed treatment equipment. Thoroughly mix the specified amount of product into the required amount of water or tank mix partner for slurry treater and dilution rate to be used. Apply only in areas with adequate ventilation or in areas that are equipped to remove mist or dust.

How it Works:
Thiamethoxam is a systemic chloronicotinyl insecticide, fludioxonil is a phenylpyrrole fungicide with contact activity, and difenoconazole is a triazole fungicide with broad-spectrum systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to pages 426 and 597.

- **Labelling:** No restrictions listed.
- **Grazing:** No restrictions listed.
- **Re-cropping:** Treated areas may be replanted immediately following harvest or as soon as practical following the last application with any crop listed on this label or to sorghum, wheat, barley, canola and pome fruit. Any cover crop planted for erosion control or soil improvement may be planted as soon as practical following the last application. However, the cover crop may not be grazed or harvested for food or feed. For all other crops, a 120 day plant-back interval must be observed.
- **Storage:** If soil conditions are ideal, plant potatoes immediately after application; however, if soil is predicted to be cold and wet for 3 days following application, either a) wait to cut, treat, plant until conditions are favorable or b) cut, treat and store. If cutting, treating and storing, potatoes can be treated with an inert dust to improve suberization. Store properly until conditions improve by making sure that there is adequate cool air (7-10°C) movement through the pile of cut seed potatoes and a relative humidity of 85 to 90%. Temperatures above 10°C promote soft rot in seed. Cut and treated seed should not be piled above 1.8 m in height. Avoid storing treated potatoes for over 2 weeks. When transporting cut and treated seed make sure the seed is covered.
- **Environment:** DO NOT apply any subsequent application of thiamethoxam in-furrow or foliar application or other Group 4 insecticide following seed piece treatment with *Cruiser Maxx Potato Extreme*. DO NOT plant more than 128,700 kg of treated potato seed pieces per day. As this product is not registered for the control of pests in aquatic systems, DO NOT use to control aquatic pests. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

Hazard Rating:
None listed.
Cruiser Maxx Vibrance Beans

Available to commercial seed treaters only.

Cruiser Maxx Vibrance Beans is a co-pack containing Cruiser Maxx Beans (thiamethoxam insecticide, metalaxyl-M and S-isomer and fludioxonil fungicides, available only as part of this co-pack) and Vibrance 500FS (sedaxane fungicide, page 586). For more detailed information on Vibrance 500FS, consult product page listed above.

Company:
Syngenta Canada Inc. (Cruiser Maxx Beans – PCP#28821, Vibrance 500FS – PCP#30438)

Formulations:
Cruiser Maxx Beans: 22.6% thiamethoxam, 1.12% fludioxonil, and 1.70% metalaxyl-M and S-isomer formulated as a suspension.
- Container size - 56.78 L

Vibrance 500FS: 500 g per L sedaxane formulated as a suspension.
- Container sizes - 1.45 L

Product information provided below for Cruiser Maxx Beans. For detailed information on Vibrance 500FS, please consult product page.
¹ Replaces one application of foliar insecticide spray.

Application Information:
For use only in commercial seed treatment facilities with closed transfer. All seed treated with this product must be conspicuously coloured at the time of treatment.

How it Works:
Thiamethoxam is a seed treatment insecticide in the neonicotinoid class of chemistry that controls listed chewing and sucking insects through contact and systemic activity. For more information refer to "Insecticide Groups Based on modes of Action" on page 600. Metalaxyl-M is an acylalanine fungicide with systemic activity against diseases caused by the Oomycetes, including pythium damping-off. The active ingredient fludioxonil is a phenylpyrrole fungicide with contact activity. For more information refer to "Fungicide Modes of Action" on page 426.

Tank Mixes:
Pea: At the low rate (117 mL per 100 kg of seed), Cruiser Maxx Beans must be tank-mixed with 130 mL of Apron Maxx RTA for equivalent disease protection as provided by the high rate of Cruiser Maxx Beans. Follow the label directions for each product and use the most restrictive precautions and limitations.
Restrictions:

Resistance management: Refer to pages 426 and 597.

NOTE: When using a seed flow lubricant for planting corn and soybean seed treated with neonicotinoid insecticides (containing the active ingredients clothianidin, imidacloprid or thiamethoxam), use only a dust-reducing fluency agent. Talc and graphite are not permitted.

• Labelling: All seed must be labelled “This seed has been treated with thiamethoxam insecticide and metalaxyl-M (including S-isomer) and fludioxonil fungicides. Wear long-sleeved shirt, long pants, and chemical-resistant gloves when handling treated seed. Do not graze or feed livestock on seeded area for 45 days after planting. Do not use for food, feed or oil processing. Store away from food and feed. Do not plant any crop other than soybeans, dry bean, chickpeas, lentils, edible-podded and succulent-shelled peas, and dry peas (including field peas) within 45 days to fields in which treated seeds were planted. This product is toxic to fish and other aquatic organisms. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned up.” Additionally, all treated soybean seed for sale or use in Canada must be labelled with the following, “Thiamethoxam is toxic to bees. Dust generated during planting of treated seed may be harmful to bees and other pollinators. To help minimize dust generated during planting, refer to the “Pollinator Protection and Responsible Use of Treated Seed – Best Management Practices” on the Health Canada webpage on pollinator protection at www.healthcanada.gc.ca/pollinators. When using a seed flow lubricant with this treated seed, only a dust reducing fluency agent is permitted. Talc and graphite are not permitted to be used as a seed flow lubricant for soybean seed treated with this insecticide. Carefully follow use directions for the seed flow lubricant. Do not load or clean planting equipment near bee colonies, and avoid places where bees may be foraging, such as flowering crops or weeds. When turning on the planter, avoid engaging the system where emitted dust may contact honey bee colonies. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.”

• Grazing: DO NOT graze or feed livestock on treated areas for 45 days after planting.

• Re-cropping: DO NOT plant any crop other than soybeans, dry beans, chickpeas, lentils and dry peas (including field peas) within 45 days in which treated seeds were planted.

• Storage: Store away from food and feed. Ideal storage temperature is above freezing and below 30°C. Repeated freeze-thawing of Cruiser Maxx Beans will not affect the physical integrity of the product. If product should freeze, bring to room temperature and ensure the contents are mixed well prior to application.

• Environment: This product is toxic to fish and aquatic invertebrates. DO NOT apply this product directly to water or areas where surface water is present. Toxic to bees. Bees can be exposed to product residues in flowers, leaves, pollen, and/or nectar resulting from seed treatment applications. Dust generated during planting of treated seed may be harmful to bees and other pollinators. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil or other surfaces.

• Compatibility with Rhizobia-based inoculants: Cruiser Maxx Beans is compatible with Rhizobium-based inoculants. Please check with inoculant manufacturers for details prior to use.

Hazard Rating:

CV Caution – Poison (Vibrance 500 FS)

TV Caution – Eye and skin irritant (Cruiser Maxx Beans)

For an explanation of the symbols used here see pages 7 and 8.

<th>Crops:</th>
<th>Diseases Controlled</th>
<th>Diseases Suppressed</th>
<th>Insects Controlled</th>
<th>Rate (per 100 kg of seed)</th>
</tr>
</thead>
</table>

### Application Information:

*Cruiser Vibrance Quattro* is for use on-farm. This product can also be applied by commercial seed treaters using closed system transfer. Treat seed in a well-ventilated area. When treating seeds, all workers must wear coveralls over a long sleeved shirt, long pants, chemical-resistant gloves, work boots, sock and a NIOSH-approved dust mask.

### How it Works:

Thiamethoxam is a seed treatment insecticide in the neonicotinoid class of chemistry that controls listed chewing and sucking insects through contact and systemic activity. For more information refer to “Insecticide Groups Based on Modes of Action” on page 600. The active ingredient difenoconazole is a triazole fungicide with broad-spectrum, systemic activity. Metalaxyl-M is an acylalanine fungicide with systemic activity against diseases caused by the Oomycetes, including pythium damping-off. Sedaxane is a succinate dehydrogenase inhibitor fungicide with systemic activity that inhibits fungal metabolism by binding to the succinate dehydrogenase enzyme to disrupt cellular respiration and energy generation. Fludioxonil is phenylpyrrole fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

### Tank Mixes:

None listed.
Restrictions:

Resistance management: Refer to page 426 and 598.

- **Labelling:** Treated seed must be labelled (listing only the applicable active ingredients) as follows: “This seed has been treated with the insecticide, thiamethoxam and the fungicides, difenoconazole, metalaxyl-M (and S-isomer), sedaxane and fludioxonil. Wear coveralls over a long-sleeved shirt, long pants, chemical-resistant gloves, work boots, socks and NIOSH-approved dust mask when handling treated seed, and during planting (including loading, sowing, maintenance, and clean-up). When using closed-cab planting equipment, chemical-resistant gloves and NIOSH-approved dust mask are not required inside cab. Do not graze or feed livestock on seeded area for 45 days after planting. Do not use for food, feed or oil processing. Store away from food and feed. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface." Store away from food and feed.”
- **Grazing:** DO NOT graze or feed livestock on treated areas for 45 days after planting.
- **Re-cropping:** DO NOT plant any crop other than cereals, corn, soybeans, members of Crop Subgroup 6C (dried, shelled peas and beans), members of Crop Subgroup 20A (canola and rapeseed subgroup) or potatoes within 60 days to fields in which treated seed were planted.
- **Storage:** Store away from food and feed. Ideal storage temperature is above freezing and below 30°C. If product should freeze, bring to room temperature, and then ensure the contents are mixed well prior to application.
- **Environment:** Toxic to aquatic organisms. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface. Toxic to bees. Bees can be exposed to product residues in flower, leaves, pollen and/or nectar resulting from seed treatment applications.

Hazard Rating:

⚠️ Warning – Contains the allergen soy

For an explanation of the symbols used here see pages 7 and 8.

¹ Protection provided during early to mid-season growth and development of potatoes only.
² The Lumiderm application rate for cutworms will also provide some early season protection from flea beetle damage.

Application Information:
For corn and registered oilseed crops Fortenza and Lumiderm must be applied in a commercial seed treatment facility using closed transfer equipment. These products contain no colourant. An appropriate seed colourant must be added when this product is applied. Fortenza is designed for on-farm treating for potato seed pieces only using a closed-treatment system. Verimark: In-furrow application: apply as a narrow band in-furrow. For best results, direct spray on the seed pieces in the furrow. Potato seed-piece treatment: Apply only in areas with adequate ventilation or areas equipped to remove spray mist or dust.

How it Works:
The active ingredient cyantraniliprole is a systemic insecticide from the diamides chemical class. For more information refer to “Insecticide Groups Based on Modes of Action” on page 600.

Tank Mixes:
Lumiderm: registered oilseed crops - Prosper EverGol, Helix Vibrance
Fortenza: registered oilseed crops - Vibrance 500 FS; Corn - Cruiser SFS, Maxim Quattro and/or Vibrance 500 FS
Follow the label directions for each product and use the most restrictive precautions and limitations.

Restrictions:
Resistance management: Refer to page 599. DO NOT apply any subsequent application of a Group 28 insecticide (in-furrow, soil or foliar) within 60 days of treatment with any of these products.

- **Labelling:** Seed treated with Lumiderm must be labeled “This seed has been treated with Lumiderm Insecticide Seed Treatment which contain cyantraniliprole. DO NOT use for feed, food or oil processing. Store away from feeds and other foodstuffs. Wear long-sleeved shirt, long pants and chemical-resistant gloves when handling treated seed. This product is toxic to aquatic organisms. Dispose of all excess treated seed. Left over treated seed may be double-sown around the headland or buried away from water sources in accordance with local requirements. Dispose of seed packaging in accordance with local requirements. Cover or incorporate spilled treated seeds.”
  - Seed treated with Fortenza must be labeled “These seeds have been treated with the insecticide cyantraniliprole. When handling and planting treated seed, workers must wear a long sleeved shirt and long pants, chemical-resistant gloves, and work boots. For good hygiene practice, it is also recommended that a NIOSH-approved dust mask be worn during all job activities. Plant treated seed only with closed cab planting equipment. Do not use for food, feed or oil processing. Toxic to bees. Follow best management practices to help minimize dust exposure to pollinators during planting of treated seed; refer to the complete guidance “Pollinator Protection: reducing risk of planting treated seed” on the Health Canada website.”

- **Grazing:** No restrictions listed.
- **Re-cropping:** Registered crops, as well as flax, sunflower, and safflower, may be replanted at any time. For all other crops, do not plant-back within 30 days of seeding with cyantraniliprole treated seed.
- **Storage:** Store product in original container only, away from other pesticides, fertilizer, food or feed. Not for use or storage in or around the home. Keep container closed. To prevent contamination store this product away from food or feed.
  - Fortenza: Ideal storage temperature for the products is above freezing and below 30°C. Repeated freeze-thawing of Fortenza will not affect the physical integrity of the product. If the product should freeze, bring the product back to room temperature and ensure the contents are mixed well prior to application.

Environment: Toxic to aquatic organisms and bees. When this product is applied and used according to label directions, risk to bees is expected to be negligible. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. The use of this chemical may results in contamination of groundwater particularly in areas where soils are permeable and/or the depth to the water table is shallow.

Hazard Rating:
∇ Caution – Eye irritant
For an explanation of the symbols used here see pages 7 and 8.
Emesto Silver

**Company:**
Bayer – PCP#30361

**Formulation:**
100 g per L penflufen, 18 g per L prothioconazole formulated as a suspension.
- Container sizes - 1 L – 200 L

**Crops, Diseases and Rates**

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Rate (per 100 kg of seed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Seed-borne black scurf and stem and stolon canker (<em>Rhizoctonia solani</em>), silver scurf (<em>Helminthosporium solani</em>), fusarium tuber rot (<em>Fusarium</em> spp.)</td>
<td>20 mL</td>
</tr>
</tbody>
</table>

**Application Information:**

*Emesto Silver* is designed to be applied as a diluted spray using equipment that ensures uniform coverage of each seed piece. Apply no more than 150 mL of slurry per 100 kg of seed pieces. Agitate or stir the slurry solution as needed. Apply only in areas with adequate ventilation or in areas that are equipped to remove spray mist or dust. Seed pieces should be treated immediately after cutting. Plant seed-pieces as soon as possible after cutting and treating.

**How it Works:**
The active ingredient penflufen is a carboxamide (SDHI) fungicide with systemic activity. The active ingredient prothioconazole is a demethylation inhibitor with broad-spectrum systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**
Insecticide Seed Treatments: *Titan ST*

Follow the label directions for each product and use the most restrictive precautions and limitations for either product.

**Restrictions:**
Resistance management: Refer to page 426.
- **Labelling:** No restrictions listed.
- **Grazing:** No restrictions listed.
- **Re-cropping:** Potatoes, corn, cereals, legumes, soybean, canola, mustard, rapeseed, borage, flax and crambe may be replanted at any time. For all other crops, DO NOT plant back within 30 days of planting with *Emesto Silver*-treated seed pieces.
- **Storage:** If cut seed needs to be stored or held for a few days, make sure that there is adequate cool air movement through the pile of cut seed potatoes at relative humidity of 85 to 90%. Store cut seed at or below 7°C. Temperatures above 10°C promote soft rot in seed. Cut and treated seed should be piled above 1.8 m in height.
- **Environment:** DO NOT apply this product or treated seed pieces directly to freshwater habitats, estuaries, or marine habitats. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

**Hazard Rating:**
None listed.
**EverGol Energy**

**Company:**
Bayer – PCP#30364

**Formulation:**
38.4 g per L penflufen, 76.8 g per L prothioconazole, 61.4 g per L metalaxyl formulated as a suspension.
- Container sizes - 33.75 L

<td>65 mL</td>
</tr>
</tbody>
</table>

**Application Information:**
*EverGol Energy* is designed for commercial seed treating equipment which can accurately control application rates and provide a good distribution of the chemical into the seed in the mixing chamber. Uniform application to seed is necessary to ensure optimum product performance. This product contains no dye and an appropriate seed colourant must be applied.

**How it Works:**
The active ingredient penflufen is a carboxamide (SDHI) fungicide with systemic activity. The active ingredient prothioconazole is a demethylation inhibitor with broad-spectrum systemic activity. The active ingredient metalaxyl is an acylalanine fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**
**Insecticide Seed Treatments:** *Stress Shield 600*
**Fungicide Seed Treatment:** *Allegiance FL* for control of early-season Phytophthora in soybean.

Follow the label directions for each product and use the most restrictive precautions and limitations for either product.

**Restrictions:**
Resistance management: Refer to page 426.
- **Labelling:** Treated seed must be labeled “This seed has been treated with *EverGol Energy*, which contains penflufen, prothioconazole and metalaxyl. When handling treated seed wear a long-sleeved shirt, long pants and chemical-resistant gloves. DO NOT use for feed, food or oil processing. Store away from feeds and other foodstuffs.”
- **Grazing:** No restrictions listed.
- **Re-cropping:** Registered crops for *EverGol Energy*, as well as canola, mustard, rapeseed, borage, flax, crambe and potato, may be replanted at any time. For all other crops, do not plant-back within 30 days of seeding with *EverGol Energy*-treated seed.
- **Storage:** To prevent contamination store this product away from food or feed. Store in cool, dry area. DO NOT store in direct sunlight. DO NOT allow prolonged storage in temperatures that exceed 40°C or go below -10°C.
- **Environment:** Toxic to aquatic organisms and non-target terrestrial plants. DO NOT discharge effluent containing this product into sewer systems, lakes, streams, ponds, estuaries, oceans or other water. Dispose of all excess treated seed. Left over seed may be double-sown around the headland or buried away from water sources in accordance with local requirements. DO NOT leave exposed treated seed on soil surface. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface. The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or depth to the water is shallow.

**Hazard Rating:**
None listed.
Gaucho CS FL
Available to commercial seed treaters only.

Company:
Bayer – PCP#27174

Formulation:
285.7 g per L imidacloprid, 47.6 g per L carbathiin, 95.3 g per L thiram formulated as a suspension.
  • Container sizes - 10, 100, 1000 L

Crops, Diseases, Insects and Rates:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Insects Controlled^2</th>
<th>Rate (per 100 kg of seed^3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Canola, rapeseed, and mustard (including oilseed mustard)</td>
<td>Seed rot, damping off, seedling blight and early season root rot (Rhizoctonia spp., Pythium spp., and Alternaria spp.); seed-borne blackleg (Leptosphaeria maculans)^1</td>
<td>Flea beetles (early-season)</td>
<td>1400 to 2100 mL</td>
</tr>
</tbody>
</table>

^1 Seed-borne blackleg controlled in canola and rapeseed only.
^2 Under high insect pressure, a foliar insecticide may also be required. Monitor crop regularly for insect infestation levels.
^3 In areas where flea beetle populations are often high, use the higher rates.

Application Information:
For use in commercial seed treaters only. Seed treatment must be thoroughly agitated to ensure uniform mixing of product prior to and during application. DO NOT apply direct heat to container. These products DO NOT contain colourant. A blue colourant must be added when products are applied to oilseeds. Treatment of highly mechanically scarred or damaged seed or seed known to be of low vigour and poor quality may result in reduced germination and/or reduction of seed and seedling vigour.

How it Works:
Imidacloprid is a chloronicotinyl insecticide with systemic activity. For more information refer to “Insecticide Groups Based on Modes of Action”on page 600. Carbathiin is a carboximide fungicide with systemic activity and thiram is a dithiocarbamate fungicide with contact activity. For more information refer to “Fungicide Modes of Action”on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to pages 426 and 597.
  • Labelling: Treated seed must be labelled as follows: “This seed has been treated with Gaucho CS FL seed protectant, which contains imidacloprid, carbathiin and thiram. Do not use for food, feed or oil processing. Store away from feeds and other foodstuffs. Wear a long-sleeved shirt, long pants and chemical-resistant gloves when handling treated seeds.”
  • Grazing: DO NOT graze or feed livestock on treated areas for 4 weeks after planting.
  • Re-cropping: No restrictions listed.
  • Storage: Protect products from freezing. Keep above 10°C prior to and during application. DO NOT store in direct sunlight or above 35°C. Treated seed stored for periods in excess of 9 months should be tested for germination before planting. DO NOT store treated seed above 25°C or in direct sunlight.
  • Environment: These products are highly toxic to birds and aquatic invertebrates. DO NOT apply directly to water or to areas where surface water is present. DO NOT contaminate water when disposing of equipment wash water. Cover or incorporate spilled treated seeds. Leftover treated seed should be double sown around the headlands, or buried away from water sources.

Hazard Rating:
⚠️ Caution – Poison
For an explanation of the symbols used here see pages 7 and 8.
General Storage Disinfectant

Company:
Ag-Services Inc – PCP#14957
Distributed by JEM Holdings Inc. in Saskatchewan and by White Potato Services Ltd. in Manitoba

Formulation:
10% dimethyl benzyl ammonium chloride, formulated as a liquid.
• Container size - 20 L

Crops:
Use for disinfecting storage areas and equipment. Not for direct use on potatoes.

Diseases:
Control of bacterial ring rot and other decay organisms in potato storage.

Rate:
60 mL per 10 L water.

Application Information:
Apply only when storage areas are empty. To disinfect walls and floors of potato storages, clean surfaces thoroughly with a broom or vacuum to remove all dirt and debris. Wash with detergent prior to disinfecting. Then, wash, mop or spray thoroughly with disinfectant solution (60 mL disinfectant in 10 L of water). Allow treated surfaces to remain wet for at least 20 minutes. The same strength solution can be used to disinfect used bags, potato planters and other machinery after all dirt has been removed. Soak bags for at least 1 hour.

Equipment: All handling and planting equipment should be cleaned and treated on a regular basis (daily when preparing seed and seed pieces). Dirt should be removed through washing with detergent prior to disinfection. Treat equipment by mopping and brushing methods.

Storage walls and ceilings: Use 600 mL of disinfectant in 100 L of water. Wash areas with detergent prior to disinfecting. Spray areas using a high pressure jet (up to 4250 kPa pressure) to penetrate cracks, etc. in floors. Spray storage air ducts with a solution of 1.2 L of disinfectant in 100 L of water. Sub-surface air ducts, flumes and plenums should be thoroughly cleaned prior to disinfection.

Tank Mixes:
DO NOT mix with soaps, detergents, foaming agents or surfactants.

Hazard Rating:
Caution – Corrosive

Other precaution: Corrosive, causes severe eye and skin damage. DO NOT get in eyes, on skin or on clothing. Avoid contamination of food. DO NOT breathe mist of diluted chemical created from pressure washer applications. Wear gloves, goggles, rubber boots, a wet suit, and mist respirator when using pressure washer system.

For an explanation of the symbols used here see pages 7 and 8.
Heads Up Plant Protectant

Company:
Heads Up Plant Protectants, Inc. – PCP#29827

Formulation:
63.02% saponins of Chenopodium quinoa formulated as a soluble powder.
- Container sizes - 50 g pouches

Crops and Diseases:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Suppressed</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato (cut or whole tubers)</td>
<td>Rhizoctonia canker and black scurf (Rhizoctonia solani)</td>
</tr>
<tr>
<td>Soybean</td>
<td>Root rot and post-emergence damping-off (Rhizoctonia solani), white mould (Sclerotinia sclerotiorum)</td>
</tr>
<tr>
<td>Dry bean</td>
<td>White mould (Sclerotinia sclerotiorum), root rot and post-emergence damping-off (Rhizoctonia solani)</td>
</tr>
</tbody>
</table>

Rate Information:
Mix 1 gram of product per 1 L of water. Apply 1 L of solution for every 100 to 264 kg of potato seed or for every 163 kg of soybean or dry bean seed.

Application Information:
Treat soybean or dry bean seed by dipping, spraying or dribbling the solution into a rotation auger conveyor or some other approved seed treatment device. Spray application to seeds within an enclosed spray device to ensure thorough coverage.
For seed potatoes, product must be applied to germination seed potatoes, as indicated by obvious sprouting activity coming from potato eyes. This sprouting activity can be from peeking to full sprout length, but before green leaves appear.

How it Works:
The active ingredient saponins of Chenopodium quinoa is made from plant sources. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to page 426.
- Labelling: No restrictions listed.
- Grazing: No restrictions listed.
- Re-cropping: No restrictions listed.
- Storage: Store this product away from food or feed. Store above -12°C.
- Environment: DO NOT contaminate irrigation or drinking water supplies or aquatic habitats. This product is toxic to aquatic organisms.

Hazard Rating:
Caution – Poison
For an explanation of the symbols used here see pages 7 and 8.
Helix Vibrance
Available to commercial seed treaters only.

Company:
Syngenta Canada Inc. - PCP#31454

Formulation:
269 g per L thiamethoxam, 16 g per L difenoconazole, 5 g per L metalaxyl-M and S isomer, 1.7 g per L fludioxonil, and 3.4 g per L sedaxane formulated as a suspension.

- Container sizes - 105 L to Bulk

Crops, Diseases, Insects and Rates:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Insects Controlled</th>
<th>Rate (per 100 kg of seed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Canola, rapeseed, and mustard (both oilseed and condiment types, including Brassica carinata)</td>
<td>Seed-borne blackleg (Leptosphaeria maculans), seed-borne Alternaria (Alternaria spp.), seedling disease complex (damping-off, seedling blight, seed rot, root rot) (Pythium spp., Fusarium spp., Rhizoctonia spp.)</td>
<td>Flea beetles (early-season)</td>
<td>1500 mL</td>
</tr>
</tbody>
</table>

Application Information:
For use only in commercial seed treatment facilities with closed transfer systems. Helix Vibrance is a premix formulation that includes a pigment. However, users are responsible for ensuring that the treated seed, when dried and ready for bagging, has an unnatural colour. If the pigment contained in the formulation does not colour the seed adequately, or to optimize seed coverage, water, additional colourant and polymers can be added to facilitate application. Use standard commercial seed treatment equipment that provides uniform seed coverage to ensure desired level of insect or disease control. Maintain constant product agitation during the seed treatment process. Allow the seed to dry before bagging. Treatment of highly mechanically scarred or damaged seed, or seed known to be of low vigour and poor quality, may result in reduced germination and/or reduction of seed and seedling vigour.

How it Works:
The active ingredient thiamethoxam is a systemic insecticide from the neonicotinoid chemical class. For more information refer to “Insecticide Groups Based on Modes of Action” on page 600. The active ingredient difenoconazole is a triazole fungicide with broad-spectrum systemic activity. The active ingredient metalaxyl-M is an acylalanine fungicide with systemic activity against diseases caused by the Oomycetes class, including Pythium damping off. The active ingredient fludioxonil is a phenylpyrrole chemistry and has contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to pages 426 and 597. DO NOT make any subsequent application of a Group 4 insecticide (i.e. in-furrow or foliar application) following treatment with Helix Vibrance.

- Labelling: Treated seed must be labelled “This seed has been treated with Helix Vibrance which contains insecticide (thiamethoxam) and fungicides (difenoconazole, metalaxyl-M and S-isomer, fludioxonil, and sedaxane). Wear long-sleeve shirt, long pants, and chemical-resistant gloves when handling treated seed. Do not use for food, feed or oil processing. Store away from food and feed.
- Grazing: DO NOT graze or feed livestock on treated areas.
- Re-cropping: DO NOT plant any crop other than those on the Helix Vibrance or Vibrance 500FS labels within 60 days to fields in which seed treated with Helix Vibrance were planted.
- Storage: Store in a well-ventilated, secure area. Store away from food and feed. Ideal storage temperature is above freezing and below 30°C. Repeated freeze-thawing will not affect the physical integrity of the product. If the product should freeze, bring the product back to room temperature and ensure the contents are mixed well prior to application. Lab and field studies have shown that Helix Vibrance treated canola and mustard can be safely stored for 18 months without loss in germination or insect and disease performance. However, due to seed quality and seed storage conditions beyond the control of Syngenta Canada Inc., no claims are made to guarantee the germination of carry-over seed or propagating materials for all crop seed.
• **Environment:** TOXIC to bees, aquatic organisms, birds, and small mammals. Bees can be exposed to product residues in flowers, leaves, pollen and/or nectar resulting from seed treatment applications. Any spilled or exposed seeds must be incorporated into the soil or cleaned up. DO NOT apply directly to water, or to areas where surface water is present. In cleaning of equipment or disposing of wastes, DO NOT contaminate water used for human or animal consumption or by wildlife and aquatic life or for irrigation purposes. If treated seed is spilled outdoors, promptly clean up.

**Hazard Rating:**

⚠️ Caution – Poison

For an explanation of the symbols used here see pages 7 and 8.

---

**Imidacloprid**

*Admire SPT / Alias 240 SC / Sombrero 600 FS / Stress Shield 600*

**Company:**

- Bayer (*Admire SPT* – PCP#27702; *Stress Shield 600* – PCP#30668)
- ADAMA Canada (*Alias 240 SC* – PCP#28475; *Sombrero 600 FS* – PCP#30505)

**Formulations:**

*Admire SPT and Alias 240 SC:* 240 g per L imidacloprid.
- Container sizes – 1 L, 3.78 L. Contains insecticide only.

*Sombrero 600 FS and Stress Shield 600:* 600 g per L imidacloprid. Contains insecticide only.

</tbody>
</table>

1 DO NOT apply any subsequent applications of Group 4 Insecticide (i.e. in-furrow or foliar application) following treatment with *Sombrero 600 FS* or *Stress Shield 600*.

2 For fields with a history of moderate to high wireworm pressure, treat crops 34 to 50 mL per 100 kg seed. Use the higher rate when infestation pressures are expected to be heavy.

3 Use the higher rate for earlier seeding or when insect populations are expected to be high in soybean and peas and for extended control period for aphids in soybean.
Application Information:

May be applied when potato pieces are being cut. Apply specified dosage as a diluted spray onto seed-pieces using a shielded spray system that is well contained and will prevent the loss of any liquid. DO NOT dilute with any more than 3 parts water to 1 part Admire SPT/Alias 240 SC. DO NOT dilute Sombrero 600 FS beyond 6%. Agitate or stir spray solution as needed. Complete coverage of the seed piece is required for optimal insect control. As part of the seed cutting and treating process, application of a fungicide registered for potato seed treatment or an inert absorbent ingredient is recommended. Apply Stress Shield 600 through a slurry applicator seed treater for uniform seed coverage. Allow seeds to dry before bagging or storing in bulk containers.

NOTE: A colourant must be added to Sombrero 600 FS and Stress Shield 600 to colour seed in accordance with the Pest Control Products Act and the Seeds Act Regulations. A blue colourant must be added when this product is applied to an oilseed.

How it Works:

Imidacloprid is a chloronicotinyl insecticide with systemic activity. For more information refer to “Insecticide Groups Based on Modes of Action” on page 600.

Tank Mixes:

Alias 240 SC may be tank mixed with Raxil MD (300 mL per 100 kg seed) for control of certain seed and soil-borne pathogens in wheat, barley, and oat. Alias 240 SC may be tank mixed with Apron Maxx RTA (325 mL per 100 kg seed) for control of certain seed and soil-borne pathogens in soybeans.

Stress Shield 600 is registered for tank mix with the fungicide seed treatments Raxil MD, Raxil PRO, or EverGol Energy in cereals. Stress Shield 600 is registered for tank mix with fungicide seed treatments Allegiance, EverGol Energy, or Apron Maxx RTA in pulses.

Bayer also supports the tank-mix of Trilex EverGol with Stress Shield 600.

Sombrero 600 FS is registered for tank mix with the fungicide seed treatments Raxil MD in cereals.

ADAMA also supports the following tank-mixes with Sombrero 600 FS – metalaxyl, EverGol Energy, Trilex EverGol, Vibrance Maxx, Apron Maxx RTA, and Proseed.

Follow the label directions for each product and use the most restrictive precautions and limitations for either product.

Restrictions:

Resistance management: Refer to page 599. DO NOT apply any subsequent application of imidacloprid in furrow or foliar application, or any other Group 4 insecticide following Admire SPT/Alias 240 SC treatment.

NOTE: When using a seed flow lubricant for planting corn and soybean seed treated with neonicotinoid insecticides (containing the active ingredients clothianidin, imidacloprid or thiamethoxam), use only a dust-reducing fluency agent. 

Talc and graphite are not permitted.

- **Labelling:** All bags containing Sombrero 600 FS/ Stress Shield 600-treated seed must be labeled or tagged as followed: “This seed has been treated with Sombrero 600 FS/ Stress Shield 600, which contains imidacloprid. Do not use for feed, food, or oil processing. Store away from feeds and other foodstuffs”.

- **Grazing:** Cover crops that are used as a rotational crop without a plant-back interval following treatment should not be grazed or harvested for food or feed. Do not graze or feed livestock on areas treated with Sombrero 600 FS and Stress Shield 600 for four weeks after planting. Mustard greens grown or harvested from Sombrero 600 FS-treated seed must not be used for human consumption.

- **Re-cropping:** Use a minimum plant-back interval of 30 days for cereals, 9 months for peas and beans, and 12 months for all other food and feed crops. Green manure and other cover crops not intended for human or animal consumption do not require a plant-back interval following treatment. DO NOT graze or harvest cover crops for food or feed. It is not recommended that this product be used in fields treated with imidacloprid during the previous season.

- **Storage:** Store product in cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food and feed. Store in original container and out of reach of children. Carry-over of Sombrero 600 FS-treated seed is not recommended (treated canola, rapeseed or mustard (condiment-type only) seed stored for periods in excess of 6 months may decrease at a faster rate than untreated seed). Test seed germination if stored for more than 6 months. Do not store Sombrero 600 FS-treated seed above 25°C or in direct sunlight. Do not store Stress Shield 600 in direct sunlight or above 35°C.

- **Environment:** DO NOT plant treated seed pieces when rainfall is forecast for the next 48 hours. DO NOT plant treated seed pieces within 15 metres of well-head or aquatic systems, including marshes, ponds, ditches, streams, lakes, etc. This product is toxic to wildlife. Keep out of lakes, streams, ponds, or other aquatic systems. DO NOT contaminate water when disposing of equipment wash waters. Leftover treated seed should be double sown around the headland, or buried away from water sources such as lakes, streams, ponds or other aquatic systems. Stress Shield 600 spillage and exposed treated seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.

Hazard Rating:

⚠️ Caution – Poison

For an explanation of the symbols used here see pages 7 and 8.
Insure Cereal

Company:
BASF Canada – PCP#30685

Formulation:
17 g per L pyraclostrobin, 17 g per L triticonazole, 10 g per L metalaxyl formulated as a liquid suspension.
- Container sizes - 2 x 9.8 L jug, 120 L Drum, 450 L Tote

<td>Seed rots and pre-emergence damping-off (Fusarium spp., Cochliobolus sativus, Pythium spp.); post-emergence damping-off (Pythium spp.); seedling blight and root rot (Fusarium spp., Pythium spp.); loose smut (Ustilago tritici); common bunt (Tilletia tritici, T. lavies)</td>
<td>Seedling blight, root rot (Cochliobolus sativus)</td>
<td>300 mL</td>
</tr>
</tbody>
</table>

Application Information:
Insure Cereal is a ready to use seed treatment formulation. This product is for use in commercial seed plant, in on-farm standard gravity flow or mist type treatment machines, and in on-the-go air seeder treatment systems. Agitate or shake well prior to usage. Uneven seed coverage may result in poor levels of disease control. Seed should be well conditioned and cleaned prior to treating. Treated seed should not require drying after treatment.

How it Works:
The active ingredient pyraclostrobin is a strobilurin fungicide with broad spectrum contact and systemic activity. The active ingredient triticonazole is a triazole fungicide that provides systemic broad spectrum activity. The active ingredient metalaxyl is an acylalanine fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to page 426.
- **Labelling:** Treated seed must be labeled “This seed has been treated with Insure Cereal containing fungicides pyraclostrobin, triticonazole and metalaxyl. Workers handling or planting treated seed must wear long-sleeved shirt, long pants, chemical-resistant gloves, shoes and socks, and respiratory protection (i.e. NIOSH/MSHA/BHSE approved respirator or fresh air hood). Respiratory protection is not required when workers are in a closed cab tractor. A closed cab is a chemical resistant barrier that completely surrounds the occupant of the cab and prevents contact with the pesticide or treated surfaces outside the cab. DO NOT use for food, feed or oil processing. Store away from feed or food stuff. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.”
- **Grazing:** No restrictions listed.
• **Re-cropping:** No restrictions listed.

• **Storage:** Store in original containers with lid tightly closed. Store away from children, animals, feed stuffs, fertilizers and seed. Protect from frost and freezing. DO NOT store treated seed for more than 18 months. Store treated seed in cool, dry conditions.

• **Environment:** Ensure proper soil incorporation of the seeds. DO NOT feed treated seed to, or otherwise expose, wildlife or domestic birds. DO NOT contaminate domestic or irrigation water supplies, lakes, streams, ponds or any body of water with the chemical, used containers, treated seed or bags. DO NOT contaminate water by cleaning of equipment or disposal of wastes.

### Hazard Rating:

- Caution – Poison
- Caution – Eye irritant and potential skin sensitizer

**Application Information:**

*Insure Cereal FX4* is a ready-to-use broad spectrum fungicide seed treatment in a waterbased formulation that provides preventive seed and seedling protection. For use on farm and on closed transfer commercial seed treatment facilities. Closed transfer includes closed mixing, loading, calibrating and closed treatment equipment.

Apply *Insure Cereal FX4* using standard slurry, gravity flow or mist-type seed treatment application equipment. Agitate or shake well prior to use. Thorough seed coverage will offer the best protection of the seed from seed-, soil-borne, and seedling diseases. When used at the recommended rate of 300 mL/100 kg seed, no additional dyes or dilutions with water are needed unless recommended by the
Seed Treatments

Insure Pulse

Company:
BASF Canada – PCP#32011

Formulation:
17 g/L pyraclostrobin, 17 g/L fluxapyroxad and 10 g/L metalaxyl formulated as a liquid flowable.

• Container sizes - 9.8L, 120 L Drum, 450 L Tote

How it Works:
Pyraclostrobin is a strobilurin fungicide with systemic broad spectrum activity against seed and soil borne diseases. It inhibits fungal metabolism by blocking mitochondrial respiration. Fluxapyroxad is a carboximide fungicide that provides systemic broad-spectrum protection against seed- and soil-borne diseases. Triticonazole is a triazole based fungicide that provides systemic broad spectrum protection against seed and soil borne diseases. Metalaxyl is an acylanine fungicide with systemic activity against diseases caused by Oomycete fungi, most commonly known as Pythium.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to page 426.

• Labelling: Treated seed must be labelled as follows “This seed has been treated with Insure Cereal FX4 containing fungicides pyraclostrobin, fluxapyroxad, triticonazole and metalaxyl. Workers handling or planting treated seed must wear long-sleeved shirt, long pants, chemical-resistant gloves, shoes and socks. Workers handling treated seed should wear suitable dust mask. DO NOT use for food, feed or oil processing. Store away from feed and food stuff. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.”

• Grazing: No restrictions listed.

• Re-cropping: No restrictions listed.

• Storage: Store in original tightly closed container and the ideal storage temperature is above freezing and below 30°C. If Insure Cereal FX4 freezes, bring to room temperature and agitate prior to use. To prevent contamination, store this product away from food and feed. Store in cool, dry, locked, well-ventilated area without floor drain.

• Environment: Ensure proper soil incorporation of the seeds. DO NOT feed treated seed to, or otherwise expose, wildlife or domestic birds. If treated seed is spilled outdoors or in areas accessible to birds, promptly clean up or bury to prevent ingestion. Ensure proper disposal of any surplus treated seed not intended for later planting. DO NOT contaminate domestic or irrigation water supplies, lakes, streams, ponds or any body of water with the chemical, used containers, treated seed or bags, which have held treated seed. DO NOT contaminate water by cleaning of equipment or disposal of wastes. Unused or leftover treated seed should not be stored where there is a chance of it becoming mixed with untreated seed.

Toxic to aquatic organisms. The use of this product may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) or the water table is shallow. To reduce runoff from treated areas into aquatic habitats, consider the characteristics and conditions of the site before treatment. Site characteristics and conditions that may lead to runoff include, but are not limited to, heavy rainfall, moderate to steep slope, bare soil, poorly draining soil (e.g. compacted or fine-textured soils such as clay). Avoid application of this product when heavy rain is forecast.

Hazard Rating:

⚠️ Caution – Poison
⚠️ Caution – Eye irritant and potential skin sensitizer

For an explanation of the symbols used here see pages 7 and 8.

</tbody>
</table>

*Use the lower rate under normal field conditions. Use the higher rate if there is a history of high disease pressures in the field OR where field conditions favour seed and soil-borne pathogens.

Application Information:

A ready-to-use seed treatment formulation for use in commercial seed treatment plants and for use in on-farm standard gravity flow or mist type treatment machines. Can also be used in “On the Go” air seeder treatment systems. When used at the recommended rate of 300 mL/100 kg seed, no additional dyes or dilutions with water are needed unless recommended by the manufacturer of the seed treatment application equipment.

**NOTE:** If using the 600 mL per 100 kg rate (flax), it is highly recommended that the seed be treated into a bin or truck box to allow the treated seed to dry prior to placing into the seeder hopper. This will prevent clumping and bridging in the seeder.

How it Works:

The active ingredient pyraclostrobin is a strobilurin fungicide with broad spectrum contact and systemic activity. Fluzapyroxad is a carboximide fungicide that provides systemic broad spectrum protection. Metalaxyl is an acylalanines fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None listed.

Restrictions:

Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labeled “This seed has been treated with *Insure Pulse* containing pyraclostrobin, fluzapyroxad and metalaxyl. DO NOT use for food, feed or oil processing.”
- **Grazing:** Do not graze or feed livestock on treated areas for 4 weeks after planting.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store treated seed in cool, dry, locked, well-ventilated area without a floor drain. Store in original tightly closed container and prevent freezing.
- **Environment:** Toxic to birds and wildlife. Ensure proper soil incorporation of the seeds. If treated seed is spilled outdoors or in areas accessible to birds, promptly clean up or bury to prevent ingestion. Ensure proper disposal of any surplus treated seed not intended for later planting. DO NOT contaminate domestic or irrigation water supplies, lakes, streams, ponds or any body of water with the chemical, used containers, treated seed or bags that have held treated seed. DO NOT contaminate water by cleaning of equipment or disposal of wastes. The use of this chemical may result in contamination of groundwater, particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.

Hazard Rating:

Warning – Contains the allergen soy.

Application Information:
For use with closed transfer commercial seed treaters (facilities and mobile treaters). Closed transfer includes closed mixing, loading, calibrating, and closed treatment equipment. Also for use in on-farm treatment of cereal grains (except corn) and pulse crops only with open or closed transfer equipment. This product contains no colourant. An appropriate colourant must be added when the product is applied to the seed.

How it Works:
The active ingredient ethaboxam is a benzamide fungicide with activity against diseases caused by oomycetes. For more information refer to “Fungicide Modes of Action” on page 426.
Tank Mixes:
Nufarm Agriculturesupports the following seed treatment mixes that are not on the INTEGO Solo label: NipsIt SUITE Cereals OF Seed Protectant, Metlock CT, Vitaflo 280, Apron Advance, Apron Maxx RTA, Cruiser Maxx Vibrance Beans, Vibrance 500FS, Vibrance Maxx RTA, Trilex EverGol.

Follow the label directions for each product and use the most restriction precautions and limitations.

Restrictions:
Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labeled “This seed has been treated with a product containing the active ingredient ethaboxam. Do not use treated seed for feed, food or oil processing. Store away from feeds and other foodstuffs. Wear long-sleeved shirt, long pants and chemical-resistant gloves when handling treated seed. This product is toxic to aquatic invertebrates, oysters and shrimp. Dispose of all excess treated seed. Left over treated seed may be double-sown around the headland or buried away from water sources in accordance with local requirements. Dispose of seed packaging in accordance with local requirements. Cover or incorporate spilled treated seeds.”

- **Grazing:** DO NOT graze field pea grown from treated seeds, or feed field pea forage or hay from such fields to livestock.

- **Re-cropping:** No restrictions listed.

- **Storage:** To prevent contamination store this product away from food or feed. Store in a cool place. DO NOT store in direct sunlight. Protect from freezing temperatures.

- **Environment:** Toxic to aquatic organisms.

Hazard Rating:
None listed.

Triticale | |

*Use the higher rate for highly infected seed lots only.

**Application Information:**

*Rancona Pinnacle* and *Cover 2* are for both commercial and for on farm application. Products may be applied utilizing mechanical, slurry or mist-type seed treating equipment provided that the equipment can be calibrated to accurately and uniformly apply the product to seed. Uniform application to seed is necessary to assure best disease protection and optimum performance.

Closed mix/load equipment must be used in commercial seed treatment facilities. In most cases, *Rancona Pinnacle* and *Cover 2* are ready to use and can be applied undiluted. However, dilution with water or container rinsate may be appropriate for some types of treaters and/or treating under dry and/or hot conditions to achieve more uniform product to seed coverage. Contact your local representative or supplier for specific recommendations.

**How it Works:**

The active ingredient ipconazole is a demethylation inhibitor with systemic and contact activity and metalaxyl is an acylaline fungicide with systemic activity. For more information refer to “Fungicide Mode of Action” on page 426.

**Tank Mixes:**

None listed.

**Restrictions:**

Resistance management: Refer to page 426.

- **Labelling:** All bags containing treated seed for sale or use in Canada must be labeled as follows: “This package or bag contains seed treated with ipconazole and metalaxyl. DO NOT use treated seed for food, feed or oil processing. Store away from food and feed. Handlers of treated seed must wear long sleeved coveralls over normal work clothing, chemical resistant gloves, and shoes plus socks. Treated seed is toxic to birds and small wild mammals. Any spilled or exposed seed must be incorporated into the soil or otherwise cleaned up from the soil surface.”
- **Grazing:** DO NOT graze or feed livestock on treated areas for 30 days after planting.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store in original container only, away from other pesticides, fertilizer, food or feed. Store in a secure place that is temperate, dry and out of direct sunlight. Avoid excess heat. DO NOT freeze.
- **Environment:** DO NOT contaminate water used for human or animal consumption or by wildlife and aquatic life or for irrigation purposes.

**Hazard Rating:**

None listed.

**Lumisena**

**Fungicide Group**

49

Refer to page 427

**Company:**

Corteva Agriscience Division of DowDuPont – PCP#33001

**Formulation:**

200 g/l of oxathiapiprolin formulated as a flowable suspension.

- Container sizes - 28.4 L and 2 x 5.4 L
Crops, Diseases and Rates:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Rate (per 100 kg of seed)</th>

<tbody>
<tr>
<td>Soybean</td>
<td>Control of phytophthora seed rot/pre-emergence damping off and post emergence damping off (<em>Phytophthora sojae</em>)</td>
<td>37 mL</td>
</tr>
<tr>
<td>Sunflower</td>
<td>Control of systemic downy mildew (<em>Plasmopara halstedii</em>)</td>
<td>72 mL</td>
</tr>
</tbody>
</table>

Application Information:

*Lumisena* is for use in commercial seed treatment facilities only. It is not for use in on-farm treating systems such as hopper-box or slurry-box applications just prior to planting. Closed transfer includes closed mixing, loading, calibrating, and closed treatment equipment. No open transfer of *Lumisena* is permitted.

This product contains no colourant. An appropriate colourant must be added when this product is applied. Regulations pertaining to *The Seeds Act* must be strictly adhered to when using this product. Treatment of damaged seed, or seed known to be of low vigour and poor quality, may result in poor germination and/or seed and seedling vigour. In cases where seed quality is unknown, treat a small portion of the seed with *Lumisena* and confirm acceptable germination, prior to treating the entire seed lot.

*Mixing instructions*: Before transferring *Lumisena* from its container, thoroughly mix the contents to insure the product is homogenous. Dilute in a sufficient volume to obtain through, uniform coverage. Polymers, colourants, and other additives should be tested for compatibility and seed prior to use in combination with *Lumisena*.

How it Works:

The active ingredient oxathiapiprolin is an oxysterol binding protein homologue inhibitor with activity against diseases caused by oomycete fungi including phytophthora seed rot and downy mildew.

Tank Mixes:

None registered.

Restrictions:

Resistance management: Refer to page 426.

- **Labelling**: All bags containing treated seed must be labelled or tagged as follows: This seed has been treated with *Lumisena* which contains oxathiapiprolin.
- **Re-cropping**: Crops and crop groups that are on this label may be planted immediately after harvest. For all legume crops except succulent peas and soybeans, a plant back interval of 180 days is required. All other crops may be planted immediately following the planting of seed treated with *Lumisena*. Seed treated with *Lumisena* may be replanted if an emergency replanting is required due to an early season crop failure.
- **Storage**: Storage product in original container away from fertilizer, food or feed. Field and laboratory tests have demonstrated that application of *Lumisena* to soybean and sunflower will not negatively affect germination. However, due to seed quality and seed storage conditions beyond the control of Corteva Agriscience, no claims are made to guarantee the germination of carry-over seed.
- **Environment**: DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of waste. Dispose of all access treated seed. Left over treated seed may be double-sown around the headland or buried away from water sources in accordance with local requirements. Dispose of seed packaging in accordance local requirements. DO NOT contaminate water bodies when disposing of plant equipment washwaters. Cover or incorporate spilled treated seed.

Hazard Rating:

None listed.
Mancozeb
Potato ST 16 / Solan MZ / Tuberseal

Company:
Norac Concepts Inc. (Solan MZ – PCP#29377, Tuberseal – PCP#17042)
Wilbur-Ellis Co., distributed by Loveland Products Canada (Potato ST 16 – PCP#24734)

Formulation:
16% mancozeb formulated as a powder.
- Container sizes - 10 kg (Tuberseal); 20 kg (Solan MZ and Potato ST 16)

Crops, Diseases and Rates:

<table>
<thead>
<tr>

<td>Potatoes</td>
<td>Fusarium seed piece decay</td>
<td>500 g</td>
</tr>
</tbody>
</table>

Application Information:
Apply product before planting; thoroughly coat surface of whole or cut seed with dust. If treated whole seed is cut, make a second application to protect cut surfaces. Plant as soon as possible after treating. If cut seed is not planted within two days of treating, store in a ventilated location to allow cut surfaces to dry.

How it Works:
The active ingredient mancozeb is a dithiocarbamate fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to page 426.
- **Labelling:** Treated seed pieces should be labelled “Poisonous to man and animals. This seed has been treated with mancozeb for the control of fusarium decay. Do not use for food or feed purposes.”
- **Grazing:** No restrictions listed.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store product in a cool, dry, well-ventilated place. Keep away from fire and sparks.
- **Environment:** DO NOT contaminate feed or food. DO NOT contaminate any body of water.

Hazard Rating:
None listed.
Maxim D/Maxim PSP/
Maxim MZ PSP

Company:
Syngenta Canada Inc. (Maxim D – PCP #30599; Maxim PSP – PCP #26647; Maxim MZ PSP – PCP #27965)

Formulation:
Maxim D: 19.4 g per L fludioxonil and 19.4 g per L difenoconazole formulated as a suspension.
- Container sizes - 2 x 9.2 L
Maxim PSP: 0.5% fludioxonil formulated as a dry powder.
- Container sizes - 10 kg
Maxim MZ PSP: 0.5% fludioxonil and 5.7% mancozeb formulated as a dry powder.
- Container sizes - 10 kg, 20 kg, 22.7 kg

Crops, Diseases and Rates:

<table>
<thead>
<tr>
<th>Product</th>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Rate (per 100 kg of seed)</th>

</tr>
</tbody>
</table>

* Maxim D will provide suppression of black scurf at 65 mL per 100 kg of seed. When R. solani pressure is high or control of black scurf is desired, used the 130 mL per 100 kg of seed rate.

Application Information:
Maxim D: Shake or mix well before using. Apply using standard seed treatment equipment that provides uniform seed coverage. Uneven or incomplete seed coverage may not give the desired level of disease control. When applying at a rate of 130 mL per 100 kg seed, Maxim D may be applied undiluted or as a water-based slurry. DO NOT exceed a maximum slurry volume of 260 mL per 100 kg seed. When applying at rates lower than 130 mL of Maxim D per 100 kg seed, add sufficient water to allow for a slurry volume of at least 130 mL per 100 kg seed. Follow manufacturer’s application instructions for the seed treatment equipment used.

Maxim PSP, Maxim MZ PSP: Apply using appropriate treater designed for treating potatoes or by dust attachment over belt. Cut pieces should be treated immediately after cutting. If treated seed pieces are bagged, they should be stored for 2 to 3 days in open crates before bagging. For optimum protection against silver scurf, ensure that seed tubers are completely free of soil. Total skin coverage is essential.

How it Works:
Fludioxonil is a phenylpyrrole fungicide with contact activity. Mancozeb is a dithiocarbamate fungicide with contact activity. The active ingredient difenoconazole is a triazole fungicide with broad-spectrum systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Maxim D can be tank-mixed with Actara 240SC for control of Colorado potato beetle, aphids and potato leafhopper.
Maxim D may be tank-mixed with Maxim Liquid PSP when R. solani pressure is high or control of black scurf is desired.
Follow the label directions for each product and use the most restrictive precautions and limitations for either product.
Restrictions:
Resistance management: Refer to page 426.

- **Labelling:** No restrictions listed.
- **Grazing:** No restrictions listed.
- **Re-cropping:** No restrictions listed.
- **Storage:** Ideal storage temperature for the product is above freezing and below 30°C. Store in a dry place. Avoid contamination of feed.
- **Environment:** This product is toxic to fish and aquatic invertebrates. DO NOT apply directly to water, or to areas where surface water is present. In cleaning of equipment or disposing of wastes, DO NOT contaminate water used for human or animal consumption or by wildlife and aquatic life or for irrigation purposes.

Hazard Rating:

⚠️ Caution – Poison
For an explanation of the symbols used here see pages 7 and 8.

---

**Maxim Quattro**
*Available to commercial seed treaters only.*

**Company:**
Syngenta Canada Inc. – PCP#29871

**Formulation:**
26.5% thiabendazole, 3.32% fludioxonil, 2.65% metalaxyl-M and S-isomer, 1.33% azoxystrobin formulated as a liquid suspension seed treatment.

- Container sizes - 5 L to Bulk

**Crops, Diseases and Rates:**

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Rate (per 100 kg of seed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Corn – field, pop, sweet</td>
<td>Seed- and soil-borne Pythium spp., Rhizoctonia spp., Fusarium spp. (including F. graminearum and F. verticillioides); seed rot/pre-emergence damping-off, post-emergence damping-off, seedling blight (weakly pathogenic Aspergillus spp. and Penicillium spp.)</td>
<td>67 mL</td>
</tr>
</tbody>
</table>

**Application Information:**
For use by a commercial seed treater only. Mix with water to form a slurry seed treatment. Contains no colourant; an appropriate colourant must be added to slurry before treating seed. Maintain constant agitation of slurry. Allow seed to dry before bagging. Treatment of highly mechanically damaged, poor quality or low vigour seed may result in reduced germination and / or reduced seed and seedling vigour. If seed lot quality is unknown conduct a germination test prior to treating.

**How it Works:**
The active ingredient thiabendazole is a benzimidazole fungicide with contact and systemic activity. The active ingredient fludioxonil is a phenylpyrrole fungicide with contact activity. The active ingredient metalaxyl-M is an acylalanine fungicide with systemic activity against diseases caused by the Oomycetes class, including pythium damping off. The active ingredient azoxystrobin is a methoxyacrylate (strobilurin) fungicide with broad spectrum activity to be used as a preventative and curative fungicide. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**
*Maxim Quattro may be tank-mixed with Cruiser SFS.*

Follow the label directions for each product and use the most restrictive precautions and limitations for either product.
Restrictions:

Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labelled “This seed has been treated with thiabendazole, fludioxonil, metalaxy-M and S-isomer, and azoxystrobin. Use chemical resistant-gloves when handling treated seed. DO NOT use for food, feed or oil processing. Store away from feed and foodstuffs. DO NOT graze corn or cut for forage within 30 days of planting.”
- **Grazing:** DO NOT graze or feed livestock on treated areas within 30 days of planting.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store product between 0°C and 30°C. Repeated freeze-thawing of the product will not compromise its integrity. If the product should freeze, bring the product back to room temperature and ensure thorough mixing before use. Store away from food and feed. DO NOT carry over treated sweet corn to the following year.
- **Environment:** DO NOT apply directly to water, or to areas where surface water is present. In cleaning of equipment or disposing of wastes, DO NOT contaminate water used for human or animal consumption or by wildlife and aquatic life or for irrigation purposes. If treated seed is spilled outdoors, promptly clean up.

**Hazard Rating:**

⚠️ Caution – Potential skin sensitizer

For an explanation of the symbols used here see pages 7 and 8.

---

**Mertect SC**

**Fungicide Group**

1

Refer to page 427

**Company:**

Syngenta Canada Inc. – PCP#13975

**Formulation:**

500 g per L thiabendazole formulated as a water dispersible suspension.

- Container sizes - 4 x 5 L

**Crops and Diseases:**

Post-harvest control of storage rots caused by *Fusarium*, *Phoma*, *Helminthosporium*, *Oospora* and *Rhizoctonia* spp. on potato.

**Rate and Water Volume:**

7.5 L per 170 L of water. Spray 2 L of this suspension per 1 metric tonne of potatoes.

**Application Information:**

Post-harvest treatment. Shake well before using. DO NOT allow suspension to stand without continuous agitation. Potatoes must rotate along conveyor line to ensure complete coverage. Prior to treating potatoes destined for export, confirm with authorities that treated potatoes will be allowed to enter importing country.

**How it Works:**

The active ingredient thiabendazole is a benzimidazole fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

None listed.
Restrictions:
Resistance management: Refer to page 426.

- **Labelling:** No restrictions listed.
- **Grazing:** No restrictions listed.
- **Re-cropping:** No restrictions listed.
- **Storage:** Minimum storage temperature 0°C.
- **Environment:** Toxic to aquatic organisms. Do not contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. Do not discharge effluent containing this product into sewer systems, lake, streams, ponds, estuaries, oceans, and other waters.

Hazard Rating:
None listed.

</table>

¹ Use the high rate if planting into cold, wet soils, if the seed is of poor quality, or if disease pressure is expected to be high.

² Triticale is a registered crop for treatment with *Belmont 2.7 FS* only

**Application Information:**

Mix with water to form a slurry seed treatment. Contains no colourant; an appropriate colourant must be added to slurry before treating seed. Maintain constant agitation of slurry. Allow seed to dry before bagging. Treatment of highly mechanically damaged, poor quality or low vigour seed may result in reduced germination and/or reduced seed and seedling vigour. If seed lot quality is unknown conduct a germination test prior to treating.

**How it Works:**

The active ingredient metalaxyl is an acylalanine fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

None listed.

**Restrictions:**

Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labelled as follows; “This seed has been treated with *Allegiance FL or Belmont 2.7 FS* seed protectant which contains metalaxyl. DO NOT use for feed, food or oil processing.” All bags containing seed for export must be labelled “FOR EXPORT ONLY.”
- **Grazing:** DO NOT graze or feed livestock on treated areas for 4 weeks after planting.
- **Re-cropping:** No restrictions listed.
- **Storage:** DO NOT store above 35°C or below 0°C. Store in original container, away from pesticides, food or feed.
- **Environment:** Treated seed may be toxic to birds and other wildlife. Clean up any spilled seeds and ensure seed is properly incorporated at planting.

**Hazard Rating:**

⚠️ Warning – Skin and eye irritant

For an explanation of the symbols used here see pages 7 and 8.
Metlock CT

Company:
Valent Canada Inc. distributed by Nufarm Agriculture – PCP#32371

Formulation:
23.2 g per L metconazole, 46.5 g per L metalaxyl formulated as a solution.
• Container sizes - 2 x 10 L, 100 L

</tbody>
</table>

Application Information:

Metlock CT does not contain a colourant, any seed treated with Metlock CT must be conspicuously coloured (red). Metlock CT is a concentrated formulation and should be mixed with water at a ratio of 5 parts water to 1 part Metlock CT to ensure sufficient seed coverage. More water can be used if necessary. For all seed types, commercial seed treatment (facilities and mobile treaters, with closed transfer including closed mixing, loading, calibrating, and closed treatment equipment only) is permitted. For cereal grain seeds (excluding corn), on-farm treatment (open transfer including open mixing, loading, calibrating, and open treatment equipment) is permitted.

How it Works:
The active ingredient metconazole is a broad-spectrum triazole demethylation inhibitor (DMI) fungicide with systemic activity. The active ingredient metalaxyl is an acylalanine fungicide with systemic activity against diseases caused by oomycetes, including Pythium damping-off. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Nufarm Agriculture supports the following seed treatment mixes that are not on the Metlock CT label:
• Wheat – NipsIT Inside 600 Insecticide at a rate of 17 to 100 mL per 100 kg of seed.
• Wheat, barley, corn, oat, buckwheat, millet, rye, triticale – INTEGO Solo Fungicide at a rate of 13 to 17 mL per 100 kg of seed.

Follow the label directions for each product and use the most restrictive precautions and limitations.
Restrictions:

Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labeled “This seed was treated with a product containing the active ingredients metalaxyl and metconazole. Do not use treated seed for feed, food or oil processing. Store away from feeds and other foodstuffs. When planning, workers must wear a long-sleeved shirt, long pants, socks and shoes, as well as chemical-resistance gloves when handling treated seeds. Dispose of all excess treated seed. Left over treated seed may be double-sown around the headland or buried away from water sources in accordance with local requirements. Do not contaminate water bodies when disposing of planting equipment washwaters. Dispose of seed packaging in accordance with local requirements. Treated seeds exposed on soil surface may be hazardous to wildlife. Cover or incorporate spilled treated seeds. A closed-cab planter is required when planting treated cereal grain seeds. An open-cab planter may be used with planting corn seeds.”
- **Re-cropping:** Barley, corn, canola, oats, rye, wheat, soybeans, and sugarbeet may be replanted at any time. A 35-day plant back interval for all other crops.
- **Storage:** Store in a cool place. DO NOT store in direct sunlight. Protect from freezing temperatures.
- **Environment:** Toxic to aquatic organisms and non-target terrestrial plants. This product demonstrates the properties and characteristics associated with chemicals detected in ground water. The use of Metlock CT in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination.

Hazard Rating:

None listed.

* Under moderate to high wireworm pressure or in situations where control is required tank mix with NipsIt INSIDE 600 Insecticide.
Application Information:
For use in commercial seed treatment facilities (with closed transfer including closed mixing, loading, calibrating, and closed treatment equipment only) and for use on-farm (open transfer including open mixing, loading, calibrating, and open treatment equipment is allowed).

How it Works:
The active ingredient clothianidin is a chloronicotinyl insecticide with systemic activity. For more information refer “Insecticide Groups Based on Modes of Action” on page 600.
The active ingredient metalaxyl is an acylalanine fungicide with systemic activity against diseases caused by oomycetes, including Pythium damping-off. Metconazole is a broad-spectrum triazole demethylation inhibitor (DMI) fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Valent Canada supports the following seed treatment mixes that are not on the NipsIt SUITE Cereals OF Seed Protectant label:
• NipsIt INSIDE 600 Insecticide at rates of 17-83 mL per 100 kg of seed.
• Intego SOLO Fungicide for control of metalaxyl resistant populations of Pythium spp.
Follow the label directions for each product and use the most restrictive precautions and limitations.

Restrictions:
Resistance management: Refer to page 426 and 598. DO NOT apply any subsequent application of a Group 4 insecticide (in-furrow or foliar) following treatment with NipsIt SUITE Cereals OF Seed Protectant.
• Labeling: Treated seed must be labeled “This seed was treated with NipsIt SUITE Cereals OF Seed Protectant, which contains clothianidin, metalaxyl, and metconazole. Do not use treated seed for feed, food or oil processing. Store away from feeds and other foodstuffs. Wear long-sleeved shirt, long pants and chemical-resistant gloves when handling treated seed. This product is toxic to aquatic invertebrates. Dispose of all excess treated seed. Left over treated seed may be double-sown around the headland or buried away from water sources in accordance with local requirements. Cover or incorporate spilled treated seeds. A closed cab planter is required when planting treated wheat seeds.”
• Grazing: DO NOT graze or feed livestock on treated areas for four weeks after planting.
• Re-cropping: Corn, canola, rapeseed, and wheat may be replanted at any time. A 35-day plant-back interval on cereal grains (except wheat), grasses, non-grass animal feeds, potato, soybeans and dry beans is required.
• Storage: Store in a cool place. DO NOT store in direct sunlight. Protect from freezing temperatures.
• Environment: Toxic to aquatic organisms. Treated seed is toxic to birds and small wild animals. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface. Toxic to bees. Bees can be exposed to product residues in flowers, leaves, pollen and/or nectar resulting from seed treatments. The use of this product in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination. DO NOT use to control aquatic pests. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

Hazard Rating:
None listed.

Phosphorous acid
Confine Extra / Rampart

Company:
Winfield Solutions (Confine Extra – PCP#30648)
Loveland Products Canada (Rampart– PCP#30654)

Formulation:
53% mono and di-potassium salts of phosphorous acid.
• Container sizes - 9.46 L - 946.35 L (Confine Extra)
• Container sizes - 9.46 L (Rampart)
Crops Diseases and Rates:

*Confine Extra*: Post-harvest treatment of potatoes for the suppression of late blight (*Phytophthora infestans*), pink rot (*P. erythroseptica*), and silver scurf (*Helminthosporium solani*) storage infection.

*Rampart*: Post-harvest treatment of potatoes for control of late blight (*Phytophthora infestans*) and pink rot (*P. erythroseptica*).

Rate and Application Information:

For application prior to storage:
- Dilute *Confine Extra* at a 1:5.13 ratio with water (326 mL *Confine Extra* + 1674 mL water). Apply 2 L of solution as a spray to 1000 kg of potatoes.
- Dilute *Rampart* at a 1:5.26 ratio with water (190 mL *Rampart* + 1 L water). Apply 2 L of solution per 100 kg of harvested potatoes as a spray or rinse.

For application to stored potatoes (*Rampart* only):
- Dilute *Rampart* at a 1:5.26 ratio with water (190 mL *Rampart* + 1 L water). Apply 2 L of solution per 100 kg of stored potatoes into water used for post-harvest storage.

How it Works:

The active ingredient mono- and di-potassium salts of phosphorous acid is a phosphonate fungicide with systemic activity to suppress pathogen inoculum. To be used as a preventative fungicide application on harvested tubers.

For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None listed.

Restrictions:

Resistance management: Refer to page 426.
- **Labelling**: No restrictions listed.
- **Grazing**: No restrictions listed.
- **Re-cropping**: No restrictions listed.
- **Storage**: Store this product away from food or feed.
- **Environment**: DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of waste. DO NOT apply by air.

Hazard Rating:

None listed.

<tbody>
<tr>
<td><em>Prosper EverGol</em></td>
<td>Canola, rapeseed, mustard (oilseed and condiment)</td>
<td>Seed rot, damping off, seedling blight and early season root rot (<em>Pythium spp.</em>, <em>Rhizoctonia spp.</em>, <em>Fusarium spp.</em>, seed-borne <em>Alternaria spp.</em>); seed-borne blackleg (<em>Leptosphaeria maculans</em>)</td>
<td>Flea beetles</td>
<td>1400 mL</td>
</tr>
</tbody>
</table>

Application Information:

*Prosper EverGol* is for use in commercial seed treatment facilities with closed transfer systems only. Seed treatment must be thoroughly agitated to ensure uniform mixing of product prior to and during application. Treatment of highly mechanically scarred or damaged seed or seed known to be of low vigour and poor quality may result in reduced germination and/or reduction of seed and seedling vigour.

How it Works:

Clothianidin is a chloronicotinyl insecticide with systemic activity. For more information refer to “Insecticide Groups Based on Modes of Action” on page 600. Carbathiin is a carboxamide fungicide with systemic activity; penflufen is a carboxamide (SDHI) fungicide with systemic activity; trifloxystrobin is a strobilurin fungicide with broad spectrum preventative activity; and metalaxyl is an acylalanine fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None listed.

Restrictions:

Resistance management: Refer to page 426 and 598. DO NOT make any subsequent application of a group 4 insecticide (in-furrow or foliar application) following treatment with any of these products.

NOTE: When using a seed flow lubricant for planting corn and soybean seed treated with neonicotinoid insecticides (containing the active ingredients clothianidin, imidacloprid or thiamethoxam), use only a dust-reducing fluency agent. Talc and graphite are not permitted.

- **Labelling:** Treated seed must be labelled as follows: “This seed has been treated with clothianidin and/or carbathiin, penflufen and metalaxyl. DO NOT use for food, feed or oil processing. Store away from feeds and other foodstuffs.”
- **Grazing:** No restrictions listed.
- **Re-cropping:** For *Prosper EverGol*, corn and canola may be replanted at any time. A 1-year plant back interval is required for leafy, root and tuber vegetables. A 30-day plant back is required for cereals, grasses, nongrass animal feeds, soybeans and dry beans.
- **Storage:** Protect products from freezing. DO NOT contaminate water, food or feed by storage, disposal or by cleaning of equipment. Store in a cool place. DO NOT store in direct sunlight. Store away from food or feed. DO NOT store treated seed above 25°C or in direct sunlight. Treated seed stored for periods in excess of 9 months should be tested for germination before planting.
- **Environment:** These products are toxic to aquatic invertebrates. DO NOT apply directly to water or to areas where surface water is present. DO NOT contaminate water when disposing of equipment wash waters. These products are toxic to birds and mammals. Any spilled or exposed seeds should be incorporated into the soil or otherwise cleaned up from the soil surface.

Hazard Rating:

⚠️ Warning – Poison

For an explanation of the symbols used here see pages 7 and 8.
Rancona V RS

Company: Arysta LifeScience Canada – PCP#30217

Formulation:
9.38 g per L ipconazole and 87.5 g per L carbathiin formulated as a liquid suspension seed treatment.
- Container sizes - 10 L, 200 L

Crops, Diseases and Rates:

<td>Root rot (<em>Rhizoctonia</em> spp., <em>Fusarium</em> spp.)</td>
<td>800 mL</td>
</tr>
</tbody>
</table>

Application Information:
*Rancona V RS* is ready to use and may be applied to seed as purchased. However, dilution with water may help to achieve more uniform seed coverage when using some types of treaters and/or when treating under dry and/or hot conditions.

How it Works:
The active ingredient ipconazole is a demethylation inhibitor with systemic and contact activity and carbathiin is a carboximide fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to page 426.
- **Labelling:** Treated seed must be labelled as follows “This seed has been treated with carbathiin and ipconazole. Do not use treated seed for feed, food, or oil processing.”
- **Grazing:** DO NOT graze or feed livestock on treated area for four weeks after planting.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store this product away from food or feed.
- **Environment:** DO NOT contaminate ponds, lakes or streams.

Hazard Rating:
None listed.

Rancona Trio

Company: Arysta LifeScience Canada – PCP#32668

Formulation:
5.0 g per L ipconazole, 133.33 g per L carbathiin, and 13.33 g per L metalaxyl formulated as a liquid suspension seed treatment.
- Container sizes - 500 mL to bulk

Fungicide Group

Refer to pages 427 and 428
Crops, Diseases and Rates:

<table>
<thead>

</thead>
<tbody>
<tr>
<td>Rye Triticale</td>
<td>General seed rots (<em>Fusarium</em> spp., <em>Pythium</em> spp., <em>Rhizoctonia solani</em>, <em>Penicillium</em> spp., <em>Aspergillus</em> spp., <em>Cochliobolus sativus</em>); seedling blight, damping-off (<em>Fusarium</em> spp., <em>Pythium</em> spp., <em>R. solani</em>, <em>C. sativus</em>)</td>
<td>Common root rot (<em>Cochliobolus sativus</em>); <em>Fusarium</em> crown and foot rot (<em>Fusarium</em> spp.)</td>
<td>300 mL</td>
</tr>
</tbody>
</table>

Application Information:

*Rancona Trio* is ready to use and does not need dilution prior to application. The optimum treating process and slurry composition depends on the crop, the treating process and application conditions.

How it Works:

The active ingredient ipconazole is a demethylation inhibitor with systemic and contact activity, carbathiin is a carboximide fungicide with systemic activity, and metalaxyl is an acylalanine fungicide systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None listed.

Restrictions:

Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labelled as follows “This seed has been treated with *Rancona Trio Fungicide*, which contains ipconazole, carbathiin, and metalaxyl. DO NOT use for feed, food, or oil processing. Store away from feeds and other food stuffs. When planting or handling treated seeds, workers must wear a long-sleeved shirt, long pants, socks and shoes, and chemical-resistant gloves. Gloves are not required while driving the tractor. A closed-cab tractor is required when planting more than 2200 kg of treated seeds per day.”
- **Grazing:** DO NOT graze or feed livestock on treated area for six weeks after planting barley, oats, or wheat. DO NOT graze or feed livestock on treated area for four weeks after planting all other crops.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store this product away from food or feed. Store in original container only, away from other pesticides, fertilizer, food, or feed. DO NOT freeze. DO NOT store treated seed above 25°C or in direct sunlight.
- **Environment:** DO NOT contaminate ponds, lakes or streams. Treated seed is toxic to birds and small wild mammals. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.

Hazard Rating:

<td>300 mL</td>
</tr>
</tbody>
</table>

Application Information:

*Raxil MD* is a ready to use formulation designed for commercial or on-farm treatment with conventional seed treating equipment which can accurately control application rates and provide good distribution of the chemical onto the seed in the mixing chamber. Uniform application to seed is necessary to ensure seed safety and best disease control. See manufacturer’s instructions supplied with the treater system for information on proper application technique.

Uniform coverage at the correct rate is important for satisfactory results. Under-treatment may lead to loss of efficacy and over-treatment could reduce germination. Seed may be planted immediately after treating.

How it Works:
The active ingredient tebuconazole is a systemic triazole fungicide with broad-spectrum activity. The active ingredient metalaxyl is an acylaline fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.
Restrictions:

Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labelled “This seed has been treated with Raxil MD which contains tebuconazole and matalaxyl; DO NOT use for food, feed or oil processing.”
- **Grazing:** DO NOT graze or feed livestock on treated areas for 4 weeks after planting.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store product in original container only, away from other pesticides, fertilizer, food or feed. Store in a cool, dry place and avoid excessive heat.
- **Environment:** DO NOT contaminate water, food, or feed by storage, disposal, or by cleaning of equipment.

Hazard Rating:

⚠️ Danger – Skin and eye irritant

</tbody>
</table>

Application Information:

*Raxil PRO* is a ready-to-use treatment formulation for use in commercial seed treatment operations and for on-farm treatment with conventional seed treating which can accurately meter, mix and apply flowable seed treatment formulations.
How it Works:
The active ingredient tebuconazole is a triazole demethylation inhibitor (DMI) fungicide with systemic activity. The active ingredient prothioconazole is a demethylation inhibitor with broad-spectrum systemic activity. The active ingredient metalaxyl is an acylalanine fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Insecticide Seed Treatment: May be mixed with Stress Shield 600.
Follow the label directions for each product and use the most restrictive precautions and limitations for either product.

Restrictions:
Resistance management: Refer to page 426.
- Labelling: Treated seed must be labeled “This seed has been treated with Raxil PRO, which contains tebuconazole, prothioconazole and metalaxyl. When handling treated seed wear chemical-resistant gloves. DO NOT use for feed, food or oil processing. Store away from feeds and other foodstuffs.”
- Grazing: No restrictions listed.
- Re-cropping: No restrictions listed.
- Storage: Store product in original container only, away from other pesticides, fertilizer, food or feed. Keep container closed. Store in a cool, dry area and avoid excessive heat.
- Environment: Toxic to aquatic organisms. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. Dispose of all excess treated seed. Left over seed may be double-sown around the headland or buried away from water sources. DO NOT leave exposed treated seed on soil surface. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface. The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable and/or the depth to the water is shallow.

Hazard Rating:

\[\text{\textbullet ~ Caution – Skin irritant}\]
For an explanation of the symbols used here see pages 7 and 8.

Raxil PRO Shield

Raxil PRO Shield is a co-pack of Raxil PRO (tebuconazole, prothioconazole and metalaxyl fungicides, page 575) and Stress Shield 600 (imidacloprid insecticide, page 551). For other detailed information on the component products see the product pages listed above.

Company:
Bayer (Raxil PRO – PCP#30102; Stress Shield 600 – PCP#30668)

Formulation:
- **Raxil PRO**: 3.0 g per L tebuconazole, 15.4 g per L prothioconazole and 6.2 g per L metalaxyl formulated as a suspension.
- **Stress Shield 600**: 600 g per L imidacloprid formulated as a suspension.

- Container sizes - 10 L Raxil PRO and 1.54 L Stress Shield 600; 175.5 L Raxil PRO and 27 L Stress Shield 600

---

**Reason 500SC**

**Company:**
Bayer – PCP#27462

**Formulation:**
500 g per L fenamidone formulated as a suspension concentrate.
- Container size - 2 L

**Crops, Diseases and Rates:**

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Rate (per 100 kg of seed)*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Seed-borne late blight (<em>Phytophthora infestans</em>)</td>
<td>10 mL</td>
</tr>
</tbody>
</table>
Application Information:
For optimal disease control, good coverage of the seed piece is required. Apply specified dosage as a diluted spray using equipment that ensures uniform coverage of each seed piece.

Agitate or stir the slurry solution as needed. Apply only in areas with adequate ventilation or in areas that are equipped to remove spray mist or dust. It is recommended to periodically clean and sanitize all surfaces which may come in contact with cut seed-pieces (i.e. cutting machines, tables, knives, planting equipment etc.). Seed pieces must be treated immediately after cutting. Do not use treated seed pieces for food, feed, or fodder. As part of the seed cutting and treating process, application of an absorbent ingredient is recommended to improve suberization.

How it Works:
The active ingredient fenamidone is a strobilurin fungicide with contact activity. To be used as a preventative and inhibitive (spore germination and antisporeulant) fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Reason 500 SC can be tank mixed with Titan and Emesto Silver Titan or Emesto Silver for application as a seed-piece treatment of potato when additional disease control and/or insect control is required. Refer to the registered label of each tank mix partner for application rate, precautions and directions for use associated with those products. Follow the most restrictive label precautions and limitations.

Restrictions:
Resistance management: Refer to page 426. If following a seed treatment application of Revus with foliar applications of this product, apply a fungicide belonging to a group other than Group 40 as the first foliar application of the season. DO NOT apply more than 243 g mandipropamid per acre per year.

- Maximum number of applications: DO NOT exceed 6 applications or 0.48 L per acre of this product per season.
- Grazing: No restrictions listed.
- Preharvest interval: 14 days.
- Re-entry: DO NOT re-enter treated areas until residues have dried.
- Re-cropping: A 30 day plant-back interval is required for potato and all other crops.
- Storage: DO NOT allow product to freeze. If stored more than 1 year, shake well before using. Keep away from fire, open flame or other sources of heat. Store in tightly closed container away from fertilizer, seeds, feed or food
- Environment: For ground application, maintain an 8 m buffer zone between areas sprayed and aquatic systems. For aerial application, allow a 10 m buffer. Toxic to fish and other aquatic organisms; DO NOT apply where runoff is likely to occur.

Hazard Rating:
\[ \n\text{Caution Poison – Eye Irritant} \n\]

For an explanation of the symbols used here see pages 7 and 8.

Revus

Company:
Syngenta Canada Inc. – PCP#29074

Formulation:
250 g per L mandipropamid formulated as a suspension.

- Container size - 10 kg
Crops, Diseases and Rates:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Diseases Suppressed</th>
<th>Rate (per 100 kg of seed)*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>
<td>Seed-borne late blight (<em>Phytophthora infestans</em>)</td>
<td>Pink rot (<em>Phytophthora erythrospetica</em>)</td>
<td>13 to 26 mL</td>
</tr>
</tbody>
</table>

* Use the higher rate when conditions favour heavy infection pressure.

**Application Information:**

Apply using standard seed treating equipment that provides uniform seed coverage. Uneven or incomplete seed coverage may not get the desired level of disease control. Add sufficient water to allow for a slurry volume that will allow for sufficient coverage. Wear coveralls over long-sleeved shirt, long pants, chemical-resistant gloves, socks and boots during mixing, loading, application, clean-up and repair. When handling or planting treated potato seed pieces, workers must wear a long-sleeved shirt, long pants, gloves, socks and boots. DO NOT use open treating equipment when treating potato seed pieces. This product must be applied using a closed treatment system.

**How it Works:**

The active ingredient mandipropamid is a carboxylic acid amid (CAA) with contact and systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

None listed.

**Restrictions:**

Resistance management: Refer to page 426. If following a seed treatment application of *Revus* with foliar applications of this product, apply a fungicide belonging to a group other than Group 40 as the first foliar application of the season. DO NOT apply more than 243 g mandipropamid per acre per year.

- **Labelling:** No restrictions listed.
- **Grazing:** No restrictions listed.
- **Re-cropping:** No restrictions listed.
- **Storage:** Store in a cool, dry place away from food, beverages, and tobacco products. To prevent contamination store this product away from food and feed.
- **Environment:** DO NOT apply this product directly to freshwater habitats, estuarine/marine habitats. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

**Hazard Rating:**

- 🚨 Warning – Poison
- ⚠️ Caution – Skin irritant

Potential skin sensitizer

For an explanation of the symbols used here see pages 7 and 8.
Crops, Diseases and Rates:

<table>
<thead>
<tr>
<th>Crop</th>
<th>Diseases Controlled</th>
<th>Rate (per 100 kg of seed)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potato</td>

<td>Aids in control of: seed piece decay and blackleg infections</td>
<td></td>
</tr>
</tbody>
</table>

Application Information:
Seed piece treatment. Apply in a convenient container or by dust attachment over belt. Cut pieces should be treated within 6 hours of cutting. For optimum control of silver scurf, ensure that seed tubers are completely free of soil. Total skin coverage is essential. If planting is to be delayed more than 1 to 2 days, the treated pieces should be stored for 2 to 3 days in open crates before bagging. This product contains no colourant; an appropriate colourant must be added when this product is applied.

How it Works:
The active ingredient thiophanate-methyl is a benzimidazole fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistance management: Refer to page 426.
- Labelling: No restrictions listed.
- Grazing: No restrictions listed.
- Re-cropping: No restrictions listed.
- Storage: Store product in a dry place. Avoid contamination of feed or food stuffs.
- Environment: DO NOT contaminate domestic or irrigation water supplies, lakes, streams and ponds

Hazard Rating:
None listed.

---

Serenade OPTI

Company:
Bayer – PCP#31666

Formulation:
*Serenade OPTI*: 26.2% *Bacillus subtilis* (QST 713 strain) formulated as a wettable powder
- Container size – 2.72 kg

Crops and Diseases:
Post-harvest suppression of silver scurf (*Helminthosporium solani*) on potato.

Rate and Application Information:
Use at a rate of 7 to 14 g per tonne. Sanitation and other cultural control practices should also be employed to aid in control and minimize the potential for disease.

Conveyor Line Application: Prepare the equivalent of 350 – 700 grams of *Serenade Opti* in 100 liters of water. Apply 2 liters of the *Serenade Opti* water suspension per tonne of potatoes. Potatoes must rotate along the conveyor line into the storage area to ensure complete coverage. The rate of the spray solution can be adjusted to ensure thorough coverage while maintaining recommended rate of *Serenade OPTI* per tonne of potatoes.
How it Works:

*Bacillus subtilis* is a bacterium that works as a bio-fungicide to prevent infection of labeled diseases by multi-site biochemical activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

None registered.

Restrictions:

Resistance management: Refer to page 426.

- **Maximum number of applications**: No restrictions listed.
- **Grazing**: No restrictions listed.
- **Preharvest interval**: Can be applied up to and including the day of harvest.
- **Re-entry**: No restrictions listed.
- **Re-cropping**: No restrictions listed.
- **Storage**: Maximum storage period of two years at room temperatures up to 25°C. Store in a dry area inaccessible to children. Store in original container.
- **Environment**: DO NOT contaminate water, food, or feed by storage and disposal.

Hazard Rating:

None listed.
Potential skin sensitizer.

### Stadium

**Company:**

Syngenta Canada Inc. – PCP#31050

**Formulation:**

143 g per L azoxystrobin, 112 g per L difenoconazole and 143 g per L fludioxonil formulated as a suspension concentrate seed treatment.

**Crops and Diseases:**

For use in post-harvest treatment of potatoes to control fusarium dry rot (*Fusarium* spp.) and to suppress silver scurf (*Helminthosporium solani*).

**Rate and Application Information:**

*Stadium* is a suspension concentrate that must be diluted with water and applied at the rate of 32.5 mL per tonne of potatoes. Finally spray solution should deliver an application rate of 2 L (*Stadium* + water) per metric tonne of potatoes. Application is for in-line as an aqueous spray. Tubers should be rotating along a conveyor line in a single layer to ensure proper coverage. DO NOT make more than one post-harvest application to the tubers.

**How it Works:**

The active ingredient azoxystrobin is a methoxyacrylate (strobilurin) fungicide with broad spectrum activity to be used as a preventative and curative fungicide, difenoconazole is a triazole fungicide with broad-spectrum systemic activity and fludioxonil is phenylpyrrole fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

None listed.

**Restrictions:**

Resistance management: Refer to page 426.

- **Labelling**: No restrictions listed.
- **Grazing**: No restrictions listed.
- **Re-cropping**: This product is restricted to table and processing potatoes.
- **Storage**: Store in a cool dry place. Do not store food, beverages or tobacco products in storage area.
- **Environment**: This product is toxic to fish and aquatic invertebrates. Do not apply directly to water or to areas where surface water is present. DO NOT allow contaminated waste water from the processing areas to ente lakes, streams, ponds or other waters. Do not contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

**Hazard Rating:**

⚠️ Warning – Poison

For an explanation of the symbols used here see pages 7 and 8.

---

**StorOx**

**Fungicide Group**

NC

Refer to page 428

**Company:**
Manufactured by BioSafe Systems Inc. – PCP#27432 Distributed in Western Canada by Brenntag Canada

**Formulation:**
27% hydrogen peroxide.
- Container sizes - 10-220 L

**Crops and Diseases:**
Control of fusarium tuber rot (*Fusarium* spp.), bacterial soft rot and silver scurf (*Helminthosporium solani*) in potato.

**Rate and Application Information:**
Prior to storage and in storage treatment for harvested potato tubers.
As a spray treatment for newly harvested potatoes before storage: 100 mL of *StorOx* per 10 L water. Spray diluted solution on tuber to runoff to achieve full and even coverage. Use 4.15 to 8.3 L water per tonne of potatoes.
As application to potatoes in storage as a direct injection into humidification water: 100 mL *StorOx* per 10 L water. Apply diluted product for at least 20 minutes per day, based on a humidification airflow rate of 0.6 cfm.

**Tank Mixes:**
May be used in conjunction with a growth inhibitor during humidification. Should not be combined or mixed with pesticides or fertilizer.

**How it Works:**
Hydrogen peroxide is an inorganic compound with contact activity against fungi and bacteria. For more information refer to “Fungicide Modes of Action” on page 426.

**Restrictions:**
- **Storage**: Store in cool, well ventilated area away from direct sunlight. Since *StorOx* is a strong oxidizing agent, contact with combustibles may cause fire.
- **Environmental**: DO NOT discharge effluent containing *StorOx* into lakes, streams, ponds or other bodies of water. DO NOT permit this product to enter surface or ground water.

**Hazard Rating:**

⚠️ Danger – Corrosive to eyes

⚠️ Warning – Skin irritant

**Other Precautions**: This product is corrosive to metal surfaces; rinse all application equipment thoroughly with water after use. Do not enter treated storage bins until the hydrogen peroxide air concentrations are below exposure levels established by occupational health and safety authorities.

For an explanation of the symbols used here see pages 7 and 8.
**Titan Emesto**

Titan Emesto is a co-pack of Titan (clothianidin insecticide, page 534) and Emesto Silver (penflufen and prothioconazole fungicides, page 545). For other detailed information on the component products see the product pages or labels for the products listed.

**Company:**
Bayer (Titan – PCP#27449; Emesto Silver – PCP#30361)

**Formulation:**
- **Titan:** 600 g per L clothianidin formulated as a suspension.
  - Container sizes - 3 L
- **Emesto Silver:** 100 g per L penflufen, 18 g per L prothioconazole formulated as a suspension.
  - Container sizes - 3.85 L

*Add 7:1 ratio of water (25 mL of component A + 16 mL of component B + 287 mL of water for a total of 328 mL per 100 kg).*

Application Information:

*Trilex Component A* is a seed treatment formulation for use in commercial seed treatment operations, and for on-farm treating with conventional seed treating equipment which can accurately meter and apply flowable seed treatment formulations. This product is recommended to be diluted with water or another suitable liquid just prior to application to ensure uniform coverage on the seed during the application process. Uniform application to seed is necessary to ensure optimum performance. Allow seeds to dry before bagging, storing or seeding.

*Trilex Component B* should be mixed with water to form a slurry seed treatment. Mix 500 mL of slurry per 100 kg of seed to be treated. The slurry should be applied as a spray into the mixing chamber of the seed treating equipment to ensure good coverage. When preparing the slurry the following procedure should be used: 1) partially fill the mixing tank with water; 2) add the required quantity of *Trilex Component B* onto the water surface; 3) allow product to disperse and then switch on agitation; 4) top up with extra water to required volume and maintain agitation during use; and 5) add colourant last.

How it Works:

*Trilex Component A*: The active ingredient penflufen is a carboxamide (SDHI) fungicide with systemic activity. The active ingredient trifloxystrobin is a strobilurin fungicide with broad spectrum preventative activity.

*Trilex Component B*: The active ingredient metalaxyl is an acylalanine fungicide with systemic activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

**Fungicide Seed Treatments**: In addition to *Trilex Component B*, *Trilex Component A* may be mixed with *Allegiance FL*. Follow the label directions for each product and use the most restrictive precautions and limitations for either product.

Bayer also supports the tank-mix of *Stress Shield 600* with *Trilex EverGol*. Apply mixes according to the most restrictive use limitations.

Restrictions:

Resistance management: Refer to page 426.

- **Labelling**: Treated seed must be labeled “This seed has been treated with *Trilex Component A* (containing penflufen and trifloxystrobin) and *Trilex Component B* (containing metalaxyl). Wear long-sleeved shirt, long pants and chemical-resistant gloves when handling treated seed. DO NOT use for feed, food or oil processing. Store away from feeds and other foodstuffs.”
- **Grazing**: DO NOT graze or feed livestock on treated areas for four weeks after planting.
- **Re-cropping**: Registered crops for *Trilex Component A*, as well as canola, mustard, rapeseed, soybean, alfalfa, corn and cereal grains, may be replanted at any time. For all other crops, DO NOT plant back within 30 days of seeding with *Trilex Component A*-treated seed.
- **Storage**: Store product in original container only, away from other pesticides, fertilizer, food or feed. Keep container closed. Store in a cool, dry area. DO NOT store in direct sunlight. DO NOT store *Trilex Component A* above 40°C or below -10°C. DO NOT store *Trilex Component B* above 35°C or below 0°C.
- **Environment**: Toxic to aquatic organisms. Treated seed may be toxic to birds and other wildlife. DO NOT discharge effluent containing this product into sewer systems, lakes, streams, ponds, estuaries, oceans or other waters. Dispose of all excess treated seed. Left over seed may be double-sown around the headland or buried away from water sources. DO NOT leave exposed treated seed on soil surface. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface. The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable and/or the depth to the water is shallow.

Hazard Rating:

⚠️ *Warning – Skin and eye irritant (Trilex Component B)*

For an explanation of the symbols used here see pages 7 and 8.
**Seed Treatments**

**Trilex EverGol Shield**

*Trilex EverGol Shield* is a co-pack of *Trilex Component A* (penflufen and trifloxystrobin fungicides, page ???), *Trilex Component B* (metalaxyl fungicide, page 564), and *Stress Shield 600* (imidacloprid, page 551). *Trilex Component A* and *Trilex Component B* are not sold individually. For individual component information, see the product pages listed above.

**Company:**

Bayer (*Trilex Component A* – PCP#30644; *Trilex Component B* – PCP#30645; *Stress Shield 600* – PCP#30668)

**Formulations:**

*Trilex Component A*: 154 g per L penflufen and 154 g per L trifloxystrobin formulated as a liquid based water formulation.
- Container sizes - 1.5L or in bulk package 6.49 L

*Trilex Component B*: 317 g per L metalaxyl formulated as a suspension.
- Container sizes - 0.96L or in bulk package 4.15 L

*Stress Shield 600*: 600 g per L imidacloprid formulated as a suspension.

* Use the low rate for control of pre-emergent damping-off, seedling decay, or seedling blight. Use the high rate for extended control of post-emergent damping-off and seedling blight or high disease pressure or high levels of seed-borne infections like smut.

Application Information:
Vibrance 500FS is for use on-farm and in closed transfer commercial seed treatment facilities. No open transfer is permitted for commercial seed treatment of barley, wheat, oats, rye, triticale and soybean. For pulse crops on farm and commercial seed treatment (using either an open or closed transfer application system) is permitted. No on-farm seed treatment is permitted for canola. Note: treatment of highly mechanically scarred or damaged seed or seed known to be of low vigour and poor quality may result in reduced germination and/or reduction of seed and seedling vigour. This product contains no colourant. An appropriate colourant must be added when this product is applied to seed.

Regulations pertaining to the “Seeds Act” must be strictly adhered to when using this product. Users are responsible for ensuring that the treated seed, when dried and ready for bagging, has an unnatural colour.

How it Works:
Sedaxane is a succinate dehydrogenase inhibitor fungicide with preventative and systemic activity that inhibits fungal metabolism by binding to the succinate dehydrogenase enzyme to disrupt cellular respiration and energy generation. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
Consult each product label for registered use rates and follow all label use instructions. Read the label directions for each product and follow the most restrictive label precautions and limitations.

Small-grain cereals (Wheat, Barley, Oats, Rye, and Triticale). For insect control, Cruiser SFS (in commercial seed treatment facilities ONLY with closed transfer). This tank-mix option is only valid for those crops common to the registered labels of both products.

Soybeans: Apron Maxx RTA for disease control. For insect control, Vibrance 500FS may be mixed with Cruiser SFS or Cruiser Maxx Beans (in commercial seed treatment facilities ONLY with closed transfer).
Restrictions:
Resistance management: Refer to page 426.
- **Labelling:** All seed must be labelled “This seed has been treated with sedaxane fungicide. Wear long-sleeved shirt, long pants, and chemical-resistant gloves when handling treated seed. Do not graze or feed livestock on seeded area for 45 days after planting. Do not use for food, feed or oil processing. Store away from food and feed”.
- **Grazing:** DO NOT graze or feed livestock on treated areas for 45 days after planting.
- **Re-cropping:** DO NOT plant any crop other than those on the product label within 60 days to fields in which seed treated with Vibrance 500FS seed treatment were planted.
- **Storage:** Store away from food and feed.
- **Environment:** Toxic to aquatic organisms. Do not contaminate food, feed, domestic or irrigation water supplies, lakes, streams and ponds. Treated seed is toxic to small wild animals. Any spilled or exposed seed must be incorporated into the soil or otherwise cleaned up from the soil surface.
- **Compatibility with *Rhizobia*-based inoculants:** Vibrance 500FS is compatible with *Rhizobia*-based inoculants. Please check with inoculant manufacturers for details prior to use. Note: Mixing with inoculants may increase drying time while treating extending the processing time.

Hazard Rating:

For an explanation of the symbols used here see pages 7 and 8.

**Vibrance Maxx RFC/RTA**

Vibrance Maxx RTA is a co-pack of Apron Maxx RTA (fludioxonil and metalaxyl-M and S-isomer fungicides, page 532) and Vibrance 500 FS (sedaxane fungicide, page 586). Vibrance Maxx RFC is a pre-mix formulation. For other detailed information on the component products see the product pages listed above.

Company:
Syngenta Canada Inc. (Apron Maxx RTA – PCP#27577; Vibrance 500 FS – PCP#30438; Vibrance Maxx RFC – PCP#32272)

Formulations:
- **Apron Maxx RTA:** 0.73% fludioxonil, 1.10% metalaxyl-M and S-isomer formulated as a suspension.
- **Vibrance 500 FS:** 500 g per L sedaxane formulated as a suspension.
- **Vibrance Maxx RFC:** 50 g per L sedaxane, 37.5 g per L metalaxyl-M and S-isomer and 25 g per L fludioxonil.
  - Container sizes - case of 2 x 3.075 L jugs, drum of 56.78 L
  - Vibrance Maxx RTA co-packs container size – 115 L Apron Maxx RTA + 3.33 L Vibrance 500 FS

Product information provided below for Vibrance Maxx RFC (pre-mix). For detailed information on component products of Vibrance Maxx RTA co-pack please consult individual product pages.

Application Information

Vibrance Maxx RFC is for use in commercial seed treatment and for on-farm seed treatment using seed treatment equipment that accurately metres, mixes and applies a flowable seed treatment. Thoroughly mix the recommended amount of Vibrance Maxx RFC with the required amount of water for the slurry treatment and dilution rate to be used. Maintain constant agitation of the slurry during the treatment. Allow the seed to dry before bagging, storing or seeding.

How it Works:

The active ingredient sedaxane is a succinate dehydrogenase inhibitor fungicide with preventative and systemic activity that inhibits fungal metabolism by binding to the succinate dehydrogenase enzyme to disrupt cellular respiration and energy generation. The active ingredient fluodxonil is a phenylpyrrole fungicide with contact activity. The active ingredient metalaxyl-M is an acylalanine fungicide with systemic activity against diseases caused by the Oomycetes, including Pythium damping-off. For more information refer to “Fungicide Modes of Action” on page 426.

Restrictions:

Resistance management: Refer to page 426.

- **Labelling:** All seed treated with Vibrance Maxx RFC must be labelled “This seed has been treated with the fungicides metalaxyl-M and S-isomer, fluodxonil and sedaxane. When handling and planting treated seed, workers must wear cotton coveralls or long-sleeved shirt and long pants, chemical-resistant gloves, and work boots. For good hygiene practice, it is also recommended to wear a NIOSH-approved N95 filtering facepiece respirator (dust mask) that is properly fit tested during all job activities. Do not use for food, feed or oil processing. Store away from food and feed.”
- **Grazing:** DO NOT graze or feed livestock on treated areas for 45 days after planting soybeans. DO NOT graze or feed livestock on treated area for 60 days after planting chickpea, dry beans, faba beans, field peas, or lentils.
- **Re-cropping:** DO NOT plant any crop other than cereals, corn, soybeans, dry beans, chickpeas, lentils, faba beans and field peas within 60 days in which treated seeds were planted.
- **Storage:** Store away from food and feed. Ideal storage temperature is above freezing and below 30°C. If product should freeze, bring to room temperature and ensure the contents are mixed well prior to application.
- **Environment:** This product is toxic to fish and other aquatic organisms. DO NOT apply this product directly to aquatic habitats, estuaries or marine habitats. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.
- **Compatibility with Rhizobia-based inoculants:** Vibrance Maxx RFC is compatible with Rhizobia-based inoculants. Please check with inoculants manufacturers for specific planting windows and methods of application prior to use.

Hazard Rating:

**Application Information:**

*Vibrance Quattro* is for use on-farm on barley, wheat, oats, rye and triticale. This product can also be applied by commercial seed treaters using closed system transfer. Treat seed in a well-ventilated area. When treating seeds, handling and planting treated seed, workers should wear cotton coveralls or long-sleeved shirt and long pants, chemical-resistant gloves, and work boots. Wear a suitable dust mask when transferring treated seed to a storage bin. For good hygiene practice, it is also recommended to wear a NIOSH approved dust mask during all job activities.
**How it Works:**

The active ingredient difenoconazole is a triazole fungicide with broad-spectrum, systemic activity. Metalaxyl-M is an acylalanine fungicide with systemic activity against diseases caused by the Oomycetes, including Pythium damping-off. Sedaxane is a succinate dehydrogenase inhibitor fungicide with systemic activity that inhibits fungal metabolism by binding to the succinate dehydrogenase enzyme to disrupt cellular respiration and energy generation. Fludioxonil is a phenylpyrrole fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

**Tank Mixes:**

*Vibrance Quattro* may be mixed with *Cruiser 5FS* for crops common to the registered labels of both products. Refer to label for details. Consult each product and follow the most restrictive label precautions and limitations.

**Restrictions:**

Resistance management: Refer to page 426.

- **Labelling:** Treated seed must be labelled (listing only the applicable active ingredients) as follows: “This seed has been treated with difenoconazole, metalaxy- M (and S-isomer), sedaxane and fludioxonil fungicides. When handling and planting treated seed, workers should wear cotton coveralls over a long-sleeved shirt, long pants, chemical-resistant gloves, and work boots. Wear a suitable dust mask when transferring seed to a storage bin. Do not graze or feed livestock on seeded area for 45 days after planting. Do not use for food, feed or oil processing. Store away from food and feed.”

- **Grazing:** DO NOT graze or feed livestock on treated areas for 45 days after planting.

- **Re-cropping:** DO NOT plant any crop other than cereals within 60 days to fields in which treated seed were planted.

- **Storage:** Store away from food and feed. Ideal storage temperature is above freezing and below 30°C. If product should freeze, bring to room temperature, and then ensure the contents are mixed well prior to application.

- **Environment:** Toxic to aquatic organisms. DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.

**Hazard Rating:**

Potential skin sensitizer

<td>Pink rot (<em>Phytophthora erythroseptica</em>)</td>
<td>32mL</td>
</tr>
</tbody>
</table>

**Application Information:**

DO NOT use open treating equipment when treating seed-pieces, *Vibrance Ultra Potato* must be applied using a closed treatment system. Treat seed in a well ventilated area and keep treated seed-pieces away from animals.
How it Works:

Sedaxane is a succinate dehydrogenase inhibitor fungicide with preventative and systemic activity that inhibits fungal metabolism by binding to the succinate dehydrogenase enzyme to disrupt cellular respiration and energy generation. The active ingredient difenoconazole is a triazole fungicide with broad-spectrum, systemic activity. The active ingredient mandipropamid is a carboxylic acid amide (CAA) fungicide with contact and systemic activity. To be used as a preventative and inhibitive (prevents spore germination) fungicide application. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:

For control of Colorado potato beetle, aphids and potato leafhopper, Vibrance Ultra Potato can be tank mixed with Actara 240 SC insecticide. For control of Colorado potato beetle, Vibrance Ultra Potato can be tank mixed with Fortenza. Protection is provided during early to mid-season growth and development for potatoes only. Refer to to tank-mix partner labels for specific application instructions and precautions. Always use in accordance with the most restrictive label restrictions and precautions.

Restrictions:

Resistance management: Refer to page 426.

- **Maximum number of applications**: DO NOT apply more than 243 g mandipropamid per acre per year.
- **Labelling**: No restrictions listed.
- **Grazing**: No restrictions listed.
- **Re-cropping**: DO NOT plant any crop other than corn, cereals, canola, soybean, dry beans, dry pea, chickpea, lentil and sugar beets within 60 days to fields where seed treated with Vibrance Ultra Potato were planted.
- **Storage**: Store away from food or feed. Ideal storage temperature is above freezing and below 30°C. repeated freeze thawing will not affect the physical integrity of the product. If the product freezes, bring it back to room temperature and ensure the contents are well mixed prior to application.
- **Environment**: TOXIC to aquatic animals. Do not contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes. Treated seed is toxic to small wild animals. Any spilled or exposed seed must be incorporated into the soil or cleaned-up from the soil surface.

Hazard Rating:

None listed.

<tr>
<td>Canola, rapeseed, and mustard (both oilseed and condiment types, including <em>Brassica carinata</em>)</td>
<td>Seed-borne blackleg (<em>Leptosphaeria maculans</em>), seed-borne Alternaria (<em>Alternaria</em> spp.), seedling disease complex including damping-off, seedling blight, seed rot, root rot (<em>Pythium</em> spp., <em>Fusarium</em> spp., <em>Rhizoctonia</em> spp.)</td>
<td>Flea beetles (early-season)</td>
<td>400 mL 1500 mL</td>
</tr>
</tbody>
</table>

Product information provided below for *Rascendo*. For detailed information on *Helix Vibrance* please consult product page.

## Application Information:

For use only in commercial seed treatment facilities with closed transfer systems. This product contains no colourant. An appropriate colourant must be added when this product is applied. Regulations pertaining to the *Seeds Act* must be strictly adhered to when using this product. Seed must be conspicuously coloured at the time of treatment.

## How it Works:

The active ingredient sulfoxaflor is a systemic insecticide that causes blockage in the insect’s nervous system resulting in paralysis and eventually death, through contact or stomach action. For more information refer to “Insecticide Groups Based on Modes of Action” on page 600.

## Tank Mixes:

None listed.

## Restrictions:

Resistance management: Refer to page 599. DO NOT make any subsequent application of a Group 4 insecticide (i.e. in-furrow or foliar application) following treatment with *Rascendo*.

- **Labelling:** Treated seed must be labelled “This seed has been treated with sulfoxaflor insecticide. Do not use for food, feed or oil purposes. Store away from feeds and foodstuffs. When handling treated seed, including planting, wear a long-sleeved shirt, long pants, chemical-resistant gloves, work boots and socks, and used closed-cab planting equipment. Chemical-resistant gloves are not required inside cab. For good hygiene practice, it is also recommended to wear a suitable dust mask during all job activities.”
- **Grazing:** No restrictions listed.
- **Re-cropping:** DO NOT plant any crop other than barley, wheat or members of Crop Group 1 (root and tuber vegetables), Crop Group 5 (Brassica leafy vegetables) or Group Subgroup 20A (canola/rapeseed subgroup) within 30 days to fields in which treated seeds were planted.
- **Storage:** Store in a well-ventilated, secure area. Avoid contamination of feed and foodstuffs. Ideal storage temperature is above freezing and below 30°C. Repeated freeze-thawing will not affect the physical integrity of the product. If the product should freeze, bring the product back to room temperature and ensure the contents are mixed well prior to application.
- **Environment:** DO NOT apply this product directly to freshwater habitats, estuaries or marine habitats. The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable and/or the depth of the water table is shallow. DO NOT contaminate irrigation or drinking water supplied or aquatic habitats by cleaning or equipment or disposal of wastes. Toxic to bees exposed to direct treatment, when used as a seed treatment according to label directions risk is not of concern. Any spilled or exposed seeds must be incorporated into the soil or otherwise cleaned-up from the soil surface.

## Hazard Rating:

None listed.
### Company:
Manufactured by Arysta LifeScience Canada (Vitaflo 280 Fungicide – PCP#11423)
Manufactured by Interprovincial Cooperative Limited (Vitaflo SP Fungicide – PCP#30381)
Manufactured for Loveland Products by Interprovincial Cooperative Limited (Vitaflo Fungicide – PCP#30380)

### Formulation:
Vitaflo 280/Vitaflo Fungicide/Vitaflo SP Fungicide: 15.59% carbathiin and 13.25% thiram formulated as a liquid suspension.
- Container sizes - 10 L, 55L, 100 L, 200 L, 1000 L

1 Will not control severe anthracnose infections
Application Information:
Designed to be used undiluted in commercial seed treaters. Undiluted product can be used at temperatures down to -20°C. Centrifugal pumps are not recommended for pumping product. Peristaltic pumps (positive displacement) using polypropylene lines with a minimum inside diameter of 2 cm are recommended. If containers have been in storage, some settling may occur and require agitation.

How it Works:
The active ingredient carbacho is a carboximide fungicide with systemic activity and the active ingredient thiram is a dithiocarbamate fungicide with contact activity. For more information refer to “Fungicide Modes of Action” on page 426.

Tank Mixes:
None listed.

Restrictions:
Resistances management: Refer to page 426.

- **Labelling:** Treated seed must be labelled as follows “This seed has been treated with Vitafo 280, Vitafo Fungicide, or Vitafo SP Fungicide liquid seed protectant containing carbacho and thiram. Do not use for feed, food, or oil processing.”
- **Grazing:** DO NOT graze or feed livestock on treated area for four weeks after planting except for the following crops:
  - **Soybean** - DO NOT graze or feed livestock on forage and hay on treated areas
  - **Bean** - DO NOT graze or feed on bean forage for 60 days
  - **Barley, oat, wheat** - DO NOT graze or feed on treated area for 6 weeks
- **Re-cropping:** No restrictions listed.
- **Storage:** DO NOT store product in direct sunlight or above 35°C. Will not freeze even at extreme temperatures. If containers have been stored for several months, shake well before using. Do NOT store dry beans, peas, lentils, or soybeans treated with any Vitafo product. Wheat, barley, rye, oats, triticale and flax seed treated with Vitafo 280/Vitafo Fungicide/Vitafo SP Fungicide can be stored up to 18 months and treated corn seed can be stored up to one year without reduction in germination.
- **Environment:** DO NOT contaminate ponds, lakes or streams.
- **Compatibility with Rhizobia-based inoculants:** Vitafo 280, Vitafo Fungicide, and Vitafo SP Fungicide are compatible with Rhizobia. DO NOT tank mix Vitafo 280, Vitafo Fungicide, or Vitafo SP Fungicide and Rhizobia. Always check with Rhizobia manufacturers on any restrictions that may exist with seed treatments.

Hazard Rating:

- Warning – Eye Irritant
- Caution – Skin Irritant
