GUIDE TO

# Field Crop Protection 2026

**Weeds**

**Plant Diseases**

**Insects**

This publication is only a guide.  
Always refer to the product label  
for application details and precautions.

Introduction

Weed Control

Plant Growth  
Regulator

Disease Control

Foliar Fungicides

Seed Treatments

Insect Control

# Guide to Field Crop Protection 2026

For Reference Until December 31, 2026  
This publication is updated annually and replaces  
the 2025 and previous issues.

\*EXAMPLE: To convert centimetres to inches, multiply by 0.39; conversely, to convert inches to centimetres, multiply by 2.54.  
CAUTION: Herbicide labels are in metric units only. Conversion between the Metric and Imperial system may result in confusion. It is recommended to use metric units only.

# Introduction

## How to Use This Book

This publication is only a guide. Always refer to the product label for application details and precautions. If the information in this publication differs from the label information, follow label instructions.

The *Guide to Crop Protection* is divided into five chapters: (1) Introduction; (2) Weed Control; (3) Foliar Fungicides; (4) Seed Treatments; and (5) Insect Control.

To use the information in each of these sections, use the following process:

1. Turn to the charts at the beginning of each section. There is a set of charts for weeds, plant diseases and insect control. Select the chart for the crop you want or plan to grow. Use the chart to match your weed, disease or insect problems with the products available for that crop.
2. Once you have narrowed your product choices down to a few candidates, go to the recommendation section for that product. Products are listed alphabetically. Read the recommendations thoroughly for each product you are considering.
3. Read the product label attached to the container for detailed instructions on application.

This publication is intended to be used as a guide only. Information contained herein is that available at the time of printing.

While every effort has been made to ensure accuracy, the provincial government does not accept responsibility for label changes. When more than one trade name is listed, not all weeds or tank mixes may appear on all labels. Consult product labels attached to pesticide containers for final detailed instructions.

Certain recommendations in this publication are given in quantity of commercial product per acre (mL, L, g or kg/acre). Product labels are given in quantity of product per hectare (mL, L, g or kg/ha). To avoid application errors be sure to read and understand label recommendations.

The *Guide to Crop Protection* includes the most recent recommendations for weed, plant disease and insect control in field and forage crops. These recommendations are based on the uses registered under the Pest Management Regulatory Agency's *Pest Control Products Act*. It is an offence under *The Pest Control Products Act* to apply any chemical in a manner not consistent with the product label. If you have any doubts regarding the instructions in this publication, or on the product label, contact the company representative, your local agricultural office or the Pest Management Regulatory Agency for further advice.

## Product Labels and PCP Numbers

On each Product Page you will see a Registration or PCP number, so named because it is mandated by the *Pest Control Products Act*. Under the Act, every pesticide requires a unique identifier – the product's Registration or PCP number. That number must also appear on the product's label.

**The pesticide label packaged with the product** is the authoritative source of information on use of the product and will contain more detailed information than is included in this Guide. Some products have a number of trade names for the same active ingredient. However, each product will have its own Registration (PCP) number and these appear next to the registrants' names. Users who are seeking more detailed information than is provided in this guide, prior to purchase, can use the Registration (PCP) number to access a sample product label online through the Pest Management Regulatory Agency's (PMRA) website or they can contact the PMRA Hotline by phone at 1-800-267-6315.

Visit <http://pr-rp.hc-sc.gc.ca/lr-re/index-eng.php> to access the Electronic Label Search Tool. The PMRA Product Information database can be searched by a product's trade name, active ingredient, company name or Registration (PCP) number. Since several products can contain the same active ingredient and there are often several versions of the same or similar labels on this database, using the PCP number is the most direct route to finding the label that links to the product page in this Guide. **There may be some differences between a label found on the package and the sample labels found on the PMRA-Label Search web site so always refer to the packaged product label when applying the product.**

Once the product is located, you may click on its number to view an Adobe Acrobat (PDF) document containing the label and any supplemental registrations. Some of these documents run to many pages but you can use the 'Find' capabilities of the Acrobat Reader plug-in for your browser to jump to specific areas of interest. If you do not have Adobe Acrobat Reader installed on your computer, you can download a free version from [www.adobe.com](http://www.adobe.com).

## Safe Use of Herbicides, Fungicides and Insecticides

Herbicides, fungicides and insecticides are classified according to the use hazard and risk involved. The categories of hazard are:

- toxicity
- flammability
- explosive potential
- corrosivity
- other

The degree of risk is represented by symbols taken from common traffic sign shapes represented by the stop, caution and yield signs. The signal word for each of the signs is danger (high risk), warning (moderate risk) and caution (low risk). Where the risk is minimal, no designation is required. The label on the container will carry the appropriate signs for the protection of the user. Degree of risk symbols for herbicides, insecticides and fungicides used in field and forage crops are included in the product directory. The symbols are illustrated in Figure 1.

Figure 1. Degree of Risk and Hazard Symbols

LD<sub>50</sub> values are used to rate the toxicity of pesticides. The LD<sub>50</sub> refers to the dose of pesticide (in mg per kg of the test animal's body weight) that is lethal to 50 percent of the group of test animals. For example, if a pesticide has an LD<sub>50</sub> value of 10 mg per kg, and the test animals each weigh 1 kg, then 50 percent of the animals would die if they each ate 10 mg of the pesticide.

Table 2. Oral LD<sub>50</sub> Values as they relate to the Risk/Hazard Symbols

|                                                                                      |                                                                                              |
|--------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
|     |             |
| DANGER POISON<br>LD <sub>50</sub> less than 500 mg per kg<br>Indicates high toxicity | WARNING POISON<br>LD <sub>50</sub> 500 to 1000 mg per kg<br>Indicates moderate toxicity      |
|    |                                                                                              |
| CAUTION POISON<br>LD <sub>50</sub> 1000 to 2500 mg/kg<br>Indicates low toxicity      | SYMBOL ABSENT<br>LD <sub>50</sub> greater than 2500 mg per kg<br>Indicates very low toxicity |

Different types of protective equipment are required for pesticides that differ in toxicity. Special equipment requirements are described on the product label, but in general the following precautions must be taken when using pesticides of different hazard ratings.

- **Danger Poison** – requires goggles, respirator, gloves and skin protection, avoid fumes and spray mist.
- **Warning Poison** – requires goggles, gloves and skin protection, avoid fumes and spray mist.

- **Caution Poison** – requires gloves and skin protection, avoid fumes and spray mist.

The absence of a hazard symbol on a pesticide label indicates low toxicity to mammals. Nevertheless, protective clothing should be worn when using pesticides that do not have a hazard symbol.

## Protecting Yourself from Exposure to Herbicides, Fungicides and Insecticides

The use of protective equipment and sound safety procedures will help minimize your exposure to herbicides, fungicides and insecticides. Follow the 10 rules for safe application listed below, and wear the safety equipment recommended.

### 10 Rules for Safe Application

1. Never smoke or eat while applying pesticides.
2. Avoid inhaling sprays or dusts. Wear protective clothing and a respirator.
3. Sprayer lines carrying chemicals should not enter the operator's cab.
4. Have soap, water and a towel available. Should concentrated product spill on skin, hands, face or eyes, wash immediately.
5. Wash hands and face when leaving the treated area, before break periods, lunch or urination.
6. Bathe or shower and change into clean clothing after working with pesticides. Wash clothing each day before re-use.
7. Call a physician or get the patient to a hospital immediately if symptoms of illness occur during or shortly after pesticide application. Be sure to take along the product label or container.
8. Store pesticides out of reach of children and where there is no chance of contact with human food or livestock feeds. Do not store herbicides with insecticides and avoid cross-contamination. Storage areas should be locked.
9. Keep chemicals in their original containers, never in unmarked containers or bottles used for food or drink.
10. Follow proper container disposal methods. All containers should be triple rinsed or pressure rinsed, punctured to render the container non-reusable, and delivered to designated disposal sites.

## Protective Clothing

Wear protective equipment as described in the chart to reduce exposure.

| EQUIPMENT | PROTECTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | HOW TO WEAR IT                                                                                                                                                                                                                  |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Coveralls | There are two types of coveralls: disposable and reusable.<br><br>Disposable coveralls are lightweight and comfortable on warm days. They can be worn for mixing and applying pesticides, then discarded at the day's end. If they become contaminated, they should be discarded at once.<br><br>The second type of coverall is made of washable fabric and may be reused many times. These fabric coveralls are adequate for use with all but the most highly toxic and concentrated pesticides. | Button (or zip) right up to the neck. Loose coveralls around the neck will suck and blow pesticide in and out of the interior of the coveralls as you bend and move.<br><br>Wear coveralls over a long-sleeved shirt and pants. |

| EQUIPMENT | PROTECTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | HOW TO WEAR IT                                                                                                                                      |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| Aprons    | When pouring or otherwise handling concentrated pesticides, it makes good sense to wear protection in the form of an apron. The apron protects the front of your body from spills or splashes of the concentrate.<br><br>The apron should be made of rubber or synthetic liquid-proof material that will resist the solvents.                                                                                                                                                                                                                    | Make sure the apron covers your body from your chest to your boots.                                                                                 |
| Gloves    | Protect your hands by wearing chemical-resistant gloves. Neoprene gloves provide the best protection. Natural rubber gloves may be used when handling organo-phosphorus or carbamate pesticides. Be sure that they are designed for use with solvents and pesticides. Never use lined gloves, gloves with wristbands or leather gloves.                                                                                                                                                                                                          | Put gloves on and roll up the first inch or two of the cuff. That way when you lift your hands, any liquid on the gloves won't drip down your arms. |
| Hats      | Use a chemical-resistant hat, preferably made of washable plastic. The hat may be a hard hat or made of flexible plastic. In either case, it should have a plastic sweatband. Wash and dry entire hat after each use and before storing. Ordinary baseball caps with cloth sweatbands are dangerous as they absorb the pesticide and recontaminate the forehead each time you wear them. Even small amounts of moderately or slightly toxic pesticides may cause severe skin irritation or other illness if exposure continues for several days. |                                                                                                                                                     |
| Boots     | Wear chemical-resistant, unlined boots. These boots are available in a variety of styles and materials.<br><br>Neoprene boots are the best. Knee-length boots offer greater protection because they extend above the lower end of the apron. Avoid leather or fabric boots and shoes because these will absorb pesticides and cannot be cleaned effectively.                                                                                                                                                                                     | Wear your pant legs outside the top of your boots. This will prevent spills and splashes from running into the boot and onto your leg.              |

## Protecting Your Eyes, Face and Lungs

Wear the following equipment to protect your facial area from exposure.

| EQUIPMENT    | PROTECTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | HOW TO WEAR IT                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Goggles      | Chemical-resistant goggles keep your eyes safe from both splashing and, if using dry formulations, dusts or granules. Don't use goggles with cloth or elastic headbands as these will absorb pesticides.                                                                                                                                                                                                                                                                                                                                                                                   | Wear goggles snugly on your face so that the sides of your head are protected from splashes. If you wear glasses, make sure you purchase goggles that fit snugly over them. Never wear contact lenses when working around pesticides.                                                                                                                                                                                                                      |
| Respirators  | Only NIOSH-approved respirators should be used. Do not exchange parts of different respirators. (For example, do not use a cartridge produced by Company "A" with a respirator produced by Company "B" as the combination may not provide adequate protection to the user). Dust masks are ineffective in protecting against herbicide vapours. Similarly, the filters on tractor cabs are intended to remove dust and are not designed to protect against herbicide vapours or mists. Chemical cartridge respirators are recommended for outdoor use when mixing and applying herbicides. | When carrying out operations, change filters each day. The cartridge should be replaced when chemical odour becomes apparent or when breathing becomes difficult. New cartridges should always be installed at the beginning of the spray season. Prior to commencing work, check the face seal while the respirator is on the wearer's face. Regardless of design, respirators cannot be worn securely by people wearing beards, moustaches or sideburns. |
| Face Shields | Goggles offer some protection, but frequently full-face protection is advised or required according to the pesticide label. It is especially important to protect your eyes and face when pouring or mixing liquid concentrates. Effective face shields are made of clear plastic.                                                                                                                                                                                                                                                                                                         | Since the shield attaches to the hard hat, you can raise or lower it as needed.                                                                                                                                                                                                                                                                                                                                                                            |

## Understanding Maximum Residue Limit Statements in the Guide

To ensure the safety of Canadian food, maximum residue limits (MRLs) set the maximum allowable amount of a pesticide residue on a crop or in a processed crop product (e.g. oil or flour). Residue levels are typically assessed for pesticides registered on crops grown for food. MRLs even exist on imported food for pesticides or pesticide uses not registered in Canada.

Health Canada's Pest Management Regulatory Agency (PMRA) is responsible for setting MRLs in Canada. Similarly, importing countries set their own MRLs (also referred to as 'import tolerances') that Canadian crop exports are subject to. Trade issues between importing and exporting countries can arise due to variability in MRLs or a lack of established MRLs.

Crop pesticide uses that may contribute to trade irritations have been flagged on product pages in the Guide to Crop Protection with the statement: **'Note: As of January 1, 2025 <http://keepitclean.ca> indicates that the use of this product on certain crop type may have market access concerns. Please see pg 13 for more information AND consult potential grain buyer(s) before using this product.'** Manitoba Agriculture and Saskatchewan Ministry of Agriculture have included such statements on products uses with known or potential MRL issues. However, this may not be a complete list of product uses with potential trade issues.

Producers can follow these practices to help prevent exceeding MRLs:

- Read and follow product labels, especially with respect to registered crops, maximum application rates, maximum number of applications per season, crop stage and pre-harvest intervals.
- Talk to your commodity buyer before applying a pesticide, especially for new pesticide chemistries, new products and products registered on new crops.

More information on MRLs and 'flagged' products is available at <http://keepitclean.ca/>.

## Avoiding Spray Drift

To minimize the risk of drift, follow these guidelines:

1. Do not spray in winds above 16 km per hour (10 miles per hour).
2. Do not spray under dead calm conditions in early morning, night, or late evening. These are often associated with temperature inversions, and the combination of these factors can result in long-distance spray drift (2 km or more). Fog or dust that seems to hang in the air is a good indicator of an inversion.
3. Avoid nozzle pressures above 45 psi (310 kPa) for conventional flat fan tips.
4. Use a minimum of 45 L per acre water for all pesticides unless otherwise specified for the product.
5. Take note of buffer zones identified in the "Restrictions" section of this guide. Do not spray when the wind is blowing towards a nearby sensitive crop, shelterbelt, garden, or water body.
6. Use amine formulations of 2,4-D or MCPA where possible. Use special care when applying volatile herbicides (most herbicides in Group 3 and Group 4, particularly ester formulations). Avoid spraying these products on or immediately before hot days.
7. Ensure that air flow from air assisted sprayers is properly set to minimize airblast rebound and drift for different crop canopies.
8. Operate nozzles at their minimum recommended height. For 80° tips, this is 18" (45 cm), and for 110° tips, this is 12" (35 cm). Orienting nozzles forward allows further height reductions.
9. Special nozzles are now available that create coarse, low-drift sprays. Pre-orifice, Turbo-TeeJet, or venturi-type nozzles are available from a number of manufacturers, and these reduce drift by 50 to 95 percent. (Refer to the section entitled **Herbicide Efficacy with Low-Drift Nozzles**).
10. Consider equipping your sprayer with protective shrouds. A number of different designs are available that can reduce drift between 35 and 75 percent.
11. Reduce travel speeds. Rapid air movement over nozzle tips increases the risk of fine droplets prone to drift and turbulence from the sprayer itself can increase the uncertainty of spray deposition.

For more on reducing drift, visit: [www.Sprayers101.com](http://www.Sprayers101.com).

## Herbicide Efficacy with Low-drift Nozzles

A number of low-drift nozzles are now available from different suppliers. Well established nozzles, such as the Turbo TeeJet, reduce drift by about 50 percent and provide equivalent efficacy to a standard flat fan nozzle. Newer nozzles ("venturi" types) are best known for their dramatic ability to reduce drift (50 to 95 percent). Research suggests that these nozzles perform well at conventional carrier volumes, travel speeds, and product rates. Some aspects require special attention:

**Pressure:** Some venturi-type nozzles require higher pressures to operate properly. Below 40 psi (275 kPa), patterns for these designs may deteriorate rapidly resulting in poor overlaps and erratic control. Design improvements have resulted in venturi nozzles that require less pressure to operate effectively. When using automatic rate controllers, make sure your pressures match the recommended pressure ranges for good nozzle performance.

**Water Volume:** Droplet size becomes more important at lower water volumes. Little is known about low-drift nozzle performance at or below 5 gallons per acre (23 L per acre). Since low-drift nozzles generate fewer droplets than conventional nozzles, ensure that water volumes are high enough for coverage when using coarse sprays.

**Weed Type:** Difficult-to-wet weeds, such as wild oats, green foxtail, lamb's-quarters, and cleavers, typically require finer sprays for effective coverage. When using venturi nozzles on these weeds, make sure your pressure is high enough to achieve good coverage. Larger weeds and reduced product rates typically make chemical control more difficult, and these conditions may also reveal some performance differences between nozzles.

**Herbicide Type:** Herbicides that belong to herbicide Groups 2, 4, and 9 perform well with venturi nozzles, even at normal pressures (40 psi). Application of herbicides in Groups 1, 6, 8, 10 and 14 may require higher pressures with venturi nozzles to maintain good performance, especially under challenging conditions. Wild oat control may be reduced with the coarsest sprays, even when applied at high pressure.

Check with your chemical representative to see if the manufacturer supports the use of low-drift nozzles with their products.

More information is available in the fact sheet "Pesticide Application and Choosing the Right Nozzles," available from your local extension office or at the Saskatchewan Ministry of Agriculture Website: [Saskatchewan.ca/agriculture](http://Saskatchewan.ca/agriculture).

## Handling a Drift Complaint

When spray drift occurs, it is important to take the right steps to resolve the complaint. If you suspect that your crop or property has been damaged because of spray drift, use the following guidelines for resolving the situation.

1. Contact the suspected applicator as soon as possible. View the damage with the suspected applicator and determine if that person did, in fact, cause the damage.
2. Are you sure that the symptoms or damage you see has been caused by spray drift? Contact your local agriculture office or agronomist to discuss the injury symptoms.
3. If the damage was caused by the applicator, determine the extent of the damage and the level of compensation (if any) with the applicator.
4. If the situation cannot be resolved quickly because of disagreements on the extent of damage, cause of the damage, or level of compensation, contact your local agricultural office to discuss options on how to proceed. Documentation will be required, particularly if insurance companies are involved.
5. The involvement of a private consultant is recommended if documentation is required. Required documentation often includes samples of the damaged plants, photographs, and yield comparisons to determine losses. Your agricultural office can provide you with a list of private consultants in your area.
6. The best approach is to start an open and honest line of communication with the suspected applicator. The majority of drift complaints are resolved quickly and efficiently by communicating with the applicator, without the involvement of outside parties.

## Mixing Pesticides

The ability to control a broad range of weeds or other pests in one pass is the advantage that a mix of two or more products allows. The mixing of pesticides is restricted to those products specifically indicated on each pesticide label, or if the labels of each and every product to be mixed contain the following general mixing statement:

"This product may be tank mixed with (a fertilizer, a supplement, or with) registered pest control products, whose labels also allow tank mixing, provided the entirety of both labels, including Directions For Use, Precautions, Restrictions, Environmental Precautions, and Spray Buffer Zones are followed for each product. In cases where these requirements differ between the tank mix partner labels, the most restrictive label must be followed. Do not tank mix products containing the same active ingredient unless specifically listed on this label."

In some cases, tank mixing pest control products can result in reduced pesticide efficacy or increased host crop injury. The user should contact [manufacturer name] at [insert manufacturer contact information] for information before applying any tank mix that is not specifically recommended on this label."

If tank mixing is not done in the correct order, the result could be a tank-load of material that may not control the target pests, cause injury to the crop, plug nozzles, or leave an undesirable residue in the tank that will require extensive cleaning. Mistakes like these are costly, could put the user at unnecessary risk of exposure to the products, or create an environmental disposal problem.

To avoid mixing that may result in incompatibilities, **always consult the label of the products that are being used** to learn the correct order. **Remember to add all like components at the same stage of mixing.** The list below is a general rule-of-thumb for mixing pesticides:

1. Fill the spray tank with 1/4 to 3/4 the amount of water required for the application and turn on the sprayer agitation. Check the products that are being used for the correct amount to add. Once agitation has begun, maintain until the tank is emptied.
2. Add any water conditioner (fertilizer or pH adjuster) additives to the tank.
3. Add any wettable powders, or water dispersible granules (DF, DG, or WDG). Add dry products slowly to prevent clogged return lines. Allow sprayer to agitate for a few minutes, allowing the product to become completely suspended in the tank, before adding the next component.
4. Shake any containers of liquid pesticide thoroughly before adding to ensure they are well mixed.
5. Add any oil dispersions (OD) or flowable liquid suspensions (F, SC) to the tank. Allow to mix.
6. Add emulsifiable concentrates (EC) or emulsions (ME, SE) to the tank and allow to mix.
7. Add any pesticides that are solutions (SN) (i.e. amines and salts)
8. Add any surfactants or other adjuvants.

Remember to always consult the label for compatible mixes and recommended mixing order.

Many pesticides will break down if left in the tank for an extended period. Try not to mix any more than you can spray at one time.

If you need to stop spraying for a short time, leave the sprayer agitation running to keep products from settling or separating in the tank.

## Container Disposal

Proper disposal of used containers and unused pesticides is important to protect the environment and prevent contamination of soil and water resources. Rinse all containers prior to disposal to reduce environmental contamination caused by open dumping of unwanted containers. Only mix as much pesticide solution as is needed to treat the desired area.

## Triple Rinsing

Triple rinsing renders used pesticide containers (metal, plastic, glass) more than 99.9 percent free of residues, in most cases. Here are the steps that should be followed:

1. Empty contents of the container into the spray tank and drain in a vertical position for 30 seconds.
2. Add a measured amount of rinse water or other diluent until container is about one-fifth full.
3. Rinse the container thoroughly and pour the rinsate into the spray tank.
4. Repeat the procedure twice (it should take only about 5 minutes in total).
5. Puncture or break triple rinsed containers to render them non-reusable. Paper bags should be rinsed once prior to disposal.

## Pressure Rinsing

Pressure rinsers can be used to rinse any size of empty pesticide container that can be lifted into position over the spray tank. A 30 second rinse with a pressure rinser is convenient and just as effective as triple rinsing. Pressure rinsers are constructed to be thrust into the bottom of a metal can or plastic jug. Holes, situated laterally in the rinser tip, direct water from a pressurized source against the inner sides of the container and effectively wash the residual pesticide into the spray tank. Some farmers have found it convenient to attach a rinser to the pump on their large water storage tank to minimize container handling. Pressure rinsers have the added advantage of rendering containers useless by automatically puncturing them.

## Disposal of Containers

Properly rinsed containers, totes and drums can be returned to a local collection site for recycling. See [www.cleanfarms.ca](http://www.cleanfarms.ca) for more information and locations.

## Sprayer Cleaning

When pesticide application is completed each day it is important to empty and clean the sprayer thoroughly to prevent the breakdown of certain pesticides, prevent adhesion of the pesticide to the sprayer, and to maintain the sprayer parts in good condition. Certain pesticides break down very quickly when left in solution, and several pesticide solutions can be corrosive to sprayer parts. Sprayer cleaning is especially important when changing from one crop to another or from one pesticide to another. Each year several reports are logged of herbicide damage caused by carryover of product residue in the tank. To avoid the risk of contamination, sprayers should be cleaned as soon as possible after application is completed.

Do not clean sprayers where rinsate can run off into ditches or other water bodies, near sensitive plants or shelterbelts, or where other people or animals are likely to walk, to avoid unnecessary exposure to people, animals and the environment.

There are three basic types of rinse solution for cleaning sprayer tanks. Their recipes and basic procedures are outlined below:

- **The Ammonia Rinse** – Fill spray tank and add 1 L of household ammonia (3 percent) for every 100 L of clean water needed for the rinse and begin agitation. Allow solution to flush through the booms until the boom is completely filled with ammonia solution and top up the tank with water. Circulate the ammonia solution through the tank and pump system for 15 minutes. Flush hoses and booms with ammonia rinse solution again (minimum 5 minutes) before emptying. Remove nozzles and screens and scrub with 0.1 L household ammonia per 10 L clean water and an old toothbrush. Perform clean water rinse to remove ammonia solution prior to next spray load. Some herbicides recommend leaving the ammonia rinse in the tank over night to improve cleaning potential.
- **The Fresh Water Rinse** – The spray tank cleaning should begin and end with a fresh water rinse to remove the majority of potential contaminants prior to the cleansing process or prior to the next round of spraying. Drain the tank of its previous contents and fill the tank with clean water. Open nozzle valves and pump clean water through the booms and hoses. Top up the tank with more clean water and circulate/agitate for at least 10 minutes and empty the tank of waste water. If this is the first rinse after spraying, a high pressure hose could be used to clean residue from all surfaces in the tank. Do not enter the tank during the cleaning process.
- **The Detergent Rinse** – After rinsing with clean water, fill spray tank and add a heavy-duty detergent at 0.25 L per 100 L of water (some suggest a non-ionic surfactant such as Agral 90 or Agsurf at 0.6 L per 100 L of water). Circulate the mixture for a minimum of 5 minutes and spray out through sprayer nozzles. Nozzles and screens are removed and cleaned individually with the same detergent solution in a small container. Soaking in this solution for several hours also helps to loosen any deposits.

The above solutions are just components of the overall sprayer cleaning process. Typical rinse instructions will repeat a combination of one or two or all of these basic rinses. Below we will give some generic rinse instructions utilizing the basic rinses as components of the larger cleaning procedure. Never enter the tank during the cleaning process as some cleansers may release dangerous gases.

- **Method A** – Drain contents of tank – 1 to 2 x Water Rinse – 2 x Ammonia Rinse – 2 x Water Rinse (one just prior to the next spraying event)
- **Method B** – Drain contents of tank – 2 x Water Rinse – 2 x Detergent Rinse – 2 x Water Rinse
- **Method C** – Drain contents of tank – Several repetitions of the Water Rinse with nozzles and screens removed and checked for debris. Products: *Adrenalin, Altitude, Amitrol 240, Ares*.

The above directions are general processes based on the similarities of tank cleaning recommendations between products in each of the herbicide groupings. Always follow the specific instructions on the product label.

Several products in the guide do not have label instructions regarding tank cleaning. In the case of products that have no cleaning recommendations on the label, there are some basic principals that can be applied. Products that are water based formulations can usually be cleaned from spray tanks using **Method C** above. Products that are formulated as an EC, SC or F (flowable) or use a petroleum based adjuvant should at least use **Method B**. The detergent breaks down the oil that may be sticking to the side of the tank. Products in Group 2 (most will already have a recommendation), with the exception of the 'IMI' products (See Table 8 on page 60), will require the use of **Method A**. The ammonia in **Method A** either increases the solubility of the product allowing it to be easily removed from the tank surfaces or speeds the breakdown of these products in water. If the product that is to be cleaned out of the tank is a combination of these elements, use a combination of Methods to clean the tank. In these cases, use a good commercial tank-cleaning product from a recognized source, with both ammonia and detergent as components.

Group 2 compounds are highly active on sensitive plants so even a small amount remaining in the sprayer can present a risk of injury. They can also occasionally be trapped on the tank walls and plumbing by petroleum based formulations or adjuvants when tank mixed with other products, resulting in tank residues that may be tougher to remove. A way to reduce the chance of this occurring is to add detergent at 0.25 L per 100 L to the Ammonia Rinse portion to assist with the breakdown of the petroleum coating so that the ammonia may rid the tank of Group 2 product.

It is very important to clean sprayers immediately after every use. With a more diverse rotation, the likelihood of damage from lack of care increases dramatically.

## How to Identify Crop and Weed Leaf Stages

Recognition of plant growth stages is essential for effective weed and disease control. Many herbicides and fungicides are safe on a crop only when applied at a specific growth stage. Similarly, weeds are controlled only when they are at certain growth stages.

For most post-emergent products, growth stages are described by the number of leaves. The following is a description of how to count leaves for staging.

### Cereals and Annual Grass Weeds

Manufacturers generally use two different systems of staging for grasses. The minimum stages of application are similar, while the later stages may differ.

Some manufacturers use "Total Leaf Count" stages based on the number of leaves on the entire plant, including tillers or secondary shoots. Most recommendations are based on the number of main stem leaves and tillers. Tillers or stools are the secondary shoots or stems of a grass plant. Similar to the branches of a broadleaf plant, tillers will emerge from the axils between the leaf and main shoot. Tillers usually begin to appear at the 3 or 4 leaf stage. When staging a plant in this manner, be sure to identify the tillers first, then count only leaves that originate from the main shoot.

Figure 2. Leaf Stages of Cereals and Annual Grass Weeds

## Broadleaf Weeds

**Cotyledons** – These are the seed leaves that usually emerge above ground. On some plants, such as faba beans, lentils and peas, they stay below the soil surface. Cotyledons are not true leaves and are not counted when determining leaf number. They are a different shape than the true leaves and may dry up and disappear at an early stage.

**Alternate leaves** – Some plants have one leaf at each node on the stem. The next leaf emerges at the next higher node and extends away from the stem in the opposite direction. These plants (lamb's quarters and wild mustard are good examples) are said to have alternate leaves.

To determine the leaf stage, simply count the number of leaves present (Figure 3).

Figure 3. Leaf Stages of Broadleaf Weeds and Crops <sup>1</sup>

**Opposite leaves** – Plants with two leaves at each node, one on each side of the stem, are said to have opposite leaves. The next pair of leaves on the next node are rotated about 45° so that they are not directly over the previous pair. Plants with opposite leaves have even-leaf numbers only. When counting, the leaf number progresses from cotyledons to 2 leaf, 4 leaf, etc. These plants generally appear shorter than plants with alternate leaves at a similar leaf stage. **Be sure to count each pair as two leaves.** Hemp nettle is a weed that has opposite leaves (Figure 3).

**Whorled leaves** – More complex plants like cleavers may have whorled leaves. These plants have three or more leaves at each node on the stem. The leaf number in each whorl may vary, so be sure to count each individual leaf unless the Guide or label recommendation refers to the number of leaf whorls (Figure 3).

Figure 4. Leaf Stages of Certain Special Crops and Forages

## Key to Product Pages

### Pesticide Product Name

This field lists the pesticide product name. Where there is only one product the commercial “trade” name is given. Where more than one company sells pesticides with the same combination of active ingredients the “generic” (active ingredient) name is given.

If the active ingredients are all in a common formulation (liquid, granule, etc.) the generic name will appear as ‘Ingredient A/ Ingredient B’ and if the active ingredients are in separate containers to be mixed in the sprayer the names are given as ‘Ingredient A + Ingredient B’.

### Pesticide Resistance Group #

*This area will the pesticide active ingredient(s) to the mode of action that ingredient uses.*

### Company:

This section identifies the company (or companies) that manufacture or market this crop protection product (or generic equivalents) in Canada as well as the PCP# for that (those) product(s). See page 10 for more information on PCP numbers. PCP#s are given as ‘(PCP#XXXXX)’ where XXXXX is a four or five digit number unique to that product. In some cases, where there are multiple components with separate PCP numbers, the PCP number will be provided below under ‘Formulation:’

### Formulation:

This section gives information on the active ingredient and its concentration in the product as well as information on formulation type and packaging types and configurations. Formulation strength (or concentrations) are given in % by weight for dry formulations and g/L for liquid formulations. PCP numbers may also be give for some products (see above).

### Crops and Staging:\*

This section indicates on which crops the product may be used and what stage of crop development it should be applied at. Rates may also be included in this section if they vary between crop types or crop stage.

*\*\*This section will also indicate which crops are registered under the User Requested Minor Use Label Expansion (URMULE) program. Some companies, as a condition of placing these minor crops on their labels request, that users of their product on these crops do so at their own risk because the registration was approved with information the company did not produce.*

*These crops will be flagged separately from the main crops.*

### Pest (Diseases, Insects, Weeds) and Staging:

This section indicates the pests (Diseases, Insects, or Weeds) that are indicated on the product label as controlled or suppressed, as well as any specifics on the timing of application relative to the pest stage if required. Rates may also be included in this section if they differ for different pests or stage of pest.

### Rates:

The rates provided in this section are given in the amount of product required per acre and the number of acres treated per package unit where possible. This section will also indicate any adjuvants that are to be used in conjunction with the product and the rate of that adjuvant.

This section will not be present if rates have been integrated into either of the previous **Crops** or **Pest** sections.

### Application Information:

- **Water Volume:** This section indicates the minimum carrier water volume to be used to apply the product. Using less than the recommended minimum carrier application volume can negatively affect pesticide performance, particularly with contact pesticides and when using low drift nozzles.
- **Nozzles and Pressure:** This section indicates if there are any particular nozzles that should or should not be used to apply the product. Pressures indicated reflect those for conventional nozzles. Low drift nozzles may require higher pressures for proper performance. A general statement of “Use nozzles and pressures designed to deliver proper coverage with **ASABE** \_\_\_\_\_ droplets” indicating the ideal droplet sizes to allow for the combination of lowest drift potential and best performance from the pesticide. ASABE refers to the American Society of Agricultural Engineers who have set standards a series of droplet measurements (in microns or micrometres) that classify droplet sizes from ‘fine’ to ‘very coarse’.

## How it Works:

This section typically refers to the page where a general description of the various modes of action of either herbicide, fungicides or insecticides.

## Effects of Growing Conditions:

This section summarizes any adverse conditions that will affect the biological function of the crop or the target pest and therefore possibly impact the product's performance. In most cases both crop and target pest must be growing or functioning normally for pesticides to provide expected performance and/or crop tolerance. Adverse weather conditions such as extreme heat, cold, drought or flooding can slow or stop the biological processes in the crop or pest. These biological processes in the crop allow the pesticide to be degraded quickly. If biological processes that are attacked by the pesticide, and under normal conditions would kill the pest, are not functioning normally the pest may be able to rid itself of the pesticide before dying and recover from the application.

## Tank Mixes:

This section indicates which other pesticides the pesticide label indicates are registered for use as tank mix combinations with this pesticide.

Common mixes may include:

### Herbicides:

- (Subtitles may indicate specific crops or condition restrictions:)

### Insecticides:

### Fungicides:

### Fertilizers:

There may be additional pesticides that are registered but not listed on this product's label. Other pesticides may have this product listed as a mix option on their labels. The note below (**in bold**) directs users to a chart inside the back cover that show all available mixes for this pesticide. The product listed on the left column of the chart is the product that supports the mix. Mixes supported by both products are marked with an 'X'. Mixes supported by only one of the products is indicated by an arrow pointing to the left column.

*Included in the tank mix section in non-bolded italics may be any precautions against the mixing of pesticides which will have adverse reactions such as crop injury, reduced pest control or unusual increased danger in the use of the product.*

**Note: The above mixes are those listed on the pesticide label only. To check for other possible mixes see the blue fold out chart inside the back cover.**

## Restrictions:

Since most pesticides have a capacity to injure neighboring plants, wildlife or people, they will come with restrictions on their use in order to prevent this unintentional damage. Misuse of pesticides may result in as little as temporary or superficial damage to plants or a slight irritation to the eyes or nose, or could also result in poor performance of the pesticide, severe injury and/or yield loss to very sensitive plants and/or unacceptable residues in agricultural commodities, and/or serious illness or death of non-target organism or people. It is important to comply with product restrictions in order to minimize the impact of the pesticide used on non-target organisms and people. A selection of common restrictions and precautions found on product labels are provided in this section, **but it is important to read the label carefully in order to understand how to use the product properly.**

- **Rainfall:** This section indicates the required delay between application and rainfall to avoid reductions in the performance of the product or the unintentional movement of the product.
- **Restricted Entry Interval:** This section indicates when it is safe for a person to re-enter treated field following an application of a particular pesticide without the same personal protection used to apply the product.
- **Resistance Management:** This section highlights products where an increased risk of the target pests developing resistance to the group of products (typically fungicides) has been identified. If no specific risk has been identified the reader is referred to a general resistance section. All pesticides have some risk of the target pest developing resistance. Rotating pesticide groups using as many different resistance groups as possible in the rotation is one way to avoid or delay resistance development.
- **Grazing:** This section indicates whether and how soon treated crops may be grazed by livestock or otherwise fed to livestock. This restriction is in place to avoid residues of the pesticide from being detected in milk or meat from animals consuming forage, greenfeed or straw from treated crops or forage.
- **Pre-harvest interval:** Is the time that must be left between application of a pesticide and the harvest of a crop in order to prevent greater than allowable residues of the pesticide in the harvested material. Harvest is the cutting of the crop (i.e. combining or hay cut) or removal of the harvestable material from the plant (i.e. picking fruit or stripper header). Maximum Residue Limits (MRLs) are set for commodities based on registered rates and staging of pesticides used in the production of those commodities. Disregarding these intervals can result in residues over the MRLs, which can lead to market disruptions.
- **Re-cropping:** This section indicates how soon specific crops may be seeded into treated fields. Failure to adhere to these delays could result in injury to the following crop.

- **Aerial Application:** This section indicates whether the product may be applied by aircraft and any special conditions that may be necessary.
- **Labelling:** In addition to other precautions and warnings, seed treatment products will also have statements about how seed treated with the product should be labeled.
- **Storage:** This section indicates how the product must be stored. As a general rule, unused pesticides should always be stored in their original containers in a secure, dry area, away from other pesticides, food or feed.
- **Buffer Zones:** This section will indicate any setback distances that are required from sensitive aquatic or upland habitats. Newer labels may indicate that these distances are from the downwind edge of the boom but older labels may not. Examples of aquatic habitats are lakes, rivers, sloughs, ponds, prairie potholes, creeks, marshes, streams, reservoirs and wetlands. Examples of terrestrial habitats are grasslands, forested areas, shelter belts, woodlots, hedgerows, riparian areas and shrublands.

In addition to the set back or 'buffer' distances indicated on product labels, provincial environment departments may also have additional restrictions or requirements for permits to apply pesticides to or near water. Check with the provincial environment department/ministry for more information.

## Tank Cleaning:

This section describes the measures that are required to properly clean out spray tanks. A general overview of sprayer cleaning is given on page 15, but products where there is a high risk of crop damage as a result of very low level contamination of the spray solution, will have specific measures indicated.

## Hazard Rating:

This section indicates the relative toxicity of the pesticide, formulations or components. For an explanation of the symbols used here see pages 10 and 11. An additional symbol that is used that is not a standard symbol is the (!) exclamation mark which indicates an otherwise undefined risk factor (i.e. irritation).

Example:

Caution – Eye Irritant

Some older products have not had hazard ratings developed, while other products have very low toxicity and do not have hazard warnings. Even in the absence of a hazard rating users should wear a minimum of nitrile gloves and an apron as well as long sleeved apparel during mixing and avoid unnecessary exposure.

# Weed Control

The use of herbicides to control weeds is often important in determining the success or failure of a crop. However, many other practices can be implemented before and after a herbicide application to help reduce weed competition. The use of these practices is termed Integrated Weed Management.

## Integrated Weed Management

A farming system that uses an array of inter-dependent cultural, biological, mechanical and herbicidal weed control practices is implementing Integrated Weed Management (IWM). It is essential that IWM involve a variety of tools including the rotation and/or mixes of available herbicide groups, ensuring that weeds are exposed to a diverse range of control mechanisms. The goal of IWM is to improve the health and vigour of crops so that they may out-compete weeds emerging in the stand. This helps to reduce selection for resistance to any single control agent and to delay or prevent the development of herbicide resistant weeds.

Practicing IWM does not mean abandoning chemical weed control, just relying on it less exclusively. For example:

- You may decide to choose a taller wheat variety or a tall, viny pea variety for a certain field. These crop selections will compete strongly with weeds, possibly allowing you to skip a spray operation in more competitive crops.
- You could insert a short-term forage crop into your crop rotation. Studies show that short-term (3 year) alfalfa stands can reduce wild oat and green foxtail populations by up to 80 percent the year after terminating the forage crop.
- Early sown barley may give you enough of a “jump” on the weeds that you can avoid herbicide applications.
- Use of vigorous, high-quality seed, sown shallow, can give you better crop competition than poor-quality or deeply sown crop seed.
- Banding nitrogen near the seed-row can give your crop an advantage over weeds, whereas broadcasting fertilizer benefits both crop and weed equally.

For more information, refer to “Weed Management: Making it Work on Your Farm” factsheet, available from Manitoba Agriculture.

## Making Spray Decisions

### Field Scouting

Field scouting is an important tool for making informed spray decisions. Accurately assessing the type and number of weeds in the field will help you determine if a spray operation is necessary. The scouting pattern diagram on this page provides a guideline for scouting a field. The entire field should be walked to get a feel for the distribution and species of the weeds present. A minimum of 20 weed counts should be taken across the field. A smaller number may be used, but be aware that accuracy decreases as the number of counts gets smaller. Count the number of weeds in a 1 square

metre or a 0.25 square metre area and divide the total number of weeds by the number of counts taken to obtain an average for the field. If using 0.25 square metre samples, make sure to multiply by four so your average is for a 1 square metre area.

Some weeds are not distributed uniformly and may be found in patches (for example, Canada thistle) or in low spots. As well, the type and number of weeds found along the field edges may be very different from those found inside the field. These areas should be considered separate from the rest of the field. If possible, patches, low spots, and field borders should be treated separately, as field-wide spraying may not be required. Look out for new invading weeds and patches of herbicide-resistant weeds. Herbicide-resistant weeds and new invaders should be removed (manually if necessary), regardless of their number, to prevent them from spreading and becoming a serious control problem. Mapping your field’s weed problems will allow you to monitor the spread of weed patches over time and help you assess the effectiveness of your control program.

## Yield Losses Caused by Weeds

Knowing the amount of crop yield loss caused by a given weed density will help you decide if a spray operation is required. The tables on the following pages give an indication of the yield loss caused by some of the important grassy weeds.

### THE FOLLOWING TABLES SHOULD BE USED ONLY AS A GUIDE.

The figures are based on Western Canadian research trials and will not be accurate all of the time. The yield loss values apply only to healthy, well fertilized crops with good stand establishment. Crops that are diseased or emerged unevenly will not compete well with weeds and will suffer larger yield losses than indicated in these tables. The yield loss figures are based on competition from a single weed species only. Other weeds, such as wild mustard or Canada thistle, must be controlled if the figures are to be accurate. As well, the tables are based on competition from normal height crops. Semi-dwarf or hybrid varieties may not compete as well with weeds and the figures may not be accurate in these cases.

Table 1. Yield Losses (Percent) in Wheat Caused by Wild Oats.

|                                               | Wild Oats Density (number/m <sup>2</sup> ) |   |   |   |   |    |    |    |    |    |    |    |    |    |    |    |    |

## Deciding to Spray – Economic Thresholds and Herbicide Resistance

An economic threshold is the level of infestation at which lost yield exceeds the cost of the chemical and its application. Determining the economic threshold will help you decide if a spray operation is necessary.

The following example outlines how to determine an economic threshold:

You have a wild oat problem in your wheat. After a thorough field scouting, you have determined that your field has an average density of 35 wild oats per square metre. You know that the crop and weeds are at the same leaf stage. Using Table 1, choose the “Same Leaf Stage” row and read across to 35 wild oats per square metre. You will find that your yield loss will be about 18 percent.

You think it could be a 60 bushel per acre wheat crop, and expect to get \$6 per bushel for it. Therefore:

- 60 bushels x 0.18 (percent of expected yield loss) = 10.8 bushels per acre of lost yield
- 10.8 bushels x \$6 per bushel = \$64.80 per acre of lost income

Now find out the price of your herbicide. Most wild oat herbicides for wheat cost between \$10 to \$25 per acre. In this case, lost income exceeds the cost of the herbicide and application, so spraying would be justified.

Alternatively, you may want to use the figures provided with some of the yield loss tables. These figures provide flowcharts to assist you in making spray decisions. In some cases the flowcharts may indicate to spray when you do not have an economic threshold weed density, but most times they will prevent you from spraying unnecessarily.

Another factor to consider when deciding whether to spray is your herbicide rotation. A minimum one-in-three rotation of herbicide groups is currently recommended to delay the development of herbicide resistance for weeds such as wild oats and green foxtail. Skipping a spray operation will give you an extra year of flexibility in your herbicide rotation. This means that you have one extra herbicide group to choose from the year after you skipped the spray operation. When making spray decisions, the ability to rotate herbicides should be considered in addition to the economics of spraying.

## Making the Spray Decision

Remember that economic thresholds should be used only as guides when making a spray decision. Lost income caused by dockage or downgrading must also be considered. **FIELDS THAT ARE NOT SPRAYED THIS YEAR HAVE A HIGHER POTENTIAL FOR PROBLEMS THE FOLLOWING YEAR BECAUSE OF WEED SEED RETURN.** A farmer’s experience and common sense play an important role when deciding to spray. Used properly, however, the economic threshold can be an important tool in making spray decisions.

## Brush Control

Woody species can have both positive and negative characteristics. Many woody plants are useful for fruit, their ornamental qualities or wood for fuel or for building materials. However, when useful species dominate landscapes where they are not desired, they require controlling. Other woody species, and there may be some overlap with the species above, can be toxic to people and animals, or become invasive on the landscape, reducing utilization of the land for other purposes like grazing, recreation, sightlines for transportation corridors or protecting against the destruction of infrastructure.

Control of woody species can be challenging and require a different approach from the control of herbaceous plants whose tops die down to the ground each year.

Woody species also provide an opportunity for management through physical cutting or plowing/dozing the tops to severely compromise the woody plant's ability to survive. While these methods can be quite effective, they can also encourage regrowth from the cut surface or from underground roots. The use of herbicides in conjunction with these operations can result in better overall results, by suppressing or preventing the return of secondary growth of that plant. Similarly, fire can sometimes be used to reduce woody growth on a wider landscape basis, but may not be targeted enough for all situations, and comes with some risk of escape and resulting liability from unintended destruction of property.

While herbicides can be an effective tool for managing woody species, timing can be different than with the management of herbaceous plants. Approaching control of perennial plants with herbicides is often more successful when the perennial plant is treated when stored energy levels are low. The energy reserve in herbaceous perennial plants typically declines through the season until the point when energy begins to flow to the root again after flowering. This results in a low ebb of energy reserves typically just as flowers emerge. However, woody species have their low energy ebb just after they leaf out in the spring, and the rest of the entire season is spent rebuilding those reserves and setting new buds for the following year. As a result, the susceptibility to the timing of systemic herbicide application differs between herbaceous and woody plants. In perennial herbaceous plants, this vulnerability occurs in late summer and fall as plants shift from fueling aerial growth to fueling the building of root reserves for winter. In woody plants, however, plants are particularly vulnerable just after leafing out and then that vulnerability gradually declines as the growing season progresses.

As the control of woody species often occurs in congested sites, where control needs to be very localized and targeted to a single individual or interspersed undesirable individuals within a collection of desirable individuals, there are additional application methods that differ from broadcast applications that are utilized in open habitats. The height of woody vegetation may also restrict broadcast applications to delivery with aircraft, ground applications need to be more specialised. Below are a series of approaches that can be used to apply herbicide to control woody species.

## Foliar

Foliar applications, as mentioned before are somewhat limited by the height of the canopy, unless executed by aircraft. But foliar treatment can also take place from the ground using vehicle-based methods or hand wand applications. Vehicle based sprayers can include those with solid booms with relatively conventional nozzles, or those with 'boomless nozzles' that deliver a fan of spray horizontally from the delivery vehicle over the target. The advantage to boomless nozzles is that they allow the vehicle to navigate tight pathways and spray past obstacles without having to physically retract a rigid boom. Delivery vehicles for boomless nozzles can range from all-terrain vehicles to tractors to road based vehicles such as trucks.

Foliar applications can also be made from the ground using single nozzle handheld systems. Low volume systems that are most common in vehicle delivery systems may also be useful for low growing and/or young woody plants (below waist height) like those used for applying to herbaceous plants. High volume applications are useful for larger woody plants and higher pressure, higher volume wands can reach the upper reaches of woody plants of moderate height that are taller than the applicator but not greatly so. The higher volumes delivering larger droplets help to reduce the risk of off target drift to some degree, but caution should still be taken when treating taller vegetation using this approach that applications take place under conditions that minimize the risk of drift and takes place in areas where drift is less problematic.

Wipers or rollers may also be used to apply herbicide solutions to short brush species. This method has minimal off target drift since the herbicide solution is applied to the absorptive material of the roller drum or wiper using low pressure and the roller/wiper makes direct contact with the target to deliver the herbicide solution to the plant.

## Basal and Single Stem Treatments

### Cut stump

The principal behind cut stump treatments is straight forward. The tree is cut down. Then shortly after the tree is felled, a treatment is applied to the area of the cut surface where the wood and the bark meet called the cambium. The cambium is the living part of the stem of woody plants and any material inside of that thin layer (wood) or outside of that layer (bark) is inert. The cut stump application is designed to allow the treatment to move into that live layer and circulate to the buds on the roots or just below the cut region that may produce regrowth or 'suckers'.

Basal bark treatments

Basal treatments are usually used on smaller diameter woody plants of 6 inches (15 cm) or less with relatively thin bark. The thinner bark of these young saplings allows the penetration of the herbicides through to the cambium where they either kill a band of the cambium around the tree effectively girdling it and thereby killing the tree, or to allow the treatment to circulate to growing points. Herbicide carriers are often waterless, using mineral or vegetable oil carriers, allowing these applications to take place year-round.

- **Low Volume** applications that treat on side of the stem thoroughly with spray solution from the base of the stem upwards for at least one foot (30 cm).
- **Streamline** applications use a thins stream of solution to an area of the stem that is about 1 to 1.5 feet (30 to 50 cm) above the base of the stem. The stream of solution is applied around the entire circumference of the stem in a roughly 2 inch (5 cm) band.
- **Frilling** applications, sometimes referred to as ‘hack and squirt’, are used on larger trees that have developed a thicker bark layer that makes direct treatment less effective. An axe, hatchet or machete is used to cut through the bark and penetrate past the cambium layer slightly. The resulting frill that is produced acts as a cup to hold the herbicide solution. Concentrated herbicide solution is applied to the frill so that it contacts the cambium layer. This can be done through spraying, dribbling, or squirting the herbicide solution into the frill. Frills should be made at relatively close regular intervals around the girth of the tree to girdle it.
- **Injection** applications use either heavy duty needles, spikes, hand drills or capsules to penetrate the bark layer of woody plants to facilitate the entry of the herbicide solution into the tree. Similar to the frills, the injection sites should be made a regular intervals to ensure treatment of the entire stem.

Weed Resistance to Herbicides

In recent years, the number of herbicide-resistant weeds and the areas they infest have increased.

Most herbicide-resistant weed infestations have

developed following repeated use of the same herbicide (or herbicide group) for a number of years on the same field. Growers who have developed weed resistance on their farms will typically see a weed, which is normally controlled by a herbicide, escape uncontrolled after a number of years of use of the same product or product group. Individual plants may be resistant to 1.5 up to 10 or more times the normal field rate.

Herbicide Groups

To help you plan your herbicide program, the following table lists “herbicide groups.” To slow down the process of developing weed resistance, tank mix products from different groups to control the same key weeds and/or use products from different groups from year to year on your fields. ‘Herbicide Layering’ is another way to use multiple herbicide groups that control of the same weed for managing herbicide resistance. Layering involves application of a soil active herbicide followed by in-crop foliar sprays. The soil applied herbicide provides a base for control and the foliar herbicide picks up any stragglers. Soil applied herbicides also help to control certain difficult to control weeds as well as improving crop yields by removal of weeds in the crop’s sensitive early growth stage.

Adapted from WSSA Herbicide Classification System For Resistant Weed Management. Weed Technol. 17:606-608 and the NDSU Weed Control Guide.

Contact herbicides = Groups 6,10,14 (foliar) and 22.

\* Products contain more than one active ingredient and appear in more than one group. In some instances, both active ingredients act to kill the same weed using different sites of action. Using these products or tank mixes of products from different groups that control the same high risk weed (see the Herbicide Resistant Weeds in Western Canada chart in the Weed Control Introduction) will slow down the process of developing weed resistance.

New herbicides do not necessarily have a unique site of action and may fall within the groups listed in the charts.

Herbicides that have the same site of action may not control the same weed spectrum or have the same crop safety. For example, *Simplicity* and *Ally* have the same site of action; however, *Simplicity* controls wild oats while *Ally* does not.

<sup>†</sup> Products are packaged with multiple components in one package. Each component may also have multiple active ingredients.

## How Do Herbicides Work?

There are several ways to define how herbicide work:

- **Timing (may apply to crop and/or weed and may be one timing for the crop and another for the weed):**

- **PPI (Pre-Plant Incorporated):** the product is applied to the soil and worked in with a tillage implement prior to seeding. The product remains effective in the soil for one to several weeks, preventing weeds from emerging within the crop.
- **PRE (Pre-Emergent Surface):** the product is applied to the soil surface and relies on rainfall to move it into the emergence zone of target weeds in the soil. The product remains effective in the soil for one to several weeks, preventing weeds from emerging within the crop. Products may allow application in the fall or in the spring prior to seeding or following seeding up until the emergence of the crop and target weeds.
- **POST (post-emergent foliar):** the product is applied at the seedling stage of the weed and/or the crop. Early applications are usually the most beneficial to crop yield because of the removal of competition by the target weed at the crop's most vulnerable stage.
- **Pre-harvest:** applied prior to the harvest of the crop to address weeds growing in mature.

- **Target:**

- **Cell membrane disruptor:** causes the plant cells to produce compounds that attack the integrity of the cell membrane. Result is the spilling of cell contents into the environment and rapid drying of affected tissues.
- **Inhibitor of essential growth component (amino acids, lipids):** blocks the production of essential building blocks for plant growth and maintenance. Target weeds stop growing and display a loss of green colour, typically in new growth first and then in older tissues as plants need to repair their tissues after environmental damage.
- **Pigment inhibitor:** new tissues produced after exposure to the herbicide develop without colour (white). Some tissues may display red or purple tinges as a result of the presence of stress compounds called anthocyanins.

- **Plant hormone mimic/Hormone transport inhibitor:** the herbicide produces the same response in plants as the natural hormone but susceptible plants are unable to break down these compounds as they would natural hormones. Results in unregulated growth of the plant cells causing distorted growth and a proliferation of non-functional tissue in the stem/root, blocking water flow to plant shoots. Transport inhibitors concentrate both natural and synthetic hormones in the tissues where they were produced, causing distorted growth.
  - **Seedling Root inhibitor:** stops roots growth of susceptible weeds. Susceptible weeds fail to emerge from treated soil.
  - **Seedling Shoot inhibitor:** stops shoot growth in susceptible weeds. Susceptible weeds fail to emerge from treated soil.
  - **Unknown:** the target of the herbicide is not known.
- Movement:**
- **Little to no plant movement:** typically soil active products. Does not move from the point where it enters the plant, or only by diffusion.
  - **Apoplastic Movement:** xylem-mobile; moves passively within free space and cell walls, upward through the transpiration stream (with water). Foliar applied products are relatively immobile. Soil active products are taken up by the root and transported to the upper portions of the plant.
  - **Symplastic Movement:** phloem-mobile – enters the cell where it is actively moved within the plant to areas of rapid growth along with other nutrients and sugars.

- **Spectrum:**

- **Non-selective:** controls or injures most plants, except for those crops that have been bred to tolerate the herbicide.
- **Selective:** controls weeds within a crop. Specific herbicides may be specific to control of the following weed types
  - Broadleaf
  - Grass

• **Biochemistry:**

- The “Group” numbering system, developed by Weed Science Society of America (WSSA), and was adopted by the Pest Management Regulatory Agency of Health Canada for use on Canadian labels.
- This system uses the herbicide’s chemistry to summarize their general mode of action on weeds. There are also sub-divisions within these Groups (see Table 8 Herbicide Site of Action and Chemical Family for Resistant Weed Management in the Weed Control Introduction) that may have differing resistance patterns.
- All herbicides within a Group share a common mode of action and resistance mechanism.
- Herbicides within a Group may have different basic chemical structures. The difference in these basic structures are captured by the family.
- In general, weeds resistant to one herbicide within a Group (or family where they are available) will be resistant to all herbicides within the Group/sub-group.

There are exceptions to this rule. Cross resistant between families within a Group is common.

- Resistance management strategies are required wherever resistance is known or there is a risk of resistance development.
- Heavy reliance on herbicides without the integration of other non-herbicide management practices raises the risk of resistance evolution greatly.

After applying a herbicide, fields can be scouted to determine the effectiveness of the treatment. The symptoms of different herbicide groups, and the approximate time it takes to develop these symptoms, are listed in the following table. Weed patches that are not affected should be noted and checked, as they may be herbicide resistant. Note that symptoms may take longer to develop when conditions are not conducive to rapid plant growth.

The following table gives a brief description of symptoms that may be exhibited if plants are injured by a herbicide. The symptoms of each group are addressed for both foliar and soil exposures.

**Table 9. The Mode of Action, Site of Uptake and Symptoms of Different Herbicide Groups**

| Herbicide Group | Mode of Action | Site of Uptake | Weed symptoms/timing                                                                                                                                        |                                                                                                                |
|-----------------|----------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
|                 |                |                | Grass weeds                                                                                                                                                 | Broadleaf weeds                                                                                                |
| 1               | Systemic       | Foliar         | Reduced growth, yellowing of growing point in 1 to 3 weeks. Newest leaf of affected plant pulls out easily in 3 to 5 days.                                  | Tolerant                                                                                                       |
| 2               | Systemic       | Foliar/Soil    | Newest leaves yellowed in 3 to 10 days, dead in 1 to 3 weeks.                                                                                               | Newest growth discolored (red/yellow/purple) and/or miniaturized; the whole plant is involved in 1 to 3 weeks. |
| 3               | Systemic       | Soil           | Reduced emergence, poor root development of emerged plants. Roots often swollen/stunted and root tips darkened.                                             | Reduced emergence, poor root development of emerged plants.                                                    |
| 4               | Systemic       | Foliar         | Tolerant to moderate rates. High rates cause symptoms similar to drought. Improper timing may cause kernel abortion in cereal crops.                        | Abnormal growth (twisted stems, cupped leaves) in 2 to 10 days.                                                |
| 5               | Systemic       | Soil           | Wilted and yellowed oldest leaves beginning at leaf margins, death in 7 to 10 days.                                                                         |                                                                                                                |
|                 | Contact        | Foliar         | Yellowed oldest leaves, death within days.                                                                                                                  | Yellowed/bleached oldest leaves where spray contacts, death within days.                                       |
| 6               | Contact        | Foliar         | Some leaf tip burn or white tissues possible.                                                                                                               | Yellowed leaves in 2 to 4 days, death in 1 to 2 weeks.                                                         |
| 9               | Systemic       | Foliar         | Wilted, yellowed leaves in 7 to 10 days. Newest growth is impacted first followed by the rest of the plant.                                                 |                                                                                                                |
| 10              | Contact        | Foliar         | Wilted, bleached leaves in 3 to 5 days, death in 1 to 2 weeks.                                                                                              |                                                                                                                |
| 13              | Systemic       | Soil           | Bleached leaves, susceptible seedlings die shortly after emergence.                                                                                         |                                                                                                                |
| 14              | Contact        | Foliar         | Some leaf burn at contact points or leaf edges.                                                                                                             | Leaves yellowed and desiccated in 1 to 3 days. (Post-emergence applications)                                   |
|                 | Systemic       | Soil           | Bleaching and yellowing, death prior to or shortly following emergence                                                                                      |                                                                                                                |
| 15              | Systemic       | Soil           | Reduced emergence, emerged plants stunted. Leaf rolling (grasses). Leaf tips compressed and crinkled (broadleaves). Buggy-whipping. Plants deep blue-green. |                                                                                                                |
| 19              | Systemic       | Foliar         | Twisting of older leaves, new leaves fail to expand, plant death in 2 to 4 weeks.                                                                           |                                                                                                                |
| 22              | Contact        | Foliar         | Leaves wilted within hours, desiccated in 1 to 3 days.                                                                                                      | Leaves wilted in 1 to 3 days, desiccated and dead in 3 to 7 days.                                              |

**Table 9. The Mode of Action, Site of Uptake and Symptoms of Different Herbicide Groups, *continued***

| Herbicide Group       | Mode of Action | Site of Uptake | Weed symptoms/timing                                                                                        |                                                                         |
|-----------------------|----------------|----------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
|                       |                |                | Grass weeds                                                                                                 | Broadleaf weeds                                                         |
| 26 (grass weeds only) | Systemic       | Foliar         | Immediate cessation of growth, rapid desiccation of new leaves and purpling and yellowing of older tissues. | See Group 4.                                                            |
| 27                    | Systemic       | Foliar         | Some bleaching and whitening of leaves.                                                                     | Leaves bleached and whitened in 2 to 10 days and death in 7 to 10 days. |
| 29                    | Systemic       | Soil           | Seedlings fail to emerge.                                                                                   | Seedlings fail to emerge.                                               |

## How to Identify Weed Resistance

It is important to avoid confusing herbicide failure caused by resistance with herbicide failure caused by various other factors (such as weather or application errors). When a herbicide fails to control weeds because of weather or application factors, that herbicide may work in the field the next season. But when herbicides fail because of the development of resistance, they will fail in subsequent years, regardless of weather or application procedures.

Herbicide resistance should be suspected under the following conditions:

- A weed species that the herbicide controlled in previous seasons now escapes the treatment, while other weeds that appear on the label continue to be controlled in the field.
- The escapes cannot be attributed to adverse weather or emergence after application (if a post-emergence product is in question).
- Irregular-shaped patches of a weed develop where the herbicide gives little or no control.
- Records of the past history of the field show repeated use of the same herbicide, or combinations of herbicides, that kill the weed in question in the same way.

**Table 10. Herbicide-Resistant Weeds in Western Canada**

| Weed            | Herbicide Group                        | Locations Confirmed         |
|-----------------|----------------------------------------|-----------------------------|
| Barnyard grass  | Group 2                                | MB                          |
| Canada fleabane | Group 9                                | Occurs in several US states |
|                 | Multiple Resistant: Groups 2 & 9       | Occurs in Ontario           |
| Cleavers        | Group 2                                | AB, MB, SK                  |
|                 | Group 4                                | AB                          |
|                 | Multiple combinations of: Groups 2 & 4 | AB                          |
| Chickweed       | Group 2                                | AB, MB, SK                  |
| Cow cockle      | Group 2                                | AB                          |
| Downy brome     | Group 2                                | Occurs in Montana           |
|                 | Group 9                                | AB                          |
| Foxtail, green  | Group 1                                | AB, MB, SK                  |
|                 | Group 2                                | MB, SK                      |
|                 | Group 3                                | AB, MB, SK                  |
|                 | Multiple combinations of: Groups 1 & 3 | MB, SK                      |
| Foxtail, yellow | Group 1 + 2                            | MB, SK                      |
| Hemp-nettle     | Group 2                                | AB, MB, SK                  |
|                 | Group 4                                | AB                          |
|                 | Multiple combinations of: Groups 2 & 4 | AB                          |

Table 10. Herbicide-Resistant Weeds in Western Canada, *continued*

| Weed                       | Herbicide Group                                                                                                                                                                                                                             | Locations Confirmed                           |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| Kochia                     | Group 2                                                                                                                                                                                                                                     | AB, MB, SK (overwhelming majority)            |
|                            | Group 4 (dicamba and /or fluroxypyr)                                                                                                                                                                                                        | AB, SK , MB                                   |
|                            | Group 5                                                                                                                                                                                                                                     | Occurs in North Dakota and Montana            |

See Table 8 Herbicide Site of Action and Chemical Family for Resistant Weed Management in the Weed Control Introduction for a complete list of products in each Herbicide Resistance Group.

If Weed Resistance Develops on Your Farm

It is important to identify weed resistance before it spreads across your farm. Plan on conducting a “patch watch” scouting program this summer to identify suspicious patches before they become difficult to manage. Resistant weed patches have been identified on fields where producers were unaware of their existence.

Your patch watch program should begin shortly after spraying and continue through July after the crop has headed out and most weeds are visible from a distance. If you find suspicious looking patches, contact your local agricultural office or crop protection company representative to assist you in confirming weed resistance. If resistance is suspected:

- 1. Map the location of the patches and mark them with stakes so you will remember their location.
- 2. Mow, cultivate or spot spray the patches. Resistant patches should not be allowed to produce seed.
- 3. Patchy areas should NOT be harvested with the rest of the field. Harvest these areas separately, and make sure to clean all harvesting equipment before leaving the area to prevent the spread of seeds across the field or a neighbouring field.
- 4. Check patches each year to monitor their spread. Keeping your resistant weeds isolated to a manageable patch is easier than dealing with an entire field of resistant weeds.

Adjuvants and Your Herbicide

Adjuvants are important ingredients in chemical weed control. Many herbicides must be applied with an adjuvant. If it is forgotten, the level of weed control can vary widely, and re-spraying may be necessary.

Many products have adjuvants built into the formulation. Others require adjuvant addition (e.g. *Refine SG*). Some adjuvants were developed specifically for one herbicide, and these are either pre-packaged with the herbicide, or are identified by name on the label (e.g. *Turbocharge* for *Marengo*, *Amigo* for *Select/Centurion*).

Consult a company representative to determine the support for pesticide adjuvant combinations not listed on the product label.

With some products, adjuvants need to be added only under certain conditions. For example, glyphosate products have built-in adjuvants, but require additional adjuvant when low rates (pre-seeding or chem-fallow), high water volumes, or certain tank mixes are used.

Adjuvants should be added only when required. If one is not required, addition can reduce weed control or injure crops. Product labels will describe when an adjuvant is required, and what type should be used.

There are two main classes of adjuvants: “activators or spray modifiers” (including surfactants and crop oils), and “utility modifiers” (including pH adjusters, water conditioners, low-drift adjuvants, and anti-foaming agents). The most important class of adjuvants is the activators. Surfactants, the main group within the activators, are “surface active agents.” These chemicals produce effects at points where two substances touch, such as between two liquids (herbicide and water) or between a solid and a liquid (herbicide and leaf surface). Some surfactants act as dispersing agents, helping to keep a pesticide suspended in water. Others work on the plant, improving the wetting, sticking and penetrating characteristics of the herbicide droplets. Oil-based adjuvants contain petroleum or vegetable oil and an emulsifier that suspends the oil in tiny droplets within the spray solution. Oil-based adjuvants typically assist in herbicide penetration into the leaf.

There are two basic types of surfactants (ionic and non-ionic), of which the non-ionic are most common. The following table lists the surfactants registered for use with herbicides in Western Canada.

Adjuvants and Registered Pesticides:

Note – some products are specific about the concentration of active ingredient in the surfactant for product performance. Check with the product page in this guide or the product label.

\* The adjuvant is packaged with the product.

† Note: All products may not be registered with all adjuvants (see adjuvant label). See product page in the following sections to determine which adjuvants are registered for each herbicide.

## Crop and Herbicide Recommendation Tables

The following charts give general weed control comparisons based on rates, timing and other application instructions and precautions as outlined in this Guide.

A dot (•) will indicate if the weed is listed on a product label. Where rate ranges are listed for controlling a given weed, ratings are based on results achieved with the higher rate unless noted otherwise. 'S' indicates weed suppression.

# Weed Control Tables

Table 1. Weed Control in Barley

\* Control. S – Suppression. TG – Top growth control.

<sup>1</sup> MCPA K mixes only. <sup>2</sup> Will not control CLEARFIELD canola varieties. <sup>3</sup> Spring seedlings only. <sup>4</sup> Up to 25 cm diameter. <sup>5</sup> Seedlings and overwintered rosettes.

<sup>6</sup> Less than 15 cm diameter. <sup>7</sup> Controlled at higher rates. <sup>8</sup> Fall application. <sup>9</sup> Only controlled when weeds are emerging from seed (not controlled if emerged at application). <sup>10</sup> Crop and use may vary between different brands. Consult product page for crop and use. <sup>11</sup> Up to 5 leaf, 2 tiller.

\* Control, S – Suppression, TG – Top growth control, <sup>10</sup> J – Japanese brome, D – Downy brome

<sup>1</sup> Spring seedlings only. <sup>2</sup> Spring seedlings and overwintered rosettes. <sup>3</sup> MCPA K mixes only. <sup>4</sup> Will not control CLEARFIELD canola varieties.

<sup>5</sup> Controlled at the higher rates. <sup>6</sup> For use on CLEARFIELD wheat varieties only. <sup>7</sup> Up to 30 cm tall or across. <sup>8</sup> Less than 15 cm diameter. <sup>9</sup> Authority 480, Authority Strike and Sulfentra only. <sup>10</sup> Weeds controlled when emerging from seed only (not controlled if emerged at application). <sup>12</sup> Not registered for all products. See product page. <sup>13</sup> Crop and use may vary between different brands. Consult product page for crop and use. <sup>14</sup> Apply before planting, during planting or within 3 days after planting but before crop emerges. <sup>15</sup> Only suppression if applied to weeds emerging from seed. <sup>16</sup> Up to 5 leaf, 2 tiller. <sup>17</sup> Excluding Group 2 herbicide tolerant canola when emerging from seed.

Table 5. Weed Control in Corn

• Control. S – Suppression. TG – Top growth control.

<sup>1</sup> For use in the Red River Valley of Manitoba only. <sup>2</sup> For use on glyphosate tolerant varieties only. <sup>3</sup> Not all glyphosate products are registered for use on glyphosate tolerant soybeans.

<sup>4</sup> Will not control CLEARFIELD varieties. <sup>5</sup> Apply in fall or spring prior to seeding or up to 3 days after seeding. <sup>6</sup> Control of the following weeds emerging from seed (not controlled if emerged at application). <sup>7</sup> For in season activity only. For initial burn down of other weeds see Table 16b. <sup>8</sup> For use in Liberty tolerant soybeans only. <sup>9</sup> Will not control glyphosate tolerant varieties. <sup>10</sup> For use on RR Xtend soybean varieties only. <sup>11</sup> Not all dicamba products are registered for use on RR Xtend soybeans. <sup>12</sup> Including glyphosate resistant biotypes. <sup>13</sup> Seedlings only. <sup>14</sup> For Enlist E3 soybean varieties only. <sup>15</sup> Crop and use may vary between different brands. Consult product page for crop and use. <sup>16</sup> Apply before planting, during planting or within 3 days after planting but before crop emerges.

Table 7. Weed Control in Field Pea

\* Control. S – Suppression. TG – Top growth control.

<sup>1</sup> For control of the marked weeds when emerging from seed (not controlled if emerged at application). <sup>2</sup> For in season activity only. For initial burn down of other weeds see Table 16b.

<sup>3</sup> Not including CLEARFIELD varieties.

Table 9. Weed Control in Dry Bean

\* Control. S – Suppression. TG – Top growth control.

<sup>1</sup> Registered for use on both flax and solin (low linolenic acid flax). <sup>2</sup> Spring seedlings only. <sup>3</sup> Not recommended for use on flax in Saskatchewan. <sup>4</sup> Fall application only.

<sup>5</sup> For in season activity only. <sup>6</sup> For initial burn down of other weeds see Table 16b. <sup>7</sup> For the control of marked weeds when emerging from seed (not controlled if emerged at application)

Table 12. Weed Control in Canola

<sup>1</sup> Rates of application vary among brands. Consult glyphosate page for specific application rates. <sup>2</sup> For pre-harvest perennial weed control and may provide harvest management benefit. <sup>3</sup> For rapid plant tissue dry down to facilitate harvest. <sup>4</sup> May be tank mixed with glyphosate (except sunflowers and triticale) when used prior to harvest. Not for crops grown for seed when glyphosate used. <sup>5</sup> Refer to product page for surfactant requirements. <sup>6</sup> Not for crops grown for seed. <sup>7</sup> Red lentil only. <sup>8</sup> *Heat LQ, Torch* or *Heat Harvest* only. <sup>9</sup> For use only on Roundup Ready canola with the pod shatter reduction trait. <sup>10</sup> Only certain glufosinate 150 products may be used, please consult product page.

• Control. S – Suppression. Levels of suppression vary depending on the product and growing conditions in the fall. Regrowth requiring in-crop treatments can be expected. TG – Top growth control.

<sup>Δ</sup>To be used only in a mix with glyphosate.

Table 20. Weed Control in Grass Pastures and Hayfields

S – seedling only. E – Established only. X – seedling or established. <sup>1</sup> Underseeded only. <sup>2</sup> For seed production only. <sup>4</sup> DO NOT graze or harvest for livestock in the year of treatment. <sup>5</sup> Use MCPA sodium salt on seedling forages only when underseeded to flax, oats, wheat or barley. DO NOT use on Flemish varieties of alfalfa. <sup>6</sup> For use as a spot treatment only control red bartsia. <sup>7</sup> Apply to fall prior to seeding. <sup>8</sup> All products may not be registered for crops and weeds indicated. Check product labels. <sup>9</sup> For forage production only. <sup>10</sup> Check recommendations for varietal restrictions. <sup>11</sup> CLEARFIELD varieties only. <sup>12</sup> Liquid formulations in spring only. <sup>13</sup> Bonanza 10G, Treflan EC (spring only). <sup>14</sup> Treflan EC in spring only. <sup>15</sup> Apply to seedlings stands that will be in production for three years after application and establishment stands that will be in production for 2 years after application. <sup>16</sup> May not include Solin (low linolenic acid flax). Check product label for restrictions. <sup>17</sup> Fall application only. <sup>18</sup> For application prior to emergence of the crop. <sup>19</sup> forage or seed production. <sup>20</sup> Dormant alfalfa. <sup>21</sup> Smooth Bromegrass ONLY

• Control. S – Top growth suppression only.

<sup>1</sup> Rates may vary between different brands. Check product page for specific rate for product and use. <sup>2</sup> May require multiple applications for complete control.

<sup>3</sup> Controlled by the highest rate. <sup>4</sup> Weeds emerging from seed only. <sup>5</sup> Soil residual control.

## Special Weed Problems

This section identifies specific weeds and some herbicides recommended for control. Refer to the particular crop section or the product label for information on specific products that may be used on the crops and for application instructions.

### Absinthe

**2,4-D LV Ester (500 g/L)** - In grass pastures with no legumes, spray 1.82 L per acre in late June, prior to flowering. Re-treat regrowth in late summer when plants have 6 to 10 inches (15 to 25 cm) of new growth. More than 1 season of treatment may be required.

**Casaron** - In poplar plantations and shelterbelts, absinthe is controlled with fall applications at a rate of 70 kg per acre.

**Dicamba** - In grass pasture and rangeland only, apply 240 g ae per acre (see dicamba page for specific formula rates) in 20 to 30 gallons (90 to 135 L) per acre for top growth control when leaves are fully expanded.

**Reclaim II /Clearview/Sightline**- In grass pastures and rangeland, apply *Reclaim II A /Clearview/Sightline A* at 55 grams per acre plus *Reclaim II B* or 2,4-D 700 ester (with Clearview/Sightline) at 0.69 L per acre or Clearview/Sightline A at 93 grams per acre for season long control.

**Restore II /Milestone** - In grass pastures and rangeland, apply *Restore II* at 0.97 L per acre or *Milestone* at 202 mL per acre when weeds are actively growing.

### Alders

**2,4-D LV Ester (500 g/L)** - In grass pastures and non-crop land, apply 1.78 L per acre to the foliage of actively growing brush.

**Dicamba + 2,4-D amine or LV ester (500 g/L)** - In grass pastures, rangeland and non-crop land, apply dicamba at 2.1 L per 1,000 L of water with 2,4-D LV ester or amine at 4.0 L per 1,000 L of water to the foliage of actively growing brush in the spring or early summer and wet the foliage until the point of runoff.

### Aspen Poplar (Trembling Aspen)

**Dicamba + 2,4-D amine or LV ester (500 g/L)** - In grass pastures, rangeland and non-crop land, apply dicamba at 1.32 L per acre with 2,4-D LV ester or amine at 1.78 L per acre in 20 gallons per acre (90 L per acre) water to the foliage of actively growing brush in spring or early summer.

**Escort** - In pasture and rangeland, apply *Escort* at 60 grams per acre with non-ionic surfactant at 0.2 L per 100 L spray solution in 10 to 20 gallons per acre (45 to 90 L per acre) water. Apply between mid-June and mid-August after the brush has leafed out, but before the leaves begin to turn their fall colours.

**Navius Flex /TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 135 grams per acre for control of trembling aspen.

### Baby's Breath (Perennial)

**Dicamba** - In grass pastures with no legumes, apply 3.72 L per acre in 10 to 20 gallons per acre (45 to 90 L per acre) water when actively growing.

**Reclaim II/Clearview/Sightline** - In grass pastures and rangeland, apply *Reclaim II A /Clearview/Sightline A* at 81 grams per acre plus *Reclaim II B* at 0.69 L per acre or *Clearview/Sightline A* at 81 grams per acre for season long control.

### Biennial Wormwood

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester (500 g/L) at 1.78 L per acre to the foliage of actively growing plants.

**Distinct** - *Distinct* applied post-emergent in corn at 115 grams per acre plus a non-ionic surfactant and UAN (liquid 28-0-0) at 1.25 L per 100 L of spray solution will control biennial wormwood (2 to 8 leaf stage). Fallow or post-harvest, *Distinct* applied at 115 grams per acre tank-mixed with glyphosate and *Merge* adjuvant (200 mL per acre) controls biennial wormwood (2 to 8 leaf stage).

**Glyphosate** - In glyphosate tolerant corn and soybean, apply a single application of 360 g ae per acre.

**MCPA** - Amine 500 formulations applied at 0.45 to 0.71 L per acre, Ester 600 formulations at 0.42 to 0.61 L per acre and Na formulations at 0.81 to 1.1 L per acre will control biennial wormwood.

**Overdrive** - In grass pastures and non-crop land, apply at 115 grams per acre for control.

**Reclaim II** - In grass pastures and rangeland, apply *Reclaim II A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre when weeds are actively growing for season long control.

**Restore II /Milestone** - In grass pastures, apply *Restore II* 0.97 L per acre or *Milestone* at 202 mL per acre for control.

**Roundup Xtend 2**- Apply *Roundup Xtend 2* at 1.14 L per acre for control of biennial wormwood (2 to 8 leaf stage).

### Black Medic

**Dichlorprop/2,4-D; Mecoprop-p; dicamba/mecoprop/MCPA; 2,4-D amine or LV ester** - Apply in registered crops at registered rates to black medic in the 1 to 4 leaf stage for suppression only.

### Chokecherry

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester (500 g/L) at 1.78 L per acre to the foliage of actively growing brush.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 135 grams per acre for control of chokecherry (up to 3 metres).

### Common Tansy

**Glyphosate** - Apply at 1.9 to 2.8 L per acre in 10 gallons of water per acre (40 L per acre) to actively growing plants that are 8 to 10 inches (20 to 25 cm) tall (summerfallow, stubble and noncropland).

**Escort** - In pastures, rangeland and rough turf, apply 8 grams per acre in 10 to 20 gallons per acre (45 to 90 L per acre) of water to actively growing plants of less than 4 inches (10 cm) tall. Add non-ionic surfactant at 0.2 L per 100 L of spray solution.

**Navius Flex /TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 68 grams per acre for control.

**Reclaim II/Clearview/Sightline** - In grass pastures and rangeland, apply *Reclaim II A* at 55 grams per acre or *Clearview/Sightline A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre for season long control.

**Restore II/Milestone** - In grass pastures and rangeland, apply *Restore II* at 0.97 L per acre or *Milestone* at 202 mL per acre for suppression.

## Curled Dock

**2,4-DB** - Apply 0.91 to 1.1 L per acre to young and actively growing plants to give top growth control.

**Dicamba** - As a patch treatment or in pasture and rangeland, apply 0.92 L per acre *Banvel II* in 10 to 20 gallons per acre (45 to 90 L per acre) water to actively growing weeds for top growth control.

**Glyphosate** - As a spot treatment, apply 2.83 to 4.86 L per acre (360 g/L formulations or equivalent of other formulations) in 10 gallons per acre (45 L per acre) water when most plants have reached the early bud stage. DO NOT disturb treated plants for at least 10 days following treatment.

**MCPA amine, 2,4-D amine** - Apply 0.445 to 0.69 L per acre of formulations containing 500 g/L MCPA or 2,4-D amine to give top growth control.

**MCPB/MCPA** - Apply 1.72 L per acre to plants at the rosette stage for control.

**Dichlorprop/2,4-D** - 0.71 L per acre for suppression before plants are 2 inches (5 cm) tall.

**Reclaim II** - In grass pastures and rangeland, apply *Reclaim II A* at 69 grams per acre plus *Reclaim II B* at 0.69 L per acre for season long control.

**Restore II** - In grass pastures and rangeland, apply *Restore II* at 0.86 L per acre to control curled dock (<4 leaf).

## Diffuse and Spotted Knapweed

**Dicamba** - In grass pastures, rangeland and non-crop land, apply at 1.86 L per acre in 10 to 20 gallons per acre (45 to 90 L per acre) water to actively growing weeds.

**Lontril** - Apply at a rate of 82 g ai per acre for control.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 68 grams per acre for control.

**Reclaim II/Clearview/Sightline** - In grass pastures and rangeland, apply *Reclaim II A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre or *Clearview/Sightline A* at 55 grams per acre for season long control of spotted knapweed or apply *Reclaim II A* at 93 grams per acre plus *Reclaim II B* at 0.69 L per acre or *Clearview/Sightline A* at 93 grams per acre plus 2,4-D amine at 340 to 445 g ae per acre from the rosette to bud stage for diffuse knapweed control.

**Restore II/Milestone** - In grass pastures and rangeland, apply *Restore II* at 0.57 L per acre or *Milestone* at 120 mL per acre when actively growing to control spotted knapweed. Apply *Restore II* at 0.97 L per acre or *Milestone* at 202 mL per acre for suppression of diffuse knapweed.

**Tordon 22K** - In rangeland and grass pasture, apply 0.91 L per acre in 90 to 180 gallons per acre (400 to 800 L per acre) of water to actively growing weeds. **WARNING** - Picloram is a very persistent and water-soluble herbicide. DO NOT apply to permeable soil. DO NOT apply to irrigated areas. Take special precautions to prevent drift.

## Field Bindweed

**2,4-D amine** - In grass pastures containing no legumes or as a spot treatment, apply 1.82 L per acre of formulations containing 500 g/L 2,4-D amine at early flowering stage.

**2,4-DB** - As a spot treatment in labelled crops apply 2.83 to 4.86 L per acre in 10 gallons per acre (45 L per acre) water at the bud stage. DO NOT disturb plants for at least 10 days following treatment. Heavy rainfall within 2 hours of application may wash chemical off the foliage and a repeat treatment may be required. Rainfall occurring within 6 hours after application may reduce control.

**Bentazon** - In labelled crops, apply 0.71 L per acre followed by 0.71 L per acre 7 to 10 days later. Apply in 20 to 35 gallons per acre (90 to 160 L per acre) water before field bindweed has developed a dark green colour and before it has begun trailing. Use a recommended surfactant (see recommendations under the appropriate crop).

**Dicamba** - As a patch treatment or in rangeland, apply 1.0 L per acre in 10 to 20 gallons per acre (45 to 90 L per acre) water. Apply when field bindweed is in the flowering stage and allow 3 weeks after treatment before resuming normal summerfallow tillage.

**Flexstar GT** - *Flexstar GT* applied at 840 mL per acre as a pre-seed or pre-emergent application for soybeans or as an early post-emergent application on 1 to 2 trifoliolate leaf stage of glyphosate tolerant soybeans will control field bindweed from the cotyledon to 3 or 4 true leaf stage. For use in the Red River Valley of Manitoba only.

**Glufosinate 200SN** - Apply *Glufosinate 200SN* to *Glufosinate 200SN* tolerant corn or soybeans at 0.81 L per acre from emergence to 6 leaf stage of field bindweed for season long suppression.

**Glyphosate** - As a spot treatment, apply 2.8 to 4.9 L per acre (360 g/L formulations or equivalent of other formulations) in 10 to 30 gallons per acre (45 to 135 L per acre) at the full bloom stage or beyond. Allow 7 or more days after application before tillage.

**MCPB/MCPA** - Apply 1.72 L per acre to plants in spring during rapid growth.

**Reclaim II** - In grass pastures and rangeland, apply *Reclaim II A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre when actively growing for top growth control.

**Restore II** - For season long control in grass pastures and rangeland only, apply *Restore II* at 0.97 L per acre.

**Tordon 22K** - In rangeland and grass pasture, apply 3.6 L per acre in 90 to 180 gallons per acre (400 to 800 L per acre) for spot treatment, using hand wand application equipment only, to a maximum of one acre of every two acre area of land. of water to actively growing weeds. **WARNING** - Picloram is a very persistent and water-soluble herbicide. DO NOT apply to permeable soil. DO NOT apply to irrigated areas. Take special precautions to prevent drift.

## Field Horsetail

**Glyphosate** - *VP480* at a rate of 1750 g ae per acre plus a non-ionic surfactant at 0.5 mL per 100 L of spray solution is registered for the control of field horsetail in Christmas tree plantations. Research has shown that application in spring or early summer, just after the plants have emerged is the timing that gives the best level of control with glyphosate. The use of a silicone-based adjuvant such as *SylGard/Xiameter* or *Dynamax* will also improve control.

**Casaron** - In poplar plantations and shelterbelts, apply in early spring or late fall prior to annual weed emergence, or after cultivation has removed existing weeds at rate of 45 to 70 kg per acre.

**MCPA amine, potassium and sodium salt mixtures** - Apply 0.57 L per acre of formulations containing 500 g/L MCPA after the weeds have fully emerged for top growth control. May be used in wheat, oats, barley, flax and rye.

## Foxtail Barley

**Flexstar GT** - *Flexstar GT* applied at 840 mL per acre as a pre-seed or pre-emergent application will control foxtail barley in glyphosate tolerant soybeans (see *FlexStar GT* page). For use in the Red River Valley of Manitoba only.

**Focus** - Apply in fall or spring as a pre-plant or pre-emergent treatment to wheat, spring or winter, corn or soybeans for pre-emergent suppression of foxtail barley.

**Glyphosate** - Prior to crop emergence, apply 1 to 2 L per acre (360 g/L formulations or equivalent of other formulations) in 5 to 10 gallons per acre (23 to 45 L per acre) water to foxtail barley at the seedling to heading stage. Late fall applications may provide better control of established plants than spring applications.

**Glyphosate** - In glyphosate tolerant canola, apply 2 applications, each at 0.5 L per acre (360 g/L formulations or equivalent of other formulations), for season long control.

**Inferno Duo** - Prior to crop emergence apply 12.75 grams per acre of *Inferno Duo* with 180 to 360 gae per acre of glyphosate.

**Kerb SC** - Apply registered rates in 20 gallons per acre (90 L per acre) water between October 1 and freeze-up. Use the lower rate on grey-wooded soils or where perennial bluegrass or fescues are the predominant pasture species. DO NOT use *Kerb* for foxtail barley removal in seed grass stands or desired foliage stands of timothy or fescue grass species. At recommended rates, pasture stands of perennial bluegrass and fescue may be reduced by 10 to 15 percent. Where perennial bluegrass and fescues are the dominant pasture species, use the lower rate of *Kerb*. Spray overlaps may seriously harm desirable pasture grass species. Where the grass stand comprises mostly foxtail barley and reseeding to a desirable grass species is required, delay seeding into the *Kerb*-treated soil until the end of June. DO NOT harvest or graze within 60 days of application with *Kerb*. Avoid using *Kerb* on soils having more than 6 percent organic matter.

**Quizalofop** - In registered crops apply 200 mL per acre to foxtail barley in the maximum 3 to 4 leaf + 3 tiller stage.

**Olympus + glyphosate** - Preplant surface or postplant preemergence applications of *Olympus* at 5.8 grams per acre tankmixed with glyphosate at 360 g ae per acre controls foxtail barley (seedling to heading stages). For more consistent control of

subsequent flushes, follow an application of *Olympus* + glyphosate with an in-crop application of *Varro*.

## Goat's-Beard

**2,4-D** - Apply 125 to 227 g ae per acre in early fall or early spring.

**Dicamba** - In grass pasture and rangeland only, apply 1.86 L per acre in 20 to 30 gallons (90 to 135 L) per acre when leaves are fully expanded.

**Dichlorprop + 2,4-D** - Apply 1.62 L per acre in early spring or fall.

**Reclaim II** - In grass pastures and rangeland, apply *Reclaim II A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre when actively growing for season long control.

**Restore II** - In grass pastures, apply 0.97 L per acre.

## Gumweed

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester at 227 to 340 g ae per acre to the foliage of actively growing plants.

**MCPA amine, potassium and sodium salt formulations** - Apply 0.71 L per acre of formulations containing 500 g/L MCPA for top growth control.

**Reclaim II /Clearview/Sightline** - In grass pastures and rangeland, apply *Reclaim II A/Clearview/Sightline A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre or 2,4-D Amine (*Clearview* and *Sightline*) at 340 g ae per acre when actively growing for season long control.

**Restore II/Milestone** - In grass pastures, apply *Restore II* at 0.97 L per acre or *Milestone* at 120 mL per acre plus 2,4-D at 340 g ae per acre for season long control.

## Hemp Dogbane

**2,4-D amine or LV ester** - Apply 1.38 to 1.82 L per acre of formulations containing 500 g/L 2,4-D in fall before frost and while plant leaves are green.

**MCPA amine, potassium and sodium salt formulations** - Apply 0.71 L per acre of formulations containing 500 g/L MCPA for top growth control.

**Glyphosate** - Apply 2.83 to 4.86 L per acre (360 g/L formulations – see glyphosate page for other rates) when hemp dogbane is in the early bud stage. Apply in 10 gallons per acre (45 L per acre) water. DO NOT disturb treated plants for at least 7 days after application.

## Hoary Cress

**Glyphosate** - As a spot treatment in labelled crops, apply 2.83 to 4.86 L per acre (360 g/L formulations or equivalent of other formulations) in 10 to 30 gallons per acre (45 to 135 L per acre) water when most plants have reached the early bud stage. DO NOT disturb treated plants for at least 10 days following treatment.

**Reclaim II** - In grass pastures and rangeland, apply *Reclaim II A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre when actively growing for season long control.

**Restore II** - For season long control in grass pastures and rangeland only, apply *Restore II* at 0.97 L per acre.

## Leafy Spurge

**2,4-D amine** - Apply 1.82 L per acre of formulations containing 500 g/L 2,4-D at early flowering stage. Repeat at least once to new growth later in the season. Control of established plants and new seedlings will require continued applications for a period of at least 4 to 5 years.

**Dicamba** - Apply 0.84 L per acre in 10 to 20 gallons per acre (45 to 90 L per acre) water for top growth control when the weed is actively growing. Patch treatment or pasture.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 68 grams per acre for control.

**Tordon 22K** - In rangeland and grass pasture, apply 3.6 L per acre in 90 to 180 gallons per acre (400 to 800 L per acre) of water to actively growing weeds. **WARNING** - Picloram is a very persistent and water-soluble herbicide. DO NOT apply to permeable soil. DO NOT apply to irrigated areas. Take special precautions to prevent drift.

**Overdrive** - In grass pastures and non-crop land, apply at 115 grams per acre for top-growth control.

## Locoweeds, Lupines, and Milk-vetches

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester (500 g/L) at 1.78 to 2.75 L per acre at the full bloom stage.

## Milkweed

**Glyphosate** - When making preharvest applications, use 1.0 L per acre (360 g/L formulations or equivalent of other formulations). For patch treatments, apply 4.86 L per acre (360 g/L formulations or equivalent of other formulations) in 10 gallons per acre (45 L per acre) water. Apply when most plants have reached the bud to bloom stage. Reduced results may occur on plants treated after full bloom as not all milkweed plants reach the required stage of growth at the same time. Repeat treatments may be required. DO NOT disturb plants for 10 days following treatment. DO NOT apply to plants covered with dust.

## Pasture Sage

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester (500 g/L) at 1.2 L per acre to the foliage of actively growing plants.

**Dicamba** - In grass pastures, rangeland and non-crop land, apply dicamba at 1.86 L per acre in 10 to 20 gallons per acre (45 to 90 L per acre) water to actively growing weeds.

**Reclaim II/Clearview/Sightline** - In grass pastures and non-crop land, apply *Reclaim II A* at 81 grams per acre plus *Reclaim II B* at 0.69 L per acre or *Clearview/Sightline A* at 81 grams per acre for 12 months of control.

**Tordon 22K** - In rangeland and grass pasture, apply 1.82 L per acre in 90 to 180 gallons per acre (400 to 800 L per acre) of water to actively growing weeds. **WARNING** - Picloram is a very persistent and water-soluble herbicide. DO NOT apply to permeable soil. DO NOT apply to irrigated areas. Take special precautions to prevent drift.

## Perennial Smartweed

**Glyphosate** - Apply 2.0 L per acre (360 g/L formulations or equivalent of other formulations) in 10 gallons per acre water. Apply when vines are a minimum of 8 inches (20 cm) tall, but before flowering.

## Poplar

**Dicamba + 2,4-D** - In grass pasture and rangeland only, apply dicamba at 2.1 L plus 2,4-D 500 amine at 4 L or 2,4-D 600 ester at 3.3 L per 220 gallons (1000 L) of water and apply by wand to the point of runoff when leaves are fully expanded.

**Escort** - In pasture and rangeland, apply *Escort* at 40 grams per acre with non-ionic surfactant at 0.2 L per 100 L spray solution in 10 to 20 gallons per acre (45 to 90 L per acre) water. Apply between mid-June and mid-August after the brush has leafed out, but before the leaves begin to turn their fall colours.

**Glyphosate** - As a non-selective spot treatment, apply 1.21 to 2.43 L per acre (360 g/L formulations or equivalent of other formulations) in 10 to 30 gallons per acre (45 to 135 L per acre) water in the summer through early fall when brush is actively growing.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 135 grams per acre for control of black and balsam poplar as well as plains cottonwood and trembling aspen.

## Povertyweed

**Dicamba** - As a spot treatment or in grass pasture or rangeland apply 1.86 L per acre in 10 to 20 gallons per acre (45 to 90 L per acre) water when weed is actively growing. Dicamba at 0.61 L per acre will provide only top growth control.

**Tordon 22K** - In rangeland and grass pasture, apply 1.82 L per acre in 90 to 180 gallons per acre (400 to 800 L per acre) of water to actively growing weeds. **WARNING** - Picloram is a very persistent and water-soluble herbicide. DO NOT apply to permeable soil. DO NOT apply to irrigated areas. Take special precautions to prevent drift.

## Prairie Everlasting, Prairie Sage

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester (500 g/L) at 1.78 L per acre to the foliage of actively growing plants in the early fall, and repeat in the spring.

**Reclaim II/Clearview/Sightline** - In grass pastures and rangeland, apply *Reclaim II A/Clearview/Sightline A* at 69 grams per acre plus *Reclaim II B* at 0.69 L per acre or for *Clearview/Sightline* mix with 445 g ae per acre of 2,4-D Amine when actively growing for 12 month control or *Reclaim II A/Clearview/Sightline A* at 81 grams per acre plus *Reclaim II B* at 0.69 L per acre or for *Clearview/Sightline* mix with 445 g ae per acre of 2,4-D Amine for 24 month control.

## Purple Loosestrife

(dryland situations only)

**Glyphosate** - Apply 2.43 L per acre (360 g/L formulations or equivalent of other formulations) in 30 to 60 gallons per acre (135 to 270 L per acre) water when purple loosestrife is actively

growing and at or beyond the bloom stage. If using hand held equipment, apply a 1 to 2 percent solution until plants are wet. Use a 33 percent product solution if using a wiper applicator. DO NOT treat plants over open water. If possible, remove and destroy the flower heads before treatment to ensure prevention of seed set. For large monocultures of purple loosestrife, gradually work from the periphery inward over a number of years to allow competing vegetation to invade the treated area. Sprayed areas should be monitored for new seedlings to prevent re-infestation of purple loosestrife.

**Reclaim II** - In grass pastures and rangeland, *Reclaim II A* at 93 grams per acre plus *Reclaim II B* at 0.69 L per acre when actively growing for control.

## Red Bartsia

**2,4-D amine or LV ester** - Apply 0.57 L per acre of formulations containing 500 g/L 2,4-D in 10 gallons per acre (45 L per acre) water. On hayland, treat within 10 days after first cutting. Roadsides and pastures should be sprayed as soon as the red bartsia appears, usually in early July. Repeat treatment if necessary for later germination.

## Roses

**Dicamba + 2,4-D amine or LV ester (500 g/L)** - In grass pastures, rangeland and non-crop land, apply dicamba at 1.48 L per acre with 2,4-D LV ester or amine at 1.78 L per acre to the foliage of actively growing brush in the spring or early summer.

**Escort** - In pasture and rangeland, apply *Escort* at 12 grams per acre with non-ionic surfactant at 0.2 L per 100 L spray solution in 10 to 20 gallons per acre (45 to 90 L per acre) water. Apply between mid-June and mid-August after the brush has leafed out, but before the leaves begin to turn their fall colours.

**Grazon XC** - In permanent grass pasture and rangeland, apply *Grazon XC* at 2.5 L per acre for control.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 68 grams per acre for control of wild rose.

**Reclaim II** - In grass pastures and non-crop land, apply *Reclaim II A* at 81 grams per acre plus *Reclaim II B* at 0.69 L per acre for 2 years of control.

## Russian Knapweed

**Dicamba** - In grass pasture and rangeland only, apply 3.72 L per acre in 20 to 30 gallons (90 to 135 L) per acre when leaves are fully expanded.

**Reclaim II** - In grass pastures and rangeland, apply *Reclaim II A* at 55 grams per acre plus *Reclaim II B* at 0.69 L per acre when weeds are actively growing for season long control.

**Restore II/Milestone** - In grass pastures and rangeland, apply *Restore II* 0.97 L per acre or *Milestone* at 202 mL per acre when actively growing for suppression.

**Tordon 22K** - In rangeland and grass pasture, apply 1.82 L per acre in 90 to 180 gallons per acre (400 to 800 L per acre) of water to actively growing weeds. **WARNING** - Picloram is a very persistent and water-soluble herbicide. DO NOT apply to permeable soil. DO NOT apply to irrigated areas. Take special precautions to prevent drift.

## Saskatoon

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester (500 g/L) at 1.78 L per acre to the foliage of actively growing brush.

## Stinging Nettle

**2,4-D amine** - Apply 0.91 to 1.82 L per acre of formulations containing 500 g/L 2,4-D amine.

**Restore II** - In grass pastures and rangeland, apply *Restore II* 0.57 L per acre.

## Toadflax (Yellow)

**Dichlorprop/2,4-D** - Apply 0.71 L per acre in 10 to 18 gallons per acre (45 to 80 L per acre) water in wheat or barley for toadflax suppression. Apply when majority of toadflax is no taller than 6 inches (15 cm). The use of Dichlorprop/2,4-D for suppression of toadflax in wheat or barley should be part of a long-term planned approach for toadflax control, which includes spring and fall tillage, fall patch spraying, fallow.

**Glyphosate** - Apply 2.83 to 4.86 L per acre (360 g/L formulations or equivalent of other formulations) when most plants have reached the early bud stage of growth. Allow 7 more days after application before tillage. A rate of 1.0 L per acre may be used with preharvest applications or when controlling in summerfallow situations.

**Grazon XC** - In permanent grass pasture and rangeland, apply *Grazon XC* at 1.9 L per acre for control. Use a recommended surfactant (such as any non-ionic surfactant) at the rate of 0.25 L per 100 L of water.

**Metsulfuron plus 2,4-D** - Apply 2 to 3 grams per acre *Ally* plus 0.34 to 0.45 L per acre 2,4-D LV ester or amine (500 g/L formulations) in 10 gallons per acre (45 L per acre) water for toadflax suppression in wheat, barley, and creeping red fescue. Add non-ionic surfactant at 0.2 L per 100 L of spray solution.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 68 grams per acre for suppression.

**Thifensulfuron/tribenuron (2:1)** - In registered crops, apply 8 grams per acre of DG formulations or 12 grams per acre of *Refine SG* in 10 gallons per acre (45 L per acre) water for suppression of toadflax. Apply when toadflax is less than 15 cm (6 inches) in height. Add non-ionic surfactant at 0.2 L per 100 L spray solution.

**Tordon 22K** - In rangeland and grass pasture, apply 3.6 L per acre in 90 to 180 gallons per acre (400 to 800 L per acre) of water to actively growing weeds. **WARNING** - Picloram is a very persistent and water-soluble herbicide. DO NOT apply to permeable soil. DO NOT apply to irrigated areas. Take special precautions to prevent drift.

## Western Snowberry (Buckbrush)

**2,4-D amine or LV ester (500 g/L)** - Apply 1.82 L per acre 2,4-D amine or LV ester in a minimum of 20 gallons per acre (90 L per acre) water in spring or early summer. Retreatment may be necessary the following year.

**Dicamba plus 2,4-D LV ester (500 g/L)** - Apply 1.48 L per acre dicamba tank mixed with 1.82 L per acre 2,4-D LV Ester in 20 gallons per acre (90 L per acre) water in spring or early summer after the leaves are fully expanded.

**Escort** - Apply 10 grams per acre in 10 to 20 gallons per acre (45 to 90 L per acre) water between mid-June and mid-August after the brush has leafed out, but before the leaves turn their fall colours.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 68 grams per acre for control.

**Reclaim II/Clearview/Sightline** - In grass pastures and non-crop land, apply *Reclaim II A* at 81 grams per acre plus *Reclaim II B* at 0.69 L per acre or *Clearview/Sightline A* at 81 grams per acre for 2 years of control.

## White Cockle

**2,4-DB** - Apply *Embutox 625* at 1.1 L per acre or *Caliber 400* at 1.7 L per acre or *Cobutox 600* at 1.1 L per acre for top growth control to registered crops only.

**Barricade II + MCPA Ester (190 mL per acre)** - In registered crops apply to white cockle up to 10 cm in height.

**Express SG** - Apply in a mix with glyphosate prior to seeding registered follow crops to control spring rosettes. In rangeland apply 20 grams per acre from the early bud to pre-bloom stage.

**Mecoprop** - Apply 2.2 L per acre in 18 gallons per acre (\*80 L per acre) of water for top growth control of established plants. Will also control seedlings. Apply to registered crops only.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 68 grams per acre for control.

**Travallas** - In registered crops apply to white cockle up to 10 cm tall or across.

## Wolf Willow (Silverberry)

**Dicamba + 2,4-D amine or LV ester (500 g/L)** - In grass pastures with no legumes, apply dicamba at 2.1 L per 1000 L of water with 2,4-D LV ester or amine at 4.0 L per 1000 L of water to the foliage of actively growing brush in the spring or early summer and wet the foliage until the point of runoff.

**Reclaim II/Clearview/Sightline** - In grass pastures and non-crop land, apply *Reclaim II A* at 81 grams per acre plus *Reclaim II B* at 0.69 L per acre or *Clearview/Sightline A* at 81 grams per acre plus 2,4-D Amine at 445 g ae per acre for 2 years of control.

## Wild Tomato

**2,4-D or MCPA amine or ester (500 g/L)** - Apply 0.34 to 0.45 L per acre to registered crops up to the 8 leaf stage of wild tomato.

**Bromoxynil+MCPA ester** - Apply 0.40 L per acre to registered crops from the 1 to 6 leaf stage of wild tomato.

## Willow

**2,4-D LV ester** - In grass pastures and non-crop land, apply 2,4-D LV ester (500 g/L) at 1.78 L per acre to the foliage of actively growing brush.

**Dicamba + 2,4-D** - In grass pasture and rangeland only, apply dicamba at 1.7 L plus 2,4-D 500 amine at 3.24 L per acre in 20 to 30 gallons (90 to 135 L) of water per acre when leaves are fully expanded.

**Escort** - In pasture and rangeland, apply *Escort* at 40 grams per acre with non-ionic surfactant at 0.2 L per 100 L spray solution in 10 to 20 gallons per acre (45 to 90 L per acre) water. Apply between mid-June and mid-August after the brush has leafed out, but before the leaves begin to turn their fall colours.

**Glyphosate** - As a non-selective spot treatment, apply 1.21 to 2.43 L per acre (360 g/L formulations or equivalent of other formulations) in 10 to 30 gallons per acre (45 to 135 L per acre) water in the summer through early fall when brush is actively growing.

**Grazon XC** - In permanent grass pasture and rangeland, apply *Grazon XC* at 2.5 L per acre for control.

**Navius Flex/TruRange** - In grass pastures and rangeland, apply *Navius Flex/TruRange* at 135 grams per acre for control.

## Soil Residual Herbicides

When applied at recommended rates in a crop, most herbicide residues will disappear within a few weeks after application and impose no restriction on cropping options the next year. However, some herbicide residues do not degrade quickly, and can persist in the soil for months or years following application, thereby restricting the crops that can be grown in rotation. Herbicide residues in the soil are deactivated in various ways including:

- Break down by chemical reactions,
- Break down by soil microbes,
- Escape to the atmosphere as a gas (volatilization),
- Break down by light (photodegradation),
- Leaching,
- Binding to soil particles.

Herbicides often disappear from the environment by more than one of these mechanisms. Many herbicides considered to be non-residual are bound temporarily to soil particles while they are broken down gradually by either soil microbes or chemical reactions. The binding action insures that the herbicide is not available to the crop in quantities that will cause damage.

As a general rule, breakdown processes are favoured by warm, moist soil conditions. During the winter, when the ground is frozen, and in the summer when the soil is dry, herbicide degradation is reduced. The residual activity of certain herbicides is also affected by soil organic matter and soil pH. These soil factors are seldom uniform across a field.

Herbicide carryover is aggravated by low levels of organic matter and is more likely to occur on eroded hilltops than in other parts of a field. The risk of herbicide carryover will also be greater in sprayer overlaps which are most common around headlands and slough margins.

Growers should be aware of the residual properties before applying any herbicide if they are to avoid cropping restrictions in following years. Knowledge of the limitations associated with herbicides that leave a soil residue, along with an accurate record of application (e.g. rates, locations) will serve to minimize rotational problems. Each herbicide used in mixes should be considered separately.

Soil tests using chemical extraction cannot always give a good indication of the potential injury risk from herbicide residue because of the influence of organic matter, clay and pH. Because of this, a field bioassay or laboratory bioassay, where plants are grown directly in the treated soil are best for detecting the potential for injury. These tests are not intended to be used to shortcut restrictions on the label, but provide information on rotational crops where none is available.

Injury symptoms from other causes can resemble herbicide carryover injury (e.g. cold weather, flooding, drought, insects, diseases, etc.). Consult with your local agronomist on potential causes before spending money on testing.

Herbicides that leave a soil residue and are of particular concern in Western Canada are found in the following chart.

## Re-cropping Restrictions for Residual Herbicides:

Figures listed are the number of cropping seasons before each crop can be grown ("1" means that the crop can be grown the year following application). For plant-back restrictions less than one season; the delay is indicated with a "d" for number of days or with "mths" for the number of months. A blank space means that there are no recommendations given on the product label and a field bioassay is recommended by many product manufacturers to determine if these crops are safe to plant. A field bioassay is a strip of a test crop that covers an area of the field that is representative of the field variation and should include an untreated area.

\* The minimum re-cropping intervals are listed. These intervals may be longer than those listed depending on the use rates, region, province, soil types, environment, time of application and crop variety. Refer to product page for more information.

\*\* Drought restrictions apply to drought conditions (80% of normal June to September rainfall) for high pH soils (greater than pH 7.5) and severe drought (less than 65% of normal June to Sept. rainfall) for all soils.

\*\*\* May not be supported for all products; see product page for details.

† May not be valid for all varieties or crop types. See product page for details.

†† in the Brown soil zone, DO NOT seed flax for 22 months.

††† CLEARFIELD lentils ONLY.

° Replant intervals are for high rate

0 - May be seeded or reseeded the year of application. No re-cropping restrictions. 1 - Next cropping season after application. 2 - Two cropping seasons after application.

NR - Not recommended.

Note: The re-cropping intervals listed may not be sufficient to prevent crop injury during periods of below average rainfall.

## Effect of Rainfall on Herbicide Efficacy

| Required Interval           | Product                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

\* The products listed make no specific time recommendation on the label. The required rainfree period could be up to 8 hours. See the product page in the guide or consult the product label.

Note: The term "Rainfastness" refers to the time needed between application and rainfall to avoid significant reduction in efficacy. Rainfall shortly after application of most post-emergent herbicides may reduce weed control. Effect will vary with product, the interval between spraying and rainfall and the intensity and duration of the rainfall. These guidelines are based on label information. Use the longest time interval on the component products when considering tank mixes.

\* formulated as a solution.

\*\* formulated as an emulsifiable concentrate.

- **600 Amine:** 564 g ae/L present as dimethylamine salt.
- **700 Ester:** 660 g ae/L present as 2-ethylhexyl ester.
  - Container size - various

### Crops, Rates and Staging:

Application rates for individual products may vary from those listed. Refer to the label for product specific use rates. Rates greater than those listed may cause crop injury.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

#### Post-emergent:

| Crop                                                              | Maximum Safe Rate (g ae per acre)         | Stage                                                                                                                                                                                                    |
|-------------------------------------------------------------------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wheat*, barley, spring rye (including durum)                      | 227 to 283***<br>(Esters)<br>227 (Amines) | 4 leaf to early flag leaf.                                                                                                                                                                               |
| Fall rye, winter wheat**                                          | 213 (Esters)<br>205 (Amines)              | In spring, apply after winter cereals begin to grow but before emergence of the flag leaf. From full tillering to prior to flag leaf stage.                                                              |
| Corn**                                                            | 227 (Amines)<br>213 (Esters)              | Apply as an overall spray before corn is 6 inches (15 cm) tall and before the 6 leaf stage. After 6 inches (15 cm) use a directed spray. Avoid making applications under hot/humid conditions onto corn. |
| Seedling and established grasses for forage and seed production** | 213 (Esters and Amines)                   | Apply from the 3 leaf stage to emergence of the flag leaf of seedling grasses. For established grasses for seed production, apply in spring up to emergence of the flag leaf.                            |
| Established forage grass (not for seed production)**              | 426 (Esters and Amines)                   | Apply in spring up to emergence of the flag leaf of established grasses, or in the fall after harvest.                                                                                                   |

| Crop                       | Maximum Safe Rate (g ae per acre) | Stage                                                                                                                                                                                |
|----------------------------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Established grass pastures | 907 (Esters and Amines)           | No restrictions, apply when weeds are actively growing. For control of brush species, apply at time of rapid growth (usually May to mid-June, and September prior to colour change). |

\* Viking 2,4 D Ester is only registered on wheat (spring, winter).

\*\* Note: Registered for use only with certain brands of 2,4-D; use of non-registered products is at the risk of the user.

\*\*\* Note: Rates above 227 g ae per acre can result in crop injury. This injury is typically offset by the benefits of improved weed control.

#### Pre-plant or Pre-emergent:

- **Barley, rye, wheat (spring, winter)** – Apply 134 to 213 g ea per acre (weeds less than 8 cm) to a maximum of 294 g ae per acre (weeds greater than 8 cm) of Nufarm 2,4-D Ester 700 or ADAMA 2,4-D Ester 700 Liquid Herbicide only prior to seeding or after seeding but prior to emergence of the crop.
- **Soybean** – Apply from 134 to 213 g ae per acre of 2,4-D 700 Ester (Nufarm 2,4-D Ester 700, ADAMA 2,4-D Ester 700 Liquid Herbicide and Loveland Salvo only) 7 days prior to seeding.

| 170            | 6        | 301 mL                 | 258 mL                 |
| 205            | 7.25     | 364 mL                 | 311 mL                 |
| 213            | 7.5      | 377 mL                 | 322 mL                 |
| 227            | 8        | 402 mL                 | 344 mL                 |
| 283            | 10       | 503 mL                 | 430 mL                 |
| 340            | 12       | 603 mL                 | 515 mL                 |
| 483            | 17       | 854 mL                 | 730 mL                 |
| 510            | 18       | 905 mL                 | 773 mL                 |
| 907            | 32       | 1608 mL                | 1374 mL                |

\*Actual product rates vary somewhat between products for similar uses. Check the product labels for the specific use rate for the product selected.

### Weeds, Rates and Staging:

Apply at lower rates when weeds are small (2 to 4 leaf stage) and actively growing. Higher rates are needed when weeds are larger, in heavy populations, or growing under stressful conditions (excessively cold, hot, dry or wet).

For pre-seed or pre-emergent application of NuFarm 2,4-D 700 Ester or ADAMA 2,4-D Ester 700 Liquid Herbicide only, apply 134 to 213 g ae per acre to control weeds less than 8 cm tall or 294 g ae per acre before the emergence of cereals to control weeds greater than 8 cm tall or harder to control weeds.

Note: The rates listed differ slightly from product to product. Check individual product labels for exact use rates.

**Susceptible Weeds:***125 to 227 g ae per acre*

- Bluebur
- Burdock
- Cocklebur
- Daisy fleabane
- False flax
- Flixweed (late fall application or spring seedlings)
- Goat's-beard
- Kochia
- Lamb's-quarters
- Mustards (except dog and tansy mustard)
- Narrow-leaved hawk's-beard (fall application to seedlings or spring application at 1 to 2 leaf stage)
- Plantain
- Prickly lettuce
- Ragweed (common, false and giant)
- Russian pigweed
- Russian thistle
- Shepherd's-purse\*\*
- Stinging nettle
- Stinkweed\*\*
- Sweet clover
- Thyme-leaved spurge
- Volunteer canola (including all herbicide tolerant varieties)
- Wild radish
- Wild sunflower

**Harder to control weeds:***227 to 340 g ae per acre*

- Annual sow-thistle
- Biennial wormwood\*
- Blue lettuce\*
- Burdock (top growth only of bolting plants)
- Canada thistle\*\*\*
- Common chickweed
- Common groundsel\*\*
- Common peppergrass
- Dandelion\*
- Flixweed (spring prior to bolting)
- Hairy galinsoga
- Knotweed
- Leafy spurge\*
- Mustard (dog and tansy)
- Narrow-leaved hawk's-beard (spring prior to bolting)
- Oak-leaved goosefoot
- Pineappleweed
- Prostrate pigweed
- Purslane
- Redroot pigweed
- Russian knapweed\*
- Russian thistle
- Sheep sorrel
- Smartweed (including lady's-thumb)
- Tumble pigweed
- Wild buckwheat\*
- Velvetleaf
- Yellowrocket\*

**Top growth control only (at rates for harder to control weeds):**

- Bull thistle
- Buttercup
- Curled dock
- Field bindweed
- Gumweed
- Hedge bindweed
- Hoary cress
- Horsetail
- Mouse-eared chickweed
- Perennial sow-thistle
- Tartary buckwheat
- Volunteer sunflower

\* Control of seedlings at rates given above and top growth control only of established plants.

\*\* Spring seedlings. Winter annual weeds – apply in late fall or early spring prior to bolting.

\*\*\* Suppression only. Apply when Canada thistle plants are actively growing and have 6 to 8 inches (15 to 20 cm) of new growth.

Regrowth will be present the following spring and in-crop treatments will be required.

**Formulation Characteristics:**

| Formulation | Risk of Vapour Drift | Activity on Weeds | Risk of Crop Injury |
|-------------|----------------------|-------------------|---------------------|
| Ester       | Medium               | Fast              | Medium              |
| Amine       | Very low             | Medium            | Low                 |

**Application Information:**

- **Water Volume:**
  - **Ground:** Minimum 20 L per acre. Water rates depend on product and use. Consult label for details. Higher application volumes (40 L per acre or greater) reduce the risk of crop injury.
- **Nozzles and Pressure:** 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressures designed to deliver proper coverage with **ASABE coarse** droplets.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| 2,4-D             | POST (foliar) | Synthetic auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

**Effects of Growing Conditions:**

Best weed control occurs when temperatures are above 21°C (daytime) or 10°C (nighttime) and humidity is above 70 percent. DO NOT apply if temperature exceeds 27°C.

## Tank Mixes:

None listed on 2,4-D amine or ester labels.

## Restrictions:

- **Rainfall:**
  - **2,4-D amine:** within 4 hours will reduce control.
  - **2,4-D ester:** within 2 hours will reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing:** DO NOT permit lactating dairy animals to graze fields within 7 days of application. DO NOT harvest forage or cut for hay within 30 days of application. Withdraw meat animals from treated fields at least 3 days before slaughter.
- **Re-cropping:** No recropping guidelines are provided on the labels. As a general guideline, there should be no cropping restrictions the year following an in-crop treatment.
- **Aerial Application:** Some formulations may be applied by air. Check the label for detailed instructions.
- **Storage:** 2,4-D ester may be frozen. 2,4-D amine requires heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to introduction.

## Hazard Rating:

**Amine 600 formulations:**

Warning – Poison

**Ester 700 formulations:**

Danger – Poison

Warning – Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# 2,4-DB

Herbicide Group  
4 - 2,4-DB

## Company:

Interprovincial Cooperative Limited (*Cobutox 625* – PCP#27911)

Nufarm Agriculture (*Embutox* – PCP#27912)

Loveland Products Canada (*Caliber 625* – PCP#27910)

## Formulation:

625 g/L 2,4-DB formulated as an emulsifiable concentrate.

- Container size - 10 L

## Crops and Staging:

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

| Crop                                                         | Stage                                                                        |
|--------------------------------------------------------------|------------------------------------------------------------------------------|
| Seedling alfalfa, bird's-foot trefoil*                       | 1 to 4 trifoliolate leaf stage                                               |
| Clover (alsike**, red**, white, Dutch but NOT sweet clover)* | As soon as possible after emergence of the 1 <sup>st</sup> trifoliolate leaf |
| Wheat, barley or oats                                        | 5 leaf to emergence of the flag leaf                                         |
| Field corn                                                   | 15 inches (40 cm) to prior to tasseling using drop nozzles.                  |
| Pastures containing forage legumes                           | After cutting or grazing and regrowth less than 3 inches (7.5 cm)            |

\* With or without a cereal cover crop.

\*\* Alsike and red clovers may be damaged by 2,4-DB applications.

**Seedling Forage Grasses\*:**

Apply from 2 to 4 leaf stage of:

- Bromegrass (smooth)
- Fescue (creeping red, meadow, tall)
- Orchard grass
- Timothy
- Wheatgrass (crested, intermediate, streambank, tall)

\* **Not for seed production. Not for feeding in the establishment year.**

**Weeds and Staging:**

**Weeds controlled at the 0.71 L per acre rate from the 2 to 4 leaf stage:**

- Lamb's-quarters
- Mustard (ball, wild, wormseed)
- Ragweed
- Redroot pigweed
- Shepherd's-purse
- Stinkweed

**Weeds controlled at higher recommended rates (0.91 to 1.1 L per acre):**

| Weed                              | Stage                                                 |
|-----------------------------------|-------------------------------------------------------|
| Bull thistle                      | Rosette to early bud stage                            |
| Canada thistle*                   | 6 inch (15 cm) to early bud                           |
| Chicory                           | Rosette                                               |
| Curled dock**                     | Young and actively growing                            |
| Dandelion*                        | Prior to bud                                          |
| Field bindweed*                   | Late summer                                           |
| Horsetail*                        | 4 to 5 inches (10 to 13 cm)                           |
| Narrow-leaved hawk's-beard        | Apply at rosette stage after alfalfa has gone dormant |
| Oak-leaved goosefoot              | Up to 2 leaf stage                                    |
| Perennial sow-thistle*            | Rosette                                               |
| Plantain                          | Prior to flowering                                    |
| Smartweed (green, lady's-thumb)** | Seedlings                                             |
| Wild buckwheat                    | Up to 2 leaf stage                                    |
| Wild radish                       | Up to 2 leaf stage                                    |
| Yellow rocket                     | Late September to mid-October                         |

\* **Top growth control**

\*\* **Suppression**

Refer to individual product labels for details on application rates to use for different weed species.

**Rates:**

| Crop                                         | Rate (L per acre) |
|----------------------------------------------|-------------------|
| Cereals, seedling forage legumes and grasses | 0.71 to 0.91      |
| Corn and pastures containing forage legumes  | 0.71 to 1.11      |

**Application Information:**

- **Water Volume:** 61 to 81 L per acre.
- **Nozzles and Pressure:** 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressures designed to deliver proper coverage with a minimum of fine droplets.

**How it Works:**

Refer to How Do Herbicides Work in introduction for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| 2,4-DB            | POST (foliar) | Synthetic auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Severe damage to legumes can occur if high temperatures (more than 27°C) or high humidity prevail at the time of application. DO NOT apply under dry soil/drought conditions.

## Tank Mixes:

### Herbicides:

#### Underseeded Legumes:

- MCPA amine (35 g ae per acre\*)  
\* 500 g/L formulation
- This tank mix may increase crop damage (stunting).
- Follow all precautions and restrictions on both product labels.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Note:** The above mixes are those listed on 2,4-DB labels only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Not specified on the label. A period of up to 8 hours may be required. Contact the manufacturer for more details.
- **Grazing Restrictions:** DO NOT graze or cut treated crops or forage until 30 days after application.
- **Re-cropping Interval:** No restrictions the year after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen.

## Sprayer Cleaning:

No sprayer clean-out information is provided on the labels. 'Method B' in the introduction, is typically considered effective in cleaning solvent based formulations such as emulsifiable concentrates. Contact the manufacturer for detailed clean-out instructions.

## Hazard Rating:

Caution – Poison

Refer to the Introduction for an explanation of the symbols.

# AAtrex Liquid

Herbicide Group  
5 - atrazine

## Company:

Syngenta Canada (PCP#18450)

## Formulations:

480 g/L atrazine formulated as a liquid suspension.

- Container size - 2 x 10 L

## Crops, Rates and Staging:

**Corn (silage, field, sweet):** 0.33 to 1.25 L per acre\* using the following application methods:

- **Pre-plant incorporated (PPI).**
- **Pre-emergent surface (after planting but before emergence of weeds and crop):** Recommended only on irrigated fields. Inconsistent weed control will occur if 0.5 inches (1.25 cm) of water/precipitation does not occur within 7 days of application.
- **Post-emergence:** 1 to 6 leaf stage and when corn is less than 12 inches (30 cm) tall. Add 1.11 to 2.23 L per acre of oil concentrate or 6.88 L per acre crop oil. Crop injury may occur when AAtrex and oil is applied post-emergence during cold weather.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

**\* Use the low rate on crops grown on sandy soils, and where weed infestations are light.**

It is recommended that any products containing atrazine not be used in areas treated with this product during the previous season.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Weeds and Staging:

For pre-plant incorporated, pre-emergent and post-emergent (when weeds are less than 4 inches or 10 cm tall) control of the following weeds:

- Lamb's-quarters
- Mustard (wild, wormseed)
- Purslane
- Ragweed
- Redroot pigweed
- Smartweed (including lady's-thumb)
- Volunteer clover
- Wild buckwheat
- Wild oats

## Application Information:

- **Water Volume:** Minimum 61 L per acre.
- **Nozzles and Pressure:** 30 to 45 psi (200 to 300 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage and a minimum of fine droplets that are prone to drift.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                             | Target                                | Movement                                         | Spectrum          | WSSA Group |
|-------------------|------------------------------------|---------------------------------------|--------------------------------------------------|-------------------|------------|
| atrazine          | PPI (soil active)<br>POST (foliar) | PSII Inhibitor/<br>Membrane disruptor | Little foliar; upward soil<br>applied (Apoplast) | Broadleaf & grass | 5          |

## Effects of Growing Conditions:

Post-emergent applications made during periods of cold weather may cause crop lightening. Hot, dry weather preceding post-emergent applications may result in reduced weed control. *AAtrex* will move with soil if eroded.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Pre-Emergent and Pre Plant Incorporated:**
    - *Dual II Magnum*
    - Glyphosate
  - **Post-Emergent\*:**
    - *Dual II Magnum*
    - Bromoxynil/MCPA (*Buctril M* only)\*\*
    - Bromoxynil (*Pardner* only)
- \* DO NOT use oils or adjuvants with post-emergent tank mixes.
- \*\* DO NOT treat after the 6 leaf stage, crop injury may occur.

**Fertilizers:** For pre-emergent applications, nitrogen solutions or complete liquid fertilizers may replace all or part of the water as a carrier. *AAtrex* may be impregnated onto dry granular fertilizers. DO NOT impregnate onto nitrate, super-phosphate or limestone.

DO NOT apply *AAtrex* with nitrogen fertilizer after corn has emerged, as crop injury will occur.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Note: The above mixes are those listed on the *AAtrex* label only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product..

## Restrictions:

- **Rainfall:** Within 2 hours of post-emergence applications may result in reduced weed control.
- **Grazing Restrictions:** DO NOT graze or cut for feed before ear emergence.
- **Pre-harvest Interval:** Leave at least 45 days from application to harvest for sweet corn and 60 days for field corn.
- **Re-cropping Interval:** All crops, except corn and triazine-tolerant canola, may be affected the year following the use of atrazine. Flax, peas and faba beans have some tolerance to atrazine residues and are usually not affected by rates of up to 0.9 L per acre applied the previous year. Other more sensitive crops may be affected 2 or more growing seasons after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for several hours. Scrub inside surfaces but do not enter tank. Flush sprayer system with water.

DO NOT clean equipment upslope of water bodies or ditches, near cropland or shelterbelts. Clean your sprayer away from areas where family members or others are likely to frequent or walk.

## Hazard Rating:

Caution – Eye Irritant

Keep out of reach of children. Harmful if swallowed.

Refer to the Introduction for an explanation of the symbols.

# Advantage Glufosinate Plus

Herbicide Group  
4 – quinclorac (broadleaf)  
10 – glufosinate

## Company:

Advantage Crop Protection Inc.

## Formulation:

**Advantage Glufosinate Plus (PCP#34985):** 146 g/L glufosinate ammonium and 15 g/L quinclorac formulated as a solution.

- Container size – 10 L, 120 L, 500 L, 1000 L

## Crops and Staging:

**Liberty Link Canola** – cotyledon to early bolting stage. Temporary crop discoloration (bronzing, speckling) may be observed after application.

DO NOT apply products that contain quinclorac more than once every two years.

## Weeds, Rates and Staging:

| Weed                                              | Weed Stage<br>(from emergence to stage) | Rate<br>(L per acre) |
|---------------------------------------------------|-----------------------------------------|----------------------|
| Cow cockle                                        | 4 leaf                                  | 0.54                 |
| Green foxtail                                     | 6 leaf (max. 3 tillers)                 |                      |
| Barnyard grass                                    | 4 leaf                                  | 0.81                 |
| Wild mustard                                      | 5 leaf                                  |                      |
| Lamb's-quarter, smartweed (lady's thumb)          | 6 leaf                                  |                      |
| Stinkweed                                         | 8 leaf                                  |                      |
| Volunteer flax                                    | 2.5 inches (6 cm)                       | 0.81                 |
| Russian thistle                                   | 3 inches (8 cm)                         |                      |
| Wild buckwheat                                    | 3 leaf                                  | 1.08                 |
| Redroot pigweed, round-leaved mallow, quackgrass* | 4 leaf                                  |                      |
| Volunteer wheat, volunteer barley*                | 4 leaf (max. 2 tillers)                 |                      |
| Hemp-nettle (1 to 3 leaf pairs), shepherd's-purse | 6 leaf                                  |                      |
| Common chickweed (max. 4 leaf pairs), sow-thistle | 8 leaf                                  |                      |
| Kochia                                            | 3 inches (8 cm)                         |                      |
| Canada thistle*, scentless chamomile              | 4 inches (10 cm)                        |                      |

| Weed                                                                | Weed Stage<br>(from emergence to stage)   | Rate<br>(L per acre) |
|---------------------------------------------------------------------|-------------------------------------------|----------------------|
| Cleavers                                                            | 3 whorls (nodes)                          | 1.35                 |
| Stork's-bill and heavy populations of wild buckwheat                | 3 leaf                                    |                      |
| Quackgrass (light to moderate** or heavy infestations*)†, wild oats | 4 leaf (max. 2 tillers except quackgrass) |                      |
| Heavy infestations† volunteer wheat, volunteer barley*              | 4 leaf (max. 2 tillers)                   |                      |
| Hemp-nettle                                                         | 8 leaf (1 to 4 leaf pairs)                |                      |
| Dandelion rosettes                                                  | 6 inches (15 cm) across                   |                      |
| Flixweed, Canada thistle*                                           | 4 inches (10 cm)                          | 1.62                 |
| Quackgrass***                                                       |                                           |                      |
| Canada thistle**                                                    |                                           |                      |

\* Top growth suppression. Plants may return from surviving growing points.

\*\* Extended top growth suppression.

\*\*\* Season long control.

†The company does not provide guidelines for weed densities. When in doubt as to the infestation level, use the high rate or contact the manufacturer.

## Application Information:

- **Water Volume: 110 l/ha**

Apply *Advantage Glufosinate Plus* in a minimum of 110 litres of water per hectare at a pressure of 275 kPa and at a ground speed of 6 to 8 km/h. If check valves are used, apply at 310 kPa. The use of 80° or 110° flat fan nozzles is highly recommended for optimum spray coverage and canopy penetration.

- DO NOT use flood jet nozzles, controlled droplet application equipment or air-assisted spray equipment.
- Uniform, thorough coverage of foliage is important to achieve consistent weed control.

Application of the spray at a 45° angle forward will result in better spray coverage. Follow directions elsewhere on the label for the correct rate and timing of application.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                          | Movement                                             | Spectrum          | WSSA Group |
|-------------------|---------------|-------------------------------------------------|------------------------------------------------------|-------------------|------------|
| Glufosinate       | POST (foliar) | Glutamine Synthase inhibitor/membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Broadleaf & grass | 10         |
| Quinclorac        | POST (foliar) | Synthetic Auxin                                 | Throughout the plant (Symplast)                      | Broadleaf only    | 4          |

## Effects of Growing Conditions:

*Advantage Glufosinate Plus* activity is influenced by environmental conditions. Cool temperatures (less than 10°C), drought, and low humidity conditions slow weed growth. Applications made under these stressed conditions may result in reduced weed control. DO NOT apply to crop that is under stress from conditions such as frost, hail, drought or extremes in temperature. Cool weather may delay weed control and if prolonged may result in poor weed control.

## Tank Mixes:

Herbicides:

**Note:** Do not tank mix *Advantage Glufosinate Plus* with herbicides, fertilizers or chemical additives unless recommended on this label or the label of each tank mix partner.

**Liberty Link Canola only:**

*Advantage Clethodim 240* – 26 mL per ac

*FBN Clethodim 240* – 26 mL per ac

**Note:** The above mixes are those listed on the *Advantage Glufosinate Plus* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction. According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

### Restrictions:

- **Rainfall:** Within 6 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated areas for 12 hours after application.
- **Grazing Restrictions:** DO NOT graze, cut for hay, or feed other portions of the treated canola to livestock.
- **Preharvest Interval:** DO NOT within 60 days of harvest when tank-mixed with clethodim or alone.
- **Re-cropping Interval:** in case of crop failure, only canola may be reseeded the same year. No restrictions for canola. 70 days for spring wheat, durum and barley. 10 months for field peas, sunflowers, flax and lentils. 12 months for oats.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT Freeze. Store in a cool, dry place. Store this product away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

### Hazard Rating:

Warning– Poison

Caution – skin and eye irritant

Refer to the Introduction for an explanation of the symbols.

## Akito

Herbicide Group  
2 - florasulam  
4 - fluroxypyr, clopyralid

### Company:

UPL AgroSolutions Canada (PCP#33657)

### Formulation:

2.5 g/L florasulam, 100 g/L fluroxypyr, and 80 g/L clopyralid formulated as an emulsifiable concentrate.

- Container sizes - 2 x 8.1 L, 97.2 L

### Crops and Staging:

**Note:** The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (for example, sandy soil) and/or the depth to the water table is shallow. Use should be avoided in these areas.

**Wheat (spring, durum, winter), barley:** 3 leaf stage to just before the emergence of the flag leaf.

**Oats:** From the 3 to 6 leaf stage.

When tank mixing, check broadleaf product description for additional restrictions.

### Weeds, Rates and Staging:

Apply early to the main flush of actively growing broadleaved weeds.

#### Weeds controlled:

- |                                       |                               |                                |
|---------------------------------------|-------------------------------|--------------------------------|
| ◦ Canada thistle** (10 cm to pre-bud) | ◦ Narrow-leaved hawk's-beard* | ◦ Volunteer canola             |
| ◦ Cleavers (1 to 8 whorls)            | ◦ Scentless chamomile         | ◦ (not CLEARFIELD varieties)   |
| ◦ Common chickweed                    | ◦ Shepherd's-purse            | ◦ Volunteer flax (up to 12 cm) |
| ◦ Dandelion (up to 30 cm in diameter) | ◦ Sow-thistle (perennial)     | ◦ Wild buckwheat               |
| ◦ Kochia (2 to 8 leaf)                |                               |                                |

\* **Suppression only.**

\*\* **Season long control, with some regrowth in the fall.**

### Rates:

**Note:** Maximum of one application of this product per year.

400 mL per acre

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage. DO NOT apply with spray droplets smaller than **ASAE S572.1 coarse** classification.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                             | Movement                            | Spectrum       | WSSA Group |
|-------------------|-----------------------------------------|------------------------------------|-------------------------------------|----------------|------------|
| florasulam        | POST (foliar) with little soil activity | ALS Amino Acid synthesis inhibitor | Toward regions of growth (symplast) | Broadleaf only | 2          |
| fluroxypyr        | POST (foliar)                           | Synthetic auxin                    | Moves through the plant (symplast)  | Broadleaf only | 4          |
| clopyralid        | POST (foliar)                           | Synthetic auxin                    | Moves through the plant (symplast)  | Broadleaf only | 4          |

## Effects of Growing Conditions:

Warm, moist growing conditions promote active weed growth and enhance the activity of *Akito* by allowing maximum foliar uptake and contact activity. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **In all wheat (spring, durum, winter):**
    - MCPA ester 600 (up to 0.43 L per acre)
    - 2,4-D ester 700 (up to 0.52 L per acre)
    - *Simplicity GoDri*\*
    - *Axial*\*
    - *Traxos*\*
  - **In barley:**
    - MCPA ester 600 (up to 0.19 L per acre)
    - 2,4-D ester 700 (up to 0.52 L per acre)
  - **In oats:**
    - MCPA ester 600 (up to 0.36 L per acre)
- \* Tank-mixes with *Akito* alone or *Akito* + MCPA or 2,4-D

**Note:** The above tank mixes are those listed on the *Akito* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. See the general guidelines for mixing pesticides for more information.

## Restrictions:

- **Rainfall:** No restrictions listed.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:** MUST NOT be grazed or fed to livestock for 7 days after treatment.
- **Pre-harvest Interval:** Leave 60 days between application and harvest.
- **Re-cropping Interval:** Wheat, barley, oat, rye, canola, flax, or mustard may be seeded in the year following treatment or fields can be summerfallowed. DO NOT seed field peas for at least 10 months following treatment. If severe drought conditions are experienced during the months of June to August inclusive in the year of application, delay seeding field peas an additional 12 months (total 22 months following application).
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in cool (above 5°C), dry, locked, well-ventilated area. If product is frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Danger – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Altitude FX3

Herbicide Group  
2 - imazamox  
4 - fluroxypyr

## Company:

BASF Canada

## Formulations:

*Altitude FX3* contains the following separate components:

**AC 299,263 120 AS (PCP#26705):** 120 g/L imazamox formulated as a solution.

- Container size - 2.68 L

**Starane II (PCP#29463):** 333 g/L of fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 5 L

MCPA, 2,4-D, or *Curtail M* must be added and are purchased separately.

## Crops and Staging:

**CLEARFIELD wheat varieties:** 3 leaf (after appearance of first tiller) to 6 leaf stage to ensure optimal crop tolerance. Apply only to CLEARFIELD wheat varieties; application to any other variety of wheat or any other crop will result in crop death.

## Weeds and Staging:

### Grasses:

Apply from 1 to 4 leaf stage to a maximum of two tillers.

- Barnyard grass
- Foxtail (green, yellow)
- Japanese brome\*
- Persian darnel
- Volunteer cereals (barley, canary seed, oats, non-CLEARFIELD spring wheat, durum)
- Wild oats

### Broadleaves:

Apply up to 4 leaf stage unless otherwise indicated.

- Cleavers (1 to 4 whorls)
- Cow cockle
- Green smartweed
- Kochia
- Lamb's-quarters
- Redroot pigweed
- Round-leaved mallow\*
- Russian thistle\*
- Shepherd's-purse
- Stinkweed
- Stork's-bill (1 to 8 leaf)\*
- Volunteer canola (except CLEARFIELD varieties)
- Volunteer flax (1 to 12 cm)
- Wild buckwheat
- Wild mustard

\* Suppression

## Rates:

**AC 299,263 120 AS:** 67 mL per acre.

**Starane II:** 126 mL per acre.

*Altitude FX3* must be tank mixed with one of the registered tank mix options found under the "tank mix" section below. Add a non-ionic surfactant (such as *Agral 90* or *Ag-Surf II*) at 0.25 L per 100 L of spray solution. Surfactant not included.

DO NOT apply *Altitude FX3* or other products containing imazamox or fluroxypyr more than once per season.

Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE coarse* droplets.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                            | Spectrum          | WSSA Group |
|-------------------|---------------|--------------------------|-------------------------------------|-------------------|------------|
| imazamox          | POST (foliar) | ALS Amino Acid inhibitor | Toward regions of growth (Symplast) | Broadleaf & grass | 2          |
| fluroxypyr        | POST (foliar) | Synthetic Auxin          | Toward regions of growth (Symplast) | Broadleaf only    | 4          |

## Effects of Growing Conditions:

Initial crop injury may be observed after application but this is outgrown and should not affect yield. Severe crop injury will occur as a result of spray overlap. AVOID SPRAYER OVERLAP.

DO NOT spray if temperatures of 5°C are forecast within 3 days of application. Treat crops during warm weather when weeds are actively growing and soil moisture is adequate for rapid growth. Under cool or dry conditions, control of some weeds may be severely reduced.

## Tank Mixes:

### Herbicides:

- **Altitude FX3 must be mixed with one of the following:**
  - MCPA or 2,4-D ester (213 g ae per acre)
  - *Curtail M* (0.61 to 0.81 L per acre)

## Restrictions:

- **Rainfall:** Rainfall within 3 hours after application may reduce activity.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze the treated crop within 14 days of application or cut for hay within 42 days of application.
- **Pre-harvest Interval:** DO NOT apply within 79 days of harvest.
- **Re-cropping Interval:** Winter wheat may be seeded 3 months after application. Barley, canola (all varieties), field peas, flax, lentil, oats, and spring wheat may be grown safely the year following application. Condiment mustard may be grown the second season following *Altitude FX3* application. Conduct a field bioassay the year before growing any other crop than those listed above.  
**Note:** Where less than 125 mm of accumulated rainfall is received between June 1 and September 1 in the year of application, or additionally for the brown soil zone where less than 15 mm is received in any single month through June, July and August, regardless of total rainfall during that time, delay planting canaryseed, canola (non-CLEARFIELD), flax, tame oats, winter wheat and durum wheat by an additional year. If the same drought conditions as described above occur in either the year of application or the year following, delay planting tame mustard by an additional year.
  - As with other herbicides that break down through microbial activity, additional conditions that may slow breakdown and increase the risk of follow crop injury are soil pH of less than 6.5, organic matter of less than 3 percent, very sandy soils and prolonged cold.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT freeze. Store in a cool, dry place above 5°C. Combustible – DO NOT store near heat or open flame.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

### Starane II:

Warning – Eye Irritant

Caution – Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Anaconda

*This product is a prepackaged tank mix of Boa Pro (see imazamox/bentazon) and Quiz (see quizalofop). Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and general information on the component products see the product pages listed above.*

Herbicide Group

1 - quizalofop

2 - imazamox

6 - bentazon

## Company:

NewAgco

## Formulation:

The *Anaconda* package contains the following components:

**Samurai (PCP#33033):** 70% imazamox formulated as a water dispersible granule.

- Container sizes - 470 g, 24 x 470 g

-plus-

**Boa (PCP#33011):** 480 g/L bentazon formulated as an emulsifiable concentrate.

- Container sizes - 14.5 L, 348 L

-plus-

**Quiz (PCP#33481):** 96 g/L quizalofop-P-ethyl formulated as an emulsifiable concentrate.

- Container sizes - 8 L, 192 L

## Crops and Staging:

| Crop      | Leaf Stage             | Days to Harvest |
|-----------|------------------------|-----------------|
| Field pea | 3 to 6 true leaf stage | 65              |

## Weeds and Staging:

Weeds controlled by *Boa Pro* (see Imazamox/Bentazon) plus the weeds controlled by *Quiz* (see Quizalofop) at 150 mL per acre.

## Rates:

*Note: Maximum of ONE APPLICATION of this or other products containing imazamox per year.*

**Samurai:** 11.7 g per acre.

-plus-

**Boa:** 362 mL per acre.

-plus-

**Quiz:** 200 mL per acre.

Add *Assassin* or *Merge* at 0.5 L per 100 L of spray solution PLUS 28 percent UAN at 0.81 L per acre (both sold separately). Failure to include UAN or adjuvant will result in significantly reduced product performance.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Ares SN

Herbicide Group  
2 -imazamox, imazapyr

## Company:

Corteva Agriscience (PCP#33167)

## Formulation:

33 g/L imazamox and 15 g/L imazapyr formulated as a solution.

- Container sizes - 1 x 9.8 L, *Surjet* 8.1 L

## Crops and Staging:

CLEARFIELD canola: 2 to 7 leaf stage.

CLEARFIELD oilseed mustard (*Brassica juncea*): 2 to 7 leaf stage.

## Weeds, Rates and Staging:

*Merge* or *Surjet* adjuvant must be used at a rate of 0.5 L per 100 L of spray solution.

At 244 mL per acre, *Ares SN* will control:

- **Grasses** - From 1 to 6 true leaf stage with up to 2 tillers:
  - Barnyard grass
  - Foxtail (green and yellow)
  - Japanese brome\*
  - Persian darnel
  - Volunteer cereals (barley, canaryseed, durum, oats and wheat - NOT including CLEARFIELD varieties)
  - Wild oats
- \* Spring germinating Japanese brome maximum 4 leaf stage.
- **Broadleaf Weeds** - up to 4 leaf stage unless otherwise indicated:
  - Chickweed
  - Cleavers (up to 4 whorls)
  - Cow cockle
  - Green smartweed
  - Hemp-nettle
  - Lamb's-quarters \*\*
  - Redroot pigweed
  - Round-leaved mallow
  - Russian thistle
  - Shepherd's-purse
  - Stinkweed
  - Stork's bill
  - Volunteer canola (not CLEARFIELD varieties)
  - Volunteer tame mustard (not CLEARFIELD oilseed varieties - *B. juncea*)
  - Wild buckwheat\*\*
  - Wild mustard
- \*\* up to 6 leaf stage

DO NOT apply *Ares SN* more than once per year or follow *Ares SN* with other products containing the active ingredient imazamox or imazapyr in the same year. Refer to the product label for complete mixing instructions for this product and its mixes. A general mixing guide can be found in the introduction.

## Application Information:

- **Water Volume:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE medium* droplets.
- **Screens:** Use 50 mesh or coarser filter screens for both nozzles and in-line screens. Use 16 mesh suction screens.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                            | Spectrum          | WSSA Group |
|-------------------|---------------|--------------------------|-------------------------------------|-------------------|------------|
| imazamox          | POST (foliar) | ALS Amino Acid inhibitor | Toward regions of growth (Symplast) | Broadleaf & grass | 2          |
| imazapyr          | POST (foliar) | ALS Amino Acid inhibitor | Toward regions of growth (Symplast) | Broadleaf only    | 2          |

## Effects of Growing Conditions:

DO NOT apply to any crops that have been subjected to stress from conditions such as hail damage, flooding, drought, hot, humid weather, widely fluctuating temperature conditions, prolonged cold weather or injury from prior herbicide applications, as crop injury may result. DO NOT spray if temperatures of 5°C or lower are forecast within 3 days of application. Treat crops during warm weather when weeds are actively growing and soil moisture is adequate for rapid growth. Under cool or dry conditions, control of some weeds may be severely reduced.

## Tank Mixes:

### Herbicides:

- **In CLEARFIELD canola only. DO NOT apply to CLEARFIELD oilseed mustard:**
  - Lontrel XC (52 mL per acre)

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the *Ares SN* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfast within 2 hours of application.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Pre-harvest Interval:** DO NOT apply within 60 days of harvest of registered crops.
- **Grazing Restrictions:** No information is provided on the label. DO NOT feed treated crops to livestock prior to crop maturity.
- **Re-cropping Interval:** Fields treated with *Ares SN* can be seeded after a minimum of 10 months to spring wheat, barley, canaryseed, chickpea, CLEARFIELD canola/oilseed *B. juncea*, field corn, field pea, or lentil. Non-CLEARFIELD canola, durum, flax and sunflowers may be seeded the second full season after application.

*If rainfall was less than 140 mm during the growing season (June 1st to August 31st) in the year of application, delay seeding rotational crops an additional 12 months. CLEARFIELD crops will be the lowest risk recropping options under these conditions. Contact Corteva Agriscience for additional advice regarding crops grown in rotation. The company recommends that a field bio-assay (a test strip grown to maturity) be conducted the year before growing any crops other than those listed above.*

- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the general sprayer cleaning section in the introduction.

## Hazard Rating:

No specific hazards.

# Arsenal PowerLine

Herbicide Group  
2 - imazapyr

## Company:

BASF Canada (PCP#23713)

## Formulations:

240 g/L imazapyr present as the isopropylamine salt, formulated as a solution.

- Container size - 2 x 9.5 L

## Crops and Staging:

For control of undesirable vegetation in non-cropland sites (including grazed or hayed areas within these site), low volume foliar brush control\* and cut stump treatment. DO NOT use in residential or recreational areas, where bystanders could be exposed during or after application. DO NOT apply to cropland.

\* Please refer to the product label for forestry site preparation and for low volume foliar brush control

## Weeds, Rates and Staging:

Must be applied post-emergence to small, emerged and vigorously growing weeds. Apply with either a non-ionic surfactant at 0.25 L per 100 L of spray solution or methylated seed oil (MSO) at 1 L per 100 L of spray solution. Use higher rate in range for larger weeds or where heavy or well-established infestations occur.

Apply ONE APPLICATION of this product or other products containing Imazapyr per year.

### Weeds controlled at 0.95 to 1.21 L per acre:

- Clovers
- Mustards\*\*
- Foxtail (green, yellow)\*\*
- Dandelion

### Weeds controlled at 1.21 L per acre:

Above weeds plus:

- |                              |                         |                         |
|------------------------------|-------------------------|-------------------------|
| ◦ Black medick               | ◦ Groundsel (common)    | ◦ Quackgrass            |
| ◦ Bladder campion            | ◦ Hemp-nettle**         | ◦ Ragweed               |
| ◦ Bluegrass (annual, Canada) | ◦ Lamb's-quarters**     | ◦ Russian thistle**     |
| ◦ Bromegrass                 | ◦ Leafy spurge          | ◦ Sheep-sorrel          |
| ◦ Bull thistle               | ◦ Maple                 | ◦ Stinkweed             |
| ◦ Burdock                    | ◦ Milkweed              | ◦ Sow-thistle (annual)* |
| ◦ Canada thistle             | ◦ Mouse-eared chickweed | ◦ Toadflax              |
| ◦ Cinquefoil (rough, sulfur) | ◦ Mulleins              | ◦ Tufted vetch          |
| ◦ Fescues                    | ◦ Old witchgrass        | ◦ Wild buckwheat**      |
| ◦ Poplar                     | ◦ Ox-eye daisy          | ◦ Wild grape            |
| ◦ Fleabanes                  | ◦ Pigweeds**            | ◦ Wild raspberry        |
| ◦ Field bindweed             | ◦ Pineappleweed         | ◦ Wild rose             |
| ◦ Goat's-beard               | ◦ Plantains             | ◦ Wild strawberry       |
| ◦ Goldenrod                  | ◦ Poison ivy            | ◦ Yellow nutsedge       |

\*\* NOT Group 2 resistant biotypes

### Weeds controlled at 1.21 to 1.86 L per acre\*\*\*:

- *Phragmites australis subsp. australis* (European Common Reed)\*\*\*

\*\*\* For control of non-native invasive *Phragmites* only in dry areas. NOT intended for native *Phragmites* control or application where surface water is present. Contact local authorities for definitive *Phragmites* identification. Apply as a low volume directed spray to cover all of the foliage in late summer or early fall while foliage is still green and fully elongated. NOT for application to the soil.

## Cut Stump Treatment:

Control the regrowth of undesirable shrubs and trees after cutting, on non-crop areas. Apply to the cambium (boundary between bark and wood) of freshly cut stump surfaces in summer and autumn months. DO NOT over apply solution causing runoff or pooling.

Mix<sup>†</sup> at a rate of 63 to 94 mL\* with 1 L of water to cut stump to control re-growth of the following brush species:

- |         |                |          |
|---------|----------------|----------|
| ◦ Alder | ◦ Cherry       | ◦ Oak    |
| ◦ Aspen | ◦ Dogwood      | ◦ Poplar |
| ◦ Ash   | ◦ Mountain ash | ◦ Willow |
| ◦ Birch | ◦ Maple        |          |

\* A rate in the upper end of the range is recommended for larger diameter stumps. Antifreeze (ethylene glycol) may be used to prevent freezing.

<sup>†</sup> Spray or brush the solution on the cambium area of the freshly cut stump surface. Ensure that the solution thoroughly wets the entire cambium area.

## Application Information:

- **Water Volume:** Minimum 40 to 222 L of water per acre.
  - **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE S572.1 medium* droplets by ground.
  - **Equipment:**
    - **High volume spray equipment:** High pressure handguns and vehicle mounted high volume directed spray equipment. Use the least amount of water practical to obtain uniform coverage of foliage to avoid runoff from the foliage.
    - **Boom Sprayer<sup>†</sup>:** Conventional boom mounted, manifold mounted, and off-centered nozzles. Sprayers without drift reduction systems should use between 25 to 60 psi (175 kPa to 425 kPa).
    - **Low volume hand held equipment:** Backpack, knapsack, and other pump-up type pressure sprayers used to direct applications to weed foliage.
- <sup>†</sup> A foam reducing agent may be added at the recommended label rate, if needed.
- Spray tank with the agitator running. Boom height must be 60 cm or less above the weed canopy or ground.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                         | Movement                           | Spectrum            | WSSA Group |
|-------------------|---------------|--------------------------------|------------------------------------|---------------------|------------|
| Imazapyr          | POST (foliar) | Amino acid synthesis inhibitor | Towards Areas of Growth (Symplast) | Broadleaf and grass | 2          |

## Effects of Growing Conditions:

For maximum activity, apply *Arsenal PowerLine* when used alone or with tank mix partners when weeds are small and actively growing.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- *Banvel VM* (0.85 to 1.86 L per acre)
- Glyphosate (except MA salt - see glyphosate)

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter into treated areas DO NOT re-enter treated area within 12 hours after application.
- **Grazing Restrictions:** There are no grazing restrictions following application. DO NOT cut forage for hay for 7 days after application.
- **Re-cropping Interval:** DO NOT apply to cropland.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store at temperatures above -12°C. DO NOT mix or store in unlined steel (except stainless steel) containers or spray tanks.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the general section on sprayer cleaning in the introduction. See the label for product specific cleaning details.

## Hazard Rating:

Caution – Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Audible

*This product is a prepackaged tank mix of the equivalent of thifensulfuron/tribenuron and fluroxypyr. Information listed is restricted to Crops, Weeds, Rates and Tank Mixes. For other detailed information on the component products see the product pages listed above.*

**Herbicide Group**  
**2 - thifensulfuron,**  
**tribenuron**  
**4 - fluroxypyr**

## Company:

Albaugh

## Formulation:

The *Audible* package contains the following components:

**Draft (PCP#31904):** 50% thifensulfuron methyl + 25% tribenuron methyl formulated as a water dispersible granule.

- Container size - 2 x 324 g

**Audible B (PCP#33387):** 333 g ae/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 2 x 5 L

## Crops and Staging:

**Wheat (spring, durum), barley and oats:** 2 leaf up to and including initiation of stem elongation.

**Winter wheat:** In the spring from 3 tiller stage until the emergence of the flag leaf.

## Weeds and Staging:

*Apply from the seedling to 4 leaf or whorl stage (up to 10 cm tall or wide) unless otherwise indicated for the following weeds:*

- Weeds controlled by thifensulfuron/tribenuron plus:
  - Cleavers (1 to 8 whorls)
  - Stork's bill (1 to 8 leaf)\*
  - Volunteer flax (1 to 12 cm)
  - Kochia (2 to 8 leaf)

\* **Suppression only.**

## Rates:

**Draft:** 8 g per acre.

**Audible B:** 125 mL per acre.

Add *Agral 90*, *AgSurf*, *Citowett Plus* at 0.2 L per 100 L of spray solution.

Thifensulfuron and tribenuron may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing.

**Note:** Maximum of ONE APPLICATION per year of this or other products containing thifensulfuron, tribenuron or fluroxypyr.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

**Herbicides:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Authority 480

*(this referring text to be removed in the 2027 edition)*  
 see Sulfentrazone

**Herbicide Group**  
**14 - sulfentrazone**

# Authority Supreme

Herbicide Group  
14 - sulfentrazone  
15 - pyroxasulfone

## Company:

FMC Corporation (PCP#32562)

## Formulation:

250 g/L pyroxasulfone and 250 g/L sulfentrazone formulated as a suspension concentrate.

- Container size - 2 x 8 L

## Crops, Rates and Staging:

**Pre-plant or pre-emergent surface (up to 3 days after seeding):** chickpea, field pea, soybean, sunflowers.

**Fall application (prior to registered crops):** when soil temperatures have dropped below 10°C but prior to freeze up.

**Broadcast in early spring:** dormant, established alfalfa (seed production only) when no new crop growth is present.\*

*\*Note: Since this use is registered under the User Requested Minor Use Label Expansion program, the manufacturer assumes no responsibility for herbicide performance. **Users of this product do so at their own risk.***

**Note:** Maximum ONE APPLICATION of products containing pyroxasulfone over a 12 month period.

Maximum of ONE APPLICATION of *Authority Supreme* or other products containing sulfentrazone over 24-months. In case of extremely low rainfall in any of those years, a subsequent application of herbicides containing sulfentrazone should be further delayed by the equivalent number of years in which extremely low rainfall occurred.

**Note:** The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sand, loamy sand or sandy loam) and/or the depth to the water table is shallow.

**After a fall application any registered crop can be seeded the following spring.**

| Treatment          | Rate (per acre)                          |                                                       |
|--------------------|------------------------------------------|-------------------------------------------------------|
|                    | Soil Type                                |                                                       |
|                    | Medium Texture<br>(1 to 3 percent O.M.)* | Medium-Fine to Fine Texture<br>(3 to 6 percent O.M.)* |
| Setup Treatment    | 162 mL                                   |                                                       |
| Residual Treatment | 202 mL                                   | 243 mL                                                |

\* O.M. = organic matter content

| Coarse                       | Medium                | Medium-Fine                                  | Fine                        |
|------------------------------|-----------------------|----------------------------------------------|-----------------------------|
| Sand, loamy sand, sandy loam | Loam, silt loam, silt | Sandy clay loam, sandy clay, silty clay loam | Silty clay, clay loam, clay |

**Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.**

**DO NOT apply *Authority Supreme* to:**

- coarse textured soils
- soils with less than 1 percent organic matter content or greater than 6 percent organic matter content
- soils with pH greater than 7.8.

## Weeds and Staging:

**Control of the following weeds emerging from seed (not controlled if emerged at application):**

- Annual bluegrass
- Barnyard grass
- Brome (downy, Japanese)
- Cleavers
- Common groundsel
- Cow cockle
- Eastern black nightshade
- Foxtail (green, yellow)
- Foxtail barley\*
- Italian ryegrass
- Kochia
- Lamb's-quarters
- Palmer amaranth
- Persian darnel\*
- Pigweed (green, redroot)
- Purslane
- Ragweed, common\*
- Stinkweed
- Velvetleaf
- Waterhemp
- Wild buckwheat
- Wild mustard\*
- Wild oats\*
- Witchgrass
- Wormseed mustard
- Yellow woodsorrel

\* Suppression only.

## Application Information:

- **Water Volume:** Minimum of 40 L per acre.
- **Nozzles and Pressure:** Maximum 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets.
- DO NOT mechanically incorporate in the fall or spring as this can destroy the herbicide barrier and allow weed escapes.
- DO NOT apply to frozen soils or existing snow cover to prevent run-off of the herbicide.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                    | Target                               | Movement                   | Spectrum          | WSSA Group |
|-------------------|-------------------------------------------|--------------------------------------|----------------------------|-------------------|------------|
| sulfentrazone     | PRE (surface) with residual soil activity | PPO Inhibitor/<br>Membrane disruptor | Little movement (Symplast) | Broadleaf         | 14         |
| pyroxasulfone     | PRE (surface) with residual soil activity | Long-chain Fatty Acid Inhibitor      | Little movement (Symplast) | Broadleaf & grass | 15         |

## Effects of Growing Conditions:

Moisture is necessary to activate both the pyroxasulfone and sulfentrazone components in soil for effective weed control. Moderate rainfall will improve weed control activity. A minimum of 12.5 mm (0.5 inches) of rainfall or irrigation is required in one event to activate the product. Dry weather following applications may reduce effectiveness. Heavy rainfall shortly after application may reduce weed control and increase the risk of injury. Extremes in environmental conditions such as temperature, moisture, soil conditions, and cultural practices may affect activity. Temporary growth suppressions may occur on eroded knolls, hilltops, areas with coarse gravelly deposits, low organic matter and/or high soil pH.

## Tank Mixes:

### Herbicides:

#### Prior to All Crops:

- Glyphosate (180 to 360 g ae per acre)
- Express SG (6 grams per acre)\*+ glyphosate (rates above) – peas and soybeans only

\* See precautions on 'Tribenuron' regarding potential pulse crop injury.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Avoid application when heavy rain is forecast. A minimum of 12.5 mm (0.5 inches) of rainfall or irrigation is required in one event after application to activate the product.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze stubble after a post harvest fall application.
- **Pre-harvest Interval:** Not applicable.
- **Re-cropping Interval:** Registered crops may be seeded any time after treatment. Winter wheat may be seeded 4 months after application. Barley, canola, field corn, mustard, oats, sunflower, or wheat (spring and durum) may be seeded 12 months after application. Lentils may be seeded 24 months after application. All other crops require 36 months from application to seeding.  
*Note: If there is a lack of adequate or normal soil moisture due to drought conditions following an application of Authority Supreme, the minimum rotational crop interval listed must be extended for one additional year (especially in June, July and August) and a representative bioassay of the field must be conducted with the potential rotational crop and adequate soil moisture to determine the crop sensitivity to Authority Supreme.*
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place over 5°C in original container. DO NOT freeze, but if frozen raise product temperature to 15°C and shake or roll to dissolve crystals.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Warning – Contains the Allergen Sulfites

Refer to the Introduction for an explanation of the symbols.

# Avenza

## Herbicide Group

1 - pinoxaden

2 - florasulam

4 - fluroxypyr

Weed Control

## Company:

Corteva Agriscience

## Formulation:

The *Avenza* package contains the following components:

**Avenza A (PCP#33455):** 5 g/L florasulam and 100 g/L fluroxypyr formulated as a suspension concentrate.

- Container sizes - 8.1 L, 64.8 L, 97.2 L

-plus-

**Avenza B (PCP#33278):** 50 g/L pinoxaden formulated as an emulsifiable concentrate.

- Container sizes - 10 L, 80 L, 120 L

## Crops and Staging:

**Wheat (spring, winter) and barley:** 3 leaf to just prior to flag leaf emergence.

## Weeds and Staging:

**Grass Weeds controlled: (1 to 6 leaf, prior to 4<sup>th</sup> tiller)**

- |                               |                         |                  |
|-------------------------------|-------------------------|------------------|
| ◦ Barnyard grass <sup>†</sup> | ◦ Proso millet          | ◦ Volunteer oats |
| ◦ Foxtail (green, yellow)     | ◦ Volunteer canary seed | ◦ Wild oats      |

**Broadleaf Weeds controlled when tank mixed with 235 mL per acre of MCPA ester 600:**

- |                                                                                                 |                              |                                    |
|-------------------------------------------------------------------------------------------------|------------------------------|------------------------------------|
| ◦ Burdock (seedlings up to 4 leaf)                                                              | ◦ Kochia                     | ◦ Smartweed                        |
| ◦ Canada thistle <sup>†</sup>                                                                   | ◦ Lamb's-quarters            | ◦ Sow-thistle (annual, perennial)  |
| ◦ Chickweed                                                                                     | ◦ Mustard (ball, wild)       | ◦ Stinkweed                        |
| ◦ Cleavers                                                                                      | ◦ Narrow-leaved hawk's-beard | ◦ Stork's-bill (1 to 8 leaf)       |
| ◦ Cocklebur                                                                                     | ◦ Plantain                   | ◦ Vetch                            |
| ◦ Cow cockle                                                                                    | ◦ Prickly lettuce            | ◦ Volunteer canola (all varieties) |
| ◦ Dandelion (seedlings, rosettes, overwintered rosettes (up to 25 cm in diameter)) <sup>†</sup> | ◦ Ragweed                    | ◦ Volunteer flax                   |
| ◦ Flixweed                                                                                      | ◦ Redroot pigweed            | ◦ Wild buckwheat                   |
| ◦ Hemp-nettle                                                                                   | ◦ Russian thistle            | ◦ Wild radish                      |
|                                                                                                 | ◦ Shepherd's-purse           | ◦ Wild sunflower (annual)          |

<sup>†</sup>Top growth control only.

## Rate:

*Avenza A* at 405 mL per acre plus *Avenza B* at 500 mL per acre + MCPA ester 600 at 235 mL per acre.

When tank mixed with 235 mL per acre MCPA ester 600 additional surfactant is NOT required.

Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE coarse* droplets. For ground applications use 30 to 40 psi (200 to 275 kPa) pressure. Flat fan nozzles of 80° or 100° are recommended.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                           | Movement                                | Spectrum       | WSSA Group |
|-------------------|-----------------------------------------|----------------------------------|-----------------------------------------|----------------|------------|
| pinoxaden         | POST (foliar)                           | ACCase Lipid synthesis inhibitor | Toward growth areas (Symplast)          | Grasses only   | 1          |
| florasulam        | POST (foliar) with little soil activity | ALS Amino Acid Inhibitor         | Toward growth areas of plant (Symplast) | Broadleaf only | 2          |
| fluroxypyr        | POST (foliar)                           | Synthetic Auxin                  | Throughout the plant (Symplast)         | Broadleaf only | 4          |

## Effects of Growing Conditions:

Weed control following application of *Avenza* may be reduced or delayed under stress conditions such as drought, heat, insufficient fertility, flooding or prolonged cool temperatures. Grass escapes or re-tillering may occur if application is made during prolonged stress conditions. Optimum weed control will be obtained if application of *Avenza* herbicide is delayed until the stress conditions have ended and weeds are once again actively growing.

## Tank Mixes:

### Herbicides:

- MCPA ester 600 (235 mL per acre)

### Fungicides: None registered.

- *Stratego* (label rates)
- *Tilt* (label rates)

### Insecticides: None registered.

### Fertilizers: None registered.

### Note: The above mixes are those listed on the *Avenza* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

## Restrictions:

- **Rainfall:** Rainfast within 1 hour of application.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Pre-harvest Interval:** DO NOT harvest the treated crop for grain within 60 days of application.
- **Grazing Restrictions:** DO NOT graze for 7 days or silage/hay for 30 days following application.
- **Re-cropping Interval:** Fields previously treated with *Avenza* can be seeded the following year to alfalfa, barley, canola, corn, dry common beans, faba bean, flax, lentil, mustard (brown, oriental and/or yellow) oats, peas, potatoes (except seed potatoes), soybeans, sunflower or wheat.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store in original containers in a secure, dry, well ventilated, heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

This product utilizes a combination of 'Method A' and 'Method B' for cleanout requiring the use of All Clear Spray Tank Decontaminator plus ammonia for the second rinse. Refer to the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water before reuse. See the label for product specific cleaning details.

## Hazard Rating:

### *Avenza A:*

Warning – Eye and Skin Irritant

### *Avenza B:*

Danger – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Avireo

Herbicide Group  
14 – carfentrazone-ethyl  
27 - tolpyralate

## Company:

FMC of Canada Ltd.

## Formulations:

The *Avireo* package contains two components:

**Aim EC (PCP#28573):** 240 g/L carfentrazone-ethyl formulated as an emulsified concentrate.

- Container size – 2 x 1.2L

-plus-

**Tolpyralate 400SC (PCP#32901):** 400 g/L tolpyralate formulated as a suspension concentrate.

- Container size – 1 x 1.62L

## Crops and Staging:

**Wheat (spring, durum, winter) and barley:** Pre-seed or pre-emergent burnoff (up to 3 days after seeding).

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds that are less than 4 inches (10 cm) in height or width.

### Weeds Controlled:

- Buckwheat, wild\*
- Canola, volunteer
- Carpetweed
- Cleavers
- Cocklebur
- Flixweed
- Jimsonweed
- Kochia
- Lamb's quarters, common
- Mallow, round-leaved
- Morning glory
- Mustard, wild\*
- Nightshade (hairy, black, Eastern black)
- Pigweed (redroot, prostrate, smooth, tumble)
- Purslane, common
- Russian thistle
- Shepherd's purse
- Smartweed, Pennsylvania
- Stinkweed
- Velvetleaf
- Waterhemp

\* **Suppression only.**

## Rate:

*Note: Maximum of one application of this or other products containing tolpyralate per year.*

**Aim EC:** 30 mL per acre

-plus-

**Tolpyralate 400 SC:** 20 mL per acre.

Add a MSO Concentrate (Methylated Seed Oil) at 1 L per 100 L of spray solution. Sold separately.

*Prepare no more spray mixture than is needed for the immediate application. Avoid the overnight storage of Tolpyralate 400SC spray mixtures.*

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre. Do not apply by air.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE S572 (572.1 to 572.3) medium classification**. Do not exceed 205 kPa (30 psi) spray pressure unless otherwise required by the manufacturer of drift reducing nozzles. Low drift nozzles may require higher pressures for proper performance.
- **Screens:** Use a 50 mesh screen and filter system.
- **Equipment:** All ground application equipment must be properly maintained and calibrated using appropriate carriers.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing        | Target                               | Movement                                                  | Spectrum  | WSSA Group |
|---------------------|---------------|--------------------------------------|-----------------------------------------------------------|-----------|------------|
| Carfentrazone-ethyl | POST (foliar) | PPO inhibitor/<br>Membrane disrupter | Little movement due<br>to rapid cell leakage<br>(sympast) | Broadleaf | 14         |
| Tolpyralate         | POST (foliar) | HPPD Pigment<br>inhibitor            | Some – foliar<br>(apoplast)                               | Broadleaf | 27         |

## Effects of Growing Conditions:

*Avireo* herbicide provides best results when applied to young, actively growing weeds. Applications made during warm, moist conditions (21°C or more) and adequate soil moisture both before and after application maximizes performance. The degree and duration of control depend on spray coverage, weed spectrum, weed size, growing conditions before and after treatment and soil moisture. Poor weed control or crop injury may result from applications made to plants under stress from: abnormally hot or cold weather, environmental conditions such as drought, water-saturated soils, hail damage, or frost, disease, insect, or nematode injury or prior herbicide, or carryover from a previous year's herbicide application.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

Glyphosate (182 to 327 g ae per acre).

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Leave 50 days between application and harvest.
- **Grazing:** MUST NOT be grazed or fed to livestock for 21 days after treatment.
- **Re-cropping:** Corn (seed, sweet, popping), winter wheat, barley, oat, rye can be seeded 3 months after treatment. Alfalfa, dry bean, canola, grass (grown for seed or forage), field peas, potato, sorghum, soybean, or sunflower can be seeding 9 months after treatment. Sugar beets can be seeded 18 months after treatment. All other rotational crops can be seeded the year after treatment.
- **Aerial Application:** Do not apply by air.
- **Storage:** Store in a cool, dry place. Do not freeze. Store this product away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to Method A in the general section on sprayer cleaning section in the introduction.. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

### *Aim EC:*

Caution – Eye and Skin Irritant

### *Tolprylate 400SC:*

Warning – May cause damage to eye, liver and kidney through prolonged or repeated exposure.

Warning – Acute aquatic toxicity.

For an explanation of the symbols used here see the introduction.

# Axial MAXX

*This product is a prepackaged tank mix of Axial Xtreme and Talinor. Information listed is restricted to Crops, Weeds, Rates and Tank Mixes. For other detailed information on the component products see the individual product pages.*

**Herbicide Group**  
**1 - pinoxaden**  
**4 - fluroxypyr**  
**6 - bromoxynil**  
**27 - bicyclopyrone**

## Company:

Syngenta Canada (PCP#30391)

## Formulation:

The *Axial Maxx* package contains two components :

**Axial MAXX A (PCP#35294):** 37.5 g/L bicyclopyrone + 175 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container sizes - 8.1 L, 64.8 L.

**Axial MAXX B (PCP#35293):** 50 g/L pinoxaden + 87.5 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 10 L, 80 L

## Crops and Staging:

Spring wheat (not including durum), spring barley: 2 leaf to 6 leaf stage on the main stem (up to 3 tillers).

## Weeds, Rates and Staging:

Weeds controlled/suppressed by the component products.

For optimum results, apply *Axial Maxx* to actively growing weeds. An early application will maximize crop yields by reducing weed competition.

## Rate:

**Axial MAXX A:** 405 mL per acre

**Axial MAXX B:** 500 mL per acre

Note: Maximum of one application of this or other products containing (list other relevant active ingredients) per year.

## Tank Mixes:

**Herbicides:** None registered

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered. Do not mix with AMS (ammonium sulfate)

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Axial Xtreme

*(this referring text to be removed in the 2027 edition)  
 see Pinoxaden/fluroxypyr*

**Herbicide Group**  
**1 - pinoxaden**  
**4 - fluroxypyr**

# Axial Xtreme iPak

*This product is a prepackaged tank mix of Axial Xtreme and Infinity. Information listed is restricted to Crops, Weeds and Rates. For other detailed information on the component products see the product pages listed above.*

**Herbicide Group**

**1 - pinoxaden**

**4 - fluroxypyr**

**6 - bromoxynil**

**27 - pyrasulfotole**

## Company:

Syngenta Canada

## Formulation:

The *Axial Xtreme iPak* package contains the following components:

**Axial Xtreme (PCP#30391):** 50 g/L pinoxaden and 87.5 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 1 x 10 L, 80 L

**Infinity (PCP#28738):** 37.5 g/L pyrasulfotole and 210 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container sizes - 1 x 6.7 L, 53.6 L

## Crops and Staging:

**Spring wheat (NOT including durum) and barley:** 1 to 6 leaf stage prior to the emergence of the 4<sup>th</sup> tiller and before the first node can be felt in the stem.

## Weeds and Staging:

Weeds controlled by the component products.

## Rates:

**Axial Xtreme:** 0.5 L per acre (no adjuvant required)

**Infinity:** 0.33 L per acre

Maximum ONE APPLICATION of this or other products containing the active ingredients pinoxaden, pyrasulfotole or bromoxynil per year.

**See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.**

# AXXE Broad Spectrum Herbicide

Herbicide Group  
N/A

## Company:

BioSafe Systems (PCP#32719)

## Formulations:

36% Ammonium Salt of Fatty Acid

- Container sizes - 9.46, 18.9, 114, 208, 984, 1041 L

## Crops and Staging:

For pre-seed burndown, spot application or shielded inter-row application in field crops, pastures, and non-crop areas on farms. Avoid contact with desirable vegetation or crop injury will occur.

## Weeds and Staging:

Axxe is non-selective and will burn any tissues contacted whether weed or crop. Application to small seedlings that have not established an extensive root will be controlled. Application to larger annuals and perennial weeds will result in top-growth control where plants may regrow from lateral buds or perennial roots following treatment. Un-emerged seedlings will not be controlled.

## Application Rates:

Mix Axxe at a 13.8 L per 100 L of spray solution and apply until the point of run-off or at the application volumes below based on weed size. Apply Axxe spray solutions only when weed surfaces are dry as water on the plant surface will dilute the herbicide rate. DO NOT apply to weeds when wet from dew, rain or irrigation.

| Height of plants (weeds)                  | 0 to 3 cm | 3 to 6 cm | 6 cm and larger |
|-------------------------------------------|-----------|-----------|-----------------|
| Axxe rate (L/acre)                        | 18.2      | 35.2      | 106             |
| Minimum total application volume (L/acre) | 131.5     | 253       | 309             |

## Application Information:

- **Water Volume:** 131.5 to 309 L per acre.
- **Nozzles and Pressure:** Use low spray pressure to reduce foaming and avoid contact with desirable plants. Most spray nozzles are designed to operate at 70 to 105 kPa (10 to 15 psi) and provide uniform spray coverage of weeds. DO NOT apply this product through any type of irrigation system.

## How it Works:

Axxe is a contact herbicide that is not translocated in plants and causes the loss of plant cell membrane integrity, exposing the cell contents to the atmosphere, resulting in rapid dry-down (necrosis) and death of the contacted tissues.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** Within 3 hours of application may result in reduced weed control.
- **Restricted Entry Interval:** No restrictions.
- **Pre-harvest Interval:** Not for application directly to crops.
- **Grazing Restrictions:** No restrictions. Ammonium salts of fatty acids are a food additive.
- **Re-cropping Interval:** Axxe has a short life in soil and most crops can be seeded immediately after use.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store product in original container in a secure, dry area away from other pesticides, food or feed.
- **Buffer Zones:** None indicated. TOXIC to terrestrial plants and aquatic organisms. Avoid overspray of water and sensitive habitats.

## Hazard Rating:

Warning – Eye Irritant

Caution – Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Barricade M

*This product is a prepackaged tank-mix of Barricade SG, Perimeter II (see fluroxypyr) and Albaugh MCPA Ester 600 or Adama MCPA Ester (see MCPA). Information listed is restricted to Crops, Weeds and Tank Mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Herbicide Group**  
**2 - thifensulfuron,**  
**tribenuron**  
**4 - fluroxypyr, MCPA**

## Company:

FMC of Canada Ltd.

## Formulation:

The *Barricade M* package contains three components:

**Barricade SG (PCP#29544):** 25% thifensulfuron plus 25% tribenuron formulated as a water soluble granule.

- Container size – 486 g jug

-plus-

**Perimeter II (PCP# 30094):** 333 g/L (fluroxypyr) formulated as an emulsifiable concentrate.

- Container size – 3.4 L jug

-plus-

**Albaugh MCPA Ester 600 (PCP# 32311) or Adama MCPA Ester (PCP#34073):** 600 g/L MCPA formulated as an emulsifiable concentrate.

- Container size – 7.6 L jug

## Crops and Staging:

**Spring wheat (including durum), winter wheat, barley and oats:** 3-leaf to initiation of stem elongation of spring wheat (including durum), spring barley or oats. Apply to winter wheat in the spring from the 3 tiller stage to just before the flag leaf stage.

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds that are less than 10 cm in height or width.

### Weeds Controlled:

- |                                                                                    |                                     |                                                    |
|------------------------------------------------------------------------------------|-------------------------------------|----------------------------------------------------|
| ◦ Annual smartweed (green, lady's-thumb)                                           | ◦ Hemp-nettle (up to 8 leaf)        | ◦ Stinkweed                                        |
| ◦ Canada thistle (less than 6 inches (15 cm) tall or across and prior to budding)* | ◦ Kochia                            | ◦ Stork's-bill (1 to 6 leaf)                       |
| ◦ Cleavers (1 to 9 whorls)                                                         | ◦ Lamb's-quarters                   | ◦ Tufted vetch (up to 15 cm)                       |
| ◦ Common chickweed (1 to 6 leaf)                                                   | ◦ Narrow-leaved hawk's- beard       | ◦ Volunteer canola (all types, up to 4 leaf stage) |
| ◦ Cow cockle                                                                       | ◦ Night-flowering catchfly          | ◦ White cockle                                     |
| ◦ Dandelion (spring and fall rosettes, up to 15 cm)                                | ◦ Ragweed (common)                  | ◦ Wild buckwheat                                   |
| ◦ Flixweed                                                                         | ◦ Redroot pigweed                   | ◦ Wild carrot*                                     |
|                                                                                    | ◦ Round-leaved mallow (1 to 5 leaf) | ◦ Wild mustard                                     |
|                                                                                    | ◦ Russian thistle                   | ◦ Volunteer flax (up to 12 cm)                     |
|                                                                                    | ◦ Scentless chamomile               |                                                    |
|                                                                                    | ◦ Sow-thistle (perennial)           |                                                    |

\* **Suppression only.**

## Rates:

**Barricade SG:** 12 g per acre.

-plus-

**Perimeter II:** 85 mL per acre.

-plus-

**MCPA Ester 600:** 190 mL per acre.

The addition of a surfactant is not required. *Barricade SG* may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing. Do apply with any products that may alter the pH of the spray solution.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- *Codinafop*
- *Simplicity*
- *Traxos*

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

**See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.**

# Batalium

Herbicide Group  
2 – flucarbazone  
4 – fluroxypyr, MCPA  
6 - bromoxynil

## Company:

UPL AgroSolutions Canada Inc. (PCP#35024)

## Formulation:

16.7 g/L flucarbazone, 74.1 g/L fluroxypyr, 197 g/L MCPA and 197 g/L bromoxynil formulated as a suspension concentrate

- Container size – 2 x 11.5 L and 114.7 L

## Crops, and Staging:

**Wheat (spring, durum, winter):** 2 to 6 total leaves (4 leaves on main stem plus 2 tillers)

## Weeds and Staging:

Apply to actively growing weeds under ideal environmental conditions.

### Grass Weeds Controlled and Suppressed (S) – 1 to 6 leaf stage unless otherwise indicated:

- Barnyard grass (S)
- Green foxtail
- Japanese brome (1 to 4 leaf)
- Volunteer oat
- Wild oat
- Yellow foxtail (S)

### Broadleaf weeds – up to 8 leaf stage unless otherwise indicated:

- American nightshade\*
- Bluebur\*
- Buckwheat (common, tartary, wild)
- Canada thistle<sup>†</sup>
- Cleavers (1 to 4 whorls)
- Cocklebur\*
- Common groundsel
- Common ragweed
- Cow cockle\*
- Flixweed\*
- Kochia (up to 5 cm)
- Lamb's-quarters
- Mustard (ball [2 to 4 leaf], wild\*\*, wormseed)
- Night-flowering catchfly\*
- Perennial sow-thistle<sup>†</sup>
- Prickly lettuce<sup>††</sup> (up to 12 leaf)
- Redroot pigweed\*\*
- Russian thistle\*
- Scentless chamomile\*
- Shepherd's-purse\*\*
- Smartweed (green\*\*, lady's-thumb\*, pale\*)
- Stinkweed (2 to 9 leaf)
- Stork's bill (S) (1 to 8 leaf)
- Volunteer canola\*\*
- Volunteer flax (1 to 12 cm)
- Volunteer sunflower\*
- Wild tomato\*

\* Up to 4 leaf

\*\* 2 to 6 leaf

<sup>†</sup> Top growth suppression only

<sup>††</sup> Suppression in winter wheat only

## Rate:

Apply at 575 mL per acre with a non-ionic surfactant at 0.25 L per 100 L of solution.

Refer to the product label for complete mixing instructions.

**Note:** Maximum one application of Batalium per growing season.

## Application Information:

- **Water Volume:**
  - **Ground:** 22 to 45 L per acre
  - **Aerial:** Minimum of 11 L per acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets. For ground applications use 30 to 50 psi (207-345 kpa) pressure. Flat fan nozzles of 80° or 110° are recommended. For aerial application, apply at no less than 43 psi (300 kpa) pressure.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                    | Target                   | Movement                                 | Spectrum              | WSSA Group |
|-------------------|-------------------------------------------|--------------------------|------------------------------------------|-----------------------|------------|
| flucarbazone      | POST (foliar) with soil residual activity | ALS Amino Acid Inhibitor | Toward growth areas of plant (sympplast) | Broadleaf and grasses | 2          |
| fluroxypyr        | POST (foliar)                             | Synthetic Auxin          | Throughout the plant (sympplast)         | Broadleaf only        | 4          |

| Active ingredient | Timing        | Target                                | Movement                        | Spectrum       | WSSA Group |
|-------------------|---------------|---------------------------------------|---------------------------------|----------------|------------|
| MCPA              | POST (foliar) | Synthetic Auxin                       | Throughout the plant (symplast) | Broadleaf only | 4          |
| Bromoxynil        | POST (foliar) | PSII Inhibitor/<br>Membrane disruptor | Little (apoplast)               | Broadleaf only | 6          |

## Effects of Growing Conditions:

For best results apply to wheat and weeds that are actively growing. Wheat exposed to water-logged or saturated soils, temperature extremes, drought, low fertility, or plant disease at application time could show injury symptoms. Weed control also may be reduced by these conditions.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

Tank mix with MCPA ester 600 at 185 mL per acre for additional control of hemp-nettle (up to 4 leaf stage).

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Leave 80 days between application and harvest.
- **Grazing:** DO NOT graze treated fields.
- **Re-cropping:** The following crops may be planted 11 months after an application of *Batalium*:

| Soil Zones and Rotational Crops |              |              |              |
|---------------------------------|--------------|--------------|--------------|
| Grey-Wooded                     | Black        | Dark Brown   | Brown        |
| Spring Wheat                    | Spring Wheat | Spring Wheat | Spring Wheat |
| Barley                          | Barley       | Barley       |              |
| Canola                          | Canola       | Canola       |              |
| Field Pea*                      | Field Pea*   | Field Pea*   |              |
|                                 | Field Bean   | Flax         |              |
|                                 | Flax         | Durum Wheat  |              |
|                                 | Durum Wheat  | Soybean      |              |
|                                 | Soybean      | Sunflower    |              |
|                                 | Sunflower    |              |              |

\*Field pea may be grown the year following *Batalium* application providing the following are all met:

1. Soil pH must be below 7.5
2. Organic matter must be above 4%, and
3. Precipitation must be equal to or above 10-year average (minimum 100 mm within 60 days of application in year of application)

- **Aerial Application:** May be applied by aircraft.
- **Storage:** Store in a cool, dry place. Store this product away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the Introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Warning – Poison

Eye irritant and skin irritant

Potential skin sensitizer

Refer to the Introduction for an explanation of the symbols.

# Beloukha

Herbicide Group  
26 –pelargonic acid

## Company:

Belchim Crop Protection Canada

## Formulation:

**Beloukha Herbicide (PCP#33685):** 500 g/L pelargonic acid formulated as emulsifiable concentrate.

**Beloukha Agricultural Herbicide (PCP#33686):** 680 g/L pelargonic acid formulated as emulsifiable concentrate.

- Container size - 2 x 9.46 L

## Crops and Staging:

**Preseed burndown:** Prior to seeding or up to 3 days after seeding and prior to emergence of cereal and pulse crops.

**Post-harvest and non-crop areas:** Total vegetation control.

### Harvest Aid:

- **Wheat, barley, oats:** when seed moisture is less than 30 per cent. Harvest when vegetation is dry.
  - **Potato:** use at onset of senescence of foliage at least 2 weeks prior to harvest.
- One repeat application may be required 7 to 14 days after the first.

## Weeds and Staging:

Apply when weeds are up to 10 cm tall. Repeat application may be required on a 7 to 14 day interval as required for complete control, especially of biennial and perennial species.

### Weeds controlled:

- |                                   |                                             |                         |
|-----------------------------------|---------------------------------------------|-------------------------|
| ◦ Annual sow-thistle*             | ◦ Fescue                                    | ◦ Nettle (common)*      |
| ◦ Barnyard grass*                 | ◦ Fireweed*                                 | ◦ Nightshade (black)    |
| ◦ Black medic                     | ◦ Field bindweed*                           | ◦ Perennial ryegrass    |
| ◦ Bluegrass                       | ◦ Goosefoot (lamb's-quarters, maple leaved) | ◦ Perennial sow-thistle |
| ◦ Bromegrass*                     | ◦ Common groundsel                          | ◦ Plantain              |
| ◦ Canada fleabane*                | ◦ Henbit                                    | ◦ Purslane              |
| ◦ Chickweed (common, mouse-eared) | ◦ Knotweed (prostrate)*                     | ◦ Redroot pigweed       |
| ◦ Cranesbill                      | ◦ Mayweed (chamomile)*                      | ◦ Shepherd's-purse      |
| ◦ Dandelion*                      | ◦ Meadow fescue*                            | ◦ Wall rocket (annual)  |
| ◦ Dutch clover*                   |                                             | ◦ Willowherb*           |

\* Suppression only

## Rate:

Maximum FOUR APPLICATIONS per year.

|                                  | Rate (L/acre) |            |
|----------------------------------|---------------|------------|
|                                  | 500 g/L       | 680 g/L    |
| Post-harvest and non-crop areas  | 6.5 to 10.9   | 4.9 to 8.1 |
| Harvest Aid: wheat, barley, oats | 4.5 to 8.9    | 3.2 to 6.5 |
| Harvest Aid: potato              | 6.5 to 8.9    | 4.9 to 6.5 |

## Application Information:

- **Water Volume:**
  - **Harvest Aid:**
    - **Wheat, barley, oats** - 80 to 121 L per acre
    - **Potatoes** - 121 L per acre. Up to 445 L per acre of water if top-growth is dense
  - **Pre-seed, post-harvest and non-crop areas:** 121 L per acre
- **Equipment, Nozzles and Pressure:**
  - **Boom Sprayer:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASABE medium droplets.
  - **Hand-held and High Volume:** Spray all leaf surfaces uniformly to complete wetness but not to run-off.
  - **Selective Placement Equipment:**
    - **Shielded sprayers** - use according to manufacturer's directions.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                        | Movement                                  | Spectrum            | WSSA Group |
|-------------------|---------------|-------------------------------|-------------------------------------------|---------------------|------------|
| pelargonic acid   | POST (foliar) | Inhibition of lipid synthesis | Little movement due to rapid cell leakage | Broadleaf and grass | 26         |

## Effects of Growing Conditions:

DO NOT apply *Beloukha* during periods of extreme weather conditions, drought, or heavy rainfall. Allow the correct environmental conditions (i.e. irrigate in drought or allow to dry in wet conditions) for at least 3 days prior to applying.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields until spray has dried.
- **Pre-harvest Interval:** Not specified.
- **Grazing Restrictions:** Not specified. DO NOT graze treated areas.
- **Re-cropping Interval:** No restrictions.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store above 5°C. Store in a cool, dry, secure and well-ventilated area.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Warning – Eye and Skin Irritant

Caution – Poison

Refer to the Introduction for an explanation of the symbols.

# Bentazon

Herbicide Group  
6 - bentazon

## Company:

BASF Canada (*Basagran* – PCP#12221, *Basagran Forté* – PCP#22006)

NewAgco (*Boa* – PCP#33011)

Nufarm Agriculture (*Berserk* – PCP # 34190)

Sharda CropChem Canada (*Benta Super* – PCP#32827)

UPL AgroSolutions Canada (*Broadloom* – PCP#32661)

Viking (*Viking Bentazon* – PCP#34758)

## Formulation:

480 g/L bentazon formulated as a solution. *Basagran Forté* has a built-in adjuvant. Other products require the addition of an adjuvant.

- Container sizes:
  - *Basagran, Benta Super, Broadloom*: 2 x 9 L, 450 L (*Broadloom* only)
  - *Boa*: 2 x 14.5 L, 340 L
  - *Basagran Forté, Berserk*: 2 x 10 L
  - *Viking Bentazon*: 2 x 14.5 L, 348 L

## Crops and Staging:

*All Products:*

| Crop        | Stage                             |
|-------------|-----------------------------------|
| Soybean     | No restrictions                   |
| Dry bean*** | After the first trifoliolate leaf |
| Corn        | No restrictions                   |

| Crop      | Stage                                                     |
|-----------|-----------------------------------------------------------|
| Pea       | After 3 leaf pairs but prior to flowering                 |
| Faba bean | After 2 to 3 leaf stage or at least 4 inches (10 cm) tall |
| Flax      | After 2 inches (5 cm) in height                           |

**Basagran Forté only:**

| Crop                                                           | Stage                                                 |
|----------------------------------------------------------------|-------------------------------------------------------|
| Forage millet and forage sorghum (forage and seed production)* | 3 to 10 inches (7.5 to 25 cm) prior to canopy closure |
| Established clover (alsike, red) for seed production only*     | 3 to 10 inches (7.5 to 25 cm) prior to canopy closure |

**Basagran, Berserk, Broadloom, Boa and Benta Super only:**

| Crop                                                                                                                             | Stage                                                                 |
|----------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| Spring wheat (excluding durum)**                                                                                                 | No restrictions (limited to the 4 leaf to flag leaf by 2,4-D staging) |
| Solin (low linolenic acid flax)                                                                                                  | After 2 inches (5 cm) in height                                       |
| Forage grasses for seed production*: Bromegrass, creeping red fescue, crested wheatgrass, meadow foxtail, orchardgrass, timothy. | 1 to 7 leaf stage                                                     |
| Forage legumes (seedlings) for seed production*: Alfalfa, alsike clover, red clover, sainfoin.                                   | After the third trifoliate leaf                                       |
| Established alfalfa for seed production.*                                                                                        | Prior to flowering                                                    |
| Established clover (Sweet, or Red) and sainfoin for seed production.*                                                            | 3 to 10 inches (7.5 to 25 cm) prior to canopy closure                 |

\* One application per season.

\*\* *Basagran, Benta Super, Broadloom, Viking Bentazon, and Boa* only at 0.4 L per acre. Must be tank mixed with 2,4-D (no adjuvant required).

\*\*\* Test a small area of a new variety for tolerance before widespread use. Refer to product labels for a list of dry bean types registered for *Basagran, Benta Super, Berserk and Boa*. *Basagran Forté* registered for all dry bean types but not tested for tolerance on all types.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

**Basagran Liquid, Berserk, Broadloom, Boa and Benta Super only:** Add *Assist* or *XA Oil Concentrate* at 0.4 to 0.8 L per acre. Use the low rate of *Assist* or *XA Oil Concentrate* only if hot, humid conditions (above 28°C and 80 percent relative humidity) prevail. *Citowett Plus* may be used on peas at 0.25 L per 100 L spray mixture. Ammonium sulphate may be added for applications to soybean and dry beans with *Assist* oil concentrate only.

*Benta Super* can also be applied with *Citowett Plus* at 0.25 L per 100 L of spray solution.

**Basagran Forté only:** *Basagran Forté* does not require the addition of *Assist* or *XA oil concentrate*. Ammonium sulphate can be added for applications to soybean only.

**Apply the rate listed when weeds in the table are within the recommended height:**

| Annual Weeds             | 0.71 L per acre |                    | 0.91 L per acre              |                    |
|--------------------------|-----------------|--------------------|------------------------------|--------------------|
|                          | Inches          | Maximum Leaf Stage | Inches                       | Maximum Leaf Stage |
| Buttercup                |                 |                    | 2 to 4                       | 6*                 |
| Cleavers                 |                 |                    | 1 to 3 whorl stage           |                    |
| Cocklebur                | 3 to 7          | 6*                 | 7 to 12                      | 10*                |
| Common chickweed         |                 |                    | 1 to 3 weeks after emergence |                    |
| Common groundsel         |                 |                    | 2 to 4                       |                    |
| Common ragweed           |                 |                    | 1 to 2                       | 6                  |
| Corn spurry              |                 |                    | 1 to 4                       |                    |
| Flower-of-an-hour        | 1 to 2          | 6*                 | 2 to 4                       | 10*                |
| Giant ragweed            |                 |                    | 2 to 6                       | 4                  |
| Hairy galinsoga          |                 |                    | 2 to 3                       | 6*                 |
| Hairy nightshade         |                 |                    | 0.2 to 0.8                   | 6                  |
| Jimsonweed               |                 |                    | 2 to 6                       | 10                 |
| Lady's-thumb (smartweed) | 1 to 3          | 6*                 | 3 to 8                       | 10                 |

| Annual Weeds                        | 0.71 L per acre |                    | 0.91 L per acre |                    |
|-------------------------------------|-----------------|--------------------|-----------------|--------------------|
|                                     | Inches          | Maximum Leaf Stage | Inches          | Maximum Leaf Stage |
| Lamb's-quarters                     |                 |                    | 0.5 to 1.0      | 8                  |
| Purslane                            |                 |                    | 1 to 2          | 6                  |
| Redroot pigweed (suppression only)  |                 |                    | 0.5 to 1.5      | 4                  |
| Russian thistle (suppression only*) |                 |                    | 1 to 3          | 4*                 |
| Shepherd's-purse                    | Rosette to 4    | 6*                 | 4 to 10         | 6                  |
| Stinkweed                           | Rosette to 2    | 6*                 | 2 to 6          | 6                  |
| Stork's-bill                        |                 |                    | 1.5 to 4        | 2 to 6 leaf stage  |
| Volunteer canola                    | 0.75 to 6       | 8                  | 0.75 to 6       | 8                  |
| Wild mustard                        | 1 to 5          | 6*                 | 5 to 10         | 10                 |
| Wild radish                         |                 |                    | 1 to 2          | 6                  |
| Canada thistle                      | 6 to 8          |                    |                 |                    |
| Field bindweed (suppression only)   | 1 to 2.5        |                    |                 |                    |
| Yellow nutsedge                     | 6 to 8          |                    |                 |                    |

\* **Basagran Forté and Berserk only.**

*Basagran*, *Boa* and *Benta Super* may be applied in spring wheat (except durum) at 0.4 L per acre when tank mixed with 2,4-D amine or ester at 143 to 190 g ae per acre to control the weeds controlled by 2,4-D plus lady's-thumb, redroot pigweed and daisy fleabane. No adjuvant is required for this mix.

Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 40 to 160 L per acre. A minimum of 80 L per acre is recommended for optimum control.\*
  - **Aerial:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Maintain 40 to 60 psi (275 to 425 kPa)\* when using conventional flat fan nozzles capable of delivering high water volumes with **ASABE medium** droplets. Low drift nozzles may require higher pressures for proper performance. Contact the herbicide manufacturer regarding the suitability of low drift nozzles for use with this product. Direct nozzles 45° forward to improve contact with vertical targets.

\* **Higher water volumes and pressures should be used when the weeds are at the upper end of their recommended treatment stage.**

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement          | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------------------------|-------------------|----------------|------------|
| bentazon          | POST (foliar) | PSII Inhibitor/Membrane disrupter | Little (Apoplast) | Broadleaf only | 6          |

## Effects of Growing Conditions:

Poor results will occur if temperatures are cool. Optimum results are achieved when applied at daytime temperatures between 20 and 28°C. Applications at temperatures greater than 28°C may result in crop injury. May result in crop injury when applied to crops that are stressed due to severe weather conditions such as frost, drought or water saturated soil.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **In soybean:**
  - *Pinnacle* (2.2 to 3.2 grams per acre)
  - *Berserk* or *Broadloom* plus *Pursuit* or *Ultra Blazer* plus *Assist* or *XA oil concentrate*
- **In dry bean\*:**
  - *Basagran*, *Berserk*, *Broadloom*, *Boa* and *Benta Super* only (0.71 L per acre) plus *Reflex\** plus *Agral 90*.
- **In spring wheat (not including durum):**
  - *Basagran*, *Berserk*, *Broadloom*, *Boa* and *Benta Super* only (0.4 L per acre) may be tank mixed with 2,4-D amine or ester at 143 to 190 g ae per acre. This tank mix DOES NOT need any adjuvant.

\* **For use in the Red River Valley of Manitoba only.**

**Fungicides:** None registered.

**Insecticides:** None registered

**Fertilizers:**

- **In soybean:**
  - *Basagran*, *Basagran Forté*, *Berserk*, *Broadloom*, *Boa* and *Benta Super* plus UAN (4 L per acre) or AMS (2.4 L per acre)
- **In dry bean:**
  - *Basagran*, *Berserk*, *Broadloom*, *Boa* or *Benta Super* plus AMS (1.5 percent v/v). Use with *Assist oil concentrate*.
- DO NOT add fertilizer with *Assist* or *XA Oil Concentrate* when tank mixing with *Pinnacle*. The risk of crop injury increases with the use of fertilizer mixes under hot, humid conditions.
- Use of fertilizer mixes is not recommended for use under western Canadian environmental conditions for other crops.

When mixing Bentazon refer to the tank mix partner label for any additional restrictions and precautions.

Allow 4 days between application of Bentazon and other herbicides, fertilizers or insecticides.

**Note: The above mixes are those listed on the bentazon labels only.**

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

**Restrictions:**

- **Rainfall:** Within 6 to 8 hours will reduce control.
- **Restricted Entry Interval:** DO NOT enter treated field for 12 hours.
- **Grazing Restrictions:** Allow 30 days between treatment with *Basagran Forté* and harvest of forage sorghum and millet for hay. Otherwise DO NOT graze treated crops or cut for feed prior to crop maturity.
- **Pre-harvest Interval:** 50 days for Bentazon + 2,4-D in wheat, 84 days for Bentazon + *Reflex* in dry beans in Manitoba. Other uses are restricted only by appropriate staging.
- **Re-cropping Interval:** No restrictions the year after application.
- **Aerial Application:** May be applied by air for weed control in dry beans or soybeans only. *Assist* or *XA Oil Concentrate* at 0.05 to 0.1 L per acre must be added. DO NOT use *Assist* or *XA Oil Concentrate* in excess of 0.1 L per acre as substantial crop injury could occur. DO NOT apply fertilizer mixes in soybean or 2,4-D tank mix in wheat by air. Crop canopy should NOT cover the weeds.
- **Storage:** May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

**Sprayer Cleaning:**

Refer to 'Method B' in the general sprayer cleaning section in the introduction.

**Hazard Rating:**

*Basagran*, *Boa*, *Benta Super*, *Viking Bentazon*:

Caution – Poison

Potential Skin Sensitizer

*Basagran Forté*:

Warning – Poison

Danger – Corrosive to Eyes

Warning – Contains the Allergen Soy

Potential Skin Sensitizer

*Berserk*, *Broadloom*: Caution – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

BlackHawk

Herbicide Group  
4 - 2,4-D  
14 - pyraflufen-ethyl

**Company:**  
Nufarm Agriculture (PCP#32111)

**Formulation:**  
473 g/L 2,4-D ester and 6.1 g/L pyraflufen-ethyl formulated as an emulsifiable concentrate.

- Container sizes - 2 x 9 L, 96 L, 480 L

**Crops and Staging:**  
Apply pre-seeding or up to 3 days after seeding the following crops:

|                                 |                                                                   |              |
|---------------------------------|-------------------------------------------------------------------|--------------|
| ◦ Wheat (spring, durum, winter) | ◦ Canaryseed (including hairless varieties for human consumption) | ◦ Soybean    |
| ◦ Barley                        |                                                                   | ◦ Triticale  |
| ◦ Corn (field)                  | ◦ Rye (spring, fall)                                              | ◦ Chemfallow |

Oats – 7 days prior to seeding.

**Post-harvest:** Apply in the fall (up until soil freeze). Crops not listed above can be planted one month after application.

**Weeds, Rates and Staging:**  
Apply 300 mL per acre to young, actively growing weeds that are less than 5 cm in height or width, unless indicated otherwise.

|                                |                                   |                                    |
|--------------------------------|-----------------------------------|------------------------------------|
| ◦ Annual sow-thistle           | ◦ Goat’s-beard                    | ◦ Shepherd’s-purse                 |
| ◦ Bluebur (up to 4 leaf)       | ◦ Kochia                          | ◦ Stinging nettle                  |
| ◦ Burdock (up to 4 leaf)       | ◦ Lamb’s-quarters                 | ◦ Stinkweed                        |
| ◦ Cleavers                     | ◦ Mallow                          | ◦ Sweet clover (seedling)          |
| ◦ Cocklebur                    | ◦ Mustards (except dog and tansy) | ◦ Thyme-leaved spurge              |
| ◦ Dandelion (spring seedlings) | ◦ Narrow-leaved hawk’s-beard**    | ◦ Volunteer canola (all varieties) |
| ◦ Cow cockle*                  | ◦ Plantain                        | ◦ Wild buckwheat*                  |
| ◦ False flax                   | ◦ Pigweed (redroot, Russian)      | ◦ Wild mustard*                    |
| ◦ Fleabane (Canada*, daisy)    | ◦ Prickly lettuce                 | ◦ Wild sunflower                   |
| ◦ Flixweed                     | ◦ Ragweed (common, false, giant)  |                                    |

\* **Suppression**  
\*\* **Up to 5 cm in the fall, up to 2 leaf in spring**  
† **Blackhawk applied alone requires the addition of a non-ionic surfactant (Nufarm Enhance, Agral 90) at 0.25 L per 100 L of spray solution.**  
Maximum TWO APPLICATIONS of *Blackhawk, Conquer II* or *Goldwing* at the low (133 mL per acre) rate listed in this Guide (maximum 3.67 grams per acre of the pyraflufen active) WITHIN A TWO YEAR TIME SPAN.  
*Blackhawk* may degrade if left in the sprayer for an extended period under alkaline conditions. Apply within 24 hours of mixing.

**Application Information:**

- **Water Volume:** Minimum 20 L per acre up to 40 L per acre (recommended).
- **Nozzles and Pressure:** Flat fan nozzles operated at a pressure of 30 to 40 psi (210 to 275 kPa) are recommended. Use nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets. Boom height must be 60 cm or less above the crop or ground.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens.

**How it Works:**  
Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                   | Target                            | Movement                                             | Spectrum                | WSSA Group |
|-------------------|------------------------------------------|-----------------------------------|------------------------------------------------------|-------------------------|------------|
| 2,4-D             | POST (foliar)                            | Synthetic Auxin                   | Moves throughout the plant (Symplast)                | Broadleaf only          | 4          |
| pyraflufen        | POST (foliar), with slight soil activity | PPO Inhibitor/ Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Non-selective Broadleaf | 14         |

## Effects of Growing Conditions:

Control may be reduced if weeds are under stress (e.g. drought, heat or cold stress). Weeds hardened off by cold weather or drought may not be adequately controlled or suppressed.

## Tank Mixes:

### Herbicides:

*Pre-seed and Pre-emergent:*

- Glyphosate (180 to 360 g ae per acre) (no surfactant required).

**Note:** The above mixes are those listed on the *Blackhawk* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product..

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label. Consult the manufacturer.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Pre-harvest Interval:** DO NOT harvest for feed or forage for 30 days.
- **Grazing Restrictions:** DO NOT graze the treated crop or cut for hay for 30 days after application. DO NOT allow lactating dairy cows to graze for 7 days after application. Animals intended for meat should be withdrawn from treated fields 3 days before slaughter.
- **Storage:** Store in a cool, dry place away from direct sunlight. DO NOT Freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Danger – Poison

Warning – Contains the Allergen Soy

Skin and Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Blackhawk EVO

Herbicide Group  
4 – dichlorprop, 2,4-D  
14 – pyraflufen-ethyl

## Company:

Nufarm Agriculture Inc

## Formulation:

**Blackhawk EVO (PCP#34904):** 7.3 g/L pyraflufen-ethyl, 284 g /L 2,4-D ester and 284 g /L dichlorprop formulated as an emulsifiable concentrate.

- Container size – 2x10L, 120L, 480L

## Crops and Staging:

**Wheat (spring, durum, winter), barley, rye (spring, fall), triticale, field corn, canary grass:** Pre-seed or prior to crop emergence - maximum of 3 days after seeding

**Oats:** Apply up to a minimum of 7 days prior to planting

**Fall burndown:** Applications can be made up until soil freeze in the fall with no spring re-cropping restrictions

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds up to 5cm in height or width.

### Weeds Controlled:

- Annual sowthistle
- Black medic\*
- Broadleaf plantain
- Canada fleabane
- Cleavers
- Common ragweeds
- Dandelion
- Kochia
- Lamb's-quarters
- Narrow-leaved hawk's-beard (in fall, and at the 1-2 leaf stage in spring)
- Night-flowering catchfly
- Powell's amaranth
- Redroot pigweed
- Shepherd's-purse
- Volunteer canola (all herbicide tolerant types)
- Wild buckwheat
- Wild mustard

\* Suppression only.

## Rate:

Blackhawk EVO: 250 to 375 mL per acre. 250 mL per acre is the standard rate, apply up to 375 mL per acre during stressful conditions, for larger weeds, or for optimum wild buckwheat control.

*Note: Do not use Blackhawk EVO as a pre-emergence treatment and a postharvest/fall burn-down application on the same fields in the same year.*

Product degradation may occur under alkaline conditions (pH>7.5). Use the spray preparation within 24 hours.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 20-40 L/acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage. Flat fan nozzles are recommended. Do not apply with spray droplets smaller than ASAE medium droplets. Spray pressure between 30 to 40 psi (210 to 275 kPa) is recommended.
- **Screens:** Use a 50 mesh or larger screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing                                  | Target                               | Movement                                             | Spectrum                | WSSA Group |
|--------------------|-----------------------------------------|--------------------------------------|------------------------------------------------------|-------------------------|------------|
| 2,4-D, Dichlorprop | POST (foliar)                           | Synthetic Auxin                      | Moves throughout the plant (Symplast)                | Broadleaf only          | 4          |
| Pyraflufen-ethyl   | POST (foliar) with slight soil activity | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Non-selective broadleaf | 14         |

## Effects of Growing Conditions:

Warm, moist growing conditions promote active weed growth and enhance the activity of *Blackhawk EVO* by allowing maximum foliar uptake and contact activity. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and regrowth may occur.

## Tank Mixes:

Tank mix partners applied at label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** Glyphosate (follow label rates)

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control. Avoid application when heavy rainfall is forecast.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Grazing:** Do not graze field corn for 75 days after application, or cereal grain crops until 30 days after application. Withdraw meat animals from treated fields at least 3 days before slaughter.
- **Re-cropping:** Grow all major crops the year after application.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Do not allow to freeze. Store in a cool, well-ventilated area and out of the reach of children and animals.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Warning – Poison

Eye irritant

Potential skin sensitizer

Refer to the Introduction for an explanation of the symbols.

Boa IQ

*This product is a prepackaged tank mix of Boa (see bentazon) and Quiz (see quizalofop). Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

Herbicide Group

1 - quizalofop

6 - bentazon

**Company:**  
AgraCity

**Formulation:**  
The *Boa IQ* package contains the following components:  
**Boa (PCP#33011):** 480 g/L bentazon formulated as a solution.

- Container sizes - 2 x 9.1 L, 455 L

-plus-  
**Quiz (PCP#33481):** 96 g/L quizalofop formulated as an emulsifiable concentrate.

- Container sizes - 6 L, 150 L

**Crops and Staging:**

| Crop      | Leaf Stage            | Days to Harvest |
|-----------|-----------------------|-----------------|
| Dry bean  | No stage restrictions | 30              |
| Faba bean | No stage restrictions | 30              |
| Field pea | No stage restrictions | 65              |
| Soybean   | No stage restrictions | 80              |

**Weeds and Staging:**  
Broadleaf weeds controlled by *Boa* (see bentazon) at 0.91 L per acre plus the grass weeds controlled by *Quiz* (see quizalofop) at 0.3 L per acre.

**Rates:**  
**Boa:** 0.91 L per acre  
-plus-  
**Quiz:** 0.3 L per acre.  
*Boa IQ* requires the addition of *Assassin* or *Merge* adjuvant at 0.5 L per 100 L of spray solution, and which must be purchased separately. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

**Tank Mixes:**  
None registered.  
*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Broadband

Herbicide Group

1- pinoxaden

2- florasulam

## Company:

Syngenta Canada

## Formulation:

**Broadband (PCP#29138):** 92.7 g/L pinoxaden and 7.7 g/L florasulam formulated as an emulsifiable concentrate.

- Container sizes - 10.5 L, 84.2 L

**Adigor Adjuvant (PCP#28151):** 11.3 L, 90.4 L

## Crops and Staging:

**Barley, spring wheat (NOT including durum):** up to the emergence of the flag leaf.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

Apply **Broadband** at 263 mL per acre and **Adigor** adjuvant at 280 mL per acre.

**Grass weeds - 1 to 6 leaves and prior to the emergence of the 4<sup>th</sup> tiller:**

- Barnyard grass
- Proso millet
- Volunteer canary seed
- Foxtail (green, yellow)
- Volunteer oats
- Wild oats

**Broadleaf weeds - 1 to 6 leaf stage:**

- Annual smartweed (including lady's-thumb)
- Hemp-nettle<sup>†</sup>
- Stinkweed
- Common chickweed
- Pigweed, redroot<sup>†</sup>
- Volunteer canola\*
- Cleavers
- Shepherd's-purse
- Wild buckwheat
- Sow-thistle (annual, perennial\*\*)†
- Wild mustard

<sup>†</sup> **Suppression only.**

\* **Not CLEARFIELD varieties.**

\*\* **Applications made at advanced leaf stages will reduce product effectiveness.**

Maximum ONE APPLICATION per year of this or other products containing the active ingredient pinoxaden.

Maximum ONE APPLICATION of this or other products containing florasulam over a TWO YEAR TIME SPAN.

## Application Information:

- **Water Volume:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets. Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                             | Movement                       | Spectrum     | WSSA Group |
|-------------------|---------------|------------------------------------|--------------------------------|--------------|------------|
| pinoxaden         | POST (foliar) | ACCase Lipid synthesis inhibitor   | Toward growth areas (Symplast) | Grasses only | 1          |
| florasulam        | POST          | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast) | Broadleaf    | 2          |

## Effects of Growing Conditions:

DO NOT apply to crops or weeds that are stressed (frost, low fertility, drought or flooding, disease or insect damage) as crop injury or reduced weed control may result.

Temporary crop injury may occur with tank-mixes under extreme weather conditions or when the crop is suffering from stress due to inadequate or abnormally high moisture levels or extreme temperatures.

## Tank Mixes:

### Herbicides:

- *Curtail M* (0.6 L per acre)
- MCPA LV500 ester (280 mL per acre)

### Fungicides:

- Propiconazole (*Tilt* only at label rates)

### Fertilizers: None registered

**Note: The above mixes are those listed on the *Broadband* label only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields within 12 hours.
- **Pre-harvest Interval:** Leave 60 days between treatment and harvest.
- **Grazing Restrictions:** DO NOT cut for livestock feed within 30 days or grazed by livestock within 7 days of treating the crop.
- **Re-cropping Interval:** No restrictions the year following treatment.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in dry, heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Bromoxynil

Herbicide Group  
6 - bromoxynil

## Company:

Bayer (*Pardner*)

Interprovincial Cooperative Limited (*IPCO Brotex 240, IPCO Brotex 480\*, IPCO Brotex 4AT, Co-op Brotex 4AT*)

ADAMA Canada (*Bromotril 240 EC*)

WinField United Canada (*Starbuck\**)

Albaugh (*Brox 240 EC*)

NewAgco (*MPOWER Buck*)

\* Note: This product is no longer manufactured but inventories still remain in distribution. This product may be removed from future editions.

## Formulation:

**Pardner (PCP#18001), MPOWER Buck (PCP#33399):** 280 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container sizes: 2 x 8 L (*Pardner*), 8.1 L (*MPOWER Buck*)

**Bromotril 240 EC (PCP#28276), Brox 240 EC (PCP#32622), Starbuck (PCP#33919), & Brotex 240 (PCP#28519):** 240 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container sizes - 2 x 9.7 L, 115 L (*Brotex 240, Brox 240 EC and Starbuck only*), 116.4 L (*Bromotril 240 EC only*), 500 L (*Brox 240 EC only*).

**IPCO Brotex 480 (PCP#31348), IPCO Brotex 4AT (PCP#33554), CO-OP Brotex 4AT (PCP#33828):** 480 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 2 x 9.7 L

## Crops, Staging and Rates:

**Pardner:** 0.40 to 0.48 L per acre.

**Brotex 240, Brox 240 EC, Starbuck, & Bromotril 240 EC:** 0.49 to 0.57 L per acre.

**IPCO Brotex 480 & IPCO Brotex 4AT:** 0.24 to 0.28 L per acre.

See the following chart for registered crops and specific rates and stages. NR = Not Registered.

| Crop                                                | Stage                                                                                        | Rate (L per acre)           |                   |                         |                           |                                         |

| Prior to direct-seeding cereal crops (mixed with glyphosate only)                                                                                                                                    | Apply according to weed stage         | 0.40                        | 0.49              | NR                      | 0.49                     | 0.24                                    |
| Pre-seed/pre-plant prior to seeding canola (mixed with glyphosate only)                                                                                                                              | Apply according to weed stage         | 0.40 to 0.51                | 0.61              | 0.49 to 0.57            | 0.49 to 0.57             | 0.29                                    |

\* NOTE: Since application to grain pearl millet, industrial hemp and sorghum is registered under User Requested Minor Use Label Expansion program, the manufacturer assumes no responsibility for herbicide performance. *Users of this product on grain pearl millet and sorghum do so at their own risk.*

\*\* *Pardner only.*

\*\*\* Make one application of 0.24 L per acre or two applications of 0.12 L per acre 10 days apart within the staging window given.

† Make one application of 0.49 L per acre or two applications of 0.24 L per acre 10 days apart within the staging window given.

## Weeds and Staging:

### Weeds controlled at the 1 to 4 leaf stage:

- American nightshade
- Annual smartweed (green, pale, lady's-thumb)
- Bluebur
- Cocklebur
- Common ragweed
- Cow cockle\*
- Kochia\*\*
- Pigweed\*†
- Russian thistle\*\*
- Stinkweed\*
- Volunteer canola\*
- Wild mustard\*

### Weeds controlled at the 1 to 8 leaf stage:

- Buckwheat (tame, tartary, wild)
- Common groundsel
- Lamb's-quarters

\* Controlled with high rate only.

\*\* Apply before plants are 2 inches high.

† Not controlled in seedling alfalfa.

## Application Information:

- Water Volume:
  - *Ground:*
    - *Corn, millet, sorghum* - 80 to 120 L per acre.
    - *Seedling grasses* - 60 L per acre.
    - *Other crops* - 40 L per acre.
  - *Aerial (wheat and barley only):* 8 to 16 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver **ASABE medium** droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement          | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------------------------|-------------------|----------------|------------|
| bromoxynil        | POST (foliar) | PSII Inhibitor/Membrane disrupter | Little (Apoplast) | Broadleaf only | 6          |

## Effects of Growing Conditions:

Avoid spraying if temperatures are greater than 25°C. Leaf scorching may occur in corn and flax if applied during or after adverse growing conditions, such as cool and wet or hot (greater than 27°C) and humid weather.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

| Crop                                            | Tank Mixes                                                                               |
|-------------------------------------------------|------------------------------------------------------------------------------------------|
| Spring wheat                                    | 2,4-D <sup>†</sup> , <i>Achieve Liquid</i> , MCPA                                        |
| Winter wheat                                    | 2,4-D, <i>Achieve Liquid</i> , MCPA                                                      |

| Flax                                            | MCPA (amine, ester or K salt)                                                            |
| Seedling forage grasses***                      | MCPA                                                                                     |
| Corn                                            | <i>Accent</i> <sup>♦</sup> + surfactant (field corn only), <i>AAtrex</i> ** (0.4 L/acre) |
| Prior to seeding: cereals, canola <sup>††</sup> | Glyphosate                                                                               |
| Prior to seeding ( <i>Koril</i> only)           | <i>Aim</i> , <i>CleanStart</i>                                                           |

\* The ester formulations are preferred but other formulations can be used.

\*\* DO NOT add oil or surfactant to this mix. DO NOT use atrazine formulations that contain oil.

\*\*\* *Brox 240 EC*, *IPCO Brotex 480*, *IPCO Brotex 4AT*, *Starbuck* and *Pardner* only.

<sup>†</sup> May be applied by air.

<sup>††</sup> *Brotex 480*, *MPOWER Buck* and *Pardner* only. Not all glyphosate products/formulations are registered for this use. Refer to individual product labels.

<sup>♦</sup> Since the use of this tank mix on corn is registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. Users of this tank mix on corn do so at their own risk.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Fungicides:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application will reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 24 hours.
- **Grazing Restrictions:** DO NOT graze treated wheat, barley, oats, forage millet, sorghum or seedling alfalfa crops or cut for feed within 30 days of application. DO NOT graze other treated crops or cut for hay prior to crop maturity. DO NOT graze or feed industrial hemp to livestock.
- **Re-cropping Interval:** No restrictions.
- **Aerial Application:** Registered for aerial application on wheat and barley. The use of low water volumes, 8 to 16 L per acre may result in less effective weed control than seen with ground application.
- **Storage:** *IPCO Brotex 480* must be stored at temperatures of 7°C or higher. Others may be stored at freezing temperatures and they will return to original state by warming to room temperature (20 to 22°C) and shaking thoroughly.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

**Hazard Rating:**

All:

Warning – Poison

*IPCO Brotex 240, Bromotril 240 EC, IPCO Brotex 4AT, Starbuck, Brox 240:*

Warning – Eye and Skin Irritant

Potential Skin Sensitizer

# Bromoxynil / 2,4-D Ester

Herbicide Group  
4 - 2,4-D  
6 - bromoxynil

**Company:**Bayer (*Thumper*)Interprovincial Cooperative Limited (*Leader*)\*Sharda CropChem (*Swipe*)Viking Crop Production Partners Inc. (*Viking Harstad*)*\* Note: This product is no longer manufactured but inventories still remain in distribution. This product may be removed from future editions.***Formulation:****Thumper (PCP#22659), Swipe (PCP#34380):** 280 g/L bromoxynil and 280 g/L 2,4-D ester formulated as an emulsifiable concentrate.

- Container size - 8 L

**Leader (PCP#28853):** 225 g/L bromoxynil and 225 g/L 2,4-D ester formulated as an emulsifiable concentrate.

- Container sizes - 10 L, 115 L\* 120 L

*\* Leader only*

- or -

The *Viking Harstad* package has the following components:**Viking 2,4-D Ester 700 (PCP#34813):** 660 g/L 2,4-D ester formulated as an emulsifiable concentrate.

- Container size - 6.8 L

**Viking Bromoxynil (PCP#34746):** 280 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 8 L

**Crops and Staging:****Thumper, Leader, Swipe:**

- Spring wheat (including durum) and barley at the 4 leaf to early flag leaf stage.

**Viking Harstad:**

- Spring wheat 3 leaf expanded to just before flag leaf and winter wheat early in spring before the shot blade stage.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

**Weeds and Staging:****Weeds controlled at the 1 to 4 leaf stage:**

- |                       |                            |                                         |
|-----------------------|----------------------------|-----------------------------------------|
| ◦ American nightshade | ◦ Cow cockle               | ◦ Shepherd's-purse                      |
| ◦ Ball mustard        | ◦ Flixweed                 | ◦ Smartweed (green, lady's-thumb, pale) |
| ◦ Bluebur             | ◦ Jimsonweed               | ◦ Volunteer canola                      |
| ◦ Cocklebur           | ◦ Night-flowering catchfly | ◦ Volunteer sunflower                   |
| ◦ Common ragweed      | ◦ Redroot pigweed          |                                         |

**Weeds controlled at the 1 to 8 leaf stage:**

- |                                    |                   |                |
|------------------------------------|-------------------|----------------|
| ◦ Buckwheat (tame*, tartary, wild) | ◦ Lamb's-quarters | ◦ Wild mustard |
| ◦ Common groundsel                 | ◦ Stinkweed       |                |

*\* up to 4 leaf stage with Approve***Weeds controlled from 1 to 12 leaf (max. 2 inches tall):**

- |          |                   |
|----------|-------------------|
| ◦ Kochia | ◦ Russian thistle |
|----------|-------------------|

**Rates:****Thumper, Swipe:** 0.4 L per acre**Leader:** 0.5 L per acre**Viking Harstad:** 400 mL per acre *Viking Bromoxynil* + 170 mL per acre *Viking 2,4-D Ester*

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre.
  - **Aerial:** 12 to 16 L per acre. Use the higher volume when there is a heavy crop canopy, or when the majority of weeds are cow cockle, smartweed, or pigweed.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) when using conventional 80° or 110° flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets.
- **Screens:** All strainer and nozzle screens must be 50 mesh or coarser.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement          | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------------------------|-------------------|----------------|------------|
| bromoxynil        | POST (foliar) | PSII Inhibitor/Membrane disrupter | Little (Apoplast) | Broadleaf only | 6          |
| 2,4-D             | POST (foliar) | Synthetic Auxin                   | Symplast          | Broadleaf only | 4          |

## Effects of Growing Conditions:

Less than acceptable weed control may be expected if weeds are under stress because of excessive moisture, drought, or cool weather.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **In wheat (spring, durum) and barley:**
  - *Liquid Achieve*
- **In wheat (spring, durum, winter):**
  - *Varro\**
- **In wheat (spring):**
  - *Clodinafop 240 EC<sup>Δ</sup>*
  - \* *Thumper and Swipe* only.
  - \*\* *Viking Harstad* only.
  - <sup>Δ</sup> Manufacturers may only support specific mixes. Contact the manufacturer for more information.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the Bromoxynil/2,4-D Ester labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 24 hours.
- **Grazing Restrictions:** DO NOT graze or cut for livestock feed within 30 days of application. Withdraw meat animals 3 days before slaughter.
- **Pre-harvest Interval:** DO NOT harvest within 30 days of application.
- **Re-cropping Interval:** No restrictions the year after application.
- **Aerial Application:** May be applied by air.
- **Storage:** May be frozen. Shake well before using after being frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the general section on sprayer cleaning in the introduction.

**Hazard Rating:****All Products:**

Warning – Poison

**Thumper and Swipe:**

Caution – Skin and Eye Irritant

**Leader:**

Warning – Skin and Eye Irritant

Potential Skin Sensitizer

**Viking Harstad:**

Danger - Poison

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Bromoxynil + Carfentrazone-ethyl

Herbicide Group

6 – bromoxynil

14 – carfentrazone-ethyl

*This product is a prepackaged tank mix of bromoxynil and carfentrazone. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Company:**ADAMA Canada (*Emphasis Max*)NewAgco (*Revenge B, Revenge B Extreme*)Interprovincial Cooperatives (*IPCO/Co-op Octagon*)Viking (*Viking Vardo*)**Formulation:**

The bromoxynil + carfentrazone packages contain two components each:

**Emphasis A** (PCP#33987 – *Emphasis Max*), **Revenge** (PCP#33716 – *Revenge B, Revenge B Extreme*), **IPCO C-Zone** (PCP#33580 – *IPCO/Co-op Octagon*), **Viking Carfentrazone** (PCP#34736 – *Viking Vardo*): 240 g/L carfentrazone-ethyl formulated as an emulsifiable concentrate.

- Container sizes - 2 x 600 mL (*Emphasis*), 1.2 L (*Revenge B*), 2.4 L (*Octagon, Viking Vardo, Revenge B Extreme*)

-plus one of-

**Bromotril 240EC** (PCP#28276 – *Emphasis*): 240 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 2 x 9.7 L

-or-

**Buck** (PCP#33399 – *Revenge B, Revenge B Extreme*): 280 g/L formulated as an emulsifiable concentrate.

- Container size - 2 x 8.1 L

-or-

**IPCO/Co-op Brotex 4AT** (PCP#33554/33828 – *IPCO/Co-op Octagon*): 480 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 2 x 9.7 L

-or-

**Viking Bromoxynil** (PCP# 34746 – *Viking Vardo*): 280 g/L formulated as an emulsifiable concentrate.

- Container size - 2 x 8.1 L

**Crops and Staging:**

Apply prior to the seeding of canola

**Weeds and Staging:****Weeds controlled by carfentrazone and bromoxynil plus:**

- Volunteer canola – fully expanded cotyledon to 4 leaf stage.

**Rates:**

**Carfentrazone:** 15 mL per acre, 30 mL per acre for *Emphasis A* and *Revenge B Extreme* only

-plus either-

**Bromotril 240EC:** 236 mL per acre.

-or-

**MPOWER Buck:** 202 mL per acre.

-or-

**IPCO/Co-op Brotex 4AT:** 118 mL per acre.

-or-

**Viking Bromoxynil:** 202 ml per acre.

**Tank Mixes:**

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** Glyphosate (label rates)

*See component products for more information on restrictions, applications details and handling. Unless indicated differently above use most limiting restrictions across all components for the mix.*

# Bromoxynil / MCPA Ester

Herbicide Group

4 - MCPA

6 - bromoxynil

**Company:**

Bayer (*Buctril M*)

ADAMA Canada (*Badge*)

NewAgco (*Canuck*)

Albaugh (*Brox M, Double Trouble*)

Interprovincial Cooperative Limited (*Logic M*)

Sharda CropChem (*Brilliant*)

Viking (*Viking Hamar*)

**Formulation:**

**Buctril M (PCP#18022), Canuck (PCP#34173), Brilliant (PCP#34383), Viking Hamar (PCP# 34806):** 280 g/L bromoxynil and 280 g/L of MCPA Ester formulated as an emulsifiable concentrate.

- Container sizes:
  - **Buctril M:** 8 L
  - **Canuck and Viking Hamar:** 2 x 8 L, 500 L, 1000 L

**Badge (PCP#16164), Logic M (PCP#28109), Brox M (PCP# 32472) and Double Trouble (PCP#33787):** 225 g/L bromoxynil and 225 g/L of MCPA ester formulated as an emulsifiable concentrate.

- Container sizes:
  - **Logic M:** 10 L, 115 L
  - **Badge:** 10 L, 120 L, 450 L
  - **Brox M and Double Trouble:** 2 x 9.7 L, 115 L, 500 L

**Crops and Staging:**

Field Crops:

- **All Products:**

| Crop                                                                                                           | Stage                                                                                                   |
|----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| Barley, oats, spring wheat (including durum)                                                                   | 2 leaf to early flag                                                                                    |
| Winter wheat                                                                                                   | 2 to 4 leaf stage in the fall or after growth resumes up to early flag leaf                             |
| Fall rye                                                                                                       | When growth commences in spring to early flag leaf                                                      |
| Canaryseed ( <i>Logic M</i> and <i>Viking Hamar</i> only - including hairless varieties for human consumption) | 3 to 5 leaf stage                                                                                       |
| Flax and solin (low linolenic acid flax)                                                                       | 2 inches (5 cm) to early bud stage. Best tolerance occurs when flax is 2 to 4 inches (5 to 10 cm) tall. |
| Corn                                                                                                           | 4 to 6 leaf stage                                                                                       |

**Seedling forage grasses:** 2 to 4 leaf stage.

- **All Products:**
  - Bromegrass
  - Fescue (creeping red, meadow)
  - Reed canarygrass
  - Russian wild-rye
  - Timothy
  - Wheatgrass (crested, intermediate, slender, tall)
- **Buctril M, Logic M, Brilliant and Badge and Viking Hamar only:**
  - Fescue (tall)
  - Meadow bromegrass
  - Meadow foxtail
  - Orchard grass
  - Wheatgrass (streambank)

**Established Forage Grasses:**

- Timothy (seed or hay) - prior to emergence of the flag leaf.

**Perennial Cereal Rye\* (Buctril M, Brilliant, Canuck and Viking Hamar only):**

- **Established stands:** 2 leaf up to early flag leaf stage.
  - **Establishment year:** 2 to 4 leaf stage in the fall, or from the time growth commences to early flag leaf stage in the spring.
- \* Since the use of this tank mix on perennial cereal rye is registered under the User Requested Minor Use Label Expansion program, the manufacturer assumes no responsibility for herbicide performance. Users of this tank mix on perennial cereal rye do so at their own risk.*

**Weeds and Staging:****Weeds up to 4 leaf stage:**

- American nightshade
- Annual smartweeds (green, lady's-thumb, pale)
- Bluebur
- Ball mustard
- Cocklebur
- Cow cockle
- Flixweed
- Jimsonweed
- Kochia\*\*
- Night-flowering catchfly
- Redroot pigweed\*
- Russian thistle\*\*
- Scentless chamomile\*\*\*
- Shepherd's-purse
- Volunteer canola
- Volunteer sunflower

\* May not be controlled in flax.

\*\* Control before plants are 2 inches tall.

\*\*\* Spring seedlings only.

**Weeds up to 6 leaf stage:**

- Wild tomato (*Buctril M, Logic M, Viking Hamar & Badge* only)

**Weeds up to 8 leaf stage:**

- Buckwheat (tame, tartary, wild)
- Common ragweed
- Common groundsel
- Lamb's-quarters
- Mustard (wild, wormseed)
- Stinkweed

**Weeds suppressed in winter wheat from the 2 to 12 leaf stage:**

- Prickly lettuce (All except *Logic M* and *Buck M*)

**Weeds where top growth is controlled:**

- Canada thistle
- Perennial sow-thistle

**Rate:**

*Buctril M, Brilliant, Canuck & Viking Hamar:* 0.4 L per acre.

*Badge, Brox M, Double Trouble & Logic M:* 0.5 L per acre.

**Application Information:**

- **Water Volume:**
  - *Corn:* 80 to 120 L per acre.
  - *Flax, Solin:* 20 to 40 L per acre.
  - *Cereals:* 20 to 40 L per acre.
  - *Seedling forage grasses:* 60 L per acre.
  - *Established timothy:* 60 L per acre.
  - *Perennial Cereal Rye:* Not less than 20 L per acre.
  - *Aerial:* 8 to 16 L per acre.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE coarse* droplets

Refer to specific labels for recommended water volumes.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement          | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------------------------|-------------------|----------------|------------|
| bromoxynil        | POST (foliar) | PSII inhibitor/Membrane disrupter | Little (Apoplast) | Broadleaf only | 6          |
| MCPA              | POST (foliar) | Synthetic Auxin                   | Symplast          | Broadleaf only | 4          |

## Effects of Growing Conditions:

Best weed control when humidity is high at the time of spraying and for the following day or two. Prolonged cool conditions may result in reduced weed control. Spraying during early morning may increase the risk of flax injury.

Avoid spraying in temperatures greater than 25°C.

DO NOT apply to flax, canaryseed or corn if daytime temperatures exceed 27°C within 48 hours before or after application.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicide Tank Mix Table:

| Crop & Tank Mixes                                          | <i>Badge</i> | <i>Buctril M &amp; Brilliant</i> | <i>Logic M</i> | <i>Canuck</i> | <i>Brox M</i> | <i>Double Trouble</i> | <i>Viking Hamar</i> |

\* *Select* only

\*\* *Select* and *Centurion* only.

# Requires the addition of a surfactant as per *Refine SG*.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Note:** The above mixes are those listed on the bromoxynil/MCPA Ester labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Rainfall within 1 hour of application may reduce weed control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 24 hours, or 15 days for corn to be harvested by hand.
- **Grazing Restrictions:** DO NOT graze treated grain or established timothy crops or cut for feed within 30 days of application. DO NOT graze meadow foxtail in the year of treatment. DO NOT graze other treated forage grasses within 56 days of treatment.
- **Pre-harvest Interval:** DO NOT harvest perennial cereal rye within 30 days of application, or flax or solin within 60 days of application.
- **Re-cropping Interval:** No re-cropping restrictions the year after treatment.
- **Aerial Application:** May be applied by air to wheat, barley, and oats only. Use higher water volume (see 'Application Information') when the majority of weeds are cow cockle, smartweed, hemp-nettle, pigweed, and Canada thistle.
- **Storage:** May be frozen. Shake the container well when thawed to reconstitute components before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

### Hazard Rating:

All Products:

Warning – Poison

Warning – Potential Skin Sensitizer

Caution – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Bromoxynil + MCPA + Fluroxypyr

Herbicide Group  
4 - fluroxypyr, MCPA  
6 - bromoxynil

## Company:

Nufarm Agriculture (*Enforcer M*)  
ADAMA Canada (*ForceFighter All In*)  
NewAgco (*Foxxxy Canuck*)  
Interprovincial Cooperatives (*IPCO Emit, Co-op Emit*)  
Sharda CropChem (*Pierce*)  
Viking (*Viking Trycka*)

## Formulation:

**Enforcer M (PCP#30691), IPCO Emit (PCP# 34600), Co-op Emit (PCP#34614), Pierce (PCP#34328), ForceFighter All In (PCP#35007):** 80 g/L fluroxypyr, 200 g/L bromoxynil and 200 g/L MCPA Ester co-formulated as an emulsifiable concentrate.

- Container sizes - 2 x 10 L, 2 x 11.37 L and 90.96 L (*ForceFighter All In* only), 120 L, 480 L, 454.8 L (*ForceFighter All In* only)

-or-

The *Foxxxy Canuck* package contains the following components:

**Canuck (PCP#34173):** 280g/L bromoxynil and 280 g/L MCPA ester formulated as an emulsifiable concentrate.

- Container sizes - 2 x 8.1 L, 777 L

**Foxxxy 333 (PCP#35375):** 333 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 6.7 L, 320 L

-or-

The *Viking Trycka* package contains the following components:

**Viking Hamar (PCP# 34806):** 280 g/L bromoxynil and 280 g/L MCPA ester formulated as an emulsifiable concentrate

- Container size - 2 x 8 L, 576 L

**Viking Fluroxypyr (PCP#34778):** 180 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 12.8 L, 307 L

## Crops and Staging:

**Wheat (durum, spring) oats\* and barley:** 2 leaf stage until the flag leaf is fully emerged.

**Winter wheat\*\*:** in spring once tillered until the flag leaf is fully emerged.

**Canaryseed\* (including for human consumption):** from the 3 to 5 leaf stage.

**Forage Grasses for seed production only\*†:**

- **Seedlings:** Apply from the 3 to 6 leaf stage.
- **Established:** Up to the first node detectable in the stem.
  - Bromegrass (meadow, smooth, hybrid)

† NOTE: Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply these uses do so at their own risk.

\* *Enforcer M, IPCO Emit and Co-op Emit* only.

\*\* *Enforcer M, IPCO Emit and Co-op Emit, Pierce* only.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds and Staging:

Apply to emerged weeds up to the 6 leaf stage unless otherwise indicated.

**Enforcer M, IPCO Emit and Co-op Emit, Pierce only applied at the 0.25 L per acre rate will control the following weeds (see "Rates:" below):**

- Kochia (up to 5 cm tall)
- Wild buckwheat\*
- Wild mustard
- Lamb's-quarters

**Enforcer M, IPCO Emit, Co-op Emit, Pierce (at the high rate), Foxy Canuck or Viking Trycka will control the following weeds (see "Rates:" below):**

*Weeds listed above plus:*

- American nightshade<sup>†</sup>
- Bluebur<sup>†</sup>
- Buckwheat (tame, Tartary, wild)
- Canada thistle (top growth control only)
- Chickweed<sup>\*\*\*</sup>
- Cleavers (up to 8 whorls)<sup>\*\*</sup>
- Cocklebur<sup>†</sup>
- Common groundsel
- Common ragweed
- Cow cockle<sup>†</sup>
- Flixweed<sup>†</sup>
- Hemp-nettle<sup>††</sup>
- Kochia
- Mustard (ball<sup>†</sup>, wild, wormseed)
- Night-flowering catchfly<sup>†</sup>
- Perennial sow-thistle (top growth control only)
- Redroot pigweed<sup>\*Δ</sup>
- Round-leaved mallow<sup>\*\*\*\*</sup>
- Russian thistle (< 5 cm tall)<sup>†</sup>
- Scentless chamomile<sup>†</sup>
- Shepherd's-purse<sup>†</sup>
- Smartweed<sup>†</sup> (green, lady's-thumb, pale)
- Stinkweed
- Stork's-bill<sup>\*ΔΔ</sup>
- Velvetleaf<sup>†</sup>
- Volunteer canola/rapeseed<sup>†</sup>
- Volunteer flax
- Volunteer sunflower<sup>†</sup>
- Wild buckwheat<sup>††</sup>

**\* Suppression only.**

**\*\* See labels as some herbicides control at a lesser number of whorls**

**\*\*\* All products except Viking Trycka (suppression) and ForceFighter All In.**

**\*\*\*\* Viking Trycka and Foxy Canuck only.**

**† Up to 4 leaf stage only.**

**†† Control for ForceFighter All In only. Rest of herbicides are suppression only.**

**††† Control with all herbicides except ForceFighter All In, Foxy Canuck and Viking Trycka suppression only.**

**\*Δ Except Foxy Canuck, Viking Trycka and ForceFighter All In.**

**\*ΔΔ Except ForceFighter All In.**

## Rates:

**Enforcer M, IPCO Emit, Co-op Emit, Pierce:** 0.25 to 0.51 L per acre

-or-

**ForceFighter All In:** 0.57 L per acre

-or-

**Foxy Canuck, Viking Trycka:**

- **Canuck, Viking Hamar:** 0.4 L per acre
- **Viking Fluroxypyr:** 0.24 L per acre
- **Foxy 333:** 0.085 L per acre to 0.166 L per acre

## Application Information:

- **Water Volume:**
  - **Enforcer M, IPCO Emit, Co-op Emit, Pierce, ForceFighter All In, Viking Trycka:** Minimum 20 to 40 L per acre; Use the higher volume when there is a heavy crop canopy or weeds are at an advanced stage.
  - **Foxy Canuck:** Minimum 40 L per acre.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE coarse** droplets while maintaining good coverage of foliage.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|---------------------------------------|---------------------------------------|----------------|------------|
| MCPA, fluroxypyr  | POST (foliar) | Synthetic auxin                       | Moves throughout the plant (Symplast) | Broadleaf only | 4          |
| bromoxynil        | POST (foliar) | PSII Inhibitor/<br>Membrane disrupter | Little (Apoplast)                     | Broadleaf only | 6          |

## Effects of Growing Conditions:

Optimum activity is experienced between 12 to 24°C when weeds are actively growing. Weeds may not be actively growing and as a result reduced activity will occur when temperatures are below 8°C or above 27°C. Frost 3 days before or after an application may reduce crop tolerance and weed control efficacy.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides -*Enforcer M, IPCO Emit, Co-op Emit, Pierce:*

- **In wheat (durum, spring, winter), barley and oats:**
  - Nufarm Boost (see thifensufuron/tribenuron) at 2.7 g/acre.
- **In wheat (durum, spring, winter) and barley:**
  - Tralkoxydim (*Liquid Achieve* and *Nufarm Tralkoxydim* only)
- **In wheat (spring and durum only) and barley:**
  - Fenoxaprop (*Puma Advance* only)
- **In spring wheat (including durum) only:**
  - Clodinafop 240 EC (*Signal* only)
  - *Simplicity*
  - *Varro*
- **In wheat (spring and durum only) and barley:**
  - *Liquid Achieve*
- **In spring wheat only:**
  - *Everest*

### Herbicide - *Viking Trycka*

- **In wheat (spring and durum only) and barley:**
  - *Liquid Achieve*
- **In Spring Wheat only:**
  - *Everest*

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the bromoxynil+MCPA+fluroxypyr labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 24 hours.
- **Grazing Restrictions:** DO NOT graze or cut for livestock feed within 30 days of application. Withdraw meat animals from treated feed 3 days before slaughter.
- **Pre-harvest Interval:** DO NOT harvest within 60 days of application.
- **Re-cropping Interval:** Barley, canola, flax, forage grasses, lentil, mustard, oats, pea, rye and wheat can be seeded the following year or fields can be fallowed.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a ventilated room above freezing. If frozen, allow container to warm and shake well before using.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

The manufacturer provides no recommendations on how to clean equipment used to apply this product. As a petroleum based emulsifiable concentrate, 'Method B' in the general section on sprayer cleaning in the introduction may be the most effective.

## Hazard Rating:

*Enforcer M, IPCO Emit, Co-op Emit, Pierce and ForceFighter All In:*

Warning – Poison

Caution – Skin and Eye Irritant, Potential Skin Sensitizer

*Foxxxy Canuck and Viking Trycka:*

Danger – Poison

Refer to the Introduction for an explanation of the symbols.

# Callisto 480 SC\*

\* for use in Manitoba only

Herbicide Group  
27 - mesotrione

## Company:

Syngenta Canada (PCP#27833)

## Formulations:

480 g/L of mesotrione formulated as a suspension

- Container size – 4 x 2.4 L

## Crops, Rates and Staging:

Field corn – 2 leaf up to and including 6 leaf

## Weeds, Rates and Staging:

Apply *Callisto 480 SC* at 63 mL per acre with *Aatrex Liquid 480* at minimum 250 mL per acre + *Agral 90* at 0.2 L per 100 L of solution.

**Note:** **DO NOT** make a foliar post-emergent application of any organophosphate or carbamate insecticide within 7 days before or 7 days after a *Callisto 480 SC* application or severe injury may occur to corn. **DO NOT** cultivate corn within 7 days before or after a post-emergent *Callisto 480 SC* application.

## Weeds Controlled:

- Volunteer canola - cotyledon to 4 leaf

## Application Information:

- **Water Volume:**
  - **Ground:** minimum 40 L per acre
- **Nozzles and Pressure:** Do not apply with spray droplets smaller than *ASAE S572.1* droplets medium classification.
- **Screens:** 50 mesh or larger.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                 | Movement                             | Spectrum       | WSSA Group |
|-------------------|---------------|------------------------|--------------------------------------|----------------|------------|
| mesotrione        | POST (foliar) | HPPD Pigment Inhibitor | Towards regions of growth (Symplast) | Broadleaf only | 27         |

## Effects of Growing Conditions:

Under unfavorable conditions such as drought, heat, flooding, prolonged cool temperatures or insufficient fertility, adequate control may not be achieved and re-growth may occur.

## Tank Mixes:

*Callisto 480 SC* must be applied with *Aatrex Liquid 480* at minimum 250 mL per acre + *Agral 90* at 0.2 L per 100 L of solution.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the Introduction.

## Restrictions:

- **Rainfall:** 3 hours
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Pre-harvest Interval:** grain corn 100 days, silage corn 45 days.
- **Re-cropping:** Canola, spring wheat, oats, barley, field corn (grain or silage), soybean – 11 months if total precipitation during the (April to September) year of application is equal or greater than the 30 year average for local location. For all other crops perform a field bioassay.
- **Aerial Application:** DO NOT apply air.
- **Storage:** May be frozen. Store this product away from food or feed. Store in a cool, dry place.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Use a combination of 'Method A' and 'Method B' in the general section on sprayer cleaning in the Introduction.

## Hazard Rating:

Caution eye irritant.

Potential skin sensitizer

Refer to the Introduction for an explanation of the symbols.

# Carfentrazone

Herbicide Group  
14 - carfentrazone-ethyl

## Company:

FMC Corporation (*Aim EC* – PCP#28573)  
NewAgco (*Revenge* – PCP#33716)  
Albaugh (*InStep* – PCP#33956)  
Interprovincial Cooperatives (*IPCO C-Zone* – PCP#33580)  
WinField United Canada (*Foremost* – PCP#34275)  
Viking (*Viking Carfentrazone* – PCP# 34736)  
Sipcam Agro USA Inc. (*Miricell* – PCP#35309)

## Formulations:

240 g/L carfentrazone-ethyl formulated as an emulsifiable concentrate.

- Container sizes:
  - *Aim EC* - 8 x 1.2 L, 4 x 4.8 L
  - *Revenge, Viking Carfentrazone* - 2 x 4.8 L
  - *InStep, Foremost, Miricell* - 4 x 2.4 L
  - *IPCO C-Zone* - 2.4 L (sold only as a component of *CO-OP IPCO Octagon*)

## Crops, Rates and Staging:

### Pre-seeding, pre-emergence (up to 3 days after seeding)\*:

Use a non-ionic surfactant at 0.25 to 0.35 L per 100 L of spray solution or use *Merge* at 1 L per 100 L of spray solution when used alone or if mixed with glyphosate at less than 180 g ae per acre. *Destination MSO* at 1 L per 100 L spray solution, *Journey* or *Destinaire HSOC* at 0.5 L per 100 L spray solution are only registered for use with *Aim EC* only. See label for specific mixes.

### From 14.8 to 29.5 mL per acre prior to the seeding of:

- Sorghum

### From 14.6 to 47.3 mL per acre prior to the seeding of:

- |                          |                                           |                                 |
|--------------------------|-------------------------------------------|---------------------------------|
| ◦ Barley                 | ◦ Flax                                    | ◦ Safflower                     |
| ◦ Buckwheat              | ◦ Hops (hooded sprayer only) <sup>†</sup> | ◦ Soybean                       |
| ◦ Canola (rapeseed)      | ◦ Lentil                                  | ◦ Sunflower                     |
| ◦ Chickpea               | ◦ Millet (pearl and proso)                | ◦ Triticale                     |
| ◦ Corn (field and sweet) | ◦ Mustard                                 | ◦ Wheat (spring, durum, winter) |
| ◦ Dry bean               | ◦ Oats                                    |                                 |
| ◦ Faba bean              | ◦ Potatoes <sup>†</sup>                   |                                 |
| ◦ Field pea              | ◦ Rye                                     |                                 |

<sup>†</sup> *Aim EC* only

### Harvest aid treatment\*:

Use *Agral 90* or *Ag-Surf* at 0.25 L per 100 L of spray solution or use *Merge* at 1 L per 100 L of spray solution when used alone.

**Post-harvest:** *Aim EC* can be applied as post-harvest burndown after harvest. DO NOT make more than two applications in total per year, including post-harvest.

| Crop                                                                                      | Rate (mL per acre)     |
|-------------------------------------------------------------------------------------------|------------------------|
| Barley, oats, wheat, millet, dry bean, chickpea, faba bean, field pea, soybean, triticale | 29.5 to 47.3           |
| Sorghum                                                                                   | 29.5                   |
| Potato**                                                                                  | 94 <sup>†</sup> to 142 |

\* DO NOT apply as a tankmix with glyphosate to crops if grown for seed purpose.

\*\* A second application of 94 to 142 mL per acre may be applied in potato.

## Weeds, Rates and Staging:

Apply to listed weeds up to 10 cm in height unless otherwise indicated:

| Weeds                                                                                                                      | Rate (mL per acre) |
|----------------------------------------------------------------------------------------------------------------------------|--------------------|
| Eastern black nightshade (up to 5 cm), lamb's-quarters (up to 7.5 cm), redroot pigweed, waterhemp (up to 5 cm), velvetleaf | 14.8               |

| Weeds                                                                                                                                                                                                                   | Rate (mL per acre) |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <i>Above weeds plus:</i><br>Flixweed**, hairy nightshade, lamb's-quarters, pigweed (prostrate, smooth, tumble, waterhemp), Pennsylvania smartweed (seedling), purslane, round-leaved mallow, stinkweed**, tansy mustard | 23.5               |
| <i>Above weeds plus:</i><br>Cleavers*, cocklebur, eastern black nightshade, kochia, jimsonweed, Russian thistle (up to 5 cm)**, shepherd's-purse*, volunteer canola (all varieties)                                     | 29.5               |
| <i>Above weeds plus:</i><br>Burclover, corn spurry, prickly lettuce, venice mallow (up to 5 cm)                                                                                                                         | 47.3               |

\* *Aim, IPCO C-Zone and Foremost only.*

\*\* *Aim, IPCO C-Zone, Revenge and Foremost only.*

## Application Information:

- **Water Volume:** Use a minimum of 40 L per acre. Higher spray volumes is required for dense weed stands. Weed control improves with the amount of coverage.
- **Nozzles and Pressure:** Maximum 35 psi (210 kPa) if using conventional nozzles. Low drift nozzles may require higher pressure for proper performance. Use nozzles and pressure designed to deliver proper coverage with **ASABE medium** droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing        | Target                               | Movement                                                | Spectrum                   | WSSA Group |
|---------------------|---------------|--------------------------------------|---------------------------------------------------------|----------------------------|------------|
| carfentrazone-ethyl | POST (foliar) | PPO Inhibitor/<br>Membrane disruptor | Little movement due to<br>rapid cell leakage (Symplast) | Non-selective<br>Broadleaf | 14         |

## Effects of Growing Conditions:

Extremes in environmental conditions such as temperature, moisture, soil conditions, and cultural practices may affect activity. Under warm moist conditions, herbicide symptoms may be accelerated. While under very dry conditions, the expression of herbicide symptoms may be reduced as weeds hardened off by drought are less susceptible.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- *Authority 480*
- *Authority Supreme*
- Glyphosate (180 to 360 g ae per acre)
- 2,4-D ester (134 to 214 g ae per acre) (see 2,4-D for crop options – prior to seeding or after seeding and prior to crop emergence)
- MCPA ester (102 to 202 g ae per acre) plus glyphosate (wheat, barley, rye, oats, flax)<sup>†</sup>
- Bromoxynil<sup>††</sup> (57 g active ingredient per acre – canola, wheat, barley, oats)
- Bromoxynil + glyphosate<sup>††</sup> (rates and crops above)
- *Command 360 ME* + glyphosate<sup>†</sup> (prior to seeding canola – all varieties)
- *Express SG* + glyphosate<sup>†</sup> (fallow or a minimum of 24 hours prior to seeding barley, oats, wheat (spring, winter, durum), dry bean, faba bean, field pea, lupin and soybean)
- *Express FX* + glyphosate<sup>†</sup> (fallow or prior to seeding wheat [spring, durum and winter], barley and oats)
- *Express Pro* + glyphosate<sup>†</sup> (fallow and prior to seeding wheat [spring, durum and winter] oats and barley)

### Harvest aid treatment:

- *Barley, chickpea, dry beans, faba bean, field pea, millet, oats, sorghum, and wheat:*
  - Glyphosate\* (360 g ae per acre)
- *Potato only:* Reglone\*\* (0.51 to 0.9 L per acre)
  - \* IPA or K salt only.
  - \*\* For potato desiccation – should a second desiccation application be required after a first application of *Aim EC* plus *Reglone* tank mix, use *Aim EC* at 94 to 142 mL per acre alone or as a tank mix with *Reglone* at 0.51 L per acre.
  - <sup>†</sup> *Aim* only.
  - <sup>††</sup> *Aim, Foremost and Revenge* only.

**Note:** The above mixes are those listed on the carfentrazone labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Rainfall within 1 hour after application may reduce activity. Heavy rainfall shortly after application may reduce activity.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Pre-harvest Interval:** Leave 7 days between application and harvest for potatoes and 3 days for all other registered crops for harvest aid uses.
- **Grazing Restrictions:** No restrictions.
- **Re-cropping Interval:** There are no rotational restrictions on crops registered for pre-seed use. All other crops may be planted 12 months after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place and avoid excess heat.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

Caution – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Carfentrazone + 2,4-D Ester

Herbicide Group

4 - 2,4-D

14 - carfentrazone

*This product is the equivalent of a prepackaged tank mix of carfentrazone and 2,4-D 700 ester. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

## Company:

NewAgco (*Revenge Pro*)Interprovincial Cooperative Ltd. (*Co-op/IPCO Convex*)Viking (*Viking Solna*)

## Formulation:

The carfentrazone + 2,4-D ester package contains the following components:

**Revenge** (PCP#33716 - *Revenge Pro*), **IPCO C-Zone** (PCP#33580 - *Co-op/IPCO Convex*), **Viking Carfentrazone** (PCP #34736 - *Viking Solna*): 240 g/L carfentrazone formulated as a emulsifiable concentrate.

- Container sizes - 1.2 L

**Co-op/IPCO Convex - 1.2 L**

**Viking Carfentrazone, Revenge Pro - 2.4 L**

-plus-

**MPOWER 2,4-D Ester 700 II** (PCP#34808 - *Revenge Pro*), **IPCO/Co-op 2,4-D Ester 700** (PCP#27819/32882 - *IPCO/Co-op Convex*), **Viking 2,4-D Ester 700** (PCP# 34813 - *Viking Solna*): 660 g ae/L 2,4-D formulated as an emulsifiable concentrate.

- Container sizes -

**Co-op/IPCO Convex - 2 x 8.69L**

**Viking 2,4-D Ester 700, Revenge Pro - 2 x 9.8 L**

## Crops and Staging:

Apply to the soil surface up to 1 day prior to seeding spring wheat, durum wheat\*, winter wheat\*, barley, rye, or in chemfallow.

\* *IPCO/Co-op Convex and Viking Solna only.*

## Weeds and Staging:

Apply 15 mL per acre of *IPCO C-Zone* plus 217 mL per acre of 2,4-D ester 700 plus glyphosate (sold separately) at 180 to 360 g ae per acre controls the weeds controlled by the component products (glyphosate at 180 g ae per acre) plus:

- |             |                         |                            |
|-------------|-------------------------|----------------------------|
| ◦ Chickweed | ◦ Jimsonweed            | ◦ Smartweed (Pennsylvania) |
| ◦ Horsetail | ◦ Kochia (all biotypes) | ◦ Tansy mustard            |

## Tank Mixes:

**Herbicides:** Glyphosate (IPA, DMA, K+)

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions.

General guidelines can be found in the introduction.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Carfentrazone + Sulfentrazone

Herbicide Group  
14 - sulfentrazone,  
carfentrazone

## Company:

FMC Corporation (*Authority Strike*)

NewAgco (*Throne II Revenge*)

## Formulation:

The *Authority Strike* package has the following components:

**Authority Strike (PCP#34867):** 380 g/L sulfentrazone and 42 g/L carfentrazone-ethyl formulated as a suspension emulsion.

- Container size - 4.52 L

-or-

The package for *Throne II Revenge* have the following components:

**Throne II (PCP#35249):** 480 g/L sulfentrazone formulated as a suspension concentrate.

- Container size - 2 x 9.4 L

**Revenge (PCP#33716):** 240 g/L carfentrazone formulated as an emulsifiable concentrate.

- Container size - 4.8 L

## Crops, Rates and Staging:

Apply in the spring prior to seeding or up to 3 days after seeding the following crops:

**At 113 mL per acre (*Authority Strike* only)**

Wheat (spring and durum), mustard

**At 113 mL per acre or 162 mL per acre (*Authority Strike* only):**

Chickpea, faba bean, field pea, flax, soybean, sunflower

**At 113 or 162 mL per acre *Authority Strike* or 88.6 mL per acre *Throne II* and 14.7 mL per acre *Revenge* or 118 mL per acre *Throne II* and up to 29.5 mL per acre *Revenge* (*Throne II Revenge* only):**

Chickpea, faba beans\*, field pea, flax, soybean, sunflower.

**Fall application (prior to registered crops):** when soil temperatures have dropped below 10°C but prior to freeze up.

Do not apply to frozen soils or existing snow cover. Do not mechanically incorporate in the fall or spring as this can destroy the herbicide barrier and allow weeds to escape.

All applications require moisture for proper activation.

For burn-off control of emerged weeds, if glyphosate is not used with *Authority Strike* or *Throne II Revenge*, the addition of an adjuvant is required. Use a non-ionic surfactant (NIS) at 0.25 L per 100 L of spray solution or use Merge at 1 L per 100 L of spray solution.

\**Authority Strike* only

## Weeds, Rates and Staging:

**At 113 mL per acre (*Authority Strike* only):**

Controls the following weeds when applied to the soil prior to emergence:

- Kochia

The following emerged weeds are controlled by *Authority Strike* up to the 10 cm stage unless otherwise indicated (burn-off):

- |                                         |                               |              |
|-----------------------------------------|-------------------------------|--------------|
| ◦ Common lamb's-quarters <sup>2</sup>   | ◦ Morning glory <sup>3</sup>  | ◦ Velvetleaf |
| ◦ Black nightshade <sup>1*</sup>        | ◦ Redroot pigweed             |              |
| ◦ Eastern black nightshade <sup>1</sup> | ◦ Tall waterhemp <sup>1</sup> |              |

**At 162 mL per acre *Authority Strike* or *Throne II* at 118 mL per acre plus *Revenge* at 30 mL per acre.**

Controls the following weeds when applied to the soil prior to emergence:

- |                          |                            |                     |
|--------------------------|----------------------------|---------------------|
| ◦ Cleavers <sup>4*</sup> | ◦ Eastern black nightshade | ◦ Smooth crabgrass  |
| ◦ Common groundsel       | ◦ Kochia                   | ◦ Wild buckwheat    |
| ◦ Common lamb's-quarters | ◦ Large crabgrass          | ◦ Yellow woodsorrel |
| ◦ Common purslane        | ◦ Powell pigweed           |                     |
| Common waterhemp         | ◦ Redroot pigweed          |                     |

The following emerged weeds are controlled by *Authority Strike* or *Throne II Revenge* up to the 10 cm stage unless otherwise indicated (burn-off):

- Carpetweed
- Cleavers\*
- Cocklebur
- Common lamb's-quarters
- Common purslane
- Common waterhemp
- Black nightshade\*
- Eastern black nightshade
- Flixweed\*
- Hairy nightshade
- Jimsonweed
- Kochia
- Morning glory<sup>3</sup>
- Pennsylvania smartweed (seedling)
- Pigweed (prostrate, smooth, tumble)
- Russian thistle<sup>1\*</sup>
- Shepherd's purse\*
- Stinkweed
- Tall waterhemp<sup>1</sup>
- Tansy mustard
- Volunteer canola (including glyphosate-tolerant)

<sup>1</sup> Up to 5 cm tall.

<sup>2</sup> Up to 7.5 cm tall.

<sup>3</sup> Up to 3 leaves.

<sup>4</sup> Weed suppression is a visual reduction in weed competition (reduced population or vigour) as compared with an untreated area. The degree of suppression will vary with weed size and environmental conditions prior to and following treatment.

\*Except *Throne II Revenge*.

**DO NOT APPLY *Authority Strike* or *Throne II Revenge* to:**

- Coarse textured (sand, loamy sand, sandy loam) soils,
- Fine textured soils with less than 1.5 percent organic matter,
- Soils with organic matter content greater than 6 percent,
- Soils with a pH of 7.8 or greater

**DO NOT apply *Authority Strike* or *Throne II Revenge* to field treated with *Authority Strike* or *Throne II* (or other products containing sulfentrazone) in the previous year.**

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre. Use as high water volume as practical to achieve even distribution over the soil surface.
- **Nozzles and Pressure:** Maximum 30 psi (175 kPa) if using conventional nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver proper coverage with ASABE medium droplets or larger.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing                       | Target                               | Movement                                            | Spectrum                | WSSA Group |
|---------------------|------------------------------|--------------------------------------|-----------------------------------------------------|-------------------------|------------|
| Sulfentrazone       | PRE (residual soil activity) | PPO Inhibitor/<br>Membrane disruptor | Little movement (symplast)                          | Broadleaf               | 14         |
| Carfentrazone-ethyl | POST (foliar)                | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage(symplast) | Non-selective broadleaf | 14         |

## Effects of Growing Conditions:

All applications require rainfall for proper activation of the sulfentrazone component. If weed growth begins before activation occurs, poor control may result on emerged weeds. A moderate rainfall (10 to 20 mm) or equivalent irrigation is required within 10 to 14 days to activate pre-emergent surface treatments. Dry conditions that persist after any application may reduce weed control. On sandy soils, heavy rainfall following application may cause leaching of *Authority Strike* that may result in reduced weed control and increased risk of crop injury.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Pre-seed or Pre-emergent:** Glyphosate\* 0.5 to 1 L per acre (360 g ae/L)
- **Pre-emergent Field pea\*\* and soybean\*\*:** Express SG (6 g per acre) and Glyphosate (182 to 328 g ae per acre)

### Aim EC\*:

- *Authority Strike* (113 mL per acre) + *Aim EC* (4 mL per acre). The additional carfentrazone will control the same weeds as *Aim EC* labelled at 24 mL per acre rate.
- *Authority Strike* (113 mL per acre) + *Aim EC* (10 mL per acre). The additional carfentrazone will control the same weeds as *Aim EC* labelled at 30 mL per acre rate.

\**Authority Strike* only.

\*\**Throne II Revenge* only.

**Note:** the above Tank Mixes are those listed on the *Authority Strike*, *Throne II* and *Revenge* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Heavy rainfall shortly after application may reduce the weed control of the carfentrazone component. Moderate rainfall (see 'Effects of Growing Conditions' above for details) within a few days of application is required for proper activity of the sulfentrazone component.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Not applicable
- **Grazing:** No restrictions
- **Re-cropping:**
  - Registered crops may be seeded anytime following application. After a fall application of 113 mL per acre of *Authority Strike* mustard (oilseed and condiment types) and wheat (spring or durum) can be grown. After a fall application of 162 mL per acre of *Authority Strike* chickpeas, faba beans, field peas, flax soybeans can be grown.
  - Winter wheat may be seeded 4 months after application of *Authority Strike* and 16 months for *Throne II Revenge*.
  - Alfalfa, barley, canola, field corn, mustard (following use of high rate), spring and durum wheat (following use of high rate) may be seeded 12 months after application of *Authority Strike*.
  - Alfalfa, barley, field corn, spring and durum wheat may be seeded 12 months after application of *Throne II Revenge*.
  - Sweet corn, lentils and sorghum may be seeded 24 months after application of *Authority Strike*.
  - Sweet corn, popcorn, sorghum and canola may be seeded 24 months after application of *Throne II Revenge*.
  - Lentils may be seeded 36 months after application of *Throne II Revenge*.
  - For all other crops 36 months must pass following application and a successful field bioassay indicating adequate tolerance before planting.
  - For each year of drought experienced, add one year to the intervals above and conduct a field bioassay to confirm tolerance of the rotational crop. Longer recropping intervals should be used under dry conditions especially in June, July and August.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store above 5°C to keep from freezing. If frozen, and solid crystals are observed, warm to above 15°C and shake or roll container periodically to dissolve solids.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Danger – Poison

Refer to the Introduction for an explanation of the symbols.

# Casoron

Herbicide Group  
20 - dichlobenil

## Company:

UPL AgroSolutions Canada (PCP#12533)

## Formulation:

4 percent dichlobenil formulated as a granular.

- Container size - 22.7 kg

## Crops:

### Poplar plantations

#### Shelterbelts consisting of the following species:

- |                              |                           |               |
|------------------------------|---------------------------|---------------|
| ◦ Ash                        | ◦ Euonymus (Burning bush) | ◦ Locust      |
| ◦ Barberry                   | ◦ Forsythia               | ◦ Maple       |
| ◦ Boxwood Caragana           | ◦ Honeysuckle             | ◦ Mock orange |
| ◦ Cedar (White, Eastern Red) | ◦ Juniper                 | ◦ Rose        |
| ◦ Crabapple                  | ◦ Lilac                   | ◦ Spirea      |
| ◦ Elm                        | ◦ Linden                  | ◦ Willow      |

**NOTE:** DO NOT apply to shelterbelts with mugo pine, firs, hemlock, holly, spruce or other shallow rooted species or injury may result. DO NOT apply in or around greenhouses. DO NOT use on light sandy soils.

## Weeds and Staging:

Apply in early spring or late fall prior to annual weed emergence, or after cultivation has removed existing weeds.

- |                                         |                   |                    |
|-----------------------------------------|-------------------|--------------------|
| ◦ Annual blugrass                       | ◦ Horsetail       | ◦ Purslane         |
| ◦ Artemisia (absinthe,* wormwood, sage) | ◦ Knotweed        | ◦ Quack grass*     |
| ◦ Bindweed*                             | ◦ Kochia          | ◦ Sheep sorrel*    |
| ◦ Canada thistle*                       | ◦ Lamb's-quarters | ◦ Shepherd's-purse |
| ◦ Chickweed                             | ◦ Loosestrife     | ◦ Smartweed        |
| ◦ Dandelion*                            | ◦ Mustard         | ◦ Sow-thistle      |
| ◦ Foxtail (green and yellow)            | ◦ Nutsedge*       | ◦ Spurge           |
| ◦ Groundsel                             | ◦ Pigweed         | ◦ Vetch*           |
|                                         | ◦ Plantain        | ◦ Wild buckwheat*  |

\* Controlled with fall applications at the higher rates.

## Rates:

45 to 70 kg per acre. At the low rate, a 15 kg bag will treat a 4 yd by 407 yd (4 m by 340 m) strip of shelterbelt. At the high rate, a 15 kg bag will treat a 4 yd by 256 yd (4 m by 214 m) strip of shelterbelt. If application is followed by 0.5 to 1.0 inches (1.3 to 2.5 cm) of irrigation, the lower rates are recommended.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing            | Target                        | Movement          | Spectrum          | WSSA Group |
|-------------------|-------------------|-------------------------------|-------------------|-------------------|------------|
| dichlobenil       | PRE (soil active) | Cellulose synthesis inhibitor | Upward (Apoplast) | Broadleaf & grass | 20         |

## Effects of Growing Conditions:

DO NOT apply during periods of high soil temperatures (more than 15°C).

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** Does not reduce activity.
- **Restricted Entry Interval:** DO NOT enter treated areas for at least 24 hours.
- **Grazing Restrictions:** DO NOT graze in treated area.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place. DO NOT freeze.
- **Buffer Zones:** Site characteristics and conditions that may lead to runoff include, but are not limited to, heavy rainfall, moderate to steep slope, bare soil, poorly draining soil (e.g., soils that are compacted, fine textured or low in organic matter). Avoid application of this product when heavy rain is forecast.

## Equipment Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

## Hazard Rating:

No specific rating. Keep out of reach of children. Harmful if swallowed. Avoid skin or eye contact.

# Cazado

Herbicide Group  
1 - pinoxaden  
2 – thien carbazone-methyl

## Company:

ADAMA Canada

## Formulation:

**Cazado (PCP#35344):** 100 g/L pinoxaden plus 8.3 g/L thien carbazone-methyl formulated as an oil dispersion.

- Container size – 9.72 L, 77.8 L

## Crops and Staging:

**Wheat (spring, durum):** 1 to 6 leaves on main stem, plus 3 tillers but prior to jointing (presence of first node).

**Winter Wheat:** Apply either in the fall or spring when the majority of plants have one leaf to full tillering, but prior to jointing (presence of first node).

## Weeds and Staging:

**Grassy Weeds Controlled:** Unless otherwise noted below, apply to young and actively growing weeds that are 1 to 6 leaves, prior to 4th tiller.

- |                   |                  |                  |
|-------------------|------------------|------------------|
| ◦ Barnyard grass  | ◦ Proso millet   | ◦ Yellow foxtail |
| ◦ Green foxtail   | ◦ Volunteer oats |                  |
| ◦ Persian darnel* | ◦ Wild oats***   |                  |

\* Suppression only.

\*\* 1 to 6 leaves, up to emergence of 2nd tiller.

\*\*\* Including Wild oat biotypes resistant to Group 1 or Group 2 herbicides. For better resistant populations control, a weed stage of 1 to 6 leaves, prior to 3rd tiller is recommended.

**Broadleaf Weeds Controlled:** 1 to 6-leaf stage

- |                    |                        |                      |
|--------------------|------------------------|----------------------|
| ◦ Barnyard grass   | ◦ Redroot pigweed      | ◦ Stinkweed          |
| ◦ Hemp-nettle      | ◦ Round-leaved mallow* | ◦ Volunteer canola** |
| ◦ Lamb's quarters* | ◦ Russian thistle*     | ◦ Wild buckwheat     |
| ◦ Pale smartweed   | ◦ Shepherd's-purse     |                      |

\* Suppression only.

\*\* Non ALS-tolerant.

## Rate:

243 mL per acre .

Under heavy weed pressure or stressed conditions, an adjuvant may be added to enhance grassy weed control, such as MSO or COC surfactant like *Addit* at 0.5 L per 100 L spray solution, or a non-ionic surfactant like *Agral 90* at 0.25 L per 100 L spray solution, in 20 to 40 L of water per acre for ground application and in a minimum of 12 L of water per acre for aerial application.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 20 to 40 L per acre.
  - **Aerial:** 12 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with: 80° or 110° pre-orifice flat fan or air induction nozzles are recommended. Use 50 mesh nozzle screens. Do not use flood type nozzles, controlled droplet application equipment, spray foils or hollow cone nozzles droplets by ground or air ASABE S572 droplets by air. Sprayers without drift reduction nozzles should use between 572.1 to 572.3 psi. Low drift nozzles may require higher pressures for proper performance.
- **Screens:** Use a 50 mesh or coarser screen and filter system.
- **Equipment:** Apply using a calibrated and clean sprayer equipment.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                             | Movement                          | Spectrum          | WSSA Group |
|-------------------|---------------|------------------------------------|-----------------------------------|-------------------|------------|
| pinoxaden         | POST (foliar) | ACCase Lipid synthesis inhibitor   | Toward growth areas (Symplast)    | Grasses only      | 1          |
| thiencarbazone    | POST (foliar) | ALS Amino Acid Synthesis Inhibitor | Toward areas of growth (Symplast) | Broadleaf & grass | 2          |

## Effects of Growing Conditions:

DO NOT apply to crops or weeds that are stressed (frost, low fertility, drought or flooding, disease or insect damage) as crop injury or reduced weed control may result. Under drought conditions DO NOT apply to spring or durum wheat if the time from seeding to spraying exceeds 35 days or if temperatures will be 3°C or lower within 3 days of application (before or after).

## Tank Mixes:

Tank mix partners applied at label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** None registered on the product label.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Leave 60 days between application and harvest.
- **Grazing:** DO NOT graze the treated crops or cut for forage within 7 days or cut for hay within 30 days of application
- **Re-cropping:** Alfalfa, barley, canaryseed, canola, chickpeas, field corn, dry bean, flax (including low linolenic acid varieties), lentils, mustard, oats, field peas, soybeans, sunflowers, timothy, wheat the year after treatment.
- **Aerial Application:** May be applied by aircraft.
- **Storage:** Store this product away from food or feed. Store in a cool, dry place. Do not store below freezing or at temperatures above 40°C. Shake well before using. Store product in original container only and keep closed. Store away from other pesticides, seeds and fertilizers.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. If mixing with other pesticides, combine this method with the method indicated for the tank mix partner..

## Hazard Rating:

Warning – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Certitude

Herbicide Group  
6 - bromoxynil  
27 - topramezone

## Company:

BASF Canada

## Formulation:

The *Certitude* package contains the following components:

**Certitude A (PCP#33908) or Component A:** 336 g/L topramezone formulated as a suspension.

- Container size - 291 mL

-plus-

**Certitude B (PCP#33893):** 235 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 9.71 L

-plus-

**Merge (PCP#24702):** 50% surfactant blend plus 50% solvent formulated as a surfactant.

- Container size - 8.1 L

## Crops and Staging:

**Canola:** Pre-seed

## Weeds and Staging:

**Weeds controlled:**

- Kochia\*<sup>†</sup>
- Shepherd's purse<sup>†</sup>
- Wild mustard<sup>†</sup>
- Lamb's quarters<sup>†</sup>
- Volunteer canola\* (cotyledon to 6-leaf)

\* Controls all herbicide resistant biotypes/varieties.

<sup>†</sup> Up to 10 cm in height.

## Rate:

**Certitude A:** 7 mL per acre

-plus-

**Certitude B:** 243 mL per acre

-plus-

**Merge:** 202 mL per acre

**Note:** Maximum of ONE APPLICATION of *Certitude* per season.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre.

**Note:** 40 L per acre is recommended for thorough coverage and optimal efficacy on herbicide resistant kochia.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets by ground. Low drift nozzles may require higher pressures for proper performance. DO NOT apply in periods of dead calm.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                | Movement                               | Spectrum          | WSSA Group |
|-------------------|---------------|---------------------------------------|----------------------------------------|-------------------|------------|
| topramezone       | POST (foliar) | HPPD Pigment Inhibitor                | Little (apoplast) some uptake by roots | Broadleaf & grass | 27         |
| bromoxynil        | POST (foliar) | PSII Inhibitor/<br>Membrane Disrupter | Little (apoplast)                      | Broadleaf only    | 6          |

## Effects of Growing Conditions:

Warm, moist growing conditions promote active weed growth. Weeds hardened off by environmental stress such as cold weather, drought or excessive heat may not be adequately controlled. DO NOT apply in periods of dead calm. DO NOT apply if temperatures of 5°C or lower are forecast within 3 days of application.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** Glyphosate (180 to 360 g ae per acre)

**Fungicides:** None registered.

**Insecticides:** None registered

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall within 1 hour will reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for at least 24 hours.
- **Pre-harvest Interval:** There is no required pre-harvest interval between a pre-seed application and harvest.
- **Grazing Restrictions:** DO NOT graze or feed other portions of the treated canola to livestock.
- **Re-cropping Interval:** Winter wheat can be seeded 4 months after application. Alfalfa, barley, canola, field corn, field pea, lentils, navy (white) bean, potato, soybean, spring wheat (including durum) can be seeded 1 year after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place. *Certitude B* formulations will solidify at temperatures below -20°C, but it will be usable again at temperatures above 0°C.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A,' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details. Refer to the tank mix partner's product label for any additional cleaning instructions.

## Hazard Rating:

Danger – Poison

Danger – Corrosive to Eyes and Skin

Warning – Eye Irritant

Warning – Contains the Allergen Soy

Refer to the Introduction for an explanation of the symbols.

# Cirpreme XC

Herbicide Group  
2 - florasulam  
4 - halauxifen, clopyralid

## Company:

Corteva Agriscience

## Formulation:

The *Cirpreme XC* package contains:

***Cirpreme A (PCP#34180)***: 20% halauxifen and 20% florasulam formulated as a water dispersible granule

- Container size - 1 x 800 g

***Lontrel XC (PCP#32795)***: 600 g/L clopyralid formulated as a solution.

- Container size - 1 x 4.1 L

## Crops and Staging:

**Wheat (spring, durum, winter), barley and rye (fall, spring)**: 3 leaf to just prior to emergence of the flag leaf

**Seedling and established timothy<sup>†</sup> and creeping red fescue<sup>†</sup> for seed, forage and hay**: 2 leaf expanded stage in seedling timothy and creeping red fescue or in the spring to established timothy and creeping red fescue.

**Seedling smooth brome<sup>†</sup> grown for seed, forage and hay production**: 2-leaf expanded stage in seedling smooth brome

**<sup>†</sup>NOTE: Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply these uses do so at their own risk.**

**Rate**: timothy, creeping red fescue and smooth brome<sup>†</sup> ONLY:

***Cirpreme A***: 10 grams per acre.

-plus-

***Lontrel XC***: 101 mL per acre.

## Weeds and Staging:

Apply to emerged, young and actively growing weeds that are less than 8 leaf stage unless otherwise stated.

The use of MCPA 600 ester is recommended at 189 to 283 mL per acre.

**Weeds controlled - *Cirpreme XC* + MCPA 600 ester at 283 mL per acre:**

- |                                                                |                                                                  |                                                                      |
|----------------------------------------------------------------|------------------------------------------------------------------|----------------------------------------------------------------------|
| ◦ Alfalfa, volunteer (up to 25 cm in height)                   | ◦ Flixweed (up to 8 leaf and 8 cm in height)                     | ◦ Smartweed, annual (green, lady's-thumb)                            |
| ◦ American dragonhead (up to bud stage or 15 cm)               | ◦ Hemp-nettle                                                    | ◦ Sow thistle, annual (up to 4 leaf)                                 |
| ◦ Annual sunflower                                             | ◦ Henbit (up to 8 leaf or 15 cm)                                 | ◦ Sow-thistle, perennial (up to the bolting stage & 20 cm in height) |
| ◦ Barnyard grass (up to 5 leaf, 2 tiller)                      | ◦ Lamb's-quarters                                                | ◦ Stinkweed                                                          |
| ◦ Burdock                                                      | ◦ Mustard (wild, ball*)                                          | ◦ Stork's-bill (up to 8 leaf)                                        |
| ◦ Canada fleabane (up to 15 cm in height)                      | ◦ Narrow-leaved hawk's-beard (up to bolting and 30 cm in height) | ◦ Thistle, Canada (up to the bud stage)                              |
| ◦ Chickweed                                                    | ◦ Plantain (top growth)                                          | ◦ Velvetleaf (up to 5 leaf)                                          |
| ◦ Cleavers (1 to 9 whorl)                                      | ◦ Prickly lettuce                                                | ◦ Vetch                                                              |
| ◦ Cocklebur                                                    | ◦ Ragweed, common (up to 6 leaf)                                 | ◦ Volunteer canola                                                   |
| ◦ Cow cockle                                                   | ◦ Redroot pigweed                                                | ◦ Volunteer flax (up to 15 cm)                                       |
| ◦ Dandelion (seedlings, overwintered rosettes & mature plants) | ◦ Round-leaved mallow (up to 6 leaf)                             | ◦ Volunteer sunflower                                                |
| ◦ Field horsetail (top growth)                                 | ◦ Scentless chamomile (up to the bud stage and 15 cm)            | ◦ Wild buckwheat                                                     |
|                                                                | ◦ Shepherd's-purse (up to bolting and 20 cm in height)           | ◦ Wild radish                                                        |

## Weeds suppressed:

- |            |                                                             |                                                                           |
|------------|-------------------------------------------------------------|---------------------------------------------------------------------------|
| ◦ Kochia** | ◦ Night-flowering catchfly (up to bolting, 15 cm in height) | ◦ White cockle (spring seedlings and overwintered plants up to bud stage) |
|------------|-------------------------------------------------------------|---------------------------------------------------------------------------|

\* Best results are obtained when applied to actively growing weeds in the 1 to 4 leaf (seedling) stage

\*\* Light to moderate infestations (up to 150 plants per m<sup>2</sup>; up to 15 cm in height)

## Rate:

**Cirpreme A:** 10 grams per acre.

-plus-

**Lontrel XC:** 52 mL per acre.

It is recommended that **Cirpreme XC** be mixed with **MCPA Ester 600** at 283 mL per acre (not supplied).

Add **Agral 90**, **Agsurf II**, or **Citowett Plus** at 0.2 L per 100 L of spray solution or **Merge** at 0.5 L per 100 L of solution.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets by ground. Sprayers without drift reduction nozzles should use between 30 to 40 psi (200 to 275 kPa). Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                          | Spectrum       | WSSA Group |
|-------------------|---------------|--------------------------|-----------------------------------|----------------|------------|
| florasulam        | POST (foliar) | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf only | 2          |
| halauxifen        | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only | 4          |
| clopyralid        | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only | 4          |

## Effects of Growing Conditions:

Control is best with actively growing weeds. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and regrowth may occur. For best results, ensure thorough spray coverage of target weeds.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **All registered crops:**
  - MCPA 600 ester (189 to 280 mL per acre)
  - *Axial*
- **Wheat (Spring, durum, winter) only:**
  - *Simplicity OD\**,
  - *Simplicity GoDRI\**

\*Cirpreme XC only

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

**Note: The above mixes are those listed on the Cirpreme XC labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Add water dispersible granule *Paradigm/Cirpreme A* first, followed by the grass tank-mix then add the *Lontrel* component, add MCPA ester and recommended surfactant as required.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Pre-harvest Interval:** DO NOT harvest the treated crop within 60 days after application.
- **Grazing Restrictions:** Livestock may be grazed on treated crops 7 days following application. DO NOT cut the treated crop for hay or silage within 21 days after application.
- **Grazing Restrictions timothy, creeping red fescue, smooth brome grass:** DO NOT permit livestock to graze fields within 60 days after application. DO NOT harvest forage or cut hay within 60 days after application.
- **Re-cropping Interval:** Alfalfa, spring wheat, barley, canola (including oilseed quality *Brassica juncea*), dry bean (*Phaseolus vulgaris* species including pinto, kidney and white types), faba beans, flax, field peas, potatoes (except seed potatoes), mustard (oriental, brown and yellow), soybeans, oats, or sunflower may be seeded 10 months after application. Lentils can be planted 22 months after application.

- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in original containers in a secure, dry heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to to 'Method C' in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

*Paradigm/Cirpreme A:*

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Cirray

Herbicide Group  
1 - pinoxaden,  
fenoxaprop-p-ethyl

## Company:

Bayer

## Formulation:

**Cirray (PCP#34306):** 50 g/L pinoxaden and 50 g/L fenoxaprop-p-ethyl formulated as an emulsifiable concentrate with cloquintocet-mexyl at 25 g/L as a safener.

- Container sizes - 6.48 L, 103.6 L

## Crops and Staging:

**Spring wheat and barley:** 1 to 6 leaves on the main stem plus 3 tillers

## Weeds, Rates and Staging:

Apply 323 mL per acre to actively growing weeds with 1 to 6 leaves on the main stem, plus 3 tillers.

### Weeds controlled:

- Green foxtail
- Barnyard grass
- Persian darnel
- Yellow foxtail
- Wild oats

**Note:** Maximum of ONE APPLICATION of this product or other product containing fenoxaprop or pinoxaden per year.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** minimum 20 L per acre.
  - **Aerial:** 12 L per acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with no smaller than **ASABE medium** droplets by ground or air. Low drift nozzles may require higher pressures for proper performance.
- **Screens:** 50 mesh nozzle screens.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing | Target                    | Movement   | Spectrum  | WSSA Group |
|--------------------|--------|---------------------------|------------|-----------|------------|
| pinoxaden          | POST   | Lipid synthesis inhibitor | Symplastic | Selective | 1          |
| fenoxaprop-p-ethyl | POST   | Lipid synthesis inhibitor | Symplastic | Selective | 1          |

## Effects of Growing Conditions:

Weed control can be reduced or delayed under stress conditions such as drought, heat, or insufficient fertility, flooding, or prolonged cool temperatures. Grass escapes or re-tillering may occur if application is made during prolonged stress conditions. DO NOT apply to crop that is stressed by conditions, such as frost, low fertility, drought, flooding, disease, or insect damage as crop injury may result.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted. Consult label of broadleaf herbicide prior to use.

**Herbicides:**

- 2,4-D Ester LV 700
- Ally
- Bromoxynil/MCPA ester<sup>†</sup>
- Frontline XL
- Infinity<sup>\*\*</sup>
- MCPA amine 500
- MCPA ester<sup>†</sup>
- Mecoprop-P (150 g ae/L)<sup>\*\*\*</sup>
- Pixxaro
- Prestige XC
- Refine SG
- Refine SG + Buctril M
- Refine SG + MCPA ester<sup>†\*</sup>
- Thumper
- Trophy<sup>†</sup>

<sup>†</sup> A reduction in barnyard grass control may be observed.

\* Suppression only of green foxtail.

\*\* For control of common ragweed and suppression of round-leaved mallow only.

\*\*\* A reduction in wild oat control may be observed.

**Fungicides:** Tilt 250E.

**Insecticides:** None registered

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

**Restrictions:**

- **Rainfall:** Rainfall within 1 hour may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Pre-harvest Interval:** Leave 65 days between application and harvest for grain or straw.
- **Grazing Restrictions:** DO NOT graze or feed to livestock for 30 days after treatment.
- **Re-cropping Interval:** There are no crop rotation limitations the year following application.
- **Aerial Application:** May be applied by aircraft.
- **Storage:** Store this product away from food or feed. Keep in original container, tightly closed, during storage. Store in a cool, dry, well-ventilated area away from feed and foodstuffs, and out of reach of children and animals. Keep away from fire or open flame, or other sources of heat. If frozen, allow to thaw and agitate thoroughly prior to use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

**Sprayer Cleaning:**

Refer to 'Method B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

**Hazard Rating:**

Danger – Eye and Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Clethodim

**Herbicide Group**  
**1 - clethodim**

**Company:**

UPL AgroSolutions Canada (*Select* – PCP#22625 & *Amigo* – PCP#22644; *Select 1EC* – PCP# 34250)

## Formulation:

**Arrow All In, Select 1EC, Shadow XL, IPCO GraminX Complete, CO-OP Patron Complete, Centurion ADV:** 120 g/L clethodim formulated as an emulsifiable concentrate.

- Container sizes:
  - Arrow All In - 2 x 6 L, 96 L, 450 L
  - Select 1EC, Centurion ADV - 2 x 6.1 L, 97.6 L
  - Shadow XL - 6 L, 97.6 L
  - IPCO GraminX Complete & CO-Op Patron Complete - 6.1 L, 97.6 L

**Antler 360 Unpacked:** 360 g/L clethodim formulated as an emulsifiable concentrate.

- Container size - 4 x 4 L

**Other products:** 240 g/L clethodim formulated as an emulsifiable concentrate.

- Container sizes:
  - Statue - 2 x 3 L clethodim, adjuvant sold separately
  - Independence - 6 L clethodim + 15 L adjuvant
  - Antler 240 - 3 L clethodim + 7.5 L adjuvant
  - Other products - 3 L clethodim + 9 L adjuvant

## Crops, Rates and Staging:

Crops are tolerant at all growth stages at maximum rates, but "Pre-harvest Intervals" must be observed to prevent excess residue in the grain (see "Restrictions:" section below).

**To a maximum rate of 150 mL per acre for 120 g/L formulations, 50 mL per acre for Antler 360 Unpacked, and 75 mL per acre for other formulations:**

- |             |                                                                         |                                    |
|-------------|-------------------------------------------------------------------------|------------------------------------|
| ◦ Chickpea* | ◦ Dry bean <sup>#</sup> (black, great northern, navy, pink, pinto, red) | ◦ Faba bean <sup>ΔΔΔ†</sup>        |
|             |                                                                         | ◦ Prairie carnation <sup>**†</sup> |

**To the maximum rate in the Weeds, Rates and Staging chart below:**

- |                                            |                             |                                                            |
|--------------------------------------------|-----------------------------|------------------------------------------------------------|
| ◦ Alfalfa (seedling only)                  | ◦ Fenugreek <sup>***†</sup> | ◦ Mustard, oilseed types ( <i>B. juncea</i> ) <sup>Δ</sup> |
| ◦ Buckwheat <sup>ΔΔΔΔ</sup>                | ◦ Field pea                 | ◦ Potato                                                   |
| ◦ Canola                                   | ◦ Flax (including solin)    | ◦ Safflower (6 to 8 leaf) <sup>Δ†</sup>                    |
| ◦ Caraway <sup>Δ†</sup>                    | ◦ Hops <sup>ΔΔΔ†</sup>      | ◦ Soybean                                                  |
| ◦ Carinata <sup>ΔΔΔ</sup>                  | ◦ Lentil                    | ◦ Sunflower                                                |
| ◦ Coriander <sup>**†</sup>                 | ◦ Mustard, condiment        |                                                            |
| ◦ Dill (seed production) <sup>***ΔΔ†</sup> | (brown, oriental, yellow)   |                                                            |

\* Apply up to the 9 node stage (7 inches or 18 cm maximum height)

\*\* Apply in the 2 to 5 leaf stage, one application per year.

\*\*\* Apply in the 3 to 5 leaf stage, one application per year.

<sup>#</sup> Select, Centurion, Centurion ADV, Shadow RTM, Antler 360 Unpacked, Statue, Independence and Viking Clethodim are registered for all *Phaseolus vulgaris* varieties. Since not all varieties of dry beans have been tested for tolerance to clethodim, first use of clethodim should be limited to a small area of each variety to confirm tolerance. Antler, Arrow All In, and Clethodim 240 and Deputy are registered for use on black, great northern, navy, pink, pinto, and red dry bean types only. Centurion and Centurion ADV are registered for use on navy and pink dry bean types only.

<sup>Δ</sup> Select, Centurion, Centurion ADV, Shadow RTM, Statue, IPCO GraminX, CO-OP Patron II, Advantage Clethodim, IPCO GraminX Complete, Co-op Patron Complete and Independence, Independence and Viking Clethodim only.

<sup>ΔΔ</sup> Select, Centurion, Centurion ADV, Shadow RTM, IPCO GraminX, CO-OP Patron II, IPCO GraminX Complete, CO-OP Patron Complete and Advantage Clethodim only.

<sup>ΔΔΔ</sup> Select, Centurion, Centurion ADV, Shadow RTM, IPCO GraminX, CO-OP Patron II, IPCO GraminX Complete and CO-OP Patron Complete only.

<sup>ΔΔΔΔ</sup> Select and Centurion only.

<sup>†</sup> NOTE: Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply these uses do so at their own risk.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

DO NOT apply more than a combined total rate of 37.5 g clethodim active ingredient (300 mL per acre of 120 g/L formulations, 100 mL per acre of 360 g/L formulations, or 150 mL per acre of 240 g/L formulations), or other products containing clethodim, to the same field per season.

**Adjuvants:** Clethodim products must be applied with 0.5 L of Amigo adjuvant (Centurion, Shadow RTM, Antler 360 Unpacked or Select), Empire (Independence), Nufarm Carrier adjuvant (Statue), X-ACT (Antler 240EC), Surf-Act (Clethodim 240, Deputy, Advantage Clethodim Adjuvant (Advantage Clethodim 240), IPCO X-Surf (IPCO GraminX), Patron II adjuvant (CO-OP Patron II), Journey HSOC or MSO (Tide Clethodim 240 EC) or Viking Phosphate Ester Adjuvant (Viking Clethodim) per 100 L of spray solution (unless otherwise indicated on the label). For spray water sources high in bicarbonate ions (CO<sub>3</sub>) see 'Effects of Growing Conditions' section following.

*Arrow All In, Select 1EC, Centurion ADV, IPCO GraminX Complete and CO-OP Patron Complete* do not require the addition of an adjuvant since it is built into the formulations. Optional - *Arrow All In* can be applied with additional adjuvant when circumstances are not ideal for weed control (heavy weed pressure, drought). Use 30% phosphate ester surfactant at 0.5 L per 100 L solution, methylated seed oil at 0.5 L per 100 L solution or non-ionic surfactant at 0.25 L per 100 L solution.

| Weed                                                                                                                                  | Rate (mL per acre) |         |         | Stage                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------|---------|---------|---------------------------------------------------------------------------------------------------------|
|                                                                                                                                       | 240 g/L            | 120 g/L | 360 g/L |                                                                                                         |
| Barnyard grass, foxtail (green, yellow)*†, proso millet, volunteer cereals (barley*†, canary seed, corn, oats*†, wheat*†), wild oats† | 50**               | 100**   | 33.3**  | Apply at 2 to 6 leaf stage.<br>† Apply at the 2 to 4 leaf stage when treated with the lowest rate.      |
| Moderate to heavy infestations of the above grasses, plus Persian darnel, Japanese brome <sup>Δ</sup> , foxtail barley <sup>Δ</sup>   | 75                 | 150     | 50      | For best results in either case, apply at the 2 to 3 leaf stage.                                        |
| Quackgrass (suppression only)                                                                                                         | 75                 | 150     | 50      | 2 to 6 leaf stage or 3 to 6 inches (6 to 15 cm) tall. For best results, apply at the 3 to 5 leaf stage. |
| Quackgrass (season long control), Japanese brome (max 3 tillers) <sup>Δ</sup> , foxtail barley (max 3 tillers) <sup>Δ</sup>           | 150***             | 300     | 100     |                                                                                                         |

\* **Apply to light infestations of these weeds only for the lowest rate. The manufacturers do not provide guidelines for weed densities under light infestations. When in doubt as to the level of weed infestation, use the higher rate or contact the manufacturer.**

\*\* **At this rate, clethodim should NOT be tank mixed with any other pesticide and should only be applied under the following growing conditions: good crop stand, within the recommended leaf staging (2 to 3 leaf is optimum timing) prior to tillering, light weed infestations, adequate moisture and fertility, absence of stress, and good growing conditions.**

\*\*\* **Apply with 1 L of adjuvant per 100 L of spray solution.**

<sup>Δ</sup> *Select, Centurion, Centurion ADV, Shadow RTM, IPCO GraminX, CO-OP Patron II, IPCO GraminX Complete and CO-OP Patron Complete only.*

Refer to the product labels for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre. Use 40 L per acre under dense weed infestations or dense crop canopies.
  - **Aerial:** Minimum of 11.3 L per acre.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) when using conventional 80° flat fan nozzles tilted forward at a 45° angle. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver proper coverage with **ASABE medium** droplets or larger.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement                            | Spectrum     | WSSA Group |
|-------------------|---------------|-----------------------------------|-------------------------------------|--------------|------------|
| clethodim         | POST (foliar) | ACCCase Lipid synthesis inhibitor | Toward regions of growth (Symplast) | Grasses only | 1          |

## Effects of Growing Conditions:

Clethodim will be less effective when plants are stressed by lack of moisture, excessive moisture, low temperature and/or very low relative humidity. Re-growth of tillers may occur if application is made under any of the above stress conditions.

Clethodim activity is reduced by levels of bicarbonate ions in spray water equal to or greater than 500 ppm. The addition of ammonium sulphate at 1.6 L per acre (490 g per L liquid) or 0.8 kg per acre (99 percent dry), or the addition of 28-0-0 liquid fertilizer at 0.5 L per acre to the tank prior to the addition of clethodim has been shown to restore control.

## Tank Mixes:

Clethodim may be tank mixed with other pesticides at the all but the lowest rates. Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

Add the recommended amount of adjuvant with all tank mixes unless otherwise indicated.

### Herbicides:

- **In flax (not including solin):**
  - Bromoxynil/MCPA ester (label rates) <sup>Δ</sup>
  - *Curtail M*<sup>†</sup>
  - MCPA Ester (rates for flax)
- **In solin (low linolenic flax):**
  - Bromoxynil/MCPA ester (label rates) <sup>Δ</sup>
  - *Curtail M*<sup>†</sup>

- **In canola:**
  - *Muster*<sup>†</sup>
  - *Lontrel 360*
- **In CLEARFIELD canola only:**
  - *Pursuit* at 42 to 85 mL per acre<sup>†</sup>
- **In Liberty Link canola:**
  - Glufosinate 150 SN (*Liberty 150 SN* and *Interline* only) at label rates mixed with 360 g/L formulations at 17 mL per acre, 240 g/L formulations at 25 mL per acre, and 120 g/L formulations at 50 mL per acre.
  - Glufosinate 150 SN (*Liberty 150 SN* and *Interline* only) at label rates mixed with *Antler 360 Unpacked* up to 50.6 mL per acre, *Select 240 EC*, *Centurion*, *CO-OP Patron II*, *IPCO GraminX*, *Shadow RTM* and *Viking Clethodim* up to 75 mL per acre. Add adjuvant for clethodim product to the tank first, then glufosinate 150SN and then clethodim.
  - Glufosinate 150 SN (*Liberty 150 SN* and *Interline* only) at label rates with *Shadow XL* and *Select 1EC* up to 153 mL per acre.
  - Glufosinate 150 SN (*Liberty 150 SN* only) at label rates mixed with *Centurion ADV* up to 153 mL per acre.
  - *Liberty 150 SN* or *Liberty AMP* and *Facet L*.
  - *Liberty AMP* at label rates mixed with *Centurion* or *Select* at 25 or 77 mL per acre *Centurion ADV* at 51 or 153 mL per acre.
- **In field peas:**
  - *Pursuit*
- **In Glyphosate tolerant soybean:**
  - Glyphosate (360 to 720 g ae per acre)<sup>†\*</sup>

<sup>†</sup> Apply with the 150 mL per acre rate of *Arrow All In*, *Centurion ADV*, *Select 1EC*, *Shadow XL*, *Arrow All In*, *IPCO GraminX Complete* and *Co-OP Patron Complete*, 50 mL per acre rate of *Antler 360 Unpacked*, or the 75 mL per acre rate of other clethodim formulations only.

<sup>Δ</sup> Manufacturers may only support specific mixes. Contact the manufacturer for more information.

\* *Select*, *Shadow RTM*, *Antler*, *Arrow All In*, *IPCO GraminX*, *CO-OP Patron II*, *IPCO GraminX Complete*, *CO-OP Patron Complete* and *Centurion ADV* only.

Allow 4 days between application of clethodim and any other chemical not recommended as a tank mix combination on the label.

**Fertilizer:** None registered.

**Insecticide:** None registered.

**Fungicides:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze or cut treated crops for forage until 60 days after application of clethodim to annual crops, and 30 days after application to seedling alfalfa.
- **Pre-harvest Interval:**

| Pre-harvest Interval (days) | Crops                                                                                                                                                         |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21                          | Hops                                                                                                                                                          |
| 30                          | Alfalfa, fenugreek                                                                                                                                            |
| 40                          | Dill seed                                                                                                                                                     |
| 60                          | Canola, carinata, chickpeas (Desi and Kabuli) coriander, dry beans, faba bean, flax (including solin), lentil, or mustard (brown, yellow, oriental), potatoes |
| 70                          | Safflower                                                                                                                                                     |
| 72                          | Sunflower                                                                                                                                                     |
| 75                          | Field peas, soybeans                                                                                                                                          |

- **Aerial Application:** *Select*, *Centurion*, *Centurion ADV*, *Shadow RTM*, *IPCO GraminX* and *CO-OP Patron II* may be applied by air in carinata, canola, chickpea, dry bean, faba bean, flax, field pea, lentil, mustard, potato, soybean, sunflower only. *Antler 360 Unpacked*, *Independence*, *Statue*, *Tide Clethodim 240 EC* and *Viking Clethodim* may be applied by air in canola, chickpea, dry bean, flax, field pea, lentil, mustard, potato, soybean, sunflower only. DO NOT apply *Antler*, *Arrow All In*, *Clethodim 240* and *Deputy* by air.
- **Storage:** May be stored at any temperature. Shake well before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

*Select, Shadow, Independence, Statue, Centurion, Centurion ADV, Tide Clethodim 240 EC and Viking Clethodim:*

Warning – Skin and Eye Irritant

*Antler, Antler 360 Unpacked, Arrow All In and Patron:*

Caution – Skin and Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Clethodim + Imazamox

*This product is a prepackaged tank mix of clethodim and imazamox. Information listed is restricted to Crops, Weed, Rates and Tank Mixes. For other detailed information on the effect of growing conditions and restrictions for the component products see the product pages listed above.*

Herbicide Group

1 - imazamox

2 - clethodim

## Company:

ADAMA Canada (*Davai A Plus*)

## Formulation:

The *Davai A Plus* package has the following components:

***Davai 80 SL (PCP#32929):*** 80 g/L imazamox formulated as a solution

- Container size - 4 L

-plus-

***Arrow All In (PCP#33225):*** 120 g/L clethodim formulated as an emulsifiable concentrate

- Container size - 6 L

## Crops and Staging:

**CLEARFIELD lentil:** 1- 9 node stage

**Dry bean:** Emergence to 3 expanded trifoliolate leaves

**Soybean:** Emergence to 3 expanded trifoliolate leaves

**Field Pea:** 1 to 6 true leaf stage

## Weeds Staging:

Weeds controlled by *Davai 80 SL* (see imazamox) plus the grasses controlled by *Arrow All In* (see clethodim) and the stages indicated on the component product pages.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Rates:

***Davai 80 SL:*** 100 mL per acre

***Arrow All In:*** 150 mL per acre

## Tank Mixes:

None registered.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Clodinafop

Herbicide Group  
1 - clodinafop

## Company:

Syngenta Canada (*Horizon NG* – PCP#29089; built in adjuvant)  
ADAMA Canada (*Ladder All In* – PCP#32497; built in adjuvant)  
Albaugh (*Slam'R* – PCP#31053; *Albaugh Surfactant* – PCP#32599; *Winner* – PCP#33786; *Albaugh Surfactant* – PCP#32599)  
NewAgco (*Aurora* – PCP#29711; *Chem Spray COC Adjuvant* – PCP#29712)  
Farmers Business Network Canada (*Foax* – PCP#31261; *CropOil 83/17 Adjuvant* – PCP#30978)  
Loveland Products Canada (*Foothills NG* – PCP#30341; built in adjuvant)  
Nufarm Agriculture (*Signal* – PCP#29172; *Nufarm Enhance* – PCP#29952)  
WinField United Canada (*Cadillac Unpacked* – PCP#30428; *Cadillac One* – PCP#32539; built in adjuvant)  
Viking (*Viking Clodinafop* – PCP# 34749; *Viking Crop Oil Concentrate* – PCP# 34811)

## Formulation:

**Horizon NG\*, Foothills NG\*:** 60 g/L clodinafop-propargyl formulated as an emulsifiable concentrate.

- Container sizes\*\* - 15.14 L, 121.1 L

**Cadillac One\*, Ladder All In\*:** 80 g/L clodinafop-propargyl formulated as an emulsifiable concentrate.

- Container sizes\*\* - 11.3 L, 90.6 L

**Cadillac Unpacked, Foax, Aurora, Signal, Slam'R, Viking Clodinafop, Winner:** 240 g/L clodinafop-propargyl formulated as an emulsifiable concentrate.

- Container sizes\*\* - 3.68 L, 7.36 L, 7.5 L, 14.72 L, 18.4 L, 22.8 L, 58.9 L, 92 L, 115 L
  - **CropOil 83/17, and Albaugh Surfactant:** 3.78 L,
  - **Nufarm Enhance:** 4 L, 16 L, 64 L
  - **ADAMA Adjuvant 80:** 4 L, 12 L
  - **Viking Crop Oil Concentrate:** 15 L, 188 L

\* These products have a built in adjuvant system and do not require the addition of an adjuvant.

\*\* Package sizes are totals across all containers in the pack and availability varies of each by company. Not all sizes may be available from each company.

## Crops and Staging:

**Spring wheat (including durum)** - prior to the emergence of the 4<sup>th</sup> tiller.

When tank mixing, check broadleaf product description for additional restrictions.

## Weeds, Rates and Staging:

**NG Formulations:** 376 mL per acre, no additional adjuvant required.

-or-

**Cadillac One, Ladder All In:** 283 mL per acre, no additional adjuvant required.

-or-

**240 EC Formulations:** 93 mL per acre plus recommended adjuvant at 0.8 L per 100 L spray solution. For *Signal* only add *Nufarm Enhance* adjuvant or *Journey HSOC*, for *Slam'R* only add *Albaugh Surfactant* at 0.25 L per 100 L spray solution.

**For control of:**

| Weed                            | Stage                                               |
|---------------------------------|-----------------------------------------------------|
| Barley grass                    | 1 to 5 leaf prior to tillering                      |
| Foxtail (green, yellow)         | 1 to 5 leaf stage, prior to emergence of 3rd tiller |
| Volunteer canaryseed, wild oats | 1 to 6 leaf, maximum 3 tillers                      |
| Volunteer oats                  | 3 to 6 leaf, maximum 3 tillers                      |

**NG Formulations:** 474 mL per acre, no additional adjuvant required;

-or-

**Cadillac One, Ladder All In:** 356 mL per acre, no additional adjuvant required.

-or-

**240 EC Formulations:** 115 mL per acre plus recommended adjuvant at 1 L per 100 L spray solution of the recommended adjuvant. For *Signal* only add *Nufarm Enhance* adjuvant or *Journey HSOC*, for *Slam'R* and *Winner* only add *Albaugh Surfactant* at 0.25 L per 100 L spray solution.

**For control of:**

| Weed           | Stage                          |
|----------------|--------------------------------|
| Persian dandel | 1 to 5 leaf prior to tillering |

Apply at the 2 to 3 leaf stage for optimum control. Optimum weed control and yield response occurs when weeds are controlled before tillering. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

**Application Information:**

- **Water Volume:**
  - **Ground:** 20 L to 40 L per acre.
  - **Aerial:** 12 L per acre.
- **Nozzles and Pressure:** 40 to 45 psi (275 to 310 kPa) when using conventional 80° or 110° flat fan stainless steel nozzles tilted forward at an angle of 45°. Low drift nozzles may require higher pressures for proper performance. Consult with herbicide manufacturer regarding the suitability of low drift nozzles for use with this product.

**Tank Mixes:**

Mixes provide control of wild oats, green foxtail, and weeds/insects controlled by the tank mix partner unless otherwise noted.

**Herbicides:**

| <i>Refine SG</i> (8 g/acre) <sup>†††</sup>                      |                |                          | •                   |                | •                    | •                      |                          | •              |                            |
| <i>Trophy</i> (20 acres/case)                                   |                | •                        | •                   |                | •                    | •                      |                          | •              |                            |

Refer to the broadleaf herbicide label for crop staging, and other information. When tank mixing *Clodinafop 240 EC*, always add the broadleaf herbicide first, followed by clodinafop, with the adjuvant added last. Reductions in green foxtail and wild oats control may be observed when tank mixed with 2,4-D amine and MCPA amine.

**Insecticides:**

- Lambda-cyhalothrin<sup>#</sup> (25 to 33 mL per acre)<sup>Ⓒ</sup>

**Fungicides:**

- Propiconazole<sup>#</sup> (0.1 L<sup>#</sup> to 0.2 L per acre)<sup>Ⓒ</sup>
- Clodinafop may also be mixed with Lambda-cyhalothrin<sup>#</sup> plus propiconazole<sup>#</sup> at the rates above<sup>Ⓒ</sup>.

**Fertilizers:** None registered.

<sup>#</sup> Check product label for specific tank mix partners and appropriate rates

<sup>Δ</sup> NOT for use with *Estaprop XT* or *Dichlorprop DX*.

<sup>\*</sup> Rate above 0.81 L per acre may cause crop injury.

<sup>\*\*</sup> Barnyard grass also controlled.

<sup>\*\*\*</sup> Barnyard grass and persian dandel also controlled. May be applied by air.

<sup>††</sup> See 2,4-D for equivalent formulation rates.

<sup>†††</sup> Additional adjuvants are not required.

<sup>Ⓒ</sup> All products except *Aurora*.

**Note:** The above mixes are those listed on the clodinafop labels only.

Clodinafop manufacturers may also support mixes with pesticides that are not on the clodinafop labels. Check with each manufacturer for the products they support. Mixes must be applied according to the most restrictive use limitations for all products added to the tank.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement                       | Spectrum     | WSSA Group |
|-------------------|---------------|-----------------------------------|--------------------------------|--------------|------------|
| clodinafop        | POST (foliar) | ACCCase Lipid synthesis inhibitor | Toward growth areas (Symplast) | Grasses only | 1          |

## Effects of Growing Conditions:

For optimum results, apply to actively growing weeds. DO NOT apply to crops or weeds that are stressed by hot or cool conditions, frost, drought, low fertility, water-saturated soil, disease or insect damage as crop injury and poor weed control may result.

## Restrictions:

- **Rainfall:** Within 30 minutes may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze or harvest treated crops for forage within 3 days of application.
- **Pre-harvest Interval:** Leave at least 60 days from application to harvest.
- **Re-cropping Interval:** No restrictions in the year following treatment.
- **Storage:** May be frozen.
- **Aerial Application:** May be applied by air.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general tank cleaning section in the introduction. If mixed with other pesticides, the cleaning method above should be combined with the method recommended for the tank mix partner if different from above.

## Hazard Rating:

240 EC formulations:

Caution – Poison

Warning – Eye and Skin Irritant

NG Formulations:

Caution – Skin Irritant

*Cadillac One, Ladder All In:*

Danger – Corrosive to Eyes

All products:

Warning – Contains the Allergen Soy

Refer to the Introduction for an explanation of the symbols.

# Clomazone

Herbicide Group  
13 - clomazone

## Company:

FMC Corporation (*Command 360 ME* – PCP#27827)  
Interprovincial Cooperatives (*IPCO Clomazone* – PCP#33910)  
Sharda CropChem Limited (*Czar* – PCP#34338)  
Sipcam Agro USA Inc. (*Caravel* – PCP#34429)

## Formulation:

360 g/L clomazone formulated as a microcapsule suspension.

- Container sizes:
  - *Command 360ME, Caravel* - 2 x 5.4 L
  - *IPCO Clomazone* - 10 L (sold only as a component of the copack *IPCO Trigon*)
  - *Czar* - 2 x 5 L

## Crops, Rates and Staging:

### Pre-plant only:

- 101 mL per acre: Mustard (brown, oriental, yellow)\*, Ethiopian mustard (*Brassica carinata*)\*, camelina\*
- up to 135 mL per acre: Canola (all varieties), coriander\*

<sup>†</sup>Since this use is registered under the User Requested Minor Use Label Expansion program, the manufacturers assume no responsibility for herbicide performance. **Application to coriander is at the risk of the user.**

- **Broadcast after seeding but prior to crop emergence:**
  - up to 135 mL per acre: Dry beans\*

\* *Command 360 ME* only

## Weeds, Rates and Staging:

Apply pre-emergent to weeds.

### Apply 101 mL per acre for suppression of:

- Cleavers
- Chickweed (suppression only - *Command 360 ME* only)

### Apply 135 mL per acre for control of:

- Cleavers
- Chickweed (suppression only - *Command 360 ME* only)

Maximum ONE APPLICATION per year of clomazone or other products containing the active ingredient clomazone.

DO NOT APPLY clomazone to:

- sandy soils
- soils with greater than 10 percent organic matter
- fields receiving applications of solid manure, unless it has been thoroughly incorporated to a depth of 10 to 15 cm

## Application Information:

- **Water Volume:** minimum 40 L per acre.
- **Nozzles & Pressure:** Use 30 psi (207 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE coarse** droplets while maintaining good coverage of foliage.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing            | Target                           | Movement          | Spectrum                            | WSSA Group |
|-------------------|-------------------|----------------------------------|-------------------|-------------------------------------|------------|
| clomazone         | PRE (soil active) | DOXP Pigment synthesis inhibitor | Upward (Apoplast) | Broadleaf (& grass at higher rates) | 13         |

## Effects of Growing Conditions:

Rainfall (5 to 10 mm), or equivalent irrigation, is required within 7 to 10 days for activation. Dry conditions that persist after application may reduce weed control. Heavy rainfall after application may dilute the active layer and result in reduced weed control. DO NOT apply when temperature exceed 25°C due to increased risk of vapour drift. Temporary whitening/yellowing of the crop may occur when emerging from treated soil. Under some conditions, temporary whitening or yellowing of leaves may occur on approved rotational crops where undesirable soil residues of clomazone exist. Refer to the label for more details.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Canola (prior to seeding):**
  - Carfentrazone
  - Carfentrazone + glyphosate

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Moderate rainfall after application is required for activation. Heavy rainfall shortly after application may reduce activity.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze the treated crop or cut for hay.
- **Re-cropping Interval:** Winter wheat may be sown 4 months after application. Canola, corn (field, sweet), dry bean (kidney, navy), field pea, potatoes, soybean, lentil, barley, oats and wheat (spring or durum) may be planted the year after application. All other crops may be planted 16 months after application. Under some conditions, temporary whitening or yellowing of leaves may occur on approved rotational crops where undesirable soil residues of clomazone exist. Refer to label for more information on recropping precautions.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store above 5°C to keep from freezing. If frozen, thaw before use. If solid crystals are observed, warm to above 15°C and shake or roll container periodically to dissolve solids. DO NOT store near heat or open flame.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A or B' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

Caution – Poison

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Clopyralid

Herbicide Group  
4 - clopyralid

## Company:

Corteva Agriscience (*Lontrel XC*)  
Sharda CropChem Canada (*Pyralid*)  
NewAgco (*Clobber*)  
Advantage Crop Protection (*Advantage Clopyralid 360*)  
Albaugh (*Spur 360*)  
Viking (*Viking Clopyralid*)  
Vincere Agri Solutions Ltd. (*Tissel X 360*)  
Interprovincial Cooperative Ltd. (*IPCO Warrant*)  
Tide International Canada Inc. (*Tide Clopyralid 360 SL*)

## Formulation:

**Lontrel XC (PCP#32795), IPCO Warrant (PCP#35378):** 600 g/L clopyralid formulated as a solution.

- Container size - 4 x 2.67 L, 2.67 L (*IPCO Warrant only*)

**Clobber (PCP#33114), Advantage Clopyralid 360 (PCP#33795), Spur 360 (PCP#34501), Viking Clopyralid (PCP#34779), Tissel X 360 (PCP#35454), Tide Clopyralid 360 SL (PCP#35435):** 360 g/L clopyralid formulated as a solution.

- Container sizes:
  - *Advantage Clopyralid 360, Tissel X 360* - 4.45 L
  - *Clobber, Viking Clopyralid* - 2 x 8.9 L

**Pyralid (PCP#32265):** 300 g/L clopyralid formulated as a solution.

- Container size - 4 x 4.45 L

## Crops, Rates and Staging:

| Clopyralid Rate<br>(g ai per acre) | Formulation (mL per acre) |                            |                                           |                            |                |                            |

| 61                                 | 170                       | 42                         | 102                                       | 25                         | 204            | 50                         |
| 82                                 | 240                       | 56                         | 137                                       | 34                         | 272            | 67                         |
| 121                                | 340                       | 83                         | 202                                       | 50                         | 403            | 100                        |

*Note: The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (for example, sandy soil) and/or the depth to the water table is shallow. Use should be avoided in these areas.*

**Wheat (spring, durum, winter), barley and oats:** Apply in spring at 41 to 61 g ai per acre from the 3 leaf to flag leaf emergence stage.

**Rye (fall, spring - *Lontrel XC* only):** Apply at 41 to 61 g ai per acre from the 3 leaf to flag leaf emergence stage.

**Flax and solin (low linolenic acid flax):** Apply at 82 to 121 g ai per acre from the 2 to 4 inches (5 to 10 cm) in height.

**Canaryseed (including for human consumption - *Lontrel XC* and *IPCO Warrant* only):** Apply at 41 g ai per acre from the 3 leaf to just prior to flag leaf emergence.

**Canola:** Apply at 61 to 121 g ai per acre from the 2 to 6 leaf stage. Argentine (*B. napus*) and Polish (*B. rapa*) varieties only; application to any other canola type oilseeds may cause crop injury.

**Corn (*Lontrel XC* and *IPCO Warrant* only):** Apply at 41 g ai per acre from spike to V6.

**Seedling forage grasses\*:** Apply at 61 to 121 g ai per acre from the 2 to 4 leaf stage.

**Established grasses\*:** Apply at 61 to 121 g ai per acre at the shot blade stage, or in the fall after harvest or in early spring.

**Seedling and established grasses\* for forage and seed production including:**

- Bromegrass (smooth)
- Orchardgrass
- Wheatgrass (crested, intermediate, slender, streambank, tall\*\*)
- Fescue (creeping red, meadow, tall)
- Reed canarygrass
- Wildrye (Altai, Russian)
- Kentucky bluegrass
- Timothy
- Meadow foxtail

**Clopyralid at 121 g ai per acre:**

**Fallow:** Stage according to weeds.

**Shelterbelts\*:** containing villosa lilac, acute willow, Colorado spruce, white spruce, buffaloberry and chokecherry\*.

**Plantation poplar (including hybrid poplar)\***

**\* NOTE:** Since these uses are registered under the User Requested Minor Use Label Expansion program, the manufacturer assumes no responsibility for herbicide performance. Users of this product for these uses do so at their own risk.

**\*\* for forage use only**

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

**Weeds, Rates and Staging:**

Apply to weeds when young and actively growing.

| Weeds Controlled                                                                                                                                                                 | Rate* (g ai per acre)                                                                                                                |

<sup>Δ</sup> *Lontrel XC, IPCO Warrant and Advantage Clopyralid 360 only.*

<sup>ΔΔ</sup> *Lontrel XC and IPCO Warrant only.*

<sup>†</sup> Canada thistle - after all thistles have emerged and when the majority are in the rosette to pre-bud stage.

<sup>\*</sup> Top growth suppression for 6 to 8 weeks. Some regrowth may occur by end of season, but will not interfere with crop harvest.

<sup>\*\*</sup> Provides season long control of Canada thistle. Not all root stalks will be killed and some regrowth may occur by the end of the growing season.

<sup>\*\*\*</sup> Provides season long control of Canada thistle with suppression into the following year.

**Application Information:**

- **Water Volume:** 40 to 80 L per acre.
- **Nozzles and Pressure:** Maximum 30 to 40 psi (200 to 275 kPa) with conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressures designed to deliver thorough, even coverage with *ASABE medium* or larger droplets.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| clopyralid        | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

**Effects of Growing Conditions:**

Poor control may occur under dry conditions. Injury to flax may occur when tank mixing with MCPA. To reduce the risk of crop injury, DO NOT apply tank mixes if temperature exceeds 27°C.

**Tank Mixes:****Herbicides:**

Clopyralid applications following applications of products containing bromoxynil (*Approve, Badge, Bromotril 240 EC, Buctril M, Enforcer, Koril, Logic M, Pardner, Thumper*) should be delayed by 14 days to allow the Canada thistle to recover from leaf burn.

Recommended rates of clopyralid may be used for each crop unless otherwise indicated. Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

| Herbicides                                            | Crop (rate g ai per acre – if different from label rates range above) |             |        |                          |                      |       |
|-------------------------------------------------------|-----------------------------------------------------------------------|-------------|--------|--------------------------|----------------------|-------|
|                                                       | Canola                                                                | Flax        | Barley | Spring Wheat (Not durum) | Oats and Canaryseed* | Corn  |
| <i>Select</i>                                         | (61 to 121)                                                           | (82 to 121) | -      | -                        | -                    | -     |
| Glyphosate (glyphosate tolerant canola and corn only) | (41)                                                                  | -           | -      | -                        | -                    | (41)* |

| Herbicides                                                    | Crop (rate g ai per acre – if different from label rates range above) |            |            |                          |                      |      |

**\*Lontrel XC and IPCO Warrant only**

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

**Note: The above mixes are those listed on the clopyralid labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance.

Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** For field corn, do not graze or harvest for silage within 40 days of treatment. For all other crops or areas treated with this product may be grazed immediately following treatment.
- **Re-cropping Interval:** Clopyralid residues in the soil may affect succeeding crops. The year after application, replant to wheat, barley, oats, rye, flax, forage grasses, mustard or canola. DO NOT use manure from animals fed or bedded with clopyralid-treated straw, except on fields that are to be sown to clopyralid-tolerant crops.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in heated storage. If product is frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No detailed cleaning procedures are indicated on the label. Use a commercial all purpose spray sprayer cleaning product for adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

**Lontrel XC and IPCO Warrant:**

Keep out of reach of children.

**Other Clopyralid products:**

Caution – Poison

Danger – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Clopyralid/Fluroxypyr

Herbicide Group  
4 - clopyralid, fluroxypyr

## Company:

Loveland Products Canada (*Momentum*)  
Sharda Crop Chem (*Inertia*)

## Formulation:

*Momentum* (PCP#30456), *Inertia* (PCP#34225): 90 g/L clopyralid and 90 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 8.99 L

## Crops and Staging:

Apply at the 3 leaf to just before the flag leaf stage of barley, wheat (spring, durum).

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds and Staging:

The following weeds are controlled at the 1 to 4 leaf per whorl stage unless specified:

- Canada thistle\*\*
- Kochia (2 to 8 leaf)
- Volunteer flax (1 to 12 cm)
- Cleavers
- Stork's-bill (1 to 8 leaf)\*
- Wild buckwheat

\* **Suppression only.**

\*\* **Season long control, some regrowth may occur in the fall. Apply from the 4 inch (10 cm) to pre-bud stage.**

## Rates:

0.45 L per acre.

Apply a maximum of ONE APPLICATION of this product or other products containing either clopyralid or fluroxypyr per year.

## Application Information:

- **Water Volume:** 40 L per acre.
- **Nozzles and Pressure:** Use 30 to 40 psi (200 to 275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE coarse** droplets while maintaining good coverage of foliage.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient         | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|---------------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| clopyralid,<br>fluroxypyr | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

When weeds are stressed because of drought, flooding, hot or cool (less than 8°C) temperatures, weeds are not actively growing and control may be reduced. DO NOT apply to weeds stressed longer than 20 days from lack of moisture as poor control can result.

## Tank Mixes:

### Herbicides:

- MCPA ester 500 (0.34 to 0.45 L per acre)
- MCPA ester 600 (0.28 to 0.38 L per acre)

*Momentum* alone or tank mixed with MCPA ester rates above may be mixed with the following:

- **In spring wheat (including durum) and barley:**
  - Tralkoxydim<sup>†</sup> (0.20 L per acre) plus registered adjuvant
  - Fenoxaprop 120 EC<sup>†</sup> (0.16 to 0.31 L per acre).
- **In spring wheat (including durum):**
  - Clodinafop<sup>†</sup> (label rates)
  - *Simplicity OD* (0.2 L per acre)
  - *Traxos* (label rate)

<sup>†</sup> **Note: The manufacturer may not support all brand of these products. See the label or contact the manufacturers for more information.**

Check the labels of mix partners for additional crop staging restrictions.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the *Momentum* and *Inertia* labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval between application and rain without loss of control may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze treated fields or cut for hay within 3 days of application.
- **Pre-harvest Interval:** Leave 60 days between application and harvest.
- **Re-cropping Interval:** Wheat, barley, oats, rye, flax, canola, mustard and peas may be planted the year after application or the field may be fallowed. DO NOT under-seed crops to forage legumes the year after treatment. DO NOT sow any other crops until the second year after application. Apply manure bedded with straw from treated crops only to the crops listed above.
  - *DO NOT seed to field peas for at least 10 months following treatment. Very dry soil conditions following application can result in a risk of injury to field peas grown in rotation. If severe drought conditions are experienced during the months of June to August inclusive in the year of application delay seeding field peas an additional 12 months (22 months following application). Contact your local Loveland Products Canada representative or retailer for more information before seeding field peas following drought conditions in the previous year.*
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool (above 5°C), dry area. If product is frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No specific cleaning recommendations are provided on the *Momentum* or *Inertia* labels. As a petroleum based emulsifiable concentrate, 'Method B' in the general section on sprayer cleaning in the introduction may be the most effective. Check with the manufacturer for more information.

## Hazard Rating:

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Clopyralid / MCPA

Herbicide Group  
4 - clopyralid, MCPA

## Company:

Nufarm Agriculture (*Curtail M*)  
NewAgco (*Clobber M*)  
Albaugh (*Spur-M*)  
Sharda CropChem (*Certain*)  
Viking (*Viking Drammen*)

## Formulation:

*Curtail M* (PCP#30914), *Clobber M* (PCP#34157), *Certain* (PCP#34356), *Spur-M* (PCP#34458), *Viking Drammen* (PCP#34798): 50 g/L clopyralid and 280 g/L MCPA Ester formulated as an emulsifiable concentrate.

- Container sizes:
  - *Curtail M*, *Certain*, *Spur-M* – 2 x 8 L (*Curtail M* and *Certain* only), 112 L
  - *Clobber M* – 2 x 12 L, 96 L, 576 L
  - *Viking Drammen* – 2 x 12 L, 96 L, 576 L

## Crops and Staging:

Apply at the 3 leaf to just before the flag leaf stage of the following crops:

- Barley
- Canaryseed\* (including hairless varieties for human consumption)
- Oat
- Flax and solin (low linolenic acid flax) at 2 to 6 inches (5 to 15 cm) height.
- Timothy (established for seed, and hay or forage production)\*
- Wheat (spring, durum)

**\* NOTE: Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply these uses do so at their own risk.**

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

The following weeds are controlled at the 1 to 4 leaf stage unless specified:

### At 0.61 L per acre:

- Burdock
- Canada thistle (low infestations)\*\*\*
- Cocklebur
- Field horsetail†
- Flixweed\*\*
- Lamb's-quarters
- Plantain†
- Prickly lettuce
- Ragweed
- Shepherd's-purse\*\*
- Stinkweed\*\*
- Sunflower (annual, volunteer)
- Wild mustard
- Wild radish
- Vetch

### At 0.81 L per acre, the above weeds plus:

- Buckwheat (tartary, wild)
- Canada thistle (medium to high infestations)\*\*\*
- Common groundsel
- Dandelion\*
- Kochia (suppression only)\*\*
- Pigweed (redroot, Russian)
- Scentless chamomile\*\*
- Smartweed
- Sow-thistle (annual, perennial†)
- Volunteer canola

\* Spring rosettes only.

\*\* 2 to 4 leaf stage, (spring seedlings only for winter annual weeds).

\*\*\* Season long control, some regrowth may occur in the fall. Apply from the 4 inch (10 cm) to prebud stage.

† Top growth control only.

## Application Information:

- Water Volume:
  - *Cereals and flax*: 40 to 60 L per acre
  - *Canary seed and timothy*: 40 to 80 L per acre
- Nozzles & Pressure: Use 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE coarse** droplets while maintaining good coverage of foliage. Flat fan tips tilted forward at a 45° angle are recommended in flax.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| MCPA, clopyralid  | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

When weeds are stressed because of drought, flooding, hot or cool (less than 15°C) temperatures, weeds are not actively growing and control may be reduced. DO NOT apply to weeds stressed longer than 20 days from lack of moisture as poor control can result.

## Tank Mixes:

*Curtail M* at 0.81 L per acre should be used in all tank mixes unless otherwise indicated. See labels for adjuvant rates.

### In spring wheat (including durum) and barley:

- *Achieve Liquid* (0.20 L per acre) plus adjuvant

Check product labels for additional crop staging restrictions.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Note: The above mixes are those listed on the *Curtail M* label only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 6 hours will reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze treated fields or cut for hay within 7 days of application.
- **Pre-harvest Interval:** Leave 60 days between application and harvest.
- **Re-cropping Interval:** Wheat, barley, oats, rye, corn, flax, canola, forage grasses and mustard may be planted the year after application. DO NOT under-seed crops to forage legumes the year after treatment.
  - DO NOT seed to field peas for at least 10 months following treatment. Very dry soil conditions following application can result in a risk of injury to field peas grown in rotation. If severe drought conditions are experienced during the months of June to August inclusive in the year of application delay seeding field peas an additional 12 months (22 months following application). Contact your local Nufarm Agriculture representative or retailer for more information before seeding field peas following drought conditions in the previous year.
  - DO NOT sow any other crops until the second year after application. Apply manure bedded with straw from treated crops only to the crops listed above.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool (above 5°C), dry area. If product is frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No detailed cleaning procedures are indicated on the label. Use a commercial all purpose spray sprayer cleaning product for adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

Caution – Poison

Caution – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Clopyralid / MCPA + Fluroxypyr

Herbicide Group  
4 - fluroxypyr,  
clopyralid, MCPA

## Company:

Corteva Agriscience (*Prestige Brands*)  
ADAMA Canada (*Esteem All In*)  
NewAgco (*Foxy CM*)  
Interprovincial Cooperatives (*IPCO State, Co-op State*)  
NuFarm Canada (*TruSlate Pro*)  
Viking (*Viking Stavanger*)  
Sharda Cropchem (*Repute*)

## Formulation:

The *Prestige XC* package has the following components:

**Prestige XC A (PCP#29462):** 333 g ae/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 3.3 L

**Prestige XC B (PCP#29465):** 50 g/L clopyralid and 280 g/L MCPA Ester formulated as an emulsifiable concentrates.

- Container sizes - 2 x 8.0 L

-or-

The *Foxy CM* package has the following components:

**Foxy 333 (PCP#35375):** 333 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 3.3 L, 118 L

**Clobber M (PCP#34157):** 50 g/L clopyralid and 280 g/L MCPA ester formulated as an emulsifiable concentrate.

- Container sizes - 2 x 8 L or 569 L

-or-

**Prestige XL (PCP#31428), Repute (PCP#35280):** 61.56 g/L fluroxypyr and 42.72 g/L clopyralid and 239.5 g/L MCPA Ester formulated as an emulsifiable concentrate.

- Container sizes - 2 x 9.5 L per case, 113.6 L drum

-or-

**Co-op State (PCP#34610), IPCO State (PCP#34597):** 77 g/L fluroxypyr, 60 g/L clopyralid and 210 g/L MCPA ester formulated as an emulsifiable concentrate.

-or-

**TruSlate Pro (PCP#34546):** 77 g/L fluroxypyr, 60 g/L clopyralid and 210 g/L MCPA ester formulated as an emulsifiable concentrate.

- Container size - 10 L

-or-

**The Viking Stavanger package has the following components:**

**Viking Fluroxypyr (PCP#34778):** 180 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 6.4 L, 230 L

**Viking Drammen (PCP#34798):** 50 g/L clopyralid and 280 g/L MCPA Ester formulated as an emulsifiable concentrate.

- Container size - 2 x 8 L, 576 L

-or-

**Esteem All In (PCP#35128):** 59.7 g/L fluroxypyr, 40 g/L clopyralid and 240.5 g/L MCPA ester formulated as an emulsifiable concentrate.

- Container size 2 x 10.93 L, 116.5 L

## Crops and Staging:

### Cereals:

- **Spring wheat (including durum), barley, oats<sup>††</sup> and canaryseed<sup>\*††</sup> (including hairless varieties for human consumption):** 3 leaf to just before the emergence of flag leaf stage
- **Winter wheat<sup>††</sup>:** Apply in the spring from the 3 tiller stage to just before the emergence of flag leaf

### Forage Grasses\* grown for seed production:

- **Seedling and established stands:** 4 leaf until the emergence of the flag leaf.
  - Bromegrass (meadow<sup>††</sup>, smooth<sup>†††</sup>, hybrid<sup>†</sup>)
  - Fescue (creeping red, tall)<sup>†††</sup>
  - Timothy<sup>†††</sup>
  - Wheatgrass (crested<sup>†††</sup>, intermediate<sup>†††</sup>, slender<sup>†</sup>)

**\* NOTE:** Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Users of this product on forage grasses and canary seed do so at their own risk.

<sup>†</sup> *Prestige Brands* only.

<sup>††</sup> *Prestige Brands, CO-OP State, IPCO State, and TruSlate Pro* only.

<sup>†††</sup> *Prestige Brands, Esteem All In, CO-OP State, IPCO State, and TruSlate Pro* only.

**Improved Grass Pastures:** *Prestige XL, CO-OP State, IPCO State and TruSlate Pro* only may be applied to improved grass-only tame pastures at the rates listed below.

## Weeds, Rates and Staging:

DO NOT follow application of these products with another application of these products or other products containing fluroxypyr in the same year. Unless otherwise stated, the following weeds will be controlled if sprayed in the 2 to 4 leaf stage.

Only **Prestige XC A** at 125 mL per acre plus **Prestige XC B** at 607 mL per acre or **Prestige XL** at 708 mL per acre or **Esteem All In** at 730 mL per acre; or **Co-op State**, **IPCO State**, or **TruSlate Pro** at 500 mL per acre or **Viking Stavanger (Viking Fluroxypyr 180)** at 240 mL per acre plus **Viking Drammen** at 600 mL per acre) controls:

- Burdock
- Canada fleabane<sup>+++</sup>
- Canada thistle (light infestations)
- Chickweed<sup>†</sup>
- Cleavers<sup>†</sup>
- Cocklebur
- Field horsetail<sup>\*\*\*</sup>
- Flixweed (spring seedlings only)
- Kochia
- Hemp-nettle (2 to 6 leaf)<sup>‡</sup>
- Lady's thumb (up to 8 leaf) <sup>‡‡</sup>
- Lamb's-quarters
- Plantain<sup>\*\*\*</sup>
- Prickly lettuce
- Ragweeds
- Shepherd's-purse
- Stinkweed
- Stork's-bill (1 to 8 leaf)
- Vetch
- Volunteer flax (1 to 12 cm)
- Volunteer sunflower
- Wild annual sunflower
- Wild buckwheat<sup>††</sup>
- Wild mustard
- Wild radish

**Prestige XC A** at 166 mL per acre plus **Prestige XC B** at 809 mL per acre or **Foxy CM (Foxy 333)** at 166 mL per acre plus **Clobber M** at 809 mL per acre) or **Viking Stavanger (Viking Fluroxypyr)** at 320 mL per acre plus **Viking Drammen** at 800 mL per acre) or **Prestige XL** at 947 mL per acre or **Esteem All In** at 970 mL per acre controls:

The weeds controlled by Prestige Brands above plus:

- Annual sow-thistle
- Canada thistle\* (moderate to heavy infestations)
- Chickweed<sup>Δ</sup>
- Common groundsel
- Dandelion<sup>\*\*</sup>
- Flixweed<sup>\*\*</sup>
- Hemp-nettle (2 to 6 leaf stage)<sup>Δ</sup>
- Perennial sow-thistle\*
- Redroot pigweed
- Round-leaved mallow (1 to 6 leaf)
- Russian pigweed
- Scentless chamomile
- Smartweed
- Tartary buckwheat
- Volunteer canola

\* Spray when 4 to 6 inches (10 to 15 cm) high. Season long control, with some regrowth in the fall.

\*\* Spring rosettes only.

\*\*\* Top growth control only.

† 1 to 4 whorls with **Foxy CM**; 1 to 8 whorls with **Prestige Brands**, **Co-op State**, **IPCO State**, **TruSlate Pro** and **Esteem All In**.

†† 1 to 4 leaf with **Foxy CM**, **Viking Stavanger**, 1 to 8 leaf with **Esteem All In**, **Co-op State**, **IPCO State**, **TruSlate Pro** and **Prestige Brands**.

Δ Suppression only with **Viking Stavanger**, **Co-op State**, **IPCO State**, and **TruSlate Pro**, control with **Esteem All In** and **Prestige Brands**.

‡ Suppression only with **Co-op State**, **IPCO State** or **TruSlate Pro** only.

‡‡ **Prestige XL** only.

‡‡‡ **TruSlate Pro** only

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre.
  - **Aerial:** 12 to 20 L per acre. Consult label for buffer zones.
- **Nozzles and Pressure:** Maximum 30 to 40 psi (200 to 275 kPa) with conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver proper coverage with **ASABE S572.1 coarse** droplets. Tilt nozzles forward at a 45° angle to improve coverage of vertical targets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------|----------------|------------|
| fluroxypyr        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| clopyralid        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| MCPA              | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

The activity of clopyralid/MPCPA + fluroxypyr is influenced by weather conditions. The temperature range for optimum activity is 12°C to 24°C. Reduced activity will occur when temperatures are below 8°C or above 27°C. Frost 3 days before or after application may reduce weed control and crop tolerance. Weed control may be reduced during stress conditions (drought or heat stress) or if heavy infestations exist.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- In wheat (spring, durum, winter\*) and barley:
    - *Liquid Achieve*\*
    - *Puma Advance*\*\*
  - In wheat (spring, durum, winter):
    - *Simplicity OD*\*\*
    - *Simplicity GoDRI*\*
- \* *Prestige XL* only.
- \*\* *Prestige XL, Co-op State, IPCO State, Repute and TruSlate Pro* only.
- \* Not registered with *Co-op State, IPCO State or TruSlate Pro*.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 4 hours of post-emergent application may result in reduced weed control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze or cut for animal feed treated cereal or forage crops unless indicated below.
  - **Wheat, barley, oats, or improved grass pastures:** DO NOT cut or graze treated fields for 7 days after application. Withdraw meat animals from treated fields at least 3 days before slaughter.
- **Pre-harvest Interval:** DO NOT harvest treated crops within 60 days of application.
- **Re-cropping Interval:** Wheat, oats, barley, rye (not under-seeded to forage legumes, clover or alfalfa), flax, canola, field pea\* and mustard may be seeded the season following application.
  - \* **NOTE: DO NOT seed to field pea for at least 10 months following treatment. Very dry soil conditions following application can result in a risk of injury to field pea grown in rotation. If severe drought conditions are experienced during the months of June to August inclusive in the year of application delay seeding field pea an additional 12 months (22 months following application).**
    - Contact the manufacturer for more information before seeding field peas following drought conditions in the previous year.
    - DO NOT seed legume forages or crops other than those listed above until the second season following application.
- **Aerial Application:** Only *Prestige Brands CO-OP State, IPCO State, TruSlate Pro* and *Esteem All In* may be applied by air.
- **Storage:** Store product in original containers in a secure, dry, heated area. If the product is frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

***Prestige XL, Co-op State, IPCO State, TruSlate Pro and Esteem All In:*** Refer to 'Method A' or 'Method B' using a specialized spray tank cleaner in the general section on sprayer cleaning in the introduction.

***Other Products:*** Refer to 'Method C' in the general section on sprayer cleaning in the introduction. The addition of detergent to the second rinse is helpful for cleaning products with oil based formulations such as emulsifiable concentrates.

### Hazard Rating:

Danger – Poison

Warning – Eye and Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Command Charge

*This product is a prepackaged tank mix of the equivalent of Command 360 ME (Command Charge A) and the equivalent of Aim EC (Command Charge B). Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above and select the most restrictive.*

Herbicide Group

13 - clomazone

14 – carfentrazone-ethyl

## Company:

FMC Corporation

## Formulation:

The *Command Charge* package contains the following components:

**Command Charge A (PCP#33558):** 360 g/L clomazone formulated as a microcapsule suspension.

- Container size - 2 x 5.4 L

-plus-

**Command Charge B (PCP#33535):** 240 g/L carfentrazone-ethyl formulated as an emulsifiable concentrate.

- Container size - 2 x 1.2 L

## Crops and Staging:

Apply prior to seeding canola and mustard.

DO NOT apply *Command Charge* to:

- Sandy soils
- Soils with greater than 10 percent organic matter
- Fields receiving applications of solid manure unless it has been thoroughly incorporated to a depth of 10 to 15 cm.

## Weeds and Staging:

Emerged weeds controlled by *Command Charge B* (see *Aim EC*) and cleavers emerging from seed controlled by *Command Charge A* (see *Command 360 ME*).

## Rate:

Note: MAXIMUM OF ONE APPLICATION per year of this or other products containing clomazone.

**Command Charge A:** 135 mL per acre.

-plus-

**Command Charge B:** 30 mL per acre.

Recommended to be tank mixed with glyphosate. If no glyphosate is used, add *Agral 90* or *Agsurf* at 0.25 L per 100 L of spray solution or *Merge* at 1 L per 100 L of spray solution. Tank mixes with glyphosate do not require a surfactant.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** Glyphosate (182 to 364 g ae per acre)

**Note: The above tank mixes are those listed on the *Command Charge* label only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

*See component products for more information on restrictions, applications details and handling. Unless indicated differently above use most limiting restrictions across all components for the mix.*

# Conquer II

Herbicide Group  
6 - bromoxynil  
14 - pyraflufen-ethyl

## Company:

Nufarm Agriculture (PCP#33350)

## Formulation:

15 g/L pyraflufen-ethyl and 467 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container sizes - 2 x 9.71 L, 77.7 L

## Crops and Staging:

**Canola, wheat (spring, durum, winter), barley, fall rye, oats, triticale, corn, canaryseed:** Apply prior to seeding or post-seeding but prior to crop emergence.

**Fallow:** Apply to small, actively growing weeds

## Weeds, Rates and Staging:

Apply **Conquer II** at 122 mL per acre to control:

- Annual sowthistle\*
- Cleavers
- Cow cockle\*
- Dandelion\*
- Flixweed\*
- Kochia
- Lamb's-quarters
- Narrow-leaved hawk's-beard\*
- Night-flowering catchfly (Seedling)
- Redroot pigweed
- Stinkweed\*
- Volunteer canola (cotyledon to 4 leaf)
- Wild buckwheat\*
- Wild mustard\*

\* **Suppression only, control when mixed with the appropriate rate of glyphosate. Refer to the glyphosate label for rate recommendation.**

Apply **Conquer II** at 122 mL per acre plus glyphosate\*\* at 180 to 360 g ae per acre (see glyphosate) to control all weeds controlled by **Conquer II** alone and glyphosate alone plus:

- Pineappleweed\*
- Shepherd's-purse
- Stinkweed
- Wild buckwheat
- Wild mustard\*

\* **Suppression only, control when mixed with the appropriate rate of glyphosate. Refer to the glyphosate label for rate recommendation.**

\*\* present as isopropylamine or potassium salt

Apply **Conquer II** at up to 242 mL per acre to control:

- Volunteer canola seedlings beyond the 3 leaf stage

Maximum TWO APPLICATIONS of **Conquer II**, **Blackhawk**, or **Goldwing** at the low (133 mL per acre) rate listed in this Guide (maximum 3.67 grams per acre of the pyraflufen-ethyl active) over A TWO YEAR TIME SPAN.

## Application Information:

- **Water Volume:** 40 L per acre.
- **Nozzles & Pressure:** Flat fan nozzles with a spray pressure of 30 to 40 psi (210 to 275 kPa) is recommended. DO NOT apply with spray droplets smaller than the **ASABE medium** classification.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                     | Target                                | Movement                                                | Spectrum                   | WSSA Group |
|-------------------|--------------------------------------------|---------------------------------------|---------------------------------------------------------|----------------------------|------------|
| bromoxynil        | POST (foliar)                              | PSII Inhibitor/<br>Membrane disrupter | Little (Apoplast)                                       | Broadleaf only             | 6          |
| pyraflufen-ethyl  | POST (foliar) with<br>slight soil activity | PPO Inhibitor/<br>Membrane disruptor  | Little movement due to rapid<br>cell leakage (Symplast) | Non-selective<br>Broadleaf | 14         |

## Effects of Growing Conditions:

Warm, moist growing conditions promote active weed growth and enhance the activity of **Conquer II** by allowing maximum foliar uptake and contact activity. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and regrowth may occur. Weed control may be reduced if the plants are beyond the recommended application growth stage, and during stress conditions, e.g. drought, heat or cold stress, or in heavy infestations where overlapping leaves prevent spray contact. For best results, ensure thorough spray coverage of target weeds.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides

- **Pre-emergent and pre-plant incorporated:** Glyphosate (follow label rates)

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Fungicides:** None registered.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 24 hours.
- **Grazing Restrictions:** DO NOT use treated areas for grazing or green feed until 30 days after application.
- **Re-cropping Interval:** Registered crops can be seeded immediately after application. Any crops not listed can be seeded 30 days after an application of *Conquer II*.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry, secure place. DO NOT freeze. Heated storage required. Store above 3°C.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Danger – Poison

Warning – Contains the Allergen Soy

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Denali CM

*This product is a prepackaged tank-mix of Himalaya (see flucarbazone), Foxy 333 (see fluroxypyr) and Clobber M (see clopyralid and MCPA).*

*Information listed is restricted to Crops, Weeds and Tank Mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

Insecticide Group

1 - flucarbazone

4 – fluroxypyr

4 – clopyralid/MCPA ester

## Company:

NewAgco

## Formulations:

The *Denali CM* package contains the following four components:

**Himalaya (PCP #33370):** 66% WDG flucarbazone formulated as a dispersible granule.

- Container size – 284 grams, 24 X 567 gram

-plus-

**Foxy 333 (PCP#35375):** 333 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size – 2.5 L, 120 L

-plus-

**Clobber M (PCP#34157):** 50 g/L clopyralid and 280 g/L MCPA formulated as an emulsifiable concentrate.

- Container size – 12 L, 576 L

## Crops and Staging:

Wheat (spring, durum): 1 to 4 leaf stage, 2 tillers.

## Weeds and Staging:

Weeds controlled by the component products.

## Rates:

*Himalaya:* 14.2 g per acre

-plus-

*Foxy 333:* 126 mL per acre

-plus-

*Clobber M:* 0.6 L per acre

## Tank Mixes:

None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Dicamba

Herbicide Group  
4 - dicamba

## Company:

BASF Canada (*Engenia*, *Banvel VM*)  
Gharda Chemicals (*Oracle* distributed by UAP)  
Bayer (*Xtendimax\**, *Xtendimax 2*)  
Sharda Cropchem (*Disha 480*)  
NewAgco (*Ammo*)  
Viking (*Viking Dicamba*)  
Interprovincial Cooperative Ltd. (*IPCO Dicamba*)

## Formulation:

**Banvel VM (PCP#29249), Disha 480 (PCP#33851):** 480 g L dicamba formulated as a solution of a diglycolamine salt.

**Engenia (PCP#32220):** 600 g L dicamba formulated as a solution of N,N-Bis-(3-aminopropyl) methylamine salt.

**Oracle (PCP#26722), Ammo (PCP#34024), Viking Dicamba (PCP#34737), IPCO Dicamba (PCP#35366):** 480 g L dicamba formulated as a solution of a dimethylamine salt.

**Xtendimax (PCP#31896):** 350 g L dicamba formulated as a solution of a diglycolamine salt.

**Xtendimax 2 (PCP#33501):** 474 g ae/L dicamba as a monoethanolamine salt.

- Container sizes - various

## Crops, Rates and Staging:

*Note: The use of these chemicals may result in contamination of groundwater, particularly in areas where soils are permeable (e.g. sand, loamy sand and sandy loam soils) and/or the depth to the water table is shallow (less than 2 m). Avoid use in these situations.*

*Oracle is registered for the all of the uses below. Banvel VM is only registered for pasture and rangeland uses below.*

| Crop                             | Stage                                                                                 | g acid equivalent per acre | Rate (mL per acre) |                |               |                    |

|                                  |                                                                                       |                            | 480 g/L forms      | <i>Engenia</i> | 350 g/L forms | <i>Xtendimax 2</i> |
| Spring wheat*                    | 2 to 5 leaf                                                                           | 45 to 56                   | 93 to 117          | 75 to 95       | 127.5 to 161  | 94 to 119          |
| Barley*                          | 2 to 5 leaf                                                                           | 45 to 56                   | 93 to 117          | 75 to 95       | 127.5 to 161  | 94 to 119          |
| Oats*                            | 2 to 5 leaf                                                                           | 45 to 56                   | 93 to 117          | 75 to 95       | 127.5 to 161  | 94 to 119          |
| Canaryseed*                      | 3 to 5 leaf                                                                           | 56                         | 117                | 95             | 161           | 119                |
| Winter wheat*                    | In spring 6 to 10 inches (15 to 25 cm) - prior to flag leaf                           | 45 to 56                   | 93 to 117          | 75 to 95       | 127.5 to 161  | 94 to 119          |
| Spring rye*                      | 2 to 3 leaf                                                                           | 45 to 56                   | 93 to 117          | 75 to 95       | 127.5 to 161  | 94 to 119          |
| Corn, field                      | Broadcast up to 8 inches (20 cm). When higher, use drop-nozzles.                      | 117 to 242                 | 243 to 505         | 200 to 400     | 333 to 692    | 246 to 510         |
| Corn, field + 2,4-D              | Apply no later than 2 weeks prior to tassel emergence and prior to 20 inches (50 cm). | 56                         | 117                | 95             | 161           | 119                |
| Red fescue (for seed production) | Seedling: 2 inches (5 cm) tall. Established: up to the flag leaf stage.               | 117                        | 243                | 200            | 333           | 246                |
| Pastures                         | Established and actively growing                                                      | 408 to 710                 | 850 to 1,480       | 530 to 1182    | 1174 to 2550  | 866 to 1882        |

| Crop                                                                                                                                                                                                                           | Stage                          | g acid equivalent per acre | Rate (mL per acre) |           |               |             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|----------------------------|--------------------|-----------|---------------|-------------|
|                                                                                                                                                                                                                                |                                |                            | 480 g/L forms      | Engenia   | 350 g/L forms | Xtendimax 2 |
| Seedling grasses (for seed and forage production):<br>Fescue (creeping red, meadow, tall), meadow foxtail, orchardgrass, smooth brome grass, timothy, wheatgrass (crested, intermediate, pubescent, slender, streambank, tall) | 2 to 4 leaf                    | 45 to 56                   | 93 to 117          | 75 to 95  | 127.5 to 161  | 94 to 119   |
| Fall stubble                                                                                                                                                                                                                   | Apply according to weed stage. | 480                        | 1000 (1.0 L)       | 800       | 1376          | 1024        |
| Fall stubble + glyphosate                                                                                                                                                                                                      | Apply according to weed stage. | 240                        | 500                | 400       | 692           | 510         |
| Pre-seeding cereals                                                                                                                                                                                                            | Apply according to weed stage. | 61                         | 127                | 100       | 175           |             |
| Chemfallow + 2,4-D                                                                                                                                                                                                             | Apply according to weed stage. | 45 to 56                   | 93 to 117          | 75 to 95  | 127.5 to 161  | 94 to 119   |
| Chemfallow + glyphosate                                                                                                                                                                                                        | Apply according to weed stage. | 56 to 117                  | 117 to 243         | 95 to 200 | 161 to 333    | 119 to 246  |

\* Should be mixed with a tank mix partner for broad spectrum control

#### In Dicamba Tolerant Soybeans:

Apply to Roundup Ready 2 Xtend (dicamba and glyphosate tolerant) and Xtendiflex (dicamba, glyphosate and glufosinate tolerant) soybeans from prior to the emergence of the crop (pre-plant or pre-emergence) and/or after the emergence of the crop (post-emergent) to the crop once or twice up to the early flower stage (R1) of the crop.

| Crop                      | Rate (mL per acre) |               |             |
|---------------------------|--------------------|---------------|-------------|
|                           | Engenia            | 350 g/L forms | Xtendimax 2 |
| Dicamba tolerant Soybeans | 200 to 400         | 333 to 692    | 246 to 510  |

### Weeds, Rates and Staging:

Apply to annual broadleaf weeds at the 2 to 3 leaf stage and to winter annual rosettes up to 2 inch (5 cm) across.

#### Dicamba applied alone at 45 to 56 g ae per acre will control:

- Cleavers (high rate only)
- Cow cockle
- Corn spurry
- Canada thistle\*
- Perennial sow-thistle\*
- Smartweed (green, lady's-thumb)
- Tartary buckwheat
- Wild buckwheat

#### Dicamba at 117 to 242 g ae per acre will control:

- Canada thistle\*\*
- Canada fleabane
- Field bindweed\*\*
- Kochia
- Lamb's-quarters
- Mustard (hare's-ear, Indian, tumble, wild, wormseed)
- Perennial sow-thistle\*\*
- Pigweed (redroot, Russian)
- Ragweed (common, false, giant)

#### Dicamba at 408 g ae per acre in rangeland or 480 g ae per acre in fallow will control:

Weeds listed above plus:

- Curled dock\*
- English daisy
- Goldenrod
- Tansy ragwort

#### Dicamba at 892 g ae per acre will control:

Weeds listed above plus:

- Diffuse knapweed
- Goat's-beard
- Ground cherry
- Pasture sage
- Povertyweed
- Sheep sorrel
- Thyme-leaved spurge

\* Top growth only.

\*\* Three consecutive years of treatment are required for complete control.

The following chart indicates weed and brush controlled by dicamba + 2,4-D mixes at the listed rates.

| Weeds                                                                  | Rate (g ae per acre) <sup>†</sup>          |       |
|------------------------------------------------------------------------|--------------------------------------------|-------|
|                                                                        | Dicamba                                    | 2,4-D |
| Poison ivy                                                             | 322                                        | 426   |
| Wild carrot                                                            | 408                                        | 426   |
| Aspen poplar                                                           | 634                                        | 852   |
| Prickly rose, western snowberry <sup>†††</sup>                         | 710                                        | 852   |
|                                                                        | Rate (L per 1000 L of water) <sup>††</sup> |       |
| Alder, aspen poplar, cherry, western snowberry, wolf willow, wild rose | 408                                        | 745   |

<sup>†</sup> Applied by broadcast sprayer.

<sup>††</sup> Apply to the foliage and stems to the point of run-off using high volume equipment.

<sup>†††</sup> Ester formulations of 2,4-D only.

**Canada thistle, perennial sow-thistle in fallow:** Apply prior to the bud stage. Must be applied to thistle plants with 6 to 10 inches (15 to 25 cm) of new growth.

**Canada thistle control in fall after harvest:** When thistles exhibit new growth and at least 2 weeks prior to a killing frost.

Refer to label for full lists of weeds controlled by dicamba plus tank mixes in cereals, pastures, fallow and other situations.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

**Brush control in pastures:** When brush is actively growing and is 6 feet (2 metres) in height or less (in spring or early summer). Growth greater than 2 metres may be cut and allowed to regrow prior to treatment.

## Application Information:

- **Water Volume:**
  - **Preseeding burnoff:** 20 to 45 L per acre.
  - **Annual crops:** at least 45 L per acre.
  - **Pastures, fallow and stubble:** 45 to 90 L per acre.
  - **Corn:** 90 to 140 L per acre.
  - **Brush:** high volumes to the point of run-off.
- **Nozzles and Pressure:**
  - **Broadcast application:**
    - *Dicamba tolerant soybeans (Enginia and Xtendimax only):* Use nozzles that deliver **extremely coarse to ultra coarse** spray droplets (volume median diameter of **450 microns or more**) as defined by **ASABE standard S572.1** and as shown in the nozzle manufacturer's catalog.
    - *Other Uses:* Maximum 40 psi (275 kPa) with conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver even coverage of **ASABE coarse** droplets.
  - **Brush Control:** Use high volume spray equipment producing large droplets including, but not limited to, hand-wand, boomless nozzle and Radi-Arc technologies.

**Note:** Refer to product labels for detailed application information

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                             | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|------------------------------------|-----------------|---------------------------------|----------------|------------|
| dicamba           | POST (foliar)<br>PRE (soil active) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Crop damage (stunting, reduced seed set) can occur if the chemical is applied at any time other than the recommended stage.

DO NOT apply to crop under stress from adverse environmental conditions, such as excess moisture, drought and disease. Apply when air temperature is between 10 and 25°C.

**DO NOT apply:**

- when there is a risk of severe temperature fall in the night;
- under high humidity, temperatures above 30°C, or fog conditions, to prevent drift to sensitive crops;
- when wind is blowing toward a nearby sensitive crop;
- when winds are below 3 km per hour or above 15 km per hour.

## Tank Mixes:

### Herbicides:

|                              | Spring wheat | Winter wheat | Barley | Oats | Seedling grasses |
|------------------------------|--------------|--------------|--------|------|------------------|
| 2,4-D amine (160 g ae/acre)  | ✓            | ✓            | ✓      |      | ✓                |
| MCPA amine (0.34 L/acre)     | ✓            | ✓            | ✓      | ✓    | ✓                |
| MCPA K (0.44 L/acre)         | ✓            | ✓            | ✓      | ✓    | ✓                |
| Sencor (0.11 to 0.17 L/acre) | ✓            |              | ✓      |      |                  |
| Ally (2 g/acre)              | ✓            |              | ✓      |      |                  |

**In Canaryseed:** MCPA amine (0.34 L per acre – 500 g ai/L formulation)

**In Corn, Spring rye:** 2,4-D amine (160 g ae per acre)

**In Chemical fallow, stubble:** 2,4-D, glyphosate products.

**In Red fescue:** 2,4-D amine (287 g ae per acre)

**In Preseeding burnoff:** Glyphosate (136 g ae per acre - see glyphosate for product rates)

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the dicamba labels only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing and Harvest Intervals:**
  - **Canaryseed:** Use only as birdseed.
  - **Corn:** DO NOT graze cattle or harvest for silage until 7 days after treatment of dicamba alone or for at least 12 weeks following dicamba tank mixes with other herbicides.
  - **Cereals, seedling grasses, pasture:** DO NOT harvest for silage for or graze lactating dairy cattle until 7 days after treatment. If treated vegetation has been consumed by dry dairy animals or meat animals within 30 days of dicamba application, feed the animal with untreated diet for 30 days before slaughter. Meat animals or dry dairy animals may graze or feed on treated pasture 3 days after dicamba application without restrictions on slaughter. Feed untreated forage within 3 days of slaughter.
  - **Dicamba tolerant Soybeans:** Pre-harvest interval of 7 to 10 days for soybean forage and 13 to 15 days for soybean hay. A plant back interval of 120 days is required for those not on the dicamba label.
- **Re-cropping Interval:** Grow only cereals, corn, soybeans or white beans the year after treatment with the 1.0 L per acre rate. Grow only cereals, corn, field beans, soybeans or canola the year after applications of 0.5 L per acre. If applications are made after September 1, or if dry weather persists after application, crop injury may occur the following spring.
- **Aerial Application:** May be applied by air on cereals only. Use a minimum water volume of 8 L per acre.
- **Storage:** May be stored at freezing temperatures.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

Caution – Poison

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Dicamba / Fluroxypyr

Herbicide Group  
4 - dicamba, fluroxypyr

## Company:

Sharda Cropchem (*Diflux* – PCP#33988)

## Formulation:

86.9 g/L dicamba and 113.3 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 2 x 9.82 L, 78.6 L

## Crops and Staging:

**Barley and spring wheat (including durum):** 2 to 5 leaf stage.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

Unless otherwise indicated apply when weeds are at the 2 to 3 leaf stage and rosettes are less than 2 inches (5 cm) across.

### Applications at 246 mL per acre controls:

- Cleavers
- Kochia (up to 9-leaf)
- Wild buckwheat\*

### Applications at 371 mL per acre controls the weeds above plus:

- Lamb's-quarters\*
- Redroot pigweed\*
- Russian thistle
- Stork's-bill\*
- Volunteer flax
- Wild buckwheat (up to 9-leaf)

**\* Suppression only.**

ONE APPLICATION per year is permitted.

## Application Information:

- **Water Volume:** Minimum 45 L per acre. If applying near sensitive crops such as soybeans, fruit trees, grapes, ornamentals, peas, lentils, potatoes, or tomatoes use 90 L per acre of water.
- **Nozzles and Pressure:** Use a maximum pressure between 40 and 45 PSI (275 to 310 kPa) for conventional flat fan nozzles. If applying near sensitive crops such as soybeans, fruit trees, grapes, ornamentals, peas, lentils, potatoes, or tomatoes use a maximum of 22 PSI (22 kPa). Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|---------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| Dicamba, fluroxypyr | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

DO NOT apply to crops that are stressed (frost, low fertility, drought or flooding, disease or insect damage) as crop injury or reduced weed control may result. DO NOT apply these products when temperatures are expected to exceed 30°C as off-target movement is more likely to occur, during and after application. Avoid application under high humidity or fog.

## Tank Mixes:

### Herbicides:

- **Barley, Spring wheat, and durum only:**
  - MCPA LV600 ester (0.23 L per acre)
- **Spring wheat, and durum:**
  - *Horizon NG* (376 mL per acre)
  - *Horizon NG* (376 mL per acre) + MCPA LV600 ester (0.23 L per acre)
  - *Traxos* (label rate)
  - *Traxos* (label rate) + MCPA Ester (rates above)

**Fertilizers:** None registered

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 1 hour may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Pre-harvest Interval:** Leave 60 days between treatment and harvest.
- **Grazing Restrictions:** Treated crops may be grazed, or cut for hay or silage after 7 days when used alone, or a minimum of 12 weeks when mixed or longer if the intervals are longer for the tank mix partner.
- **Re-cropping Interval:** Wheat, barley, oats, rye, forage grasses, flax, canola, mustard, lentils and peas may be grown the following season. There are no re-cropping restrictions the second year after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen. If frozen, bring to room temperature and agitate before use. This product is combustible. DO NOT store near heat or open flame.
- **Buffer Zones:** Observe buffer zones outlined in the label.
  - Handheld or backpack applications do not require a buffer.
  - Legumes are particularly sensitive to dicamba + fluroxypyr.

### Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

Warning – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Dicamba / Mecoprop / MCPA

Herbicide Group  
4 - dicamba,  
mecoprop-p, MCPA

## Company:

Loveland Products Canada (*Sword* – PCP#27892)  
Interprovincial Cooperative Limited (*Tracker XP* – PCP#27790)

## Formulation:

275 g/L MCPA, 62.5 g/L mecoprop-p and 62.5 g/L dicamba formulated as a solution.

- Container sizes - 2 x 10 L, 500 L (*Sword* only), 1000 L (*Sword* only)

## Crops and Staging:

### All Products:

#### Cereals:

| Crop                                                                               | Stage                                                                     |
|------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| Barley                                                                             | 2 to 4 leaf (3 leaf for best crop safety)                                 |
| Canaryseed (including for human consumption), oats, spring wheat (including durum) | 2 to 5 leaf (3 to 4 leaf for best crop safety)                            |
| Winter wheat                                                                       | Spring application only; up to 12 inches (30 cm) high (top leaf extended) |
| Fallow                                                                             | Fall stubble                                                              |

#### *Sword* only:

- **Seedling grasses grown for forage only (NOT for seed production)\*:** Apply at the 2 to 4 leaf stage.
  - Creeping red fescue
  - Meadow foxtail
  - Smooth bromegrass
  - Wheatgrass (crested, intermediate)
  - Orchardgrass
  - Timothy
- **Established grasses for forage only (NOT for seed production)\*:** Apply up to flag leaf stage.
  - Bromegrass (meadow, smooth)
  - Meadow foxtail
  - Wheatgrass (crested, intermediate, pubescent, slender, streambank, tall, western)
  - Fescue (creeping red, meadow, tall)
  - Orchardgrass
  - Timothy
  - Kentucky bluegrass

**\* NOTE: Use only one application per year by ground. Since applications to forage grasses in western Canada has been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. Application to forage grasses are at the risk of the user.**

## Weeds and Staging:

### Weeds controlled at 0.4 to 0.6 L per acre from the 2 to 3 leaf stage unless otherwise indicated:

- Bindweed\* (field, hedge)
- Hemp-nettle (less than 2 pairs of true leaves)
- Russian thistle (less than 2 inches (5 cm))
- Buckwheat (tame, tartary, wild)
- Kochia
- Shepherd's-purse
- Canada thistle (6 to 8 inches (15 to 20 cm))\*
- Lamb's-quarters
- Smartweed (green, lady's-thumb)
- Cleavers (1 to 2 whorls)
- Mustards (ball, tall, wild, wormseed, yellow)
- Sow-thistle (annual, perennial\*)
- Corn spurry
- Night-flowering catchfly
- Stinkweed
- Cow cockle
- Pigweed (prostrate, redroot)
- Volunteer canola
- Flixweed
- Ragweed, common
- Volunteer sunflowers

#### \* Top growth control only

Use the higher rate under adverse weather conditions, when weed density is high, for cleavers control, winter annual control and for suppression of Canada thistle and perennial sow-thistle.

Although dicamba/mecoprop-p/MCPA is registered up to the 5 leaf stage of the crop for the rates listed here, the low rate should be used when the crop is at the 5 leaf stage for optimum crop safety.

For Canada thistle, post-harvest or fallow application, use 0.81 L per acre.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre.
  - **Aerial:** Minimum of 12 L per acre
- **Nozzles and Pressure:** 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of **ASABE coarse** droplets.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient             | Timing        | Target          | Movement                                 | Spectrum       | WSSA Group |
|-------------------------------|---------------|-----------------|------------------------------------------|----------------|------------|
| dicamba,<br>mecoprop,<br>MCPA | POST (foliar) | Synthetic Auxin | Moves throughout the plant<br>(Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Hot and dry or cold and wet weather prior to spraying may result in reduced weed control and increased crop injury.

DO NOT apply within 2 weeks of a killing frost.

## Tank Mixes:

### Herbicides:

- **Wheat and Barley:**
  - *Sencor* or linuron for chickweed control.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Note:** The above mixes are those listed on the dicamba/mecoprop-p/MCPA labels only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Activity may be reduced if rainfall occurs within 3 hours of application. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze or harvest for livestock feed within 7 days of application.
- **Pre-harvest Interval:** Leave at least 80 days from application to harvest.
- **Re-cropping Interval:** No restrictions the year after application.
- **Aerial Application:** All may be applied by air.
- **Storage:** DO NOT freeze.
- **Buffer Zones:** Buffers are not required for hand-held and backpack applications. Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Poison

Warning – Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Dicamba + Tribenuron

Herbicide Group  
2 - tribenuron  
4 - dicamba

## Company:

FMC Corporation (*Express FX*)  
NewAgco (*Ammo Extra*)

## Formulation:

The *Express FX* package has the following components:

**Express FX (PCP#33039):** 60.87% dicamba and 6.52% tribenuron-methyl formulated as a water dispersible granule.

- Container size - 1.86 kg

-or-

The package for *Ammo Extra* includes the following components:

**MPOWER Extra (PCP#33143):** 75% tribenuron-methyl formulated as a wettable granule

- Container size - 640 g

-plus-

**Ammo (PCP#34024):** 480 g/L dicamba formulated as a solution.

- Container size - 15 L

*Express FX* and *Ammo Extra* are purchased alone, but it must be mixed with glyphosate before use.

## Crops and Staging:

For application to fallow, post-harvest\* and 1 day prior to seeding the following crops:

- Barley
- Wheat (spring, durum and winter\*)
- Oats\*

\* Except *Ammo Extra*

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds that are less than 15 cm (6 inches) in height or width. Weeds controlled or suppressed by the tank mix of *Express FX* or *Ammo Extra* + glyphosate (182 gae per acre):

- |                                                       |                                           |                                              |
|-------------------------------------------------------|-------------------------------------------|----------------------------------------------|
| ◦ Annual smartweed (green, lady's-thumb) <sup>†</sup> | ◦ Kochia** (up to 8 cm)                   | ◦ Wild buckwheat (up to 8 leaf) <sup>Δ</sup> |
| ◦ Canada fleabane (up to 8 cm)                        | ◦ Lamb's-quarters                         | ◦ Wild mustard                               |
| ◦ Canada thistle (rosette)*                           | ◦ Narrow-leaved hawk's-beard (up to 8 cm) | ◦ Volunteer flax                             |
| ◦ Cleavers <sup>†</sup>                               | ◦ Redroot pigweed                         |                                              |
| ◦ Common chickweed (up to 8 leaf) <sup>†</sup>        | ◦ Russian thistle                         |                                              |
| ◦ Common ragweed (up to 8 cm)                         | ◦ Scentless chamomile (up to 8 cm)*       |                                              |
| ◦ Cow cockle (up to 3 leaf)                           | ◦ Stinkweed                               |                                              |
| ◦ Dandelion                                           | ◦ Tufted vetch*                           |                                              |
| ◦ Flixweed                                            | ◦ Volunteer canola                        |                                              |
| ◦ Hemp-nettle                                         | ◦ White cockle (rosette)*                 |                                              |

\* Suppression only

\*\* Except biotypes multiple resistant to glyphosate, Group 2 and dicamba

<sup>Δ</sup> Up to 3 leaf for *Ammo Extra* only

<sup>†</sup> *Express FX* only

## Rates:

**Express FX:** 46.5 g per acre. DO NOT apply more than 46.5 g per acre per year.

**MPOWER Extra:** 4 g per acre.

-plus-

**Ammo:** 93.8 mL per acre.

Must be tank mixed with glyphosate.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Minimum 22 L per acre.
- **Nozzles and Pressure:** DO NOT apply with spray droplets smaller than **ASABE coarse** classification. Boom height must be 60 cm or less above the crop or ground.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                   | Movement                                | Spectrum       | WSSA Group |
|-------------------|-----------------------------------------|--------------------------|-----------------------------------------|----------------|------------|
| tribenuron        | POST (foliar)                           | ALS Amino Acid Inhibitor | Toward growth areas of plant (Symplast) | Broadleaf only | 2          |
| dicamba           | POST (foliar) with slight soil activity | Synthetic Auxin          | Moves throughout the plant (Symplast)   | Broadleaf only | 4          |

## Effects of Growing Conditions:

Apply *Express FX* and *Ammo Extra* when air temperature is between 10 and 25°C. DO NOT apply when there is a risk of severe drop in night temperatures. Control of weeds growing in wheel tracks may be reduced if *Express FX* and *Ammo Extra* is applied under dry, dusty conditions.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- Glyphosate

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

## Restrictions:

- **Rainfall:** If rain occurs soon after application, control may be reduced.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:** MUST NOT be grazed or fed to livestock for 7 days after treatment.
- **Re-cropping:** Fields treated with *Express FX* may be seeded to wheat (spring, durum or winter), spring barley or oats a minimum of 24 hours after application. Fields treated with *Ammo Extra* may be seeded to wheat (spring and durum), spring barley a minimum of 24 hours after application. Fields treated with a chemfallow application of *Express FX* or *Ammo Extra* can be seeded to any crop the following season. Fields treated with a post-harvest application of *Express FX* in the fall may be seeded in spring to canola, corn, lentils, oats, spring barley, soybeans, wheat (spring or durum) or white beans (contact manufacturer for timing limitations for canola, lentil, soybeans, white beans and field corn when seeding in the spring following fall application).
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store in original container only, away from fertilizer, seeds, food or feed. Not for use or storage in or around the home. Keep container closed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' found in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Poison

Warning – Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Dichlorprop/2,4-D

Herbicide Group  
4 - dichlorprop, 2,4-D

## Company/Products:

Nufarm Agriculture (*Estaprop XT*)

Interprovincial Cooperative Limited (*Dichlorprop-DX*)

## Formulation:

*Estaprop XT* (PCP#29660); *Dichlorprop-DX* (PCP#29664): 210 g/L of dichlorprop-P and 400 g/L of 2,4-D ester formulated as an emulsifiable concentrate.

- Container sizes:
  - *Estaprop XT* - 2 x 9.7 L
  - *Dichlorprop-DX* - 2 x 10L, 115 L

## Crops and Staging:

*Wheat (spring, durum) and barley*: 4 leaf until the early flag leaf stage.

*Winter wheat*: in spring from tillering to the early flag leaf stage.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds and Staging:

Treat weeds when young and actively growing and before they are shielded by the crop. Additional stage restrictions indicated are the minimum indicated over all labels. Check individual labels for exceptions.

- |                           |                                                                    |                                                           |
|---------------------------|--------------------------------------------------------------------|-----------------------------------------------------------|
| ◦ Bluebur                 | ◦ Mustards (ball, dog, hare's-ear, Indian, tumble, wild, wormseed) | ◦ Shepherd's-purse                                        |
| ◦ Burdock                 | ◦ Night-flowering catchfly <sup>♦</sup>                            | ◦ Sow-thistle (annual, perennial*)                        |
| ◦ Canada thistle*         | ◦ Oak-leaved goosefoot                                             | ◦ Spreading atriplex (cotyledon to 10 leaf) <sup>††</sup> |
| ◦ Cocklebur               | ◦ Pigweed (redroot, Russian)                                       | ◦ Stinkweed                                               |
| ◦ Curled dock*            | ◦ Prickly lettuce (2 to 12 leaf) <sup>†</sup>                      | ◦ Stork's-bill                                            |
| ◦ Dandelion***            | ◦ Ragweed (common, giant <sup>†† ♦♦</sup> )                        | ◦ Toadflax**                                              |
| ◦ Flixweed                | ◦ Round-leaved mallow                                              | ◦ Volunteer canola                                        |
| ◦ Kochia (up to 2 inches) | ◦ Russian thistle (up to 2 inches)                                 |                                                           |
| ◦ Lamb's-quarters         |                                                                    |                                                           |

Control the following weeds up to the 4 leaf stage:

- |                                      |                       |                  |
|--------------------------------------|-----------------------|------------------|
| ◦ Smartweed (including lady's-thumb) | ◦ Volunteer sunflower | ◦ Wild buckwheat |
| ◦ Tartary buckwheat                  |                       |                  |

\* Top growth control only

\*\* Suppression only; treat before the majority reach 6 inches (15 cm)

\*\*\* Season long control in winter wheat

♦ Spring annuals only

♦♦ Treat prior to the 6 leaf stage

† In winter wheat only

†† *Estaprop XT* in winter wheat only

## Rates:

486 mL per acre.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|--------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| dichlorprop, 2,4-D | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 97 L per acre\*. Use a minimum of 40 L of water per acre to reduce the risk of drift.
  - **Aerial:** Minimum 12 L per acre.
- **Nozzles and Pressure:** 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver proper coverage with **ASABE coarse** droplets or larger.

\* May vary by product. Check label closely.

## Effects of Growing Conditions:

Applications made under dry conditions may result in reduced control. Crops under stress from adverse environmental conditions, such as excess moisture, frost or drought, may be injured. Best weed control when adequate soil moisture is present and warm temperatures prevail. DO NOT apply when daytime temperatures exceed 27°C.

## Tank Mixes:

### Herbicides:

| Tank Mix Partner<br>(Mixed at label rates unless otherwise indicated) | Crops        |       |              |                |
|-----------------------------------------------------------------------|--------------|-------|--------------|----------------|
|                                                                       | Spring wheat | Durum | Winter wheat | Barley         |
| Clodinafop <sup>Δ</sup>                                               | •            | •     |              |                |
| Fenoxaprop <sup>Δ</sup>                                               | •            | •     |              | • <sup>†</sup> |
| Thifensulfuron/tribenuron <sup>Δ††</sup>                              | •            | •     | •            | •              |
| Tralkoxydim <sup>Δ</sup>                                              | •            | •     | •            | •              |

<sup>†</sup> *Vigil WB* only.

<sup>††</sup> *Estaprop XT* only.

<sup>Δ</sup> Manufacturers may only support mixes with specific products. Contact the manufacturer for more information.

Note: Always refer to the label for the tank mix partner in this guide for additional restrictions on staging and varieties.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note: The above mixes are those listed on dichlorprop-P + 2,4-D labels only.**

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** Leave 12 hours before entering treated fields.
- **Grazing Restrictions:** DO NOT graze the treated crop or harvest for hay or feed within 40 days of application. Withdraw meat animals from treated fields at least 3 days before slaughter.
- **Pre-harvest Interval:** Leave 40 days from spraying until harvest of winter wheat and 60 days for other crops.
- **Re-cropping Interval:** No restrictions the year after application. Fields treated with *Estaprop XT* may be replanted after a minimum of 30 days.
- **Aerial Application:** May be applied by air. Refer to specific product labels for full details for application by air.
- **Storage:** May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Warning – Poison

Refer to the Introduction for an explanation of the symbols.

# Diquat

Herbicide Group  
22 - diquat

## Company:

Syngenta Canada (*Reglone, Reglone Ion, Desica*)  
ADAMA Canada (*Armory 240, Armory All In*)  
Advantage Crop Protection (*Advantage Diquat 240*)  
NewAgco (*Clone*)  
Sharda Cropchem Canada (*Dessicash Desiccant*)  
Federated Cooperatives (*Co-op Bolster II*)  
Interprovincial Cooperative Limited (*IPCO Bolster II*)  
Loveland Products Canada (*Stage*)  
Nufarm Agriculture (*Drifast*)  
WinField United Canada (*Craven*)\*  
Viking (*Viking Diquat*)  
Innovis Crop Protection Limited (*Innovis Diquat 240 Harvest Aide*)

**\*Note:** This product is no longer manufactured but inventories still remain in distribution. This product may be removed from future editions.

## Formulation:

**Diquat 240 formulations:** *Armory 240* (PCP#32726); *Advantage Diquat 240* (PCP#33731); *IPCO Bolster II* (PCP #33743); *Clone* (PCP#32997); *Co-op Bolster II* (PCP#33744); *Craven* (PCP#32231); *Desica* (PCP#30488); *Dessicash Desiccant* (PCP#31406); *Drifast* (PCP#32648); *Stage* (PCP#31597); *Reglone* (PCP#26396), *Viking Diquat* (PCP#34790), *Innovis Diquat 240 Harvest Aide*: (PCP# 34905)  
240 g/L diquat ion (present as dibromide) formulated as a solution.

- Container sizes - Various from 2 x 10 L to 1000 L

**Reglone Ion** (PCP#31058), **Armory All In** (PCP#35143): 200 g/L diquat formulated as a solution. Comes with a built-in-adjuvant

- Container sizes - 2 x10 L, 115 L (*Reglone Ion* only), 120 L (*Armory All In* only), 450 L

## Crops and Staging:

**Field crops:** Diquat is used to dry immature green material at top of indeterminate crops and green weeds to facilitate harvest. Diquat will not speed maturity of green crops. Treatment before the recommended stage can result in reduced yield and quality. Use *Agral 90*, a wetting and spreading agent at a rate of 1 L for each 1000 L of spray mixture unless otherwise stated. For bean or lentils, LI 700 at a rate of 2.5 L for each 1000 L of spray mixture may be used. For all applications of 240 g/L formulations. Refer to product labels for specific recommendations for adjuvant use.

|                                                                                                                       |                                                                          | 240 g/L formulations      |                                                                                                         | 200 g/L formulations                        |                           |
|                                                                                                                       |                                                                          | Ground                    | Aerial                                                                                                  | Ground                                      | Aerial                    |
| Chickpeas <sup>†</sup>                                                                                                | Plants yellow, pods mature, seeds changed colour and detached from pods. | 0.50 to 0.69 <sup>†</sup> | 0.69                                                                                                    | 0.61 to 0.83 <sup>†</sup>                   | 0.83                      |
| Potatoes (top growth mature and few weeds)                                                                            | Two weeks prior to harvest.                                              | 0.5                       | Requires 2 Passes<br>Pass #1:<br>0.69 to 0.93 L/acre**<br>Pass #2:<br>(4 to 5 days later) at 0.5 L/acre | DO NOT use 200 g/L formulations on potatoes |                           |
| Potatoes (some top growth and/or some weeds)                                                                          |                                                                          | 0.69 to 0.93***           |                                                                                                         |                                             |                           |
| Potatoes (dense crop, heavy weed infestations)                                                                        |                                                                          | 1.42***                   |                                                                                                         |                                             |                           |
| Alfalfa, bird's-foot trefoil, red clover, alsike clover <sup>†††</sup> and white clover (for seed production only)*** | Pods are ripe but before shattering. Harvest within 7 days.              | 0.69 to 1.09 <sup>†</sup> | 0.69 to 1.09 <sup>†</sup>                                                                               | 0.83 to 1.32 <sup>†</sup>                   | 0.83 to 1.32 <sup>†</sup> |

<sup>†</sup> Use high rates for dense crops and/or heavy weed infestations. Use of high rates for canola and chickpea is recommended.

<sup>††</sup> Except Nufarm Drifast and Innovis Diquat 240 Harvest Aide.

<sup>†††</sup> Reglone Ion, Armory All In only.

\* This use can cause shattering losses in non-shatter resistant canola.

\*\* DO NOT use an adjuvant on potatoes except at the 0.5 L per acre ground application rate.

\*\*\* DO NOT use on forage legumes that have been treated with a residual herbicide in the previous 12 months.

**Industrial vegetation uses in non-crop areas (Diquat 240 formulations only):** Apply 0.93 to 1.86 L per acre to kill topgrowth vegetation on areas to be maintained vegetation free. May be combined with soil active herbicides to maintain vegetation free.

## Application Information:

### • Water Volumes:

- **Ground:** 91 to 222 L per acre. Use 222 to 445 L per acre on potatoes.
- **Aerial:** 18 L per acre.

Use the highest water volumes when crop canopy is heavy or if weed growth is dense.

- **Nozzles and Pressure:** 20 to 30 psi (150 to 200 kPa) when using conventional Flat fan nozzle tips are recommended for proper coverage. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets. Rotary atomizer nozzles and other low volume and ultra low volume application equipment are not recommended for use with diquat.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement          | Spectrum      | WSSA Group |
|-------------------|---------------|-----------------------------------|-------------------|---------------|------------|
| diquat            | POST (foliar) | PS I Inhibitor/Membrane disruptor | Little (Apoplast) | Non-selective | 22         |

## Effects of Growing Conditions:

Best results under cloudy conditions or in evening. Shattering losses can increase if heavy winds, rain or hail occur after the crop has dried down.

## Tank Mixes:

**Herbicides:** None registered.

**Insecticides:** None registered.

**Fungicides:** Fungicides may be added when applying diquat to potatoes for vine killing.

**Fertilizers:** None registered.

## Restrictions:

- **Rainfall:** Within 15 minutes may reduce effectiveness.
- **Restricted Entry Interval:** Leave 24 hours before entering treated fields.
- **Grazing Restrictions:** Crop residues remaining after harvest may be fed to livestock.
- **Pre-harvest Interval (note these recommended intervals may be for functional or marketability reasons):**
  - **Faba bean, lentil:** Wait 4 to 7 days to harvest.
  - **Forage legumes:** DO NOT exceed 7 days.
  - **Canola, mustard:** Wait 7 to 10 days; maximum 14.
  - **Sunflowers:** Wait 15 to 20 days.
  - **Flax, peas:** When sample tests dry.
- **Re-cropping Interval:** No restrictions the year after application.
- **Aerial Application:** May be applied by air in a minimum of 18 L per acre water volume.
- **Storage:** DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

When finished spraying diquat, rinse the sprayer out with clean water. Run through pump, lines and nozzles. Drain tank by spraying out on an untreated portion of a crop on which the product is registered, or by spraying on uncropped land. Refill sprayer with water and *Agral 90* at 0.6 L per 1000 L spray solution. Run the solution through lines and boom. Spray out, then refill with clean water. Leave equipment standing overnight, then drain water out.

Refer to the general section on sprayer cleaning in the introduction. for additional information.

## Hazard Rating:

Warning – Poison

Caution – May Cause Eye Damage

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Distinct

Herbicide Group  
4 - dicamba  
19 - diflufenzopyr

## Company:

BASF Canada (PCP#25811)

## Formulation:

20% diflufenzopyr and 50% dicamba, sodium salt formulated as a water dispersible granule.

- Container size - 2 x 2.3 kg

## Crops and Staging:

### Fallow and Post-Harvest applications

**Corn:** 2 to 6 leaf stage

*Note: The use of this chemical may result in contamination of groundwater, particularly in areas where soils are permeable (e.g. sand, loamy sand and sandy loam soils) and/or the depth to the water table is shallow.*

## Weeds, Rates and Staging:

**Corn:**

**Distinct applied post-emergent to weeds below at 115 grams per acre plus a non-ionic surfactant and**

**UAN (liquid 28-0-0) at 1.25 L per 100 L of spray solution will control:**

- |                                    |                             |                                   |
|------------------------------------|-----------------------------|-----------------------------------|
| ◦ Biennial wormwood (2 to 8 leaf ) | ◦ Ragweed (common, giant**) | ◦ Velvetleaf                      |
| ◦ Canada thistle*                  | ◦ (2 to 8 leaf)             | ◦ Volunteer canola (up to 4 leaf) |
| ◦ Cocklebur (6 leaf )              | ◦ Redroot pigweed           | ◦ Wild buckwheat                  |
| ◦ Kochia (up to 15 cm)             | ◦ Sow-thistle, perennial**  |                                   |
| ◦ Lady's-thumb                     | ◦ (2 to 10 leaf )           |                                   |
| ◦ Lamb's-quarters                  | ◦ Waterhemp                 |                                   |

**Fallow or post-harvest:**

It is recommended that *Distinct* be tank-mixed with glyphosate and *Merge* adjuvant (200 mL per acre).

**Distinct at 58 grams per acre, as a tank mix with glyphosate, provides enhanced control of the following weeds:**

- Dandelion\*
- Kochia
- Lamb's-quarters
- Narrow-leaved hawk's-beard
- Redroot pigweed
- Round-leaved mallow
- Sow-thistle, spiny annual
- Wild buckwheat

**Distinct at 115 grams per acre controls:**

- Weeds listed at 58 grams per acre plus:
  - Biennial wormwood (2 to 8 leaf)
  - Canada thistle\*
  - Cocklebur
  - Lady's-thumb
- Lamb's-quarters
- Redroot pigweed
- Ragweed, common
- Sow-thistle, perennial\*\*
- Waterhemp
- Velvetleaf
- Volunteer canola (up to 4 leaf)
- Wild buckwheat

\* Top growth control only.

\*\* Suppression only.

A general guide to mixing can be found in the introduction.

DO NOT exceed a maximum application rate of 115 grams per acre of *Distinct* per season.

**Application Information:**

- **Water Volume:** 20 to 80 L per acre. High water volumes are required for adequate coverage, particularly when weed densities are high or weed staging is large.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of **ASABE coarse** droplets.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                    | Movement                                | Spectrum       | WSSA Group |
|-------------------|---------------|---------------------------|-----------------------------------------|----------------|------------|
| dicamba           | POST (foliar) | Synthetic Auxin           | Throughout the plant (Symplast)         | Broadleaf only | 4          |
| diflufenzopyr     | POST (foliar) | Auxin transport inhibitor | To growth areas of the plant (Symplast) | Broadleaf only | 19         |

**Effects of Growing Conditions:**

DO NOT spray if temperatures of +5°C or less are forecast within 3 days of application or when temperatures are expected to exceed +27°C on the day of application. Under cool or dry conditions, control of some weeds may be severely reduced.

**Tank Mixes:****Herbicides:**

- **Fallow and Post-harvest:**
  - Glyphosate (180 to 360 g ae per acre) - recommended
- **Corn:**
  - None registered in western Canada.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Restrictions:**

- **Rainfall:** Rain within 4 hours may reduce control.
- **Restricted Entry Interval:** Leave 12 hours before entering treated fields.
- **Grazing Restrictions:** DO NOT graze or cut as feed for 75 days.
- **Pre-harvest Interval:** DO NOT apply within 120 days of harvesting corn.
- **Re-cropping Interval:** A plant back interval of 30 days is required for the planting of rotational crops. If applying between September 1<sup>st</sup> and 30<sup>th</sup> at the low rate (58 g per acre), BASF supports plant back to these crops the following spring – canola, lentil, field peas, soybeans, or cereal crops. Please contact BASF Canada for a full list of supported rotational crops.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place above 5°C.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

*Distinct* can cause injury to sensitive crops at very low concentrations. Sprayers used to spray this product should be flushed out immediately after use.

Use 'Method B' in the introduction to clean sprayers after using *Distinct*.

## Hazard Rating:

Caution – Poison

Refer to the Introduction for an explanation of the symbols.

# Enforcer D

Herbicide Group  
4 - fluroxypyr, 2,4-D  
6 - bromoxynil

## Company:

Nufarm Agriculture (PCP#30690)

## Formulation:

80 g/L fluroxypyr, 190 g/L bromoxynil and 240 g/L 2,4-D ester formulated as an emulsifiable concentrate.

- Container sizes - 2 x 10 L, 120 L, 480 L

## Crops and Staging:

*Spring wheat (including durum) and barley*: 4 leaf stage until the flag leaf is fully emerged.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

Apply to emerged weed seedlings up to the 5 leaf stage unless otherwise indicated.

### Weeds controlled at the 0.24 L per acre rate:

- Broadleaf plantain
- Cleavers
- Common groundsel
- Kochia (up to 5 cm tall)
- Hemp-nettle
- Knotweed
- Lady's-thumb
- Lamb's-quarters
- Night-flowering catchfly
- Shepherd's-purse
- Stinkweed
- Stork's-bill
- Volunteer canola
- Wild mustard

### Weeds controlled at the 0.48 L per acre rate:

- *Weeds listed above plus:*
  - Canada thistle (suppression)
  - Dandelion
  - Field horsetail
  - Redroot pigweed
  - Round-leaved mallow
  - Russian thistle
  - Volunteer flax
  - Wild buckwheat

## Application Information:

- **Water Volume:** Minimum 20 to 40 L per acre. Use the higher volume when there is a heavy crop canopy or weeds are at an advanced stage.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces **ASABE coarse** droplets while maintaining good coverage of foliage.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------------------------|---------------------------------------|----------------|------------|
| fluroxypyr, 2,4-D | POST (foliar) | Synthetic Auxin                   | Moves throughout the plant (Symplast) | Broadleaf only | 4          |
| bromoxynil        | POST (foliar) | PSII Inhibitor/Membrane disrupter | Little (Apoplast)                     | Broadleaf only | 6          |

## Effects of Growing Conditions:

Optimum activity is experienced between 12 to 24°C when weeds are actively growing. Weeds may not be actively growing and as a result reduced activity will occur when temperatures are below 8°C or above 27°C. Frost 3 days before or after an application may reduce crop tolerance and weed control efficacy.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **In spring wheat (including durum) and barley:**
  - Tralkoxydim (*Nufarm Tralkoxydim* and *Liquid Achieve* only)
  - Fenoxaprop (*Puma Advance* only)
  - Thifensulfuron/tribenuron (*Boost* only) - 2.7 grams per acre
- **In spring wheat (including durum) only:**
  - Clodinafop 240 EC (*Signal* only)
  - *Simplicity OD*
  - *Varro*

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note: The above mixes are those listed on the *Enforcer D* labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 24 hours.
- **Grazing Restrictions:** DO NOT graze or cut for livestock feed within 30 days of application. Withdraw meat animals from treated feed 3 days before slaughter.
- **Pre-harvest Interval:** DO NOT harvest within 60 days of application.
- **Re-cropping Interval:** Barley, canola, flax, forage grasses, lentil, mustard, oats, pea, rye and wheat can be seeded the following year or fields can be fallowed.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a ventilated room above freezing. If frozen, allow container to warm and shake well before using.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

The manufacturer provides no recommendations on how to clean equipment used to apply this product. As a petroleum based emulsifiable concentrate, 'Method B' in the general section on sprayer cleaning in the introduction may be the most effective.

### Hazard Rating:

Caution – Poison

Caution – Skin and Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Enlist 1

Herbicide Group  
4 - 2,4-D

## Company:

Corteva Agriscience (PCP#33701)

## Formulation:

454 g /L 2,4-D present as a choline salt formulated as a solution.

- Container sizes - 2 x 10.2 L, 547 L

## Crops and Staging:

- **Enlist E3 soybeans:** no later than R2 (full flowering stage)
- **Enlist corn:** Up to the V8 growth stage or 120 cm (48 in) height
- **Wheat (spring, durum, winter), barley, and fall rye:** full 3-leaf to early flag leaf stage

## Weeds and Staging:

Apply when weeds are small and actively growing. Use the lower rate in each group for seedling weeds (2-4 leaves) and growing rapidly; and the higher rate for weeds that are in bud, during dry, cool periods or where heavy infestations exist.

### Weeds Controlled with lower rate (295 mL to 445 mL per acre):

- Bluebur
- Burdock (before 4 leaf stage)
- Cocklebur
- Common plantain
- False flax
- Daisy fleabane
- Field horsetail
- Flixweed
- Goat's-beard
- Hoary cress
- Kochia
- Lamb's-quarters
- Mustards (except green tansy)
- Pigweed (redroot, Russian)
- Ragweed (common, giant)
- Russian thistle
- Shepherd's-purse
- Sunflower (annual)
- Sweet clover
- Vetch
- Wild radish

### Weeds Controlled with higher rate (525 mL to 725 mL per acre) – Enlist E3 Soybeans and Enlist corn only:

- Biennial wormwood\*
- Bindweed (field\*, hedge)
- Blue lettuce\*
- Buckwheat (wild\*, tartary)
- Burdock\*
- Canada thistle\*
- Chickweed (common, mouse-eared\*)
- Common purslane
- Common tansy
- Dandelion
- Dog Mustard
- Field peppergrass
- Hairy galinsoga
- Knotweed (before 4 leaf)
- Leafy spurge\*
- Oakleaf goosefoot
- Pineappleweed
- Sow-thistle (annual, perennial\*)
- Velvetleaf

\* Top growth control.

## Rate:

**Enlist E3 soybeans, E3 corn:** Make one to two applications with a minimum of 12 days between applications. Do not apply more than two post emergent applications per use season. Do not apply more than 1.46 L per acre of *Enlist 1* (660 g acid equivalent) per use season.

**Wheat (spring, durum, winter), barley, and fall rye:** The recommended safe crop rate is 445 mL per acre. Possible crop injury may come from higher rates needed to control certain weed species. Higher volumes of water (40 or more litres of water per acre) may reduce the risk of crop injury. Do not apply more than 1 treatment per year.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 80 L per acre (recommended 40 to 60 L per acre).
- **Nozzles and Pressure:** DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASABE coarse to extremely coarse droplets by ground to significantly reduce the potential for drift. Sprayers without drift reduction nozzles should use between 30 to 40 psi (200 to 275 kPa). Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|--------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| 2,4-D choline salt | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

*Enlist 1* herbicide is selective to Enlist (glyphosate and 2,4-D tolerant) varieties. **Foliar application to non-tolerant varieties will cause serious crop damage and yield loss.** Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur. In general, increase spray volume as crop canopy, height and weed density increase to obtain adequate spray coverage.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Post-Emergent:** Enlist Corn, Enlist E3 Soybeans: Glyphosate (360 g ae per acre)
  - Enlist E3 Soybeans: *Liberty 200 SN* (ensure that the glufosinate ammonium herbicide is registered for use on soybeans and refer to label for specific weed species and application rates). Tank-mixing *Enlist 1* with glufosinate ammonium herbicides not labelled for use on Enlist E3 soybeans can cause significant crop injury.

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 2 hours of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Grazing: Enlist Corn, wheat, barley or fall rye:** Lactating livestock may be grazed on treated crops 7 days following application. Withdraw meat animals from treated field at least 3 days prior to slaughter. **Enlist Soybean:** DO NOT graze.
- **Re-cropping:** There are no crop rotational restrictions to fields previously treated with *Enlist 1* after a minimum of 10 months. During the growing season, if replanting is required following application of *Enlist 1* herbicide, observe all planting restrictions for 2,4-D pre-plant applications (i.e., delay planting a crop sensitive to 2,4-D).
- **Storage:** Store this product away from food or feed. This product must be stored away from fertilizers, seeds, insecticides, fungicides or other herbicides intended for use on 2,4-D sensitive crops. If this product is exposed to temperatures below 0°C, it should be warmed to at least 5°C and mixed thoroughly before using.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Warning – Poison

Caution – eye and skin irritant, potential skin sensitizer.

Refer to the introduction for an explanation of the symbols used.

# Enlist Duo

Herbicide Group

4 - 2,4-D

9 - glyphosate

## Company:

Corteva Agriscience (PCP#30958)

## Formulation:

194 g/L 2,4-D present as a choline salt and 204 g/L glyphosate present as a dimethylamine salt formulated as a solution.

- Container sizes - 2 x 8.7 L, 556.8 L

## Crops, Rates and Staging:

**Prior to seeding or post-seeding but pre-emergence:** Wheat (spring, durum, winter), barley, rye, field corn**Post-emergence:**

- **Enlist E3 soybeans:** up to R2 (full flowering stage)
- **Enlist corn:** Up to the V8 growth stage or 120 cm (48 in) height

## Weeds and Staging:

Apply when weeds are small and actively growing.

### Grassy weeds controlled:

- |                       |                    |                     |
|-----------------------|--------------------|---------------------|
| ◦ Barnyard grass      | ◦ Quackgrass       | ◦ Wild oats         |
| ◦ Foxtail (green)     | ◦ Volunteer barley | ◦ Yellow nutsedge** |
| ◦ Proso millet (wild) | ◦ Volunteer wheat  |                     |

### Broadleaf weeds controlled:

- |                                    |                                                 |                                                 |
|------------------------------------|-------------------------------------------------|-------------------------------------------------|
| ◦ Biennial wormwood*               | ◦ Field horsetail                               | ◦ Pineappleweed                                 |
| ◦ Bindweed (field**, hedge)        | ◦ Field peppergrass                             | ◦ Ragweed (common, giant)                       |
| ◦ Bluebur                          | ◦ Flixweed                                      | ◦ Round-leaved mallow**                         |
| ◦ Blue lettuce*                    | ◦ Goat's-beard                                  | ◦ Russian thistle                               |
| ◦ Buckwheat (wild, tartary)        | ◦ Hairy galinsoga                               | ◦ Shepherd's-purse                              |
| ◦ Burdock*                         | ◦ Hemp-nettle                                   | ◦ Smartweed (green, Pennsylvania, lady's-thumb) |
| ◦ Canada fleabane                  | ◦ Hoary cress                                   | ◦ Sow-thistle, (annual, perennial**)            |
| ◦ Canada thistle**                 | ◦ Kochia                                        | ◦ Stinkweed                                     |
| ◦ Chickweed (common, mouse-eared*) | ◦ Lamb's-quarters                               | ◦ Sweet-clover                                  |
| ◦ Cleavers                         | ◦ Leafy spurge*                                 | ◦ Vetch                                         |
| ◦ Cocklebur                        | ◦ Milkweed (common**)                           | ◦ Velvetleaf                                    |
| ◦ Common plantain                  | ◦ Mustards (except green tansy)                 | ◦ Volunteer canola                              |
| ◦ Common purslane                  | ◦ Narrow-leaved hawk's-beard                    | ◦ Wild radish                                   |
| ◦ Common tansy                     | ◦ Night-flowering catchfly                      | ◦ Wild sunflower (annual)                       |
| ◦ Corn spurry                      | ◦ Nightshade (Eastern black)                    | ◦ Wild tomato                                   |
| ◦ Cow cockle                       | ◦ Oak-leaf goosefoot                            | ◦ Yellow nutsedge**                             |
| ◦ Daisy fleabane                   | ◦ Pigweed/amaranth                              |                                                 |
| ◦ Dandelion                        | (redroot, Russian, smooth, Palmer**, waterhemp) |                                                 |
| ◦ False flax                       |                                                 |                                                 |

\* Top growth control.

\*\* Use 2 applications for best control. The second application should be no later than the V8 stage of corn. Milkweed should be 15 to 60 cm in height and actively growing. Yellow nutsedge should be 5 to 15 cm in height and actively growing. Canada thistle and perennial sow-thistle should be from the rosette stage to 50 cm in height and actively growing. The second application should be at least 2 weeks after the first for best control of these perennial weeds.

## Rates:

Apply at 1.74 L per acre. DO NOT apply more than 2 applications (3.48 L per acre total) per season.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 80 L per acre. Corteva Agriscience recommends 40 to 60 L per acre.
- **Nozzles and Pressure:** DO NOT apply during periods of dead calm. Avoid application of this product when winds are gusty. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse to extremely coarse** droplets by ground to significantly reduce the potential for drift. Sprayers without drift reduction nozzles should use between 30 to 40 psi (200 to 275 kPa). Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing        | Target                              | Movement                       | Spectrum                                         | WSSA Group |
|--------------------|---------------|-------------------------------------|--------------------------------|--------------------------------------------------|------------|
| 2,4-D choline salt | POST (foliar) | Synthetic Auxin                     | Symplast                       | Broadleaf only                                   | 4          |
| glyphosate         | POST (foliar) | EPSP Amino Acid Synthesis Inhibitor | Toward growth areas (Symplast) | Non-selective broadleaf & grass, except HT crops | 9          |

## Effects of Growing Conditions:

*Enlist Duo* herbicide is a systemic herbicide and is intended for control of emerged annual and perennial weeds. *Enlist Duo* herbicide is selective to *Enlist* (glyphosate and 2,4-D tolerant) varieties. Foliar application to non-tolerant varieties will cause serious crop damage and yield loss. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur. In general, increase spray volume as crop canopy, height and weed density increase to obtain adequate spray coverage.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** Glyphosate (480 g/L present as the DMA salt).

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** *Enlist Duo* should not be applied when rainfall is expected within 2 hours of completion of the application.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:**
  - ***Enlist Corn:*** Lactating livestock may be grazed on treated crops 7 days following application. Withdraw meat animals from treated field at least 3 days prior to slaughter. DO NOT graze *Enlist* soybean.
- **Pre-harvest Interval:** DO NOT harvest within 30 days of application.
- **Re-cropping Interval:** There are no crop rotational restrictions to fields previously treated with *Enlist Duo* after a minimum of 10 months. During the growing season, if replanting is required following application of *Enlist Duo* herbicide, observe all planting restrictions for 2,4-D pre-plant applications (i.e., delay planting a crop sensitive to 2,4-D).
- **Aerial Application:** DO NOT apply by air.
- **Storage:** This product must be stored away from fertilizers, seeds, insecticides, fungicides or other herbicides intended for use on 2,4-D and glyphosate sensitive crops.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Caution – Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Eptam Liquid EC

Herbicide Group  
15 (formerly Group 8) - EPTC

## Company:

Gowan Canada (PCP#11284)

## Formulation:

834g/L of EPTC formulated as an emulsifiable concentrate.

- Container sizes - 10 L, 1000 L

**Caution:** The level of weed control may be reduced where Eptam Liquid EC is used on soils that have been treated with Eptam Liquid EC the previous growing season. It is expected that the reduction in control will be greater where Eptam Liquid EC have been used repeatedly for 2 or more years.

## Crops, Rates and Staging:

Eptam Liquid EC is applied as a pre-plant incorporated treatment prior to seeding the following crops:

| Crop                                                                       | Rate (L per acre) |
|----------------------------------------------------------------------------|-------------------|
| Dry beans                                                                  | 1.72 to 2.23      |
| Alfalfa, birdsfoot trefoil, cicer milkvetch**, sweet clover**, sunflowers* | 1.72              |
| Potatoes                                                                   | 1.72 to 3.44      |
| Flax*                                                                      | 1.42 to 1.72      |

\* May also be applied in late fall prior to freeze-up.

\*\* Seed production only.

**NOTE:** The use of Eptam Liquid EC on flax is not recommended in Saskatchewan because of the risk of crop injury.

Where a rate range appears, use the lower rate on light textured soils and the higher rate on heavy textured soils.

DO NOT apply Eptam Liquid EC to:

- soils with less than 3 percent organic matter
- soil with more than 15 percent organic matter.

## Weeds and Staging:

Must be applied prior to the emergence of the following weeds. Emerged weeds will not be controlled.

- |                           |                                         |                                           |
|---------------------------|-----------------------------------------|-------------------------------------------|
| ◦ Barnyard grass          | ◦ Henbit*                               | ◦ Quackgrass (suppression)**              |
| ◦ Chickweed*              | ◦ Lamb's-quarters*                      | ◦ Volunteer cereals (wheat, barley, oats) |
| ◦ Corn spurry*            | ◦ Nettleleaf goosefoot*                 | ◦ Wild oats                               |
| ◦ Foxtail (green, yellow) | ◦ Pigweed (prostrate, redroot, tumble)* | ◦ Yellow nutsedge**                       |
| ◦ Hairy nightshade*       | ◦ Purslane*                             |                                           |

\* Will be controlled only if treatment is made when conditions are favourable for germination and growth.

\*\* Roots of perennial weeds must be thoroughly chopped prior to application.

## Application Information:

- **Water Volume:** Minimum of 40 L per acre of water. May be mixed with liquid fertilizer in place of water (see label for liquid fertilizer compatibility).
- **Pressure:** 30 to 40 psi (200 to 275 kPa).
- **Equipment and Nozzles:** Since Eptam Liquid EC is highly volatile, the product must be incorporated immediately. This is best accomplished by mounting spraying equipment directly onto the incorporation equipment (tandem disks, field cultivators on light soil). May also be applied to cleanly cultivated soil for potatoes, by metering into the irrigation water to achieve the recommended rate per acre ("herbigation" or "chemigation"). See label for detailed instructions.
- **Incorporation:** All growth and stubble should be thoroughly worked into the soil before treatment. Apply to a dry soil surface. Incorporate immediately after application preferably during the spraying operation as Eptam Liquid EC is volatile. Set disc and cultivator implements to cut to a depth of 4 to 6 inches (10 to 15 cm). A second operation at a right angle to the first is required. The disc or cultivator must be followed with a harrow or other levelling device that extends beyond the width of the implement. Speeds in excess of 8 km per hour (5 miles per hour) will result in excessive pulverization and crop residue destruction leaving the field susceptible to erosion. The maximum recommended tillage depth is 4 inches (10 cm).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing            | Target                                 | Movement                            | Spectrum          | WSSA Group            |
|-------------------|-------------------|----------------------------------------|-------------------------------------|-------------------|-----------------------|
| EPTC              | PPI (soil active) | Lipid Synthesis Inhibitor (Non-ACCase) | Little movement in plant (Apoplast) | Broadleaf & Grass | 15 (formerly Group 8) |

## Effects of Growing Conditions:

Crop injury can occur if stressful environmental conditions (cold, wet soils, drought or excessive heat) occur after seeding. To minimize crop injury, delay seeding 10 days if these conditions occur at the time of application, or select an alternative product. Very cold or dry soil conditions during weed emergence will reduce control.

## Tank Mixes:

**Herbicides:**

- **Dry beans (navy and red kidney only):** Liquid formulations of *Treflan* and *Rival*.

**Insecticides:** DO NOT tank mix with insecticides.

**Fungicides:** None registered.

**Fertilizers:** May be mixed with liquid fertilizer.

- Compatibility test should be conducted according to instructions on the herbicide label.
- Dry bulk fertilizers, except nitrate fertilizers, may be impregnated or coated with *Eptam Liquid EC*. The impregnated fertilizer should be spread uniformly onto the field using a double overlap pattern immediately after impregnation. The impregnated fertilizer must be applied to the field when the soil surface is dry to at least 0.5 inch (1.5 cm) depth. The first incorporation must be done immediately after application.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No effect once incorporated. DO NOT apply prior to irrigation.
- **Restricted Entry Interval:** DO NOT enter treated fields for 24 hours.
- **Grazing Restrictions:** DO NOT graze or feed treated crops to livestock in the year of application.
- **Re-cropping Interval:** Will not injure crops the year after spring application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No detailed cleaning procedures are indicated on the label. Use a commercial all purpose spray sprayer cleaning product for adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

Caution – Poison

Refer to the Introduction for an explanation of the symbols.

# Erebus Xtreme

Herbicide Group  
2 - pyroxsulam  
4 - fluroxypyr

## Company:

Syngenta Canada

## Formulation:

The *Erebus Xtreme* package contains two components:

***Erebus Xtreme* (PCP#34353):** 12.8 g/L pyroxsulam and 113.5 g/L fluroxypyr formulated as a suspension .

- Container size - 2 x 9.46 L

-plus-

***Erebus Xtreme B Utility Modifier:***

- Container size - 3.88 L

## Crops and Staging:

Spring wheat (including durum) and winter wheat – 3 leaf up to and including stem elongation.

## Weeds, Rates and Staging:

Add *Erebus Xtreme B Utility Modifier* at 95 mL per acre.

***Erebus Xtreme* at 356 mL per acre:**

- **Grasses:**
  - Japanese brome (1 to 4 leaf)
  - Wild oats (less than 75 plants per m<sup>2</sup>, up to 4 leaf, 2 tiller)
- **Broadleaves:**
  - Cleavers (1 to 8 whorls)
  - Kochia\* (2 to 8 leaf)
  - Wild buckwheat (1 to 4 leaf)
  - Flax, volunteer (1 to 12cm)
  - Stork's-bill\* (1 to 8 leaf)

***Erebus Xtreme* at 473 mL per acre:**

The weeds controlled above plus those listed below.

- **Grasses:**

| Weed                                           | Stage                        |
|------------------------------------------------|------------------------------|
| Wild oats                                      | up to the 4 leaf, 2 tillers  |
| Barnyard grass, yellow foxtail, green foxtail* | 1 to 5 leaf                  |
| Japanese brome                                 | 1 to 6 leaf                  |
| Downy brome*                                   | 2 to 6 leaf, up to 4 tillers |

- **Broadleaves:**
  - Canada thistle\* (up to 30 cm, before budding)
  - Flixweed (up to 10 cm)
  - Smartweed (1 to 5 leaf)
  - Cow cockle (up to 8 leaf)
  - Hemp-nettle (1 to 8 leaf)
  - Stinkweed (up to 30 cm)
  - Common chickweed (up to 10 cm)
  - Kochia (2 to 8 leaf)
  - Volunteer canola (1 to 6 leaf)\*\*
  - Corn spurry (up to 2 whorl or <10 cm)
  - Redroot pigweed (1 to 8 leaf)
  - Round-leaved mallow (up to 6 leaf or 10 cm)
  - Russian thistle\* (up to 10 cm)
  - Dandelion\* (rosettes <20 cm diameter)
  - Shepherd's-purse (up to 30 cm)

\* **Suppression only.**

\*\* **Not CLEARFIELD varieties.**

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 20 L per acre.
  - **Aerial:** 12 to 20 L per acre.
- **Nozzles and Pressure:** DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) coarse classification. Boom height must be 60 cm or less above the crop or ground. Use low pressures (200 to 275 kPa).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                         | Spectrum            | WSSA Group |
|-------------------|---------------|--------------------------|----------------------------------|---------------------|------------|
| pyroxsulam        | POST (foliar) | ALS Amino Acid Inhibitor | Toward area of growth (Symplast) | Broadleaf and grass | 2          |
| fluroxypyr        | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)  | Broadleaf           | 4          |

## Effects of Growing Conditions:

*Erebus Xtreme* activity is influenced by weather conditions. Optimum activity requires active crop and weed growth. The temperature range for optimum activity is 12° C to 24° C. Reduced activity will occur when temperatures are below 8° C or above 27° C. Frost before application (3 days) or shortly after (3 days) may reduce weed control and crop tolerance. Weed control may be reduced during stress conditions, e.g. drought, heat or cold stress, or if weeds have initiated flowering, or if heavy infestations exist.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- 2,4-D ester 700 (214 to 243 mL per acre)

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control. Avoid application when heavy rain is forecast.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** DO NOT harvest the treated crop within 60 days after application.
- **Grazing:** MUST NOT be grazed or fed to livestock for 7 days after treatment.
- **Re-cropping:** Fields treated can be seeded the following year to barley, canola, corn, dry beans (of the species *Phaseolus vulgaris*), flax, lentils, yellow and brown mustard, oats, peas, potatoes, soybeans, sunflower, or spring wheat; or fields can be summerfallowed.
- **Aerial Application:** May be applied by aircraft.
- **Storage:** Store in original container in a secure, dry, heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Caution - Eye and Skin Irritant

Potential Skin Sensitizer

# Escort

Herbicide Group  
2 - metsulfuron

## Company:

Envu Canada (PCP#23005)

## Formulation:

60% metsulfuron-methyl formulated as a water dispersible granule.

- Container size - 0.25 kg

## Crops and Staging:

Pasture, rough turf, and rangeland: No stage restrictions.

## Weeds, Rates and Staging:

For seedling weeds apply to young plants up to 4 inches (10 cm) tall or wide. For established non-woody plants (biennial or perennial) apply up to the early bud stage. For western snowberry, wild rose and other woody species, apply between mid-June and mid-August after the brush has leafed out, but before the leaves begin to turn their fall colours.

| Rate        | Weeds Controlled                                                                                                        |
|-------------|-------------------------------------------------------------------------------------------------------------------------|
| 8 g/acre    | Canada thistle*<br>Dandelion*<br>Russian thistle<br>Sow-thistle*<br>Common tansy<br>Scentless chamomile<br>Sweet clover |
| 10 g/acre   | <i>Above weeds plus:</i><br>Western snowberry                                                                           |
| 12 g/acre   | <i>Above weeds plus:</i><br>Wild rose<br>Dandelion                                                                      |
| 40 g/acre** | Balsam poplar<br>Willow                                                                                                 |
| 60 g/acre** | Cherry<br>Trembling aspen                                                                                               |

At all rates add *Agral 90*, *Agsurf II*, or *Citowett* at 0.2 L per 100 L of spray solution.

\* **Suppression only.**

\*\* **Rangeland only. See label for detailed application instructions.**

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information

- **Water Volume:** 40 to 91 L per acre for weedy growth and up to 809 L per acre applied to the point of run-off for woody species. See the label for details.
- **Nozzles and Pressure:** 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing                               | Target                   | Movement                                | Spectrum       | WSSA Group |
|--------------------|--------------------------------------|--------------------------|-----------------------------------------|----------------|------------|
| metsulfuron-methyl | POST (foliar) also has soil activity | ALS Amino Acid Inhibitor | Toward growth areas of plant (Symplast) | Broadleaf only | 2          |

## Effects of Growing Conditions:

DO NOT apply during periods of intense rainfall or to soil saturated with water. Warm, moist conditions following treatment enhance the activity of *Escort*, while cold, dry conditions may reduce or delay activity. Brush hardened off by cold weather and drought stress may not be controlled.

**Tank Mixes:**

**Herbicides:** 2,4-D amine or ester (371 g ae per acre) plus surfactant.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

**Restrictions:**

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:** May be grazed by cattle on the day of treatment.
- **Storage:** Store in a cool, dry place. May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

**Sprayer Cleaning:**

*Escort* can cause severe injury to sensitive crops at very low concentrations. Use 'Method A' in the introduction to clean sprayers immediately after using *Escort*.

**Hazard Rating:**

Caution – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Esplanade SC / Rejuvra

Herbicide Group  
29 - indaziflam

**Company:**

Envu Canada (*Esplanade SC* - PCP#31333; *Rejuvra* - PCP#35553)

**Formulation:**

200 g/L of indaziflam formulated as a suspension concentrate.

- container sizes
  - *Esplanade SC* - 4 x 1 L, 2 x 10 L
  - *Rejuvra* - 946 L

**Crops and Staging:**

***Esplanade SC:*** Grass forage and hay; rangeland and pasture; non-crop areas where bare ground is desired (i.e., rights-of-way, roadsides, industrial sites, fence lines and other non-crop areas).

***Rejuvra:*** Grass forage and hay; rangeland and pasture.

DO NOT use in residential or recreational areas, where bystanders could be exposed during or after application.

DO NOT apply to cropland.

**Weeds and Staging:**

Preemergent, soil active, residual control of the emergence of the following weeds. Apply to target surface as a uniform broadcast or band application before weeds germinate.

**Broadleaf weeds controlled:**

- |                                |                                      |                            |
|--------------------------------|--------------------------------------|----------------------------|
| ◦ Bittercress                  | ◦ Kochia*                            | ◦ Round-leaved mallow      |
| ◦ Black medic                  | ◦ Lamb's-quarters                    | ◦ Shepherd's-purse         |
| ◦ Carpetweed                   | ◦ London rocket*                     | ◦ Sow-thistle (annual)     |
| ◦ Chickweed (mouse-eared)      | ◦ Mustard (black, wild)              | ◦ Spotted spurge           |
| ◦ Common groundsel             | ◦ Nightshade (American black, hairy) | ◦ St-John's wort           |
| ◦ Cudweed                      | ◦ Pigweed (prostrate, redroot*)      | ◦ Stork's-bill             |
| ◦ Curled dock                  | ◦ Plantain (buckthorn)               | ◦ Sunflower (wild, annual) |
| ◦ Field bindweed               | ◦ Prickly lettuce*                   | ◦ White clover*            |
| ◦ Fleabane (hairy)             | ◦ Prostrate knotweed                 | ◦ White sweetclover        |
| ◦ Hawk's-beard (smooth, green) | ◦ Purple vetch                       | ◦ Yellow star-thistle      |
| ◦ Henbit                       | ◦ Purslane                           | ◦ Yellow woodsorrel        |

**Grassy weeds controlled:**

- Annual bluegrass
- Annual brome (downy, Japanese)
- Barnyard grass
- Crabgrass (large, smooth)
- Foxtail (green, yellow)
- Ryegrass (annual, Italian, perennial)
- Stinkgrass
- Tufted lovegrass
- Volunteer common rye
- Wild oats
- Wild proso millet
- Witchgrass

\* **Suppression only.**

**Rates:**

152 mL per acre

**Note:** Excessive plant debris present on the soil surface at time of application may prevent uniform product distribution reaching the soil and reduce weed control. Performance may be improved by removing excessive debris prior to product application.

Only ONE APPLICATION of this product or other products containing indaziflam per year.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

**Application Information:**

- **Water Volume:** Minimum 40 to 380 L per acre. Use adequate volumes to provide complete even soil coverage.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE S572.1* coarse droplets or coarser. DO NOT apply with hollow cone nozzles or other application equipment that does not provide uniform coverage.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing       | Target                                  | Movement                | Spectrum                   | WSSA Group |
|-------------------|--------------|-----------------------------------------|-------------------------|----------------------------|------------|
| Indaziflam        | Pre-emergent | Inhibitor of cell wall synthesis site C | No appreciable movement | Broadleaf and Grassy Weeds | 29         |

**Effects of Growing Conditions:**

*Esplanade SC* and *Rejuvra* are persistent soil active herbicides. As soil active herbicides, these products rely on rainfall to move them into the germination zone of weedy species. *Esplanade SC* and *Rejuvra* are broken down by soil microbes; therefore, persistence can vary based on availability of rainfall. Low rainfall will allow these products to persist for longer and moist conditions will cause these products to persist for a shorter period. Very heavy rain may leach these products out of the germination zone and reduce control.

**Tank Mixes:**

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:**

- Glyphosate<sup>†</sup> (360 to 1750 g ae per acre)
- *Milestone* (0.1 to 0.2 L per acre)
- Glyphosate<sup>†</sup> + *Milestone* (rates above)
- *Navius Flex/TruRange* (68 to 135 g per acre)+ glyphosate<sup>†</sup>
- *Navius Flex/TruRange* (68 - 135g per acre) plus a non-ionic adjuvant, *Merge* adjuvant, or *Crop Oil Concentrate*
- *Navius Flex* or *TruRange* + Glyphosate plus a non-ionic adjuvant, *Merge* adjuvant or *Crop Oil Concentrate* (rates above)

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

<sup>†</sup> **Note:** The manufacturer may not support all brands of these products. See the label or contact Bayer for more information.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

**Restrictions:**

- **Rainfall:** Treatments are most effective in controlling weeds when adequate moisture is present and the application is followed by rain prior to weed seed germination.
- **Restricted Entry Interval:** DO NOT enter treated areas until sprays have dried.
- **Grazing Restrictions:** DO NOT harvest crop group 17 grass hay within 40 days of application. For all other uses, there are no grazing or haying restrictions for non-lactating or lactating animals (including cattle, horses, sheep, and goats) when using *Esplanade SC/Rejuvra* alone as directed. When applying *Esplanade SC/Rejuvra* in tank mixture, consult the label of the tank mix partner(s) for further information regarding grazing and haying restrictions and always observe the most restrictive interval and precautionary measures of the products involved in the tank mixture.
- **Re-cropping Interval:** DO NOT apply to cropland.
- **Aerial Application:** May be applied by air.
- **Storage:** DO NOT store below freezing. Keep in original container during storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Causes Moderate Eye Irritation

Refer to the Introduction for an explanation of the symbols.

# Ethalfluralin

Herbicide Group  
3 - ethalfluralin

Weed Control

## Company:

Gowan Canada (*Edge MicroActiv* - PCP#32904)

Rath Holdco Inc. (*Yieldshield Resflura Soilsorb* - PCP#34586)

## Formulation:

10% ethalfluralin formulated as a granular.

- Container size - 454 kg

## Crops and Staging:

*Ethalfluralin* can be applied prior to seeding the following crops:

- |                         |                                 |              |
|-------------------------|---------------------------------|--------------|
| ◦ Alfalfa establishment | ◦ Dry beans**                   | ◦ Field peas |
| ◦ Camelina*             | ◦ Industrial hemp*              | ◦ Safflower  |
| ◦ Canola                | ◦ Flax*,*** (fall applied only) | ◦ Soybeans   |
| ◦ Caraway               | ◦ Faba beans                    | ◦ Sunflowers |
| ◦ Chickpeas*            | ◦ Lentils†                      |              |
| ◦ Coriander             | ◦ Mustard (yellow only)         |              |

† **Yieldshield Resflura Soilsorb is registered for fall application only, where one incorporation is completed in the fall. Edge MicroActiv may be applied spring or fall. Fall application may be for both conventional tillage and direct seeding systems. Spring application of Edge MicroActiv is for use with direct seeding systems only. Seeding depth is critical – DO NOT seed more than 1.5 inches (4 cm) deep. Avoid loose seedbeds and planting into cold soils.**

\* **Since this use is registered under the User Requested Minor Use Label Expansion program, the manufacturers assume no responsibility for herbicide performance. Application to camelina, chickpeas, flax and industrial hemp is at the risk of the user.**

\*\* **Yieldshield Resflura Soilsorb 10% for navy and kidney only. Edge MicroActiv is registered for all dry common bean (*Phaseolus* spp.) but tolerance may vary across varieties. Apply to a small area initially to determine tolerance before adopting over a larger area.**

\*\*\* **Edge MicroActiv only.**

## Weeds and Staging:

For pre-emergent control of the following weeds:

### Grassy Weeds:

- |                             |                           |               |
|-----------------------------|---------------------------|---------------|
| ◦ Barnyard grass            | ◦ Volunteer barley*       | ◦ Wild oats*  |
| ◦ Foxtail (green**, yellow) | ◦ Volunteer spring wheat* | ◦ Witch grass |

### Broadleaf Weeds:

- |                |                                |                    |
|----------------|--------------------------------|--------------------|
| ◦ Cleavers*    | ◦ Kochia                       | ◦ Purslane         |
| ◦ Chickweed    | ◦ Lady's-thumb*                | ◦ Russian thistle* |
| ◦ Corn spurry  | ◦ Lamb's-quarters              | ◦ Wild buckwheat   |
| ◦ Cow cockle   | ◦ Nightshade*                  |                    |
| ◦ Hemp-nettle* | ◦ Pigweed (prostrate, redroot) |                    |

\* **Suppression only.**

\*\* **Not including group 3 herbicide resistant biotypes.**

## Rates:

**Note:** Successful use of this product requires proper field preparation and product incorporation. For instructions on proper application under various situations see 'Application Information' below.

|        | Rate (kg per acre)                                |                                              |                                             |                                        |                                              |
|--------|---------------------------------------------------|----------------------------------------------|---------------------------------------------|----------------------------------------|----------------------------------------------|
|        | Light Textured Soils                              |                                              | Medium to Heavy Textured Soils              |                                        |                                              |
|        | 2 to 6 percent Organic Matter<br>Dark Brown-Black | 6 to 15 percent Organic Matter<br>Deep Black | 2 to 4 percent Organic Matter<br>Dark Brown | 4 to 6 percent Organic Matter<br>Black | 6 to 15 percent Organic Matter<br>Deep Black |
| Spring | 3.4                                               | 4.5                                          | 3.4                                         | 4.5                                    | 4.9 to 5.7                                   |
| Fall   | 4.5                                               | 5.7                                          | 4.5                                         | 5.7                                    | 5.7                                          |

DO NOT apply to:

- soils containing less than 2 percent organic matter (including eroded knolls)
- soils containing greater than 15 percent organic matter.
- fields that received applications of manure within the last 12 months. After this period, manure must be thoroughly incorporated to a depth of 10 to 15 cm.

To reduce the possibility of injury to the treated crop, use good quality certified seed. Seed shallow into a warm, moist, firm seedbed using recommended agronomic practices that will promote rapid and even crop germination and emergence.

## Application Information:

Apply uniformly with a properly calibrated granular herbicide applicator. Avoid concentration of the herbicide in narrow bands. Calibrate the applicator according to manufacturer's directions and check frequently during application to be sure equipment is operating correctly.

### Direct Seeding Systems (minimum tillage systems):

- **General:**
  - Direct-seeding is defined as seed placement into standing stubble (including chemical fallow) with minimum soil disturbance (<30 percent) and maximum surface residue retention. *Edge MicroActiv* may be used on fields that have been in direct-seeding systems for at least two consecutive years. When seeding, a one pass, direct-seeding operation is recommended.
  - Application to the soil surface provides residual control of susceptible weeds within the top 2.5 cm of the soil surface but will not control weeds that germinate from deeper (>2.5 cm).
- **Land Preparation:**
  - *Crop Residue Management:* Chopping, spreading and even distribution of straw and chaff residues will prevent plugging or hairpinning during the seeding operation. Poor and uneven crop emergence, cold wet soils, soil nutrient tie-up and delayed and uneven maturity may also be a result of inadequate residue management.
  - *Pre-seeding (Burn Off) Weed Control:* *Edge MicroActiv* will not control emerged weeds. A pre-seeding burn-off herbicide treatment is required to eliminate weed competition prior to crop emergence.
- **Instructions:**
  - Use of a single harrow operation assists in managing straw residue to ensure good herbicide soil contact. Avoid excessive soil disturbance.
  - *Seeding Instructions:* Use direct-seeding equipment with seed placement at a uniform depth to ensure seed-soil contact and rapid crop emergence. Minimum soil disturbance ensures a uniform herbicide layer at the soil surface.
  - *Fall Application:* *Edge MicroActiv* in direct-seeding systems may be applied in the fall between October 1 and prior to soil freeze-up for weed control the following year. Apply at the fall rates in the 'Rates' section using a harrow operation to manage crop residue and ensure herbicide soil contact. DO NOT apply to snow or frozen soil.
  - *Spring Application:* *Edge MicroActiv* in direct-seeding systems may be applied in the spring as early as field conditions permit and at least 10 days prior to seeding. Apply at the spring rates in the 'Rates' section and use a shallow harrow incorporation within 24 hours of application.

### Conventional Tillage Systems:

- **General:**
  - *Ethalfuralin* for weed control in conventional tillage systems is intended for use on soils which have been conventionally tilled with > 30 percent soil disturbance within the previous two consecutive years or more.
- **Land Preparation:**
  - *Pre-seeding Weed Control:* *Ethalfuralin* will not control emerged weeds. If existing weed growth is too heavy to allow uniform application and incorporation, destroy established weeds by cultivation or a foliar herbicide application before application.

• **Application Instructions:**

- Incorporate with a tandem disc, discer or field cultivator (Vibrashank type). Cultivators should have 3 to 4 rows of sweeps spaced 8 inches apart and staggered so that no soil is left unturned. Set equipment to work at a depth of 3 to 4 inches (8 to 10 cm). Operate disc implements at 7 to 10 km per hour (4 to 6 miles per hour), and cultivators at 10 to 13 km per hour (6 to 8 miles per hour).
- *Fall and Spring Application:* In conventional tillage systems, *Ethalfluralin* can be applied in the fall between September 1 and prior to freeze-up for weed control the following year, or it may be applied in the spring any time up to seeding. DO NOT apply to snow or frozen soil.
- Apply to a soil surface free of large clods and incorporate in the same operation if possible.
- Two incorporations are required at right angles for thorough mixing. *The first incorporation must be completed within 24 hours of application.* Delay the second incorporation for at least three days after the first. When applying in the fall, it is preferred that both incorporations be done in the fall. The second incorporation may be delayed until spring to conserve crop residues; however, both incorporations must be done to the same depth.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing            | Target                          | Movement                            | Spectrum          | WSSA Group |
|-------------------|-------------------|---------------------------------|-------------------------------------|-------------------|------------|
| ethalfluralin     | PPI (Soil active) | Mitosis Inhibitor/cell division | Little movement in plant (Apoplast) | Broadleaf & grass | 3          |

## Effects of Growing Conditions:

Crops stressed by cold weather, excessive moisture or drought may be injured by *Ethalfluralin*. Dry soil conditions between application and emergence may result in decreased weed control.

## Tank Mixes:

Not applicable.

## Restrictions:

- **Rainfall:** No effect once incorporated.
- **Grazing Restrictions:** DO NOT graze or cut treated crops for livestock feed.
- **Re-cropping Interval:** DO NOT grow sugar beets, oats, and small-seeded annual grasses such as timothy, canaryseed and creeping red fescue in rotation following a crop treated with *Ethalfluralin*. DO NOT seed wheat as a rotational crop onto land that has been treated with trifluralin and/or *Ethalfluralin* at oilseed/special crop/barley rates for two consecutive crop years. Thinning of crop may occur in areas that have received abnormally low amounts of precipitation or in crops that are emerging slowly.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place. May be frozen. DO NOT expose to prolonged sunlight or heat.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Not applicable.

## Hazard Rating:

Warning – Eye and Skin irritant.

Refer to the Introduction for an explanation of the symbols.

# Exhilarate

(this referring text to be removed in the 2028 edition)  
see Halauxifen/Florasulam + MCPA

Herbicide Group  
2 - florasulam  
4 - halauxifen, MCPA

# Express FT

Herbicide Group  
2 – tribenuron-methyl, metsulfuron methyl  
4 - dicamba

## Company:

FMC of Canada Ltd.

## Formulation:

**Express FT (PCP: 35535):** 59.57% dicamba, present as sodium salt plus 6.38% tribenuron-methyl plus 1.28% metsulfuron-methyl formulated as a wettable granule.

- Container size – 4 x 1.88 kg

## Crops and Staging:

**Wheat (spring, durum, winter), barley, oats:** Apply a minimum of 24 hours prior to planting or as post-harvest burnoff where registered crops will be seeded next spring.

**Chemfallow:** Allow at least 10 days after treatments before tillage.

Must be applied with glyphosate (minimum 182 g ae per acre).

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds that are less than 6 inches (15 cm) in height or width.

### Weeds controlled (*Express FT* + glyphosate):

- Canada fleabane - up to 8 cm
- Canada thistle\* - rosette
- Chickweed - 1-6 leaf
- Cleavers\*\* - up to 8 cm
- Common ragweed - up to 8 cm
- Cow cockle - up to 3 leaf
- Dandelion\*\*
- Downy brome
- Flixweed
- Giant foxtail
- Green foxtail
- Hemp-nettle
- Kochia - up to 8 cm
- Lamb's-quarters
- Narrow-leaved hawk's-beard\*\* - Up to 8 cm
- Night-flowering catchfly\* - up to 8 cm
- Persian darnel
- Redroot pigweed
- Russian thistle
- Scentless chamomile - up to 8 cm
- Stinkweed
- Tufted vetch\*
- Volunteer barley
- Volunteer canola\*\* (including glyphosate-tolerant varieties)
- Volunteer wheat
- White cockle - rosette
- Wild buckwheat - up to 8 leaf
- Wild carrot - up to 10 cm\*
- Wild mustard
- Wild oats

\* Suppression only.

\*\*Up to 15 days of extended control on weeds germinating from seed (Depending on environmental conditions).

## Rate:

**Note:** Maximum of one application of this or other products containing metsulfuron-methyl per year.

47 g per acre

Must be applied with glyphosate (minimum 182 g ae per acre).

*Express FT* may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing. Do not add adjuvants that alter the pH of the spray solution.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 20 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASABE S572 droplets by ground. Do not apply with more than 275 kPa. Low drift nozzles may require higher pressures for proper performance.
- **Screens:** Use a 50 mesh or coarser screen and filter system.
- **Equipment:** Apply using a calibrated field sprayer.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient       | Timing                                  | Target                             | Movement                              | Spectrum       | WSSA Group |
|-------------------------|-----------------------------------------|------------------------------------|---------------------------------------|----------------|------------|
| metsulfuron, tribenuron | POST (foliar)                           | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast)        | Broadleaf only | 2          |
| dicamba                 | POST (foliar) with slight soil activity | Synthetic Auxin                    | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Apply *Express FT* when air temperature is between 10 and 25°C. DO NOT apply when there is a risk of severe drop in night temperatures. Control of weeds growing in wheel tracks may be reduced if *Express FT* is applied under dry, dusty conditions. Under certain conditions (heavy rainfall, prolonged cool weather, frost conditions, wide fluctuations in day/night temperatures) lightening in crop colour and reduction in crop height may occur.) This injury may be worse on light or low organic matter soils. DO NOT use *Express FT* on highly variable soils that have large gravelly or sandy areas, eroded knolls or calcium deposits.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** *Aim EC*

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

**Note:** the above Tank Mixes are those listed on the *Express FT* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

## Restrictions:

- **Rainfall:** Rainfall soon after application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Not applicable.
- **Grazing:** None listed.
- **Re-cropping:** Fields treated with *Express FT* may be seeded to oats, wheat (spring, durum or winter) or spring barley a minimum of 24 hours after application. The following crops may be seeded 10 months after application: Canola, dry beans, faba beans, field corn, flax, lentils, peas and soybeans. Fields treated with a post-harvest application of *Express FT* in the fall may be seeded in the spring to wheat (spring or durum), spring barley or oats, or fields may be summerfallowed.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store this product away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to Method A in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Caution – Poison

Eye irritant and Potential Skin Sensitizer.

Warning – Contains the allergens sulfites and milk.

Refer to the Introduction for an explanation of the symbols.

# Express Pro

Herbicide Group  
2 - tribenuron, metsulfuron

## Company:

FMC Corporation (PCP#29212)

## Formulation:

42.9% tribenuron methyl and 8.6 % metsulfuron methyl formulated as a water soluble granule.

- Container size - 560 g

*Express Pro* is purchased alone but must be mixed with glyphosate before use.

## Crops and Staging:

For application to fallow, post-harvest and prior to seeding of the following crops:

- Spring wheat
- Winter wheat
- Durum wheat
- Barley
- Oats

Allow at least one day (24 hours) between application and seeding.

## Fallow and post-harvest\* application:

Allow 10 days between fallow or post-harvest\* treatment and tillage.

DO NOT use *Express Pro* on highly variable soils that have large gravelly or sandy areas, eroded knolls or calcium deposits.

## Weeds, Rates and Staging:

***Express Pro* at 7 grams per acre plus glyphosate at a rate equivalent to 180 g ae per acre (see glyphosate):**

- Weeds controlled by glyphosate products at these rates plus the weeds below up to 3 inches (8 cm) unless otherwise indicated:
  - Canada thistle (rosettes)\*
  - Night-flowering catchfly\*
  - Wild carrot (up to 10 cm)\*
  - Cleavers<sup>†</sup>
  - Scentless chamomile
  - Volunteer canola (including glyphosate tolerant varieties – up to six inches)\*\*\*<sup>†</sup>
  - Cow cockle (up to 3 leaf)
  - Stork's bill (up to 10 cm)
  - Tufted vetch (up to 15 cm)\*
  - Dandelion (up to 6 inches)<sup>†</sup>
  - White cockle (rosettes)
  - Narrow-leaved hawk's-beard<sup>†</sup>

<sup>†</sup> Up to 15 days of extended control.

\* Suppression only.

*Express Pro* may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing.

If using other herbicides containing the active ingredient metsulfuron methyl, restrict total use of metsulfuron methyl to 0.61 grams active ingredient per acre per year.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** 22 to 45 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE medium* droplets. Low drift nozzles may require higher pressures for proper performance.
- **Screens:** Use 50 mesh or larger screens in both nozzles and in-line filters.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient       | Timing        | Target                             | Movement                       | Spectrum       | WSSA Group |
|-------------------------|---------------|------------------------------------|--------------------------------|----------------|------------|
| metsulfuron, tribenuron | POST (foliar) | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast) | Broadleaf only | 2          |

## Effects of Growing Conditions:

Registered crops seeded following *Express Pro* application become stressed by drought, low fertility, saline soils, waterlogged soils (soils at or near field capacity), disease or insect damage may be injured. This injury may be worse on light or low organic matter soils. Weeds hardened off by environmental stress such as those above may not be adequately controlled.

## Tank Mixes:

### Herbicides:

- Must be mixed with glyphosate.
  - *Aim EC*

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Note:** The above mixes are those listed on the *Express Pro* labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check product labels for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Heavy rainfall immediately after application may reduce effectiveness. DO NOT apply if rain is forecast for the time of application. Contact manufacturers for more information.
- **Restricted Entry Interval:** Wait 12 hours before re-entering treated fields.
- **Re-cropping Interval:** Barley, oats and wheat (spring, winter and durum) may be seeded a minimum of 24 hours after application. Canola, dry beans, faba beans, field corn, flax, lentils, peas and soybeans may be planted 10 months following application. Following fall applications, barley, oats, or wheat (spring or durum), may be seeded or fields may be summerfallowed.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place. May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

*Express Pro* can cause severe injury to sensitive crops at very low concentrations. Sprayers used to spray this product should be flushed out immediately after use. Refer to 'Method A' found in the general sprayer cleaning section in the introduction. Check the label or contact the manufacturer for more specific sprayer cleaning information.

### Hazard Rating:

Caution – Poison

Warning – Eye Irritant

Potential Skin Sensitizer

Contains the Allergens Sulphites and Milk

Refer to the Introduction for an explanation of the symbols.

# Extinguish XL

Herbicide Group  
2 - florasulam  
4 - halauxifen, 2,4-D

## Company:

Corteva Agriscience (PCP#35112)

## Formulation:

6 g/L halauxifen, 6 g/L florasulam, and 300 g/L 2,4-D ester formulated as an emulsifiable concentrate.

- Container size - 2 x 6.74 L, 80.9 L

## Crops and Staging:

Wheat (winter, spring and durum) and barley: 2 leaf stage to just prior to the emergence of the flag leaf emergence.

## Weeds and Staging:

Weeds controlled at the 1 to 8 leaf stage unless otherwise specified to control the following weeds:

- Barnyard grass (up to 5 leaf, 2 tiller)
- Canada fleabane (up to 15 cm)
- Canada thistle (up to bolting, 30 cm in height)\*
- Chickweed<sup>◊</sup>
- Cleavers (up to 9 whorls)<sup>◊</sup>
- Common ragweed (up to 6 leaf)<sup>◊◊</sup>
- Cow cockle
- Dandelion (seedlings & overwintered rosettes up to 30 cm in diameter)
- Flixweed (up to 8 leaf and 8 cm tall)
- Hemp-nettle<sup>\*◊</sup>
- Kochia<sup>\*◊◊</sup>
- Lamb's-quarters<sup>◊</sup>
- Narrow-leaved hawk's-beard (up to bolting & 30 cm tall)
- Night-flowering catchfly (up to bolting stage, 15 cm tall)\*
- Redroot pigweed
- Round-leaved mallow (up to 6 leaf)
- Scentless chamomile (up to bud stage)\*
- Shepherd's-purse (up to bolting & 20 cm tall)
- Smartweed (lady's-thumb, green)
- Sow-thistle, annual (up to 4 leaf)
- Sow-thistle, perennial (up to 6 leaf)\*
- Stinkweed
- Stork's-bill
- Velvetleaf (up to 5 leaf)
- Volunteer alfalfa (up to 25 cm tall)
- Volunteer canola<sup>◊◊</sup>
- Volunteer flax (up to 15 cm)
- White cockle (seedlings and overwintered rosettes up to the bud stage)\*
- Wild buckwheat
- Wild mustard

\* Suppression only.

◊ Including Group 2 resistant biotypes

◊◊ Including all herbicide-resistant biotypes

◊◊◊ Including Group 2 and 9 resistant biotypes

## Rate:

337 mL per acre.

Add a non-ionic surfactant (NIS) at 0.25 L per 100 L of spray solution for control of weeds that are under severe environmental stress, or when applying to weeds at more advanced growth stages, or for heavy weed infestations.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASABE coarse droplets by ground. Sprayers without drift reduction nozzles should use between 30 to 40 psi (200 to 275 kPa). Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                            | Spectrum       | WSSA Group |
|-------------------|---------------|--------------------------|-------------------------------------|----------------|------------|
| florasulam        | POST (foliar) | ALS Amino Acid Inhibitor | Toward regions of growth (Symplast) | Broadleaf only | 2          |
| halauxifen        | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)     | Broadleaf only | 4          |
| 2,4-D             | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)     | Broadleaf only | 4          |

## Effects of Growing Conditions:

Control is best with actively growing weeds. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur. For best results, ensure thorough spray coverage of target weeds.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- *Spring wheat (including durum) and winter wheat:*
  - *Simplicity* (200 mL per acre)
  - *Simplicity GoDRI* (28 g per acre) plus *Agral 90* (0.25 L per 100 L solution)
  - *Everest 3.0 AG*
  - *Varro*
  - *Traxos*
- *Spring wheat (including durum):*
  - *Tandem*
- *Spring wheat and barley:*
  - *Axial*

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** DO NOT harvest the treated crop within 60 days after application.
- **Grazing:** Livestock may be grazed on treated crops 7 days following application. DO NOT cut the treated crop for hay or silage within 30 days after application. Withdraw meat animals from treated fields at least 3 days before slaughter.
- **Re-cropping:** Alfalfa, spring wheat, barley, canola (including oilseed quality *B. juncea*), dry bean (*Phaseolus vulgaris* species including pinto, kidney and white types), faba beans, flax, field peas, potatoes (except seed potatoes), mustard (Oriental, brown and yellow), soybeans, oats, or sunflower may be seeded 10 months after application. Lentils can be planted 22 months after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage Store in original containers in a secure, dry heated storage.**
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Use a combination of 'Method A' and 'Method B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. If mixed with another pesticide additional clean-out measures may be necessary. See the label for product specific cleaning details.

## Hazard Rating:

Danger – Corrosive to eyes

Potential skin sensitizer.

Refer to the introduction for an explanation of the symbols used here.

# Fenoxaprop

Herbicide Group  
1 - fenoxaprop

## Company:

Bayer (*Puma Advance*)  
NewAgco (*HellCat*)  
Interprovincial Cooperative Limited (*Vigil WB*)  
Viking (*Viking Fenoxaprop*)

## Formulation:

**HellCat (PCP#30055), Vigil WB (PCP#30844), Viking Fenoxaprop (PCP#34817):** 120 g/L fenoxaprop-p-ethyl formulated as an emulsifiable concentrate.

- Container sizes\* - 6.2 L, 12.4 L, 18.6 L, 99.3 L, 297.6 L, 312 L, 500 L

**Puma Advance (PCP#29615):** 90 g/L fenoxaprop-p-ethyl formulated as an emulsifiable concentrate.

- Container sizes - 8.25 L, 123.75 L, 412.5 L

\* Check with individual suppliers for the container sizes they have available.

## Crops and Staging:

Application beyond the maximum rates provided below may result in crop injury.

| Crop                                                                                 | Stage                                                                                            |
|--------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| Spring wheat (including durum), barley <sup>†</sup>                                  | 1 to 6 leaves on the main stem plus 3 tillers                                                    |
| Barley <sup>††</sup>                                                                 | 1 to 5 leaves on the main stem plus 2 tillers                                                    |
| Perennial ryegrass for seed production only* (seedling or established <sup>†</sup> ) | 2 to 4 leaves                                                                                    |
| Meadow brome grass (seedling or established) (forage or seed production)**           |                                                                                                  |
| Tall fescue (seedling or established) (forage or seed production) <sup>†</sup>       | Seedling tall fescue - 2 to 6 leaves<br>Established tall fescue - prior to the shot blade stage. |

<sup>†</sup> *Puma Advance* only. Late application of other products could result in injury to barley.

<sup>††</sup> *HellCat*, *Vigil WB* or *Viking Fenoxaprop* only. Apply to barley only when tank mixed with a registered broadleaf product.

NOTE: Application of other fenoxaprop products to barley can result in crop injury.

\* Perennial ryegrass with *Vigil WB* by ground only.

\*\* Meadow brome grass with *Puma Advance* by ground only.

**NOTE: Since the uses on forage grasses were registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply this use do so at their own risk.**

Durum wheat, forage grasses and barley may experience some initial, temporary stunting and yellowing that rarely results in yield loss. Injury is more likely under stress conditions (see "Effect of Growing Conditions" section).

Treatment at the 3 to 4 leaf stage of cereal crops and weeds will maximize crop tolerance and weed control. Temporary crop injury such as shortening or discolouration may be observed after application. Such injury is more likely to occur in barley and also when fenoxaprop is applied outside recommended stages.

## Weeds, Rates and Staging:

Apply from the 1 to 6 leaf stage up to emergence of 3<sup>rd</sup> tiller of the weeds below. Apply at the 3 to 4 leaf stage for optimum control. Optimum weed control and yield response occurs when weeds are removed before tillering.

DO NOT apply fenoxaprop or products containing fenoxaprop to a crop more than once per year.

| Weeds                                                                           | Rate (mL per acre)  |               |
|---------------------------------------------------------------------------------|---------------------|---------------|
|                                                                                 | <i>Puma Advance</i> | 120 g/L forms |
| Green foxtail only                                                              | 206                 | 156           |
| Low wild oats infestations*                                                     | 360                 | 271           |
| Moderate-heavy wild oats infestations, barnyard grass, green and yellow foxtail | 413                 | 312           |

\* Low wild oats rate for use on WHEAT AND DURUM ONLY, and when applied alone and NOT in a tank-mix. NOT for use with perennial ryegrass or meadow brome grass.

## Application Information:

- **Water Volume:**
  - **Ground:** 23 to 45 L per acre. Use higher water volumes for dense canopies.
  - **Aerial:** A minimum of 14 L per acre.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) when using conventional 80° or 110° flat fan nozzles. Angle nozzles forward at 45° to improve contact with vertical leaf surfaces. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver proper coverage with **ASABE medium** droplets or larger.
  - DO NOT use flood jet nozzles, controlled droplet application equipment or Spra-foi equipment.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing        | Target                            | Movement                            | Spectrum     | WSSA Group |
|--------------------|---------------|-----------------------------------|-------------------------------------|--------------|------------|
| fenoxaprop-p ethyl | POST (foliar) | ACCCase Lipid synthesis inhibitor | Toward regions of growth (Symplast) | Grasses only | 1          |

## Effects of Growing Conditions:

DO NOT apply fenoxaprop 2 to 3 days prior to, or following, temperatures of 3°C or lower as crop injury may occur. Under stressful conditions (hot/dry, water logging, disease or insect damage) or heavy crop canopy, early application will improve weed control. DO NOT apply by air when both the temperature is greater than 25°C and the relative humidity is less than 30 percent.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

DO NOT apply *Vigil WB* in barley without a broadleaf herbicide mix. ALWAYS tank mix with a registered broadleaf herbicide.

- 2,4-D ester (170 g ae per acre<sup>†</sup> - see 2,4-D page for product rates)
- *Ally* (2 to 3 grams per acre)<sup>†</sup>
- Bromoxynil/2,4-D ester<sup>Δ</sup>
- Bromoxynil/MCPA ester<sup>Δ</sup>
- *Curtail M*
- *Dichlorprop/2,4-D*<sup>Δ</sup>
- *Infinity* (0.33 L per acre)<sup>††</sup>
- MCPA amine or ester (0.28 L per acre) (600 g ai/L formulation)
- Mecoprop-p<sup>\*\*\*Δ\*</sup>
- *Prestige XC*<sup>††</sup>
- *Refine SG*<sup>††</sup>
- *Refine SG* + MCPA (rates above)<sup>††</sup>
- *Refine SG* (4 grams per acre)+ *Buctril M* (0.4 L per acre)<sup>††</sup>
- *Trophy*<sup>\*††</sup>

<sup>†</sup> All products except *HellCat*.

<sup>††</sup> *Puma Advance* only.

<sup>Δ</sup> Manufacturers may only support mixes with specific brands. Contact the manufacturers for more information.

\* Use only at the high rate of fenoxaprop.

\*\* Use only at the green foxtail rate of fenoxaprop.

\*\*\* Use in wheat only

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the fenoxaprop labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Leave an interval of 7 days prior to application or 4 days after application of fenoxaprop, when applying any pesticide that is not registered as a tank mix.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze or cut cereal crops or meadow bromegrass for hay, within 25 days of application. DO NOT graze or cut perennial ryegrass crop for hay within 65 days of application.
- **Pre-harvest Interval:** DO NOT harvest within 65 days of application.
- **Re-cropping Interval:** No restrictions in the year after application. Only ONE APPLICATION may be made per year.
- **Aerial Application:** May be applied by air.
- **Storage:** DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

All:

Caution – Poison

Warning – Contains the Allergen Soy

**HellCat, Viking Fenoxaprop:**

Warning – Eye and Skin Irritant

**Puma Advanced:**

Danger – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Fierce Brands / Torpedo Brands

Herbicide Group  
14 - flumioxazin  
15 - pyroxasulfone

## Company:

Valent Canada, Inc. Distributed by Nufarm Agriculture

## Formulation:

**Fierce EZ (PCP#33869), Torpedo EZ (PCP#33872):** 160 g/L flumioxazin and 203 g/L pyroxasulfone formulated as a suspension concentrate.

- Container size - 2 x 7.16 L

## Crops, Rates and Staging:

**Note:** The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.

DO NOT make more than ONE APPLICATION per season.

### Fierce Spring Applications

| Crop                                                | Stage                                                                                                                                                              | Rates                             |
|-----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
|                                                     |                                                                                                                                                                    | <b>Fierce EZ</b><br>(mL per acre) |
| Soybeans*, chickpea, field pea                      | Pre-seed to pre-emergent. Crop should be seeded prior to or within 3 days of application.                                                                          | 178                               |
| Spring wheat (not including durum)** and field corn | Pre-seed only. Apply a minimum of 7 days before seeding wheat and apply between 7 and 30 days prior to seeding field corn. Apply on minimum to no-till soils only. | 178                               |

\* Seed at least 1.5 inches (4 cm) deep. Apply up to 3 days after seeding and prior to emergence.

\*\* Seed wheat at least 1 inch (2.5 cm) deep. Apply a minimum of 7 days prior to seeding spring or winter wheat.

### Fierce Fall Applications

| Crop                                                                           | Stage                                                                                                                                                  | Rates                             |
|--------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
|                                                                                |                                                                                                                                                        | <b>Fierce EZ</b><br>(mL per acre) |
| Soybeans*, lentils (small reds and large green varieties), chickpea, field pea | Application should be made prior to soil freeze. DO NOT apply on top of snow cover. Higher rates for season long control in medium to fine soils only. | 178 to 267                        |
| Spring wheat** (not including durum) and field corn                            | Application should be made prior to soil freeze. DO NOT apply on top of snow cover.<br><b>Apply to minimum to no-till soils only.</b>                  | 178                               |
| Winter wheat**                                                                 | <b>Apply to minimum to no-till soils only.</b>                                                                                                         | 178                               |

**Torpedo Brands**

| Crop                                                      | Stage                                                                                                                           | Rates                              |
|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
|                                                           |                                                                                                                                 | <b>Torpedo EZ</b><br>(mL per acre) |
| For the maintenance of bare ground on industrial sites*** | Application should be made prior to soil freeze. DO NOT apply on top of snow cover. Higher rates for medium to fine soils only. | 356 to 492                         |

\* Seed at least 1.5 inches (4 cm) deep. Apply up to 3 days after seeding and prior to emergence.

\*\* Seed lentils and wheat at least 1 inch (2.5 cm) deep. Apply a minimum of 7 days prior to seeding spring or winter wheat.

\*\*\* *Torpedo* will cause crop injury. DO NOT apply to farm alleys or roads where traffic may result in treated dust settling onto crops or other desirable vegetation.

**Weeds and Staging:**

Spray within 6 hours of mixing. *Fierce/Torpedo* will break down in the spray tank left to sit in the sprayer for an extended period.

Apply prior to crop and weed emergence. *Fierce/Torpedo* will not control emerged weeds. If weeds are emerged, apply in a mix with a foliar herbicide (see tank mix section).

***Fierce/Torpedo* will provide control or suppression of the following weeds:**

- |                              |                                                        |                                      |
|------------------------------|--------------------------------------------------------|--------------------------------------|
| ◦ Annual sow-thistle         | ◦ Foxtail (green)                                      | ◦ Russian thistle*                   |
| ◦ Barnyard grass             | ◦ Foxtail barley*                                      | ◦ Smartweed (Pennsylvania)           |
| ◦ Brome (downy, Japanese)*   | ◦ Kochia                                               | ◦ Velvetleaf                         |
| ◦ Canada fleabane            | ◦ Lamb's-quarters                                      | ◦ Volunteer canola (all varieties)*† |
| ◦ Chickweed (common)†        | ◦ Nightshade (Eastern black, hairy)                    | ◦ Wild buckwheat                     |
| ◦ Cleavers                   | ◦ Pigweed (green, redroot, Palmer amaranth, waterhemp) | ◦ Wild mustard                       |
| ◦ Crabgrass (large)          | ◦ Ragweed (common)                                     | ◦ Wild oats*                         |
| ◦ Dandelion (seedlings only) |                                                        | ◦ Witchgrass                         |

† *Fierce Brands* only

\* Suppression only.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction. When applying *Fierce EZ/Torpedo EZ* by itself, a surfactant is not required.

**Application Information:**

- **Water Volume:** 40 L to 120 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE medium* droplets.
- **Screens:** The use of 50 mesh screens is recommended.

DO NOT perform any tillage operations after application otherwise weed control will be reduced. When applied prior to seeding crops must be direct seeded with minimum disturbance systems.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                    | Target                               | Movement                                                                        | Spectrum            | WSSA Group |
|-------------------|-------------------------------------------|--------------------------------------|---------------------------------------------------------------------------------|---------------------|------------|
| flumioxazin       | PRE (surface) with soil activity          | PPO Inhibitor/<br>Membrane disruptor | Upward to leaves. Little downward movement due to rapid cell leakage (Apoplast) | Selective Broadleaf | 14         |
| pyroxasulfone     | PRE (surface) with residual soil activity | Long-chain Fatty Acid Inhibitor      | Little movement (Symplast)                                                      | Broadleaf & grass   | 15         |

**Effects of Growing Conditions:**

Rainfall is required to activate *Fierce/Torpedo* in the soil. Dry weather following applications of *Fierce/Torpedo* may reduce effectiveness. However, when adequate moisture is received after dry conditions, *Fierce/Torpedo* will control susceptible germinating weeds listed on the label. Crop injury may occur when soils are wet and cool following application or soils are poorly drained. Severe injury may occur with flooded soils. Newly emerging foliage can be temporarily injured by heavy rain splashing treated soil on leaves. Heavy crop residues may reduce weed control. Tillage following application can reduce effectiveness – DO NOT till after application.

**Irrigation:** If rainfall is not received after application, 1.5 to 2.5 cm of irrigation may be applied to improve weed control activity. DO NOT apply irrigation to wheat between emergence and heading.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

#### Prior to All Crops:

- **Soybean:**
  - Glyphosate (IPA or K salts) 180 to 486 g ae per acre
  - *Pursuit*

DO NOT apply with *Dual II Magnum* or *Frontier* or injury may occur.
- **Fallow land:**
  - Glyphosate
- **Wheat:**
  - Glyphosate (IPA or K salts) 180 to 486 g ae per acre
- **Bare ground on non-crop areas (*Torpedo* only):**
  - Glyphosate, 2,4-D Ester, *Arsenal*, dicamba, *Hyvar XL*, *Karmex*, *Krovar*, *Telar*, *Tordon 22K* or *Velpar*.

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rain or irrigation shortly after application is required for activation. If rainfall does not occur, irrigation with at least 1.5 cm of water is recommended before ground crack occurs. Avoid application if heavy rain is forecast.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:**
  - **Field corn:** DO NOT permit livestock to graze field or harvest as green feed or silage within 93 days after application.
  - **Soybeans:** DO NOT harvest as green feed or permit livestock to graze fields within 21 days after application. DO NOT cut hay/fodder within 50 days after application.
  - **Wheat (spring and winter):** DO NOT harvest as green feed or permit livestock to graze fields within 42 days after application. DO NOT cut hay/fodder within 52 days after application.
  - **All other crops:** DO NOT graze, cut or feed treated crops to livestock.
- **Re-cropping Interval:**
  - **Soybean, chickpea, field pea:** Immediately
  - **Field corn, wheat (spring, winter):** 7 days. Wheat may also be seeded any time in the spring following a fall application of up to the highest labelled rate.
  - **Lentils:** 6 months or any time in the spring following a fall application of the highest labeled rate.
  - **Barley, durum wheat, oats, alfalfa:** 11 months
  - **Canola, mustard seed:** 12 months
  - **Crops not listed:** A successful soil bio-assay must be performed prior to planting.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store in a cool, dry place. May be frozen
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. See product label for further information.

## Hazard Rating:

Warning – Skin and Eye Irritant

Applicators and mixers should only handle a maximum of 58 kg (680 acres at the low rate) of 345 L (~1937 acres at the low rate) of *Fierce EZ* per day with proper personal protective equipment.

Refer to the Introduction for an explanation of the symbols.

# Flexstar GT\*

\* For use only in the Red River Valley of Manitoba

Herbicide Group  
9 - glyphosate  
14 - fomesafen

## Company:

Syngenta Canada (PCP#30412)

## Formulation:

67 g/L fomesafen and 271 g/L glyphosate formulated as a solution.

- Container sizes - 2x10 L, 450 L

## Crops and Staging:

*Flexstar GT* may be applied as a pre-seed burn down or as pre-emergent to the crop of soybeans or as early post-emergent on 1 to 2 trifoliate leaf stage of glyphosate tolerant soybeans only.

For use in the Red River Valley of Manitoba only.

Maximum ONE APPLICATION EVERY TWO CONSECUTIVE YEARS of *Flexstar GT* or other products containing the active ingredient fomesafen.

## Weeds, Rates and Staging:

*Flexstar* applied at 840 mL per acre control of the following weeds at the cotyledon to 3 or 4 true leaf stage. Add *Turbocharge* adjuvant at 0.25 L per 100 L spray solution only when weeds are under stress conditions and for larger weeds.

### Grass Weeds:

- Barnyard grass
- Bromegrass (smooth)
- Cattail (common)
- Downy brome
- Foxtail barley
- Foxtail (green, yellow)
- Persian darnel
- Proso millet
- Quackgrass
- Rye, tame
- Volunteer barley
- Volunteer corn (except glyphosate tolerant varieties)
- Volunteer wheat
- Wild oats
- Yellow nutsedge

### Broadleaf Weeds:

- Absinthe
- Canada thistle
- Chickweed, common
- Cleavers
- Clover (white)
- Cocklebur
- Cow cockle
- Curled dock
- Dandelion
- Field bindweed
- Fleabane (Canada)
- Flixweed
- Hemp-nettle
- Horsetail
- Knotweed (Japanese, prostrate)
- Lamb's-quarters
- Milkweed (common)
- Narrow-leaved hawk's-beard
- Night-flowering catchfly
- Nightshade (Eastern black)
- Pigweed (redroot, smooth)
- Prickly lettuce
- Ragweed (common)
- Round-leaved mallow
- Russian thistle
- Shepherd's-purse
- Smartweed (green, lady's-thumb)
- Sow-thistle (annual, perennial)
- Stinkweed
- Stork's-bill
- Volunteer alfalfa
- Volunteer canola (all varieties)
- Volunteer flax
- Wild buckwheat
- Wild mustard
- Wild tomato

A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Minimum of 60 to 80 L clean, clear water per acre. Higher spray volume is required for dense weed stands.
- **Pressure:** 30 psi (210 kPa). Increase pressure to 60 psi (420 kPa) for fields with heavy weed densities or with weeds at the upper limit of their recommended stage.
- **Nozzles:** Use nozzles capable of delivering appropriate pressures and volumes. DO NOT apply with spray droplets smaller than the *ASABE coarse* classification.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                                 | Movement                                            | Spectrum                   | WSSA Group |
|-------------------|-----------------------------------------|----------------------------------------|-----------------------------------------------------|----------------------------|------------|
| fomesafen         | POST (foliar) with little soil activity | PPO Inhibitor/<br>Membrane disruptor   | Little movement due to rapid cell leakage(Symplast) | Non-selective<br>Broadleaf | 14         |
| glyphosate        | POST (foliar)                           | EPSP Amino Acid<br>Synthesis Inhibitor | Toward growth areas<br>(Symplast)                   | Broadleaf &<br>grass       | 9          |

## Effects of Growing Conditions:

Extremes in environmental conditions such as temperature, moisture, soil conditions, and cultural practices may affect activity.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** Within 4 hours may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Pre-harvest Interval:** Leave at least 90 days from application to harvest.
- **Grazing Restrictions:** DO NOT graze treated crop or cut for hay.
- **Re-cropping Interval:** Winter wheat may be sown 4 months after application. Spring wheat, dry beans, soybeans and field corn may be grown the year following an application. These re-cropping restrictions refer only to the Red River Valley of Manitoba. Use outside this region is not registered as re-cropping options have not been determined.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store above -10°C, in a dry place in original container, away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Florasulam

Herbicide Group  
2 - florasulam

## Company:

Corteva Agriscience (*PrePass Flex*)

NewAgco (*Battlefront*)

Loveland Products Canada (*Blitz*, *Bombard 50SC*)

ADAMA Canada (*Priority HL*)

Sharda Cropchem (*Flora*, *Start 25 WDG*)

Advantage Crop Protection (*Advantage Florasulam 50 SC*)

Albaugh (*Clorvante*)

Viking (*Viking Florasulam*)

## Formulation:

**PrePass Flex (PCP#31259)\*, Start 25 WDG (PCP#34969)\*:** 25% florasulam formulated as a water dispersible granule.

- Container size - 8 x 648 g case

**Blitz (PCP#31687)\*, Battlefront (PCP#33003)\*, Flora (PCP#33610)\*, Advantage Florasulam 50 SC (PCP#34336)\*, Clorvante (PCP#34431)\*, Bombard 50 SC (PCP#35006)\*, Viking Florasulam (PCP#34752):**

50 g/L florasulam formulated as a suspension concentrate.

- Container sizes:
  - *Priority*, *Battlefront*, *Advantage Florasulam 50 SC*, *Bombard 50 SC*, *Viking Florasulam* - 2 x 6.4 L
  - *Flora* - 2 x 6.4 L
  - *Blitz* - 4 x 3.2 L

**Priority HL (PCP#35140)\*:** 200g/L florasulam formulated as a suspension concentrate.

- Container size - 1.62 L

**\* NOTE:** *PrePass Flex*, *Priority HL*, *Blitz*, *Battlefront*, *Flora*, *Advantage Florasulam 50 SC*, *Clorvante*, *Bombard 50 SC* and *Start 25 WDG* are intended to be applied with glyphosate only. Best practice is to mix florasulam products with herbicides from other resistance groups to prevent the development of resistant weed biotypes.

## Crops and Staging:

### All Products:

- **Preseed burndown, fallow or post harvest:** Florasulam + glyphosate can be applied either in the fall or in the spring prior to seeding spring wheat (including durum), barley or oats or as an initial fallow treatment. *PrePass Flex* and *Start 25 WDG* may be applied in fall prior to seeding winter wheat.

### *Battlefront, Advantage Florasulam 50 SC, Clorvante, Bombard 50 SC, Flora and Viking Florasulam only:*

- **Wheat (spring, durum, winter<sup>††</sup>), barley:** 2 to 6 leaf stage.

<sup>††</sup> *Flora and Viking Florasulam only.*

### *PrePass Flex only:*

- **Established alfalfa for forage and hay\*:** apply to dormant or semi-dormant alfalfa (not actively growing) in late fall or early spring. See label for details
- \* **Note:** Since applications to established alfalfa for forage and hay has been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. **Application to established alfalfa for forage and hay is at the risk of the user.**

When mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds and Staging:

### Broadleaf weeds controlled at the 2 to 4 leaf stage:

- Chickweed
- Cleavers
- Cow cockle\*\*
- Shepherd's-purse
- Smartweed (including lady's-thumb)
- Stinkweed
- Volunteer canola<sup>†</sup>
- Wild buckwheat
- Wild mustard

### Broadleaf weeds suppressed:

- Annual sow-thistle
- Hemp-nettle
- Narrow-leaved hawk's-beard
- Perennial sow-thistle (top growth control only)
- Redroot pigweed

\* Seedlings and overwintered rosettes.

\*\* All products except *Advantage Florasulam 50 SC* and *Bombard 50 SC*.

<sup>†</sup> Not Including CLEARFIELD canola varieties.

## Rates:

*PrePass Flex, Start 25 WDG:* 8.1 grams per acre

*Blitz, Battlefront, Viking Florasulam, Flora, Advantage Florasulam 50 SC, Clorvante and Bombard 50 SC:* 40 mL per acre

*Priority HL:* 10 mL per acre

Refer to the product label for complete mixing instructions for this product and its mixes. A general mixing guide can be found in the introduction.

## Application Information:

- **Water Volume:** 40 L per acre.
- **Nozzles and Pressure:** Maximum 30 to 40 psi (200 to 275 kPa) with conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                             | Movement                            | Spectrum       | WSSA Group |
|-------------------|-----------------------------------------|------------------------------------|-------------------------------------|----------------|------------|
| florasulam        | POST (foliar) with little soil activity | ALS Amino Acid synthesis inhibitor | Toward regions of growth (Symplast) | Broadleaf only | 2          |

## Effects of Growing Conditions:

Warm, moist growing conditions promote active weed growth and enhance activity of florasulam. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur. Under conditions of low crop and high weed density, control may be reduced. Extreme growing conditions such as drought or near freezing temperature prior to, at, or following time of application may reduce weed control and increase the risk of crop injury at all stages of growth.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### **Preseed Burndown, Fallow or Post-harvest:**

- Glyphosate (180 to 360 g ae per acre)

### **In spring wheat (including durum):**

- Bromoxynil

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note: The above mixes are those listed on the florasulam labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall within 30 minutes application of *Prepass Flex* may reduce effectiveness. No rainfast period is specified on other labels; required interval may be up to 8 hours. Contact manufacturer for more information. DO NOT apply excessive irrigation following application as product may leach.
- **Restricted Entry Interval:** DO NOT enter or allow worker entry into treated areas for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze or cut treated areas for feed or hay within 7 days of application. Withdraw meat animals from treated fields at least 3 days before slaughter. When *PrePass Flex* is applied to established alfalfa for forage and hay DO NOT cut for hay or graze within 21 days of application.
- **Pre-harvest Interval:** Leave 60 days between application and harvesting mature crop.
- **Re-cropping Interval:** Wheat, barley, canola, chickpea\*, corn\*, dry beans\*, flax\*, lentil\*, mustard\* (brown, oriental, yellow, and oilseed quality *B. juncea* types), oats\*\*, peas, potato\* (except seed potato), soybean\* or sunflower\* may be grown the year following an application.
- **Priority HL** only - when applied prior to August 1 - barley, canola, oats, peas or wheat (including durum) can be seeded the following spring.
- When applied after August 1 - barley, oats or wheat (including durum) can be seeded the following spring.  
\* *PrePass Flex, Flora, Battlefront* only.  
\*\* All products except *Advantage Florasulam 50 SC* and *Clorvante*.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in dry, heated area. If frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Check the cleanout requirements of pesticides mixed with this product. Additional cleanout measures may need to be integrated into those provided here.

## Hazard Rating:

*PrePass Flex:*

Warning – Eye Irritant

*Other Products:*

Caution – Poison

May Cause Skin and Eye Irritation

Refer to the Introduction for an explanation of the symbols.

# Florasulam + Dicamba

Herbicide Group  
2 - florasulam  
4 - dicamba

## Company:

Corteva Agriscience (*Korrex II*)  
Viking Crop Production Partners Inc. (*Viking Kiruna*)  
ADAMA Canada (*Gordex*)  
NewAgco (*Pilot*)

## Formulation:

The florasulam + dicamba package contains the following components:

**Korrex II A (PCP#31405):** 25% florasulam formulated as water dispersible granules.

- Container size - 1 x 0.45 kg

- or -

**Viking Florasulam (PCP#34738):** 50 g/L florasulam formulated as a suspension.

- Container size - 1 X 6.4 L

- plus -

**Korrex II B (PCP#31205), Viking Dicamba (PCP#34737):** 480 g/L dicamba dimethylamine salt formulated as a solution.

- Container size - 1 x 7.76 L

The *Gordex* package contains the following components:

**Gordex A (PCP#35555):** 200 g/L florasulam formulated as a suspension concentrate.

- Container size - 1.13 L

**Gordex B (PCP#35572):** 480 g/L dicamba formulated as a solution.

- Container size 7.76 L

The *Pilot* package contains the following components:

**Battlefront (PCP# 33003):** 50 g/L florasulam formulated as a suspension concentrate.

- Container size - 6.4 L

**Ammo (PCP#34024):** 480 g/L formulated as a solution.

- Container size - 15 L

## Crops and Staging:

**Wheat (spring, durum, winter), barley, oats:**

In the fall following harvest of the previous crop or in spring prior to seeding. No later than 48 hours after seeding and prior to crop emergence.

## Weeds, Rates and Staging:

Dicamba + florasulam must be mixed with glyphosate at least 180 g ae per acre or up to 1000 g ae per acre of glyphosate to control the weeds controlled by glyphosate at these rates (see glyphosate for product rates and weeds controlled).

- **Spring and Fall application:**
  - *Korrex II A* at 5.7 grams per acre plus *Korrex II B* at 97 mL per acre.
  - *Gordex A* at 7 mL per acre plus *Gordex B* at 97 mL per acre.
  - *Battlefront* at 40 mL per acre plus *Ammo* at 93.75 mL per acre.
- **Fall application or Summerfallow** (Note: Fall application is generally more effective in control of perennial weeds):
  - *Korrex II A* at 8.1 grams per acre plus *Korrex II B* at 139 mL per acre.
  - *Gordex A* at 10 mL per acre plus *Gordex B* at 138 mL per acre.
  - *Battlefront* at 40 mL per acre plus *Ammo* at 93.75 mL per acre.
- **Viking Kiruna**
  - *Viking Florasulam* at 40 mL per acre plus *Viking Dicamba* at 127 mL per acre.

**Weeds controlled by glyphosate at the rates above plus enhanced control of the following weeds at the 2 to 4 leaf stage unless otherwise indicated:**

- Annual sow thistle<sup>†</sup>
- Cleavers
- Chickweed
- Cow cockle
- Dandelion (seedling, overwintered or mature plants up to 30 cm across)
- Hemp-nettle
- Kochia
- Narrow-leaved hawk's-beard (up to 8 cm tall)
- Perennial sow-thistle<sup>\*\*</sup>, <sup>\*\*\*</sup>
- Scentless chamomile<sup>†</sup>, <sup>\*\*\*</sup>
- Shepherd's-purse
- Smartweed (including lady's-thumb)
- Stinkweed
- Volunteer canola<sup>\*</sup>
- Wild buckwheat
- Wild mustard

<sup>†</sup> **Suppression only.**

<sup>\*</sup> **Including all herbicide-tolerant canola varieties.**

<sup>\*\*</sup> **Applications at advanced stages will reduce control.**

<sup>\*\*\*</sup> **Except Pilot.**

Refer to the product labels for complete mixing instructions for these products. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Use a minimum of 20 to 40 L per acre
- **Nozzles and Pressure:** Maximum 22 psi (150 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE coarse* droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|--------------------------|---------------------------------------|----------------|------------|
| florasulam        | POST (foliar) | ALS Amino Acid inhibitor | Toward Areas of Growth (Symplast)     | Broadleaf only | 2          |
| dicamba           | POST (foliar) | Synthetic Auxin          | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

**Korrex II A, Gordex A and Battlefront:** Warm, moist growing conditions promote active weed growth and enhance activity. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur.

**Korrex II B, Gordex B and Ammo:** Crop damage (stunting, reduced seed set) can occur if the chemical is applied at any time other than the recommended stage. DO NOT apply to crop under stress from adverse environmental conditions, such as excess moisture, drought and disease. Apply when air temperature is between 10 and 25°C.

## Tank Mixes:

**Herbicides:**

- **Prior to crop emergence:**
  - *Korrex II*, *Gordex* and *Pilot* must be mixed with glyphosate<sup>\*</sup> (180 to 1000 g ae per acre – see glyphosate for conversion to product rates).
  - *Viking Kiruna* may be mixed with glyphosate
- **All salt types.**

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Heavy rainfall immediately after application may wash the chemical off the foliage and a repeat treatment may be required. DO NOT apply if rainfall is forecast for the time of application. Consult manufacturer for more detail on the time period they support.
- **Restricted Entry Interval:** No specific re-entry period is indicated on the label. Other products with similar component indicated a minimum re-entry period of 12 hours.
- **Pre-harvest Interval:** DO NOT harvest crops for 60 days from application.
- **Grazing Restrictions:** Livestock may graze the treated area 7 days after application.

- **Re-cropping Interval:** Registered crops may be seeded any time after treatment. Preseed fields treated with *Korrex II* in the spring season can be seeded the following year to barley, canola, chickpeas, corn, field beans, flax, *Juncea* canola, lentils, mustard (brown, oriental, yellow), oats, peas, potato (except seed potato), soybeans, sunflower, wheat or fields can be summerfallowed. Fields treated with *Korrex II*, *Gordex* or *Pilot* for fall application season after August 1<sup>st</sup> can be seeded only to registered crops.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place in original container away from other pesticides, fertilizer, food or feed. Keep the container closed to prevent spills and contaminations. Keep packages dry at all times.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

**Korrex II A, Gordex A, Battlefront:** Refer 'Method A' in the general section on sprayer cleaning in the introduction.

**Korrex II B, Gordex B and Ammo:** Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

A combination of 'Method A' and 'Method B' is the best option. The use of *All-Clear* or *Clean-Out* sprayer cleaners are also recommended as an alternative to the combination of methods above.

## Hazard Rating:

**Korrex II A and Gordex A:**

Warning – Eye Irritant

**Korrex II B and Gordex B:**

Caution – Poison

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Florasulam + Fluroxypyr + MCPA

*These products are a prepackaged tank mix of florasulam, fluroxypyr and MCPA Ester. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

Herbicide Group  
2 - florasulam  
4 - fluroxypyr, MCPA

## Company:

NewAgco (*Deathstar*)

Viking (*Viking Askim*)

## Formulation:

The florasulam + fluroxypyr package contains the following components:

**Battlefront** (PCP#33003 - *Deathstar*), **Viking Florasulam** (PCP#34752 - *Viking Askim*): 50 g/L florasulam formulated as a suspension concentrate.

- Container sizes - 3.2 L, 9 x 3.2 L (*all except Battlefront*), 12 x 6.4 L (*Battlefront only*)

-plus-

**Viking Fluroxypyr** (PCP# 34778 - *Viking Askim*): 180 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 2 x 12.8 L, 230 L

**Foxy 333** (PCP#35375): 333 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 2 x 6.7 L, 320 L

## Crops and Staging:

Spring wheat, durum wheat, barley: Apply from the 3 to 6 leaf stage, prior to flag leaf.

## Weeds and Staging:

Apply when weeds are at the 2 to 4 leaf stage unless otherwise indicated.

**Battlefront** at 40 mL per acre plus **Foxy 333** at 125 mL per acre plus MCPA ester 600 at 300 mL per acre (sold separately) or **Viking Florasulam** at 40 mL per acre plus **Viking Fluroxypyr** at 320 mL per acre plus MCPA ester at 300 mL per acre (sold separately) will control:

- |                                            |                                                |                                    |
|--------------------------------------------|------------------------------------------------|------------------------------------|
| ◦ Annual sow-thistle*                      | ◦ Flixweed <sup>§</sup> (spring rosettes only) | ◦ Shepherd's-purse                 |
| ◦ Annual sunflower <sup>†§</sup>           | ◦ Hemp-nettle <sup>§</sup>                     | ◦ Smartweed                        |

\* **Suppression only.**

\*\* **Suppression for Viking Askim only.**

\*\*\* **Up to 8 whorls for Deathstar only at this rate.**

\*\*\*\* **Up to 8 leaf for Deathstar only at this rate.**

† **Up to 4 leaf stage.**

§ **Requires additional 47 mL per acre of MCPA 600 ester for control.**

## Tank Mixes:

None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Florasulam + Glyphosate

Herbicide Group  
2 - florasulam  
9 - glyphosate

*This product is a prepackaged tank mix of florasulam and glyphosate. Information listed is restricted to Crop, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

## Company:

Corteva Agriscience (*PrePass XC, PrePass Flex*)  
ADAMA Canada (*Priority HL*)  
Loveland Products Canada (*Blitz*)

## Formulation:

The *PrePass XC* package contains the following components:

***PrePass XC A (PCP#29651)***: 50 g/L florasulam formulated as a suspension concentrate.

- Container sizes - 1.6 L, 4 x 12 L

***PrePass XC B (PCP#29652)***: 480 g/L glyphosate DMA salt formulated as a solution.

- Container sizes - 2 x 7.5 L, 450 L

-or-

***PrePass Flex\* (PCP#31259)***: 25% florasulam formulated as a water dispersible granule.

- Container size - 8 x 648 g

-or-

***Blitz\* (PCP#31687)***: 50 g/L florasulam formulated as a suspension concentrate.

- Container size - 2 x 6.4 L

***Priority HL (PCP# 35140)***: 200 g/L florasulam formulated as a suspension concentrate.

- Container size - 1.62 L

**\* *PrePass Flex, Priority HL and Blitz* DO NOT come packaged with glyphosate. Glyphosate must be purchased separately.**

## Crops and Staging:

Florasulam + glyphosate can be applied either in the fall or in the spring prior to seeding spring wheat (including durum), barley or oats or as an initial fallow treatment.

*PrePass XC* or *PrePass Flex* may be applied in fall prior to seeding winter wheat.

## Weeds and Staging:

**Florasulam + glyphosate will control the following weeds:**

*Weeds controlled by glyphosate at the 180 g ae per acre rate plus enhanced control of the following weeds:*

- ***Broadleaf weeds controlled at the 2 to 4 leaf stage:***

- |                                             |                                             |                                      |
|---------------------------------------------|---------------------------------------------|--------------------------------------|
| ◦ Canada fleabane (up to 8 cm) <sup>†</sup> | ◦ Lamb's-quarters                           | ◦ Smartweed (including lady's-thumb) |
| ◦ Common chickweed                          | ◦ Narrow-leaved hawk's-beard (up to 8 cm)   | ◦ Stinkweed                          |
| ◦ Cleavers                                  | ◦ Ragweed, common (up to 8 cm) <sup>†</sup> | ◦ Volunteer canola (all varieties)   |
| ◦ Cow cockle                                | ◦ Redroot pigweed                           | ◦ Volunteer flax                     |
| ◦ Dandelion (up to 30 cm across)            | ◦ Russian thistle <sup>†</sup>              | ◦ Wild buckwheat (up to 5 leaf)      |
| ◦ Flixweed <sup>†</sup>                     | ◦ Scentless chamomile <sup>†</sup>          | ◦ Wild mustard                       |
| ◦ Hemp-nettle                               | ◦ Shepherd's-purse                          |                                      |
| ◦ Kochia*                                   |                                             |                                      |

- ***Broadleaf weeds suppressed:***

- Annual sow-thistle
- Perennial sow-thistle\*\*\*

**\* Note:** Florasulam + glyphosate will not control glyphosate resistant kochia.

**\*\* Earlier applications provide better results.**

**\*\*\* Applications made at advance stages will reduce effectiveness.**

<sup>†</sup> *PrePass XC* and *PrePass Flex* only.

## Rates:

For *PrePass XC*:

*PrePass XC A*: 40 mL per acre

-plus-

*PrePass XC B*: 375 mL per acre

-or-

*Prepass Flex*: 8.1 grams per acre

-plus-

**Glyphosate (purchased separately)**: At least 180 g ae per acre (see glyphosate for product rates)

-or-

*Blitz*: 40 mL per acre

-or-

*Priority HL*: 10 mL per acre

-plus-

**Glyphosate (purchased separately)**: 180 g ae per acre (see glyphosate for product rates)

## Tank Mixes:

Herbicides

- *PrePass XC: Vantage Plus Max II*\*\*.
- *PrePass Flex*: glyphosate IPA, DMA or K+ salt at 180 to 1020 g ae per acre.
- *Priority HL or Blitz*: must be mixed with glyphosate IPA or DMA salt at 180 g ae per acre.

**\*\* NOTE:** Corteva Agriscience does not support the topping up of *PrePass XC* with other salts of glyphosate as they may have a negative reaction with the florasulam component. *PrePass Flex* may be topped up with any formulation of glyphosate, as indicated above.

**Note:** The above mixes are those listed on the florasulam + glyphosate labels only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Re-cropping Interval:**
  - Applications after August 1: Spring wheat (including durum), barley and oats, may be seeded the following year, or the field may be fallowed.
  - Applications **before August 1**: Barley, canola, chickpeas\*, dry beans\*, field peas, flax\*, lentils\*, mustard\* (brown, oriental, yellow and oilseed quality *B. juncea*) oats, soybeans\*, sunflower\* and wheat, may be grown the following year.

\* *PrePass XC* and *PrePass Flex* only.

**See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.**

# Florasulam / fluroxypyr + MCPA Ester

Herbicide Group  
2 - florasulam  
4 - fluroxypyr, MCPA

## Company:

ADAMA Canada (*Outshine All In*)  
NewAgco (*Battlestar*)  
Corteva Agriscience (*Stellar Unpacked, Stellar XL*)  
Sharda Crop Chem (*Alloy*)  
Viking (*Viking Bodo*)  
Syngenta (*Sabatis*)  
Interprovincial Cooperative Ltd. (*IPCO Trace, CO-OP Revlox*)

## Formulation:

**Battlestar (PCP#34567), Viking Bodo (PCP#34799), Alloy (PCP#34669), Stellar Unpacked (PCP#34516):** 2.5 g/L florasulam and 100 g/L fluroxypyr formulated as a suspension concentrate.

- Container size - 2 x 8 L, 3 x 8 L (*Battlestar* only), 97.1 L (*Stellar Unpacked* only), 348 L (*Viking Bodo* only), 590 L (*Battlestar* only)

**MCPA 2 EH Ester 600 (PCP#31669):** 600 g/L of MCPA Ester formulated as an emulsifiable concentrate.

- Container sizes:
  - MCPA 2 EH Ester 600 - 1 x 9.33 L
  - Alloy, Stellar Unpacked and Viking Bodo - MCPA sold separately

-or-

**Stellar XL (PCP #32099), Sabatis (PCP#35304), Outshine All In (PCP#35082), IPCO Trace (PCP#35337), CO-OP Revlox (PCP#35338):** 2.5 g/L florasulam, 100 g/L fluroxypyr and 350 g/L of MCPA as a co-formulated emulsifiable concentrate.

- Container sizes - 2 x 8.1 L, 97.1 L (*Stellar XL, IPCO Trace* and *Co-Op Revlox* only), 97.2 L (*Outshine All In* only), 129.6 L (*Sabatis* only) or 518 L (*Stellar XL, Outshine All In, IPCO Trace* and *CO-OP Revlox* only)

## Crops and Staging:

**Barley, oats, wheat (spring, durum, winter\*):** 3 to 6 leaf stage, including staging for *Steel* with MCPA tank mix. DO NOT apply *Alloy* or *Stellar Unpacked* or *Steel* mixed with MCPA on oats. *Alloy, Stellar Unpacked* and *Steel* alone on registered crops starting at the 2 leaf stage.

**Rye (fall and spring):** from 2 leaf expanded to just prior to flag leaf emergence (*Stellar XL* only).

**Seedling and established forage grasses for seed production\*†:**

- **Seedlings:** 4 leaf stage up to the flag leaf stage.
- **Established:** no stage restrictions.
  - Bromegrasses
  - Orchardgrass
  - Ryegrasses
  - Fescues
  - Redtop
  - Timothy
  - Meadow Foxtail
  - Reed canarygrass
  - Wheatgrasses

**Seedling and established forage grasses for seed, forage and hay production\*†:**

- Bromegrass (meadow, smooth, hybrid)

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

\* *Stellar XL, Outshine All In, IPCO Trace, CO-OP Revlox and Sabatis* only.

† **Note** - Since applications to forage grasses have been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. **Application to timothy is at the risk of the user.**

## Weeds and Staging:

Apply when weeds are at the 2 to 4 leaf stage unless otherwise indicated. Weed list includes *Steel* tank mixed with MCPA ester.

- Burdock<sup>†</sup>
- Plantain<sup>†</sup>
- Sunflower (annual)
- Chickweed (common)
- Prickly lettuce<sup>†</sup>
- Vetch<sup>†</sup>
- Cleavers<sup>††</sup>
- Ragweed
- Volunteer canola
- Cocklebur<sup>†</sup>
- Pigweed (redroot, Russian<sup>†</sup>)
- Volunteer flax
- Flixweed
- Shepherd's-purse
- Wild buckwheat
- Hemp-nettle
- Smartweed
- Wild mustard
- Kochia
- Stinkweed<sup>†</sup>
- Wild radish<sup>†</sup>
- Lamb's-quarters
- Stork's-bill\*

\* **Suppression only.**

† **Weeds listed on MCPA component of *Steel/Battlestar* mix only. All weeds controlled with *Stellar XL, Outshine All In, IPCO Trace, CO-OP Revlox* and *Sabatis*.**

†† 1 to 8 whorl for *Stellar XL, Outshine All In, IPCO Trace* and *CO-OP Revlox*. No staging given for *Steel/Battlestar*.

## Rates:

**Battlestar/Viking Bodo/Alloy/Stellar Unpacked:** 0.4 L per acre

**Other MCPA 600 ester mix with Battlestar:** 0.24 L per acre

-or-

**Stellar XL, Outshine All In, IPCO Trace, CO-OP Revlox and Sabatis:** 405 mL per acre

## Application Information:

- **Water Volume:** Minimum 40 L per acre.
- **Nozzles & Pressure:** For conventional flat fan nozzles use a pressure of 30 to 40 PSI (200 to 275 kPa). Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets. Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                             | Movement                            | Spectrum       | WSSA Group |
|-------------------|---------------|------------------------------------|-------------------------------------|----------------|------------|
| florasulam        | POST (foliar) | ALS Amino Acid Synthesis Inhibitor | Toward regions of growth (Symplast) | Broadleaf only | 2          |
| fluroxypyr        | POST (foliar) | Synthetic Auxin                    | Throughout the plant (Symplast)     | Broadleaf only | 4          |
| MCPA              | POST (foliar) | Synthetic Auxin                    | Throughout the plant (Symplast)     | Broadleaf only | 4          |

## Effects of Growing Conditions:

DO NOT apply to crops or weeds that are stressed (frost, low fertility, drought or flooding, disease or insect damage) as crop injury or reduced weed control may result.

## Tank Mixes:

### Herbicides:

- **Spring wheat (including durum) and barley (Alloy/Stellar Unpacked/Battlestar/Bodo only):**
  - MCPA Ester
- **Barley, spring wheat:**
  - Axial\*\*\*
- **Spring Wheat (including durum) only:**
  - Simplicity\*\*
  - Simplicity GoDRI\*\*\*
  - Traxos\*\*\*\*
- **Spring wheat (including durum) and winter wheat, fall and spring rye (Stellar XL only):**
  - Simplicity Go DRI\*\*\*\*\*
- **Spring wheat (including durum) and winter wheat (Viking Bodo and Battlestar only).**
  - Simplicity

\* All products.

\*\* Stellar, Stellar XL, IPCO Trace, Co-Op Revlox and Viking Bodo only.

\*\*\* Stellar XL, Sabatis, Outshine All In, IPCO Trace, CO-OP Revlox and Viking Bodo only.

\*\*\*\* Sabatis only.

\*\*\*\*\* Stellar XL, Outshine All In and Sabatis only.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall within 2 hours of application may reduce efficacy.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Pre-harvest Interval:** Leave 60 days between treatment and harvest.
- **Grazing Restrictions:** DO NOT graze or harvest for livestock feed within 7 days of treating the crop. **For forage grasses (Stellar XL, Outshine All In, IPCO Trace, CO-OP Revlox and Sabatis only):** DO NOT graze dairy animals within 7 days of application. DO NOT harvest green feed or cut for hay/silage within 7 days of application. Withdraw meat animals from grazing within the 7 day period for 3 days before slaughter.

- **Re-cropping Interval:** The following crops may be grown the season following application: barley, canola, corn\*, field beans (*Phaseolus vulgaris*)\*, flax\*, lentils\*, mustard\*, oats, peas, potato\*†, soybean\*, sunflower\* or wheat or fields can be summerfallowed. There are no recropping restrictions the second year after application.  
\* Alloy, Stellar Unpacked, Battlestar, Stellar, Stellar XL Outshine All In, IPCO Trace, CO-OP Revlox and Sabatis only.  
† Except seed potatoes for Stellar
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen. If frozen, bring to room temperature and agitate before use. Stellar and Outshine only – product is combustible. DO NOT store near heat or open flame.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Use a combination of 'Method A' and 'Method B' utilizing the commercial spray tank cleaner *All-Clear* as the detergent. See the general section on sprayer cleaning in the introduction. If mixed with another pesticide additional clean-out measures may be necessary.

## Hazard Rating:

Warning – Poison

Warning – Eye and Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Flucarbazone

Herbicide Group  
2 - flucarbazone

## Company:

UPL AgroSolutions Canada (*Everest 3.0 AG*)

Syngenta Canada (*Sierra 3.0 AG*)

NewAgco (*Himalaya*)

Viking (*Viking Flucarbazone*)

Nufarm Agriculture Inc. (*Reata*)

## Formulation:

**Everest 3.0 AG (PCP#33258), Sierra 3.0 AG (PCP#33538):** 200 g/L flucarbazone-sodium formulated as a suspension concentrate.

- Container size - 3.88 L

**Himalaya (PCP#33370), Viking Flucarbazone (PCP#34739):** 66% flucarbazone-sodium formulated as a water dispersible granule.

- Container size - 567 g

**Reata (PCP#35599):** 105 g/L flucarbazone-sodium formulated as a suspension concentrate.

- Container size - 2 x 7.34 L

## Crops and Staging:

**Spring application to wheat (spring, durum, winter):** 1 leaf to a maximum of 4 main stem leaves plus 2 tillers (6 total leaves).

*Note: Several of the tank mix partners have more limiting staging than flucarbazone alone. When tank mixing use the most restrictive application stage or injury may result.*

## Weeds, Rates and Staging:

**Grass weeds:** Maximum of 4 main stem leaves and 2 tillers

**Broadleaf weeds:** 2 to 6 leaf stage

| Weed                                                                                                                                                                                                                                 | Rate                  |                                                |                      |

| <b>Suppression of:</b><br>Wild buckwheat (1 to 4 leaf stage), barnyard grass**, yellow foxtail**                                                                                          | 48.2                  | 14.4                                            | 92                   |
| <b>Grass weeds listed above</b> growing under poor growing conditions or when mixing with herbicides containing the a.i. dicamba                                                          | 58.2                  | 17.4                                            | 111                  |

Requires the addition of a non-ionic surfactant (*Agral 90, Agsurf II, Liberate, ProSurf, Super Spreader, LI700*) at 0.25 L per 100 L of spray solution.

\* Will not control imidazolinone tolerant (CLEARFIELD) canola volunteers or Group 2 resistant weed biotypes.

\*\* For control of these weeds, see tank mix section of the product label.

DO NOT apply more than the equivalent of 11.64 g flucarbazone active ingredient per growing season.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 22.5 to 45 L per acre.
  - **Aerial:** 11 L per acre.
- **Nozzles and Pressure:** Use 30 to 50 psi (200 to 345 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets. Orienting nozzles at a 45 degree angle forward may improve coverage of vertical leaves (grasses).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                    | Target                   | Movement                                | Spectrum          | WSSA Group |
|-------------------|-------------------------------------------|--------------------------|-----------------------------------------|-------------------|------------|
| flucarbazone      | POST (foliar) with soil residual activity | ALS Amino Acid Inhibitor | Toward growth areas of plant (Symplast) | Broadleaf & grass | 2          |

## Effects of Growing Conditions:

Crop tolerance and weed control may be reduced if applications are made to plants growing under stress. Stress includes saturated or water-logged soil, drought, extreme temperatures, low fertility or visible disease symptoms at application. Adopting practices to increase crop vigour will improve crop tolerance.

## Tank Mixes:

### Herbicides:

Note:

- All mixes must be applied with a registered surfactant unless otherwise indicated. Only one registered surfactant is required.
- All products below may be mixed at label rates with flucarbazone unless otherwise indicated.
- Flucarbazone at all rates may be mixed with the products listed below unless otherwise indicated.
  - **In wheat (spring and durum) only:**
    - 2,4-D amine or ester (rates up to 227 g ae per acre)\*
    - *Akito*
    - *Enforcer D*
    - *Enforcer M<sup>A</sup>*
    - *Pixxaro*
  - **In wheat (spring and winter) only:**
    - 2,4-D amine or ester (rates up to 227 g ae per acre)
    - Bromoxynil/MCPA (*Buctril M/Logic M* only)
    - MCPA amine or ester at rates up to 0.38 L per acre (600 g/L formulation)
    - Thifensulfuron/tribenuron (*Refine SG* only)<sup>A</sup>

- **In spring wheat (NOT including durum) only:**

- Attain X CA<sup>ΔΔ</sup>
- Bromoxynil (Brotex 240/Pardner only)
- Bromoxynil/2,4-D (Leader/Thumper only)
- Curtail M<sup>\*\*</sup>
- Dichlorprop-D
- DyVel<sup>ΔΔ</sup>
- Frontline 2,4-D
- Florasulam + MCPA (Frontline XL only)\*
- Florasulam/Fluroxypyr+MCPA (Stellar XL only)\*\*
- Fluroxypyr+MCPA (Trophy only)
- Metsulfuron (Ally only) + 2,4-D amine or ester up to rates above\*\*
- OcTTain XL<sup>\*Δ</sup>
- Optica Trio<sup>#\*†§</sup>
- Pixxaro<sup>ΔΔ</sup>
- Prestige XC<sup>\*\*</sup>
- Thifensulfuron/Tribenuron (Refine SG only<sup>§</sup>) plus 2,4-D amine or ester at rates above

\* Apply in 40 L per acre of water. In durum max rate is 170 gae per acre in 45 L of water.

\*\* Apply in 40 L per acre of water only with 38.4 to 58.3 mL per acre of *Flucarbazone 3.0/3.0 AG*.

† Wild oats control may be reduced with this mix.

# Tank mix only with the highest rate of flucarbazone.

§ *Flucarbazone 3.0 AG* only.

Δ *Flucarbazone 3.0* and *Reata* only

ΔΔ *Reata* only

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Note: The above mixes are those listed on the flucarbazone labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated area within 12 hours.
- **Grazing Restrictions:** DO NOT graze treated fields. Mature grain or straw may be fed to livestock.
- **Pre-harvest Interval:** Leave at least 80 days from application to harvest
- **Re-cropping Interval:** See the following chart below:

| Soil Zones and Rotational Crops                                |                                                                                                                                                       |                                                                                                                                         |              |
|----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Grey-Wooded                                                    | Black                                                                                                                                                 | Dark Brown                                                                                                                              | Brown        |
| Spring wheat<br>Barley<br>Canola (all varieties)<br>Field pea* | Spring wheat<br>Barley<br>Canola (all varieties)<br>Durum wheat<br>Field pea*<br>Flax<br>Field bean<br>Soybean <sup>†</sup><br>Sunflower <sup>†</sup> | Spring wheat<br>Barley<br>Canola (all varieties)<br>Durum wheat<br>Field pea*<br>Flax<br>Soybean <sup>†</sup><br>Sunflower <sup>†</sup> | Spring wheat |

<sup>†</sup> Not including *Sierra 3.0* at this time.

\* NOTE: Field pea may be grown the year following flucarbazone application in fields where precipitation has been equal to or above the 10-year average during the growing season, and where organic matter content is above 4 percent, and pH is below 7.5. The company suggests a minimum of 100 mm (4 inches) of rain is needed in the 60 days following application for adequate breakdown to take place.

NOTE: Other rotational crops may also be affected under certain environmental conditions, including prolonged drought and/or cold temperatures within the following cropping season, as well as soils with both low OM (less than 2 per cent) and high pH (greater than 7.5).

- **Aerial Application:** May be applied by aircraft.
- **Storage:** Store in closed original container in a cool, dry area away from fertilizers, food or feed. DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. When mixing with other pesticides, combine the method above with cleanout methods for the tank mix partner.

**Hazard Rating:***Flucarbazone 3.0 AG:*

Danger – Corrosive to Eyes

*Himalaya, Viking Flucarbazone:*

Warning eye and skin irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Flucarbazone + Tribenuron

Herbicide Group  
2 - flucarbazone, tribenuron**Company:**UPL AgroSolutions Canada (*Inferno Duo*)NewAgco (*Himalaya Extra*)Viking (*Viking Visby*)**Formulation:*****Inferno Duo* (PCP#30663):** 45% flucarbazone and 3.9% tribenuron formulated as water dispersible granules.

- Container size - 4 x 1018 grams

-or-

The *Himalaya Extra* package contains the following components:***Himalaya* (PCP#33370):** 66% flucarbazone-sodium formulated as a water dispersible granule.

- Container size - 695 g

-plus-

***MPOWER Extra* (PCP#33143):** 75% tribenuron methyl formulated as a water dispersible granule.

- Container size - 320 g

-or-

The *Viking Visby* package contains the following components:***Viking Flucarbazone* (PCP#34739):** 66% flucarbazone-sodium formulated as a water dispersible granule.

- Container size - 695 g

-plus-

***Viking Tribenuron* (PCP#34738):** 75% tribenuron methyl formulated as a dry flowable.

- Container size - 320 g

**Crops and Staging:****Spring wheat (NOT including durum) and winter wheat\*:** Apply to the soil surface from one week before seeding until crop emergence.\* Winter wheat with *Inferno Duo* only.**Weeds, Rates and Staging:*****Inferno Duo:*** Apply 12.75 g per acre or***Himalaya Extra:*** Apply 8.7 g per acre of *Himalaya* plus 4 g per acre of *MPOWER Extra****Viking Visby:*** Apply 8.7 g per acre of *Viking Flucarbazone* plus 4 g per acre of *Viking Tribenuron****All Products:*** Add 180 g ae per acre of glyphosate IPA or K+ salts (see glyphosate) to control:

- Weeds controlled by glyphosate at 180 g ae per acre (see glyphosate) plus:
  - Cow cockle
  - Dandelion<sup>†</sup>
  - Foxtail barley (up to 10 cm)\*
  - Narrow-leaved hawk's-beard
  - Shepherd's-purse<sup>§</sup>
  - Volunteer canola
  - Wild oats<sup>†</sup>

**Mix with glyphosate at 360 g ae per acre to control:**

- Foxtail barley (greater than 10 cm, heavy infestations or stressed plants)\*

\* Apply prior to seed head emergence and the loss of older leaves.

<sup>†</sup> Suppression only.<sup>§</sup> *Inferno Duo* only.NOTE: The entire 254.5 g pouch of *Inferno Duo* must be added to the spray tank. DO NOT use part pouches.

DO NOT apply flucarbazone/tribenuron more than once per season or follow the application of these products with an application of another flucarbazone product.

## Application Information:

- **Water Volume:** 40 L per acre.
- **Nozzles and Pressure:** Use 30 to 50 psi (200 to 345 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage and a minimum of fine droplets that are prone to drift.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                               | Target                   | Movement                          | Spectrum          | WSSA Group |
|-------------------|------------------------------------------------------|--------------------------|-----------------------------------|-------------------|------------|
| flucarbazone      | POST (foliar – emerged weeds)<br>PRE (soil activity) | ALS Amino Acid inhibitor | Toward Areas of Growth (Symplast) | Broadleaf & grass | 2          |
| tribenuron        | POST (foliar – emerged weeds)                        | ALS Amino Acid inhibitor | Toward Areas of Growth (Symplast) | Broadleaf only    | 2          |

## Effects of Growing Conditions:

Crop tolerance and weed control may be reduced if applications are made to plants growing under stress. Stress includes saturated or water-logged soil, drought, extreme temperatures, low fertility or visible disease symptoms at application.

Adopting practices to increase crop vigor will improve crop tolerance.

## Tank Mixes:

**Herbicides:** Glyphosate IPA or K<sup>+</sup> salts only.

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the *Inferno Duo* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** DO NOT apply if rainfall is expected within 1 hour of application.
- **Restricted Entry Interval:** Wait at least 12 hours before re-entering treated fields.
- **Grazing Restrictions:** DO NOT graze treated fields. Mature grain or straw may be fed to livestock.
- **Pre-harvest Interval:** Leave at least 80 days from application to harvest.
- **Re-cropping Interval:** The following crops may be planted 11 months after application.

| Soil Zones and Rotational Crops                                                        |                                                                                                                                                                       |                                                                                                                                                         |                                      |
|----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| Grey-Wooded                                                                            | Black                                                                                                                                                                 | Dark Brown                                                                                                                                              | Brown                                |
| Wheat (spring, winter <sup>†</sup> )<br>Barley<br>Canola (all varieties)<br>Field pea* | Wheat (spring, winter <sup>†</sup> , durum)<br>Barley<br>Canola (all varieties)<br>Field pea*<br>Flax<br>Field bean<br>Soybean <sup>†</sup><br>Sunflower <sup>†</sup> | Wheat (spring, winter <sup>†</sup> , durum)<br>Barley<br>Canola (all varieties)<br>Field pea*<br>Flax<br>Soybean <sup>†</sup><br>Sunflower <sup>†</sup> | Wheat (spring, winter <sup>†</sup> ) |

<sup>†</sup> *Inferno Duo* only.

\* **NOTE:** Field peas may be grown the year following application in fields where precipitation has been equal to or above the 10 year average during the growing season, and where organic matter content is above 4 percent, and pH is below 7.5. The company suggests a minimum of 100 mm (4 inches) of rain is needed in the 60 days following application for adequate breakdown to take place.

- **NOTE:** Other rotational crops may also be affected if rainfall is less than the 10 year average for the area. Soils in the grey wooded, black and dark brown soil zones with a combination of low organic matter (less than 2 percent), light textured soils or high pH (greater than 7.5) (i.e. eroded knolls, sandy soils) may result in delayed growth and development in rotational crops. DO NOT plant crops other than those listed above in the year following application.

- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

*Inferno Duo:*

Caution – Skin Irritant

Potential Skin Sensitizer

Warning – Contains the Allergen Sulphites

*Himalaya Extra, Viking Visby:*

- *Himalaya:*

Warning – Eye and Skin Irritant

- *MPOWER Extra Viking Tribenuron:*

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Flumioxazin

Herbicide Group  
14 - flumioxazin

## Company:

NewAgco (*Fury*)

Valent Canada, Inc. Distributed by Nufarm Agriculture (*Chateau EZ, Valtera EZ*)

Interprovincial Cooperative Ltd. (*IPCO Tetra*)

## Formulation:

*Fury* (PCP#35513): 51.1% flumioxazin formulated as a wettable granule.

- Container sizes:
  - *Fury* - 9.12 kg

*Chateau EZ* (PCP#34036); *Valtera EZ* (PCP#33523); *IPCO Tetra* (PCP#35453): 479.2 g/L flumioxazin formulated as a suspension concentrate.

- *Chateau EZ* - 4 x 910 mL
- *Valtera EZ* - 2 x 4.8 L

## Crops, Rates, and Staging:

Maximum ONE APPLICATION per year of *Valtera EZ*, *Chateau EZ*, *IPCO Tetra* or *Fury* or other products containing flumioxazin.

**Pre-seed or pre-emergent:**

**Spring Application:**

| Crop                                                                                      | Product                                                          | Fury Rate (g per acre) |             | Rate (mL per acre) |             |

| Chickpea, field pea, lentil (small red, large green) spring wheat (NOT including durum)**, sunflower†           | <i>IPCO Tetra</i> only                                |                        |             | 60                 | 90          |
| Lentil** (small red, large green)                                                                               | <i>Fury</i> only                                      | 56.7                   | 85.0        |                    |             |
| Established dormant alfalfa <sup>‡</sup> grown for seed and hay or other forage                                 | <i>Valtera EZ</i> and <i>IPCO Tetra</i> only          |                        |             | 120                | 120         |

\*\* Seed wheat, barley and lentil at least 1 inch (2.5 cm) deep. Apply *Valtera EZ* and *IPCO Tetra* a minimum of 7 days prior to seeding spring wheat, barley, winter wheat, lentils and field corn. Apply to minimum till soils only.

\*\*\* Potatoes (*Chateau EZ* only): Apply after hilling. A minimum of 2 inches (5 cm) of soil must cover the vegetative portion of the potato or crop injury may result.

† Apply *Valtera EZ* and *IPCO Tetra* a minimum of 30 days prior to planting.

‡ Apply to dormant alfalfa with maximum of 15 cm (6 inches) of new growth to minimize crop injury. Application will result in burning of green leaves. NOTE: Since this use has been registered under the 'User Requested Minor Use' program, the manufacturer assumes no responsibility for herbicide performance or injury.

§ DO NOT apply to farm paths or roadways or areas with dusty surfaces where dust may blow onto nearby crops as injury may result to those crops.

If weeds are emerged, apply *Valtera EZ*, *IPCO Tetra* and *Fury* in a mix with a foliar herbicide (see tank mix section).

**Harvest Aid (*Valtera EZ* and *IPCO Tetra* only):** Apply 45 to 60 mL per acre *Valtera EZ* or *IPCO Tetra* per acre when crops are physiologically mature to dry green weed material. Add metholated seed oil (MSO) at 1 L per acre or a non-ion surfactant such as *Nufarm Enhance* at 0.125 to 0.25 L per 100 L of spray solution.

- Chickpea, dry bean, faba bean, field pea, lentil – a minimum of 80 percent of the pods are yellow to tan in colour and 20 percent are yellow in colour. Wait at least 8 days with *Valtera EZ* and *IPCO Tetra* before harvesting.
- Wheat – 30 percent or less grain moisture. Wait at least 10 days before harvesting.
- Sunflower – 35 percent or less grain moisture. Wait at least 5 days before harvesting.

**Weeds and Rates:**

Apply prior to crop and weed emergence.

***Chateau EZ* applied at 45 mL per acre\*\* provides suppression of the following weeds:**

- Canada fleabane
- Lamb's-quarters
- Kochia
- Nightshade (Eastern black, hairy)
- Pigweed (green, redroot)
- Ragweed, common

***Fury* applied at 56.7 to 85.0 grams per acre or *Valtera EZ* or *IPCO Tetra* applied at 60 to 90 mL per acre provides control of the weeds above plus:**

- Annual sow-thistle\*\*\*
- Green foxtail\*
- Russian thistle†\*, \*\*\*
- Cleavers\*, \*\*\*
- Hairy nightshade
- Volunteer canola\*, \*\*\* (all varieties)
- Common chickweed
- Kochia\*\*\*
- Waterhemp\*\*\*
- Common ragweed
- Lamb's quarters
- Wild buckwheat\*, \*\*\*
- Dandelion
- Palmer amaranth\*\*\*
- Eastern black nightshade
- Pigweed (green, redroot)

***Valtera EZ* or *IPCO Tetra* applied at 120 to 181 mL per acre provides extended control of the weeds above.**

\* Suppression.

\*\* Rate for *Chateau EZ* in potato only.

\*\*\* Except *Fury*.

† *Valtera EZ* and *IPCO Tetra* only.

DO NOT apply on soils with > 5 percent organic matter, or fine soils. Soils such as clay, clay loam, silty clay or silty clay loam are considered fine textured soils. DO NOT apply to soils composed of more than 90 percent sand and gravel.

The duration of residual control may be reduced at lower rates. Spray within 6 hours of mixing. When applying *Valtera EZ*/*IPCO Tetra*/*Chateau EZ* by itself a surfactant is not required.

## Application Information:

- **Water Volume:**
  - **Preseed or pre-emergent:** Minimum 40 L per acre (recommended by manufacturer).
  - **Harvest Aid:** 57 to 113 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets.
- **Screens:** The use of 50 mesh screens is recommended.
- **DO NOT** perform any tillage operations after application otherwise weed control will be reduced. When applied prior to seeding crops must be direct seeded with minimum disturbance systems.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                                 | Target                               | Movement                                                                                                          | Spectrum       | WSSA Group |
|-------------------|--------------------------------------------------------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------|----------------|------------|
| flumioxazin       | PRE (surface) with residual soil activity, Pre-harvest | PPO Inhibitor/<br>Membrane disruptor | <i>PRE:</i> Upward in plant (Apoplast)<br><i>Preharvest:</i> Little movement due to rapid cell leakage (Symplast) | Broadleaf only | 14         |

## Effects of Growing Conditions:

Rainfall is required to activate flumioxazin in the soil. Crop injury may occur when soils are wet and cool following application or soils are poorly drained. Severe injury may occur with flooded soils. Newly emerging foliage can be temporarily injured by heavy rain splashing treated soil on leaves. Heavy crop residues may reduce weed control.

**Irrigation:** If rainfall is not received after application, 5 to 10 mm of irrigation may be applied to improve weed control activity. **DO NOT** apply irrigation to wheat after emergence until the main head is fully emerged.

## Tank Mixes:

The following mixes are for *Valtera EZ* and *IPCO Tetra* only.

### Herbicides:

- **Soybean, wheat or bare ground:**
  - Glyphosate (IPA or K salts) 180 to 486 g ae per acre (spring or fall).  
Note: **DO NOT** mix when applying prior to soybean with *Dual II Magnum* or *Frontier Max* herbicides or injury could occur.
- **Field pea and chickpea and lentils:**
  - Glyphosate (IPA or K salts) 180 to 360 g ae per acre.
- **Harvest-aid Applications only:**
  - Glyphosate (IPA or K salts) at preharvest rates.
- **Fury only: lentils**
  - Glyphosate (IPA or K salts) 0.486 g ae per acre (spring or fall).

**Fertilizers:** None registered.

**Fungicides:** None registered.

**Insecticides:** None registered.

**Note:** The above mixes are those listed on the *Valtera EZ*, *IPCO Tetra* and *Fury* labels only.

Apply mixes according to the most restrictive use limitations for either product.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rain or irrigation shortly after application is required for activation. If rainfall does not occur, irrigation with at least 5 mm of water is recommended before ground crack occurs.
- **Restricted Entry Interval:** **DO NOT** re-enter treated fields for 12 hours.
- **Grazing Restrictions:**
  - **Alfalfa:** **DO NOT** harvest or graze within 25 days of application.
  - **Field corn:** **DO NOT** permit livestock to graze fields within 93 days after application. **DO NOT** harvest greenfeed or silage within 93 days after application.
  - **Soybeans:** **DO NOT** harvest as greenfeed or permit livestock to graze fields within 21 days after application. **DO NOT** cut hay/fodder within 50 days after application.
  - **Wheat:** **DO NOT** harvest as greenfeed or permit livestock to graze fields within 26 days after application. **DO NOT** cut hay/fodder within 52 days after application.
  - **All other crops:** **DO NOT** graze, cut or feed treated crops to livestock.

- **Pre-harvest Interval:**
  - **Desiccation:** Leave 5 days between application and harvest. Leave 7 days to harvest if mixing with glyphosate.
- **Re-cropping Interval:**
  - **Valtera EZ/Chateau EZ /IPCO Tetra**

| Rate (mL per acre)                 | Crops                                                       | Re-cropping Interval |
|------------------------------------|-------------------------------------------------------------|----------------------|
| 45 to 60<br>(for harvest aid uses) | Winter wheat                                                | 7 days               |
| 60                                 | Soybean, field corn, chickpea, field pea                    | Immediately          |
|                                    | Sunflowers, durum                                           | 30 days              |
|                                    | Spring wheat, lentils (small red and large green varieties) | 7 days               |
|                                    | Winter wheat                                                | 4 months             |
|                                    | Barley                                                      | 3 months             |
|                                    | Sorghum, dry common beans**, and canola                     | 9 months             |
|                                    | Alfalfa                                                     | 11 months            |
|                                    | All other crops not listed*                                 | 12 months*           |
| 90                                 | Soybean, field corn, chickpea, field pea                    | Immediately          |
|                                    | Sunflowers                                                  | 2 months             |
|                                    | Spring wheat                                                | 7 days               |
|                                    | Winter wheat                                                | 4 months             |
|                                    | Barley                                                      | 3 months             |
|                                    | Lentils (small red and large green varieties)               | 6 months             |
|                                    | Sorghum, dry common beans**                                 | 9 months             |

| 85                | Soybean                                | Immediately          |
|                   | Winter wheat                           | 4 months             |
|                   | Lentils (small red and large green)    | 6 months             |
|                   | Sorghum, dry common beans**            | 9 months             |
|                   | Alfalfa, barley and canola             | 11 months            |
|                   | All other crops not listed*            | 12 months*           |

\* Also requires that a successful bioassay be completed following the given recropping interval.

\*\* Note: Not all varieties of dry beans have been tested for recrop tolerance. Test new varieties of dry beans on a small area before attempting large acreages.

- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place. DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. See product label for further information.

## Hazard Rating:

**Fury:**

Caution – Poison

**Chateau EZ, Valtera EZ, IPCO Tetra:**

No specific hazard statement.

Refer to the Introduction for an explanation of the symbols.

# Fluroxypyr

**Herbicide Group  
4 - fluroxypyr**

## Company:

Parijat Industries India Ltd. (*Ikwin, Ikwin Gold*)

FMC Corporation (*Perimeter II, FMC Fluroxypyr 333EC*)

Albaugh (*Fluro Star, Fluro Star Max*)

WinField United (*Cavalier 333*)

Advantage (*Advantage Fluroxypyr 333 EC*)

## Formulation:

**Ikwin (PCP#33047), Fluro Star (PCP#33280):** 180 g ae/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 9.68 L (*Ikwin*), 9.3 L or 115 L (*Fluro Star*)

**Perimeter II (PCP#30094)\*, FMC Fluroxypyr 333 EC (PCP#35620)\*, Cavalier 333 (PCP#33933), Fluro Star Max (PCP#33281), Advantage Fluroxypyr 333 EC (PCP#35273), Ikwin Gold (PCP#35524):** 333 g ae/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 3.4 L (*Perimeter II, Cavalier*) or 2 x 10 L (*Fluro Star Max*), 10 L (*FMC Fluroxypyr 333EC*)

**\* Perimeter II/FMC Fluroxypyr 333EC is only available as a component of co-packaged products or tank mixes with FMC products.**

## Crops and Staging:

**Spring wheat (including durum), barley, oats\*:** 2 leaf up to the initiation of stem elongation (nodes can be felt at the base of the stem).

**Winter wheat\*:** Apply to winter wheat in the spring from the 3 tiller stage to just before the flag leaf stage.

**Rangeland, permanent pasture, rights-of-way, industrial and other non crop areas - Advantage Fluroxypyr 333 EC, Cavalier 333, Ikwin Gold and Fluro Star Max only.**

**\* Cavalier 333 Fluro Star Max, Advantage Fluroxypyr 333 EC, Ikwin Gold, Perimeter II and FMC Fluroxypyr 333EC only.**

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

| Weeds Controlled         | 180 g/L            |               | 333 g/L            |               |
|--------------------------|--------------------|---------------|--------------------|---------------|
|                          | Rate (mL per acre) | Stage         | Rate (mL per acre) | Stage         |
| Cleavers                 | 162                | 1 to 4 whorls | 85                 | 1 to 6 whorls |
| Cleavers                 | -                  | -             | 125                | 1 to 8 whorls |
| Kochia*                  | 243                | 2 to 8 leaf   | 125                | 2 to 8 leaf   |
| Round-leaved mallow      | 324                | 1 to 6 leaf   | 162                | 1 to 6 leaf   |
| Volunteer flax           | 243                | 1 to 12 cm    | 125                | 1 to 12 cm    |
| Chickweed <sup>††</sup>  | 324                | up to 8 cm    | 162                | up to 8 cm    |
| Hemp-nettle <sup>†</sup> | 324                | 2 to 6 leaf   | 162                | 2 to 6 leaf   |

| Weeds Controlled            | 180 g/L            |             | 333 g/L            |             |
|-----------------------------|--------------------|-------------|--------------------|-------------|
|                             | Rate (mL per acre) | Stage       | Rate (mL per acre) | Stage       |
| Stork's-bill <sup>†</sup>   | 243                | 1 to 8 leaf | 125                | 1 to 8 leaf |
| Wild buckwheat <sup>†</sup> | 324                | 1 to 4 leaf | 85                 | 1 to 8 leaf |

<sup>†</sup>170 to 340 mL per acre in rangeland, permanent pasture, rights-of-way, industrial and other non-crop areas. For spot applications mix 17 to 34 mL per 100 L spray solution

<sup>†</sup> Suppression only.

<sup>††</sup> Suppression only with 180 g/L formulations, control with 333 g/L formulations.

Make only ONE APPLICATION per year of any of these products or other products containing fluroxypyr. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre. All other uses minimum 40 L per acre.
  - **Aerial:** *Perimeter II/FMC Fluroxypyr 333EC* only – 12 to 20 L per acre.
- **Nozzles and Pressure:** Maximum 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE coarse* droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------|----------------|------------|
| fluroxypyr        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

The activity these products are influenced by weather conditions. The temperature range for optimum activity is 12°C to 24°C. Reduced activity will occur when temperatures are below 8°C or above 27°C. Frost 3 days before or after application may reduce weed control and crop tolerance. Weed control may be reduced during stress conditions (drought, heat or cold stress) or if extremely heavy infestations exist.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

The following mixes may be used with each of the products above unless noted otherwise.

- **In all labelled crops:**
  - MCPA ester (up to 560 g ae per acre)
  - *Curtail M* (0.61<sup>††</sup> to 0.81 L per acre)
- **In all labelled crops - except oats:**
  - 2,4-D ester (up to 560 g ae per acre)

The following mixes may be used with fluroxypyr alone or in combination with the broadleaf tank mix partners above unless otherwise indicated.

- **In spring wheat (including durum) and barley:**
  - *Refine SG*
  - *Tralkoxydim*<sup>†\*</sup>
- **In spring wheat (including durum) only:**
  - Clodinafop 240 EC<sup>†</sup> (93 mL per acre)
  - Fenoxaprop<sup>†</sup>
  - *Simplicity OD*<sup>†Δ</sup>
- **In rangeland, permanent pasture, rights-of-way, industrial and other non-crop areas:\*\***
  - *Milestone*

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizer:** None registered.

\* Temporary crop injury or reduced wild oats control may occur with this tank mix.

\*\* *Advantage Fluroxypyr 333 EC, Cavalier 333, Ikwin Gold and Fluro Star Max* only

<sup>†</sup> See product labels for specific brands registered.

<sup>††</sup> *Perimeter II/FMC Fluroxypyr 333EC* only.

<sup>Δ</sup> Only with tank mix with 2,4-D ester.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 1 hour will reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated area within 12 hours.
- **Grazing Restrictions:** Livestock may be grazed 3 days after application. DO NOT feed or cut forage grasses for hay.
- **Pre-harvest Interval:** Leave 60 days between application and harvest.
- **Re-cropping Interval:**
  - **All Products:** Barley, canola, flax, forage grasses, lentils, mustard, oats, peas, rye, and wheat, may be grown the year after application. There are no re-cropping restrictions the second year after application.
  - **Perimeter II/FMC Fluroxypyr 333 EC only:** Alfalfa, corn, dry beans, faba beans, potatoes, soybeans and sunflowers may also be seeded the year following.
- **Aerial Application:** *Perimeter II, FMC Fluroxypyr 333EC, Fluro Star Max, Ikwin Gold* only may be applied by air.
- **Storage:** Avoid freezing. If frozen, bring to room temperature and agitate before use. These products are combustible. DO NOT store near heat or open flame.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

*Ikwin, Fluro Star Max, Cavalier 333:* Danger – Poison

All products:

Warning – Eye Irritant

Caution – Skin Irritant

Refer to the Introduction for an explanation of the symbols.

## Fluroxypyr + 2,4-D

Herbicide Group  
4 - fluroxypyr, 2,4-D

*This product is a prepackaged tank mix of fluroxypyr and 2,4-D ester. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

### Company:

NewAgco (*Foxy Pro II, Foxy Extreme II*)

Nufarm Agriculture (*Flurox-24*)

### Formulation:

The packages for *Flurox-24* have the following components:

**Nufarm Fluroxypyr (PCP#30194), Fluroxypyr 180 EC (PCP#30815):** 180 g/L fluroxypyr formulated as an emusifiable concentrate.

- Container sizes:
  - *Nufarm Fluroxypyr* - 7.28 L
  - *Fluroxypyr 180 EC*- 9.6 L, 96 L, 980 L

The packages for *Foxy Pro II* and *Foxy Extreme* have the following components:

**Foxy 333 (PCP#35375):** 333 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 5.1 L (*Foxy Pro II* only) 6.7 L, 320 L

**2,4-D Ester 700 (PCP#27820), Salvo 2,4-D Ester 700 (PCP#27818), 2,4-D Ester 700 II (PCP#34808):** 660 g/L 2,4-D ester formulated as an emusifiable concentrate.

- Container sizes:
  - *Flurox-24* package - 10.3 L
  - *Salvo* - 9.8 L<sup>§</sup>
  - *Foxy Pro II* package - 9.8 L<sup>§</sup>
  - *Foxy Extreme II* package - 9.8 L, 460 L

<sup>§</sup> NOTE: The amount of 2,4-D 700 ester provided in the *Foxy Pro II* package is roughly 75% of the 2,4-D ester required to achieve the rates listed below. Additional 2,4-D ester will need to be purchased to achieve labelled use rates.

## Crops and Staging:

Spring wheat (including durum), barley: 4 leaf up to the emergence of the flag leaf.

### Forage Grasses for seed production only\*:

- Seedling and established grasses at the 4 leaf up to the emergence of the flag leaf.
  - Bromegrass (meadow, smooth)
  - Timothy
  - Wheatgrass (crested, intermediate)
  - Fescue (creeping red, tall)

\* **NOTE:** Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply these uses do so at their own risk.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

The following weeds are controlled at the 2 to 4 leaf stage, unless otherwise specified:

<sup>§</sup> **NOTE:** The amount of 2,4-D 700 ester provided in the *Rush 24* and *Foxy Pro II* packages is roughly 75 percent of the 2,4-D ester required to achieve the rates listed below. Additional 2,4-D ester will need to be purchased to achieve labelled use rates.

### Rates:

- **Nufarm or ADAMA Fluroxypyr 180** at 180 mL per acre or **Foxy 333** at 85 mL per acre plus 2,4-D ester 700 component<sup>§</sup> at 260 mL per acre controls the weeds controlled by 2,4-D ester at 170 g ae per acre (see 2,4-D) plus the following weeds:
  - Annual sunflower
  - Hoary cress (top growth)<sup>Δ</sup>
  - Wild buckwheat<sup>\*\*</sup>
  - Cleavers\*
  - Kochia
  - Field horsetail (top growth)
  - Vetch

\* 1 to 4 whorls with *Flurox-24*; 1 to 6 whorls with *Foxy Extreme II* and *Foxy Pro II* only.

\*\* 1 to 4 leaf with *Flurox-24*, *Foxy Extreme II* and *Foxy Pro*; 1 to 8 leaf with *Foxy Pro II* and *Foxy Extreme II* (suppression) only.

- **Nufarm or ADAMA Fluroxypyr 180** or at 240 mL per acre or **Foxy 333** at 125 mL per acre plus 2,4-D ester 700 component<sup>§</sup> at 340 mL per acre controls the weeds controlled by 2,4-D ester at 227 g ae per acre (see 2,4-D) plus the following weeds:

- All weeds listed above plus:
  - Cleavers (1 to 8 whorls)<sup>Δ</sup>
  - Hedge bindweed
  - Stork's bill (1 to 8 leaf)
  - Docks
  - Hemp-nettle (2 to 6 leaf stage)<sup>†</sup>
  - Volunteer flax (1 to 12 cm)
  - Dog mustard
  - Kochia (2 to 8 leaf)
  - Wild buckwheat<sup>\*\*\*</sup>
  - Field bindweed (top growth)
  - Round-leaved mallow (1 to 6 leaf)
  - Gumweed
  - Smartweed
  - Hairy galinsoga

\*\*\* 1 to 4 leaf with *Flurox 24*, *Foxy Pro* and *Foxy Extreme*; 1 to 8 leaf with *Foxy Pro II* and *Foxy Extreme II* only.

<sup>Δ</sup> *Foxy Pro II*, *Foxy Extreme II* and *Flurox-24* only.

<sup>†</sup> Suppression only.

Make only ONE APPLICATION per year of any of these products or other products containing the same active ingredients. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

The following mixes may be used with each of the combinations above unless noted otherwise.

- **In spring wheat (including durum) and barley:**
  - Tralkoxydim<sup>†\*</sup>
- **In spring wheat (including durum) only:**
  - Clodinafop 240 EC<sup>†</sup> (93 mL per acre)
  - Fenoxaprop<sup>†</sup>

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizer:** None registered.

\* Temporary crop injury or reduced wild oat control may occur with this tank mix.

<sup>†</sup> See product labels for specific brands registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

General guidelines can be found in the introduction.

# Fluroxypyr/2,4-D

Herbicide Group  
4 - fluroxypyr, 2,4-D

## Company:

Corteva Agriscience (*OcTTain XL* – PCP#30077)

Interprovincial Cooperative Ltd. (*Co-op OcTTain XL* – PCP#33892, *IPCO OcTTain XL* – PCP#33891)

Sharda Crop Chem (*OSim Plus* – PCP#34712)

ADAMA Canada (*Rush 24 All In* – PCP#34878)

Viking Crop Production Partners Inc. (*Viking Kalmar* - PCP#35353)

## Formulation:

90 g/L fluroxypyr plus 360 g/L 2,4-D LV ester as an emulsifiable concentrate.

- Container sizes - 2 x 9 L, 108 L, 576 L
- *Rush 24 All In* - 2 x 8.9 L, 106.8 L, 427.2 L
- *Viking Kalmar* - 8.9 L, 445 L

## Crops and Staging:

**Spring wheat (including durum), barley:** 4 leaf up to the emergence of the flag leaf.

**Winter wheat†:** Apply to winter wheat in the spring from the 3 tiller stage to just before the flag leaf stage.

### Forage grasses for seed production only\*:

- *Seedling and established grasses at the 4 leaf up to the emergence of the flag leaf.*
  - Bromegrass (meadow, smooth)
  - Timothy
  - Wheatgrass (crested, intermediate)
  - Fescue (creeping red, tall)

\* **Note:** Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. **Those who apply these uses do so at their own risk.**

† *OcTTain XL*, *IPCO OcTTain XL* and *OSim Plus* only.

**Rangeland, pasture, industrial vegetation management only (i.e. rights-of-way, roadsides, permanent perennial grass cover areas and industrial vegetation management areas):** Based on weed timing (*OcTTain XL*, *OSim Plus* and *Rush 24 All In* only).

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, and Staging:

The following weeds are controlled at the 2 to 4 leaf stage, unless otherwise specified:

- *OcTTain XL*, *OSim Plus*, *Viking Kalmar* and *Rush 24 All In* at 0.45 L per acre controls:
  - Bluebur
  - Burdock
  - Cleavers (1 to 8 whorl)
  - Clover (sweet)
  - Cocklebur
  - Common chickweed (up to 8 cm or 3 inches)†
  - Field horsetail\*
  - Flixweed
  - Goat's-beard
  - Hemp-nettle (2 to 6 leaf)
  - Hoary cress\*
  - Kochia
  - Lamb's-quarters
  - Mustards (except dog or green and grey tansy mustard)
  - Plantain
  - Prickly lettuce
  - Ragweed
  - Redroot pigweed†
  - Round-leaved mallow (1 to 6 leaf)
  - Shepherd's-purse
  - Sow-thistle (perennial)†\*
  - Stinkweed
  - Stork's-bill (1 to 8 leaf)
  - Sunflower (annual)
  - Vetch
  - Volunteer canola
  - Volunteer flax (1 to 12 cm)
  - Wild radish
  - Wild mustard
  - Wild buckwheat (1 to 6 leaf)
- *OcTTain XL*, *OSim Plus* and *Rush 24 All In* at 0.45 L per acre plus 2,4-D ester (LV700 at 81 mL per acre or LV600 at 95 mL per acre) controls:
 

**All weeds listed above plus:**

  - Annual sow-thistle†
  - Blue lettuce\*
  - Canada thistle†\*
  - Dandelion\*\*
  - Docks
  - Field bindweed\*
  - Field peppergrass
  - Gumweed
  - Hairy galinsoga
  - Hedge bindweed
  - Leafy spurge\*
  - Mustard (dog and tansy)
  - Oak-leaved goosefoot
  - Perennial sow-thistle†\*
  - Redroot pigweed
  - Russian thistle
  - Smartweed (including lady's-thumb)
  - Tartary buckwheat
  - Wild buckwheat (1 to 8 leaf)

- **Rangeland or non-crop areas (i.e. rights-of-way, roadsides, permanent perennial grass cover areas and industrial vegetation management areas):**
  - *OcTTain XL, OSim Plus and Rush 24 All In* only at 0.65 L per acre:
    - *All weeds listed above plus:*
      - Kochia (up to 50 cm) suppression
  - *OcTTain XL, OSim Plus and Rush 24 All In* only at 1.25 L per acre:
    - *All weeds listed above plus:*
      - Kochia (up to 50 cm) control

† **Suppression only.**

\* **Top growth only.**

\*\* **Spring rosettes only.**

Make only ONE APPLICATION per year of any of these products or other products containing the same active ingredients. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre. All other uses minimum 40 L per acre.
  - **Aerial:** 12 to 20 L per acre.
- **Nozzles and Pressure:** Maximum 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE coarse* droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------|----------------|------------|
| fluroxypyr        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| 2,4-D             | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

The activity these products are influenced by weather conditions. The temperature range for optimum activity is 12°C to 24°C. Reduced activity will occur when temperatures are below 8°C or above 27°C. Frost 3 days before or after application may reduce weed control and crop tolerance. Weed control may be reduced during stress conditions (drought, heat or cold stress) or if extremely heavy infestations exist.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

The following mixes may be used with each of the combinations above unless noted otherwise.

- **In spring wheat (including durum), winter wheat and barley:**
  - Tralkoxydim\*
- **In spring wheat (including durum) only:**
  - Clodinafop 240 EC (93 mL per acre)\*\*
- **In spring wheat (including durum) and winter wheat only:**
  - *Simplicity OD*†
  - *Simplicity GoDRI*††

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered. DO NOT mix with liquid fertilizers.

\* **Temporary crop injury or reduced wild oats control may occur with this tank mix.**

\*\* *OcTTain XL* and *IPCO OcTTain XL* only.

† **All products without additional 2,4-D ester only.**

†† **All products Except *OSim Plus*.**

**Note: The above mixes are those listed on the *OcTTain XL* labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated area within 12 hours.
- **Re-cropping Interval:** Alfalfa, barley, canola, corn, dry beans, flax, forage grasses, lentils, mustard, oats, peas, potatoes, rye, soybeans, sunflowers and wheat may be grown the year after application. There are no re-cropping restrictions the second year after application.
- **Re-cropping Interval Rush 24 All In:** Barley, canola, flax, forage grasses, lentils, mustard, oats, peas, rye and wheat may be grown the year after application. There are no re-cropping restrictions the second year after application.
- **Pre-harvest Interval:** Leave 60 days between application and harvest.
- **Grazing Restrictions:** DO NOT permit lactating dairy animals to graze cereal fields within 7 days of application. DO NOT harvest cereal crops for forage or cut hay within 30 days of application. Withdraw meat animals from treated fields at least 3 days before slaughter. DO NOT feed or cut forage grasses for hay.
- **Aerial Application:** *OcTTain XL*, *Co-op OcTTain XL*, *IPCO OcTTain XL* and *OSim Plus* may be applied by air. Rangeland and industrial uses by ground only.
- **Storage:** Avoid freezing. If frozen, bring to room temperature and agitate before use. These products are combustible. DO NOT store near heat or open flame.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Poison

Caution – Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Fluroxypyr + MCPA

**Herbicide Group  
4 - fluroxypyr, MCPA**

*This product is a prepackaged tank mix of fluroxypyr (see Fluroxypyr) and MCPA Ester.*

*Information listed is restricted to Crops, Weeds, Rates and Tank mixes.*

*For other detailed restrictions and other general information on the component products see the product pages listed above.*

## Company:

NewAgco (*Foxy M*)

Nufarm Agriculture (*Trophy*)

Viking (*Lidingo*)

## Formulation:

The Fluroxypyr + MCPA package has the following components:

**Nufarm Fluroxypyr (PCP#30194), ADAMA Fluroxypyr 180 EC (PCP#30815) or Viking Fluroxypyr (PCP# 34778):** 180 g/L fluroxypyr.

- Container sizes:
  - *Nufarm Fluroxypyr*, *ADAMA Fluroxypyr 180 EC* - 4.8 L
  - *Foxy* - 9.6 L, 230 L
  - *Viking Fluroxypyr* - 9.6 L

**Foxy 333 (PCP#35375):** 333 g/L fluroxypyr.

- Container size - 5.1 L

**NuFarm MCPA Ester 600 (PCP#27803), MCPA Ester 600 (PCP#34156), ADAMA MCPA 2 EH Ester 600 (PCP#31669) or Viking MCPA Ester 600 (PCP # 34805):**

600 g/L MCPA Ester.

- Container sizes:
  - *NuFarm MCPA Ester 600*, *ADAMA MCPA 2 EH Ester 600* - 7.5 L
  - *Viking MCPA Ester 600* and *MCPA Ester 600* - 10 L

All components above are formulated as emulsifiable concentrates.

## Crops and Staging:

Spring wheat (including durum), canaryseed\*, barley: 3 leaf up to full emergence of the flag leaf.

**\*Trophy only - Since the use of this product on canaryseed is registered under the User Requested Minor Use registration system, the manufacturer assumes no responsibility for herbicide performance. Users of this product on canaryseed do so at their own risk.**

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds and Staging:

**Weeds controlled at the 2 to 4 leaf stage, unless specified, include weeds controlled by MCPA 600 ester at 380 mL per acre plus:**

- Cleavers (1 to 4 whorls)\*
- Vetch
- Kochia
- Volunteer flax (1 to 12 cm)

**Weeds suppressed include:**

- Green smartweed
- Stork's-bill (1 to 8 leaf)
- Hemp-nettle (2 to 6 leaf)
- Wild buckwheat

**\* Up to 8 whorls only for Foxy M at 125 mL rate of Foxy 333**

## Rate:

**Fluroxypyr component:** 0.24 L per acre; Foxy 333 - 125 mL per acre rate.

**MCPA Ester 600 component:** 0.38 L per acre.

Maximum ONE APPLICATION per year of these or other products containing fluroxypyr.

## Tank Mixes:

Tank mix partners may be mixed at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **In spring wheat (including durum) and barley:**
    - Tralkoxydim<sup>†</sup>
  - **In Spring wheat (including durum) only:**
    - Clodinafop<sup>†</sup>
    - Flucarbazone<sup>†</sup>
- <sup>†</sup> See product labels for specific brands registered and compatibility with each product.

**Note: The above mixes are those listed on the Fluroxypyr + MCPA Ester labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

**See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.**

# Focus

Herbicide Group  
14 - carfentrazone-ethyl  
15 - pyroxasulfone

## Company:

FMC Corporation

## Formulation:

**Focus (PCP#32292):** 447 g/L pyroxasulfone and 53 g/L carfentrazone-ethyl formulated as a suspension emulsion.

- Container size - 4 x 4.5 L

## Crops and Staging:

**Note:** Seed soybeans at least 4 cm deep and other crops at least 1 inch (2.5 cm) deep or injury may occur.

**Note:** The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.

**Apply in the fall or in the spring prior to seeding or up to 3 days after seeding of:**

- |                           |             |                                        |
|---------------------------|-------------|----------------------------------------|
| ◦ Corn                    | ◦ Soybean   | ◦ Wheat (spring and winter, NOT durum) |
| ◦ Lentil <sup>†</sup>     | ◦ Sunflower |                                        |
| ◦ Field peas <sup>†</sup> |             |                                        |

<sup>†</sup> Under certain conditions, **Focus** can affect lentil and field pea growth. See details under "Effects of Growing Conditions" below.

**WARNING** – application to emerged crops will result in severe damage to the crop.

DO NOT apply **Focus**:

- to soils with 7 percent or more organic matter content.
- to soils with a pH greater than 7.8.
- to sandy soils with less than 1 percent organic matter content.
- in conjunction with products containing saflufenacil (*Heat*), before or after the application of **Focus** as crop injury may occur.

## Weeds and Staging:

Control of the following weeds emerging from seed (not controlled if emerged at application):

- |                           |                             |                   |
|---------------------------|-----------------------------|-------------------|
| ◦ Annual bluegrass        | ◦ Kochia*                   | ◦ Stinkweed*      |
| ◦ Barnyard grass          | ◦ Lamb's-quarters*          | ◦ Waterhemp       |
| ◦ Brome (downy, Japanese) | ◦ Mustard (wild*, wormseed) | ◦ Wild buckwheat* |
| ◦ Cleavers                | ◦ Persian darnel*           | ◦ Wild oats*      |
| ◦ Foxtail (green, yellow) | ◦ Pigweed (green, redroot)  | ◦ Velvetleaf      |
| ◦ Foxtail barley*         | ◦ Ryegrass (Italian)        |                   |

\* Suppression only.

The following emerged weeds are controlled by **Focus** up to the 10 cm stage unless otherwise indicated (burn-off):

**At the 90 mL per acre rate:**

- |                                       |                                                         |                                  |
|---------------------------------------|---------------------------------------------------------|----------------------------------|
| ◦ Lamb's-quarters (up to 7.5 cm tall) | ◦ Nightshade** (black, Eastern black - up to 5 cm tall) | ◦ Pigweed (redroot, waterhemp**) |
|                                       |                                                         | ◦ Velvetleaf                     |

**At the 113 mL per acre rate:**

Weeds controlled post-emergent above plus:

- |                                      |                                                  |                 |
|--------------------------------------|--------------------------------------------------|-----------------|
| ◦ Flixweed                           | ◦ Pigweed (prostrate, smooth, tumble, waterhemp) | ◦ Stinkweed     |
| ◦ Lamb's-quarters                    | ◦ Purslane                                       | ◦ Tansy mustard |
| ◦ Nightshade (hairy)                 | ◦ Round-leaved mallow                            |                 |
| ◦ Pennsylvania smartweed (seedlings) |                                                  |                 |

**At the 136 mL per acre rate:**

Weeds controlled post-emergent above plus:

- |              |                                     |                                     |
|--------------|-------------------------------------|-------------------------------------|
| ◦ Carpetweed | ◦ Jimsonweed                        | ◦ Russian thistle (up to 5 cm tall) |
| ◦ Cleavers   | ◦ Kochia                            | ◦ Shepherd's-purse                  |
| ◦ Cocklebur  | ◦ Nightshade (black, Eastern black) | ◦ Volunteer canola                  |

## Rates:

| Treatment                                              | Rate (per acre)                                    |                                                    |
|--------------------------------------------------------|----------------------------------------------------|----------------------------------------------------|
|                                                        | Soil Type                                          |                                                    |
|                                                        | Coarse to Medium Texture<br>(1 to 3 percent O.M.)* | Medium to Fine Texture<br>(> 3 to 7 percent O.M.)* |
| Early season control only (spring application only)    | 90 mL                                              |                                                    |
| Extended residual control (spring or fall application) | 113 mL                                             | 136 mL                                             |

\* O.M. = organic matter content.

| Coarse to Medium soils                              | Medium-Fine to Fine soils                                                 |
|-----------------------------------------------------|---------------------------------------------------------------------------|
| Sand, loamy sand, sandy loam, loam, silt loam, silt | Sandy clay loam, sandy clay, silty clay loam, silty clay, clay loam, clay |

Maximum ONE APPLICATION of *Focus* or other products containing pyroxasulfone within a 12 month period.

Use non-ionic surfactant at 0.25 L per 100 L of spray solution or *Merge* at 1 L per 100 L of spray solution for emerged broadleaf weeds, if using *Focus* without glyphosate.

DO NOT follow a fall application of *Focus* (or any other product containing pyroxasulfone) with a spring application of *Authority 480* (or any other product containing sulfentrazone) to fields where spring wheat will be planted.

Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Minimum of 40 L per acre. Higher spray volume is required for dense weed stands. Weed control improves with the amount of coverage.
- **Nozzles & Pressure:** Maximum 35 psi (210 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE medium* droplets.
- Apply to a uniform seedbed which is firm and clod free. DO NOT mechanically incorporate between application and seeding the crop as this can destroy the herbicide barrier and allow weeds to escape. DO NOT apply to frozen soils or existing snow cover as runoff may result.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing                                         | Target                               | Movement                                             | Spectrum                   | WSSA Group |
|---------------------|------------------------------------------------|--------------------------------------|------------------------------------------------------|----------------------------|------------|
| carfentrazone-ethyl | POST (foliar)                                  | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Non-selective<br>Broadleaf | 14         |
| pyroxasulfone       | PPI, PRE (surface) with residual soil activity | Long-chain Fatty Acid Inhibitor      | Little movement (Symplast)                           | Broadleaf & grass          | 15         |

## Effects of Growing Conditions:

**All Crops:** Moisture, a minimum of 15-25mm. shortly after application, is necessary to activate the Pyroxasulfone component in soil for effective weed control. Dry weather following applications may reduce effectiveness. Extremes in environmental conditions such as temperature, moisture, soil conditions, and cultural practices may affect activity. Excessive rainfall, irrigation, or prolonged wet soil conditions after application of *Focus* from seed germination through seedling emergence may increase the risk of seedling injury, especially with shallow seeded crops.

**Lentils, Peas:** Under certain conditions, *Focus* can affect lentil and pea growth. These conditions include high pH (7.5 and above), cool weather, prolonged and excessive moisture, seedling diseases, and any other conditions, including poor agronomic practices, that are unfavorable to vigorous crop growth. Such effects are often observed as stunting and discoloration. The duration of these effects is somewhat dependent on the duration of the adverse growing conditions. These effects lessen and generally diminish with the return to normal growing conditions.

## Tank Mixes:

### Herbicides:

- **Prior to field corn only:**
    - AAtrex (0.85 to 1.25 L per acre) (soil activity).
  - **Prior to all crops:**
    - Glyphosate (180 to 360 g ae per acre)
  - **Prior to wheat (spring, winter, NOT durum), soybean\*, field pea\*:**
    - Express SG\* + glyphosate
- \* Refer to crop specific restrictions of Express SG prior to pulse crops.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Heavy rainfall shortly after application may reduce weed control of the carfentrazone component. Moderate rainfall (see 'Effects of Growing Conditions' above for details) within a few days of application is required for proper activity of the pyroxasulfone component.
  - **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
  - **Grazing Restrictions:** DO NOT allow livestock to graze or feed on wheat grain, forage, hay or straw within 42 days after application.
  - **Pre-harvest Interval:** Not applicable.
  - **Re-cropping Interval:** Field corn, field pea, lentils, soybeans, sunflower, wheat (winter and spring, NOT including durum) may be seeded any time following application. Barley, canola, chickpeas, durum, flax, mustard, oats, safflower may be seeded 12 months after application. Sugar beets may be seeded 24 months after application. Conduct a field bioassay to confirm crop safety prior to seeding any other rotational crops.
- Note:** If there is a lack of adequate or normal soil moisture due to drought conditions following an application of *Focus* (especially in June, July and August), the minimum rotational crop interval described above must be extended for one additional year and a representative bioassay of the field must be conducted with the potential rotational crop and adequate soil moisture to determine the crop sensitivity to *Focus*.
- **Aerial Application:** DO NOT apply by air.
  - **Storage:** STORE ABOVE 5°C TO KEEP PRODUCT FROM FREEZING. If frozen, thaw before use. If solid crystals are observed, warm material to above 15°C by placing container in warm location. Shake or roll container periodically to redissolve solids.
  - **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

No specific hazards.

# Focus NXT

Herbicide Group  
2 - florasulam  
14 – carfentrazone-ethyl  
15 - pyroxasulfone

## Company:

FMC of Canada Ltd.

## Formulation:

The *Focus NXT* package contains two components:

**Focus (PCP#32292):** 447 g/L pyroxasulfone plus 53 g/L carfentrazone-ethyl formulated as a suspension emulsion.

- Container size – 2 x 4.5 L

-plus-

**Spitfire 50 SC (PCP#31252):** 50 g/L florasulam formulated as a suspension concentrate.

- Container size – 1 x 2.6 L

## Crops and Staging:

**Spring wheat (NOT durum):**

Pre-seed only. May only be used on soils with organic matter 3 – 7%.

## Weeds and Staging:

*Focus NXT* provides both burnoff of emerged weeds and extended control on weeds emerging from seed.

Unless otherwise noted below, apply to young and actively growing weeds that are less than 4 inches (10 cm) in height or width.

### Emerged weeds controlled:

- |                    |                                                   |                                                   |
|--------------------|---------------------------------------------------|---------------------------------------------------|
| ◦ Carpetweed       | ◦ Nightshade (hairy, black and Eastern black)     | ◦ Sow thistle, perennial*, **                     |
| ◦ Cleavers         | ◦ Pigweed (redroot, prostrate, smooth and tumble) | ◦ Stinkweed                                       |
| ◦ Cocklebur        | ◦ Purslane                                        | ◦ Tansy mustard                                   |
| ◦ Common chickweed | ◦ Round-leaved mallow                             | ◦ Velvetleaf                                      |
| ◦ Flixweed         | ◦ Russian thistle (up to 5 cm tall)               | ◦ Volunteer canola (all herbicide tolerant types) |
| ◦ Hemp nettle*     | ◦ Shepherd's purse                                | ◦ Waterhemp                                       |
| ◦ Jimsonweed       | ◦ Smartweed                                       | ◦ Wild buckwheat                                  |
| ◦ Kochia           | ◦ Sow thistle, annual*                            | ◦ Wild mustard                                    |
| ◦ Lamb's-quarters  |                                                   |                                                   |
| ◦ Morning glory    |                                                   |                                                   |

### Emerging (from seed) weeds controlled:

- |                                   |                            |                      |
|-----------------------------------|----------------------------|----------------------|
| ◦ Annual bluegrass                | ◦ Eastern black nightshade | ◦ Volunteer canola** |
| ◦ Annual bromes (downy, Japanese) | ◦ Green pigweed            | ◦ Wild buckwheat*    |
| ◦ Barnyard grass                  | ◦ Kochia*                  | ◦ Wild oats*         |
| ◦ Foxtail barley*                 | ◦ Lamb's quarters*         | ◦ Wild mustard*      |
| ◦ Foxtail (green, yellow, giant*) | ◦ Persian dandel*          | ◦ Wormseed mustard   |
| ◦ Italian ryegrass                | ◦ Redroot pigweed          |                      |
| ◦ Cleavers                        | ◦ Stinkweed*               |                      |
| ◦ Common waterhemp                | ◦ Velvetleaf               |                      |

\* **Suppression only.**

\*\* **Applications made at advanced stages will reduce product effectiveness.**

## Rate:

*Note: Maximum of one application of this or other products containing pyroxasulfone and florasulam per year.*

**Focus:** 136 mL per acre.

**Spitfire 50 SC:** 40 mL per acre.

Must be tank mixed with glyphosate.

*Do not store the sprayer overnight or for any extended period of time with the spray mixture remaining in the tank.*

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre.
- **Nozzles and Pressure:** DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) medium classification and a spray pressure of 200-275 kPa.
- **Screens:** Use a 50 mesh screen and filter system.
- **Equipment:** Apply using a calibrated field sprayer. Do not apply by air.

## How it Works:

Refer to How Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing                                   | Target                                | Movement                                                   | Spectrum            | WSSA Group |
|---------------------|------------------------------------------|---------------------------------------|------------------------------------------------------------|---------------------|------------|
| Carfentrazone-ethyl | POST (foliar)                            | PPO inhibitor/<br>membrane disrupter  | Little movement<br>due to rapid cell<br>leakage (symplast) | Broadleaf           | 14         |
| Pyroxasulfone       | PRE (soil active)                        | Long-chain fatty<br>acid inhibitor    | Little movement<br>(symplast)                              | Broadleaf and grass | 15         |
| Florasulam          | POST (foliar) with<br>some soil activity | ALS amino acid<br>synthesis inhibitor | Moves to growing<br>points                                 | Broadleaf           | 2          |

## Effects of Growing Conditions:

Control of emerged weeds is optimized when the product is applied to actively growing weeds up to 10 cm in height, or as specified. Extremes in environmental conditions such as temperature, moisture, soil conditions, and cultural practices may affect the activity. For extended control of emerging weeds, all soil applications of *Focus NXT* require adequate rainfall for herbicidal activation. Dry weather following applications may reduce effectiveness. May not control weeds that germinate after application but before an activating rainfall /irrigation, or weeds that germinate through cracks resulting from dry soil. However, when adequate moisture is received after dry conditions, may provide a reduced level of control of susceptible germinating weeds. Excessive rainfall, irrigation, or prolonged wet soil conditions after application may increase the risk of seedling injury, especially with shallow seeded crops. Spring wheat must be seeded a minimum of 2.5 cm deep.

Note:

DO NOT use on soil with less than 3% organic matter.

DO NOT use on soils with a pH greater than 7.8.

DO NOT follow a fall application of Authority 480 (or any other product containing sulfentrazone) with a spring application of *Focus NXT* (or any other product containing pyroxasulfone) to fields where spring wheat will be planted.

## Tank Mixes:

Must be applied with glyphosate (minimum 182 g ae per acre) (sold separately).

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

## Restrictions:

- **Rainfall:** Soon after application may affect control of emerged weeds. Requires adequate rainfall for herbicidal activation for the extended control of weeds. Contact the manufacturer for more information.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Not applicable.
- **Grazing:** MUST NOT be grazed or fed to livestock for 42 days after treatment.
- **Re-cropping:** Canola, barley, field peas and wheat can be seeded the year after treatment.  
If there is a lack of adequate or normal soil moisture due to drought conditions, especially in June, July and August, following an application of *Focus NXT*, the minimum rotational crop interval described above must be extended for one additional year and a representative bioassay of the field must be conducted with the potential rotational crop and adequate soil moisture to determine the crop sensitivity to *Focus NXT*.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to Method A in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

### Focus:

Danger – Health hazard.

### Spitfire 50 SC:

Caution – Poison

May cause skin and eye irritation.

For an explanation of the symbols used here see the Introduction.

# Foxy MR

*This product is a prepackage tank mix of thifensulfuron/tribenuron (2:1), MCPA ester and fluroxypyr. Information listed is restricted to Crops, Weeds, Rates and Tank Mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Herbicide Group**  
**4 - fluroxypyr, MCPA**  
**2 - thifensulfuron,**  
**tribenuron**

## Company:

NewAgco

## Formulation:

The Foxy MR package contains the following components:

**Foxy 333 (PCP#35375):** 333 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 5.1 L
- plus-

**MCPA Ester 600 (PCP#34156):** 600 g a.e./L MCPA ester formulated as an emulsifiable concentrate.

- Container sizes - 10 L
- plus-

**MPOWER RX (PCP#33520):** 50% thifensulfuron-methyl + 25% tribenuron-methyl formulated as water dispersible granules.

- Container sizes - 320 g

## Crops and Staging:

**Spring wheat, durum wheat, barley:** 3-leaf to early flag leaf stage.

## Weeds and Staging:

Weeds controlled by thifensulfuron/tribenuron (2:1) plus the weeds controlled by MCPA ester at 240 mL per acre plus:

- Cleavers (1 to 8 whorls)
- Volunteer flax (1 to 12 cm)
- Stork's-bill (1 to 8 leaf)\*
- Kochia (2 to 8 leaf)

\* **Suppression only.**

## Rates:

**Note:** Maximum ONE APPLICATION of this or other products containing fluroxypyr or thifensulfuron per year.

**Foxy:** 125 mL per acre

-plus-

**MCPA Ester 600:** 240 mL per acre

-plus-

**MPOWER RX:** 8 g per acre

Add Agral 90, Agsurf II or Citowett Plus at 0.2 L per 100 L of spray solution if applied without a wild oat herbicide.

MPOWER RX may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

**See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.**

# Frontier Max

Herbicide Group  
15 - dimethanamid

## Company:

BASF Canada (PCP#29194)

## Formulation:

720 g/L dimethanamid-P formulated as an emulsifiable concentrate.

- Container sizes - 3 L to 1000 L

## Crops and Staging:

### Pre-plant incorporated:

- Corn (NOT sweet corn, popcorn, or corn grown for seed).

### Pre-emergence surface:

- Dry beans (navy and kidney beans only).
- Potatoes – after planting or after hilling, but before emergence of the crop or weeds.

## Weeds and Staging:

Pre-emergent control of green foxtail.

## Rates:

### Pre-plant incorporated treatments:

- Apply at 0.35 to 0.39 L per acre. Apply at the higher rate on fine-textured or high organic soils and for heavier anticipated weed problems.

### Pre-emergence surface treatments:

| Soil Type (Texture) | Rate (L per Acre)                  |                               |                                |
|---------------------|------------------------------------|-------------------------------|--------------------------------|
|                     | Less than 3 percent Organic Matter | 3 to 6 percent Organic Matter | 7 to 10 percent Organic Matter |
| Coarse              | 0.31                               | 0.31                          | 0.35                           |
| Medium and Fine     | 0.31                               | 0.35                          | 0.39                           |

## Application Information:

- **Water Volume:** A minimum of 40 L per acre.
- **Pressure:** 30 to 43 psi (200 to 300 kPa).
- **Nozzles:** Flat fan or flood-jet. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of **ASABE medium** droplets.
- **Screens:** Use 16 mesh suction screen, 50 mesh elsewhere on sprayer.
- **Incorporation:** For pre-plant incorporated treatments, apply *Frontier Max* as a broadcast treatment and incorporate using a harrow, rolling cultivator or other implement capable of giving uniform, shallow incorporation into the top 5 cm (2 inches) of soil within 7 days of planting. Avoid deeper incorporation or reduced weed control and/or crop injury may result. Immediate incorporation after application is not necessary.
  - Beans must be planted at least 4 cm (1.5 inches) deep or crop injury may occur.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                            | Target                             | Movement                   | Spectrum          | WSSA Group |
|-------------------|---------------------------------------------------|------------------------------------|----------------------------|-------------------|------------|
| dimethanamid-P    | PPI, PRE (surface)<br>with residual soil activity | Long-chain Fatty<br>Acid Inhibitor | Little movement (Symplast) | Broadleaf & grass | 15         |

## Effects of Growing Conditions:

Rainfall is required within 7 to 10 days of application to activate and move *Frontier Max* into the soil zone. If dry conditions persist, a shallow cultivation or the use of a rotary hoe is necessary to move the herbicide into moist soil and control weed escapes. Shallow tillage is important to minimize dilution of the herbicide. If drought conditions persist after pre-plant incorporated or pre-emergence applications, weed control may not be adequate.

## Tank Mixes:

**Herbicides:** None registered.

**Fertilizers:** May be applied with a liquid fertilizer carrier. Test compatibility with liquid fertilizer by mixing a small amount of herbicide with a proportional quantity of liquid fertilizer in a jar. May also be impregnated on dry bulk fertilizers for pre-plant incorporated treatments. A minimum of 90 kg per acre of dry bulk fertilizer should be applied. DO NOT impregnate *Frontier Max* on nitrate fertilizers, superphosphates or limestone.

**Insecticides:** None registered.

**Note:** The above mixes are those listed on the *Frontier Max* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall after application is important for good weed control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 24 hours.
- **Grazing Restrictions:** DO NOT graze or feed the treated corn crop within 40 days of application. DO NOT graze the treated bean crop or feed bean forage, hay or straw to livestock.
- **Re-cropping Interval:** DO NOT plant winter wheat within 120 days of application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT freeze. Must be stored under heated warehouse conditions.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. When mixing with other pesticides, combine the method above with the method recommended for the tank mix partner if different from above for thorough cleaning.

## Hazard Rating:

Caution – Poison

Warning – Eye Irritant and Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Fury R

*This product is a prepackaged tank-mix of Fury (see flumioxazin) and Revenge (see carfentrazone). Information listed is restricted to Crops, Weeds and Tank Mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Herbicide Group**

**14 - flumioxazin**

**14 - carfentrazone**

## Company:

NewAgco

## Formulation:

The *Fury R* package contains two components:

**Fury (PCP#35513):** 51.1 % flumioxazin formulated as a wettable granule.

- Container size – 9.12 kg

-plus-

**Revenge (PCP#33716):** 240 g/L carfentrazone-ethyl formulated as an emulsifiable concentrate.

- Container size: 4.8 L

## Crops and Staging:

**Crops:** Lentils (small red and large green)

Apply prior to weed emergence, and at minimum 7 days prior to planting lentils into no-till or minimum tillage fields.

When weeds have already emerged, apply *Fury R* as a tank mix with glyphosate, present as the isopropylamine (IPA) or potassium (K) salt, at 486 g ae per acre.

## Weeds Staging:

Weeds controlled by the component products.

**Rates:**

*Note: Maximum of one application of this or other products containing flumioxazin per 24-month period.*

**Fury:** 57 g per acre

-plus-

**Revenge:** 30 mL per acre.

Surfactant is not required when tank mixed with glyphosate.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the Introduction.

Tank mix **Fury R** with a burndown herbicide and use an appropriate adjuvant when weeds are present at the time of application. Refer to the tank mix partner's product label for the proper use rates by weed sizes

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the Introduction.

**Tank Mixes:**

Tank mix partners applied at all label rates and included recommended adjuvants unless otherwise noted.

**Herbicides:** Glyphosate

Do not tank mix with flufenacet as crop injury may occur.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Glufosinate 150, 180, 280 SN

Herbicide Group  
10 - glufosinate

**Company:**

BASF Canada (*Liberty 150SN Liberty AMP*)

NewAgco (*Victus*)

UPL AgroSolutions Canada (*Interline*)

Advantage Crop Protection (*Advantage Glufosinate-ammonium 150SN*)

WinField United (*Justice*)\*

Sharda CropChem (*Opportunity 15SL*)

Viking (*Viking Glufosinate 150*)

NuFarm Agriculture (*Granata*)

Innovis Crop Protection Limited (*Innovis Glufosinate-ammonium 150 SN, SyntheSIZE 280 HE*)

ADAMA Canada (*ADAMA Glufosinate 150 SL*)

Advantage Crop Protection (*Advantage Glufosinate 150*)

Rath Holdco Inc. (*RHI Glufosinate Ammonium 150, RHI Glufosinate 280*)

Interprovincial Cooperative Ltd. (*IPCO Glufosinate 150*)

Tide International Canada Inc. (*Tide Glufosinate Ammonium 150SL*)

Maunitech North America Inc. (*Maxunitech Glufosinate 150 SN*)

*\* Note: This product is no longer manufactured but inventories still remain in distribution. This product may be removed from future editions.*

**Formulation:**

*Liberty 150 SN (PCP#28837), Victus (PCP#33267), Interline (PCP#32860), Innovis Glufosinate-ammonium 150 SN (PCP#33472), Justice (PCP#33615), Opportunity 15SL (PCP#34332), Granata (PCP#34807), ADAMA Glufosinate 150 SL (PCP#34833), Viking Glufosinate 150 (PCP#34726), IPCO Glufosinate 150 (PCP#35053), RHI Glufosinate Ammonium 150 (PCP# 35001), Advantage Glufosinate 150 (PCP# 34827), Tide Glufosinate Ammonium 150SL (PCP#34996), Maxunitech Glufosinate 150 SN (PCP#35543):*

150 g/L glufosinate ammonium formulated as a solution.

- Container sizes:

- *Liberty 150SN, Interline* - 2 x 13.5 L, 108 L, 432 L, 864 L
- *Victus, Viking Glufosinate* - 108 L, 500 L, 1000 L
- *Justice* - 108 L, 500 L
- *Innovis Glufosinate-ammonium 150SN* - 10 L, 120 L, 500 L, 1000 L
- *Granata* - 500 L
- *ADAMA Glufosinate 150 SL, Maxunitech Glufosinate 150 SN* - 2 x 13.5 L, 108 L, 432 L, 1000 L
- *Tide Glufosinate Ammonium 150SL* - 500 L, 1000 L

**Liberty AMP (PCP# 35075):** 180 g/L glufosinate ammonium formulated as a solution.

- Container sizes: 429.4 L, 904 L

**RHI Glufosinate 280 (PCP#34902), SyntheSIZE 280 HE (PCP#35033):** 280 g/L glufosinate ammonium formulated as a solution.

- Container sizes: 2 x 10 L, 120 L, 500 L, 1000 L

## Crops, Rates and Staging:

**Liberty Link Canola** – cotyledon to early bolting stage. Temporary crop discolouration (bronzing, speckling) may be observed after application.

*Note: A valid Liberty and Trait Agreement is required to purchase Liberty 150SN and Liberty AMP only.*

### Repeat Applications:

**Liberty 150SN only:** Up to 3 applications per year to LibertyLink canola at rates up to 1.62 L per acre for each of the three applications (if required) up to early bolting stage of canola. Apply when new weed growth is in the correct leaf stage. DO NOT apply more than 4.86 L per acre per year.

**Other Glufosinate 150 SN brands:** A second application of up to 1.35 L per acre may be made to fields to a maximum total combined rate of 2.97 L per acre (i.e. 1.62 L plus 1.35 L). DO NOT apply more than 2.97 L per acre in one season.

**Liberty AMP only:** Up to 3 applications per year to Liberty canola at rates up to 1.35L per acre for each of the 3 applications (if required) up to but prior to early bolting stage of canola. DO NOT apply more than 4.05 L per acre per year.

**RHI Glufosinate 280 and SyntheSIZE 280 HE:** a second application of up to 0.72 L per acre may be made to fields to a maximum total combined rates of 1.59 L per acre (i.e. 0.87 L plus 0.72 L). DO NOT apply more than 1.59 L in one season.

**Glufosinate tolerant soybean (Opportunity 15SL, Granata and ADAMA Glufosinate 150 SL only):** Up to two applications of up to 1.35 L per acre from the cotyledon to flowering stage. DO NOT apply more than 2.7 L per acre in one season.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions. **DO NOT tankmix**

**Liberty 150SN with Interline or ADAMA Glufosinate 150 SL.**

### Harvest Aid Treatment:

**Note:** As of January 1, 2025 [www.keepitclean.ca](http://www.keepitclean.ca) indicates that the use of this product on certain crop types may have market access concerns. Please see introduction for more information AND consult potential grain buyers before using this product.

| Crop                                                                              | Rate (L per acre)          | Stage                                         |
|-----------------------------------------------------------------------------------|----------------------------|-----------------------------------------------|
| Alfalfa (seed production only)***                                                 | 1.09                       | 50 to 75% pod turn (brown)                    |
| Canola <sup>†*</sup> (only Roundup Ready canola with pod shatter reduction trait) | 0.81 to 1.09 <sup>††</sup> | 30 to 40% seed colour change (green to brown) |
| Lentil <sup>†**</sup>                                                             | 0.81 to 1.09 <sup>††</sup> | 40 to 60% pod turn (yellow to brown)          |
| Potato <sup>†**</sup>                                                             | 1.21                       | 14 to 21 days prior to harvest                |

<sup>†</sup> Not for crops grown for seed.

<sup>††</sup> Use the higher rate when crop canopies or weed densities are heavy.

\* *Innovis Glufosinate-ammonium 150SN and RHI Glufosinate Ammonium 150 only.*

\*\* *Innovis Glufosinate-ammonium 150SN, Victus, Viking Glufosinate and RHI Ammonium Glufosinate 150 only.*

\*\*\* *Innovis Glufosinate-ammonium 150SN, Victus, Interline, Opportunity 15SL, Justice, Viking Glufosinate, RHI Glufosinate Ammonium 150, Tide Glufosinate Ammonium 150SL, Maxunitech Glufosinate 150 SN and Advantage Glufosinate 150 only.*

## RHI Glufosinate 280 and SyntheSIZE 280 HE

| Crop                                                                               | Rate (L per acre)         | Stage                                         |
|------------------------------------------------------------------------------------|---------------------------|-----------------------------------------------|
| Canola <sup>†**</sup> (only Roundup Ready canola with pod shatter reduction trait) | 0.43 - 0.59 <sup>††</sup> | 30 to 40 % seed color change (green to brown) |

<sup>†</sup>Not for crops grown for seed.

<sup>††</sup> Use the higher rate when crop canopies or weed densities are heavy.

\*\*DO NOT harvest treated crop within 5 days after application.

| Quackgrass***                                                                     | 4 leaf                                             | 1.6                                          | 1.35                             | 0.87                                         |
| Canada thistle**                                                                  | 4 inches (10 cm)                                   |                                              |                                  |                                              |
| Japanese, downy brome (spring germinated)                                         | 6 leaf (up to emergence of 1 <sup>st</sup> tiller) | 1.6 <sup>†††</sup>                           | 1.35                             | N/A                                          |

\* Top growth suppression. Plants may return from surviving growing points.

\*\* Extended top growth suppression.

\*\*\* Season long control.

<sup>†</sup> The company does not provide guidelines for weed densities. When in doubt as to the infestation level, use the high rate or contact the manufacturer.

<sup>††</sup> Liberty 150 SN, Liberty AMP and Granata only

<sup>†††</sup> Liberty 150 SN, Interline, Opportunity 15SL, IPCO Glufosinate 150 and Advantage Glufosinate 150 only

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 45 L per acre. When crop canopy and weed densities are heavy, apply in 69 to 89 L per acre of water.
  - **Aerial:** 13 to 22 L per acre.
- **Nozzles and Pressure:**
  - **Ground:** Use 40 psi (275 kPa) when using conventional 80° or 110° flat fan nozzles; 45 psi (310 kPa) when using check valves. Angle nozzles forward at 45° to improve coverage of vertical leaf surfaces. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** or larger droplets.
  - **Aerial:** DO NOT use raindrop nozzles. Use a combination of nozzles and pressure to provide **ASABE coarse** or larger droplet size distribution.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                              | Movement                                                | Spectrum             | WSSA Group |
|-------------------|---------------|-----------------------------------------------------|---------------------------------------------------------|----------------------|------------|
| glufosinate       | POST (foliar) | Glutamine Synthase Inhibitor/<br>Membrane disruptor | Little movement due to rapid<br>cell leakage (Symplast) | Broadleaf &<br>grass | 10         |

## Effects of Growing Conditions:

Glufosinate activity is influenced by environmental conditions. Cool temperatures (less than 10°C), drought, and low humidity conditions slow weed growth. Applications made under these stressed conditions may result in reduced weed control.

## Tank Mixes:

### Herbicides:

**Note: Avoid mixing different glufosinate products in the same tank as incompatibilities have been reported.**

- Clethodim (*Select 1EC or Shadow XL ONLY*) 51 mL to 153 mL<sup>Δ</sup> per acre. For *Select 1EC* or *Shadow XL* tank mixes add *Glufosinate 150SN* and then the *Select 1EC* or *Shadow XL*. Consult label for specific mixing instructions.
  - Clethodim (*Centurion ADV ONLY*) 51 mL to 153 mL<sup>ΔΔ</sup> per acre. For tank mixes add *Glufosinate 150SN* and then the *Centurion ADV*. Consult label for specific mixing instructions.
  - Clethodim (*Centurion* or *Select* only) 25 mL to 77\* mL per acre plus *Amigo*. For *Centurion* or *Select* tank mixes add *Amigo* to the tank first followed by *Glufosinate 150SN* and then *Centurion* or *Select*. Consult label for specific mixing instructions.
  - Clethodim (*Centurion* or *Select* only) 25\*\* mL per acre plus *Amigo*. For *Centurion* or *Select* tank mixes add *Amigo* to the tank first followed by *Glufosinate 150SN* and then *Centurion* or *Select*. Consult label for specific mixing instructions.
  - *Facet* (quinclorac)\*\*\* (113 mL per acre) plus *Merge* or *Amigo* 0.2 L per acre adjuvant (0.2 to 0.4 L per acre)
  - *Facet* (quinclorac)\*\*\*\* (113 - 227 mL per acre) plus *Merge* or *Amigo* adjuvant (0.2-0.4 L per acre).
  - Clethodim (*Centurion* only) 25 to 77mL per acre + *Facet* 113 to 227 mL per acre plus *Merge* or *Amigo* adjuvant (rates above)\*\*\*\*\*
  - *Clever* (quinclorac) 25 g per acre<sup>†</sup>
  - *Clever* or *Ingenious* (quinclorac) 25 g per acre<sup>††</sup>
- <sup>Δ</sup> *Liberty 150 SN, Liberty AMP and Interline* only.
- <sup>ΔΔ</sup> *Liberty 150 SN, Liberty AMP* only.
- \* *Liberty 150 SN and Liberty AMP, Interline, Opportunity 15SL, Advantage Glufosinate 150* only.
- \*\* *Victus, Viking Glufosinate 150, RHI Glufosinate Ammonium 150, Innovis Glufosinate-ammonium 150 SN* only.
- \*\*\* *Interline, Justice, Opportunity 15SL, Granata, ADAMA Glufosinate 150 SL* only.
- \*\*\*\* *Liberty 150 SN and Liberty AMP* only.
- \*\*\*\*\* *Liberty 150 SN, Liberty AMP and Advantage Glufosinate 150* only.
- <sup>†</sup> *Advantage Glufosinate 150* only.
- <sup>††</sup> *RHI Glufosinate Ammonium 150, Innovis Glufosinate-ammonium 150 SN* only.
- *RHI Glufosinate 280 and SyntheSIZE 280 HE*:  
Clethodim (*Centurion* or *Select* only) 25 mL per acre plus *Amigo*. For *Centurion* or *Select* tank mixes add *Amigo* to the tank first followed by *RHI Glufosinate 280* and then *Centurion* or *Select*. Consult label for specific mixing instructions.
  - *Ingenious* (quinclorac) 25 g per acre plus adjuvant
  - *Advantage Clethodim* 25 mL per acre plus adjuvant.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 4 hours may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated areas for 24 hours after application.
- **Grazing Restrictions:** DO NOT graze the treated crop or cut for feed.
- **Preharvest Interval:** DO NOT apply within 60 days of harvest when tankmixed with quinclorac and/or clethodim. For Harvest Aid uses, leave 9 days between application and harvest of lentil and potato.
- **Re-cropping Interval:** No restrictions for field corn, canola and soybeans. Following *Liberty 150SN* or *Victus* or *RHI Glufosinate 280* there are no restrictions for dry common beans (not grown for seed), alfalfa and potato. Following *Liberty AMP* there are no restrictions for field corn, canola, soybeans, dry common beans (not grown for seed), alfalfa and potato. 70 days for buckwheat, barley, millet, oats, rye, sorghum, triticale and wheat. Minimum 120 days for all other crops.

- **Aerial Application:** May be applied by air.
- **Storage:** DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

Warning – Poison

Caution – Skin Irritant

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Glufosinate 200 SN

Herbicide Group  
10 - glufosinate

### Company:

BASF Canada (*Liberty 200 SN* – PCP#25337)

Innovis Crop Protection Limited (*Innovis Glufosinate 200 SN* – PCP#32823)

NewAgco (*Victus 200 SN* – PCP#33613)

Maxumitech North America Inc. (*Maxumitech Glufosinate 200 SN* - PCP#35549)

### Formulation:

200 g/L of glufosinate ammonium formulated as a solution.

- Container size - 10 L, 108 L (*Victus* only), 500 L (*Victus* only)

### Crops and Staging:

**Glufosinate ammonium tolerant corn only:** 1 to 8 leaf stage. Refer to product label for appropriate method of determining crop leaf stage.

**Glufosinate ammonium tolerant soybean varieties only:** up to the start of flowering and prior to canopy closure.

### Weeds Rates and Staging:

Weeds controlled with 0.61 L per acre rate

| Weed                                 | Weed Stage (from emergence to stage) |
|--------------------------------------|--------------------------------------|
| Cocklebur                            | 4 leaf                               |
| Green foxtail, proso millet, ragweed | 5 leaf                               |
| Redroot pigweed, shepherd's-purse    | 6 leaf                               |
| Chickweed                            | 8 leaf                               |

Weeds controlled with 0.81 L per acre rate

| Weed                                                                              | Weed Stage (from emergence to stage) |
|-----------------------------------------------------------------------------------|--------------------------------------|
| Perennial sow-thistle, wild buckwheat, wild mustard, wild oats, yellow foxtail    | 4 leaf                               |
| Barnyard grass, eastern black nightshade                                          | 5 leaf                               |
| Canada thistle*, field bindweed*, lady's-thumb, lamb's-quarters, wormseed mustard | 6 leaf                               |
| Ragweed                                                                           | 7 leaf                               |
| Stinkweed                                                                         | 8 leaf                               |

\* Season long suppression.

Weeds controlled with 1.0 L per acre rate

| Weed         | Weed Stage            |
|--------------|-----------------------|
| Quackgrass** | 1 to 4 leaf           |
| Kochia***    | up to 10 cm in height |

| Weed                | Weed Stage            |
|---------------------|-----------------------|
| Canada fleabane***  | up to 10 cm in height |
| Cleavers***         | up to 4 whorls        |
| Volunteer canola*** | 6 leaf                |
| Giant Ragweed***    | 8 leaf                |
| Waterhemp***        | 8 leaf                |
| Jimsonweed**, ***   | 1 to 6 leaf stage     |

\*\* Season long suppression, apply with ammonium sulphate, 2.4 L per acre (49 percent solution) or 1.2 kg per acre (99 percent).

\*\*\* Liberty 200 SN only

#### Second Application:

- A second application may be made to fields treated initially with up to 1 L per acre, if weeds and crop are at the correct leaf staging. DO NOT apply more than 2 L per acre glufosinate 200 SN to a crop in a single season.

#### Split Application Program:

- For season long control of the weeds above a split application of glufosinate 200 SN may be employed. The first application must be a minimum of 0.81 L per acre made at the correct weed staging. For the second application of a 0.51 L per acre rate may be used. The second application timing must be made as soon as the second flush of weeds occurs and before the maximum leaf stage for the crop.

#### Application Information:

- Water Volume:** A minimum of 45 L per acre.
- Nozzles and Pressure:** Use 25 to 40 psi (175 to 275 kPa) when using conventional 80° or 110° flat fan nozzles. Angle nozzles forward at 45° to improve coverage of vertical leaf surfaces. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE medium* droplets.

#### How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                              | Movement                                                | Spectrum             | WSSA Group |
|-------------------|---------------|-----------------------------------------------------|---------------------------------------------------------|----------------------|------------|
| glufosinate       | POST (foliar) | Glutamine Synthase Inhibitor/<br>Membrane disruptor | Little movement due to rapid<br>cell leakage (Symplast) | Broadleaf &<br>grass | 10         |

#### Effects of Growing Conditions:

Glufosinate activity is influenced by environmental conditions. Cool temperatures (less than 10°C), drought and low humidity conditions slow weed growth. Applications made under these stress conditions may result in reduced weed control. Weed control may also be reduced when heavy dew, fog, or mist are present at the time of application.

#### Tank Mixes:

None registered.

#### Restrictions:

- Rainfall:** Within 4 hours of application may reduce control.
- Restricted Entry Interval:** DO NOT re-enter treated areas for 24 hours after application, without protective clothing as for spraying.
- Grazing Restrictions:** DO NOT graze treated fields within 20 days of application.
- Pre-harvest Interval:** Leave 86 days between application and corn harvest, and 70 days for soybean.
- Re-cropping Interval:** No re-cropping restrictions the year after treatment.
- Aerial Application:** DO NOT apply by air.
- Storage:** DO NOT freeze.
- Buffer Zones:** Observe buffer zones outlined in the label.

#### Sprayer Cleaning:

Refer to 'Method C' in the general section on sprayer cleaning in the introduction.

#### Hazard Rating:

Caution – Poison

Caution – Skin Irritant

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Glyphosate

## Herbicide Group 9 - glyphosate

### Product Names, Company, Formulation and Package Sizes:

All products are formulated as solutions.

Container sizes available: Various

| Product Name                                | Company                              | Salt type* | Active** content (g ae per L) |
|---------------------------------------------|--------------------------------------|------------|-------------------------------|
| <i>Advantage Glyphosate 360</i> (PCP#33694) | Advantage Crop Protection            | IPA        | 360                           |
| <i>Advantage Glyphosate 540</i> (PCP#33764) | Advantage Crop Protection            | K+         | 540                           |
| <i>Catchfire 540</i> (PCP#35466)            | Vincere Agri Solutions Ltd.          | K+         | 540                           |
| <i>Credit 540 K</i> (PCP#35608)             | Nufarm Agriculture                   | K+         | 540                           |

| <i>Viking 540 Glyphosate</i> (PCP# 34787)   | Viking Crop Production Partners Inc. | K+         | 540                           |

\* Salt type: IPA = Isopropylamine, MA = Monoammonium, DA = Diammonium, DMA = dimethylamine, K+ = Potassium

\*\* Formulation concentration is expressed as "grams of acid equivalent per litre of product (g ae/L)" with the exception of *Glyforce WDG*.

Glyphosate acid is the herbicidally active component of the formulation and is proportional to the activity of the formulation.

Note: Some products may be more effective due to formulation differences (not related to higher glyphosate content) under adverse conditions, but that benefit is reduced when applications are made under optimal conditions for activity (i.e. rapid weed growth, clean leaf surfaces). When selecting a glyphosate product, consult the product labels.

| Rate<br>(g ae per acre) | Glyphosate formulation concentration (g ae per L) |        |        |        |        |            |
|-------------------------|---------------------------------------------------|--------|--------|--------|--------|------------|
|                         | 356/360                                           | 450    | 480    | 500    | 540    | 68.77% WDG |
| 36.5                    | 100 mL                                            | 81 mL  | 76 mL  | 73 mL  | 67 mL  | -          |
| 73                      | 200 mL                                            | 162 mL | 152 mL | 146 mL | 134 mL | -          |
| 110                     | 0.3 L                                             | 0.24 L | 0.23 L | 0.2 L  | 0.2 L  | 142 g      |
| 120                     | 0.33 L                                            | 0.27 L | 0.25 L | 0.24 L | 0.22 L | -          |
| 136                     | 0.38 L                                            | 0.30 L | 0.28 L | 0.27 L | 0.25 L | -          |
| 145                     | 0.4 L                                             | 0.32 L | 0.3 L  | 0.28 L | 0.27 L | 190.2 g    |

### Crops and Uses:

1. Annual weed control prior to crop emergence or in fallow.
2. Quackgrass control prior to seeding or after harvest.
3. Dandelion control (other than Preharvest).
4. Canada thistle control in fallow, shelterbelts and post-harvest.
5. Alfalfa control (other than Preharvest).
6. Other perennial weeds control in fallow, shelterbelts and post-harvest.
7. Patch treatments of perennial weeds in cereals, corn, soybean and forages.
8. Preharvest perennial weed control.
9. For use in Glyphosate tolerant crops.
10. Tank Mixes.

### 1. Annual weed control prior to crop emergence or in fallow:

Weeds listed may not occur on all product labels. Check individual product labels for a specific list of weeds controlled.

| Rate<br>(g ae per acre) | Surfactant*  | Weeds Controlled                                                                                                                                                                                                                                                                 | Weed Stage                                                                                                                                                                                                                   |
|-------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 110                     | 0.14 L/acre  | <b>Grasses:</b> Green foxtail, volunteer cereals, wild oats (light infestations)<br><b>Broadleaves:</b> lady's-thumb, stinkweed, volunteer canola (NOT including glyphosate tolerant varieties), wild mustard.                                                                   | Less than 3 inches (8 cm) high. Apply at the 1 to 3 leaf stage of wild oats.                                                                                                                                                 |

| 180 to 275              | Not required | <i>Above weeds plus:</i><br><b>Grasses:</b> downy brome, Persian darnel.<br><b>Broadleaves:</b> Canada fleabane, cleavers, common ragweed, flaxweed, hemp-nettle, lamb's-quarters, narrow-leaved hawk's-beard, redroot pigweed, Russian thistle, volunteer flax, wild buckwheat. | Canada fleabane, common ragweed, less than 3 inches (8 cm) high. Other weeds less than 6 inches (15 cm). Use high rate for narrow-leaved hawk's-beard 3 to 6 inches (8 to 15 cm) or wild buckwheat at the 3 to 4 leaf stage. |

| Rate<br>(g ae per acre) | Surfactant*  | Weeds Controlled                                                                                                                                                            | Weed Stage                         |
|-------------------------|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| 325                     | Not required | <i>Above weeds plus:</i><br><b>Grasses:</b> annual blue grass.<br><b>Broadleaves:</b> annual sow-thistle, kochia, prickly lettuce, shepherd's-purse, narrow-leaved vetch**. | Less than 6 inches (15 cm) high    |
| 510                     | Not required | Above weeds.                                                                                                                                                                | Greater than 6 inches (15 cm) high |

\* Unless otherwise specified on the product label, use one of the following surfactants: *Agral 90, Agsurf II, Companion or LI700*.

\*\* Note: Narrow-leaved vetch is an annual species. Established perennial vetches, such as American vetch, may not be controlled at this rate.

## 2. Quackgrass control prior to seeding or after harvest:

| Rate (g ae per acre) | Quack Grass Stage                                                                                                                                                          |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 360                  | Season long control of light to moderate infestations. Apply when quack grass is 8 inches (20 cm) tall and has 3 to 4 actively growing leaves. Apply spring or fall.       |
| 360 to 1020          | Apply when quack grass has 3 to 4 new leaves for long term control of heavy infestations. Use high rate for sod-bound quack grass (left undisturbed for at least 2 years). |

DO NOT apply fall treatments if a hard frost has occurred (-5°C) or if plants are drought stressed. Spread straw to allow regrowth and good spray coverage.

Cultivation prior to application will result in reduced control. DO NOT cultivate between harvest and treatment when using fall applications. If using spring applications on fields which have been fall-tilled, delay application until the quack grass has reached the 4 to 5 leaf stage. (This will occur 1 to 4 weeks later on fall-tilled fields than in undisturbed fields).

Cultivation after application usually will improve control of quack grass. Wait a minimum of 3 days after application before cultivating. If growing conditions are poor (cold or dry), particularly in the fall, waiting longer than 5 days may improve control.

## 3. Dandelion control (other than Preharvest):

Apply up to and including dandelion bloom for best results.

| Rate (g ae per acre) | Dandelion Growth Stage                                                                    |
|----------------------|-------------------------------------------------------------------------------------------|
| 360                  | Less than 6 inches (15 cm) diameter. Allow 3 or more days after treatment before tillage. |
| 540 to 720           | Greater than 6 inches (15 cm) diameter. Use higher rate when infestations are heavy.      |

## 4. Canada thistle control in fallow, shelterbelts and post-harvest:

| Rate (g ae per acre) | Weed Staging                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 360                  | Rosettes at least 6 inches (15 cm) in diameter, treated in late summer, following tillage in spring and early summer (up to August 1). Allow thistles to regrow for 5 weeks following last tillage. Wait a minimum of 10 days after application before tillage.<br>Treatment after a mild frost is possible if leaves are green and pliable and plants are actively growing. |
| 690 to 1020          | Bud stage or beyond. Allow at least 5 days after application before tillage.<br>-or-<br>Post-harvest treatment. Allow 8 to 10 inches (20 to 25 cm) of new growth before application. Must be sprayed at least 2 weeks prior to killing frost. Straw should be removed or evenly spread to allow for proper regrowth and spray coverage.                                      |

## 5. Alfalfa Control (other than Preharvest):

| Rate (g ae per acre) | Weed Staging                                                                                                                                                                                                                                                                                   |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 540 to 720           | Fall control of alfalfa in early bud to full bloom stage. Use high rate when alfalfa populations are high or when perennial grasses are present. Allow at least 5 days before tillage. See tank mix section for minimum tillage or spring applications. Apply with 23 to 135 L per acre water. |

## 6. Other perennial weed control in fallow, shelterbelts and post-harvest:

(Refer to individual product labels for detailed application information.)

### Foxtail Barley:

- Control from seedling to heading (all products) at 360 to 720 g ae per acre. Late fall applications may provide better control of established foxtail barley plants than spring applications.

**Yellow toadflax:** 360 g ae per acre.

**Other Perennial weeds\*:** 1020 to 1750 g ae per acre

\* Perennial weeds such as absinthe, blue grass spp., smooth brome grass, cattail, curled dock, field bindweed (bloom stage or beyond), hemp dogbane, hoary cress, poison ivy, purple loosestrife, perennial sow-thistle, and yellow nutsedge applied at the early heading to early bud stage.

## 7. Patch treatments of perennial weeds in wheat, oats, barley, corn, soybean, forage legumes and forage grasses:

(Refer to individual product labels for detailed application instructions)

| Rate (g ae per acre) | Weed                                                            |
|----------------------|-----------------------------------------------------------------|
| 360 to 1020          | Quack grass 8 in (20 cm) tall                                   |
| 690 to 1020          | Canada thistle bud or beyond                                    |
| 1750                 | Milkweed bud to bloom                                           |
| 1020 to 1750         | Other perennial weeds*                                          |
| 36.5 to 73           | Spot treatment rates for hand held equipment (per 10 L water**) |

\* Perennial weeds such as absinthe, blue grass spp., smooth brome grass, cattail, curled dock, field bindweed (bloom stage or beyond), hemp dogbane, hoary cress, poison ivy, purple loosestrife, perennial sow-thistle, and yellow nutsedge applied at the early heading to early bud stage.

\*\* Use the low rate for quack grass and the high rate for all other perennials.

## 8. Preharvest perennial weed control:

**DO NOT apply to any crops grown for seed.**

**Note:** As of January 1, 2025 [www.keepitclean.ca](http://www.keepitclean.ca) indicates that the use of this product on certain crop types may have market access concerns. Please see introduction for more information AND *consult potential grain buyers before using this product.*

Not all glyphosate products are registered for Preharvest applications on all crop species listed below. Refer to specific glyphosate labels for a list of registered uses and crop species.

### RATES:

- Prior to the harvest of annual grains (see staging chart below for specific crops):** 360 g ae per acre.
- Prior to the final cut of forages to be removed from production:** 360 to 720 g ae per acre.
- Weeds controlled with preharvest applications:**

| Quack grass 4-5 green leaves | Canada thistle and perennial sow-thistle at bud stage or beyond | Common milkweed at bud to bloom stage | Toadflax at bud to full bloom stage | Dandelion from rosette to full bloom stage |
|------------------------------|-----------------------------------------------------------------|---------------------------------------|-------------------------------------|--------------------------------------------|
| X                            | X                                                               | X                                     | X                                   | X                                          |

- Crop Staging for Preharvest applications:**

- Apply to crops (except forage) when grain moisture is less than 30 percent. The following chart lists visual symptoms that can be used as guidelines to when 30 percent grain moisture has been reached.

| Crop*                                      | Visual Guide to Proper Application Stage                                                                                 |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| Wheat, barley*, oats*, canaryseed****      | Hard dough stage – a thumbnail impression remains on seed.                                                               |
| Canola, mustard****                        | Pods are green to yellow and most seeds are yellow to brown.                                                             |
| Flax (and solin - low linolenic acid flax) | Majority (75 to 80% of bolls) are brown.                                                                                 |
| Lentil                                     | Lowermost pods (bottom 15%) are brown and rattle when shaken.                                                            |
| Pea                                        | Majority (75 to 80%) of pods are brown.                                                                                  |
| Chickpea**, lupin**, faba bean**, dry bean | Stems are green to brown in colour; pods are mature (yellow to brown in colour); 80% to 90% leaf drop (original leaves). |
| Camelina****                               | When 95% of pods have changed colour, seed is firm and less than 40% of seed is green.                                   |
| Soybean                                    | Stems are green to brown in colour and pod tissue is brown and dry in appearance (80 to 90% leaf drop).                  |

| Crop*  | Visual Guide to Proper Application Stage                                                                                         |
|--------|----------------------------------------------------------------------------------------------------------------------------------|
| Forage | 3 to 7 days prior to the last cut before rotation or forage renovation. DO NOT apply to forage stands that are to be maintained. |

\* Registered for application to barley grown for malt and tame oats grown for milling; however, many millers and malsters are not accepting glyphosate treated oats or malt barley. Contact malt barley or milling oats buyers prior to application to confirm acceptance of glyphosate-treated grain.

\*\* Preharvest applications on these crops are registered with *Roundup Transorb HC*, *Roundup WeatherMax*, *R/T 540*, *Advantage Glyphosate 540*, *Stonewall 540*, *Viking 540 Glyphosate* and *StartUp* only.

\*\*\* Preharvest applications on these crops are registered with *RoundUp Weather Max* only.

† Yellow/white, brown, oriental mustard only.

† **NOTE:** Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply glyphosate to chickpea, lupin, faba bean, canaryseed, camelina or mustard do so at their own risk.

## 9. For use in glyphosate tolerant canola:

### Weeds, Staging and Rates:

#### *Genuity* (original) glyphosate tolerant canola:

All applications must be made within the cotyledon to 6 leaf stage. Temporary yellowing may occur if applied at the 4 to 6 leaf stage of the crop.

Not all glyphosate products are registered for use on glyphosate tolerant canola at all rates listed. Refer to individual product labels for specific uses and rates.

#### Single application of 120 g ae per acre:

- **Weeds controlled at all stages unless indicated otherwise:**
  - Annual grasses: barnyard grass, green foxtail, volunteer cereals, wild oats.
  - Annual broadleaves: annual smartweed spp.\*\*, chickweed, corn spurry, cow cockle\*, hemp-nettle, kochia, lamb's-quarters, night-flowering catchfly\*, redroot pigweed, Russian thistle, shepherd's-purse\*, stinkweed, volunteer canola (except glyphosate tolerant varieties), wild mustard, wild tomato.

#### Single application of 180 g ae per acre:

- **All stages of the weeds listed above plus:**
  - Annual broadleaves: cleavers, flixweed, wild buckwheat, stork's-bill, narrow-leaved hawk's-beard.
  - Perennial weeds suppressed: Canada thistle, dandelion, perennial sow-thistle, and season long quack grass control.

#### Split application of 180 g ae per acre plus 180 g ae per acre:

- **Additional flushes of the weeds listed above plus:**
  - Annual broadleaves: round-leaved mallow
  - Season long control of following perennials: Canada thistle, foxtail barley, and perennial sow-thistle.

#### Single application of 270 g ae per acre:

- **All weeds in single applications above plus:**
  - Season long control of following perennials: Canada thistle and perennial sow-thistle.

\* Low rates can be used only up to the 3 leaf stage of the crop otherwise use the high rate.

\*\* Low rates can be used only when annual smartweed is in the 4 to 6 leaf stage.

**NOTE:** A maximum of 360 g ae per acre per season is allowed in glyphosate tolerant canola

#### Second Generation Glyphosate Tolerant (*TruFlex* and *Optimum GLY*) canola varieties only:

*TruFlex Canola*: *Roundup* brands, *R/T 540*, *Matrix*, and *Startup* only.

*Optimum GLY canola*: *Credit Xtreme*, *Crush'r 540*, *Matrix*, *Shotgun 540*, and *Stonewall* only.

Apply from emergence to first flower stage (50 percent of plants in field have no more than 1 flower) for rates up to one or two applications of the 360 g ae per acre rate. The maximum timing at the 720 g ae per acre rate is the 6 leaf stage.

#### Single application of 120 to 180 g ae per acre:

- **Weeds controlled at all stages unless indicated otherwise:**
  - Annual grasses: barnyard grass, green foxtail, volunteer cereals, wild oats.
  - Annual broadleaves: annual smartweed (incl. lady's-thumb)\*\*\*, chickweed, cleavers, corn spurry, cow cockle\*, flixweed, hemp-nettle, kochia, lamb's-quarters, narrow-leaved hawk's-beard, night-flowering catchfly\*, pigweed (redroot), Russian thistle, shepherd's-purse\*, stinkweed, stork's-bill, volunteer canola (except glyphosate tolerant varieties), wild buckwheat, wild mustard, wild tomato.
  - Perennial weeds suppressed: Canada thistle, dandelion, perennial sow-thistle, and season long quack grass control.

#### Split application of 180 g ae per acre plus 180 g ae per acre:

- **Additional flushes of the weeds listed above plus:**
  - Annual broadleaves: round-leaved mallow
  - Season long control of following perennials: Canada thistle, foxtail barley, and perennial sow-thistle.

Single application of 270 g ae per acre:

- **All stages of the weeds listed above plus:**
  - Season long control of following perennials: Canada thistle and perennial sow-thistle.

Single application of 360 g ae per acre:

- **All weeds above plus:**
  - Grasses: foxtail barley, yellow foxtail, wild proso millet.
  - Broadleaves: biennial wormwood (2 to 8 leaf), cocklebur, common milkweed<sup>†</sup>, nightshade (eastern black), pigweed (smooth), ragweed (common), smartweed (Pennsylvania).

Split application of 360 g ae per acre plus 360 g ae per acre at least 2 weeks apart and prior to 50 percent bloom:

- **Additional flushes of the weeds listed above plus:**
  - Season long control of following: Dandelion, common milkweed (15 to 60 cm), field bindweed, waterhemp (up to 18 leaf stage).

Single application of 720 g ae per acre (maximum 6 leaf stage of TruFlex canola):

- **All weeds above.**

<sup>†</sup> Suppression only.

\* Low rates can be used only up to the 3 leaf stage of the crop otherwise use the high rate.

\*\* Low rates can be used only when annual smartweed is in the 4 to 6 leaf stage.

**NOTE:** A maximum of 720 g ae per acre per season is allowed in TruFlex glyphosate tolerant canola.

## 10. For use in glyphosate tolerant corn and soybean:

### Weeds, Staging and Rates:

All applications must be made within the following crop growth stages.

- **Corn:** up to and including 8 leaf stage
- **Soybean:** first trifoliate leaf through flowering.

**Not all glyphosate products are registered for use on glyphosate tolerant corn and soybeans at all rates listed. Refer to individual product labels for specific uses and rates.**

- **Single application of 360 g ae per acre controls the following weeds:**

|                           |                |                              |
|---------------------------|----------------|------------------------------|
| ◦ Barnyard grass          | ◦ Proso millet | ◦ Volunteer barley and wheat |
| ◦ Foxtail (green, yellow) | ◦ Quack grass  | ◦ Wild oats                  |
  - **Broadleaves:**

|                                      |                              |                                                           |
|--------------------------------------|------------------------------|-----------------------------------------------------------|
| ◦ Biennial wormwood                  | ◦ Kochia                     | ◦ Smartweed spp.                                          |
| ◦ Canada thistle                     | ◦ Lamb's-quarters            | ◦ Stinkweed (suppression only)                            |
| ◦ Chickweed                          | ◦ Narrow-leaved hawk's-beard | ◦ Stork's-bill                                            |
| ◦ Cleavers                           | ◦ Night-flowering catchfly   | ◦ Velvetleaf                                              |
| ◦ Corn Spurry                        | ◦ Nightshade (Eastern black) | ◦ Volunteer canola (except glyphosate tolerant varieties) |
| ◦ Cocklebur                          | ◦ Perennial sow-thistle      | ◦ Wild mustard                                            |
| ◦ Common milkweed (suppression only) | ◦ Pigweed (smooth, redroot)  | ◦ Wild buckwheat                                          |
| ◦ Common ragweed                     | ◦ Round-leaved mallow        | ◦ Wild tomato                                             |
| ◦ Flixweed                           | ◦ Russian thistle            |                                                           |
|                                      | ◦ Shepherd's-purse           |                                                           |
  - \* Registered for control in glyphosate tolerant soybean only with Roundup products and R/T 540 only.
  - **Second applications of 360 g ae per acre controls the following weeds:**
    - **Late flushes of heavy infestations of the above weeds plus control of:**

|                   |                       |                   |
|-------------------|-----------------------|-------------------|
| ◦ Common milkweed | ◦ Round-leaved mallow | ◦ Yellow nutsedge |
|-------------------|-----------------------|-------------------|
    - Field bindweed
  - **Single application of 720 g ae per acre in glyphosate tolerant soybean from the first trifoliate to flowering stage and corn up to and including 6 leaf stage:**
    - **Heavy infestations of the annual weeds listed above plus control of:**

|                   |                         |                   |
|-------------------|-------------------------|-------------------|
| ◦ Field bindweed  | ◦ Canada thistle        | ◦ Yellow nutsedge |
| ◦ Common milkweed | ◦ Perennial sow-thistle |                   |
  - **Single application of 1020 g ae per acre in glyphosate tolerant soybean (Roundup Ready 2 Yield soybeans only) from the first trifoliate to flowering stage**
    - **Weeds listed above plus control of:**

|                     |                      |
|---------------------|----------------------|
| ◦ Volunteer alfalfa | ◦ Smooth brome grass |
|---------------------|----------------------|
- \*\* The single application rate in glyphosate tolerant corn and soybean is not labeled for all glyphosate products. Refer to individual glyphosate labels for the registration status of this rate usage in glyphosate tolerant soybean and corn.**

## 11. Tank Mixes:

Tank mix partners may be mixed at all label rates and include recommended adjuvants unless otherwise noted. Not all glyphosate products are registered for all tank mix options below. Refer to individual glyphosate labels for registered tank mixes, glyphosate rates and registered crop species.

|                                                                   | Rate per Acre                                                                             |
|-------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| Preseeding before all crops <sup>†††</sup>                        | <i>Aim</i>                                                                                |
| Preseeding canola <sup>††</sup>                                   | Bromoxynil – all bromoxynil products at the highest rate indicated on the Bromoxynil page |
| Preseeding cereals <sup>***</sup>                                 | 2,4-D (108 to 273 g ae)*                                                                  |
|                                                                   | Bromoxynil - <i>Pardner</i> (0.51 L), <i>Koril</i> (0.48), <i>Brotex</i> (0.6 L)          |
|                                                                   | MCPA <sup>♦</sup> (0.2 to 0.4 L)*                                                         |
|                                                                   | Bromoxynil/MCPA* - <i>Buctril M</i> (0.2 to 0.4 L), <i>Logic M</i> (0.25 to 0.5 L)        |
| Preseeding corn (field and sweet), flax                           | MCPA <sup>♦♦</sup> (0.2 to 0.4 L)* <sup>♦</sup>                                           |
|                                                                   | Bromoxynil/MCPA* - <i>Buctril M</i> (0.2 to 0.4 L), <i>Logic M</i> (0.25 to 0.5 L)        |
| Preseeding field pea, lentil <sup>†</sup> , chickpea <sup>†</sup> | MCPA Amine <sup>♦♦</sup> (0.2 to 0.28 L)* <sup>♦</sup>                                    |
| Preseeding canaryseed & seedling forage grasses <sup>♦♦♦</sup>    | Bromoxynil/MCPA* - <i>Buctril M</i> (0.2 to 0.4 L), <i>Logic M</i> (0.25 to 0.5 L)        |
| Preseeding or prior to emergent of soybeans (all varieties)       | Imazethapyr ( <i>Pursuit</i> )                                                            |
| Chem fallow                                                       | 2,4-D (235 g ae)*                                                                         |
|                                                                   | Dicamba (0.12 L)*                                                                         |
|                                                                   | Bromoxynil - <i>Pardner</i> (0.51 L), <i>Brotex</i> (0.6)                                 |
| Canada thistle control following harvest or in fallow             | Dicamba (240 g acid equivalent per acre)**                                                |
| Alfalfa control in spring/fall                                    | 2,4-D (235 to 470 g ae)*                                                                  |

\* Volunteer glyphosate tolerant canola control: Tank mixes of 2,4-D at 108 to 160 g ae per acre, MCPA and bromoxynil/MCPA will control volunteer glyphosate tolerant canola up to the 4 leaf stage and 2,4-D at 212 to 320 g ae per acre will give control up to the 6 leaf stage. Earlier application will result in more consistent control. Dicamba at 0.12 L per acre will not control glyphosate tolerant canola.

\*\* See re-cropping restrictions for dicamba with fall applications.

\*\*\* 2,4-D tank-mixes in cereals are registered for winter wheat, wheat, barley, and rye; bromoxynil tank-mixes in cereals are registered on wheat, oats and barley; bromoxynil/MCPA and MCPA tank-mixes registered on cereals include wheat, barley oats and rye.

<sup>†</sup> Under drought conditions, deep seeding and/or brief rain showers after seeding may cause injury to emerging seedlings in sprayer overlaps. NOT for use with *Disruptor*, *Viking 540 Glyphosate*, *Smoke*, or *Sharda Glyphosate*.

<sup>††</sup> *Roundup WeatherMax*, *R/T 540*, *Roundup Transorb*, *Disruptor 540*, *Viking 540 Glyphosate*, *Startup* only.

<sup>†††</sup> *Credit Xtreme* only.

<sup>♦</sup> Rates based on 500 g/L formulations. All formulation concentrations are registered unless indicated otherwise.

<sup>♦♦</sup> Use only amine formulations of MCPA prior to corn, lentil, chickpea and field peas.

<sup>♦♦♦</sup> Forage grasses include brome grass, crested wheatgrass, intermediate wheat grass, slender wheatgrass, tall wheatgrass, Russian wildrye, timothy, orchard grass, creeping red fescue, meadow fescue, meadow foxtail, tall fescue, meadow brome grass, streambank wheatgrass and reed canarygrass.

### Tank mixes in glyphosate tolerant crops:

- **Tank mixes or rates listed may not occur on all product labels. Refer to individual product labels for registered tank-mixes.**
  - **Soybean:**
    - *Assure II* (101 to 154 mL per acre)
    - *Pursuit* (65 to 85 mL per acre)
  - **Corn:**
    - *AAtrex* (0.63 to 0.84 L per acre)
    - 2,4-D single application (108 to 212 g ae per acre)\*
    - 2,4-D split application (108 g ae per acre followed by 80 to 108 g ae per acre)\*
      - \* 2,4-D applications to corn may result in serious injury to some corn hybrids. Consult corn seed provider for varietal tolerance to 2,4-D applications. Apply prior to 4 leaf stage of corn.

**Note: The above mixes are those listed on the glyphosate labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. See the general guidelines for mixing pesticides for more information.

## Application Information:

- **Water Volume:**
  - **Ground:** Use 20 to 40 L per acre in most situations; use of the lower volume may improve control when hard water (Ca or Mg) or iron (Fe) ions are present (See Effects of Growing Conditions below). For certain crop situations, perennial weeds and tank mixes may require up to 120 L per acre of clean low ion water.
  - **Aerial:** Use 8.1 to 20 L per acre for registered preharvest uses only (see Aerial Application below). Minimum 20 L per acre for preseed, fallow, glyphosate tolerant crops and post-harvest treatments with *Roundup WeatherMax* only.

Refer to specific weed control situations or labels for more information on water volumes and adjuvants.
- **Nozzles and Pressure:** Use 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets for ground applications and **ASABE coarse** droplets for aerial applications.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                    | Target                              | Movement                       | Spectrum          | WSSA Group |
|-------------------|---------------------------|-------------------------------------|--------------------------------|-------------------|------------|
| glyphosate        | POST (foliar), Preharvest | EPSP Amino Acid Synthesis Inhibitor | Toward growth areas (Symplast) | Broadleaf & grass | 9          |

## Effects of Growing Conditions:

Best results are achieved under relatively warm sunny conditions when weeds are actively growing. Frost which kills more than 40 percent of the above ground tissue will reduce control. Control will also be reduced if foliage is heavily covered with dust. "Hard water" or water containing calcium (Ca), magnesium (Mg) or iron (Fe) ions will reduce the activity of glyphosate products proportional to the level hardness. Reducing application water volume and /or adding ammonium sulphate at 1.2 kg per acre (99 percent dry) or 2.4 L per acre (49 percent solution) will reduce the negative effects of low levels of hard water ions. If water is extremely hard (greater than 700 ppm or 40 grains), another water source should be found. Dirty water or water with suspended soil or organic matter will reduce control.

## Restrictions:

- **Rainfall:** DO NOT apply if rainfall is forecast for the time of application, as weed control may be reduced. Consult manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated crop areas for 12 hours after application. DO NOT enter treated non-crop areas until sprays have dried.
- **Grazing Interval:** All portions of forage and crops treated with glyphosate products may be fed to livestock.
- **Re-cropping Interval:** No restrictions.
- **Aerial Application:** DO NOT apply *Crush'R Plus*, *Glyforce WDG*, *Matrix*, *Shotgun 360* brands of glyphosate to cropland by air.
  - All other glyphosate products listed in the "Product names, Company, Formulation and Packaging" chart are registered for aerial application for certain pre-harvest treatments. Not all crop species listed in the pre-harvest section are registered for aerial glyphosate application. Consult manufacturer for current aerial pre-harvest registration status.
  - ONLY *Roundup WeatherMax* may be applied by air when fields are too wet to access by ground sprayer (flooded) for preseed burndown, fallow treatment, or application to glyphosate tolerant crops (canola, corn, soybean).
  - Aerial applicators of *Roundup WeatherMax* for use prior to seeding, in glyphosate tolerant crops and to fallow must have successfully completed a *Roundup* herbicide aerial application training course provided by Bayer.
- **Storage:** May be stored below 0°C.
- **Equipment:** DO NOT mix, store or apply this product in galvanized steel or unlined steel (except stainless steel) containers or spray tanks.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

## Hazard Rating:

*Roundup Transorb HC*, *Roundup WeatherMax*, *Glyforce WDG*, *Destroyer 540*, *Disruptor 540*, *Stonewall 540*, *R/T 540*, *Viking 540* Glyphosate, *J-Maxx 540*, *Glycere 540*, *Credit 540 K*:

Caution – Poison

*Disruptor 540*, *Roundup Transorb HC*, *Roundup WeatherMax*, *R/T 540*, *Stonewall 540*, *Viking 540* Glyphosate, *J-Maxx 540*, *Glycere 540*:

Warning – Eye and Skin Irritant

**All other products:**

Caution – Skin and Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# GoldWing

Herbicide Group  
4 - MCPA Ester  
14 - pyraflufen-ethyl

## Company:

Nufarm Agriculture (PCP#32112)

## Formulation:

13.5g/L pyraflufen-ethyl and 420g/L MCPA ester formulated as an emulsifiable concentrate.

- Container sizes - 2 x 10.7 L, 85.5 L

## Crops and Staging:

For application from prior to seeding through to 3 days after planting and prior to the emergence of:

- Barley
- Buckwheat
- Canaryseed
- Chickpea
- Corn (field, sweet)
- Dry beans
- Faba bean
- Field pea
- Flax
- Lentils
- Lupins
- Oats
- Proso (crown) or pearl millet
- Rye (spring and winter)
- Triticale
- Wheat (spring, durum, winter)

## Weeds, Rates and Staging:

Unless otherwise stated, apply to emerged, young, actively growing weeds that are less than 5 cm tall or across.

**GoldWing at 133 mL<sup>†</sup> per acre controls:**

- Annual sow-thistle\*
- Canada fleabane\*
- Cleavers
- Cow cockle\*
- Dandelion\*
- Flixweed\*
- Kochia
- Lamb's-quarters
- Mallow
- Mustards (except dog and tansy)
- Narrow-leaved hawk's-beard
- Night-flowering catchfly
- Redroot pigweed
- Stinkweed
- Volunteer canola (all varieties)
- Wild buckwheat\*
- Wild mustard\*

**GoldWing at 266 mL<sup>†</sup> per acre provides control or suppression of the weeds above plus control of the following weeds:**

- Canada fleabane
- Cow cockle
- Flixweed
- Goat's-beard\*
- Wild buckwheat

\* Suppression only.

<sup>†</sup> GoldWing applied alone requires the addition of a non-ionic surfactant (Nufarm Enhance, Agral 90) at 0.25 L per 100 L of spray solution.

Maximum TWO APPLICATIONS of Goldwing at the 133 mL per acre rate, Conquer II or Blackhawk (maximum 3.67 grams per acre of the pyraflufen active) WITHIN A TWO YEAR TIME SPAN.

Maximum of ONE APPLICATION of Goldwing at the high (266 mL per acre) rate, and other products with the pyraflufen-ethyl active above (maximum 3.67 grams per acre of the pyraflufen-ethyl active) WITHIN A TWO YEAR TIME SPAN.

## Application Information:

- **Water Volume:** Minimum 20 to 40 L per acre. Higher water volumes may provide better performance.
- **Nozzles & Pressure:** Use 30 to 40 psi (210 to 275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE medium** droplets while maintaining good coverage of foliage. Keep booms lower than 60 cm from crop canopy.
- **Screens:** Use 50 mesh filter screens or larger.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                               | Movement                                             | Spectrum       | WSSA Group |
|-------------------|-----------------------------------------|--------------------------------------|------------------------------------------------------|----------------|------------|
| MCPA              | POST (foliar)                           | Synthetic Auxin                      | Moves throughout the plant (Symplast)                | Broadleaf only | 4          |
| pyraflufen        | POST (foliar) with little soil activity | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Broadleaf only | 14         |

## Effects of Growing Conditions:

Extreme growing conditions such as drought or near freezing temperatures prior to, at and following time of application may reduce weed control. Wet foliage at the time of application may result in reduced weed control.

## Tank Mixes:

### Herbicides:

- Glyphosate (label rates)

**Note:** The above mixes are those listed on the *GoldWing* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** No specific recommendation. May be up to 8 hours. Contact the manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze or feed treated crop to livestock within 7 days of application. DO NOT cut for hay within 30 days of treatment. Withdraw meat animals from treated fields 3 days prior to slaughter and feed untreated feed.
- **Pre-harvest Interval:** N/A when used prior to emergence.
- **Re-cropping Interval:** Any crop may be seeded one month after application.
- **Aerial Application:** Apply by ground equipment only.
- **Storage:** Store in original containers in a cool, secure, dry place. DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Tank Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. The addition of detergent may improve the effectiveness of tank cleanout, especially when tank mixed.

### Hazard Rating:

Caution –Skin Irritant

Potential Skin Sensitizer

Contains the Allergen Soy

Refer to the Introduction for an explanation of the symbols.

# Grazon XC / Aspect

Herbicide Group  
4 - picloram, 2,4-D

## Company:

Corteva Agriscience (*Grazon XC* – PCP#31642; *Aspect* – PCP#31641)

## Formulation:

97.5 g/L picloram and 360 g ae/L 2,4-D formulated as a solution.

- Container sizes - 2 x 10 L and 110 L

**Note:** Available only through selected retail outlets.

## Crops and Staging:

**Grazon XC:** Permanent grass pasture and rangeland. Apply in spring or early summer.

**Aspect:** For use on roadsides and other rights of way.

**Note:** The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.

## Weeds, Rates and Staging:

**Note:** Maximum ONE APPLICATION of these products or other product containing picloram per year.

**Note:** DO NOT prolong application for longer than 24 hours after mixing as product may degrade in the tank.

### Broadcast (multi-nozzle) application:

- **Apply Grazon XC or Aspect at 1.0 L per acre for season long control ONLY:**

- |                  |                 |             |
|------------------|-----------------|-------------|
| ◦ Canada thistle | ◦ Common yarrow | ◦ Dandelion |
|------------------|-----------------|-------------|

- **Apply Grazon XC or Aspect at 1.9 L per acre: for control of the above weeds and the following weeds:**

- |                        |                    |                   |
|------------------------|--------------------|-------------------|
| ◦ Burdock              | ◦ Goldenrod        | ◦ Prickly lettuce |
| ◦ Clovers (red, sweet) | ◦ Leafy spurge*†   | ◦ Toadflax*†      |
| ◦ Dock                 | ◦ Plantain         | ◦ Vetch           |
| ◦ Fleabane             | ◦ Ragweed (common) | ◦ Wild carrot     |

\* For control of leafy spurge and toadflax, use a recommended surfactant (such as any non-ionic surfactant) at the rate of 250 mL per 100 L of water. If maximum rainfastness is desired increase the rate to 375 mL per 100 L of water.

† Research has shown that annual applications may be required for up to 4 years to achieve a high level of sustained control of leafy spurge.

- **Apply Grazon XC or Aspect at 2.5 L per acre for control of the following woody species:**

- |                              |                                  |             |
|------------------------------|----------------------------------|-------------|
| ◦ Aspen                      | ◦ Birch                          | ◦ Wild rose |
| ◦ Balsam poplar <sup>Δ</sup> | ◦ Western snowberry <sup>Δ</sup> | ◦ Willow    |

- **Apply Aspect only at 4.65 L per acre for control of the species above plus the following woody species\*\*:**

- |         |         |          |
|---------|---------|----------|
| ◦ Alder | ◦ Maple | ◦ Poplar |
| ◦ Cedar | ◦ Pine  | ◦ Spruce |

### Handheld application\*\*:

- **Single nozzle wand (foliar):** Apply *Aspect* at 2.7 L per 1000 L of water for application to the fully developed foliage and stems of woody plants prior to the development of fall coloration.
- **Basal Bark Treatments:** Mix a dilute solution in a ratio of 1 part *Aspect* to 1.5 parts water (or ethylene glycol under freezing conditions) for use in the following applications.
  - **Cut Stump Treatment:** Apply the dilute solution above to the outer edge of the freshly cut surface of a stump.
  - **Frill or Girdle Treatment:** Apply the dilute solution to the frills or exposed cambium from a girdling of a tree stem.
  - **Tree Injection Treatment:** Apply the dilute solution above by injecting through the bark to the cambium (wood-bark interface at intervals of 7.5 cm).

<sup>Δ</sup> Suppression

\*\* For faster burndown of coniferous species use a recommended surfactant (such as *Gateway Adjuvant*, or *Xiameter OFX-0309 Fluid*, or any non-ionic surfactant) at the rate of 0.25 L per 100 L of water. If maximum rainfastness is desired, increase the rate to 0.375 L per 100 L of water.

## Application Information:

- **Water volume\*:**

- **Ground:** 40 to 80 L per acre.
- **Aerial:** 8.1 to 20 L per acre.

\* Use higher water volumes for when foliage is dense. Higher water volumes provide more reliable control.

- **Nozzles and Pressure:** Use nozzles that will deliver coarse droplets in a uniform pattern. Maximum 30 psi (207kPa) by ground or air when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets.
- Drift of even small amounts of *Grazon XC* or *Aspect* onto sensitive plants or areas where sensitive crops may be grown can cause injury. DO NOT apply under conditions prone to drift (i.e. high winds, dead calm and temperature inversions).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                    | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|-------------------------------------------|-----------------|---------------------------------|----------------|------------|
| picloram          | POST (foliar) with residual soil activity | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| 2,4-D             | POST (foliar)                             | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

**IMPORTANT:** Picloram is a very persistent and water-soluble herbicide. Treated soil should not be moved from the treated area. DO NOT apply to soils that are permeable, have sinkholes, or lie over limestone bedrock. DO NOT apply to soils whose surfaces are composed of fractured rock or unconsolidated gravel. Application to these sites may allow the movement of herbicide to underlying water sources or aquifers. When applying *Grazon XC* over sandy soils ensure that aquifers are not within 1.8 m of the soil surface. If shallow aquifers are present, DO NOT APPLY *Grazon XC*. *Grazon XC* must not be applied on range and pasture acres that are irrigated. DO NOT compost or mulch clippings or manure from grass treated with *Grazon XC* unless being reapplied to the treated area.

## Effects of Growing Conditions:

Nothing listed on the *Grazon XC* label. Avoid application when pasture and target weeds are under stress from drought, flooding, extreme heat or cold, as injury to grass or unacceptable control may result. Avoid application when temperatures exceed 28°C.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** DO NOT apply if rainfall is forecast. No specific time frame is indicated on the label. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT re-enter pastures within 12 hours of application.
- **Grazing Restrictions:** DO NOT graze areas treated with *Aspect* at a rate of greater than 2.5 L per acre. DO NOT allow lactating dairy animals to graze treated areas within 7 days of application. Withdraw meat animals from treated fields at least 3 days before slaughter. DO NOT harvest forage or cut hay within 30 days of application. Feed livestock untreated forage for 7 days prior to moving onto land that produce broadleaf crops; otherwise, urine or manure may contain picloram. See restrictions in "How it Works" section above.
- **Re-cropping Interval:** Legumes may not be established in a pasture for several years after treatment. If legumes are essential in a pasture, DO NOT use *Grazon XC*. DO NOT break up treated pasture and plant to sensitive broadleaf crops for at least 5 years after application.
- **Aerial Application:** May be applied by air. DO NOT apply during periods of dead calm. DO NOT apply when wind speed is greater than 16 km per hour at flying height at the site of application.
- **Storage:** Store product in original containers in a secure, dry, cool area. DO NOT freeze. Combustible – DO NOT store near open flame or heat sources.
- **Buffer Zones:** Handheld or backpack application do not require a buffer zone. Observe buffer zones outlined in the label.

## Sprayer Cleaning:

A combination of 'Method A' and 'Method B' found in the introduction, including the use of a commercial tank cleaner or ammonia, is recommended immediately after application is finished. See label for further details.

## Hazard Rating:

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Halauxifen/florasulam + MCPA

Herbicide Group  
2 - florasulam  
4 - halauxifen, MCPA

## Company:

Corteva Agriscience (*Exhilarate*)

Interprovincial Cooperative Ltd (*CO-OP Exhilarate*, *IPCO Exhilarate*)

## Formulation:

All *Exhilarate* packages contains the following components:

**Exhilarate A (PCP#33803):** 20% halauxifen and 20% florasulam formulated as a water dispersible granule.

- Container size - 800 g
- plus-

**Plus M Ester 600 (PCP#29622 – Exhilarate), IPCO MCPA Ester 600 (PCP#27802 – IPCO Exhilarate),**

**CO-OP MCPA Ester 600 (PCP#29001 – CO-OP Exhilarate):** MCPA Ester 600 g ae/L formulated as an emulsifiable concentrate.

- Container size - 2 x 7.56 L

## Crops and Staging:

**Wheat (winter, spring and durum) and barley:** 3 leaf stage to just prior to the emergence of the flag leaf emergence.

**Rye (fall, spring - Exhilarate only):** 3 leaf stage to just prior to flag leaf emergence.

## Weeds and Staging:

**Weeds controlled at the 1 to 8 leaf stage unless otherwise specified to control the following weeds:**

- American dragonhead (up to bud stage and 15 cm in height)
- Barnyard grass (up to 5 leaf, 2 tiller)
- Canada fleabane (up to 15 cm)
- Canada thistle (up to 30 cm)\*
- Chickweed
- Cleavers (up to 9 whorls)
- Common ragweed (up to 6 leaf)
- Cow cockle
- Dandelion (seedlings and overwintered rosettes up to 30 cm diameter)
- Flixweed (up to 8 leaf and 8 cm tall)
- Hemp-nettle
- Henbit (up to bud stage and 15 cm in height)
- Kochia\*
- Lamb's-quarters
- Narrow-leaved hawk's-beard (up to 30 cm tall)
- Night-flowering catchfly (up to 15 cm)\*
- Redroot pigweed
- Round-leaved mallow (up to 6 leaf)
- Scentless chamomile (up to bud stage)\*
- Shepherd's-purse (up to 20 cm)
- Smartweed (lady's-thumb, green)
- Sow-thistle, annual (up to 4 leaf)
- Sow-thistle, perennial (up to 6 leaf)\*
- Stinkweed (up to 4 leaf)
- Stork's-bill
- Velvetleaf (up to 5 leaf)
- Volunteer alfalfa (up to 25 cm tall)
- Volunteer canola
- Volunteer flax (up to 15 cm)
- White cockle (seedlings and overwintered rosettes up to the bud stage)\*
- Wild buckwheat
- Wild mustard (1 to 4 leaf)

\* Suppression.

## Rates:

**Exhilarate A:** 10 g per acre

**Plus M Ester 600, IPCO MCPA Ester 600, Co-op MCPA Ester 600:** 189 mL per acre

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets by ground. Sprayers without drift reduction nozzles should use between 30 to 40 psi (200 to 275 kPa). Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                          | Spectrum       | WSSA Group |
|-------------------|---------------|--------------------------|-----------------------------------|----------------|------------|
| florasulam        | POST (foliar) | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf only | 2          |
| halauxifen        | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only | 4          |
| MCPA              | POST (foliar) | Synthetic Auxin          | Symplast                          | Broadleaf only | 4          |

## Effects of Growing Conditions:

Control is best with actively growing weeds. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur. For best results, ensure thorough spray coverage of target weeds.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

#### *Spring wheat (including durum) and winter wheat:*

- *Simplicity* (200 mL per acre)
- *Simplicity GoDRI* (28 g per acre) plus *Agral 90* (0.25 L per 100 L spray solution) or *Bindem Utility Modifier* (60 mL per acre)

#### *Spring wheat (including durum):*

- *Tandem*

#### *Spring wheat and barley:*

- *Axial*

Consult label for specific surfactant requirements.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** DO NOT harvest the treated crop within 60 days after application.
- **Grazing Restrictions:** Livestock may be grazed on treated crops 7 days following application. DO NOT cut the treated crop for hay or silage within 21 days after application.
- **Re-cropping Interval:** Alfalfa, spring wheat, barley, canola (including oilseed quality *B. juncea*), dry bean (*Phaseolus vulgaris* species including pinto, kidney and white types), faba beans, flax, field peas, potatoes (except seed potatoes), mustard (oriental, brown and yellow), soybeans, oats, or sunflower may be seeded 10 months after application. Lentils can be planted 22 months after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in original containers in a secure, dry heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Use a combination of 'Method A' and 'Method B' refer to the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

**Exhilarate A:** Potential Skin Sensitizer

**Plus M Ester 600:**

Warning – Poison

Refer to the Introduction for an explanation of the symbols.

# Hurricane

Herbicide Group  
6 - bentazon  
14 - acifluorfen

## Company:

UPL AgroSolutions Canada (PCP#32662)

## Formulation:

320 g/L of bentazon and 160 g/L of acifluorfen formulated as a soluble liquid.

- Container size - 2 x 10 L

## Crops and Staging:

**Soybean:** 1 to 2 trifoliolate stage

## Weeds and Staging:

Unless otherwise noted below, apply to small, actively growing weeds up to the 6 leaf stage to control.

### • Weeds controlled up to the 6 leaf stage:

- Common ragweed
- Lamb's-quarters\*
- Palmer amaranth
- Pigweed (redroot, smooth, green)
- Waterhemp
- Velvetleaf\*\* (up to 4 leaf stage)

\* **Suppression only.**

\*\* **Use AMS (or UAN) as the additive when velvetleaf is a target weed.**

## Rate:

Apply at 710 mL per acre with one of the following additives: ammonium sulfate (AMS), crop oil concentrate, or UAN (liquid 28-0-0) at the rates specified below:

| Additive             | Application Rate of Additive (per acre)                                               |
|----------------------|---------------------------------------------------------------------------------------|
| AMS                  | 1.13 kg                                                                               |
| Crop oil concentrate | 0.5 to 0.95 L                                                                         |
| UAN solution         | 1.9 to 3.8 L                                                                          |
| Merge adjuvant       | 200 to 400 mL per 40 L of water unless stated otherwise on the tank mix partner label |
| Sure-Mix surfactant  | 0.5 L per 100 L of spray mixture                                                      |

*NOTE: DO NOT apply more than 0.9 kg of bentazon (from all sources) per acre per calendar year.*

*NOTE: If the combined temperature and relative humidity exceed 100 (e.g. temperature of 30°C plus 70 percent relative humidity = 100), use the lower additive rates.*

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 40 to 80 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets by ground. Use a minimum of 40 psi (275 kPa) spray pressure.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                             | Movement                                             | Spectrum       | WSSA Group |
|-------------------|---------------|------------------------------------|------------------------------------------------------|----------------|------------|
| bentazon          | POST (foliar) | PSII Inhibitor/ Membrane Disruptor | Little (Apoplast)                                    | Broadleaf only | 6          |
| acifluorfen       | POST (foliar) | PPO Inhibitor/ Membrane Disruptor  | Little movement due to rapid cell leakage (Symplast) | Broadleaf only | 14         |

## Effects of Growing Conditions:

Soybeans may exhibit leaf speckling, yellowing, bronzing or burning, but plants generally outgrow this condition within 10 days. New growth is normal and crop vigor is not reduced.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- *Assure II* with *Merge* or *Sure-Mix*
- *Basagran* (up to 235 mL per acre) with crop oil concentrate, AMS, or UAN
- *Pinnacle* with non-ionic surfactant and AMS or UAN
- *Pursuit* with non-ionic surfactant and AMS or UAN
- Glyphosate products (see label for specific products) (only apply to glyphosate tolerant soybeans)
- *Liberty* with crop oil concentrate (only apply to glufosinate tolerant soybeans)
- Clethodim products with *Amigo*

**Fungicides:** None registered.

**Insecticides:** None registered.

### Fertilizers:

- Ammonium sulfate (AMS)
- UAN (liquid 28-0-0)

**NOTE: the above tank mixes are those listed on the *Hurricane* label only.**

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 4 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 48 hours.
- **Pre-harvest Interval:** No specific preharvest interval is indicated on the label.
- **Grazing Restrictions:** DO NOT graze the treated crop or cut for hay.
- **Re-cropping Interval:** The label has no restrictions on crops that may be planted the following season.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store in a dry place. DO NOT store below 4°C or above 37°C. This product is a reducing agent and should not be mixed or stored in close proximity to strong oxidizing agents.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Caution – Poison

Warning – Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Huskie PRE

Herbicide Group  
6 - bromoxynil  
27 - pyrasulfatole

## Company:

Bayer

## Formulation:

**Huskie PRE (PCP#35077):** 25 g/L pyrasulfatole and 280 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container Sizes: 8.1L, 129.6 L, 405 L

## Crops and Staging:

**Pre-seeding or post-seeding but pre-emergent:** Wheat (spring, durum, winter), triticale, barley.

## Weeds and Staging:

The following weeds are controlled at the 1 to 6 leaf stage unless otherwise specified:

- Annual sow thistle
- Chickweed
- Cleavers (1 to 6 whorls)
- Canada fleabane (up to 10 cm in height/diameter)
- Cow Cockle<sup>1</sup> (1 to 4 leaf stage)
- Dandelion\* (up to 10 cm in height / 25 cm diameter)
- Flixweed (up to 10 cm in height)
- Giant ragweed\*
- Green smartweed
- Hemp-nettle
- Kochia (up to 10 cm in height)
- Lady's thumb
- Lamb's-quarters (1 to 8 leaf stage)
- Narrow-leaved hawk's beard (up to 10 cm in height/prior to bolting)
- Pale smartweed
- Perennial sow-thistle\*
- Redroot pigweed
- Round-leaf mallow
- Russian thistle (up to 10 cm in height)
- Shepherd's purse
- Stinkweed
- Tartary buckwheat (1 to 8 leaf stage)
- Volunteer canola (includes conventional and herbicide tolerant)
- Volunteer soybean (up to the 5th trifoliate leaf stage)
- Wild buckwheat (1 to 8 leaf stage)
- Wild mustard

<sup>1</sup> In normal conditions will be controlled up to the 4-leaf stage. Plants beyond this stage are unlikely to be controlled. The higher rate generally gives better results.

\* Suppression only

## Rate:

0.4 to 0.5 L per acre

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 19 L per acre
  - **Aerial:** Do NOT apply by air
- **Nozzles and Pressure:** For best results use flat fan nozzles or comparable nozzles to achieve uniform spray distribution. Do not use flood jet nozzles. DO NOT apply with spray droplets smaller than the American Society of Agricultural Engineers (ASAE S572.1) medium classification. Boom height must be 60 cm or less above the crop or ground.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Introduction section for an explanation of the concepts used in the table below.

| Active Ingredient | Timing | Target                                | Movement                                                                               | Spectrum       | WSSA Group |
|-------------------|--------|---------------------------------------|----------------------------------------------------------------------------------------|----------------|------------|
| bromoxynil        | Foliar | PSII Inhibitor/<br>Membrane disruptor | Little (Apoplast)                                                                      | Broadleaf only | 6          |
| pyrasulfatole     | Foliar | HPPD pigment<br>inhibitor             | Some – both foliar<br>and root (apoplast),<br>somewhat systemic<br>(Has soil residues) | Broadleaf only | 27         |

## Effects of Growing Conditions:

For best results, apply to emerged, young, actively growing weeds according to the weed stages listed. Under stressed conditions, early application will result in improved weed control. Weeds growing under adverse environmental conditions such as drought will be less susceptible to herbicide effects.

## Tank Mixes:

### Herbicides:

- *Pre-seed and pre-emergent*
  - *Huskie PRE* must be tank mixed with glyphosate (*Roundup Weathermax*, *Roundup Transorb HC* or *R/T 540* only at 180 to 360 g ae per acre) (no surfactant required).

**Note:** The above mixes are those listed on the *Huskie PRE* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

### Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 24 hours.
- **Preharvest Interval:** Barley - 45 days, wheat and triticale - 50 days
- **Grazing:** Do not graze or treated crops or cut hay within 25 days of application
- **Re-cropping:** Registered crops may be seeded anytime after treatment. Treated field can be seeded the following year to alfalfa, canaryseed, canola, field corn (Manitoba only), flax, potatoes, soybeans (Manitoba only), sunflower, oats. Field peas may be grown the season following application in the black, grey-wooded and dark brown soil zones. DO NOT plant field peas the season following *Huskie PRE* use in the brown soil zone where soil pH is above 7.5 and precipitation was less than 125 mm from June 1 to September 1 the year of application. Lentils may be seeded 22 months after application.
- **Aerial Application:** Do not apply by aircraft
- **Storage:** Do not store below -20 °C. After storage, warm to room temperature and shake well before use. If stored for one year or longer, shake or mix well before using. Store this product away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning on page 15-16. Flush sprayer system with water. See the label for product specific cleaning details.

### Hazard Rating:

Contains petroleum distillates – vomiting may cause aspiration pneumonia. Treat symptomatically.

# Imazamox

Herbicide Group  
2 - imazamox

## Company:

BASF Canada (*Solo ADV II*)  
ADAMA Canada (*Davai 80 SL*)  
Corteva Agriscience (*Amity WDG*)  
NewAgco (*Samurai*)  
Sharda Cropchem (*Next*)  
Nufarm Agriculture (*Venim*)  
Albaugh (*Dakota*)  
Viking (*Viking Imazamox*)  
Syngenta Canada (*Canvista*)  
Parijat Industries India Ltd. (*Cavort, Cavort 120 SL*)  
Sharda Cropchem (*Image*)

## Formulation:

***Solo ADV II* (PCP#33720):** 25 g/L imazamox formulated as a solution.

- Container size - 2 x 6.5 L or 3 x 4.33 L

***Amity WDG* (PCP#33180), *Samurai* (PCP#33033), *Next* (PCP#33620), *Dakota* (PCP#34698), *Viking Imazamox* (PCP#34777), *Cavort* (PCP#34854):** 70% imazamox formulated as a water dispersible granule.

- Container sizes:
  - 4 x 117.5 g water soluble bags
  - *Samurai* - 470 g

***Davai 80 SL* (PCP#32929) *Canvista* (PCP#35015):** 80 g/L imazamox formulated as a solution.

- Container sizes - 2 x 8 L, 96 L

***Image* (PCP#33914), *Cavort 120 SL* (PCP#35570):** 120 g/L imazamox formulated as a solution.

- Container sizes - 4 X 5.33 L, 85.3 L

***Venim* (PCP34394):** 350 g/L imazamox formulated as a solution.

- Container size - 2 x 3.66 L

## Crops and Staging:

**CLEARFIELD sunflower (*Solo ADV II*, *Next*, *Venim*, *Cavort* and *Dakota* only):** 2 to 8 leaf stage.

**CLEARFIELD canola (*Amity WDG*, *Next*, *Cavort* and *Dakota* only):** 2 to 6 leaf stage.

**CLEARFIELD lentil:**

- *Solo ADV II*, *Davai 80SL* and *Canvista*: 1 to 9 node stage.
- *Next*, *Samurai*, *Venim*, *Dakota*, *Cavort* and *Viking Imazamox*: 2 to 6 leaf stage.
- *Davai 80 SL*: 1 to 9 node stage

**CLEARFIELD oilseed mustard (*Brassica juncea*) (*Amity WDG*, *Dakota*, *Cavort* and *Next* only):** 2 to 6 leaf stage.

**CLEARFIELD wheat (*Image*, *Cavort 120 SL* only):** Early postemergent.

**Imidazolinone (IMI) tolerant chickpeas (*Solo ADV II* only):** 1 to 6 node stage.

**Dry bean (*Davai 80SL*, *Canvista* and *Venim* only):** Emergence to 3 expanded trifoliolate leaves stage.

**Field Pea (*Davai 80SL*, *Canvista*, *Samurai*, *Next*, *Dakota*, *Venim*, *Cavort*, *Cavort 120 SL* and *Viking Imazamox* only):** 1 to 6 leaf stage.

**Soybean (*Solo ADV II*, *Next*, *Venim*, *Davai 80SL* and *Canvista* only):** Cotyledon to 4 leaf (3 expanded trifoliolates) stage\*.

**Note:** Temporary crop yellowing may be observed shortly after application in CLEARFIELD canola. Not all dry bean varieties have been tested for tolerance to *Davai 80SL*, test new varieties on a small area for tolerance before widespread use.

## Weeds, Rates and Staging:

MAXIMUM ONE APPLICATION of these or any other products containing imazamox in a year.

For all products except *Solo ADV II*, add one of the following adjuvants:

- *Merge*, methylated soybean oil (*MSO*) or *Surjet* at 0.5 L per 100 L of spray solution.
- *Carrier adjuvant* at 0.25 L per 100 L of spray solution.

**Note:** Various manufacturers may support different adjuvants with their products. Check the label or with the manufacturer which adjuvant they support.

***Next/Samurai/Amity/Dakota WDG/Viking Imazamox/Cavort* at 8.5 grams per acre or *Image/Cavort 120 SL* at 51 mL per acre plus recommended adjuvant above will control up to the 4 leaf stage:**

- Lamb's-quarters†
- Volunteer wheat
- Wild mustard
- Stinkweed
- (not CLEARFIELD varieties)

*Solo ADV II* at 325 mL per acre (no adjuvant required) or *Next/Samurai/Amity/Dakota WDG/Viking Imazamox/Cavort* at 11.7 grams per acre or *Image/Cavort 120 SL* at 68 mL per acre or *Davai 80 SL/Canvista* at 100 mL per acre or *Venim* at 23 mL per acre plus recommended adjuvant above will control:

The weeds above plus:

**Grasses - 1 to 4 main stem leaves, early until tillering:**

- Barnyard grass
- Foxtail (green, yellow)
- Japanese brome<sup>†</sup>
- Persian darnel
- Volunteer barley
- Volunteer canaryseed
- Volunteer oats
- Wild oats

**Broadleaf Weeds - cotyledon to 4 leaf stage:**

- Cleavers<sup>†</sup>
- Cow cockle
- Flixweed\*
- Green smartweed
- Lamb's-quarters
- Redroot pigweed
- Round-leaved mallow<sup>†</sup>
- Russian thistle
- Shepherd's-purse
- Stork's-bill\*
- Volunteer canola (not CLEARFIELD varieties)
- Wild buckwheat<sup>†</sup>

<sup>†</sup> Suppression only.

\* *Davai 80SL, Canvista* and *Venim* only.

Refer to the product label for complete mixing instructions for this product and its mixes, including registered adjuvants. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE (S572.1) medium* or larger droplets.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens (*Solo WDG, Davai 80SL, Samurai, Next, Venim* and *Mizuna* only).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                   | Movement                                    | Spectrum          | WSSA Group |
|-------------------|-----------------------------------------|--------------------------|---------------------------------------------|-------------------|------------|
| imazamox          | POST (foliar) with slight soil activity | ALS Amino Acid inhibitor | Toward growth areas of the plant (Symplast) | Broadleaf & grass | 2          |

## Effects of Growing Conditions:

DO NOT spray if temperatures of +5°C or lower are forecast within 3 days of application. Treat crops during warm weather when weeds are actively growing and soil moisture is adequate for rapid growth. Under cool or dry conditions, control of some weeds may be severely reduced.

## Tank Mixes:

Unless otherwise indicated, imazamox and tank mix partners are applied at all label rates and include adjuvants indicated in "Rates:" above.

### Herbicides:

- **Field peas only:**
  - *Samurai, Viking Imazamox* and *Dakota* (11.7 g per acre) only
  - *Basagran Forte* or *Boa\** (362 mL per acre) plus *UAN 28%* (800 mL per acre)
- **Field peas, soybeans and dry beans:**
  - *Davai 80 SL, Canvista* at 81 mL per acre only
  - Imazethapyr (*Phantom* only at 26.3 mL per acre) + non-ionic or methylated seed oil adjuvant
  - *Davai 80 SL, Canvista* at 100 mL per acre only
  - *Basagran Forte* (500 mL per acre) + *UAN 28%* (800 mL per acre)
- **Dry beans only**
  - *Dakota* (11.7g per acre) only
  - *Basagran Forte* (510 mL per acre) + *UAN 28%* (800 mL per acre)
- **CLEARFIELD canola**
  - *Amity WDG* at 11.7 g per acre only
  - *Lontrel XC* (51 mL per acre) + *Surjet* or *Merge* at 0.5 L per 100 L of spray solution
- **Clearfield lentils, Clearfield sunflowers, and soybeans**
  - *Solo ADV II* at 325 mL/acre only
  - *Caziva Ultra Q, Assure II* or *Yuma GL Liquid EC* (150 - 300 mL/acre)

\* *Samurai* only.

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall within 3 hours of application may reduce product efficacy.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze treated crops or cut for hay/silage/green-feed unless otherwise indicated below.
  - **CLEARFIELD canola and oilseed quality mustard:** 20 days following application.
  - **Field pea:** 30 days following application of *Davai 80SL*, *Canvista* or *Venim* or within 20 days of application for *Next*, *Samurai/ Cavort* and *Viking Imazamox*.
  - **CLEARFIELD lentil:** 20 days following application of *Solo ADV II*, *Davai 80SL*, *Canvista*, *Next*, *Venim*, *Cavort* and *Viking Imazamox*.
  - **Soybeans:** 20 days following application of *Solo ADV II* only.
- **Pre-harvest Interval:**
  - **CLEARFIELD sunflower:** 70 days after application.
  - **CLEARFIELD canola and oilseed quality mustard, CLEARFIELD lentil, field pea and soybeans:** 60 days after application.
  - **Dry bean:** 75 days after application.
- **Re-cropping Interval:**
  - **Solo ADV II, Amity WDG, Next only:** Winter wheat may be seeded 3 months after application.
  - **All products:** Barley, canaryseed, canola, chickpea, field corn, field pea, flax, lentil, oats, sunflower, and spring wheat (including durum) may be seeded the first spring after application and tame mustard (condiment types only) the second season after application. The company recommends that a field bioassay (a test strip grown to maturity) be conducted the year before growing any crops other than those listed above. Contact manufacturer for additional information on recropping intervals. Check any tank mix partners for additional recropping restrictions.

**Note:** Where less than 125 mm of accumulated rainfall is received between June 1 and September 1 in the year of application, or additionally for the brown soil zone where less than 15 mm is received in any single month through June, July and August, regardless of total rainfall during that time, delay planting canaryseed, canola (non-CLEARFIELD), flax, tame oats or, winter wheat and durum wheat by an additional year. If the same drought conditions as described above occur in either the year of application or the year following, delay planting tame mustard by an additional year.

  - As with other herbicides that break down through microbial activity, additional conditions that may slow breakdown and increase the risk of follow crop injury are soil pH of less than 6.5, organic matter of less than 3 percent, very sandy soils and prolonged cold.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT freeze. Store in a cool, dry place above 5°C.
- **Buffer Zones:** Delete and replace with "Observe buffer zones outlined in the label."

## Sprayer Cleaning:

Refer to 'Method C' in the general sprayer cleaning section in the introduction.

## Hazard Rating:

*Davai 80SL, Canvista, Venim:* Caution – Poison and Eye Irritant

*Solo ADV II:* Caution – Skin Irritant

*Amity WDG, Samurai, Next:*

Warning – Eye Irritant

Warning – Contains the Allergen Sulfites

Refer to the Introduction for an explanation of the symbols.

# Imazamox / Bentazon

Herbicide Group  
2 - imazamox  
6 - bentazon

## Company:

BASF Canada (*Viper ADV*)  
ADAMA Canada (*Python*)  
NewAgco (*Boa Pro, Boa Pro Advance*)\*  
Sharda CropChem (*Benz*)  
NuFarm Agriculture (*Ransack*)  
Syngenta Canada (*Nelatic*)  
Interprovincial Cooperative Ltd. (*IPCO Maraud*)

## Formulation:

**Viper ADV (PCP#30626), Benz (PCP#33830), Boa Pro Advanced (PCP#35669):** 20 g/L imazamox and 429 g/L bentazon formulated as a solution.

- Container sizes - 2 x 8.1 L, 129 L

**Ransack (PCP#34931), Nelatic (PCP#35030), IPCO Maraud (PCP#35440):** 20.6 g/L imazamox and 440 g/L bentazon formulated as a solution.

- Container sizes - 2 x 8.1 L, 97.2 L

The *Python* package contains the following components:

**Python A (PCP#33279):** 80 g/L imazamox formulated as a solution.

- Container size - 4 L

-plus-

**Python B (PCP#33282):** 480 g/L bentazon formulated as a solution.

- Container size - 2 x 7.26 L

The *Boa Pro* package contains the following components:

**Samurai (PCP#33033):** 70% imazamox formulated as a water dispersible granule.

- Container size - 470 g

-plus-

**Boa (PCP#33011):** 480 g/L bentazon formulated as a solution.

- Container size - 2 x 14.5 L

## All products require the addition of:

BASF 28% UAN (28-0-0) is required, but sold separately.

- Container sizes - 2 x 8 L, 128 L drums

## Crops and Staging:

### All products:

**Field pea:** 3 to 6 above-ground nodes (3 to 6 true leaves).

**Viper ADV, Benz, Python, Ransack, IPCO Maraud, Boa Pro Advanced and Nelatic only:**

**Dry bean (black, cranberry, great northern, navy, pinto, pink, red Mexican<sup>†</sup>):** Imazamox/Bentazon plus additional *Basagran Forte* (see tank mix section) from the fully expanded first trifoliate leaf to the second trifoliate fully expanded.

Even though Imazamox/Bentazon is registered for all the dry bean types above, tolerance may vary between varieties (esp. navy).

Test new varieties on a small area for tolerance before widespread use.

**Soybean:** Emergence to 3 fully expanded trifoliate leaves.

**Viper ADV, Benz, IPCO Maraud, Boa Pro Advanced and Ransack only:**

**Faba bean:** 3 to 6 above-ground nodes (3 to 6 true leaves).

**Alfalfa (seedling or established) for seed forage and hay<sup>†</sup>:** Apply *Viper ADV, Benz, Ransack, IPCO Maraud* or *Nelatic* plus additional *Basagran Forte* (see tank mix section) to seedling alfalfa after the third trifoliate stage or to established alfalfa before flower and prior to canopy closure.

**Viper ADV and Boa Pro Advanced only:**

**Established and seedling clover (alsike, red, sweet) and sainfoin for seed production only<sup>†</sup>:** Seedling clover and sainfoin tolerant after the third trifoliate stage otherwise apply prior to flowering but before the crop canopy closes.

**Benz only:**

**Established and seedling clover (alsike and red) for seed production only<sup>†</sup>:** Seedling clover tolerant after the third trifoliate stage otherwise apply prior to flowering but before the canopy closes.

**Ransack, IPCO Maraud and Nelatic only:**

**Established and seedling clover (alsike, and red) and sainfoin for seed production only<sup>†</sup>:** Seedling clover and sainfoin tolerant after the third trifoliate stage otherwise apply prior to flowering but before the crop canopy closes.

<sup>†</sup> **NOTE:** Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. **Those who apply these uses do so at their own risk.**

**NOTE:** Applications under hot, humid conditions may result in temporary leaf yellowing, leaf flecking, bronzing or burning. The crop usually outgrows this condition within 10 days and new tissues will not be affected.

## Weeds and Staging:

**Grasses - 1 to 4 main stem leaves or until early tillering.**

- Barnyard grass
- Foxtail (green, yellow)
- Japanese brome\*
- Persian darnel
- Volunteer barley
- Volunteer canaryseed
- Tame oats
- Volunteer wheat (including durum, not CLEARFIELD varieties)
- Wild oats

**Broadleaf Weeds - cotyledon to 4 leaf stage.**

- Biennial wormwood<sup>§§</sup>
- Cleavers<sup>\*†</sup>
- Cow cockle
- Flixweed<sup>§§</sup>
- Green smartweed
- Kochia<sup>\*†§</sup>
- Lamb's-quarters
- Pigweed (prostrate<sup>††\*</sup>, redroot)
- Round-leaved mallow<sup>\*§</sup>
- Russian thistle<sup>§</sup>
- Shepherd's-purse
- Stinkweed
- Sow-thistle (spiny annual)<sup>††\*§</sup>
- Stork's-bill<sup>††</sup>
- Volunteer canola (including CLEARFIELD varieties)
- Volunteer lentils (including CLEARFIELD lentils)<sup>§</sup>
- Wild buckwheat\*
- Wild mustard<sup>†</sup>

\* Suppression only.

<sup>†</sup> Including Group 2 resistant biotypes.

<sup>††</sup> *Viper ADV, Ransack, IPCO Maraud, Boa Pro Advanced and Nelatic* requires the addition of *Basagran Forte* (see tank mix section) for activity on these weeds in dry beans and alfalfa only.

<sup>§</sup> *Viper ADV, Ransack, Nelatic, IPCO Maraud, Boa Pro Advanced and Benz* only.

<sup>§§</sup> *Python* only.

## Rates:

*Viper ADV, Benz, Ransack, IPCO Maraud, Boa Pro Advanced and Nelatic:* 400 mL per acre.

*Ransack:* 300 mL per acre for volunteer canola (non-imidazolinone tolerant, cotyledon to 3 - leaf stage).

*Python:* *Python A* at 0.1 L per acre and *Python B* at 0.36 L per acre.

*Boa Pro:* *Samurai* at 11.7 g per acre and *Boa* at 362 mL per acre.

**All Products:** Add 28 percent BASF UAN (sold separately) at 0.81 L per acre.

Failure to include UAN will result in significantly reduced product performance. DO NOT use any other adjuvants, additives or fertilizers as injury may result.

DO NOT apply imazamox/bentazon more than once or follow imazamox/bentazon with any related products containing Imazamox in the same year.

DO NOT apply to any crop other than those registered as severe injury will result. Refer to the product label for complete mixing instructions for this product. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Apply in 40 L per acre. High water volumes are required for adequate coverage, particularly when weed densities are high or weed staging is large.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of **ASABE medium** droplets.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement          | Spectrum          | WSSA Group |
|-------------------|---------------|-----------------------------------|-------------------|-------------------|------------|
| imazamox          | POST (foliar) | ALS Amino Acid inhibitor          | Symplast          | Broadleaf & grass | 2          |
| bentazon          | POST (foliar) | PSII Inhibitor/Membrane disrupter | Little (Apoplast) | Broadleaf only    | 6          |

## Effects of Growing Conditions:

DO NOT spray if temperatures of +5°C or less are forecast within 3 days of application. Under cool or dry conditions, control of some weeds may be severely reduced. DO NOT apply to crops stressed from hail damage, flooding, drought, hot, humid weather, widely fluctuating temperatures, prolonged cold or injury from previous herbicides, as crop injury may result.

## Tank Mixes:

*Viper ADV, Benz, Ransack, IPCO Maraud, Boa Pro Advanced and Nelatic only for dry bean (types above) and alfalfa\*:*

- *Basagran Forte* (145 mL per acre) plus UAN as above.

## Roundup Ready Soybean\*:

- Glyphosate (360 to 720 mL per acre). UAN is not required for control of weeds listed on the glyphosate label.

\*Except *Boa Pro Advanced*

## Restrictions:

- **Rainfall:** Rain within 6 hours may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze, or cut for feed/hay within 20 days of application to alfalfa. DO NOT graze or cut for feed any other listed crop.
- **Pre-harvest Interval:** DO NOT apply within 60 days of harvest.
- **Re-cropping Interval:** Winter wheat may be seeded 3 months after application. Barley, canaryseed, canola, chickpea, field corn, field pea, flax, lentil, oats, sunflower, and spring wheat (including durum) may be seeded the first season after application and tame mustard (condiment types only) the second season after application. The company recommends that a field bioassay (a test strip grown to maturity) be conducted the year before growing any crops other than those listed above. Contact manufacturer for additional information on recropping intervals.

**Note:** Where less than 125 mm of accumulated rainfall is received between June 1 and September 1 in the year of application, or additionally for the brown soil zone where less than 15 mm is received in any single month through June, July and August, regardless of total rainfall during that time, delay planting canaryseed, canola (non-CLEARFIELD), flax, tame oats, winter wheat and durum wheat by an additional year. If the same drought conditions as described above occur in either the year of application or the year following, delay planting tame mustard by an additional year.

- As with other herbicides that break down through microbial activity, additional conditions that may slow breakdown and increase the risk of follow crop injury are soil pH of less than 6.5, organic matter of less than 3 percent, very sandy soils and prolonged cold.
- **Storage:** DO NOT freeze. Store in a cool, dry place above 5°C.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general sprayer cleaning section in the introduction.

## Hazard Rating:

Warning – Poison

Warning – Contains the Allergen Soy

Warning – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Imazamox + Clethodim

Herbicide Group

1 - clethodim

2 - imazamox

*This product is a prepackaged tank mix of imazamox and clethodim. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

## Company:

NewAgco(Samurai Master)

Viking Crop Production Partners Inc. (Viking Falun)

## Formulation:

The imazamox + clethodim package contains the following components:

**Samurai (PCP#33033), Viking Imazamox (PCP#34777):** 70% imazamox formulated as a water dispersible granule.

- Container size - 4 x 470 g

-plus-

**Independence (PCP#32851), Viking Clethodim (PCP#34745):** 240 g/L clethodim formulated as an emulsifiable concentrate.

- Container size - 8 L

## Crops and Staging:

Field pea - 1 to 6 true leaf stage

Clearfield lentils - 2 to 6 leaf stage

Weeds and Staging:

Weeds controlled by *Samurai*, *Viking Imazamox* at 11.7 grams per acre plus the weeds controlled by *Independence*, *Viking Clethodim* at 50 mL per acre. *Samurai Master* requires the addition of *Assassin* or *Merge* adjuvant and *Viking Falun* requires the addition of *Viking PHC Adjuvant* at 0.5 L per 100 L of spray solution, and which must be purchased separately.  
*Note: Maximum of ONE APPLICATION of this or other products containing imazamox per year.*

Tank Mixes:

None registered.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

Imazamox / Imazethapyr

Herbicide Group  
2 - imazamox, imazethapyr

Company:

BASF (*Odyssey NXT*)  
NewAgco (*Ninja*)  
Viking (*Viking Skien*)

Formulation:

**Ninja (PCP#32995), Viking Skien (PCP#34866):** 35% imazamox and 35% imazethapyr formulated as a dispersible granule.

- Container size - 8 x 86.5 g water soluble packs. Adjuvant sold separately.

**Odyssey NXT II (PCP#33678):** 35% imazamox and 35% imazethapyr formulated as a dispersible granule.

- Container size - 2 x 692 g jugs per 80 acre case. One case will also include 2 x 8.1 L jugs of *Merge*.

Crops and Staging:

| Crop                                                                                                                                                                                                                            | Leaf Stage                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| Field pea <sup>Δ</sup> , faba bean <sup>ΔΔΔ</sup>                                                                                                                                                                               | 1 to 6 nodes/true leaf stage |
| CLEARFIELD sunflower <sup>ΔΔΔ</sup>                                                                                                                                                                                             | 2 to 8 leaf                  |
| CLEARFIELD lentil <sup>ΔΔΔ</sup> , CLEARFIELD sunflowers <sup>ΔΔΔ</sup>                                                                                                                                                         | 1 to 9 above ground nodes    |
| Soybean <sup>ΔΔ</sup>                                                                                                                                                                                                           | 1 to 3                       |
| Fenugreek (grain <sup>**</sup> , seed or forage) <sup>ΔΔΔ</sup> , alfalfa <sup>*†ΔΔΔ</sup> , bird's-foot trefoil <sup>*†ΔΔΔ</sup> , seedling clover (red, alsike and sweet) <sup>*ΔΔΔ</sup> , seedling sainfoin <sup>*ΔΔΔ</sup> | 1 to 4                       |

\* Seed production only.

\*\* Including grain production for human consumption (*Odyssey NXT* only)

† Seedling and established.

<sup>Δ</sup> *Viking Skien* is registered on field peas only.

<sup>ΔΔ</sup> *Odyssey NXT II*.

<sup>ΔΔΔ</sup> *Odyssey NXT II* only.

Temporary crop yellowing may be observed shortly after application in field pea and faba bean.

Weeds, Rates and Staging:

*Merge* adjuvant (sold separately for *Ninja* and *Viking Skien*; included in *Odyssey NXT II*) must be used at a rate of 0.5 L per 100 L of spray solution.

At 17.3 grams per acre, *Odyssey NXT II* and *Ninja* plus 26 mL per acre of *Phantom* will control:

- Grasses - 1 to 4 main stem leaves, until tillers are visible:
  - Barnyard grass
  - Persian darnel
  - Wild oats
  - Green foxtail
  - Volunteer cereals (wheat excluding CLEARFIELD varieties, barley, oats)

- **Broadleaf Weeds - cotyledon to 4 leaf stage unless otherwise indicated:**

- Chickweed
- Cleavers (up to 4 whorls)
- Flixweed
- Green smartweed
- Hemp-nettle\*
- Lamb's-quarters\*\*\*
- Redroot pigweed
- Russian thistle†
- Shepherd's-purse
- Stinkweed
- Stork's-bill
- Volunteer canola (not CLEARFIELD varieties)

- Volunteer tame mustard (not CLEARFIELD oilseed (*B. juncea*) varieties)<sup>NQ</sup>
- Wild buckwheat\*
- Wild mustard

\* Suppression only in field peas and CLEARFIELD lentils.

\*\* Suppression only in field peas, not controlled in CLEARFIELD lentils.

\*\*\* Suppression only.

† Suppression only in CLEARFIELD lentils. Not labelled for control in peas with *Ninja*.

**Note:** DO NOT apply *Imazamox/Imazethapyr* more than once or follow it with any other product containing imazamox or imazethapyr in the same year.

Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** 40 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE medium* droplets or larger.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                   | Movement                          | Spectrum          | WSSA Group |
|-------------------|-----------------------------------------|--------------------------|-----------------------------------|-------------------|------------|
| imazamox          | POST (foliar) with slight soil activity | ALS Amino Acid inhibitor | Toward Areas of Growth (Symplast) | Broadleaf & grass | 2          |
| imazethapyr       | POST (foliar) with some soil activity   | ALS Amino Acid inhibitor | Toward Areas of Growth (Symplast) | Broadleaf only    | 2          |

## Effects of Growing Conditions:

DO NOT spray if temperatures of 5°C are forecast within 3 days of application. Treat crops during warm weather when weeds are actively growing and soil moisture is adequate for rapid growth. Under cool or dry conditions, control of some weeds may be severely reduced.

## Tank Mixes:

### Herbicides†:

- **In field peas, CLEARFIELD lentils, faba beans and soybeans:**
  - *Caziva Ultra Q*, *Assure II* or *Yuma* (154 to 304 mL per acre).

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

† **Note:** The above mixes are those listed on the *Odyssey NXT II* label only. No tank mixes are listed on the *Ninja* and *Viking Skien* labels.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product..

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall within 3 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze treated canola or soybean or cut for hay. Field pea may be fed to livestock 30 days after application. DO NOT harvest forage or cut for hay.
- **Pre-harvest Interval:** DO NOT apply within 60 days of harvesting faba bean, field pea, and lentil. DO NOT apply within 85 days of harvesting soybean.

- **Re-cropping Interval:** Field pea, lentil, CLEARFIELD canola, oats, barley, field corn\*, chickpea, soybean and spring wheat may be seeded the first full season after application. Flax\*\*, canola, canaryseed, durum wheat and sunflower may be seeded the second full season after application. The manufacturers recommend that a field bio-assay (a test strip grown to maturity) be conducted the year before growing any crops other than those listed above.
  - **Note:** Where less than 125 mm of accumulated rainfall is received between June 1 and September 1 in the year of application, or additionally for the brown soil zone where less than 15 mm is received in any single month through June, July and August, regardless of total rainfall during that time, delay planting tame oats by an additional year. If the same drought conditions as described above occur in either the year of application or the year following, delay planting non-CLEARFIELD canola by an additional year.
  - **Note:** As with other herbicides that break down through microbial activity, the breakdown of Imazamox/Imazethapyr may be slowed or delayed by environmental conditions such as drought, excessive cold and/or acid soils (pH less than 6.5) resulting in an increased risk of injury to rotational crops. The most tolerant crops are CLEARFIELD canola and legume crops, then cereals. Contact manufacturer for additional information on re-cropping interval.
- \* Field corn is not listed as a registered recrop option on the Ninja label.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT freeze. Store in a cool, dry place above 5°C.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the general sprayer cleaning section in the introduction.

## Hazard Rating:

⚠ Warning – Eye and Skin Irritant

⚠ Warning – Contains Allergen Sulfites

Refer to the Introduction for an explanation of the symbols.

# Imazamox/Imazethapyr + Clethodim

*This product is a prepackaged tank mix of imazamox/imazethapyr and clethodim. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

Herbicide Group

1 - clethodim

2 - imazamox,  
imazethapyr

## Company:

NewAgco (Ninja Master)

Viking (Viking Floro)

## Formulation:

The imazamox/imazethapyr + clethodim package contains the following components:

**Ninja (PCP#32995 - Ninja Master), Viking Skien (PCP# 34866 - Viking Floro):** 35% imazamox + 35% imazethapyr formulated as a water dispersible granule.

- Container size - 4 x 692 g

-plus-

**Independence (PCP#32851 - Ninja Master), Viking Clethodim (PCP# 34745 - Viking Floro):** 240 g/L clethodim formulated as an emulsifiable concentrate.

- Container size - 8 L

## Crops and Staging:

| Crop      | Leaf Stage             | Days to Harvest |
|-----------|------------------------|-----------------|
| Field pea | 1 to 6 true leaf stage | 75              |

## Weeds, Rates and Staging:

Weeds controlled by imazamox/imazethapyr at 17.3 grams per acre plus the weeds controlled by clethodim at 50 mL per acre.

Ninja Master requires the addition of Assassin or Merge adjuvant and Viking Floro requires the addition of Viking PHC adjuvant both at 0.5 L per 100 L of spray solution, which must be purchased separately.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

None registered.

**See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.**

# Imazamox / Quizalofop

Herbicide Group

1 - quizalofop

2 - imazamox

*This product is a prepackaged tank mix of imazamox and quizalofop. Information listed is restricted to Crops, Weeds, Rates and Tank Mixes. For other detailed information on the effect of growing conditions, and restrictions for the component products see the product pages listed above.*

## Company:

BASF Canada (*Solo Ultra Q*)

ADAMA Canada (*Davai Q Plus*)

## Formulation:

The *Solo Ultra Q* package contains the following components:

***Solo ADV II (PCP#33720)***: 25 g/L imazamox formulated as a solution with built in adjuvant.

- Container size - 2 x 6.5 L jugs

***Caziva Ultra Q (PCP# 34282)***: 96 g/L quizalofop-p-ethyl formulated as an emulsifiable concentrate.

- Container size - 6.16 L

-or-

The *Davai Q Plus* package has the following components:

***Davai 80 SL (PCP#32929)***: 80 g/L imazamox formulated as a solution.

- Container size - 4 L

***ADAMA Quizalofop (PCP#34935)***: 100 g/L quizalofop-p-ethyl formulated as an emulsifiable concentrate.

- Container size - 7.8 L

## Crops and Staging:

**CLEARFIELD sunflower\***: 2 to 8 leaf stage.

**CLEARFIELD lentil**: 2 to 9 node stage.

**Soybean**: Cotyledon to 4 leaf stage

**Dry bean\*\***: emergence to 2nd trifoliate leaf.

**Field pea\*\***: 1 to 6 true leaf stage.

*\*Solo Ultra Q only.*

*\*\*Davai Q Plus only.*

## Weeds Staging:

Weeds controlled by *Solo ADV* and *Davai 80 SL* (see imazamox) plus the grasses controlled by *Caziva Ultra Q* (see quizalofop) at 0.2 L per acre and *ADAMA Quizalofop* at 195 mL per acre and the stages indicated on the component product pages plus:

- Annual brome (downy, Japanese)
- Foxtail barley
- Volunteer corn

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Rates:

***Solo ADV***: 325 mL per acre

***Caziva Ultra Q***: 154 mL per acre

***Davai 80 SL***: 100 mL per acre

***ADAMA Quizalofop***: 195 mL per acre

## Tank Mixes:

**Herbicides:**

- Quizalofop (may be added to top up to a total of 300 mL per acre)

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Imazethapyr

Herbicide Group  
2 - imazethapyr

## Company:

BASF Canada (*Pursuit 240* – PCP#23844)

NewAgco (*Kamikaze* – PCP#30127)

ADAMA Canada (*Phantom* – PCP#30017)

Viking (*Viking Imazethapyr* – PCP#34747)

## Formulation:

240 g/L imazethapyr formulated as a solution.

- Container size - 2 x 3.3 L jugs per case

## Crops and Staging:

**All products:** DO NOT use in the brown or dark brown soil zones (except for use in dry bean and alfalfa under irrigated brown soils); rotational crops may be severely injured due to carry over in these soils.

| Crop      | Stage                                                                   |
|-----------|-------------------------------------------------------------------------|
| Field pea | May be applied up to the sixth above-ground node stage (6 true leaves). |

### *Pursuit, Phantom and Viking Imazethapyr only:*

| Crop                                               | Stage                                                     |
|----------------------------------------------------|-----------------------------------------------------------|
| Dry bean (pinto, pink and red varieties only)      | Up to and including the second trifoliate leaf stage      |
| Soybean (Manitoba only)                            | Up to and including the third trifoliate leaf stage       |
| Seedling alfalfa (forage or seed production)*      | Apply after the first trifoliate leaf stage.              |
| Established alfalfa (seed production only)**       | Apply before alfalfa reaches 12 inches (30 cm) in height. |
| Chickling vetch ( <i>Lathyrus</i> ) grown for seed | Apply at the 5 to 7 leaf stage.                           |

\* Apply only to seedling alfalfa that will remain in production for at least 3 years following application. Apply only once during the life of the alfalfa stand.

\*\* DO NOT apply in the last year of established alfalfa stands.

## Weeds and Staging:

**In field peas and soybean. Apply up to the 4 leaf stage, unless otherwise indicated:**

- Chickweed
- Cleavers
- Green foxtail
- Hemp-nettle
- Redroot pigweed
- Shepherd's-purse
- Smartweed
- Stinkweed
- Volunteer canola (not CLEARFIELD varieties)
- Wild buckwheat†
- Wild mustard
- Wild oats† (2 to 4 leaf stage)

**In seedling and established alfalfa:**

- Common groundsel\*†
- Green foxtail†
- Green smartweed \*
- Redroot pigweed
- Shepherd's-purse\*†
- Stinkweed
- Volunteer canola (not CLEARFIELD varieties)
- Wild mustard

**In dry bean:**

- Hairy nightshade (up to 6 leaf stage)

\* Seedling alfalfa only.

† Suppression only.

## Rates:

85 mL per acre.

A non-ionic surfactant with at least 80 percent active ingredient (*Agral 90*, *Agsurf II*, *Surf 92*) should be added at a rate of 0.25 L per 100 L of spray solution. DO NOT over apply imazethapyr, as crop injury may result.

DO NOT apply imazethapyr more than once per season or follow imazethapyr with other products containing imazethapyr in the same year. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** 40 to 160 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver proper coverage with **ASABE medium** droplets or larger.

## How it Works:

Refer to "How Do Herbicides Work" in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                          | Spectrum          | WSSA Group |
|-------------------|---------------|--------------------------|-----------------------------------|-------------------|------------|
| imazethapyr       | POST (foliar) | ALS Amino Acid inhibitor | Toward Areas of Growth (Symplast) | Broadleaf & grass | 2          |

## Effects of Growing Conditions:

DO NOT spray if temperatures of +5°C are forecast within 3 days of application. Treat crops during warm weather when weeds are actively growing and soil moisture is adequate for rapid growth. Under cool or dry conditions, control of some weeds may be severely reduced.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze or harvest seedling alfalfa within 14 days of treatment. DO NOT graze or harvest field peas for feed within 30 days. DO NOT graze other treated crops or cut for feed prior to crop maturity.
- **Pre-harvest Interval:** DO NOT apply within 60 days of harvesting field peas or chickling vetch, within 75 days of harvesting dry beans, or within 85 days of harvesting soybeans.
- **Re-cropping Interval:** Rotate to barley, spring wheat (not durum), lentils, alfalfa, field pea or CLEARFIELD canola the year following application. The manufacturer recommends that a field bioassay (a test strip grown to maturity) be conducted the year before growing any crop other than those listed above. However, yield losses within the test strips may not be noticed unless the yield can be compared to an untreated area seeded adjacent to the imazethapyr-treated strip. In case of crop failure, only field peas or CLEARFIELD canola may be replanted in the year of application.
  - *NOTE: Breakdown of imazethapyr may be slowed or delayed by environmental conditions such as drought, excessive cold and/or acid soils (pH less than 6.5) resulting in an increased risk of injury to rotational crops. The most tolerant crops are CLEARFIELD canola and legume crops, then cereals. Contact manufacturer for additional information on re-cropping intervals.*
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT freeze. If the product is exposed to temperatures below 0°C, thaw the product completely and shake the container vigorously prior to use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

There are no specific sprayer cleaning directions on the product label. The use of 'Method C' in the general section on sprayer cleaning in the introduction is recommended for other products with similar chemistry. Contact the manufacturer for more information.

## Hazard Rating:

Caution – May Cause Skin Irritation

Caution – May Cause Eye Damage

Refer to the Introduction for an explanation of the symbols.

# Inferno Trio

Herbicide Group  
2 - florasulam, flucarbazone,  
14 - carfentrazone-ethyl

## Company:

UPL AgroSolutions Canada (PCP#33273)

## Formulation:

**Inferno Trio (PCP#33273):** 141 g/L flucarbazone, 50 g/L florasulam, and 175 g/L carfentrazone-ethyl formulated as a suspension concentrate.

- Container size - 4 x 3.24 L

## Crops and Staging:

**Spring wheat (NOT including durum):** Apply to the soil surface from one week before seeding until crop emergence.

## Weeds, Rates and Staging:

**Inferno Trio:** Apply 40 mL per acre

- Will control the following weeds:
  - Cleavers
  - Cocklebur
  - Dandelion (S)
  - Flixweed<sup>†</sup>
  - Hemp-nettle (S)
  - Green foxtail
  - Kochia (including glyphosate-resistant)
  - Lamb's-quarters
  - Narrow-leaved hawk's-beard (S)
  - Redroot pigweed\*
  - Russian thistle
  - Shepherd's-purse
  - Stinkweed
  - Wild buckwheat
  - Wild mustard
  - Wild oats (S)
  - Volunteer canola\*

**Inferno Trio:** Apply 40 mL per acre plus 180 g ae per acre of glyphosate IPA, DA or K+ salts (see glyphosate) to control:

- Will control weeds above in addition to the weeds controlled by glyphosate at 180 g ae per acre (see glyphosate) and the weeds above plus:
  - Barnyard grass
  - Chickweed
  - Corn spurry
  - Cow cockle
  - Dandelion\*\*
  - Eastern black nightshade
  - Kochia (including glyphosate-resistant)
  - Night-flowering catchfly
  - Round-leaved mallow
  - Smartweed (green, Pennsylvania)
  - Stork's-bill
  - Wild tomato
  - Velvetleaf

(S) Suppression.

\* Control of weeds that emerge within 7 days following application.

\*\* Top-growth only.

**NOTE:** These products applied alone, without glyphosate, requires the addition of a non-ionic surfactant such as Ag-Surf, Agral 90, ProSurf, etc. at 0.25 L per 10 L of spray mixture.

**NOTE:** DO NOT apply more 6 g ai per acre of flucarbazone (the equivalent of 1 application) per growing season.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets. Use a spray pressure of 30 to 50 psi (207 to 345 kPa) pressure.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing                                               | Target                               | Movement                                             | Spectrum                | WSSA Group |
|---------------------|------------------------------------------------------|--------------------------------------|------------------------------------------------------|-------------------------|------------|
| flucarbazone        | POST (foliar – emerged weeds)<br>PRE (soil activity) | ALS Amino Acid Inhibitor             | Toward Areas of Growth (Symplast)                    | Broadleaf & grass       | 2          |
| florasulam          | POST (foliar) with little soil activity              | ALS Amino Acid Inhibitor             | Toward Areas of Growth (Symplast)                    | Broadleaf only          | 2          |
| carfentrazone-ethyl | POST (foliar)                                        | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Non-selective broadleaf | 14         |

## Effects of Growing Conditions:

DO NOT apply to soils with organic matter less than 2.5 percent or soil pH greater than 8. Unacceptable crop injury may occur if applied to soils saturated with water. Unacceptable crop injury symptoms and reduced weed control may be observed under temperature extremes, drought, low fertility, or plant disease.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Pre-emergent or post-plant pre-emergent** - Glyphosate IPA, DA or K+ salts only

**Note:** The above mixes are those listed on the *Inferno Trio* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze treated fields.
- **Pre-harvest Interval:** Leave 80 days between application and harvest.
- **Re-cropping Interval:** The following crops may be planted 11 months after an application of *Inferno Trio*:

| Soil Zones and Rotational Crops                |                                                                                                      |                                                                                        |              |
|------------------------------------------------|------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|--------------|
| Grey-Wooded                                    | Black                                                                                                | Dark Brown                                                                             | Brown        |
| Spring Wheat<br>Barley<br>Canola<br>Field Pea* | Wheat (spring, durum)<br>Barley<br>Canola<br>Field Pea<br>Field Bean<br>Flax<br>Soybean<br>Sunflower | Wheat (spring, durum)<br>Barley<br>Canola<br>Field Pea<br>Flax<br>Soybean<br>Sunflower | Spring Wheat |

\* Field pea may be grown the year following flucarbazone application providing the following conditions are all met:

1. Soil pH must be below 7.5
  2. Organic matter must be above 4 percent, and
  3. Precipitation must be equal to or above 10-year average (minimum 100 mm within 60 days of application in year of application)
- **Aerial Application:** DO NOT apply by air.
  - **Storage:** Store in a cool, dry place.
  - **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Residues of these active ingredients in the spray tank can cause severe injury to sensitive crops at very low concentrations. Sprayers should be cleaned out immediately before using another product.

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

When mixing with other pesticides, combine the method above with the method required for the tank mix partner if it is different from above.

## Hazard Rating:

Warning – Contains the Allergen Sulphites

Caution – Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Infinity

Herbicide Group  
6 - bromoxynil  
27 - pyrasulfotole

## Company:

Bayer (PCP#28738)

## Formulation:

37.5 g/L pyrasulfotole and 210 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 2 x 6.7 L jugs per case

## Crops and Staging:

The following crops may be treated when at the 1 leaf stage of growth until the flag leaf is just visible but still rolled:

- Barley
- Perennial ryegrass\*  
(seedling & established, grown for seed or forage)
- Red fescue and brome grass\*  
(established, grown for seed or forage)
- Timothy (seed production only)
- Triticale
- Wheat (spring, durum, winter)

**\* NOTE: Since the uses on forage grasses were registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Those who apply this use do so at their own risk.**

## Weeds, Rates and Staging:

At 0.33 L per acre the following weeds are controlled at the 1 to 6 leaf stage unless otherwise noted:

- Annual sow-thistle
- Chickweed
- Canada fleabane (seedlings up to 10 cm)\*
- Canada thistle<sup>†</sup> (up to 30 cm)
- Cleavers (1 to 3 whorls)
- Cleavers (4 to 6 whorls)\*
- Dandelion<sup>†</sup> (up to 25 cm across<sup>††</sup>)
- Flixweed (up to 10 cm)
- Hemp-nettle
- Kochia (up to 10 cm)
- Lamb's-quarters
- Narrow-leaved hawk's-beard (up to 10 cm before bolting)
- Pale smartweed
- Ragweed (common, giant<sup>†\*</sup>)
- Perennial sow-thistle<sup>†</sup>
- Redroot pigweed
- Round-leaved mallow\*\*
- Russian thistle (up to 10 cm)
- Shepherd's-purse
- Spreading atriplex (up to 10 leaf)<sup>†\*</sup>
- Stinkweed
- Stork's-bill (up to 8 leaf)<sup>\*\*\*</sup>
- Volunteer canola\*\*
- Volunteer soybean\*
- Wild buckwheat
- Wild mustard

<sup>†</sup> Suppression only.

<sup>††</sup> Spring seedlings and overwintered rosettes.

<sup>\*</sup> Suppression alone or control with the addition of ammonium sulphate (AMS)\*.

<sup>\*</sup> Add 200 g of active AMS per acre (202 grams per acre of 99 percent dry; 0.5 L per acre of 40 percent liquid; or 0.4 L per acre of 49 percent solution).

<sup>\*\*</sup> All herbicide tolerant varieties.

<sup>\*\*\*</sup> Only when mixed with 2,4-D + AMS.

DO NOT apply *Infinity* or other products containing pyrasulfotole or bromoxynil more than once in the same year.

## Application Information:

### • Water Volume:

- **Ground:** Minimum 19 L per acre
- **Aerial:** Minimum 11.4 L per acre

Higher water volumes should be used under dense crop and weed canopies to ensure thorough coverage of the target weeds.

- **Nozzles and Pressure:** Maximum 40 to 45 psi (275 to 310 kPa) with conventional flat fan nozzles. Use nozzles and pressure designed to deliver proper coverage with **ASABE medium** droplets. Angle ground sprayer nozzles forward at a 45° angle to improve coverage of vertical leaf targets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                | Movement                                                                        | Spectrum       | WSSA Group |
|-------------------|---------------|---------------------------------------|---------------------------------------------------------------------------------|----------------|------------|
| bromoxynil        | POST (foliar) | PSII Inhibitor/<br>Membrane disruptor | Little (Apoplast)                                                               | Broadleaf only | 6          |
| pyrasulfotole     | POST (foliar) | HPPD Pigment Inhibitor                | Some – both foliar and root (Apoplast)<br>Somewhat systemic (has soil residues) | Broadleaf only | 27         |

## Effects of Growing Conditions:

For best results, apply to emerged, young, actively growing weeds according to the weed stages listed. Under stressed conditions and/or heavy crop canopy, early application will result in improved weed control. Weeds growing under adverse environmental conditions such as drought will be less susceptible herbicide effects.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Wheat (spring, winter, and durum), barley and triticale:**
  - Liquid Achieve
- **Wheat (spring and durum) and barley only:**
  - Puma Advance
  - 2,4-D ester (113 g ae per acre) + AMS (see Rates)

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** DO NOT mix with fertilizers other than those indicated above.

**Note: The above mixes are those listed on the *Infinity* label only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated area within 12 hours.
- **Grazing Restrictions:** DO NOT graze treated crops or cut for hay within 25 days of application.
- **Pre-harvest Interval:** Leave at least 50 days for wheat and triticale and 45 days for barley from application to harvest of grain or straw.
- **Re-cropping Interval:** Alfalfa, barley, canaryseed, canola, field corn (Manitoba only), flax, potatoes, soybeans (Manitoba only), sunflowers, tame oats, and wheat (durum, spring) may be seeded the year following application. Field peas may be grown the season following application in black, grey-wooded and dark brown soil zones. DO NOT plant field peas the season following Infinity use in the brown soil zone soil pH is above 7.5 and precipitation was less than 125 mm from June 1st until September 1st of the year of application.
- **Aerial Application:** May be applied by air.
- **Storage:** Store product in original containers in a secure, dry area, away from other pesticides, food or feed above -20°C. If stored over winter, shake or mix well before using.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

The manufacturer recommends a cleanout process similar to "Method A" using a combination of water and ammonia solution rinses. For additional information, refer to the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Warning – Poison

Warning – Eye and Skin Irritant

Warning – Contains the Allergen Soy

Refer to the Introduction for an explanation of the symbols.

# Infinity FX

Herbicide Group  
6 - bromoxynil  
27 - pyrasulfotole  
4 - fluroxypyr

## Company:

Bayer

## Formulations:

**Infinity FX (PCP#33248):** 31.1 g/L pyrasulfotole, 174.3 g/L bromoxynil and 72 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 8.1 L, 129.6 L, 405 L

## Crops and staging:

**Wheat (spring, durum) and barley:** Apply at the 2 leaf stage of growth until the flag leaf is just visible but still rolled.

## Forage grasses for forage or seed production:

Seedling and established grasses at the 4 leaf stage until the flag leaf is just visible but still rolled

- Perennial ryegrass
- Timothy
- Red fescue (creeping red)
- Bromegrass (meadow bromegrass and smooth bromegrass)<sup>†</sup>

<sup>†</sup> **Infinity FX only**

## Weeds, Rates, Staging:

At the **Infinity FX** at 405 mL per acre, the weed species controlled by the **Infinity** label plus the following.

- Cleavers (1 to 9 whorls)\*
- Kochia (up to 15 cm in height)
- Volunteer flax (up to 12 cm)
- Chickweed (up to 8 leaf stage)
- Round-leaved mallow (1 to 6 leaf stage)
- Hemp-nettle (up to 8 leaf stage)

\* **Ammonium sulphate (AMS)** at 200 g of active ingredient per acre may be added for improved broad leaf control (202 grams per acre of 99 percent dry; 0.5 L per acre of 40 percent liquid; or 0.4 L per acre of 49 percent liquid).

## Application Information

- **Water Volume**
  - **Ground:** Minimum of 19 L per acre. Higher water volumes should be used under dense crop and weed canopies to ensure thorough coverage of the target weed.
- **Nozzles and Pressure:** Maximum 40 to 45 psi (275 to 310 kPa) with conventional flat fan nozzles. Use nozzles and pressure to deliver proper coverage with **ASABE medium** droplets. Angle ground sprayer nozzles forward at a 45° angle to improve coverage of vertical leaf targets.

## Tank Mixes

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides :

- **Spring wheat, durum, and barley:**
  - 2,4-D ester + AMS
  - *Liquid Achieve*
  - *Puma Advance*
- **Spring wheat and durum:**
  - *Horizon NG*
  - *Varro*
- **Spring wheat and barley:**
  - *Axial*

**Fertilizers:** DO NOT mix fertilizers other than those indicated above

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check label of both products to be mixed for directions. General guidelines can be found in the introduction.

**See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.**

**Hazard Rating:**

Warning – Poison

Eye and Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Insight Liquid SC

Herbicide Group  
14 - tiafenacil

**Company:**

Gowan Canada

**Formulation:***Insight Liquid SC (PCP#34689)*: 339 g/L tiafenacil formulated as a suspension concentrate.

- Container size – 6 x 2.4 L, 4 x 4.8 L

**Crops and Staging:**

**Wheat (spring, durum, winter), field corn and soybeans:** For burndown of emerged weeds prior to seeding or after seeding but prior to crop emergence.

**Fallow and non-crop areas**

**Weeds, Rates and Staging:**

Unless otherwise noted below, apply to young and actively growing weeds that are up to 12.5 cm in height.

**Weeds Controlled:**

- Kochia
- Lamb's-quarters
- Prickly lettuce\*
- Redroot pigweed
- Russian thistle
- Volunteer canola
- Waterhemp\*
- Wild buckwheat
- Wild oat

\* Suppression

**Rate:**

30 to 60 mL per acre.

Add MSO surfactant at 1 L per 100 L of spray solution.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

**Application Information:**

- **Water Volume:** Minimum 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASAE medium to coarse* droplets.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                             | Movement                                  | Spectrum      | WSSA Group |
|-------------------|---------------|------------------------------------|-------------------------------------------|---------------|------------|
| tiafenacil        | POST (foliar) | PPO inhibitor / membrane disruptor | Little movement due to rapid cell leakage | Non-selective | 14         |

**Effects of Growing Conditions:**

Burndown activity may be slowed or reduced under cloudy and/or foggy or cooler weather conditions, or when weeds are growing under drought or other stress conditions.

**Tank Mixes:**

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** None

**Insecticides:** None

**Fungicides:** None

**Fertilizers:** None

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** No restrictions on the label.
- **Grazing:** Not applicable.
- **Re-cropping:**
  - **Field corn, spring wheat (including durum):** 0 days after application.
  - **Soybeans:** 14 days after application.
  - **All other crops:** May be seeded the year following application (270 days).
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT allow product to freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method B' in the general sprayer cleaning section in the introduction.

### Hazard Rating:

No specific hazard indicated.

## Intruvix<sup>\*</sup>/Intruvix II

*Intruvix is a prepackaged tank mix of the equivalent of Express FX (Intruvix A) and the equivalent of Aim EC (Intruvix B). Information listed is restricted to Crop, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

*\* Note: This product is no longer manufactured but inventories still remain in distribution. This product may be removed from future editions.*

Herbicide Group

2 - tribenuron

4 - dicamba

14 - carfentrazone-ethyl

### Company:

FMC Corporation

### Formulation:

The *Intruvix* package contains the following components:

**Intruvix A (PCP#33462):** 60.87% dicamba and 6.52% tribenuron-methyl formulated as a water dispersible granule.

- Container size - 3.72 kg

**Intruvix B (PCP#33530):** 240 g/L carfentrazone-ethyl formulated as an emulsifiable concentrate.

- Container size - 1.2 L

**NOTE:** *Intruvix* is purchased alone but must be tank mixed with glyphosate before use.

**Intruvix II (PCP#34898):** 43.75% dicamba, 4.69% tribenuron-methyl and 11.25% carfentrazone-ethyl formulated as a wettable granule.

- Container size - 2.58 kg.

### Crops and Staging:

For application to fallow, post-harvest and 1 day prior to seeding barley, oats or wheat (spring, durum, winter).

### Rates:

**Intruvix A:** 46.5 grams per acre. DO NOT apply more than 46.5 grams per acre per year.

**Intruvix B:** 15 mL per acre

-or-

**Intruvix II:** 64.5 g per acre

Must be tank mixed with glyphosate.

*Intruvix/Intruvix II* may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

**Weeds Controlled up to 8 cm:**

- Canada fleabane
- Common ragweed
- Narrow-leaved hawk's beard
- Scentless chamomile\*

**Weeds Controlled up to 10 cm:**

- Carpetweed
- Cocklebur
- Hairy nightshade
- Jimsonweed
- Kochia
- Morning glory
- Nightshade (black, Eastern black, hairy)
- Pennsylvania smartweed
- Pigweed (prostrate, smooth, tumble)
- Purslane (common)
- Round-leaved mallow
- Shepherd's purse
- Tansy mustard
- Velvet leaf
- Waterhemp

**Weeds Controlled up to 15 cm:**

- Cleavers
- Dandelion
- Downy brome
- Flixweed
- Green foxtail
- Hemp nettle
- Lady's thumb
- Lamb's-quarters
- Persian darnel
- Redroot pigweed
- Russian thistle
- Stinkweed
- Tansy mustard
- Volunteer barley
- Volunteer canola
- Volunteer flax
- Volunteer wheat
- Wild mustard
- Wild oats

**Weeds Controlled up to 3-leaf:**

- Cow cockle

**Weeds Controlled up to 8-leaf:**

- Wild buckwheat

**Weeds Controlled up to rosette:**

- Canada thistle\*
- White cockle\*

*Intruvix/Intruvix II* tank-mixed with glyphosate (0.9 L per acre of 360 g/L ae formulation)

**Weeds Controlled up to 15 cm:**

- Annual bluegrass
- Annual sowthistle
- Narrow-leaved vetch
- Prickly lettuce
- Shepherd's purse

\* Suppression only.

**Application Information:**

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre. Higher spray volumes are required for dense weed stands. Weed control improves with the amount of coverage.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE standard S572.1* droplets by ground. Low drift nozzles may require higher pressures for proper performance.
- Optimum *Intruvix/Intruvix II* spray clouds should be 450 microns with fewer than 10% of the droplets being 200 microns or smaller.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing                                  | Target                               | Movement                                             | Spectrum                | WSSA Group |
|---------------------|-----------------------------------------|--------------------------------------|------------------------------------------------------|-------------------------|------------|
| Tribenuron          | POST (foliar)                           | ALS Amino Acid Inhibitor             | Toward growth areas of plant (symplast)              | Broadleaf only          | 2          |
| Dicamba             | POST (foliar) with slight soil activity | Synthetic auxin                      | Moves throughout the plant (symplast)                | Broadleaf only          | 4          |
| Carfentrazone-ethyl | POST (foliar)                           | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (symplast) | Non-selective broadleaf | 14         |

**Effects of Growing Conditions:**

Weed control is optimized when the product is applied to actively growing weeds. Warm, moist growing conditions promote active weed growth and enhance the activity of *Intruvix/Intruvix II* by allowing maximum foliar uptake and contact activity. Weeds hardened off by environmental stress such as cold weather, drought stress or excessive heat may not be adequately controlled or suppressed, and regrowth may occur.

*Intruvix/Intruvix II* applied to pre-seed to fields that are stressed by severe conditions such as drought, low fertility, saline soils, water-logged soils (soils at or near field capacity), disease or insect damage may result in crop injury. Drought, disease or insect damage following application may also result in crop injury, grade or yield loss.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- Glyphosate (182 g ae per acre).

DO NOT use with tank additives that alter the pH of the spray solution.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

### Restrictions:

- **Rainfall:** If rain occurs soon after application, control may be reduced. Environmental conditions that slow the drying of the spray mixture on the foliage may increase the time required for absorption.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Not applicable.
- **Grazing:** None.
- **Re-cropping:** Fields treated with *Intruvix*/*Intruvix II* in the spring or as chemfallow may be seeded to any crop the following season. Fields treated with *Intruvix*/*Intruvix II* in the fall may be seeded in spring to canola, corn, lentils, oats, spring barley, soybeans, wheat (spring or durum) or white beans. Contact manufacturer for specific application timing restrictions.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Not for use or storage in or around the home. Store in original containers only. Keep container tightly closed. Store in a cool, dry place. Store this product away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

### Hazard Rating:

Danger – Poison

Warning – Contains the allergens milk and sulfites

Refer to the Introduction for an explanation of the symbols

***See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.***

# IPCO Bifecta EZ

Herbicide Group  
5 - metribuzin  
14 - flumioxazin

## Company:

Interprovincial Cooperative Limited (*IPCO Bifecta EZ* - PCP#34589)

## Formulation:

347 g/L metribuzin and 77.6 g/L flumioxazin formulated as a suspension concentrate.

- Container size – 2 x 10 L

## Crops and Staging:

Apply before planting, during planting, within 3 days of planting - but before the crop emerges, or in the fall prior to seeding the crop indicated.

| Crop                              | Application Rate (per acre) |                              |
|-----------------------------------|-----------------------------|------------------------------|
|                                   | Spring/Early Summer         | Fall (Post-Harvest/Burndown) |
| Soybean                           | 356 mL                      | 356 mL                       |
| Lentils, field peas, spring wheat | 356 mL                      | 356 mL to 506 mL             |
| Post-harvest fall burndown        | N/A                         | 506 mL                       |
| Fallow cropland                   | 506 mL                      | N/A                          |
| Bare ground in non-crop areas     | 506 mL                      | 506 mL                       |

DO NOT apply to fine-textured soils such as clays.

DO NOT use on muck soil.

DO NOT apply to fields with greater than 5% organic matter.

Injury may occur if:

- *IPCO Bifecta EZ* is applied to sandy soils with less than 2% organic matter.
- *IPCO Bifecta EZ* is applied to soils with pH of 7.5 or greater.
- Soybeans are planted less than 1.5 inches deep and lentils, field peas and spring wheat are planted less than 1 inch deep.

Tillage conducted after application may reduce residual efficacy on target weeds.

DO NOT make more than one application of this product or other products containing metribuzin or flumioxazin per year.

## Weeds, Rates and Staging:

Unless otherwise noted below, apply to young and actively growing weeds.

### Weeds Controlled:

- Barnyard grass
- Canada fleabane
- Carpetweed\*\*
- Chickweed
- Cleavers
- Cocklebur
- Common ragweed
- Dandelion
- Downy brome
- Foxtail (green, yellow)
- Jimsonweed/devil's trumpet\*\*
- Kochia
- Lamb's-quarters
- Nightshade (Eastern black, hairy)
- Pigweed (green, prostrate, redroot, Palmer, waterhemp)
- Russian thistle
- Shepherd's-purse
- Smartweed (green, lady's thumb)
- Velvetleaf
- Volunteer canola\*
- Wild buckwheat
- Wild mustard
- Yellow woodsorrel

\* Suppression

\*\* Pre-emergent only

## Application Information:

- **Water Volume:**
  - **Ground only:**
    - **Soybeans:** Minimum 60 L per acre.
    - **Other crops:** Minimum 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE medium* droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active Ingredient | Timing                                    | Target                             | Movement                                      | Spectrum          | WSSA Group |
|-------------------|-------------------------------------------|------------------------------------|-----------------------------------------------|-------------------|------------|
| metribuzin        | PPI (soil active) POST (foliar)           | PSII Inhibitor/ Membrane disruptor | Little foliar; upward soil applied (Apoplast) | Broadleaf & grass | 5          |
| flumioxazin       | PRE (surface) with residual soil activity | PPO Inhibitor/ Membrane disruptor  | PRE: Upward in plant (Apoplast)               | Broadleaf only    | 14         |

## Effects of Growing Conditions:

Many weather-related factors, including splashing or heavy rains or irrigation or cool conditions at or near crop emergence, may result in soybean injury in treated fields. Application after the soybeans have begun to crack, or are emerged, will result in severe crop injury.

## Tank Mixes:

Tank mixes with glyphosate do not require the addition of a surfactant. All other tank mixes must be applied with crop oil concentrate at 0.5 to 1.0 L per acre or a non-ionic surfactant at 0.25% v/v.

Tank mix products applied at label rates unless otherwise indicated.

### Herbicides:

- **All Crops and Fallow:**
  - Glyphosate (*Credit Xtreme* only)
- **In Soybeans:**
  - *BlackHawk*
  - 2,4-D Ester, *Enlist 1*
  - *Enlist Duo* (2,4-D tolerant soybeans only)
  - *Phantom 240* (see imazethapyr)
- **In Field Peas and Lentils:**
  - *GoldWing*
- **For Spring Wheat:**
  - *BlackHawk*
  - *GoldWing*
  - *Conquer II*
- **In Fallow:**
  - *BlackHawk*
  - 2,4-D Ester
  - Dicamba
- **Post-Harvest/Fall Burndown prior to the spring seeding of:**
  - **Soybeans, field Pea, Lentil, Spring wheat:**
    - *BlackHawk*
  - **Soybeans only**
    - 2,4-D Ester

## Restrictions:

- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** DO NOT harvest soybeans with 100 days of application to soybeans, 70 days of application to field peas, lentils, or 60 days of application spring wheat.
- **Grazing:** MUST NOT be grazed by livestock or cut for greenfeed within 21 days of application or cut for hay within 50 days of application to soybean. DO NOT graze or otherwise cut field peas for feed within 40 days of application. DO NOT graze or otherwise cut wheat for feed within 52 days of application. DO NOT graze or otherwise cut lentils for feed.
- **Re-cropping:**

| IPCO BIFECTA EZ Rate (mL per acre) | Crop                                                        | Rotational Interval |
|------------------------------------|-------------------------------------------------------------|---------------------|
| 356                                | Soybean, field corn, chickpea, field pea                    | Immediately         |
|                                    | Spring Wheat, lentils [small red and large green varieties] | 7 days              |
|                                    | Winter wheat, durum wheat                                   | 4 months            |
| 445 to 506                         | Soybean, field corn, chickpea, field pea                    | Immediately         |
|                                    | Spring wheat                                                | 7 days              |
|                                    | Winter wheat                                                | 4 months            |
|                                    | Lentils [small red and large green varieties]               | 6 months            |

All other crops not listed may be seeded after 12 months with a successful field bioassay result.

- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store in a cool, dry, secure place.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Sprayers used to apply *IPCO Bifecta EZ* should be cleaned out thoroughly each day after use. All nozzles, screens and filters should be removed and cleaned after applying this product. Refer to 'Method A' found in the general sprayer cleaning section in the introduction. See label for detailed cleaning instructions. DO NOT use ammonia with chlorine bleach.

## Hazard Rating:

Caution – Poison

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# IPCO Trigon

*This product is a prepackaged tank mix of carfentrazone, bromoxynil, and clomazone.*

*Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Herbicide Group**  
**14 - carfentrazone**  
**6 - bromoxynil**  
**13 - clomazone**

## Company:

Interprovincial Cooperatives Ltd.

## Formulation:

The *IPCO Trigon* package contains the following components:

**IPCO C-Zone (PCP#33580):** 240 g/L carfentrazone formulated as an emulsifiable concentrate.

- Container size - 1.2 L

**IPCO/Co-op Brotex 4AT (PCP#33554/33828 – IPCO/Co-op Octagon):** 480 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 9.7 L

**IPCO Clomazone (PCP#33910):** 360 g/L clomazone formulated as a microcapsule suspension.

- Container size - 10 L

## Crops and Staging:

**Canola:** Prior to seeding the crop.

## Weeds and Staging:

**Weeds controlled by the bromoxynil + carfentrazone-ethyl co-pack plus:**

- Extended suppression of cleavers emergence.

## Rates:

**Note:** Maximum ONE APPLICATION per year of this or other products containing clomazone.

**IPCO C-Zone:** 15 mL per acre.

**IPCO/Co-op Brotex 4AT:** 118 mL per acre.

**IPCO Clomazone:** 125 mL per acre.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

## Herbicides:

- Glyphosate (label rates).

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Kerb SC

Herbicide Group  
3 - propyzamide

## Company:

Corteva Agriscience

## Formulation:

**Kerb SC (PCP#30264):** 400 g/L propyzamide formulated as a suspension concentrate.

- Container size - 2 x 10 L

## Crops and Staging:

Apply to the following established crops between October 1 and freeze-up or very early spring\*. Temperatures should be above freezing at time of application but should not exceed 12°C after application or a reduction in control may be observed. Applications are more effective if followed by a rain. Contact manufacture for specific staging and application guidelines prior to application.

Established alfalfa, bird's-foot trefoil, and established pastures\*\*.

\* Early spring application for seed alfalfa only.

\*\* **Severe stand thinning** may occur to pastures consisting primarily of crested wheatgrass, meadow fescue and timothy.

- Some thinning (10 to 15 percent) may occur with tall fescue and creeping red fescue.

## Weeds, Rates and Staging:

Apply in late fall or very early spring (seed alfalfa only) prior to the emergence of weeds.

**Established grass or grass/legume pastures for control of foxtail barley:**

- **Brown, dark brown or gray wooded soils:** 0.45 L per acre.
- **Black soils:** 0.56 L per acre.

**Established Alfalfa<sup>†</sup> and bird's foot trefoil<sup>†</sup>:**

| Weed                                         | Rate (L per acre)   |
|----------------------------------------------|---------------------|
|                                              | <b>Kerb SC</b>      |
| Annual grasses, volunteer cereals, wild oats | 0.89 L <sup>†</sup> |
| Quackgrass, orchardgrass, timothy, chickweed | 1.13 to 1.62* L     |
| Dodder (fall application only)               | 1.62 L              |

Note that complete control may not be achieved.

\* Maximum 1.13 L per acre with spring application. Low temperatures and adequate moisture following application are needed for efficacy.

<sup>†</sup> Including fall application on spring seeded crops.

**Caution:** DO NOT use on soils with more than 6 percent organic matter. DO NOT apply to soils prone to flooding. DO NOT apply to pastures that contain high proportions of timothy, crested wheat grass or meadow fescue. Consult the manufacturer for other forage grass species sensitivities to Kerb SC.

## Application Information:

- **Water Volume:** 120 to 200 L per acre.
- **Nozzles and Pressures:** Maximum 30 to 40 psi (200 to 275 kPa) with conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing            | Target                                                              | Movement          | Spectrum          | WSSA Group |
|-------------------|-------------------|---------------------------------------------------------------------|-------------------|-------------------|------------|
| propazomide       | PRE (soil active) | Long-chain Fatty Acid Inhibitor/<br>Membrane & cell wall production | Little (apoplast) | Broadleaf & grass | 15         |

## Effects of Growing Conditions:

Dry soil conditions at time of weed emergence may result in reduced control. Approximately 3 inches of total precipitation is required for adequate activation. Best results when soil temperatures are low but above freezing.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** Surface applications are most effective if followed by 0.5 to 1 inch (1.25 to 2.5 cm) of rain within 2 days of application. Avoid application when heavy rain is forecast.
- **Restricted Entry Interval:** DO NOT re-enter treated areas for 24 hours.
- **Grazing Restrictions:** DO NOT graze or harvest for livestock feed within 90 days of the 1.62 L per acre rate of *Kerb SC*, and 60 days of application for lower rates.
- **Re-cropping Interval:** May be replanted to leafy vegetable (except Brassica vegetables) crops after 30 days of treatment and root or tuber vegetables within 90 days of treatment. DO NOT re-plant to any other crops within 1 year of treatment.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place. DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Keep out of reach of children

Refer to the Introduction for an explanation of the symbols.

# Korrex II

(this referring text to be removed in the 2028 edition)  
see Florasulam + dicamba

Herbicide Group  
2 - florasulam  
4 - dicamba

# Laudis

Herbicide Group  
27 - tembotrione

## Company:

Bayer (PCP#31721)

## Formulation:

420g/L tembotrione formulated as a suspension concentrate.

- Container size - 3.6 L

## Crops and Staging:

Corn (field and sweet): 2-leaf up to and including 8-leaf stage.

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds up to the 6-leaf stage.

**Note:** Maximum of ONE APPLICATION may be made with this product per year in sweet corn. Maximum of TWO APPLICATIONS at least 10 days apart may be made with this product per year in field corn.

| Weeds                                                                                                                                         | Rate (mL per acre) |
|-----------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| Common lamb's-quarters, common ragweed, redroot pigweed, velvetleaf                                                                           | 60                 |
| Above weeds plus: Kochia                                                                                                                      | 73                 |
| Above weeds plus: Canada fleabane (up to 10 cm height or diameter), giant ragweed, green foxtail (up to 2 tillers), waterhemp, wild buckwheat | 90                 |

A repeat application at 60 mL per acre will provide control or suppression of late emerging weeds listed above for the same rate. A repeat application at 90 mL per acre will provide control or suppression of late emerging weeds plus control of wild buckwheat and green foxtail. Add *Hasten Spray Adjuvant* at 0.71 L per acre and UAN (28 percent) at 1.42 L per acre.

*Laudis* may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - *Ground:* 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets. Sprayers without drift reduction nozzles should use between 29 to 58 psi (200 to 400 kPa). Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing | Target            | Movement                  | Spectrum                                        | WSSA Group |
|-------------------|--------|-------------------|---------------------------|-------------------------------------------------|------------|
| tembotrione       | POST   | Pigment inhibitor | Apoplastic and symplastic | Selective- annual broadleaf and grasses in corn | 27         |

## Effects of Growing Conditions:

Weed control may be reduced if the application is made when weeds are dust covered or in the presence of heavy dew, fog and mist/rain or when weeds are under stress and not actively growing due to drought, heat, lack of fertility, flooding or prolonged cool temperatures. Under cool and/or dry conditions, activity may be reduced or delayed. If crop is under stress due to abnormal environmental conditions or exhibiting injury from previous herbicide applications, delay application until stress passes and after both crop and weeds have resumed growth.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **In field and sweet corn:**
  - *Xtendimax*
  - *Pardner*
- **In field corn only:** *Aatrex Liquid 480*<sup>†</sup> (follow restrictions on the *Aatrex* page)
- **In corn hybrids with Roundup Ready 2 Technology:**
  - *Roundup Weathermax*
  - *Roundup Transorb*

<sup>†</sup> DO NOT use in sweet corn.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Insecticides:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 2 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated areas for 12 hours.
- **Grazing Restrictions:** DO NOT graze or feed to livestock for 45 days after treatment.
- **Pre-harvest Interval:** Leave 45 days between application and harvest.
- **Re-cropping Interval:** Winter wheat, soybean, field corn, sweet corn, spring wheat, potato the year after treatment. Dry beans may be seeded 22 months after treatment.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT contaminate water, food or feed by storage or disposal. Keep in original container during storage. Store the tightly closed container away from feeds, seeds, fertilizers, plants and foodstuffs. DO NOT use or store in or around the home.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Caution – Poison

Warning – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Lorox L

Herbicide Group  
5 - linuron

## Company:

Tessenderlo Kerley Inc. (PCP#16279)

## Formulations:

480 g/L linuron formulated as a suspension concentrate.

- Container size - 10 L

## Crops, Rates and Staging:

*Note: Maximum application volume of 16,000 L of product per person per day for any use.*

**Pre-emergent surface (not incorporated) applications for use on loam to clay soils only:**

|           | Rate (L per acre)   |                     |
|-----------|---------------------|---------------------|
|           | Soil Organic Matter |                     |
|           | less than 2 percent | from 2 to 5 percent |
| Potatoes* | 0.72                | 1.5                 |

\* Application must be made after all soil disturbance (dragging, hilling) is complete for the season and before the crop emerges.

If used on sandy soils, severe crop injury may result.

Seed the crop at least 2 inches (5 cm) deep. Make only one application per year to field crops.

**Post-emergent applications only:**

| Crop                                                                                                                                     | Stage                                                                                  | Lorox L<br>(L per acre) |
|------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|-------------------------|
| Shelterbelts (caragana, green ash, Siberian and American elm, Manitoba maple, poplar, willow, white spruce, Colorado spruce, Scots pine) | Apply as an overall spray to dormant stock or as a directed spray if buds have broken. | 1.82                    |
| Short Rotation Intensive Poplar                                                                                                          | Apply as a directed spray under plants that have been established for 1 year or more   | 1.82                    |

## Weeds and Staging:

### • Post-Emergence:

- Apply when annual broadleaf weeds are in the 2 to 4 leaf stage and when green foxtail is in the 1 to 3 leaf stage.
- In shelterbelts, apply when weeds are less than 4 inches (10 cm) tall.

### • When tank mixed with MCPA amine in cereals, the following weeds are controlled:

- Buckwheat (tartary, wild)
- Chickweed
- Corn spurry
- Cow cockle
- Flixweed
- Green foxtail (suppression possible)
- Hemp-nettle
- Lamb's-quarters
- Ragweed (common, giant)
- Redroot pigweed
- Shepherd's-purse
- Smartweed (green, lady's thumb)
- Stinkweed
- Stork's-bill

### • Pre-emergent surface treatments and Post-emergent applications in shelterbelts:

- Sufficient moisture (1 to 2 inches or 3 to 5 cm) in the form of rainfall or irrigation is necessary within 7 to 10 days of a pre-emergence application or poor weed control will result.
- Barnyard grass\*
- Common chickweed
- Common groundsel†
- Corn spurry†
- Dandelion (seedlings only)†
- Foxtail (green, yellow)\*
- Goosefoot
- Knotweed
- Kochia†
- Lamb's-quarters
- Pigweed (prostrate†, redroot)
- Plantain (seedlings only)†
- Purslane
- Ragweed (common)
- Shepherd's-purse
- Smartweed (annual)
- Sow-thistle (annual, perennial† seedlings only)
- Stinkweed
- Wild buckwheat
- Wild radish†
- Witch grass
- Wormseed mustard

\* Suppression

† Not registered with Lorox L.

## Application Information:

- **Water Volume:**
  - *Pre-emergent surface:* 81 to 162 L per acre.
  - *Shelterbelts and short rotation intensive poplar:* 90 to 180 L per acre.
- **Nozzles and Pressure:** 25 to 40 psi (175 to 275 kPa) when using conventional stainless steel flat fan nozzles for post emergent applications. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with a minimum of **ASABE medium** droplets. DO NOT apply using hand held or boomless nozzle systems.
- **Screens:** Use a 50 mesh or coarser line strainers and screens.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                             | Target                                | Movement                                         | Spectrum             | WSSA Group |
|-------------------|------------------------------------|---------------------------------------|--------------------------------------------------|----------------------|------------|
| linuron           | PPI (soil active)<br>POST (foliar) | PSII Inhibitor/<br>Membrane disruptor | Little foliar;<br>upward soil applied (Apoplast) | Broadleaf &<br>grass | 5          |

## Effects of Growing Conditions:

In post-emergent applications the best weed control occurs when temperatures are moderate, when relative humidity is high and when soil moisture is adequate. Injury to cereals (crop lightening) will occur when the crop is under stress because of drought or disease. This injury is worse when the product is applied at advanced leaf stages. In pre-emergent surface treatments, rainfall or irrigation (1 to 2 inches or 3 to 5 cm) is required to move linuron into the root zone of germinating seeds.

Insufficient moisture will result in poor weed control. Drought conditions after application will result in little to no weed control. If rainfall does not occur within 7 to 10 days of application and prior to crop emergence, a shallow rotary hoeing (0.75 to 1.5 inches per 2 to 4 cm) should be made to mix the top layer of soil to help activation. Avoid covering treated ground with un-treated soil. If unusually heavy rain follows application, severe crop injury may result from herbicide in the root zone of the crop. DO NOT use on sandy soils or severe crop injury will result.

## Tank Mixes:

**Herbicides:** None registered.

**Fertilizers:** None registered.

**Insecticides:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label for post-emergent applications; required interval may be up to 8 hours. Pre-emergent applications require rainfall for activation. Contact manufacturer for more information.
- **Restricted Entry Interval:**

| Crop               | Application timing | Post Application Activity | REI and/or PHI |
|--------------------|--------------------|---------------------------|----------------|
|                    |                    | All other activities      | 12 hrs         |
| Potatoes           | Pre-emergence      | All tasks                 | 4 days         |
| Shelterbelts       | Pre-emergence      | All tasks                 | 6 days         |
| Sweet white lupins | Pre-emergence      | All tasks                 | 3 days         |

- **Grazing Restrictions:** DO NOT graze treated crops or cut for feed prior to crop maturity.
- **Pre-harvest Interval:** N/A
- **Re-cropping Interval:** If the intended potato crop fails, fields treated with pre-emergent surface applications of *Lorox L*, may be seeded back only to potatoes. Till the soil thoroughly before reseeded. DO NOT retreat field with a second application of *Lorox L*. No other restrictions 1 year after treatment.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT store liquid Linuron formulations at temperatures below 5°C. *Lorox L* may be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to the general section on sprayer cleaning in the introduction.

# MCPA

## Herbicide Group 4 - MCPA

### Company and Formulation

|                                     | PCP# (Product Name) |            |            |             |                            |

\* Formulated as a solution

\*\* Formulated as an emulsifiable concentrate

### Crops, Rates and Staging:

The maximum safe rates for various crops are given below. Higher rates used for harder to control weeds (see "Weeds, Rates and Staging") may cause crop injury. Application rates for individual products may vary from those listed. Refer to the label for product specific use rates. Rates greater than those for harder to control weeds may cause crop injury. When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

| Crop                                                   | Stage                                                                                                                                             | Maximum Rate (L per acre) |                      |         |
|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|----------------------|---------|
|                                                        |                                                                                                                                                   | Amine 500                 | Amine or Ester 600   | Na Salt |
| Wheat (spring and durum), barley                       | 4 leaf to just before flag leaf emergence.                                                                                                        | 0.45                      | 0.42 (E)             | 0.81    |
| Oats                                                   | 3 leaf to just before flag leaf emergence. <sup>††</sup>                                                                                          | 0.45                      | 0.36                 | 0.81    |
| Spring rye                                             | 4 leaf to just before flag leaf emergence.                                                                                                        | 0.45                      | 0.42                 | 0.81    |
| Flax (NOT solin - low linolenic acid flax)             | 2 inches (5 cm) in height to prebud stage. Apply at 2 to 4 inches (5 to 10 cm) in height for maximum crop tolerance.                              | 0.4                       | 0.28 (E) or 0.34 (A) | 0.71    |
| Winter wheat (WW), fall rye (FR)                       | In spring, apply from the time growth commences until the early flag leaf stage.                                                                  | 0.45                      | 0.42                 | 0.81    |
| Corn                                                   | As a broadcast spray up to 6 to 7 inch (15 to 18 cm) tall or 6 leaf stage. Up to 3 weeks before tasseling as a directed spray using drop nozzles. | 0.45                      | 0.37 (Amine only)    | 0.61    |
| Peas                                                   | Vines 4 to 7 inches (10 to 18 cm) long. For short-statured, determinate flowering peas, apply at the early stages within this range.              | 0.22*                     | 0.17 (Amine only)    | 0.36*   |
| Cereals underseeded to alfalfa (not Flemish varieties) | Apply when the majority of seedling legumes are in the 1 to 3 trifoliate leaf stage.                                                              | 0.22                      | 0.19 (Amine only)    | 0.4     |
| Underseeded alsike, ladino and red clover              | Apply when the majority of seedling legumes are in the 1 to 3 trifoliate leaf stage.                                                              | 0.28                      | NR                   | 0.4     |

| Crop                                                                                          | Stage                                                                                                                                                                          | Maximum Rate (L per acre) |                      |         |
|-----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|----------------------|---------|
|                                                                                               |                                                                                                                                                                                | Amine 500                 | Amine or Ester 600   | Na Salt |
| Red clover <sup>†</sup><br>Seedling (seed and forage)<br>Established <sup>†</sup> (seed only) | <b>Seedlings:</b> 1 to 3 trifoliate stage.<br>DO NOT feed to livestock in the first year.<br><b>Established:</b> Apply at the breaking of dormancy in the spring up to 7.5 cm. | 0.23                      | 0.19 (Amine only)    | NR      |
| Grass pastures                                                                                | Spring or fall.                                                                                                                                                                | 1.42                      | 1.13 (E) or 1.42 (A) | 0.71    |
| Seedling forage** grasses (not for seed)                                                      | Apply from the 3 leaf stage to the shot blade stage.                                                                                                                           | 0.45**                    | NR                   | NR      |
| Established forage** grasses (not for seed)                                                   | Apply in the spring up to the shot blade stage or in the fall after harvest.                                                                                                   | 0.45**                    | NR                   | NR      |

(E) or (A) indicates Ester or Amine formulations. NR = Not Registered

\* The rates given are lower than the registered rates for peas. Less than the maximum label rates are recommended because of crop injury concerns.

\*\* MCPA is NOT registered for use on forage grasses grown for forage seed.

<sup>†</sup> Nufarm MCPA Amine only.

<sup>††</sup> Use the lowest rate of MCPA Amine 600 on oats between the 3 and 6 leaf stage.

## Formulation Characteristics:

| Formulation | Risk of Vapour Drift | Activity on Weeds | Risk of Crop Injury |
|-------------|----------------------|-------------------|---------------------|
| LV Ester    | Medium               | Fast              | Medium              |
| Amine       | Very Low             | Medium            | Low                 |
| Salts       | Very Low             | Slow              | Very Low            |

## Weeds, Rates and Staging:

Apply at lower rates when weeds are small (2 to 4 leaf stage) and actively growing. Higher rates are needed when weeds are larger, in heavy populations, or growing under stressful conditions (excessively cold, hot, dry or wet).

NOTE: The following rates are a general range for all products. Rate ranges for individual products may differ slightly. Consult the product label for specific rates for each application.

+ Not controlled by Na salt formulations

### Susceptible weeds:

- **Amine 500 formulations – 0.28 to 0.45 L per acre**
- **Amine and Ester 600 formulations – 0.24 to 0.36 L per acre**
- **Na formulations – 0.5 to 0.81 L per acre.**
  - Burdock
  - Cocklebur
  - Flixweed (late fall applications or small seedlings)
  - Kochia
  - Lamb's-quarters
  - Mustards (except dog and tansy)
  - Prickly lettuce
  - Ragweed
  - Russian pigweed
  - Shepherd's-purse
  - Stinkweed
  - Wild radish
  - Wild sunflower

### Harder to control weeds:

- **Amine 500 formulations – 0.45 to 0.71 L per acre.**
- **Ester 600 formulations – 0.42 to 0.61 L per acre.**
- **Na formulations – 0.81 to 1.1 L per acre.**
  - Annual sow-thistle
  - Biennial wormwood
  - Bluebur+
  - Common peppergrass
  - Curled dock
  - Flixweed (overwintered rosettes prior to bolting)
  - Goat's-beard+
  - Goosefoot+
  - Hemp-nettle (suppression only)
  - Mustard (including dog, tansy and tumble)
  - Plantain
  - Purslane+
  - Redroot pigweed
  - Smartweed (annual)
- **Top growth control only (rates as for harder to control weeds):**
  - Blue lettuce
  - Bindweed (field, hedge)
  - Canada thistle
  - Corn spurry+
  - Dandelion+
  - Gumweed
  - Field horsetail+
  - Hoary cress
  - Leafy spurge
  - Perennial sow-thistle
  - Russian thistle+

## Application Information:

- **Water Volumes:**
  - *Cereals, flax, pastures, forage grasses:* 40 to 81 L per acre.
  - *Peas:* Minimum 61 L per acre.
  - *Cereals Underseeded to Forage Legumes:* 61 to 81 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| MCPA              | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Best weed control occurs when temperatures are above 21°C (daytime) or 10°C (night time) and humidity is above 70 percent. DO NOT apply if temperature exceeds 27°C. If applying to flax, injury and a delay in maturity may result from application under hot or humid conditions. Extremely hard water may reduce performance or cause problems in spraying the product.

## Tank Mixes:

### Herbicides:

- **In Wheat and barley:**
  - Linuron and *Sencor* (500 amine only).
- **In Oats:**
  - Linuron (500 amine only)
  - Not all brands are labelled for tank mixing. Check the product label prior to use for registered mixes and rates. Follow all precautions and restrictions on both labels.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** Liquid nitrogen (28-0-0) may be used in place of water as a carrier with certain amine formulations for application in spring to winter wheat or fall rye.

**Note: The above mixes are those listed on the MCPA labels only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 6 hours of MCPA Na salt, 4 hours of MCPA amine, or 2 hours of MCPA Ester application will reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze within 7 days of application.
- **Re-cropping Interval:** No restrictions the year after application.
- **Aerial Application:** Some products may be applied by air to specific crops. Check the label for detailed instructions.
- **Storage:** MCPA Ester may be frozen. DO NOT freeze MCPA amine or MCPA sodium salt.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No specific cleaning procedures are indicated on the label. Based on products with similar chemistry, 'Method B' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product, may provide adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

Warning – Poison

Refer to the Introduction for an explanation of the symbols.

# MCPB / MCPA

Herbicide Group  
4 - MCPB, MCPA

## Company:

Interprovincial Cooperative Limited (*Clovitox Plus* – PCP#24336)

Nufarm Agriculture (*Tropotox Plus* – PCP#8211)

Loveland Products Canada (*Topside* – PCP#22003)

## Formulation:

375 g/L MCPB present as a sodium (Na) salt and 25 g/L MCPA present as potassium (K) or sodium (Na) salt and formulated as a solution.

- Container size - 10 L

## Crops, Rates and Staging:

Registered for all products:

- *Apply 1.11 to 1.72 L per acre. Apply only that needed to control the target weeds:*

| Crop                                                      | Stage                                                                      |
|-----------------------------------------------------------|----------------------------------------------------------------------------|
| Pea                                                       | 3 to 6 expanded leaves.                                                    |
| Clover (alsike, ladino, red, white Dutch, wild white)     | Monofoliolate to 3 trifoliolate leaf stage (with or without a cover crop). |
| Oats, wheat, rye or barley (alone or as a companion crop) | 2 leaf to flag leaf stage.                                                 |
| Field corn                                                | 45 cm high to the start of tasseling – use drop nozzles.                   |
| Established pasture                                       | After grazing or cutting when weeds have regrown to a susceptible stage.   |

## Seedling Forage Grasses:

- *Apply at 1.11 to 1.42 L per acre from the 2 to 4 leaf stage:*
  - Bromegrass (smooth, meadow)
  - Fescue (altai, red, meadow, tall)
  - Green needlegrass
  - Reed canarygrass
  - Timothy
  - Wheatgrass (crested, creeping intermediate, northern, pubescent, slender, stream-bank, tall, western)
  - Wild rye (altai, Russian)

Registered for *Tropotox Plus* and *Clovitox Plus* only:

- Seedling alfalfa for seed production\* at the 3 to 6 trifoliolate stage.

NOTE: Seedling alfalfa vigour may be reduced in the year of treatment, however, the crop recovers and yield will not normally be affected.

**\* Since this use is registered under the User Requested Minor Use Label Expansion program, the manufacturers assume no responsibility for herbicide performance. Users of this treatment on seedling alfalfa do so at their own risk.**

Maximum ONE APPLICATION per year of these and other products containing the active ingredients MCPA/MCPB.

## Weeds, Rates and Staging:

| Weeds                                                                                                                              | Stage                         | Rate (L per acre) |
|------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|-------------------|
| Lamb's-quarters, mustards (ball, wild, wormseed), stinkweed                                                                        | Seedlings                     | 1.11              |
| Annual sow-thistle*, hemp-nettle*, redroot pigweed, ragweed, shepherd's-purse, volunteer rapeseed (including canola), wild radish* | Seedlings                     | 1.72              |
| Curled dock, perennial sow-thistle**, plantain                                                                                     | Rosette                       | 1.72              |
| Bull thistle                                                                                                                       | Rosette to early bud          | 1.72              |
| Buttercup (creeping, tall), field bindweed                                                                                         | In spring during rapid growth | 1.72              |
| Canada thistle                                                                                                                     | 6 inches (15 cm) to early bud | 1.72              |
| Horsetail*                                                                                                                         | 6 inches (15 cm)              | 1.72              |

\* Suppression only

\*\* Top growth control only

## Application Information:

- **Water Volume:**
  - *Clovitox Plus*: 71 to 91 L per acre.
  - *Tropotox Plus, Topside*: 61 to 81 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE coarse* droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| MCPB & MCPA       | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Damage to peas or seedling forage legumes may occur if the crop is sprayed when under drought or disease stress. Under extremely hot or humid conditions, crop injury may be severe. DO NOT apply when temperatures are over 27°C. Best activity on weeds occurs in warm weather.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:**
  - *Field com*: A Restricted Entry Interval of 9 days after application is required.
  - *For all other registered crops*: DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze crop treated with *Topside* or cut for hay. DO NOT graze or cut seedling forage grasses in the year of treatment. Cereals treated with *Tropotox* or *Clovitox* may be used for grazing or cut for greenfeed or hay 30 days after application. Forage legumes and peas treated with *Clovitox* may be used for animal feed 30 days after application. Withdraw meat animals from fields treated with *Tropotox* or *Clovitox* at least 3 days before slaughter.
- **Re-cropping Interval:** A minimum rotational crop plant back interval of 12 months must be observed for all crops other than those registered for use with MCPA or MCPB. Phenoxy herbicides can persist in soils for weeks, particularly if dry or cool weather persists. DO NOT seed sensitive crops immediately after spraying.
- **Aerial Application:** *Clovitox* may be applied by air to established pasture and cereal crops (not underseeded to clover).
- **Storage:** DO NOT freeze.
- **Buffer Zones:**
  - Hand-held or backpack sprayers, inter-row hooded sprayers and spot treatments are exempt from buffer zone requirements.
  - Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No specific cleaning procedures are indicated on the label. Based on products with similar chemistry, 'Method B' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product, may provide adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

*Clovitox Plus*:

Danger – Poison

Danger – Corrosive to Eyes

*Tropotox Plus & Topside*:

Caution – Poison

*Tropotox Plus*:

Warning – Contains the Allergen Caseinate (Milk)

Refer to the Introduction for an explanation of the symbols.

# Mecoprop-p

Herbicide Group  
4 - mecoprop-p

## Company:

Loveland Products Canada (*Mecoprop-P* – PCP#27891)

## Formulation:

150 g/L mecoprop-p present as potassium salt formulated as a liquid.

## Crops and Staging:

Spring wheat (including durum), barley and oats: 3 leaf to flag leaf stage.

## Weeds, Rates and Staging:

Apply *Mecoprop-P* at 2.2 to 2.8 L per acre to weeds from the 2 to 4 leaf stage. Use the high rate for weeds in an advanced stage of growth.

- Black medic
- Canada thistle (top growth control only)
- Chickweed
- Cleavers
- Clover (volunteer)
- Corn spurry
- Lamb's-quarters
- Plantain
- Wild mustard

## Application Information:

- **Water Volume:** 81 to 121 L per acre.
- **Nozzles and Pressure:** Maximum 40 psi (275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE coarse* droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| mecoprop          | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Apply in warm weather under good growing conditions. Avoid spraying in very hot weather or in drought conditions.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Grazing Restrictions:** DO NOT graze or feed treated crop to livestock prior to crop maturity.
- **Re-cropping Interval:** No restrictions the year after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** DO NOT freeze.
- **Buffer Zones:**
  - Hand-held or backpack sprayers, inter-row hooded sprayers and spot treatments are exempt from buffer zone requirements.

| Application method | Buffer Zones (metres <sup>†</sup> ) Required for the Protection of: |                  |                     |
|--------------------|---------------------------------------------------------------------|------------------|---------------------|
|                    | Aquatic Habitats of Depths                                          |                  | Terrestrial habitat |
|                    | Less than 1 m                                                       | Greater than 1 m |                     |
| Ground only*       | 1                                                                   | 0                | 5                   |

See the Key to Product Pages in the introduction for an explanation of the different habitats.

\* Buffer zones can be reduced by 70 percent when using shrouds and by 30 percent when using cones mounted less than 12 inches from the crop canopy.

<sup>†</sup> Distance measured as metres from the downwind edge of the spray boom to sensitive habitat.

## Sprayer Cleaning:

No specific cleaning procedures are indicated on the label. Based on products with similar chemistry, 'Method B' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product, may provide adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

Caution – Poison

Refer to the Introduction for an explanation of the symbols.

# Metolachlor

Herbicide Group  
15 - metolachlor

## Company:

Syngenta Canada (*Dual II Magnum* – PCP#25729)  
UPL AgroSolutions Canada (*Komodo* – PCP#33599)  
Sharda Cropchem (*Metallica* – PCP#34054)  
NewAgco (*Stallion* – PCP#34334)

## Formulation:

915 g/L s-metolachlor and r-metolachlor formulated as an emulsifiable concentrate.

- Container size - 2 x 10 L

## Crops and Staging:

### Pre-plant incorporated.

**Pre-emergent:** In areas with good rainfall or under irrigation, Metolachlor may be applied as a pre-emergence surface treatment. At least 0.5 inches of water (1.25 cm) is required within 10 days of application for proper activity.

Refer to product label for more specific information on timing and rates of applications for each crop type.

- Corn (field, sweet, silage)
- Potatoes
- Sweet white lupins
- Dry beans (navy, kidney, pinto)\*†
- Soybeans\*

\* Beans should be planted at least 4 cm deep to avoid crop injury. Dry bean varieties vary in their tolerance to metolachlor. Test a limited acreage on all new varieties first.

## Weeds, Rates and Staging:

**Pre-emergent and Pre-Plant Incorporated Treatments:** Apply 0.47 to 0.7 L per acre prior to weed emergence.

- Barnyard grass
- Redroot pigweed\*
- Waterhemp (in soybeans, high rate only)\*†
- Foxtail (green, yellow)
- Yellow nutsedge\*\*
- Witch grass
- Nightshade (American, Eastern black)

\* Suppression only.

\*\* Pre-plant incorporated treatment only.

Use higher rates on heavy textured soils or when high populations of weeds are expected.

DO NOT apply to soils with less than 1 percent or greater than 10 percent organic matter.

Maximum ONE APPLICATION per year of this or other products containing the active ingredient s-metolachlor.

† **NOTE:** Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. Users of this product for these uses do so at their own risk.

## Application Information:

- **Water Volume:** A minimum of 60 L per acre.
- **Nozzles:** Use 30 to 45 psi (200 to 300 kPa) when using conventional flat fan nozzles.
- **Screens:** Use 50 mesh screens.
- **Incorporation:** Apply to a firm seed bed free of large clods or lumps. If using tandem disks, set disks to work the soil at a depth of 4 inches (10 cm) and operate at a speed of 6 km per hour (4 miles per hour). If using an S-tine cultivator, set the implement to work the soil to a depth of 4 inches (10 cm) and operate at a speed of 10 km per hour (6 miles per hour). Incorporation equipment should include rolling or western harrows.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                         | Target                          | Movement                   | Spectrum          | WSSA Group |
|-------------------|------------------------------------------------|---------------------------------|----------------------------|-------------------|------------|
| metolachlor       | PPI, PRE (surface) with residual soil activity | Long-chain Fatty Acid Inhibitor | Little movement (Symplast) | Broadleaf & grass | 15         |

## Effects of Growing Conditions:

A moderate rainfall or equivalent irrigation (0.5 inches) is required within 10 days to activate pre-emergent surface treatments. If rain does not occur, a shallow cultivation or use of a rotary hoe is necessary. Drought conditions that persist after any application may reduce annual grass control. On sandy soils, heavy rainfall following application may cause leaching of *Dual II Magnum*, resulting in reduced weed control.

## Tank Mixes:

### Herbicides:

- **In corn:** AAtrex and glyphosate in both PPI and pre-emergent applications.
- **In soybeans:** Sencor, and glyphosate, in both PPI and pre-emergent applications.

**Fertilizers:** May be applied with liquid fertilizer. May be impregnated onto dry bulk fertilizers (except nitrate fertilizers, superphosphate fertilizers or limestone).

**Insecticides:** None registered.

**Note:** The above mixes are those listed on the *Dual II Magnum* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** When applying as a pre-emergent surface treatment, 0.5 inches (1.25 cm) of rain or irrigation is required after application for proper activity.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze the treated immature crop or cut for hay. In corn, immature means before ear emergence.
- **Pre-harvest Interval:** DO NOT harvest corn within 80 days of post-emergent application.
- **Re-cropping Interval:** In the year of treatment, seed only corn, soybeans, white beans, potatoes, snap beans, lima beans, peas, sweet white lupins, or (a minimum of 4.5 months after application) winter cereals.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen.
- **Buffer Zones:** Leave a buffer zone of 29 metres between last spray swath and the edge of important wildlife habitats such as wetlands, sloughs and water bodies.

## Sprayer Cleaning:

No detailed cleaning procedures are indicated on the label. Use a commercial all purpose spray sprayer cleaning product for adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

Warning – Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Metribuzin

Herbicide Group  
5 - metribuzin

## Company:

Bayer (*Sencor 75 DF, Sencor 480 F*)  
UPL AgroSolutions Canada (*Tricor 75 DF, Tricor LQ*)  
ADAMA Canada (*Squadron*)  
Sharda CropChem Canada (*Buzzin 70 WDG; Mextrix SC; Meter 75DF*)  
NewAgco (*Meteor*)  
Viking (*Viking Metribuzin*)

## Formulations:

*Sencor 75 DF* (PCP#17242); *Squadron* (PCP#32081); *Tricor 75 DF* (PCP#30661); *Meter 75DF* (PCP#33932); *Meteor* (PCP#34370) ; *Viking Metribuzin* (PCP# 34789):

75% metribuzin formulated as a dispersible granule.

- Container sizes:
  - *Sencor 75 DF, Tricor 75 DF* - 4 x 2.5 kg
  - *Squadron* - 4 x 5 kg
  - *Meter 75DF* - 2.5 kg
  - *Meteor, Viking Metribuzin* - 2 x 5 kg

*Buzzin 70 WDG* (PCP#32756): 70% metribuzin formulated as wettable granule.

- Container size - 2.5 kg

*Metrix SC* (PCP#32876), *Tricor LQ* (PCP#33911), *Sencor 480 F* (PCP#26280): 480 g/L metribuzin formulated as suspension concentrate.

- Container sizes:
  - *Metrix SC* - 4 x 5 L
  - *Tricor LQ* - 2 x 9.46 L
  - *Sencor 480 F* - 5 L

## Crops and Staging:

**Barley and wheat (spring and durum only, except *Sencor 480 F* and *Viking Metribuzin* which is spring only):** Post-emergence (POST) 2 to 5 leaf stage.

**Chickpea\*:** Up to 2.5 inches (6 cm) in height, when vines have 1 to 3 above ground nodes.

**Note:** application past recommended growth stage may result in severe crop injury.

**Faba bean, lentil<sup>†</sup>, soybean\*\*\*:** Preplant incorporated (PPI) (only in a tank mix with *Treflan EC*).

**Lentil\*:** Single or split post-emergent applications\*\* - up to 6 inches (15 cm) of vine length. For maximum crop tolerance, apply at the 1 to 4 above ground node stage.

**Peas (field only):** Preplant incorporated (PPI) (when tank mixed with *Rival* or *Treflan EC*). Post-emergence (single or split applications\*\*) - up to 6 inches (15 cm) of vine length. For short-statured, determinate flowering peas, apply at the early stages within this range.

**Potato (except *Belleisle* or *Tobique*)\*\*\*:** Pre-emergence (PRE) in sprinkler irrigation systems (apply only in a tank mix with *Eptam Liquid EC* for both systems).

**Potato (except *Atlantic*, *Belleisle*, *Eramosa*, *Tobique* and red-skinned or early maturing varieties)\*\*\*:** Early post-emergence (up to 4 inches or 10 cm in height).

**Shelterbelts:** PPI only in a tank mix with *Treflan EC*.

<sup>†</sup> Fall application only.

\* DO NOT use on lentils, peas or chickpeas seeded less than 2 inches (5 cm) deep or in soils with less than 4 percent organic matter.

\*\* Under certain field or weather conditions a split application may provide better weed control and crop tolerance than single applications. The first application should be made at the cotyledon to 2 leaf stage of the weeds. The second application should be made when a second flush of weeds have emerged or if weeds which were more advanced at the time of the first application have started to show regrowth. The split applications are normally 7 to 10 days apart.

\*\*\*Consult manufacturer or seed supplier for varietal tolerances to metribuzin applications in soybean and potato.

## Crops and Rates:

| Crop                                     |                                                             | Rates                        |                        |                                                       |

| Shelterbelts†                            |                                                             | 162                          | 173                    | 243                                                   |

\* See labels for details.

† Only in tank mix with liquid trifluralin only.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

Post-emergence applications should be made when weeds are small – 2 inches (5 cm) in height or diameter.

Split applications (post-emergence on lentils and peas) – 1<sup>st</sup> application at cotyledon to 2 leaf stage of weeds.

The 2<sup>nd</sup> application (if necessary) 7 to 10 days after the first.

The following rates are based on the 75 WDG formulations. Check the table in Crops and Rates for corresponding rates for other formulations.

- **Post-emergence at 81 grams per acre:**

- **Weeds controlled in spring wheat, barley, field pea and suppressed in lentil:**

- Chickweed
  - Green smartweed
  - Hemp-nettle\*  
(suppression in all crops)
  - Lamb's-quarters
  - Stinkweed
  - Volunteer canola
  - Wild mustard

- **Additional weeds controlled in spring wheat and barley only:**

- Lady's-thumb
  - Redroot pigweed

- **Post-emergence at 111 grams per acre:**

- **Weeds controlled in spring wheat, barley, field pea, and suppressed in lentil and chickpea:**

- Ball mustard
  - Corn spurry
  - Hemp-nettle
  - Tartary buckwheat

- **Additional weeds controlled in spring wheat and barley only:**

- Common groundsel
  - Night-flowering catchfly
  - Wormseed mustard

- **Post-emergence at 152 grams per acre:**
    - *Weeds controlled in spring wheat and barley:*
      - Henbit
      - Russian thistle
    - *Weeds controlled in potatoes only:*
      - *Weeds listed for 111 grams per acre rate above plus:*
        - Lady's-thumb
        - Redroot pigweed
        - Shepherd's-purse
  - **Preplant Incorporated in faba beans, lentils, field pea and soybean (see "Crops and Rates:" above). Must be applied in tank mix with Treflan EC or Rival (see trifluralin page for rates\*):**
    - *Weeds controlled by either Rival or Treflan EC plus:*
      - Corn spurry (with *Rival* in peas only)
      - Kochia (with *Rival* in peas only)
      - Stinkweed
      - Green smartweed
      - Russian thistle (with *Treflan* only - not in faba bean)
      - Volunteer canola
      - Hemp-nettle
      - Shepherd's-purse
      - Wild mustard
- \* Use the high rate for best control.

## Application Information:

- **Water Volume:**
  - *Preplant incorporated:* 40 L per acre.
  - *Post-emergence applications:*
    - *Cereals* - 40 L per acre.
    - *Lentils, peas, chickpeas* - 70 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets. If using conventional flat fan nozzles use a maximum of 30 to 40 psi (200 to 275 kPa) with opening no smaller than 6502, 8002 or TK2. Angle nozzles 45° forward to achieve better coverage of vertical weed targets.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens.
- **Incorporation:** All plant growth and stubble should be thoroughly worked into the soil before treatment. Apply directly to the soil surface. Two incorporations are required at right angles for thorough mixing. The first incorporation must be made within 24 hours of spraying. For fall applications, it is preferred that both incorporations be done in the fall. The second incorporation may be delayed until spring to conserve crop residue; however, both incorporations must be done the recommended depth.
- Incorporate with a tandem disc, discer or field cultivator (Vibrashank type). Set equipment to work at a depth of 3 to 4 inches (8 to 10 cm). Operate disc implements at 4 to 6 miles per hour (7 to 10 km per hour), cultivators at 6 to 8 miles per hour (10 to 13 km per hour).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                             | Target                                | Movement                                         | Spectrum          | WSSA Group |
|-------------------|------------------------------------|---------------------------------------|--------------------------------------------------|-------------------|------------|
| metribuzin        | PPI (soil active)<br>POST (foliar) | PSII Inhibitor/<br>Membrane disruptor | Little foliar; upward soil applied<br>(Apoplast) | Broadleaf & grass | 5          |

## Effects of Growing Conditions

Crop height reductions or yellowing may occur if high temperatures occur within 48 hours of application. Cold, cloudy weather or frost within 3 days of application will also aggravate injury. If frost occurs, allow 4 to 5 days for crop to recover prior to applying metribuzin. Heavy rainfall soon after application to peas, lentils and chickpeas can result in stand reduction on soils with less than 4 percent organic matter and to spring wheat and spring barley on soils with 3 percent organic matter.

## Tank Mixes:

### Herbicides:

- *In spring wheat or barley:* Dicamba, MCPA amine or 2,4-D amine.
- *In potatoes (post emergent) Tricor 75 DF and Viking Metribuzin only:* Prism SG\*
- *In potatoes (preplant incorporated):* Eptam Liquid EC (Required).
- *In faba beans, soybeans, lentils, shelterbelts (preplant incorporated):* Treflan EC (Required).
- *In peas (preplant incorporated):*
  - *Treflan EC* (spring or fall application). Required.
  - *Rival* (preplant incorporated (fall application). Required.
  - All products – 75 WDG forms at 77 grams per acre\*\* plus 0.19 L per acre MCPA sodium salt (300 g/L).

\* Consult manufacturer or seed supplier for varietal tolerances to metribuzin and Prism tank-mix applications in potato.

\*\* See corresponding rates for other formulations in the chart in "Crops and Rates"

**Insecticides:** None registered.

**Fungicides:** None registered.

**Note:** The above mixes are those listed on the metribuzin labels only.

Allow 5 days between application of metribuzin and application of other pesticides.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 6 hours may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated areas for 12 hours after application.
- **Grazing Restrictions:** DO NOT graze treated cereal crops within 30 days of application, or peas, chickpeas or lentils within 70 days of application.
- **Pre-harvest Interval:** DO NOT harvest barley, wheat or potatoes within 60 days of application. DO NOT harvest lentils, field peas within 70 days of application. DO NOT harvest chickpeas within 40 days of application.
- **Re-cropping Interval:** Preplant incorporated treatments may leave a residue in the soil that will affect succeeding crops when using higher rates of product. DO NOT seed canola, onions, celery, peppers, cole crops, lettuce, spinach, red beets, turnips, pumpkin, squash, cucumbers or melons the year after treatment. Fall seeded crops may be injured when seeded the same year as preplant or post-emergence applications of these products.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Use 'Method B' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

Caution – Poison

Refer to the Introduction for an explanation of the symbols.

## Metsulfuron

Herbicide Group  
2 - metsulfuron

### Company:

FMC Corporation (*Ally* - PCP#20214)

Albaugh (*Plotter* - PCP#34619)

NewAgco (*MPower Pro*\* - PCP#31118, *Met Pro II* - PCP# 35382)

*\* Note: This product is no longer manufactured but inventories still remain in distribution. This product may be removed from future editions.*

### Formulation:

60% metsulfuron methyl formulated as a water dispersible granule.

- Container size - 122 g
- *MPower Pro* and *Met Pro II* - 80 g

### Crops and Staging:

**Wheat (spring and durum), barley:** 2 leaf up to emergence of the flag leaf.

#### Established forage grasses for forage or seed production\*:

- Apply from the 2 leaf to flag leaf stage and before canopy is dense enough to prevent thorough leaf coverage.
  - Crested wheatgrass\*
  - Creeping red fescue\*
  - Timothy\*†
  - Intermediate wheatgrass\*
  - Orchardgrass\*

† Fall application *Ally* or *Plotter* only.

*\* NOTE - Since applications to forage grasses have been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. Application to forage grasses is at the risk of the user.*

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

### Weeds, Rates and Staging:

Apply up to 3 grams per acre to control weeds at the 2 to 4 leaf stage unless otherwise indicated.

A rate of 2 to 3 grams per acre may be used when mixing with certain other herbicides (See Tank Mixes).

Add a non-ionic surfactant such as *Agral 90*, *Ag-Surf II*, *Companion*, *Super Spreader* or *Citowett Plus* at 0.2 L per 100 L spray volume.

**Weeds controlled:**

- Ball mustard
- Bluebur
- Chickweed
- Common groundsel
- Corn spurry
- Cow cockle
- Flixweed
- Hemp-nettle
- Pigweed (prostrate, redroot)
- Scentless chamomile
- Shepherd's-purse
- Smartweed (green, lady's-thumb)
- Stinkweed
- Stork's-bill
- Tartary buckwheat
- Volunteer canola\*
- Wild mustard

**Weeds suppressed:**

- Canada thistle\*\*
- Lamb's-quarters (up to 3 in (8 cm))
- Russian thistle
- Sow-thistle (annual, perennial)\*\*
- Toadflax
- Wild buckwheat (up to 3 leaf)

\* **CLEARFIELD varieties will be controlled only with the addition of 2,4-D or MCPA.**

\*\* **Apply when thistles are less than 6 inches (15 cm) tall.**

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

**Application Information:**

- **Water Volume:** Minimum 40 L per acre.
- **Nozzles and Pressure:** No application pressures are recommended by the manufacturer. Typical application pressures for standard flat fan nozzles are from 35 to 40 psi (240 to 275 kPa). Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressures designed to deliver proper coverage with **ASABE medium** droplets.
- **Screens:** Use a 50 mesh nozzle screens and in-line filter system.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing | Target                             | Movement                       | Spectrum  | WSSA Group |
|-------------------|--------|------------------------------------|--------------------------------|-----------|------------|
| metsulfuron       | PRE    | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast) | Broadleaf | 2          |

**Effects of Growing Conditions:**

Metsulfuron may injure crops stressed by heavy rainfall, prolonged cool weather, frost conditions, wide fluctuations in day/night temperatures, drought, or water-saturated soils, either before or after application. Weed control will be reduced under dry, cold conditions.

**Tank Mixes:**

DO NOT mix the soluble bags with liquid fertilizers, substances that contain boron or substances that release free chlorine. Mixing the water soluble bags with any of these compounds will result in an insoluble substance in the tank.

**Herbicides:**

- **In wheat:**
  - *Puma Advance*
- **In wheat and barley:**
  - 2,4-D Amine or Ester (170 to 227 g ae per acre – refer to 2,4-D), plus surfactant\*.
  - MCPA Amine or Ester (0.23 to 0.38 L per acre – 600 g/L formulation), plus surfactant.
- **In creeping red fescue:**
  - *Assure II* (0.2 to 0.3 L per acre) plus *Sure-Mix* adjuvant\*.

\* **Use with the 3 grams per acre rate only.**

Consult tank mix partner labels for additional crop staging and variety restrictions.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizer:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product. Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

**Restrictions:**

- **Rainfall:** Rain within 4 hours of application of tank mixes with 2,4-D amine, 2 hours of application of tank mixes with 2,4-D ester, will reduce weed control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** No restrictions.

- **Re-cropping Interval:**

- **Caution:**

- DO NOT apply more than 3 grams per acre per year.
  - DO NOT use on highly variable soils that have large gravelly or sandy areas, eroded knolls, or calcium deposits.
  - Metsulfuron residues can persist for long periods, potentially limiting re-cropping options. Degradation of metsulfuron is dependent on the pH, moisture, and temperature of the soil. Refer to the label for details on rotation and minimum re-cropping intervals.
  - The following re-cropping intervals, based on soil pH, should be considered as guidelines only. Metsulfuron residues may affect crops for a longer period of time than outlined in the following table. Add 12 months to recommendations if less than 5 inches (130 mm) of rainfall in brown and dark brown soils or less than 10 inches (250 mm) rainfall in black or grey wooded soils in any year following application.

**Minimum Re-Cropping Interval (Months)**

| Soil PH       | Barley, Wheat | Oat*    | Canola* | Flax*   | Lentils | Canary Seed | Yellow Mustard |
|---------------|---------------|---------|---------|---------|---------|-------------|----------------|
| less than 7.0 | 10            | 10      | 10 (22) | 10 (22) | 34      | 48          | 48             |
| 7.0 -7.9      | 10            | 10 (22) | 22 (34) | 34      | 48      | 48          | 48             |

\* Figures in brackets refer to re-cropping intervals in brown and dark brown soil zones.

- On black and grey wooded soils with pH of 7.5 or less, fescue may be planted 10 months after application and alfalfa, red clover, peas and flax may be planted 22 months after application. DO NOT use on soils with pH greater than 7.9.
- Effects of metsulfuron residues on crops other than those listed in the table have not been fully evaluated. Because of the length of re-cropping restrictions and the lack of information on many rotational crops, land previously treated with metsulfuron cannot be rotated to crops other than those listed until a field bioassay confirms that residues of metsulfuron are not present. Consult the label for additional instructions on how to perform a field bioassay. Failure to follow these instructions could result in injury to subsequent crops.

- **Aerial Application:** DO NOT apply by air.

- **Storage:** Store in a cool, dry place. May be frozen.

- **Buffer Zones:**

- Handheld or backpack applications do not require a buffer.
  - Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Metsulfuron can cause severe injury to sensitive crops at very low concentrations. Sprayers used to apply metsulfuron should be flushed out immediately after metsulfuron is used. All nozzles, screens and filters should be removed and cleaned after applying this product. Refer to 'Method B' found in the general sprayer cleaning section in the introduction. DO NOT use ammonia with chlorine bleach.

## Hazard Rating:

Caution – Poison

Caution – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Muster

## Herbicide Group 2 - ethametsulfuron

### Company:

FMC Corporation (PCP#21555)

### Formulation:

75% ethametsulfuron-methyl formulated as a wettable granule.

- Container size - 320 g

### Crops, Rates and Staging:

NOT for use on yellow mustard (*Brassica alba*).

| Crop                                                                                       | Rate (g/acre) | Stage                                                     |
|--------------------------------------------------------------------------------------------|---------------|-----------------------------------------------------------|
| Canola                                                                                     | 8 to 12       | Minimum 2 leaf stage (main stem) to the start of bolting. |
| Mustards: brown & oriental condiment as well as oilseed quality ( <i>Brassica juncea</i> ) | 8             | 4 leaf stage but prior to bolting.                        |
| Ethiopian mustard ( <i>Brassica carinata</i> )                                             |               |                                                           |
| Sunflower                                                                                  | 8 to 12       | 2 to 8 leaf stage (15 to 45 cm)                           |

*Muster* applied alone requires the addition of *Agral 90*, *Agsurf II*, or *Citowett* at 0.2 L per 100 L of spray solution. When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

### Weeds, Rates and Staging:

Apply from the cotyledon to 6 leaf stage. Stinkweed must be sprayed in the 1 to 4 leaf stage

#### At the 8 grams per acre rate:

- Flixweed \*
- Hemp-nettle
- Wild mustard
- Green smartweed
- Stinkweed \*\*

#### The 12 grams per acre rate controls above weeds plus:

- Redroot pigweed \*\*
- Stinkweed

\* Spring seedlings only.

\*\* Suppression with *Muster* alone but control with *Assure II* plus *Sure-Mix*.

### Application Information:

- **Water Volume:** 40 L per acre.
- **Equipment, Nozzles and Pressure:** 30 to 40 psi (200 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE medium* droplets. Sprayer must be equipped with continuous agitation. Maintain the spray boom at 24 inches or less above the crop canopy.
- **Screens:** Use a 50 mesh or coarser nozzle screen and in-line filter system.

### How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing | Target                             | Movement                       | Spectrum  | WSSA Group |
|-------------------|--------|------------------------------------|--------------------------------|-----------|------------|
| ethametsulfuron   | POST   | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast) | Broadleaf | 2          |

### Effects of Growing Conditions:

DO NOT apply to crops that are stressed by severe conditions such as drought, low fertility, saline soils, waterlogged soils (soils at or near field capacity), disease or insect damage as crop injury may result. Less than acceptable control will occur in fields where high weed populations exist and where stressful environmental conditions prevail (drought, cold weather). Heavy rainfall soon after application may result in visual crop injury or possible yield reduction. Thin crop stands or application prior to the 2 leaf stage of canola or 4 leaf stage of brown condiment mustard and oriental mustard (condiment and oilseed types), sandy soils or soils with low organic matter may increase the severity of the injury.

## Tank Mixes:

### Herbicides:

- **Canola, brown and oriental mustards (*Brassica juncea* only):**
  - *Assure II* plus *Sure-Mix* adjuvant.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered. DO NOT mix soluble bags with liquid fertilizers.

**Note:** The above mixes are those listed on the *Muster* label only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 4 to 6 hours may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze or feed crop to livestock within 60 days of application. DO NOT graze treated sunflowers.
- **Pre-harvest Interval:** Leave 60 days from application to harvest.
- **Re-cropping Interval:** DO NOT sow wheat, barley, oats or flax within 10 months of application. DO NOT seed canola, lentils, peas, faba beans, tame mustard, alfalfa, canaryseed, dry beans, fescues or red clover within 22 months of application. All other crops must not be sown until a successful "field bioassay" is performed at 22 months after application. Growers may experience reduced yields if other crops are grown without following these guidelines.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Sprayers used to apply *Muster* should be flushed out immediately after *Muster* is used. Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

### Hazard Rating:

None indicated.

## Navius FLEX / TruRange

Herbicide Group  
2 - metsulfuron  
4 - aminocyclopyrachlor

### Company:

Envu Canada (*Navius FLEX* – PCP#30922; *TruRange* – PCP#33964)

### Formulation:

39.5% aminocyclopyrachlor and 12.6% metsulfuron formulated as a water dispersible granule.

- Container size - 8 x 1.361 kg

### Crops and Staging:

**Navius FLEX:** Rangeland or non-crop areas (i.e. rights-of-way, roadsides, industrial sites, fence lines and other non-crop areas).

**TruRange:** Rangeand and permanent pastures only.

**DO NOT** use in residential or recreational areas, where bystanders could be exposed during or after application.

**DO NOT** apply to cropland or land expected to be converted to cropland in the foreseeable future.

**Note:** The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.

Avoid application of this product in areas where the roots of desirable trees and/or shrubs may extend unless injury or loss can be tolerated. Root zone areas of desirable trees or vegetation are affected by local conditions and can extend well beyond the tree canopy.

## Weeds, and Staging:

For best results, apply to young, actively growing weeds. For woody species, apply between mid-June and mid-August after the brush has leafed out, but before the leaves begin to turn their fall colours.

**After the granules have fully dispersed, add surfactant. Either one of the following:**

- Non-ionic surfactants (i.e. *Sentry* or *Sylgard OFX-0309 Fluid*) at 0.25 L per 100 L (25 mL per 10 L) of spray solution.
- *Merge* or a crop oil concentrate (oil-surfactant blends such as *Assist*, *Score*, etc.) at 1 L per 100 L (100 mL per 10 L).
- *Hasten NT Ultra Spray* or MSO at 0.25 to 1 L per 100 L of spray solution. Use higher adjuvant rates when weed pressure is heavy or for more difficult to control weeds.

### Weeds controlled at 68 grams per acre:

- |                               |                                   |                                 |
|-------------------------------|-----------------------------------|---------------------------------|
| ◦ Bluebur                     | ◦ Kochia                          | ◦ Sweet clover (white, yellow)  |
| ◦ Buckwheat (tartary, wild*)  | ◦ Lamb's-quarters*                | ◦ Toadflax*                     |
| ◦ Canada goldenrod†           | ◦ Leafy spurge                    | ◦ Volunteer canola              |
| ◦ Canada thistle              | ◦ Mustard (ball, wild)            | ◦ (except CLEARFIELD varieties) |
| ◦ Chickweed                   | ◦ Orange hawkweed                 | ◦ White cockle                  |
| ◦ Common groundsel            | ◦ Ox-eye daisy                    | ◦ Wild carrot                   |
| ◦ Common tansy                | ◦ Pigweed (prostrate, redroot)    | ◦ Wild chervil                  |
| ◦ Common yarrow               | ◦ Rough cinquefoil†               | ◦ Wild parsnip                  |
| ◦ Corn spurry                 | ◦ Russian thistle                 | ◦ Yellow star-thistle           |
| ◦ Cow cockle                  | ◦ Scentless chamomile             |                                 |
| ◦ Dandelion                   | ◦ Shepherd's-purse                | <u>Woody Species:</u>           |
| ◦ Flixweed                    | ◦ Smartweed (green, lady's-thumb) | ◦ Smooth sumac                  |
| ◦ Giant buttercup†            | ◦ Sow-thistle (annual, perennial) | ◦ Western snowberry             |
| ◦ Hemp-nettle                 | ◦ Stinkweed                       | ◦ Wild rose                     |
| ◦ Knapweed (diffuse, spotted) | ◦ Stork's-bill                    |                                 |

### Weeds controlled at 135 grams per acre:

- *The weeds listed above plus the following woody species up to 2.5 metres unless otherwise indicated:*

|                                |                                     |                                                  |
|--------------------------------|-------------------------------------|--------------------------------------------------|
| ◦ Manitoba maple (Box Elder)   | ◦ Plains cottonwood                 | ◦ Hackberry                                      |
| ◦ Green ash                    | ◦ Poplar (balsam, black)            | ◦ Balsam fir (up to 2 metres)                    |
| ◦ Chokecherry (up to 3 metres) | ◦ Trembling aspen (up to 3 metres)  | ◦ Spruce (black, white, Norway – up to 2 metres) |
| ◦ Pin cherry (up to 3 metres)  | ◦ Willow (sandbar/ditchbank, pussy) |                                                  |

### Weeds controlled at 202 grams per acre:

- *The species listed above plus the following woody species to 2 metres tall unless otherwise indicated:*

|                                   |                               |                                                  |
|-----------------------------------|-------------------------------|--------------------------------------------------|
| ◦ Pine (Eastern white, jack, red) | ◦ Balsam fir (up to 3 metres) | ◦ Spruce (black, white, Norway – up to 3 metres) |
|-----------------------------------|-------------------------------|--------------------------------------------------|

\* Suppression only.

† Season long control only.

**DO NOT** apply more than a total of 270 grams per acre per season or apply *Escort* to the same site in the same year as *Navius FLEX/TruRange*. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

**Adjuvants:** *Navius Flex* or *TruRange* must be applied with a non-ionic surfactant such as *Sentry* or *Sylgard OFX-0309 Fluid* at 0.25 L per 100 L of spray solution.

or

A crop oil concentrate or a methylated seed oil at 1 L per 100 L of spray solution.

or

An esterified vegetable oil-based spray adjuvant such as *Hasten NT Ultra Spray Adjuvant* at 0.25 to 1 L per 100 L of spray solution. Use higher adjuvant rates when weed pressure is heavy or for more difficult to control weeds.

## Application Information

- **Water Volume:**
  - **Ground:** No specific carrier volumes are indicated for ground application but volumes could be up to 162 L per acre for herbaceous weeds and up to 810 L per acre is recommended for foliar application to woody species. See the label for details.
  - **Aerial:** Apply in 12 to 20 L per acre of water.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE coarse* droplets.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient   | Timing                               | Target                   | Movement                          | Spectrum       | WSSA Group |
|---------------------|--------------------------------------|--------------------------|-----------------------------------|----------------|------------|
| metsulfuron-methyl  | POST (foliar) also has soil activity | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf only | 2          |
| aminocyclopyrachlor | POST (foliar) also has soil activity | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only | 4          |

## Effects of Growing Conditions:

Warm, moist growing conditions promote active weed growth and enhance activity. Weeds stressed by moisture or temperature extremes (heat or cold) may be less susceptible and incomplete weed kill may result. Residual control of weeds germinating after application occurs when *Navius FLEX/TruRange* is carried into the root zone by rainfall. DO NOT apply during periods of intense rainfall or to soil saturated with water. Brush hardened off by cold weather and drought stress may not be controlled.

## Restrictions:

- **Rainfall:** Rain within 4 hours may reduce effectiveness.
- **Restricted Entry Interval:** DO NOT re-enter treated areas until sprays have dried.
- **Re-cropping Interval:** No recropping interval is indicated. Conduct a bioassay when converting pasture to annual crop land to determine tolerance to potential residues in the soil. The following restrictions apply to all plant materials, or manure from animals fed material, from areas treated with *Navius FLEX/TruRange* within the previous 18 months:
  - DO NOT apply to land used for growing susceptible crops. Manure may only be applied on rangeland.
  - DO NOT use as mulch or compost and do not apply directly on or around desirable plants.
  - Must only be used on-farm.
- **Grazing Restrictions:** No grazing or haying restrictions for non-lactating or lactating animals (including cattle, horses, sheep, and goats) when used as directed. Grazing animals do not have to be moved off the pasture or rangeland before, during or after application.
- **Aerial Application:** May be applied by air.
- **Storage:** Store in a cool, dry place. May be frozen.
- **Buffer Zones:**
  - **Contact the Saskatchewan Ministry of Environment or Manitoba Sustainable Development Department for additional permitting requirements.**
  - Hand-held or backpack sprayers and spot treatments are exempt from buffer zone requirements.
  - Observe buffer zones outlined in the label.

## Sprayer Cleaning:

*Navius FLEX/TruRange* can cause severe injury to sensitive plants at very low concentrations. Use 'Method A' in the introduction to clean sprayers immediately after using *Navius FLEX/TruRange* or directions on the label.

## Hazard Rating:

Warning – Contains the Allergens Milk and Sulfites

Refer to the Introduction for an explanation of the symbols.

# Nicosulfuron

Herbicide Group  
2 - nicosulfuron

## Company:

Corteva Agriscience (*Accent* \*, *Accent IS*)

Sharda Cropchem Canada (*Nicosh*)

Albaugh (*Primero*)

\* **Note:** This product is no longer manufactured but inventories still remain in distribution. This product may be removed from future editions.

## Formulation:

**Accent (PCP#32884), Nicosh (PCP#33227) Primero (PCP#34948):** 75% nicosulfuron formulated as a water dispersible granule.

- Container sizes:
  - *Accent* - 133.6 g (4 x 33.4 g water soluble bags per pouch)
  - *Nicosh* - 33.4 g
  - *Primero* - 480 g

**Accent IS (PCP#34410):** 54.55% nicosulfuron formulated as a water dispersible granule.

- • Container size - 6 X 270 g

## Crops and Staging:\*

**Field corn:** 1 to 8 leaf stage (six visible collars), coleoptile (short, blunt leaf) is counted as the first leaf.

**Sweet corn\*\*:** 1 to 6 leaf stage (4 visible collars).

\* **Note:** Since applications to field and sweet corn in western Canada have been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. **Application to corn is at the risk of the user.**

\*\* **Note:** Nicosulfuron is registered for use on all sweet corn varieties but tolerance may vary depending on variety. Krispy King, Jubilee and Jubilee Supersweet are the only varieties that have been tested for tolerance in western Canada. Test on small areas planted to other varieties for tolerance prior to widespread use.

## Weeds and Staging:

| Weeds                                                | Staging                                                             |
|------------------------------------------------------|---------------------------------------------------------------------|
| Barnyard grass, foxtail (green, yellow*), witchgrass | 1 to 6 leaves (up to 2 tillers)                                     |
| Quackgrass                                           | 3 to 6 leaves (with extended leaf 4 to 8 inches (10 to 20 cm) long) |
| Wild oats                                            | 3 to 6 leaves                                                       |

\* **Suppression only.**

The best control and yield response is achieved by applying at the earlier end of the leaf stage ranges.

## Rates:

**Accent, Nicosh, Primero:** 13.5 grams per acre. Add a non-ionic surfactant (*Citowett Plus*, *Agsurf* or *Agral 90*) at 0.2 L per 100 L of spray solution.

**Accent IS:** 18.5 grams per acre. Add one of the following adjuvants: non-ionic surfactant at 0.2 L per 100 L of spray solution; *Merge*, *Surjet* or *Sure-Mix* at 0.5 L per 100 L of spray solution, *Adapt Oil Concentrate* at 1 L per 100 L of spray solution. Non-ionic surfactants may be applied with 28% liquid urea ammonium nitrate (UAN) at 2 L per acre for improved performance on certain weeds.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Minimum 40 L per acre; optimum 56 to 77 L per acre.
- **Nozzles and Pressure:** 25 to 40 psi (175 to 275 kPa) when using conventional flat fan nozzles tilted forward at a 45° angle. Low drift nozzles may require higher pressures for proper performance. Use nozzles and pressures designed to deliver proper coverage with *ASABE medium* droplets.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                             | Movement                       | Spectrum | WSSA Group |
|-------------------|---------------|------------------------------------|--------------------------------|----------|------------|
| nicosulfuron      | POST (foliar) | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast) | Grasses  | 2          |

## Effects of Growing Conditions:

Poor weed control or crop injury may result if at the time of application, plants are under stress from disease, insect or nematode injury, carryover of herbicide from a previous years application, abnormally hot or cold weather, drought, water-soaked soils, hail damage or frost. Delay application until stress passes and both corn and weeds have resumed growth. When corn is injured by frost, wait 48 to 72 hours after normal growing conditions have resumed before applying nicosulfuron. Stress conditions after application may also result in injury or poor weed control.

## Tank Mixes:

### Herbicides:

- *Pardner* (0.4 L per acre) plus surfactant.

**Fertilizers:** DO NOT mix with fertilizers.

**Insecticides:** None registered. Nicosulfuron should not be applied to corn that has been treated with organophosphate insecticides. Leave 7 days between the application of nicosulfuron and that of a foliar organophosphate insecticide.

**Fungicides:** None registered.

**Note:** The above mixes are those listed on the nicosulfuron labels only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 2 to 4 hours of application may result in reduced weed control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT graze or feed treated corn forage, silage, fodder or grain for at least 30 days.
- **Pre-harvest Interval:** Leave at least 30 days in field corn and 40 days in sweet corn from application to harvest.
- **Re-cropping Interval:** Spring cereals, canola, field pea, flax, corn, potato, dry beans<sup>†</sup>, sunflower, alfalfa may be seeded 10 months from application. For all other crops a field bioassay is recommended before planting.  
<sup>†</sup> Since not all dry bean varieties have been tested for rotational crop tolerance, the first planting of each variety to previously treated fields should be limited to a small area to confirm tolerance prior to widespread recropping.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store product in original container in a secure, dry area away from other pesticides, food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

*Accent, Nicosh:*

Caution – Eye Irritant

*Accent IS:*

Warning – Contains the allergens milk and sulfates

Keep out of reach of children. Avoid breathing spray mist. Avoid contact with skin, eyes and clothing.

Refer to the Introduction for an explanation of the symbols.

# Odyssey Ultra Q

*This product is a prepackaged tank mix of Odyssey NXT II (see Imazamox/Imazethapyr) and Caziva Ultra Q (see Quizalofop). Information listed is restricted to Crop, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Herbicide Group**  
**1- quizalofop**  
**2- imazamox,**  
**imazethapyr**

## Company:

BASF Canada

## Formulation:

The Odyssey Ultra Q packages contain the following components:

**Odyssey Ultra NXT II (PCP#33678):** 35% imazamox and 35% imazethapyr formulated as a dispersible granule.

- Container size - 1 x 692 g jug

**Caziva Ultra Q (PCP#34282):** 96 g/L quizalofop-p-ethyl formulated as an emulsifiable concentrate.

- Container size - 6.16 L

**Merge adjuvant (PCP#24702):** Container size - 1 x 8.1 L

## Crops and Staging:

| Crop              | Leaf Stage | Days to Harvest |
|-------------------|------------|-----------------|
| Field pea         | 1 to 6*    | 60              |
| CLEARFIELD lentil | 1 to 9*    | 60              |
| Soybean           | 1 to 3     | 85              |
| Faba bean         | 1 to 6     | 80              |

\* Above-ground nodes.

## Weeds, Rates and Staging:

At 17.4 grams per acre *Odyssey Ultra NXT II* and 154 mL per acre *Caziva Ultra Q* controls the weeds controlled by *Odyssey NXT II* plus the additional grass weeds below from the 1 to 6 leaf stage (main stem) up to 2 tillers

- Annual brome (Japanese, downy)
- Volunteer corn
- Yellow foxtail
- Foxtail barley
- Volunteer Clearfield wheat
- Quackgrass (suppression)
- (including spring and durum)

*Odyssey Ultra Q* requires the addition of *Merge* adjuvant at 0.5 L per 100 L of spray solution.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

### Herbicides:

- Quizalofop (top up to a total quizalofop rate of 0.30 L per acre)

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Olympus

Herbicide Group  
2 - propoxycarbazone-sodium

## Company:

Bayer

## Formulation:

**Olympus (PCP#32755):** 70% propoxycarbazone-sodium formulated as a wettable granule.

- Container size - 463 g

## Crops and Staging:

**Wheat (spring, durum, winter):** Pre-seed or prior to crop emergence.

## Weeds, Rates and Staging:

**Olympus at 5.8 grams per acre plus glyphosate\* at 180 to 360 grams ae per acre controls:**

Weeds controlled up to 15 cm in height unless otherwise indicated.

### Grasses:

- Downy brome<sup>†Δ</sup>
- Foxtail barley (seedling to heading)<sup>\*\*†</sup>
- Green foxtail<sup>Δ</sup>
- Japanese brome (up to and including 2 leaf)
- Persian darnel<sup>Δ</sup>
- Volunteer wheat<sup>Δ</sup>
- Volunteer barley<sup>Δ</sup>
- Wild oats<sup>Δ</sup>

### Broadleaves:

- Canada fleabane (up to 8 cm)<sup>Δ</sup>
- Cleavers<sup>Δ</sup>
- Common ragweed<sup>Δ</sup>
- Flixweed<sup>Δ</sup>
- Hemp-nettle<sup>Δ</sup>
- Kochia<sup>ΔΔ</sup> (except glyphosate-tolerant biotypes)
- Lady's thumb<sup>Δ</sup>
- Lamb's quarters<sup>Δ</sup>
- Redroot pigweed<sup>Δ</sup>
- Russian thistle<sup>Δ</sup>
- Stinkweed<sup>Δ</sup>
- Volunteer canola (1 to 4 leaf)<sup>†</sup>
- Volunteer flax<sup>Δ</sup>
- Wild buckwheat (up to 8 cm height and 1-3 leaf)<sup>Δ</sup>
- Wild mustard<sup>Δ</sup>

\*including all salts

\*\* 360 g ae per acre of glyphosate is required for control of foxtail barley

†For more consistent control of subsequent flushes, follow an application of *Olympus* + glyphosate with an in-crop application of *Varro*. Refer to the *Varro* label for additional weeds controlled.

ΔControlled by glyphosate alone at 180 to 275 g ae per acre.

ΔΔControlled by glyphosate alone at 360 g ae per acre.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 20 L per acre
  - **Aerial:** Minimum 10 L per acre (*Note: There are restrictions on aerial application – see the note under Restrictions below*)
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets or larger. The use of 80° or 110° flat fan nozzles is recommended for optimum spray coverage. DO NOT use flood jet nozzles, controlled droplet application equipment or Sprafol equipment.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient       | Timing                              | Target                      | Movement                             | Spectrum          | WSSA Group |
|-------------------------|-------------------------------------|-----------------------------|--------------------------------------|-------------------|------------|
| propoxycarbazone-sodium | POST and PRE<br>(has soil activity) | ALS Amino<br>Acid Inhibitor | Toward areas of growth<br>(Symplast) | Broadleaf & grass | 2          |

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Pre-seed and Pre-Emergent:**
  - Glyphosate

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered. DO NOT mix soluble bags with liquid fertilizers.

## Restrictions:

- **Rainfall:** Within 4 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:** MUST NOT be grazed or fed to livestock for 71 days after treatment.
- **Pre-harvest Interval:** Leave 71 days between application and harvest.
- **Re-cropping Interval:** Barley, canola, dry beans, field peas, flax, lentils, oats, and soybeans may be grown in the season following application.
- **Aerial Application:** Note – while *Olympus* may be applied by aerial application, due to the requirement that it be mixed with glyphosate, this aerial option is only available for certain glyphosate products and then only when the field to be treated is too wet to support ground based sprayers. (See glyphosate)
- **Storage:** Store in a cool, dry place.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Warning – Contains the Allergen Milk

Refer to the Introduction for an explanation of the symbols.

# OnDeck

**Herbicide Group**  
**27 - tolpyralate**  
**6 - bromoxynil**

## Company:

Corteva Agriscience

## Formulation:

**OnDeck (PCP#34709):** 18.7 g /L tolpyralate and 186.6 g/L bromoxynil formulated as an emulsifiable concentrate.

- Container size - 2 x 6.475 L case, 414.4 L tote

## Crops, and Staging:

**Wheat (spring, durum, winter) and barley:** 1-leaf stage to jointing. Winter wheat applications can be made in the fall or spring.

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds at the 1 to 6 leaf stage.

### Weeds Controlled:

- |                                                            |                                                 |                                           |
|------------------------------------------------------------|-------------------------------------------------|-------------------------------------------|
| ◦ Annual smartweed (lady's-thumb)                          | ◦ Foxtail (green****, yellow)                   | ◦ Russian thistle (up to 10 cm in height) |
| ◦ Barnyard grass (up to 10 cm in height)                   | ◦ Hemp-nettle                                   | ◦ Shepherd's purse                        |
| ◦ Canada thistle (suppression only, up to 30 cm in height) | ◦ Kochia (up to 10 cm)**                        | ◦ Stinkweed                               |
| ◦ Chickweed                                                | ◦ Lamb's-quarters (up to 8 leaf)                | ◦ Volunteer canola                        |
| ◦ Cleavers (4 whorls)*                                     | ◦ Narrow-leaved hawksbeard                      | ◦ Waterhemp (up to 10 cm in height)       |
| ◦ Common ragweed                                           | ◦ Perennial sow thistle (up to 30 cm in height) | ◦ Wild buckwheat (4 leaf)***              |
|                                                            | ◦ Redroot pigweed                               | ◦ Wild mustard                            |
|                                                            | ◦ Round leaved mallow                           |                                           |

\*For control of cleavers up to the 6-whorl stage, apply at 435 mL per acre or the standard rate with a recommended adjuvant.

\*\*Apply at 325 mL per acre for control of lighter populations of kochia (<100 plants per m<sup>2</sup>) up to 10 cm in size. For control of kochia in heavier populations up to 15 cm in size, apply at 435 mL per acre or the standard rate with a recommended adjuvant.

\*\*\*Apply at 325 mL per acre for control of light populations of wild buckwheat (<25 plants per m<sup>2</sup>) up to the 4-leaf stage. For control of wild buckwheat in heavier populations up to the 6-leaf stage, apply at 435 mL per acre or the standard rate with a recommended adjuvant.

\*\*\*\*Apply at 325 mL per acre for control of green foxtail up to the 4-leaf stage. For control of green foxtail up to the 6-leaf stage, apply at 435 mL per acre or the standard rate with a recommended adjuvant.

## Rate:

**Standard rate:** 325 mL per acre

**High rate:** 435 mL per acre

Maximum of one application per year.

*OnDeck* can be applied in tank-mix with methylated seed oil, crop oil concentrate or high surfactant oil concentrate-type adjuvants at a minimum rate of 0.5 L per 100 L of spray solution for enhanced weed control when weed populations are high, weed staging is advanced or when weeds are stressed due to environmental conditions. Apply 0.5 to 1 L of adjuvant per 100 L of spray solution.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20-80 L per acre. Recommended 40 L per acre.
  - **Aerial:** 20 L per acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets by ground or by air.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                | Movement                               | Spectrum              | WSSA Group |
|-------------------|---------------|---------------------------------------|----------------------------------------|-----------------------|------------|
| tolpyralate       | POST (foliar) | HPPD Pigment Inhibitor                | Some – both foliar and root (Apoplast) | Broadleaf and grasses | 27         |
| bromoxynil        | POST (foliar) | PSII Inhibitor/<br>Membrane disrupter | Little (Apoplast)                      | Broadleaf only        | 6          |

## Effects of Growing Conditions:

Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur. For best results, ensure thorough spray coverage of target weeds. Under certain environmental conditions slight delay on barley development can be present; the delay is transient and will not have an impact on yield.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Post-Emergent:**
  - MCPA ester 600 (189 to 235 mL per acre)
  - 2,4-D Ester 700 (202 to 445 mL per acre)
  - *Simplicity GoDRI*
  - *Simplicity OD*
  - Pinoxaden
  - *Horizon NG*
  - Flucarbazone
  - *Traxos*
  - *Varro*

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** *OnDeck* may be applied in spray solutions containing liquid nitrogen fertilizer at up to 0.51 L per acre.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Preharvest Interval:** Do not harvest the treated mature crop within 50 days after application
- **Grazing:** Livestock may be grazed on treated crops 30 days following application. Do not cut the treated crop for hay or silage within 30 days after application.
- **Re-cropping:** The following crops may be grown 10 months after application: alfalfa, barley, bean (dry), camelina, canola, chickpeas, flax, grass (grown for seed or forage), lentils, oats, field peas, potato (not for seed), sorghum, soybean, sunflower. Winter wheat or rye (annual and fall) may be seeded 3 months after application. Corn may be replanted immediately.
- **Aerial Application:** May be applied fixed-wing or by rotary aircraft.
- **Storage:** Store this product away from food or feed. Store in original containers in a secure, dry heated storage. Do not allow contamination of seeds, plants, fertilizers or other pesticides. Do not contaminate food, feedstuffs or domestic water supplies. If containers are damaged or spill occurs, use the product immediately or contain the spill with absorbent materials and dispose of waste.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the Introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

Warning – Poison

Eye irritant and skin irritant

Potential skin sensitizer

Refer to the Introduction for an explanation of the symbols.

# Optica Trio

Herbicide Group  
4 - MCPA, mecoprop-p, dichlorprop

## Company:

Loveland Products Canada (PCP#29662)

## Formulation:

160 g/L MCPA + 130 g/L mecoprop-p + 310 g/L dichlorprop-p formulated as a solution

- Container size - 10 L

## Crops and Staging:

| Crop                                         | Stage                                                                     |
|----------------------------------------------|---------------------------------------------------------------------------|
| Barley, oats, spring wheat (including durum) | 2 to 5 leaf                                                               |
| Winter wheat                                 | Spring application only; up to 12 inches (30 cm) high (top leaf extended) |

## Weeds, Rates and Staging:

Weeds controlled at the 2 to 3 leaf stage unless otherwise indicated.

### Apply at 0.61 L per acre to control:

- Lamb's-quarters
- Volunteer canola
- Wild mustard
- Stinkweed

### Apply at 1.0 L per acre to control the weeds listed above plus:

- Canada thistle\*
- Common ragweed
- Redroot pigweed
- Cleavers (1 to 2 whorls)
- Kochia
- Wild buckwheat
- Common chickweed
- Lady's-thumb (suppression)

\* Top growth control only.

DO NOT apply *Optica Trio* more than once or follow application with any related product in the same year.

## Application Information:

- **Water Volume:** Minimum 20 L per acre.
- **Nozzles and Pressure:** 30 to 43 psi (200 to 300 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE medium* droplets or larger.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient             | Timing        | Target          | Movement                              | Spectrum       | WSSA Group |
|-------------------------------|---------------|-----------------|---------------------------------------|----------------|------------|
| dichlorprop, mecoprop-p, MCPA | POST (foliar) | Synthetic Auxin | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Less than satisfactory control may result if weeds are not actively growing such as under conditions that are extremes of hot or cold, dry or wet weather prior to spraying.

## Tank Mixes:

### Herbicides:

- **Spring wheat (including durum):**
  - *Signal* (93 mL per acre) plus supplied adjuvant.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the *Optica Trio* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT feed treated crops to milking animals or harvest for forage within 7 days of application. Meat animals grazing treated crops must be removed 3 day prior to slaughter.
- **Pre-harvest Interval:** No pre-harvest interval indicated on label when *Optica Trio* is used alone.
- **Re-cropping Interval:** No information provided on label. Contact manufacturer for information.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Keep from freezing.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No specific cleaning procedures are indicated on the label. Based on products with similar chemistry, 'Method B' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product, may provide adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

Caution – Poison

Danger – Corrosive to Eyes

Refer to the Introduction for an explanation of the symbols.

# Option 2.25 OD

*For use in Manitoba only.*

**Herbicide Group  
2 - foramsulfuron**

## Company:

Bayer

## Formulations:

**Option 2.25 OD (PCP#27424):** 22.5 g/L foramsulfuron formulated as an oil-dispersion.

- Container size - 6.3 L jug

## Crops and Staging:

Field corn at the 1 to 8 leaf stage or 5 to 6 visible collars

## Weeds and Staging:

### Annual Grasses:

- Barnyard grass (1 to 6 leaf, to early tillering)
- Foxtail, green and yellow (2 to 5 leaf, to early tillering)
- Proso millet (2 to 5 leaf, to early tillering)

### Broadleaf Weeds:

- Common chickweed (4 to 6 leaf)
- Common ragweed\* (2 to 4 leaf)
- Lamb's quarters (4 to 8 leaf)
- Nightshade, Eastern black (1 to 5 leaf)
- Redroot pigweed (1 to 7 leaf)
- Wild mustard (5 to 7 leaf)
- Wormseed mustard (5 to 9 leaf)

\* Suppression only.

## Rates:

**Option 2.25 OD:** 0.63 L per acre plus 28 percent UAN (liquid 28-0-0) at 1.0 L per acre.

**NOTE:** *Option 2.25 OD* should be tank mixed with *Banvel II* at 121 mL per acre for enhanced control of broadleaf weeds and the management of Group 2 resistant weed biotypes.

Add *Option 2.25 OD* to a half full tank, followed by *Banvel II*, then 28 percent UAN.

## Application Information:

- **Water Volume:** 60 L per acre
- **Nozzles and Pressure:** Use 25 to 40 psi (175 to 275 kPa) when using conventional 80° or 110° flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of **ASABE medium** or larger droplets.
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                               | Target                   | Movement                          | Spectrum       | WSSA Group |
|-------------------|--------------------------------------|--------------------------|-----------------------------------|----------------|------------|
| foramsulfuron     | POST (foliar) also has soil activity | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf only | 2          |

## Effects of Growing Conditions:

Under optimum conditions weed growth ceases within 1 to 3 days and yellowing of the growing point occurs in 5 to 10 days. Warm moist conditions provide for the best activity. Activity may be reduced or delayed if applied under cool and/or dry conditions or in the presence of heavy dew, fog, mist or rain or if weeds are dust covered. If the crop or weeds are under stress due to environmental conditions, delay application until the both crop and weeds have resumed active growth.

## Tank Mixes:

**Herbicides:** *Banvel II* (121 mL per acre)\*

**Insecticides:** Avoid application to corn that has been treated with organophosphorous insecticides.

**Fungicides:** None registered.

**Fertilizers:** DO NOT use any fertilizers or additives other than 28 percent UAN (1 L per acre), recommended\*.

\* *Option 2.25 OD* should be applied to corn in Manitoba as a tank-mixture with *Banvel II*. UAN 28 percent is required. See 'Rates' section above.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 6 hours may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields until residues have dried.
- **Grazing Restrictions:** DO NOT graze treated corn crops or cut for forage within 45 days of application.
- **Pre-harvest Interval:** Leave 70 days between application and harvest of grain.
- **Re-cropping Interval:** The following crops may be grown the season following application: alfalfa, barley, bean (dry common), canola, clover (red), corn (field and sweet), oats, pea, potato, soybean, timothy, spring wheat. Winter wheat may be seeded 4 months after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Keep dry.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

*Option 2.25 OD* residues in the spray tank can cause severe injury to sensitive crops at very low concentrations. Sprayers should be cleaned out immediately before using another product. Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Eye Irritant

Warning – Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Overdrive

Herbicide Group  
4 - dicamba  
19 - diflufenzopyr

## Company:

BASF Canada (PCP#30065)

## Formulation:

20% diflufenzopyr and 50% dicamba sodium salts formulated as water dispersible granules.

- Container size - 4 x 3.4 kg

## Crops and Staging:

Established permanent grass pasture, non-cropland sites and rangeland. DO NOT apply *Overdrive* on annual crops or newly seeded grasses.

**Note:** *The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.*

## Weeds and Staging:

- Biennial wormwood
- Canada thistle\*
- Dandelion\*\*
- Kochia (up to 15 cm)
- Lady's-thumb
- Lamb's-quarters
- Leafy spurge\*\*
- Perennial sow-thistle (2 to 10 leaf)
- Ragweed (common)
- Redroot pigweed
- Sweet clover\*
- Velvetleaf
- Vetch\*
- Volunteer canola (up to 4 leaf)
- Waterhemp
- Wild buckwheat

\* Top growth control.

\*\* Top growth suppression.

## Rates:

115 grams per acre.

*Merge Adjuvant* at the rate of 0.25 L per 100 L of spray solution or a non-ionic surfactant at 0.25 L per 100L of spray solution plus ammonium nitrate (UAN 28 percent) at 1.25L per 100L of spray solution must also be added. Use of an anti-foam agent is suggested.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Minimum 89 L per acre. Use higher water volumes when treating dense or tall vegetation.
- **Nozzles and Pressure:** Maximum 20 psi (150 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of application equipment and pressure that is designed to deliver an even coverage of **ASABE coarse** droplets that are less prone to drift. Non-target broadleaf plants are very sensitive to *Overdrive* drift. Avoid conditions that are conducive to drift. (See introduction for drift control suggestions).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                    | Movement                                | Spectrum       | WSSA Group |
|-------------------|---------------|---------------------------|-----------------------------------------|----------------|------------|
| dicamba           | POST (foliar) | Synthetic Auxin           | Throughout the plant (Symplast)         | Broadleaf only | 4          |
| diflufenzopyr     | POST (foliar) | Auxin transport inhibitor | To growth areas of the plant (Symplast) | Broadleaf only | 19         |

## Effects of Growing Conditions:

DO NOT spray if temperatures are expected to exceed 27°C. DO NOT spray in high humidity or fog. DO NOT spray if wind velocity exceeds 8 km per hour. Established grasses growing under stress conditions can exhibit various injury symptoms that may be more pronounced if herbicides are applied.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** Heavy rain within 4 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Grazing Restrictions:** DO NOT permit lactating dairy animals to graze fields within 7 days after application. DO NOT harvest forage or cut hay within 30 days after application. Withdraw meat animals from treated fields at least 3 days before slaughter.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place.
- **Buffer Zones:**
  - Hand-held or backpack sprayer and spot treatment DO NOT require a buffer zone from sensitive habitat.
  - Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Poison

Caution – Eye Irritant, Potential Skin Sensitizer

Warning – Contains the Allergen Sulfites

Refer to the Introduction for an explanation of the symbols.

# Oxbow

Herbicide Group

4 - dichlorprop

6 - bromoxynil

## Company:

Nufarm Agriculture Inc.

## Formulation:

**Oxbow (PCP#34883):** 435 g/L dichlorprop + 174 g/L bromoxynil formulated as an emusifiable concentrate

- Container size – 2 x 9.71 L, 116.5 L, 466 L

## Crops and Staging:

**Spring wheat, durum, barley:** 3-leaf to prior to the flag-leaf stage

**Winter wheat:** Apply in the spring from early tillering to prior to flag-leaf stage

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds up to the 4 leaf stage

### Weeds Controlled:

- |                                     |                                          |                         |
|-------------------------------------|------------------------------------------|-------------------------|
| ◦ Bluebur                           | ◦ False cleavers (4 whorl)               | thumb)                  |
| ◦ Broadleaf plantain                | ◦ Kochia (1-12 leaf)                     | ◦ Sow thistle (annual)  |
| ◦ Buckwheat (wild, tartary -8 leaf) | ◦ Lamb's-quarters (8 leaf)               | ◦ Stinkweed (8 leaf)    |
| ◦ Chickweed                         | ◦ Redroot pigweed*                       | ◦ Volunteer canola      |
| ◦ Cocklebur                         | ◦ Round-leaved mallow                    | ◦ Wild mustard (8 leaf) |
| ◦ Common ragweed                    | ◦ Russian thistle (5 cm high, 2-12 leaf) |                         |
| ◦ Cow cockle                        | ◦ Smartweed (green, pale, lady's         |                         |

\* Suppression only.

## Rate:

**Oxbow:** 0.485 to 0.648 L/acre. Use the high rate when the field has heavy weed pressure.

## Application Information:

- **Water Volume:**
  - **Ground:** 20-40 L/acre.
  - **Aerial:** Minimum 12-16 L/acre. Use higher volume for heavy crop canopy, or when the majority of weeds are cow cockle, smartweed, or pigweed.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASABE coarse droplets at a minimum by ground or air.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                                | Movement                                 | Spectrum       | WSSA Group |
|-------------------|---------------|---------------------------------------|------------------------------------------|----------------|------------|
| Bromoxynil        | POST (foliar) | PSII Inhibitor/<br>Membrane disrupter | Little (Apoplast)                        | Broadleaf only | 6          |
| Dichlorprop       | POST (foliar) | Synthetic Auxin                       | Moves throughout the plant<br>(Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Best weed control when weeds are actively growing when adequate soil moisture is present and warm temperatures prevail. Applications made under dry conditions may result in reduced control. Crops under stress from adverse environmental conditions such as frost, drought, or water saturated soils may be injured. Do not apply when daytime temperatures exceed 27°C.

## Tank Mixes:

Tank mix partners applied at label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** None registered on product label.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control. Avoid application when heavy rain is forecast.
- **Re-entry:** DO NOT re-enter treated fields for 24 hours.
- **Preharvest Interval:** Leave 60 days between application and harvest.
- **Grazing:** MUST NOT be grazed or fed to livestock for 40 days after treatment. Do not harvest forage or cut for hay within 30 days after application.
- **Re-cropping:** Grow all major crops the year after treatment.
- **Aerial Application:** May be applied by aircraft.
- **Storage:** Oxbow will solidify at temperatures below -20°C but will become useable at temperatures above 0°C
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method C' in the general section on sprayer cleaning in introduction.

## Hazard Rating:

Danger – Poison

Skin Irritant

Potential skin sensitizer

Refer to the Introduction for an explanation of the symbols.

# Paradigm PRE

Herbicide Group  
2 - florasulam  
4 - halauxifen

## Company:

Corteva Agriscience (PCP#31304)

## Formulation:

20% halauxifen present as methyl ester and 20% florasulam formulated as a water dispersible granule.

- Container size - 4 x 600 g jugs per case

## Crops and Staging:

### Pre-seed and post harvest applications:

- Prior to the planting of wheat (spring, durum, winter), oats and barley (or a maximum of 48 hours after seeding).
- Must be used in combination with a mixture of glyphosate at 180 to 1020 g ae per acre.

## Weeds, Rates and Staging:

Apply to actively growing weeds at the 1 to 8 leaf stage unless otherwise specified. Mix with glyphosate at 180 to 1020 g ae per acre.

Apply **Paradigm PRE** at 7.5 grams per acre when applied in a spring burndown or prior to winter wheat seeding in the fall in a mix with glyphosate to control or suppress the following weeds in addition to those weeds controlled by glyphosate at 180 g ae per acre (see glyphosate page):

- Canada thistle (suppression up to 30 cm)
- Chickweed
- Cleavers (1 to 9 whorl stage)
- Dandelion (seedlings and spring rosettes up to 15 cm across)
- Lamb's-quarters
- Mustard (wild)
- Shepherd's-purse

Apply **Paradigm PRE** at 10 grams per acre in a fall burndown or prior to winter wheat seeding in the fall in a mix with glyphosate to control or suppress the following weeds in addition to the weeds controlled by glyphosate at 180 g ae per acre (see glyphosate page):

*The weeds controlled or suppressed above plus:*

- American dragonhead (up to bud stage or 15 cm)
- Barnyard grass (up to 5 leaf, 2-tiller)
- Buckwheat, wild
- Canada thistle (suppression up to 30 cm)
- Cow cockle
- Dandelion (seedlings, rosettes and mature plants up to 30 cm across)
- Henbit (up to 8 leaf or 15 cm)
- Kochia\* (up to 15 cm)
- Night-flowering catchfly<sup>§</sup> (up to bolting, 15 cm in height)
- Redroot pigweed
- Round-leaved mallow (up to 6 leaf)
- Scentless chamomile<sup>§</sup> (up to the bud stage)
- Smartweed (green)
- Sow-thistle, annual<sup>§</sup>
- Sow-thistle, perennial<sup>§</sup> (up to 6 leaf)
- Stork's-bill
- Velvet leaf (up to 5-leaf)
- Volunteer alfalfa (up to 25 cm)
- Volunteer canola (all varieties)
- White cockle<sup>§</sup> (spring seedlings and over-wintered plants up to the bud stage)

<sup>§</sup> Suppression only.

\* Light to moderate infestation (up to 150 plants per square metre).

## Application Information:

- **Water Volume:** Minimum 20 to 40 L per acre. Use the higher volume when there is a heavy crop canopy or weeds are at an advanced stage.
- **Nozzles and Pressure:** Use 30 to 40 psi (200 to 275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE S572.1 coarse** droplets while maintaining good coverage of foliage.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                          | Spectrum       | WSSA Group |
|-------------------|---------------|--------------------------|-----------------------------------|----------------|------------|
| florasulam        | POST (foliar) | ALS Amino Acid inhibitor | Toward areas of growth (Symplast) | Broadleaf only | 2          |
| halauxifen        | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only | 4          |

## Effects of Growing Conditions:

Weeds and crops must be actively growing. Extreme growing conditions such as drought or near freezing temperature prior to, at or following time of application may reduce weed control. Allow 5 days from application until tillage. Soil disturbance caused by seeding may reduce control.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Preseed burndown (fall or spring):**
  - Glyphosate IPA, DMA or K+ formulations from 180 to 1020 g ae per acre (see glyphosate page for weeds controlled and conversion to product rates)

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze livestock within 7 days of application. DO NOT cut for silage or hay within 21 days of application.
- **Pre-harvest Interval:** DO NOT harvest crops within 60 days of application.
- **Re-cropping Interval:** Registered crops above can be planted any time after application. Alfalfa, barley (spring), canola (including oilseed quality *B. juncea*), corn, dry bean, fababean, field pea, flax, mustard (oriental, brown and yellow), oats, soybeans, sunflower can be seeded a minimum of 10 months after treatment (typically the first season following spring application) or fields can be summerfallowed. Lentils may be grown 22 months after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a heated, dry place in original container.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction using All Clear Tank Decontaminator as the detergent component.

## Hazard Rating:

Caution – Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Permit WG

Herbicide Group  
2 - halosulfuron

## Company:

Gowan Canada (PCP#31210)

## Formulation:

72.6% halosulfuron methyl ester formulated as water dispersible granules.

- Container size - 567 g

## Crops and Staging:

### Pre-emergent surface<sup>†</sup>:

- **Dry beans\***: Apply 14.2 to 19 grams per acre after seeding but prior to soil cracking.

### Post-emergent foliar<sup>†</sup>:

- **Dry beans\***: Apply 14.2 to 28.3 grams per acre at the 2 to 4 trifoliate leaves, prior to flowering. Maximum of one application per year.
- **Corn (sweet, popcorn)**: Apply 19 to 28.3 grams per acre up to the 10 to 12 leaf stage. A second application of 19 grams per acre may be applied with drop nozzles if needed, avoiding contact with the whorl. Maximum of two applications per year.
- **Corn (Field)**: Apply 19 to 37.6 grams per acre up to the 10 to 12 leaf stage. A second application of up to 37.6 grams per acre may be applied with drop nozzles if needed. Maximum of two applications per year.
- **Proso millet**: Apply 14 to 19 grams per acre from the 2 leaf up to prior to head emergence. Maximum one application per year.

\* **Note: not all varieties have been tested for tolerance. For untested varieties apply to a small area to determine tolerance prior to use on a large scale.**

<sup>†</sup> **Applications to emerged weeds require the addition of a non-ionic surfactant with 80 percent or greater active ingredient content at the lowest labelled rate for the surfactant regardless of crop stage.**

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

**Weeds controlled with pre-emergent soil applications of 14 to 19 grams per acre unless otherwise indicated:**

- |                                 |                                          |                                 |
|---------------------------------|------------------------------------------|---------------------------------|
| ◦ Annual sunflower              | ◦ Lamb's-quarters                        | ◦ Spiny amaranth                |
| ◦ Canada fleabane               | ◦ Plantain (broadleaf)                   | ◦ Stinking mayweed              |
| ◦ Chickweed (common)            | ◦ Pigweed (redroot, smooth)              | ◦ Wild mustard                  |
| ◦ Cocklebur                     | ◦ Prickly lettuce                        | ◦ Wild radish                   |
| ◦ Common groundsel              | ◦ Purslane*                              | ◦ Velvetleaf                    |
| ◦ Corn spurry                   | ◦ Ragweed (common)                       | ◦ Volunteer canola              |
| ◦ Creeping yellow cress         | ◦ Round-leaved mallow                    | ◦ (except CLEARFIELD varieties) |
| ◦ Flower-of-an-hour             | ◦ Shepherd's-purse                       | ◦ Yellow nutsedge**             |
| ◦ Fringed (Northern) willowherb | ◦ Smartweed (lady's-thumb, Pennsylvania) |                                 |
| ◦ Jimsonweed                    |                                          |                                 |

\* **Suppression only**

\*\* **Requires a rate of 28.3 to 37.6 grams per acre rate for suppression based on the maximum rate for each crop.**

**Weeds controlled from the 3 leaf stage (unless otherwise indicated) to the maximum weed height indicated:**

| Weed                      | Maximum Weed Height (cm) |                     |
|---------------------------|--------------------------|---------------------|
|                           | 14 to 19 g/acre          | 28.3 to 37.6 g/acre |
| Annual sunflower          | 31                       | 38                  |
| Bindweed (Hedge)*         | 5                        | 10                  |
| Cocklebur                 | 23                       | 36                  |
| Common milkweed*          | 13                       | 31                  |
| Corn spurry               | 5                        | 10                  |
| Creeping yellowcress      | 5                        | 10                  |
| Fleabane (Philadelphia)   | 8                        | 8                   |
| Flower-of-an-hour         | 8                        | 31                  |
| Horsetail*                | 5                        | 10                  |
| Pigweed (redroot, smooth) | 8                        | 15                  |
| Ragweed (common)          | 23                       | 31                  |

| Weed                                           | Maximum Weed Height (cm) |                     |
|------------------------------------------------|--------------------------|---------------------|
|                                                | 14 to 19 g/acre          | 28.3 to 37.6 g/acre |
| Ragweed (giant)                                | 8                        | 15                  |
| Shepherd's-purse                               | 5                        | 10                  |
| Smartweed (lady's-thumb, Pennsylvania)         | 5                        | 10                  |
| Spiny amaranth                                 | 8                        | 15                  |
| Wild mustard                                   | 8                        | 15                  |
| Wild radish                                    | 8                        | 15                  |
| Velvetleaf                                     | 23                       | 31                  |
| Volunteer canola (except CLEARFIELD varieties) | 8                        | -                   |
| Yellow nutsedge                                | 8 to 15                  | 8 to 31             |

\* Suppression only.

### Application Information:

- **Water Volume:** Minimum 40 to 55 L per acre. Use the higher volume when there is a heavy crop canopy or weeds are at an advanced stage.
- **Nozzles and Pressure:** Use 40 psi (275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE medium** droplets while maintaining good coverage of foliage.

### How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing    | Target                             | Movement                       | Spectrum  | WSSA Group |
|-------------------|-----------|------------------------------------|--------------------------------|-----------|------------|
| halosulfuron      | PRE, POST | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast) | Broadleaf | 2          |

### Effects of Growing Conditions:

Moisture is necessary to activate the herbicide in soil for effective weed control. Dry weather following applications may reduce effectiveness. Extremes in environmental conditions such as temperature, moisture, soil conditions, and cultural practices may affect activity.

Optimum activity is experienced between 12 to 24° C when weeds are actively growing. Weeds may not be actively growing and as a result reduced activity will occur when temperatures are below 8° C or above 27° C.

### Tank Mixes:

#### Herbicides:

- **In dry beans:**
  - *Eptam Liquid EC* (1.72 to 2.12 L per acre) as pre-plant incorporated tank mix – see *Eptam Liquid EC* page for incorporation instructions.
- **In field corn only:**
  - 2,4-D (label rates)
  - *Accent* (label rates)
  - *AAAtrex* (label rates)
  - Dicamba (label rates)
  - Glyphosate in glyphosate tolerant corn only (label rates)

**Insecticides:** None registered.

NOTE: The application of foliar organophosphate insecticides to treated crops can increase the risk of crop injury.

**Fungicides:** None registered.

**Fertilizers:** UAN or high grade ammonium sulfate (21-0-0) may be used if a tank mix partner requires it as an additive.

DO NOT use liquid fertilizer as a spray carrier.

**Note: The above mixes are those listed on the *Permit WG* label only.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product..

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Activity of foliar applications may be reduced if rainfall or irrigation occurs within 4 hours. Pre-emergent surface applications will benefit from some rainfall but excessive rainfall (greater than 1 inch or 2.5 cm) shortly after application may result in injury, especially when seeding is shallow.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze or cut corn for livestock greenfeed within 30 days of the last application. Allow 30 days for sweet corn and 65 days for popcorn or grain corn from the last application to foliage and the harvesting of silage. Proso (crown) millet may be grazed immediately after treatment. DO NOT cut proso (crown) millet for hay within 37 days of application or feed straw within 50 days of application.
- **Pre-harvest Interval:** DO NOT harvest dry beans within 30 days of post-emergent applications. DO NOT harvest proso (crown) millet within 50 days of application. There is no pre-harvest interval indicated for grain corn.
- **Re-cropping Interval:** Delay seeding the following crops for the interval indicated:
  - *Dry common beans* – no delay required
  - *Field corn* - 1 month
  - *Cereals (wheat barley and oats)* - 2 months
  - *Potatoes, peas forage legumes and soybeans* - 1 year
  - *Canola and sunflowers* - 2 years
  - Refer to label for all other crops including vegetable field crops.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place in original container.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Poison

Caution – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Pinoxaden

Herbicide Group  
1 - pinoxaden

## Company:

Syngenta Canada (*Axial* with built in adjuvant; *Trondus* plus *Adigor* Adjuvant)  
 ADAMA Canada (*Brazen II* plus *Cohere* Adjuvant, *Brazen All In*)  
 Nufarm Agriculture (*Epic* adjuvant sold separately; *Epic II* adjuvant sold separately)  
 Interprovincial Cooperatives (*Co-op Avant*, *IPCO Avant* plus *IPCO MSO* Adjuvant)  
 Sharda CropChem (*Pina* with built in adjuvant)  
 Advantage Crop Protection (*Advantage Pinoxaden*)  
 NewAgco (*Ace 50* with built in adjuvant)  
 Viking (*Viking Pinoxaden 50* with built in adjuvant)  
 Maxunitech North America Inc. (*Maxunitech Pinoxaden 100EC*)

## Formulation:

*Axial* (PCP# 30431), *Pina* (PCP#34640), *Ace 50* (PCP#34668), *Viking Pinoxaden 50* (PCP#34956), *Brazen All In* (PCP#35086): 50 g/L pinoxaden formulated as an emulsifiable concentrate.

- Container sizes - 2 x10 L, 80 L, 400 L (*Axial* only)
- *Ace 50* and *Viking Pinoxaden* - 2 x 10 L (*Ace 50*), 2 x 10 L, 120 L (*Viking Pinoxaden* only), 480 L, 1000 L

*Brazen II* (PCP#33551), *Epic* (PCP#33603), *Co-op Avant* (PCP#34378), *IPCO Avant* (PCP#34377), *Trondus* (PCP#33448), *Epic II* (PCP#34423), *Advantage Pinoxaden* (PCP#34865), *Maxunitech Pinoxaden 100EC* (PCP#35184): 100 g/L pinoxaden formulated as an emulsifiable concentrate.

-plus-

**Cohere Adjuvant** (PCP#33552 - for use with Brazen II), **IPCO MSO Adjuvant** (with Co-op/IPCO Avant - PCP#33757 - for use with Co-op/IPCO Avant), **Adigor Adjuvant** (PCP#28151 - for use with Trondus): various blends of methylated seed oil and ethoxylated alcohols.

- Container sizes:
  - Brazen II, Co-op/IPCO Avant - 9.71 L + Cohere Adjuvant, IPCO MSO Adjuvant 11.3 L
  - Epic - 2 x 9.72 L, 77.7 L (adjuvant sold separately)
  - Trondus - 9.7 L, 77.6 L + Adigor Adjuvant - 11.3 L, 90.4 L
  - Advantage Pinoxaden - 2 x 9.7 L (adjuvant sold separately)
  - Maxunitech Pinoxaden 100EC - 10 L, 60 L

## Crops and Staging:

**All products:**

**Spring wheat\*** and durum (Epic, Epic II, Advantage Pinoxaden, Co-op/IPCO Avant only), winter wheat (Axial and Pino only) and barley\*,\*\* – all products; winter wheat – Axial and Pino only; durum wheat - Epic, Co-op Avant and Advantage Pinoxaden only: Up to the emergence of the flag leaf.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

**Axial only:**

**Forage grasses and legumes for seed production only\*\*\*:**

- Apply to seedling grasses at the 2 to 5 leaf stage:
  - Bromegrass (meadow, smooth)
  - Fescue (creeping red)
- Apply to seedling legume forages at the 2 to 5 leaf stage.

\*\*\* **NOTE:** Since these uses are registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility for herbicide performance. **Application is at the risk of the user.**

## Weeds, Rates, and Staging:

Apply from the 1 to 6 leaf up to the emergence of the 4<sup>th</sup> tiller. Apply at the 2 to 3 leaf stage for optimum control.

**Brazen II, Co-op/IPCO Avant, Epic, Epic II, Advantage Pinoxaden, Maxunitech Pinoxaden 100EC or Trondus at 160 mL plus Cohere Adjuvant (Brazen II) at 283 mL per acre, Carrier Adjuvant (Epic, Epic II, Advantage Pinoxaden, Maxunitech Pinoxaden 100EC - sold separately) or IPCO MSO Adjuvant (Co-op/IPCO Avant) at 500 mL per 100 L to control:**

- Persian darnel†

**Axial, Pino, Viking Pinoxaden 50, Ace 50 or Brazen All In at 0.5 L per acre (no adjuvant required)\* or Brazen II, Co-op/IPCO Avant, Epic, Epic II, Advantage Pinoxaden, Maxunitech Pinoxaden 100EC or Trondus at 243 mL per acre plus a recommended adjuvant.**

- **Adjuvants:** Cohere Adjuvant (Brazen II) or Adigor Adjuvant (Trondus) at 283 mL per acre, Carrier Adjuvant (Epic, Epic II, Advantage Pinoxaden, Maxunitech Pinoxaden 100EC - sold separately) or IPCO MSO Adjuvant (Co-op/IPCO Avant) at 500 mL per 100 L:
  - **Controls the weeds above plus:**
    - Barnyard grass
    - Foxtail (green, yellow)
    - Proso millet
    - Volunteer oats
    - Volunteer canary seed
    - Wild oats

\* DO NOT mix with any other adjuvant other than what is provided in the formulation.

† Brazen II, Epic, Epic II, Advantage Pinoxaden and Co-op/IPCO Avant only.

Maximum ONE APPLICATION per year of these or other products containing the active ingredient pinoxaden.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre.
  - **Aerial:** 12 L per acre.
- **Nozzles and Pressure:** 40 to 45 psi (275 to 310 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of ASABE medium droplets.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                           | Movement                       | Spectrum     | WSSA Group |
|-------------------|---------------|----------------------------------|--------------------------------|--------------|------------|
| pinoxaden         | POST (foliar) | ACCase Lipid synthesis inhibitor | Toward growth areas (Symplast) | Grasses only | 1          |

## Effects of Growing Conditions:

DO NOT apply to crops that are stressed (frost, low fertility, drought or flooding, disease or insect damage) as crop injury may result. Weed control may be reduced if pinoxaden is applied under stress conditions such as drought, heat, insufficient fertility, flooding or prolonged cool temperatures.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- Bromoxynil/MCPA (*Buctril M* only)<sup>†</sup>
- *Curtail M*
- Fluroxypyr + MCPA (*Trophy* only)<sup>†</sup>
- *Infinity*
- MCPA Ester<sup>†</sup> (0.34 to 0.45 L per acre - 500 g/L form)
- Florasulam/fluroxypyr + MCPA Ester<sup>§</sup>
- *Pixxaro* (*Axial* and *Ace 50* only)
- *Refine SG* + MCPA Ester<sup>\*\*\*†</sup> (12 grams per acre + 0.23 to 0.28 L per acre)
- Thifensulfuron/tribenuron (*Refine SG* only)<sup>\*\*</sup>

\* Always consult the label of the broadleaf herbicide prior to use.

\*\* Addition of surfactants other than those included in or with pinoxaden are not required.

\*\*\* Suppression only of green foxtail.

<sup>†</sup> A reduction in barnyard grass control may be observed.

<sup>§</sup> Check label for specific products.

**Insecticides:** None registered.

### Fungicides:

- Propiconazole (*Tilt* only).

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of treatment may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Pre-harvest Interval:** Leave at least 60 days between treatment and harvest of grain and straw.
- **Grazing Restrictions:** DO NOT graze livestock within 7 days or cut for hay within 30 days of application.
- **Re-cropping Interval:** No restrictions the year following treatment. DO NOT seed any crops in the year of treatment following application (emergency re-crop).
- **Aerial Application:** May be applied by air.
- **Storage:** Store in a cool, dry place. May be frozen.
- **Buffer Zones:** Buffers are not required for hand-held and backpack applications. Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Poison

Warning – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Pinoxaden/fluroxypyr

Herbicide Group

1 - pinoxaden

4 - fluroxypyr

## Company:

Syngenta Canada (*Axial Xtreme* - PCP#30391)Sharda CropChem (*Kingpin* - PCP# 35070)

## Formulation:

50 g/L pinoxaden and 87.5 g/L fluroxypyr formulated as an emulsifiable concentrate.

- Container sizes - 2 x 10 L, 80 L, 400 L

## Crops and Staging:

**Spring wheat (NOT including durum) and barley:**1 to 6 leaf stage prior to the emergence of the 4<sup>th</sup> tiller and before the first node can be felt in the stem.

## Weeds, Rates and Staging:

Apply at 0.5 L per acre (no adjuvant required)

**Grasses** - 1 to 6 leaf prior to the emergence of the 4<sup>th</sup> tiller

- Barnyard grass
- Proso millet
- Volunteer canary seed
- Foxtail (green, yellow)
- Volunteer oats
- Wild oats

**Broadleaf Weeds** - stages indicated below:

- Cleavers (up to 4 whorls)
- Stork's bill (up to 6 leaf)\*
- Wild buckwheat (up to 4 leaf)\*
- Kochia (2 to 8 leaf)

\* **Suppression.**

Maximum ONE APPLICATION per year of this or other products containing pinoxaden or fluroxypyr.

## Application Information:

- **Water Volume:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Maximum 40 to 45 psi (275 to 310 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** classification droplets.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                           | Movement                              | Spectrum       | WSSA Group |
|-------------------|---------------|----------------------------------|---------------------------------------|----------------|------------|
| pinoxaden         | POST (foliar) | ACCase Lipid synthesis inhibitor | Toward growth areas (Symplast)        | Grasses only   | 1          |
| fluroxypyr        | POST (foliar) | Synthetic Auxin                  | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Tolerance and efficacy is best when applied during warm weather when weeds are actively growing and soil moisture is adequate for rapid growth. Under prolonged stress caused by excessive cool or heat, flooding or drought, or poor fertility, control of some weeds may be reduced and or crops may be injured.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- Bromoxynil/MCPA<sup>†</sup>
  - *Curtail M*<sup>†</sup>
  - *Infinity*<sup>††</sup>
  - MCPA Ester (280 to 310 mL per acre – 600 g/L form)<sup>†</sup>
  - Thifensulfuron/tribenuron (*Refine SG* only)
  - Thifensulfuron/tribenuron (*Refine SG* only) + MCPA Ester (rates above)<sup>†</sup>
- <sup>†</sup> A reduction in barnyard grass control may be observed with this mix.
- <sup>††</sup> A reduction in green foxtail control may be observed with this mix.

**Fungicides:**

- Propiconazole (*Tilt* only at 101 to 202 mL per acre)

**Insecticides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

**Restrictions:**

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Pre-harvest Interval:** DO NOT apply within 60 days of harvest.
- **Grazing Restrictions:** Must not be grazed within 7 days or cut for livestock feed within 30 days of treatment.
- **Re-cropping Interval:** Barley, canola, flax, forage grasses, lentil, mustard, oats, peas, rye or wheat may be seeded the first full season after application or fields can be fallowed.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool, dry place. DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

**Sprayer Cleaning:**

Refer to 'Method B' in the introduction. Use 500 g or mL per 100 L of rinsate for alkali detergents or 250 g or mL per 100 L of rinsate for concentrated laundry detergents. DO NOT use chlorine based cleaners.

**Hazard Rating:**

Warning – Eye and Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Pixxaro

Herbicide Group  
4 - halauxifen,  
fluroxypyr, MCPA

## Company:

Corteva Agriscience

## Formulation:

The *Pixxaro* package contains the following components:

*Pixxaro A* (PCP#31303)/*Pixxaro Flexx* (PCP#34381): 16.25 g/L halauxifen and 250 g/L fluroxypyr present as ester and formulated as an emulsifiable concentrate.

- Container sizes - 1 x 4.9 L, 2 x 9.8 L, 4 x 9.8 L

*Pixxaro B/Plus M Ester 600* (PCP#29622): 600 g/L MCPA Ester formulated as an emulsifiable concentrate.

- Container sizes - 1 x 9.45 L, 75.1 L

## Crops and Staging:

**Wheat (spring, durum, winter), barley and rye (fall, spring)\*:** 3 leaf stage to just prior to emergence of the flag leaf.

**Timothy, seedling and established for seed production only\*\*:** In the spring when weeds are actively growing at the 1 to 8 leaf stage.

\* *Pixxaro A* only.

\*\* **NOTE:** Since applications to field and timothy have been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. Application to timothy is at the risk of the user.

## Weeds and Staging:

Apply to actively growing weeds up to 10 cm high or wide unless otherwise specified:

- **Weeds controlled (suppressed=S):**
  - American dragonhead<sup>†</sup> (up to bud stage)
  - Barnyard grass (up to 5 leaf, 2-tiller)
  - Burdock (prior to 4 leaf)\*
  - Canada thistle (up to 30 cm) (S)\*
  - Chickweed<sup>†††</sup>
  - Cleavers (1 to 9 whorl)
  - Cocklebur\*
  - Cow cockle (up to 8 leaf or 15 cm)
  - Dandelion (rosettes up to 30 cm in diameter) (S)\*
  - Field horsetail (S)\*
  - Fleabane, Canada<sup>†</sup>
  - Flixweed
  - Hemp-nettle<sup>†††</sup>
  - Henbit<sup>†</sup> (up to bud stage)
  - Kochia<sup>†</sup>
  - Lamb's-quarters<sup>†††</sup>
  - Marshelder (false ragweed) (S)
  - Mustard (ball, wild)
  - Nightshade<sup>††</sup> (black, hairy and cutleaf/wild tomato)
  - Plantain, common (S)
  - Prickly lettuce (S)
  - Ragweed (common<sup>††</sup>, giant<sup>†††</sup>)
  - Redroot pigweed<sup>†††</sup>
  - Round-leaved mallow<sup>††</sup>
  - Shepherd's-purse (up to 20 cm)
  - Smartweed (green, lady's-thumb) (S)\*
  - Sow-thistle, annual (S) (up to 4 leaf)
  - Sow-thistle, perennial (S)<sup>\*††</sup>
  - Stinkweed (S)
  - Stork's-bill<sup>†††</sup>
  - Velvetleaf (up to 5 leaf stage)
  - Vetch
  - Volunteer alfalfa (up to 25 cm)
  - Volunteer canola<sup>\*†††</sup>
  - Volunteer flax<sup>†</sup>
  - Wild buckwheat<sup>†††</sup>
  - Wild radish (S)
  - Wild sunflower (annual) (S)

\* Controlled with the addition of MCPA.

<sup>†</sup> Up to 15 cm in height.

<sup>††</sup> 1 to 6 leaf only.

<sup>†††</sup> 1 to 8 leaf stage.

## Rates:

*Pixxaro A/Pixxaro Flexx*: 125 mL per acre. If using *Pixxaro A/Pixxaro Flexx* alone add *Turbocharge*, COC, MSO at 0.5 L per 100 L of spray solution

*Pixxaro B*: 235 to 283\* mL per acre. Use the 283 mL per acre rate for improved control of heavy infestations or larger redroot pigweed or smartweeds.

\* Note: Additional MCPA Ester must be purchased separately above what is indicated in "Container Size:" above to achieve this higher rate.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 20 to 80 L per acre.
  - **Aerial:** Minimum 12 L per acre.
- **Nozzles and Pressure:** Use 30 to 40 psi (200 to 275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE coarse** droplets while maintaining good coverage of foliage.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------|----------------|------------|
| halauxifen        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| fluroxypyr        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| MCPA              | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Weeds and crops must be actively growing. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Spring wheat (including durum) and barley:**
  - Fenoxaprop 120 EC (0.31 L per acre)
  - *Liquid Achieve*
  - *Puma Advance* (0.41 L per acre)
  - 2,4-D ester\*
  - Curtail M\*
- **Spring Wheat and Barley:**
  - *Axial*
- **Spring Wheat (including durum):**
  - *Simplicity OD/Simplicity GoDRI*
  - Clodinafop 240 EC (93 mL per acre plus adjuvant)
  - *Horizon NG* (376 mL per acre)
  - *Traxos*
- **Winter Wheat\*:**
  - MCPA ester 600 (0.11 L to 0.17 L per acre)
  - 2,4-D ester 700 (0.21 L per acre)
  - *Curtail M*
  - *Simplicity GoDRI/Simplicity OD*
  - *Liquid Achieve*

\* *Pixxarro Flexx* only

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

Off-label tank mixes, as previously permitted under the Pest Management Regulatory Agency (PMRA) Off-label Tank Mix Policy memo of 2009 are no longer allowed under new guidance from PMRA. As of December 20, 2022 only products specifically indicated on product labels may be mixed, or when the labels of two or more products to be mixed include the statement quoted in the introduction. As of December 2024 this memo will no longer be recognized by Health Canada.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:**
  - **Wheat and barley:** DO NOT graze livestock within 7 days of application. DO NOT cut for silage or hay within 21 days of application.
  - **Timothy:** DO NOT cut treated fields for hay/forage. DO NOT graze treated fields. DO NOT feed seed screenings and aftermath (straw, stubble) to livestock.
- **Pre-harvest Interval:** DO NOT harvest crops within 60 days of application.
- **Re-cropping Interval:** Winter wheat and fall rye may be seeded 3 months after application. Alfalfa, barley, canola, corn, dry bean (*Phaseolus vulgaris* species including pinto, kidney and white types), faba bean, flax, field peas, mustard, oats, soybean, spring wheat, sunflower and timothy may be seeded the first spring following application. Lentils may be grown the second season after application.

- **Aerial Application:** May be applied by air.
- **Storage:** Store over winter in a heated, dry place in original container.
- **Buffer Zones:** Spot treatments using hand held equipment DO NOT require a buffer zone. Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. Check the cleanout requirements of pesticides mixed with this product. Additional cleanout measures may need to be integrated into those provided here.

## Hazard Rating:

**Pixxaro A:**

Warning – Skin and Eye Irritant

Caution – Potential Skin Sensitizer

**Pixxaro B:**

Warning – Poison

Refer to the Introduction for an explanation of the symbols.

# Predicade

*This product is a prepackaged tank mix of Predicade Broadleaf (equivalent to Barricade II), Predicade Grass (equivalent to Varro), and MCPA ester 600. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Herbicide Group**  
**2 - thifensulfuron/**  
**tribenuron, thien carbazon**  
**4 - fluroxypyr, MCPA**

## Company:

FMC Corporation

## Formulation:

The *Predicade* package contains the following components:

**Predicade Broadleaf (PCP#31713):** 25% thifensulfuron methyl and 25% tribenuron methyl formulated as a soluble granule.

- Container size - 486 g

**Predicade Grass (PCP#31735):** 10 g/L thien carbazon-methyl formulated as a suspension concentrate.

- Container size - 8 L

**Perimeter II (PCP#30094):** 333 g ae/L fluroxypyr formulated as an emulsifiable concentrate.

- Container size - 3.4 L

**Albaugh MCPA Ester 600 (PCP#32311), ADAMA MCPA Ester 600 (PCP#34073), Nufarm MCPA Ester 600 (PCP#27803):** 600 g ae/L MCPA Ester formulated as an emulsifiable concentrate.

- Container size - 7.6 L

## Crops and Staging:

### Spring wheat (including durum):

Apply from the fully emerged 3 leaf to 6 leaf stage, with a maximum of three tillers, and before the first node can be felt in the stem. DO NOT apply beyond 35 days of seeding.

### Winter wheat:

Spring application from the 3 tiller stage and before the first node can be felt in the stem. DO NOT apply after the presence of the first node as crop injury may occur.

## Rates:

**Predicade Broadleaf:** 12 grams per acre

**Predicade Grass:** 200 mL per acre

**Perimeter II:** 85 mL per acre

**MCPA Ester 600:** 190 mL per acre

## Weeds and Staging:

Weeds controlled by *Barricade II* and *Varro* plus:

- Dandelion (spring and fall rosettes, up to 15 cm in diameter)
- Volunteer canola (all varieties) – 2 to 4 leaf
- White cockle
- Scentless chamomile

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Primextra II Magnum

Herbicide Group  
15 - metolachlor  
5 - atrazine

## Company:

Syngenta Canada (PCP#25730)

## Formulation:

400 g/L of s-metolachlor and 320 g/L of atrazine formulated as a liquid.

- Container size - 2 x 10 L

## Crops and Staging:

Pre-plant incorporated or pre-emergent in corn. Pre-emergent applications of *Primextra II Magnum* require at least 0.5 inches of water (1.25 cm) within 10 days of application for proper activity.

## Weeds and Staging:

Apply prior to the emergence of weeds. Weeds that have emerged prior to application will not be controlled.

- Barnyard grass
- Buckwheat
- Foxtail (green, yellow)
- Lamb's-quarters
- Nightshade (American, Eastern black)
- Pigweed (prostrate, redroot)
- Purslane
- Ragweed
- Smartweed (lady's-thumb)
- Wild mustard
- Witch grass
- Yellow nutsedge\*

\* Herbicide must be incorporated for best control.

## Rates:

| Weed Populations    | Rate (L per acre) |
|---------------------|-------------------|
| Light infestations  | 1.2               |
| Medium infestations | 1.4               |
| Heavy infestations  | 1.6               |

DO NOT apply *Primextra II Magnum* to:

- soils with less than 1 percent organic matter content
- soils with more than 10 percent organic matter content.

It is recommended that any products containing atrazine not be used in areas treated with this product during the previous season.

## Application Information:

- **Water Volume:** 61 L per acre.
- **Pressure:** 30 to 45 psi (200 to 300 kPa).
- **Nozzles:** Flat fan.
- **Screens:** Use 50-mesh nozzle and main plumbing screens.
- **Incorporation:**
  - Incorporate using S-tine or C-tine cultivators or tandem disk. DO NOT incorporate deeper than 4 inches (10 cm).
  - To ensure that the product remains in the top 2 inches (5 cm) of soil, apply to a firm seedbed free of large clods or lumps. If using tandem disks, set disks to work the soil at a depth of 4 inches (10 cm) and operate at a speed of 6 km per hour (4 miles per hour). If using an S-tine cultivator, set the implement to work the soil to a depth of 4 inches (10 cm) and operate at a speed of 10 km per hour (6 miles per hour).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                         | Target                                | Movement                                      | Spectrum            | WSSA Group |
|-------------------|------------------------------------------------|---------------------------------------|-----------------------------------------------|---------------------|------------|
| atrazine          | PPI, PRE (surface) with residual soil activity | PSII Inhibitor/<br>Membrane disruptor | Little foliar; upward soil applied (Apoplast) | Primarily broadleaf | 5          |
| metolachlor       | PPI, PRE (surface) with residual soil activity | Long-chain Fatty Acid Inhibitor       | Little movement (Symplast)                    | Broadleaf & grass   | 15         |

## Effects of Growing Conditions:

Extended periods of dry soil conditions may result in reduced weed control. Moderate rainfall (0.5 inch) after application will enhance activity. Heavy rainfall following application of *Primextra II Magnum* may dilute the metolachlor deeper than 2 inches (5 cm) and result in reduced weed control, particularly on light textured soils.

## Tank Mixes:

**Herbicides:** None registered.

**Fertilizers:** May be tank mixed with liquid fertilizer for pre-plant incorporated applications. Conduct a compatibility test by performing a jar test prior to mixing the products in the tank. May be impregnated onto dry bulk fertilizers (except nitrate or superphosphate fertilizers or limestone).

**Note:** The above mixes are those listed on the *Primextra* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Moderate rainfall shortly after application will enhance activity. Heavy rainfall reduces weed control by leaching the chemical out of the top few centimeters of soil. Inadequate rainfall after application (within 10 days) will cause reduced weed control.
- **Restricted Entry Interval:** DO NOT re-enter treatment area within 12 hours of application.
- **Grazing Restrictions:** DO NOT graze or cut corn for feed before ear emergence.
- **Re-cropping Interval:** This product contains atrazine. All crops except corn and triazine-tolerant canola may be affected the year following the use of atrazine. Other more sensitive crops may be affected two or more growing seasons after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a dry place.
- **Buffer Zones:**
  - Observe buffer zones outlined in the label.
  - DO NOT mix or load this product within 30 metres of any sensitive aquatic habitats.

## Sprayer Cleaning:

No specific cleaning procedures are indicated on the label. Based on products with similar chemistry, 'Method B' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product, may provide adequate cleaning. Contact the manufacturer for more information.

## Hazard Ratings

Caution Poison

Caution – Eye Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Prominex

Herbicide Group  
4 - halauxifen,  
clopyralid, fluroxypyr

## Company:

Corteva Agriscience (PCP#34021)

## Formulation:

4.7 g/L halauxifen, 97.8 g/L clopyralid and 122.2 g/L fluroxypyr formulated as a micro emulsion.

- Container size - 2 x 8.3 L, 99.4 L

## Crops and Staging:

**Wheat (spring, durum, winter) and barley:** from 3 leaf stage to just prior to flag leaf emergence.

## Weeds, Rates and Staging:

Apply 414 mL per acre 1 to 8 leaf stage, unless otherwise specified.

### Weeds controlled:

- American dragonhead (up to bud and 15 cm)
- Barnyardgrass (up to 5-leaf, 2-tiller)
- Canada fleabane (up to 15 cm)\*
- Canada thistle (rosette to pre-bud)
- Chickweed
- Cleavers (1 to 9 whorl)
- Common ragweed (up to 6 leaf)
- Cow cockle (up to 8 leaf and 15 cm)
- Flixweed (up to 8 leaf and 8 cm)
- Hemp-nettle
- Henbit (up to bud stage and 15 cm)
- Giant ragweed
- Kochia (up to 15 cm)
- Lamb's-quarters
- Nightshade (eastern black, hairy, cutleaf - up to 6 leaf)
- Pigweed, redroot
- Round-leaved mallow (up to 6 leaf)
- Shepherd's-purse (to bolting and 20 cm)
- Stork's-bill
- Velvetleaf (up to 5 leaf)
- Volunteer alfalfa (up to 25 cm)
- Volunteer flax (up to 15 cm)
- Wild buckwheat.

### Weeds suppressed:

- Annual sow-thistle (up to 5 leaf)
- Wild mustard (1 to 4 leaf, up to 10 cm)

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 80 L per acre.
  - **Aerial:** Minimum 12 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** or larger droplets. Use a spray pressure of 30 to 40 psi (207 to 275 kPa) pressure when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to 'How Do Herbicides Work' in the Weed Control Section.

| Active ingredient | Timing        | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------|---------------------------------|----------------|------------|
| halauxifen        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| clopyralid        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| fluroxypyr        | POST (foliar) | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Extreme growing conditions such as drought or near freezing conditions prior to, at or following time of application may reduce weed control and increase risk of crop injury at all stages of growth. Under conditions of low crop and high weed density, control may be reduced.

## Tank Mixes:

### Herbicides:

- **In all crops:**
  - MCPA ester
  - 2,4-D ester
- **In wheat (spring, winter and durum):** alone or in mixture with 2,4-D or MCPA
  - *Simplicity OD* or *GoDRI*,
- **In wheat (spring and durum only):** alone or in mixture with MCPA
  - *Horizon NG*
  - *Traxos*
- **In wheat (spring and durum only) and barley:** alone or in mixture with 2,4-D or MCPA
  - *Liquid Achieve SC*
  - *Puma Advance*
- **In wheat (spring NOT durum) and barley:** alone or in mixture with MCPA
  - *Pinoxaden (Axial, Trondus)*

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels for tank mix instructions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 4 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for at least 12 hours.
- **Preharvest Interval:** DO NOT harvest within 60 days of application.
- **Grazing Restrictions:** Livestock may be grazed 7 days after application. DO NOT cut the treated crop for hay or silage within 21 days of application.
- **Re-cropping Interval:** Spring wheat, barley, oats, canola, corn, soybeans, flax, field peas, mustard, timothy can be grown 10 months after application. Very dry soil conditions following application can result in a risk of injury to soybeans or field peas. If severe drought conditions are experienced during the months of June to August inclusive (less than 140 mm of rainfall) in the year of application, delay seeding of soybeans and field peas until 22 months after application.
- **Aerial Application:** May be applied by air.
- **Storage:** Store in original containers in a secure, dry heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Tank Cleaning:

This product utilizes a combination of 'Method A' and 'Method B' for cleanout requiring the use of All Clear Spray Tank Decontaminator for the tank plus ammonia for nozzles screens and filters for the second rinse. Refer to the general section on sprayer cleaning in introduction. Let solution stand for an extended period for better results. Flush sprayer system with water before reuse. See the label for product specific cleaning details.

### Hazard Ratings

Warning – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Prospect

Herbicide Group  
4 - halauxifen  
14 - carfentrazone

## Company:

Corteva Agriscience (PCP#33635)

## Formulation:

15 g/L halauxifen plus 27.97 g/L carfentrazone formulated as an emulsifiable concentrate.

- Container size - 2 x 10.8 L case

## Crops and Staging:

Prior to seeding canola, flax, mustard (Oriental, brown, yellow), soybeans, field peas, field corn, spring wheat, durum wheat and barley.

## Weeds and Staging:

Alone *Prospect* will control the following broadleaf weeds from the 1 to 8 leaf stage unless otherwise indicated:

- American dragonhead (up to bud stage and 15 cm in height)
- Barnyard grass (up to 5 leaf, 2-tiller stage)
- Canada fleabane (up to 8 leaf and less than 10 cm in height)
- Chickweed
- Cleavers (up to 25 cm in size)
- Cow cockle (up to 8 leaf and 15 cm in height)
- Dandelion (suppression of rosettes up to 15 cm)
- Flixweed (up to early stem extension and 10 cm)
- Hemp-nettle
- Henbit (up to bud stage and 15 cm in height)
- Lamb's-quarters
- Nightshade, Eastern black
- Redroot pigweed
- Round-leaved mallow (up to 6 leaf)
- Shepherd's-purse (up to bolting and 20 cm high)
- Stinkweed (suppression up to the bud stage)
- Velvetleaf (up to the 5-leaf stage)
- Volunteer alfalfa (up to 25 cm tall)
- Waterhemp (up to 5 cm tall)
- Wild buckwheat (suppression)

*Prospect* plus glyphosate 180 g ae per acre will control the weeds above plus the weeds controlled by glyphosate at 180 g ae per acre plus the following from 1 to 8 leaves unless otherwise indicated:

- Dandelion (rosettes up to 15 cm)
- Flixweed (up to early stem extension and 20 cm)
- Kochia\*
- Lady's-thumb
- Stinkweed (up to the bud stage)
- Volunteer canola (all varieties up to 5 leaf)
- Wild buckwheat (up to 6 leaf)

\* Light to moderate infestations of kochia (up to 150 plants per square metre; up to 15 cm in height).

## Rates:

***Prospect* alone:** 135 mL per acre plus a methylated seed oil at 0.5 L per 100 L of spray solution.

***Prospect* plus glyphosate:** Rates above plus at least 180 g ae per acre or up to 1020 g ae per acre of glyphosate. Adjuvant is not required when mixing with glyphosate. See glyphosate page for weeds controlled at higher glyphosate rates.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets by ground. Sprayers without drift reduction nozzles should use between 30 to 40 psi (200 to 275 kPa). Low drift nozzles may require higher pressures for proper performance.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                               | Movement                                             | Spectrum                | WSSA Group |
|-------------------|---------------|--------------------------------------|------------------------------------------------------|-------------------------|------------|
| halauxifen        | POST (foliar) | Synthetic Auxin                      | Throughout the plant (Symplast)                      | Broadleaf only          | 4          |
| carfentrazone     | POST (foliar) | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Non-selective broadleaf | 14         |

## Effects of Growing Conditions:

*Prospect* must be applied prior to seeding of the crop, in tank-mix with glyphosate, to the main flush of actively growing broadleaf and grassy weeds. Warm, moist growing conditions promote active weed growth and enhances activity by allowing maximum foliar uptake and activity. Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur. For best results, ensure thorough spray coverage of target weeds.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

**Herbicides:** Glyphosate.

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the *Prospect* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Preharvest Interval:** Canola may be harvested 60 days or more after application.
- **Grazing Restrictions:** MUST NOT be grazed or fed to livestock for 21 days after treatment.
- **Re-cropping Interval:** Fields previously treated with *Prospect* can be seeded after a minimum of 10 months to spring wheat, barley, oats, canola, field corn, soybeans, sunflowers, flax, field peas, potatoes (except seed potatoes), mustard, alfalfa, dry bean (*Phaseolus vulgaris* species including pinto, kidney and white types) and timothy or fields can be summerfallowed. Lentils can be planted 22 months after application of *Prospect*. Fall rye and winter wheat can be planted 3 months after application of *Prospect*.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in original containers in a secure, dry heated storage.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Ratings

Warning – Contains the Allergen Soy

Refer to the Introduction for an explanation of the symbols.

# Pyroxsulam

Herbicide Group  
2 - pyroxsulam

## Company:

Corteva Agriscience (*Simplicity 30 OD*, *Simplicity GoDRI*)

Interprovincial Cooperative Ltd. (*IPCO Aura*, *Co-op Tranquil*)

## Formulation:

***Simplicity 30 OD* (PCP#28887), *IPCO Aura* (PCP#35518), *Co-op Tranquil* (PCP#35520):** 30 g/L pyroxsulam formulated as an oil-dispersion.

- Container size - 2 x 8 L (plus water conditioner 2 x 1.5 L)

***Simplicity GoDRI* (PCP#31916):** 21.5% pyroxsulam formulated as a water dispersible granule.

- Container size - 4 x 2.24 kg

## Crops and Staging:

**Wheat (spring and durum):**

- ***Simplicity OD*, *IPCO Aura*, *Co-op Tranquil*:** 3 leaf stage until prior to the emergence of the flag leaf.
- ***Simplicity GoDRI*:** 2 leaf stage until the emergence of the flag leaf.

**Winter wheat:**

- ***Fall*:** 1 to 3 leaf stage.
- ***Spring*:** 2 to 7 leaf plus 4 tillers.

**Rye (*Simplicity GoDRI* only):** Apply to actively growing rye (fall and spring-seeded) from the 2 leaf stage until the 1st node can be felt at the base of the stem.

**Triticale (*Simplicity GoDRI* only):** Apply to actively growing triticale from the 3 leaf stage until the 1st node can be felt at the base of the stem.

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

When applied alone, add a 90 percent active non-ionic surfactant such as *Agral 90*, *AgSurf* or *Sentry* at 0.25 L per 100 L of spray solution.

- Adjuvant purchased separately.

See the *Simplicity* or *Simplicity GoDRI* labels for additional adjuvant requirements.

Shake *Simplicity 30 OD* jug well before adding to spray tank.

**Wild oats (less than 75 plants per square metre):**

*Simplicity 30 OD*, *IPCO Aura*, *CO-OP Tranquil* at 0.15 L per acre or *Simplicity GoDRI* at 21 grams per acre:

- Wild oats (less than 75 plants per square metre)
- Japanese brome (1 to 4 leaf, 2 tiller – whichever comes first).

*Simplicity 30 OD*, *IPCO Aura*, *CO-OP Tranquil* at 0.20 L per acre or *Simplicity GoDRI* at 28 grams per acre:

The weeds controlled above plus those listed below.

- **Grasses:**

| Weed                                                  | Stage                        |
|-------------------------------------------------------|------------------------------|
| Wild oats, Persian darnel*                            | up to the 4 leaf, 2 tillers  |
| Barnyard grass, yellow foxtail, green foxtail*        | 1 to 5 leaf                  |
| Japanese brome (under sub-optimal growing conditions) | 1 to 6 leaf                  |
| Downy brome†                                          | 1 to 6 leaf, up to 4 tillers |

- **Broadleaves:**

- Canada thistle\* (up to 30 cm, before budding)
- Cleavers (up to 6 whorl)
- Cow cockle (up to 8 leaf)
- Common chickweed (up to 10 cm)
- Corn spurry (up to 2 whorl or 10 cm tall)
- Dandelion\* (rosettes <20 cm diameter)
- Field violet (up to 6 leaf)\*
- Flixweed (up to 10 cm)
- Hemp-nettle (1 to 8 leaf)
- Night-flowering catchfly (up to rosette stage)\*
- Redroot pigweed (1 to 8 leaf)
- Round-leaved mallow (up to 6 leaf or 10 cm)
- Russian thistle\* (up to 10 cm)
- Shepherd's-purse (up to 30 cm)
- Smartweed (1 to 5 leaf)
- Stinkweed (up to 30 cm)
- Volunteer canola (1 to 6 leaf)\*\*
- White cockle\* (<20 cm up to first flower)
- Wild buckwheat (1 to 4 leaf)\*

\* **Suppression only.**

\*\* **Not CLEARFIELD varieties.**

† **Control with fall application in winter wheat; suppression only in spring applications on both winter and spring wheat.**

**Winter wheat (pyroxsulam alone) for downy brome suppression use the following adjuvant:**

- *Merge* at 0.5 L per 100 L of spray (spring application only). See the product labels for additional adjuvant requirements.

## Application Information:

- **Water Volume:**
  - **Ground:** 20 to 40 L per acre.
  - **Aerial:** 12 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE coarse** droplets. See the label for detailed instructions on aerial application.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                          | Spectrum          | WSSA Group |
|-------------------|---------------|--------------------------|-----------------------------------|-------------------|------------|
| pyroxsulam        | POST (foliar) | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf & grass | 2          |

## Effects of Growing Conditions:

DO NOT apply to crops that are stressed (frost, low fertility, drought or flooding, disease or insect damage) as crop injury may result and/or weed control may be reduced.

## Tank Mixes:

**Herbicides:**

- The addition of an adjuvant to *Simplicity OD*, *IPCO Aura* and *CO-OP Tranquil* is not required in tank mixes unless the adjuvant is required by the tank mix partner. Consult the *Simplicity GoDRI* label for added requirements.

| Tank-Mix Partner                     | Product Rates     |
|--------------------------------------|-------------------|
| 2,4-D ester                          | 280 g ae per acre |
| <i>Buctril M</i> (bromoxynil + MCPA) | 0.4 L per acre    |
| <i>Curtail M</i>                     | 0.6 L per acre    |

| Tank-Mix Partner                                         | Product Rates                                    |
|----------------------------------------------------------|--------------------------------------------------|
| <i>Exhilarate A</i> + MCPA ester 600                     | 10 g per acre + 189 mL per acre                  |
| <i>Exhilarate A</i> + MCPA ester 600 + <i>Lontrel XC</i> | 10 g per acre + 189 mL per acre + 52 mL per acre |
| MCPA ester (600 formulation)                             | 0.23 to 0.38 L per acre                          |
| <i>OcTTain XL</i>                                        | 0.45 L per acre                                  |
| <i>Pixxaro</i> **                                        | 40 acres per case                                |
| <i>Prestige XC</i>                                       | 27 acres per case                                |
| <i>Stellar/ Stellar XL</i>                               | 40 acres per case                                |
| <i>Thumper</i> (bromoxynil + 2,4-D)                      | 0.4 L per acre                                   |

**Fungicides:**

- *Tilt\** (label rates)
- *Stratego\** (label rates)
- MCPA + *Tilt\**
- MCPA + *Stratego\**

**Fertilizers:** None registered

\* High rate of *Simplicity GoDRI* only

\*\* *Simplicity GoDRI* only.

**Note:** The above mixes are those listed on the *Simplicity OD*, *Simplicity GoDRI*, *IPCO Aura* and *Co-op Tranquil* labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

**Restrictions:**

- **Rainfall:** Within 2 hours may reduce control.
- **Pre-harvest Interval:** Leave 60 days between treatment and harvest.
- **Grazing Restrictions:** Must NOT be grazed or fed to livestock for 7 days after treating crop.
- **Re-cropping Interval:**
  - **Both products:** Barley, condiment and oilseed quality brown mustard (*B. juncea* types), canola, chickpea, dry bean, flax, lentil, oats, field pea, potato, spring wheat, soybean, sunflower and yellow mustard may be seeded 11 months following treatment.
  - ***Simplicity GoDRI only:*** Field corn, sunflower and potatoes after 10 months; alfalfa after 11 months.
- **Aerial Application:** May be applied by air.
- **Storage:** *Simplicity 30 OD*, *IPCO Aura* and *CO-OP Tranquil* will freeze at -10°C. DO NOT freeze; store above -9°C. Allow product to warm above 7°C before using and thoroughly mix the product prior to use. *Simplicity GoDRI* is not affected by freezing. Keep *Simplicity GoDRI* away from fire or open flame, or other source of heat.
- **Buffer Zones:** Observe buffer zones outlined in the label.

**Sprayer Cleaning:**

Refer to the general section on sprayer cleaning in the introduction. See label for specific cleaning details.

**Hazard Rating:**

*Simplicity 30 OD*, *IPCO Aura* and *Co-op Tranquil*:

Warning – Poison

Warning – Contains the Allergen Soy

Caution – Eye and Skin Irritant, Potential Skin Sensitizer

*Simplicity GoDRI*:

Caution – Eye Irritant

Refer to the Introduction for an explanation of the symbols.

# Quinclorac

Herbicide Group  
4 - quinclorac (broadleaf)  
26 - quinclorac (grass)

## Company:

BASF Canada (*Facet L*)  
Farmers Business Network Canada (*Clever*)  
Advantage Crop Protection (*Advantage Quinclorac, Ingenious*)

## Formulation:

**Clever** (PCP#31365); **Advantage Quinclorac** (PCP#35274), **Ingenious** (PCP#32213): 75% percent quinclorac formulated as a water dispersible granule (WDG).

- Container size - 10 x 1 kg

**Facet L** (PCP#31539): 180 g/L quinclorac formulated as a solution.

- Container size - 2 x 9.07 L

## Crops, Rates and Staging:

*Merge* adjuvant (purchased separately) must be used at 0.5 to 1 L per 100 L of spray solution to control for all products and rates.

### Pre-emergent surface:

*Facet L* at 227 to 280 mL per acre may be mixed with or without glyphosate and applied prior to the seeding of canola.

### Post-emergent:

**Quinclorac 75 percent WDG at 54.6 grams per acre or *Facet L* at 227 mL per acre may be applied post-emergence to:**

- Barley - 1 to 4 leaf (prior to tillering)\* (*Facet L* only may be used on barley for human consumption).
- Canola (all varieties) - Up to 6 leaf for *Facet*; 2 to 6 leaf for Quinclorac 75% WDG formulations.

**Quinclorac 75 percent WDG only at 54.6 grams per acre may be applied post-emergence to:**

- Mustard (brown, oriental and oil quality *Brassica juncea*) - 2 to 6 leaf.

**Quinclorac at 54.6 to 66.7 grams per acre or *Facet L* at 227 to 280 mL per acre may be applied post-emergence to:**

- Canaryseed - 3 to 5 leaf\*†.
- Spring wheat (including durum) - 1 to 5 leaf.

\* Not for use on crops for human consumption.

† Not for use on crops for livestock consumption.

DO NOT apply products that contain quinclorac more than once every two years. When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

### Pre-emergent surface:

*Facet L* applied at 227 mL per acre will control emerged weeds listed below, plus suppression of secondary flushes of cleavers emerging from seed.

*Facet L* applied at 280 mL per acre will control emerged weeds listed below, plus plus control of secondary flushes of cleavers and green foxtail emerging from seed.

### Post-emergent:

Apply quinclorac at 54.6 to 66.7\* grams per acre or *Facet L* at 227 to 280\* mL per acre plus *Merge* adjuvant (purchased separately) at 1 L per 100 L of spray solution to control:

#### Grasses:

- Barnyard grass (1 to 5 leaves)
- Green foxtail\* (1 to 5 leaves, up to 2 tillers)

#### Broadleaves:

- Cleavers (1 to 3 whorls), (1 to 6 whorls for *Facet L* when tank mixed with *Liberty 150 SN*)
- Volunteer flax (1 to 8 cm)
- Sow-thistle (annual and perennial – 2 to 6 leaf)\*\*

\* Use the high rate for heavy infestations of green foxtail only. For clarification of what constitutes a heavy infestation contact the manufacturer.

\*\* Suppression only.

DO NOT apply products that contain quinclorac more than once every two years.

Early treatment of weeds is important to maximize crop yield potential by eliminating early weed competition. Refer to broadleaf tank mix partner for additional timing restrictions.

## Application Information:

- **Water Volume:** Minimum 45 L per acre.
- **Nozzles & Pressure:** 40 to 60 psi (275 to 425 kPa) when using standard flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage **ASABE fine** droplets or larger. Flat fan nozzles may be tilted forward 45 degrees to improve coverage on vertical surfaces (i.e. grasses).
- **Screens:** Use 50 mesh or coarser on both nozzle and primary plumbing screens

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                        | Movement                        | Spectrum       | WSSA Group |
|-------------------|---------------|-------------------------------|---------------------------------|----------------|------------|
| Quinclorac        | POST (foliar) | Synthetic Auxin               | Throughout the plant (Symplast) | Broadleaf only | 4          |
|                   |               | Cellulose Synthesis Inhibitor | Throughout the plant (Symplast) | Grass only     | 26         |

## Effects of Growing Conditions:

DO NOT apply to crop that is under stress from conditions such as frost, hail, flooding, drought or extremes in temperature. Cool weather may delay weed control and if prolonged may result in poor weed control.

## Tank Mixes:

**Herbicides:** When mixing with broadleaf partners a slight reduction in green foxtail control may result. If spraying for green foxtail, use the high rate of quinclorac. Add *Merge* adjuvant at 1 L per 100 L spray solution for all tank mixes.

**Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.**

### In barley\*:

- *Buctril M*
- MCPA amine or ester (0.41 to 0.45 L per acre - 500 g/L formulations)
- *Refine Extra\*\**

### In canaryseed\*:

- *Buctril M*

### In spring wheat (including durum) only\*:

- 2,4-D amine or ester (160 to 212 g ae per acre)
- *Buctril M*
- MCPA amine or ester (0.34 to 0.45 L per acre - 500 g/L formulations)
- *Refine Extra\*\**
- *Express + 2,4-D\*\**

### In canola only:

- Pre-emergent surface – *Facet L* at 227 to 280 mL per acre may be mixed with glyphosate at 180 to 325 g ae per acre (see glyphosate page for product rates).
- Post-emergent - Quinclorac 75 percent WDG at 25 grams per acre or *Facet L* at 170 to 227 mL per acre may be mixed with:
  - Glyphosate at rates registered in glyphosate tolerant canola varieties only
  - *Ares SN* in CLEARFIELD canola varieties only (*Facet L* only).
- Post-emergent in *Liberty Link* canola quinclorac 75 percent WDG at 25 grams per acre or *Facet L* at 113 to 227 mL per acre may be mixed with:
  - *Liberty 150 SN* - up to 1.62 L per acre
  - *Liberty 150 SN* - up to 1.62 L per acre, plus clethodim (*Centurion* only) at 50 to 75 mL per acre or *Centurion ADV* at 51-153 mL per acre (*Facet L* only).
  - *Liberty AMP* - up to 1.35 L per acre
  - *Liberty AMP* - up to 1.35 L per acre plus *Centurion* at 50 to 75 mL per acre or *Centurion ADV* at 51 to 153 mL per acre.

**\*Advantage Quinclorac, Clever and Ingenious only**

**\*\*Clever and Ingenious only. Addition of surfactants other than *Merge* is not required.**

**Refer to individual product labels for application details such as staging and varietal restrictions.**

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

*Note: Allow 4 days between the application of quinclorac and any other chemical not listed as a tank mix.*

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 6 hours may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours after application.
- **Grazing Restrictions:** DO NOT graze or cut for feed within 77 days of application. DO NOT graze canaryseed or use for consumption by livestock. DO NOT graze or cut treated canola crops for feed. Canola meal may be fed.
- **Pre-harvest Interval:** DO NOT harvest wheat or canaryseed within 77 days of application. DO NOT harvest canola or mustard within 60 days of application. DO NOT harvest spring barley within 80 days of application.
- **Re-cropping Interval:** In case of crop failure, only barley, canola or spring wheat (including durum) may be reseeded the same year. Barley, canola, field peas, oats, sunflowers and wheat may be grown the year after application. Flax and lentils may be grown the second year after application. On low organic matter soils or under dry conditions, flax and lentils should not be grown until the third year after application. DO NOT use quinclorac on land where potatoes or vegetables are grown.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen. Should product freeze, warm to room temperature before using.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Poison

Caution – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Quizalofop

Herbicide Group  
1 - quizalofop

## Company:

AMVAC (*Assure II*)  
Gowan Canada (*Yuma GL Liquid EC*)  
Interprovincial Cooperative Limited (*Co-op/IPCO Contender II*)  
NewAgco (*Quiz*)  
Nufarm Agriculture (*Idol*)  
ADAMA Canada (*Leopard*, *ADAMA Quizalofop*)  
Sharda (*Elegant 10EC*)  
BASF (*Caziva Ultra Q* – only available in *Odyssey Ultra Q* or *Solo Ultra Q* packs)  
Viking (*Viking Quizalofop*)

## Formulation:

*Assure II* (PCP#25462), *Yuma GL* (PCP#30100), *Co-op/IPCO Contender II* (PCP#33961/PCP#33960), *Quiz* (PCP#33481), *Idol* (PCP#33906), *Elegant 10EC* (PCP#33617), *Caziva Ultra Q* (PCP#34282), *Viking Quizalofop* (PCP#34759): 96 g/L quizalofop-p-ethyl formulated as an emulsifiable concentrate.

- Container sizes:
  - *Assure II* + *Sure-Mix* Adjuvant - 8 L + 8 L, 96 L + 96 L, or 500 L + 500 L
  - *Yuma GL Liquid EC*, *Elegant 10EC*, *Viking Quizalofop* - 2 x 8 L, 500 L (*adjuvant purchased separately*)
  - *Co-op/IPCO Contender II* + *IPCO MSO Adjuvant* - 8 + 8 L
  - *Quiz* - 2 x 8 L, 500 L (*adjuvant purchased separately*)
  - *Idol* - 2 x 8 L (*Carrier adjuvant sold separately*)
  - *Caziva Ultra* - see *Odyssey Ultra Q* and *Solo Ultra Q*

*Leopard* (PCP#33715) and *ADAMA Quizalofop* (PCP#34935): 100 g/L quizalofop-p-ethyl formulated as an emulsifiable concentrate.

- Container size - 2 x 7.8 L, 93.6 L (*Leopard* only), 487.5 L (*Leopard* only)

## Crops and Staging:

**Annual Crops:** Where there is no leaf stage restriction do not apply beyond the pre-harvest interval listed in the table:

| Crop      | Preharvest Interval (Days) | Max Leaf Stage |
|-----------|----------------------------|----------------|
| Camelina* | 64                         |                |
| Canola    | 64                         |                |

| Crop                                                                           | Preharvest Interval (Days) | Max Leaf Stage       |
|--------------------------------------------------------------------------------|----------------------------|----------------------|
| Chickpea                                                                       | 85                         |                      |
| Dry bean*†                                                                     | 30                         |                      |
| Ethiopian mustard ( <i>Brassica carinata</i> )*                                | 64                         |                      |
| Faba bean*§                                                                    | 30                         |                      |
| Flax or solin (low linolenic acid flax)                                        | 82                         |                      |
| Industrial hemp (for fibre, seed, or oil)*                                     | 73                         | 6 leaf (up to 25 cm) |
| Lentil§                                                                        | 65                         |                      |
| Oriental mustard (condiment types and oilseed quality <i>Brassica juncea</i> ) | 64                         |                      |
| Pea (field)§                                                                   | 65                         |                      |
| Soybean§                                                                       | 80                         |                      |
| Sunflower*††§                                                                  | 60                         | 8 leaf               |
| Yellow and brown mustard                                                       | 64                         |                      |

† NOTE: While quizalofop has been registered for use on all dry field bean types not all types have been tested for tolerance. When using quizalofop on a new dry bean type or variety for the first time evaluate tolerance on a small area first before applying large acreages and check with seed supplier for variety sensitivity.

†† *Assure II, Co-op/IPCO Contender II, Elegant and Yuma GL Liquid EC* only.

§ *Caziva Ultra Q* for use on marked crops only.

#### Forage crops (seed production only):

- **Seedling or established:** Alfalfa, clover (alsike, red, sweet)\*, sainfoin\*, bird's-foot trefoil\*, creeping red fescue.
- **Seedling only:** Clover (white)\*
- **Established only:** Cicer milkvetch\*

#### Forage crops (seed, forage or hay production)

- **Seedling or established:** Creeping red fescue\*\* (2 leaf to pre-heading)

\* NOTE: Since applications to these crops have been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. Application to these crops is at the risk of the user.

\*\**Assure II* only

When tank mixing, always check the tank mix partner recommendations for additional staging restrictions.

## Weeds, Rates and Staging:

Apply quizalofop according to weed stage below to the maximum rates of 0.3 L per acre for all crops except Ethiopian mustard (*B. carinata*) where the maximum rate is 0.2 L per acre.

#### Add one of the following registered adjuvants to the spray tank when applying:

- **Assure II only:** *Sure-Mix* or a Methylated Seed Oil (MSO) type adjuvant (0.5 L per 100 L of spray solution), *LI700* (0.25 to 0.5 L per 100 L of spray solution), or *Merge* (0.5 to 1.0 L per 100 L of spray solution)
- **Co-op/IPCO Contender II:** *Merge* or *IPCO MSO Adjuvant* (0.5 to 1.0 L per 100 L of spray solution), *Sure-Mix* (rates above), *LI 700* (0.25 to 0.5 L per 100 L of spray solution) or *Liberate MSO Adjuvant* (rates above)
- **Yuma GL Liquid EC or Quiz:** *Merge* or *XA Oil Concentrate* (0.5 to 1.0 L per 100 L of spray solution), or *MSO adjuvant* or *Sure-Mix* (0.5 L per 100 L of spray solution)
- **Viking Quizalofop:** *Merge* (0.5 to 1.0 L per 100 L of spray solution), or *Sure-Mix* (0.5 L per 100 L of spray solution)

Use the higher rate of *XA Oil Concentrate* when wild oats or quackgrass are present in the field or when growing conditions are poor.

| Weed                           | Stage                         | Rate (L per acre) |                              |
|--------------------------------|-------------------------------|-------------------|------------------------------|
|                                |                               | 96 g/L forms      | Leopard and ADAMA Quizalofop |
| Green foxtail                  | 2 leaf to early tillering     | 0.15              | 0.148                        |
| Volunteer wheat, barley, oats* | 2 leaf to early tillering     |                   |                              |
| Volunteer corn                 | 2 to 6 leaf stage             |                   |                              |
| Wild oats                      | 1 to 5 leaf (without tillers) |                   |                              |

| Weed                                                       | Stage                     | Rate (L per acre) |                              |
|------------------------------------------------------------|---------------------------|-------------------|------------------------------|
|                                                            |                           | 96 g/L forms      | Leopard and ADAMA Quizalofop |
| Wild oats*                                                 | up to 2 tillers           | 0.20              | 0.194                        |
| Barley grass, yellow foxtail, proso millet, old witchgrass | 2 leaf to early tillering |                   |                              |
| Quack grass suppression                                    | 2 to 6 leaf stage         |                   |                              |
| Foxtail barley                                             | 3 to 4 leaf max 3 tillers |                   |                              |
| Downy <sup>†</sup> and Japanese <sup>††</sup> brome        | 2 to 5 leaf stage         |                   |                              |
| Quack grass season long control                            | 2 to 6 leaf stage         | 0.30              | 0.291                        |

\* Best results are likely to occur if applications are made before tillering begins. Apply at the 2 to 3 leaf stage for optimum control.

<sup>†</sup> Except Quiz, Idol and Viking Quizalofop.

<sup>††</sup> Except Elegant.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre. Up to 162 L per acre of water may be used under heavy populations to improve coverage.
  - **Aerial:** Minimum 10 L per acre to a maximum of 20 L per acre.
- **Nozzles and Pressure:** 30 to 40 psi (210 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASABE medium* droplets.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing        | Target                           | Movement                          | Spectrum   | WSSA Group |
|--------------------|---------------|----------------------------------|-----------------------------------|------------|------------|
| quizalofop-p-ethyl | POST (foliar) | ACCase Lipid Synthesis Inhibitor | Toward areas of growth (Symplast) | Grass only | 1          |

## Effects of Growing Conditions:

Crop injury may occur if crops are stressed because of drought or flooding. Less than acceptable weed control may be expected if weeds are under stress because of drought, flooding or cool weather.

## Tank Mixes:

### Herbicides:

- **In Canola:**
  - *Muster* (8 to 12 grams per acre) plus adjuvant.
- **Glufosinate tolerant canola (Liberty Link) only:**
  - *Liberty 150 SN*\* (0.54 to 1.6 L per acre) plus *Sure-Mix*, *LI 700* or MSO adjuvants, including *Liberate*\* or *IPCO MSO*.
- **In Dry Bean (Pinto, Pink, Great Northern, Small Red):**
  - *Basagran* (label rates with quizalofop at 0.25 L per acre plus *Sure-Mix* adjuvant).
- **In Oriental Mustard (*B. juncea* condiment and oilseed):**
  - *Muster* (8 grams per acre plus quizalofop at 0.15 to 2.0 L per acre plus adjuvant). DO NOT use on yellow mustard as injury will result.
- **In Soybean:**
  - *Pinnacle* (2.2 to 3.3 grams per acre).
  - *Pinnacle* (2.2 to 3.3 grams per acre) plus *Basagran Forté* (label rates) plus quizalofop (0.25 L per acre) plus *Sure-Mix* adjuvant.
- **In Tribenuron Tolerant Sunflowers:**
  - *Express SG* (6 grams per acre) plus *Sure-Mix* or *Merge*\*\* adjuvants.
- **In Established creeping red fescue for seed:**
  - *Ally* (label rates) plus quizalofop (0.2 to 0.3 L per acre) plus adjuvant.
- Allow 24 hours after application before applying a broadleaf herbicide. If the broadleaf herbicide is applied first, wait 7 days before application of quizalofop.

**Insecticides:** None registered.

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the quizalofop labels only.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** 4 days for camelina and 12 hours for all other crops.
- **Grazing Restrictions:** DO NOT graze treated crops or cut for feed in the year of treatment. Assure II use on seedling or established creeping red fescue for seed, forage and hay production - DO NOT permit livestock to graze or cut hay within 60 days after application.  
DO NOT harvest any part of the industrial hemp plant treated with quizalofop for the purposes of smoking or vaping.  
DO NOT feed any part of the industrial hemp plant to treated with quizalofop to livestock.
- **Pre-harvest Interval:** See 'Crops and Staging' chart above.
- **Re-cropping Interval:** No restrictions the year after treatment.
- **Aerial Application:** May be applied by air when used alone.
- **Storage:** DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Cleanout is recommended but no specific cleaning procedures are indicated on the label. Based on products with similar chemistry, 'Method B' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product, may provide adequate cleaning. Contact the manufacturer for more information.

### Hazard Rating:

*Leopard:*

Caution – Poison

*Other Products:*

Danger – Corrosive to Eyes

Skin Irritant, Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Reclaim II / ClearView

Herbicide Group  
2 - metsulfuron  
4 - aminopyralid, 2,4-D

## Company:

Corteva Agriscience

## Formulations:

**Reclaim II A (PCP#30062); ClearView (PCP#29752):** 52.5% aminopyralid + 9.45% metsulfuron methyl formulated as a water dispersible granule.

- Container size - 1.84 kg

**Reclaim II B (PCP#30063):** 660 g/L 2,4-D ester formulated as an emulsifiable concentrate.

- Container size - 2 x 6.48 L

NOTE: Limited availability through selected retail outlets.

## Crops and Staging:

**Rights of way, industrial and non-crop areas, rangeland and pastures** - Apply in spring or early summer.

*Note: The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow. Avoid use in these situations.*

## Weeds, Rates and Staging:

Application timing is critical for weed control. For optimum weed control apply when weeds are emerged, young and actively growing in the vegetative stage for proper translocation and systemic weed activity.

Maximum of 49 g ae (active ingredient) per acre of *Reclaim II* (equivalent of 93 g product per acre) or other product containing aminopyralid (*Restore II*, *Milestone*, *Clearview*, *Sightline*) per season. Treated areas should not receive more than 49 g ae per acre a product containing aminopyralid the year after initial treatment.

Add a surfactant such as *Gateway*, or non-ionic adjuvant such as *Ag-surf*, *Agral 90*, or *Cittowet Plus* at 0.2 L per 100 L of spray solution after adding *Reclaim II/ClearView* components.

### Weeds controlled by *Clearview* at 55 g per acre:

- |                                                                                   |                                    |                                              |
|-----------------------------------------------------------------------------------|------------------------------------|----------------------------------------------|
| ◦ Bluebur                                                                         | ◦ Field scabious                   | ◦ Sow-thistle (perennial)                    |

|                                                                  | ◦ Plumeless thistle   |                                        |

**Weeds controlled by *Clearview* at 69 g per acre:**

- *Weeds controlled by Clearview above plus:*
  - Absinthe<sup>§</sup>
  - Canada thistle<sup>†§§§\*</sup>
  - Cudweed
  - Curled dock
  - Fireweed
  - Hoary allysum
- Perennial pepperweed
- Western (perennial) ragweed
- Pasture sage<sup>§§</sup>
- Prairie sage<sup>†</sup>
- Pussy toes
- Volunteer alfalfa
- Wild carrot
- Wild strawberry<sup>††</sup>

Shrubs

- Prairie wild rose<sup>§§§</sup>
- Western snowberry (buckbrush)<sup>†</sup>

***Reclaim II A* at 69 g per acre plus *Reclaim II B* at 0.69 L per acre; or *Clearview* at 69 g per acre plus 2,4-D Amine 340 to 445 g ae per acre at provides season long control of the weeds above plus the weeds controlled by 340 to 445 g ae of 2,4-D plus the following weeds unless indicated otherwise:**

- *Weeds controlled by Clearview above plus:*
- Shrubs
- Shrubby cinquefoil<sup>††</sup>

**Weeds controlled by *Clearview* at 81 g per acre:**

- *Weeds controlled by Clearview above plus:*
  - Baby's-breath
  - Black henbane
- Cleavers
- Wild caraway
- Wild parsnip

***Reclaim II A* at 81 grams per acre plus *Reclaim II B* at 0.69 L per acre; or *Clearview* at 81 g per acre plus 2,4-D Amine 340 to 445 g ae per acre at provides season long control of the weeds controlled by *Clearview* above plus the weeds controlled by 340 to 445 g ae of 2,4-D plus the following weeds unless indicated otherwise.**

- Canada thistle<sup>††</sup>
- Shrubs
- Prairie wild rose<sup>††</sup>
- Silverberry (wolf willow)<sup>††</sup>
- Western snowberry (buckbrush)<sup>††</sup>

**Weeds controlled by *Clearview* at 93 g per acre:**

- *Weeds controlled by Clearview above plus:*
  - Absinthe
  - Knapweed (Brown, diffuse<sup>\*\*</sup>)
  - Hawkweed (orange<sup>†</sup>, yellow)<sup>\*\*\*</sup>
  - Hoary cress
- Hound's-tongue
- Japanese knotweed
- Mullein
- Prickly lettuce
- Purple loosestrife
- Yarrow<sup>§</sup>

Shrubs

- Shrubby cinquefoil<sup>††</sup>

**Weeds controlled by *Reclaim II A* at 93 grams per acre plus *Reclaim II B* at 0.69 L per acre; or *Clearview* at 93 g per acre plus 2,4-D Amine 340 to 445 g ae per acre at provides season long control of the weeds controlled by *Clearview* above plus the weeds controlled by 340 to 445 g ae of 2,4-D plus the following weeds unless indicated otherwise.**

**Weeds controlled by *Clearview* above plus:**

- Prairie sage<sup>††</sup>
- Shrub
- Shrubby cinquefoil<sup>††</sup>

<sup>§</sup> Season long suppression only.

<sup>§§</sup> Suppression up to 12 months from application.

<sup>§§§</sup> Suppression up to 24 months from application.

<sup>†</sup> Controlled up to 12 months from application.

<sup>††</sup> Controlled up to 24 months after application. DO NOT retreat again in year after treatment.

<sup>\*</sup> Removal of competing vegetation may result in new Canada thistle shoots emerging.

<sup>\*\*</sup> Apply when plants are actively growing with the optimum time of application occurring from rosette to the bolting stages of development or in the fall. Use of the highest application rate improves or extends the duration of control.

<sup>\*\*\*</sup> Apply to plants in the bolting stage of development.

**Individual plant or Spot/Strip Applications:**

- ***Clearview*:** 1.35 to 2.3 grams plus 20 mL surfactant such as *Gateway*, *Ag-Surf*, *Agral 90* or *Citowett* per 10 L of spray solution.
- ***Reclaim II*:** 2.3 grams of *Reclaim II A* plus 17 mL of *Reclaim II B* plus 20 mL of surfactant such as *Gateway Adjuvant*, *Ag-Surf*, *Agral 90* or *Citowett Plus* per 10 L of spray solution.

**Application Information:**

- **Water Volume:**
  - ***Ground*:** 80 L per acre minimum.
  - ***Aerial*:** 20 L per acre minimum. For better coverage apply at 50 L per acre.
- **Nozzles and Pressure:** Use a combination of application equipment and pressures that will apply ***ASABE coarse*** droplets in a uniform pattern. Drift of even small amounts of *Reclaim II* into sensitive plants or areas where sensitive crops may be grown can cause injury. DO NOT apply under conditions prone to drift (i.e. high winds, dead calm, or temperature inversions).

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing                               | Target                   | Movement                          | Spectrum       | WSSA Group |
|--------------------|--------------------------------------|--------------------------|-----------------------------------|----------------|------------|
| metsulfuron-methyl | POST (foliar) also has soil activity | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf only | 2          |
| aminopyralid       | POST (foliar) also has soil activity | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only | 4          |
| 2,4-D              | POST (foliar)                        | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only | 4          |

## Effects of Growing Conditions:

Application should be avoided when pasture and targeted weeds are under stress of drought, excess moisture, extreme heat or cold or other environmental stresses. Target weeds must be actively growing. Avoid applications when temperatures exceed 28°C.

## Tank Mixes:

### Herbicides:

- **Reclaim II:** Grazon XC (1.0 L per acre)
- **Clearview:**
  - **Permanent grass areas:** 2,4-D
  - **Bare ground only:**
    - Glyphosate (a surfactant is required)
    - Arsenal
    - Torpedo EZ (356 to 492 mL per acre)
    - Torpedo EZ plus glyphosate (rates above)

**Note:** The above mixes are those listed on the *Reclaim II* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT re-enter treated areas for 12 hours.
- **Grazing Restrictions:**
  - **Clearview alone:** Grazing not restricted for livestock or lactating dairy animals.
  - **Reclaim II:** DO NOT allow lactating dairy animals to graze treated areas within 7 days of application. Withdraw meat animals from treated areas and feed untreated feed for at least 3 days before slaughter. DO NOT harvest forage or cut hay within 30 days of application.
  - **Both products:** Allow 3 days of grazing on untreated pasture or feed untreated hay before transferring livestock to areas where sensitive broadleaf crops may be grown, since feces and urine may contain the herbicide.
- **Re-cropping Interval:** DO NOT apply to pastures where legumes are an essential component. DO NOT break up treated pasture and plant to sensitive broadleaf crops for at least 3 years after application. Conduct a field bioassay prior to planting.
- **Aerial Application:** May be applied by air.
- **Storage:** Store product in original, labeled containers in a secure, dry, cool area. DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product such as *All Clear* or *Clean Out* spray cleaner. The inclusion of detergent in 'Method B' may provide improved cleaning. Contact the manufacturer for more information.

## Hazard Rating:

*Clearview/Reclaim II A:*

Caution – Eye Irritant

*Reclaim II B:*

Caution – Poison

Warning – Skin Irritant

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Reflex\*

\* For use only in the Red River Valley of Manitoba.

Herbicide Group  
14 - fomesafen

## Company:

Syngenta Canada (PCP#24779)

## Formulation:

240 g/L fomesafen formulated as a solution.

- Container size - 10 L

## Crops and Staging:

Apply *Reflex* at 235 mL per acre at the 1 to 2 trifoliolate leaf stage of the following crops:

- **Soybeans:** Apply only as a tank mix with *Basagran* at 0.71 L per acre plus *Agral 90* at 0.1 L per 100 L of spray solution or as a mix with glyphosate at registered rates in glyphosate tolerant soybean.
- **Dry beans\*:** Apply only as a tank mix with *Basagran* at 0.71 L per acre plus *Agral 90* at 0.1 L per 100 L of spray solution.

**\* NOTE - Since applications to dry beans in the Red River Valley has been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. Application to dry beans is at the risk of the user.**

DO NOT use before the 1<sup>st</sup> trifoliolate leaf stage or increased risk of crop injury may result.

Maximum ONE APPLICATION EVERY TWO CONSECUTIVE YEARS of *Reflex* or other products containing the active ingredient fomesafen.

## Weeds, Rates and Staging:

Broadleaf weeds controlled by *Basagran* at the 0.71 L per acre rate or glyphosate at registered rates in glyphosate tolerant soybeans plus improved control of the following weeds up to the 4-leaf stage:

- Cocklebur
- Eastern black nightshade
- Lady's-thumb
- Lamb's-quarters\*
- Ragweed (common)
- Redroot pigweed
- Volunteer canola
- Wild mustard
- Velvetleaf (3 leaf)

**\* Suppression only**

## Application Information:

- **Water Volume:** Minimum 81 L per acre. Increase water volume to 142 L per acre for fields with heavy weed densities or with weeds at the upper limit of their recommended stage.
- **Pressure:** 275 kPa (40 psi). Increase pressure to 420 kPa (60 psi) for fields with heavy weed densities or with weeds at the upper limit of their recommended stage.
- **Nozzles:** Use nozzles capable of delivering appropriate pressures and volumes.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                  | Target                               | Movement                                             | Spectrum       | WSSA Group |
|-------------------|-----------------------------------------|--------------------------------------|------------------------------------------------------|----------------|------------|
| fomesafen         | POST (foliar) with slight soil activity | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Broadleaf only | 14         |

## Effects of Growing Conditions:

Weed control and crop tolerance may be reduced under certain stress conditions such as cold temperatures, excess moisture, drought and injury from hail or previous herbicide applications.

## Tank Mixes:

### Herbicides:

- **Dry beans and soybeans:**
  - *Basagran* (0.71 L per acre)
- **Glyphosate tolerant soybeans only:**
  - Glyphosate (360 to 720 g ae per acre)

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Note: The above mixes are those listed on the *Reflex* label only.**

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 4 hours may reduce control.
- **Grazing Restrictions:** DO NOT graze treated crop or cut for hay. There is insufficient data to support such use.
- **Pre-harvest Interval:** Leave at least 84 days from application to harvest.
- **Re-cropping Interval:** Winter wheat may be sown 4 months after application. Spring wheat, dry beans, soybeans and field corn may be grown the year following an application.
  - These re-cropping restrictions refer only to the Red River Valley of Manitoba. Use outside this region is not registered as re-cropping options have not been determined.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** Store in a cool place away from food or feed. Store above 0°C. Storing *Reflex* below 0°C can negatively affect product quality.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

No specific cleaning procedures are indicated on the label. Based on products with similar chemistry, 'Method B' found in the general sprayer cleaning section in the introduction or a commercial spray sprayer cleaning product, may provide adequate cleaning. Contact the manufacturer for more information.

## Hazard Rating:

Danger – Corrosive to Eyes

Refer to the Introduction for an explanation of the symbols.

# Restore II / Milestone

Herbicide Group  
4 - aminopyralid, 2,4-D

## Company:

Corteva Agriscience

## Formulation:

**Restore II (PCP#30632):** 50 g/L aminopyralid and 400 g/L 2,4-D amine formulated as a solution.

- Container size - 2 x 9.7 L

**Milestone (PCP#28517):** 240 g/L aminopyralid formulated as a solution.

- Container size - 2 x 10 L

*Note: Limited availability through selected retail outlets.*

Maximum of 49 g ae (active ingredient) per acre of *Restore II* (97 L product per acre) or other products containing aminopyralid (*Reclaim II*, *Milestone*, *Clearview*, *Sightline*) PER SEASON.

## Crops and Staging:

**Industrial and non-crop areas, rangeland and pastures:** Apply in spring or early summer.

*Note: The use of this chemical may result in contamination of groundwater particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow. Avoid use in these situations.*

## Weeds, Rates and Staging:

Apply when weeds are young and actively growing in the vegetative stage for control unless indicated otherwise.

*Note: the use of the highest rate structure improves level and duration of weed control and is recommended when weed populations are dense.*

**Milestone at 120 mL per acre (2.9 mL per 10 L of water for backpack sprayers) will control:**

- |                                   |                                             |                                      |
|-----------------------------------|---------------------------------------------|--------------------------------------|
| ◦ Buttercup (hairy, tall)         | ◦ Ox-eye daisy (pre-bud)                    | ◦ Thistle (bull, nodding, plumeless) |
| ◦ Canada goldenrod <sup>+++</sup> | ◦ Perennial sow-thistle                     | ◦ Yellow star-thistle                |
| ◦ Canada fleabane                 | ◦ Ragweed (common, western <sup>+++</sup> ) | (rosette through bolting)            |
| ◦ Canada thistle <sup>++</sup>    | ◦ Scentless chamomile <sup>+++</sup>        |                                      |
| ◦ Curled dock <sup>+++</sup>      | ◦ Spotted knapweed                          |                                      |
| ◦ Horse-nettle                    | ◦ Sulphur cinquefoil <sup>+++</sup>         |                                      |

**Restore II at 0.57 L per acre or Milestone at 120 mL per acre plus 2,4-D amine at 340 g ae per acre will control:**

- |                                                                                                        |                          |
|--------------------------------------------------------------------------------------------------------|--------------------------|
| ◦ Weeds controlled by Milestone above plus weeds controlled by 2,4-D at 340 g ae per acre (see 2,4-D): |                          |
| ◦ Canada goldenrod*                                                                                    | ◦ Gumweed <sup>***</sup> |
| ◦ Curled dock (< 4 leaf)*                                                                              | ◦ Hawkweeds*             |
|                                                                                                        | ◦ Scentless chamomile*   |

**Milestone at 154 mL per acre (3.8 mL per 10 L of water for backpack sprayers) will control:**

- Weeds controlled by Milestone at 120 mL per acre above plus:
  - Absinth (wormwood)<sup>†††</sup>
  - Clover
  - Cudweed
  - Curled dock
  - Fleabane, hairy
  - Scentless chamomile
  - Tansy ragwort
  - Western ragweed

**Restore II at 0.86 L per acre or Milestone at 154 mL per acre plus 2,4-D amine at 340 g ae per acre will control:**

- Weeds controlled by Milestone at 154 mL per acre above, plus weeds controlled by 2,4-D at 340 g ae per acre (see 2,4-D):
  - Canada goldenrod<sup>††\*\*</sup>
  - Dandelion<sup>††\*</sup>
  - Hawkweeds<sup>\*\*</sup>
  - Heal-all<sup>\*\*</sup>
  - Smartweed (green and Pennsylvania)<sup>\*\*</sup>
  - Sulphur cinquefoil<sup>††\*\*</sup>

**Milestone at 202 mL per acre (5.0 mL per 10 L of water for backpack sprayers) will control:**

- Weeds controlled by Milestone at 154 mL per acre above plus:
  - Absinth (wormwood)
  - Clover
  - Common tansy<sup>†††</sup>
  - Dandelion<sup>†††</sup>
  - Fireweed<sup>\*</sup>
  - Hawkweed, orange (bolting)<sup>\*</sup>
  - Japanese knotweed<sup>†††</sup>
  - Knapweed<sup>†††</sup> (diffuse, Russian)
  - Mullein<sup>\*</sup>
  - Prickly lettuce
  - Purple loosestrife
  - Tall ironweed
  - Yarrow, Common<sup>†††</sup>

**Milestone at 154 mL per acre plus 2,4-D amine at 437 g ae per acre will control:**

- Absinth (wormwood)<sup>††</sup>
- Dandelion<sup>††</sup>

**Restore II at 0.97 L per acre or Milestone at 202 mL per acre plus 2,4-D amine at 340 g ae per acre will control:**

- Weeds controlled by Milestone at 202 mL per acre above, plus weeds controlled by 2,4-D at 340 g ae per acre (see 2,4-D):
  - Absinth (wormwood)
  - Biennial wormwood<sup>††\*\*</sup>
  - Bindweed (field and hedge)<sup>††\*\*</sup>
  - Blue lettuce<sup>††\*\*</sup>
  - Burdock<sup>††\*\*</sup>
  - Canada goldenrod<sup>††\*\*</sup>
  - Dandelion<sup>††\*\*</sup>
  - Field bindweed<sup>††\*\*</sup>
  - Gumweed<sup>††\*\*</sup>
  - Hoary cress<sup>††\*\*</sup>
  - Leafy spurge<sup>††\*\*</sup>
  - Mouse-eared chickweed<sup>††\*\*</sup>
  - Western snowberry<sup>††\*</sup>
  - Yellow rocket<sup>††\*\*</sup>

**Milestone at 202 mL per acre plus 2,4-D Amine at 583 g ae per acre will control:**

- Common tansy<sup>††</sup>
- Western snowberry<sup>††</sup>

\* Milestone or Milestone + 2,4-D only

\*\* Restore II only.

† Top growth control only.

†† Season long control.

††† Suppression only.

**Individual plant or spot/strip applications:**

- **Milestone:** See rates above. Apply to target plant so that it is evenly covered with spray solution but not to the point of runoff. Use higher rate when growing conditions are less than favourable or when plant foliage is tall and dense.
- **Restore II:** 14-24 mL of Restore II per 10 L of spray solution. Thoroughly and uniformly wet the foliage of all target plants but not to the point of runoff. Use the higher rate when growing conditions are less than favorable or when plant foliage is tall and dense.

**Application Information:**

- **Water volume:**
  - **Ground:** 80 L per acre minimum.
  - **Aerial:** 20 L per acre minimum
- **Nozzles and Pressure:** Use a combination of application equipment and pressures that will apply **ASABE coarse** droplets in a uniform pattern.
  - Drift of even small amounts of *Restore II* into sensitive plants or areas where sensitive crops may be grown can cause injury. DO NOT apply under conditions prone to drift (i.e. high winds, dead calm, or temperature inversions).
  - Avoid applications closer than the drip line or outer edge of the canopies of trees or injury may occur to the tree.

**NOTE:** Use closed handling systems when using bulk containers and/or if handling more than 663 L of product per day. Handheld applications are limited to 20 L of product per day. Respirators must be worn if applying more than 12.5 L per day using handheld equipment.

**How it Works:**

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                               | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|--------------------------------------|-----------------|---------------------------------|----------------|------------|
| aminopyralid      | POST (foliar) also has soil activity | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| 2,4-D             | POST (foliar)                        | Synthetic Auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Application should be avoided under conditions of drought or other environmental stress.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Restore II:** none registered.
- **Milestone:**
  - **Permanent grass stands:** 2,4-D amine (340, 437, & 583 gae/acre respectively or 150, 190 & 260 mL per 10 L of water respectively for backpacks)
  - **Bare ground only:**
    - *Arsenal* (1.2 L/acre)
    - Glyphosate (rates as per glyphosate page up to 1750 g ae per acre)
    - *Torpedo EZ* (356 to 492 mL per acre)
    - *Torpedo EZ* plus glyphosate (rates above)

## Restrictions:

- **Rainfall:** No rainfast period is specified on the label; required interval may be up to 8 hours. Contact manufacturer for more information.
- **Restricted Entry Interval:** DO NOT re-enter treated areas for 12 hours.
- **Grazing Restrictions:**
  - **Milestone alone:** Grazing not restricted for livestock or lactating dairy animals.
  - **Restore II:** DO NOT allow lactating dairy animals to graze treated areas within 7 days of application. Withdraw meat animals from treated fields at least 3 days before slaughter. DO NOT harvest forage or cut hay within 30 days of application.
  - **Both products:** Allow 3 days of grazing on an untreated pasture (or feed untreated hay) before transferring livestock to areas where sensitive broadleaf crops may be grown.
- **Re-cropping Interval:** DO NOT use if legumes are essential in a pasture. DO NOT break up treated pasture and plant to sensitive broadleaf crops for at least 3 years after application.
- **Aerial Application:** May be applied by air.
- **Storage:** Store product in original, labelled containers in a secure, dry, cool area. DO NOT freeze.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

'Method A' found in the general sprayer cleaning section in the introduction.

## Hazard Rating:

Danger – Eye and Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Restore NXT

**Herbicide Group**  
**4 - aminopyralid**  
**4 - florasulfuron**

## Company:

Corteva Agriscience (PCP #34730)

## Formulation:

80 g/L aminopyralid and 6.36 g/L florasulfuron present as solution concentrate.

- Container size – 2 x 10 L

**Note:** Limited availability through selected retail outlets.

## Crops, and Staging:

Permanent grass pasture and rangeland. Apply in spring or early summer.

**Note:** The use of this product in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

## Weeds, Rates and Staging:

Apply to young weeds that are actively growing at time of application. Post emergence applications should be made before bud stage or early flowering, unless otherwise specified. Only weeds present at the time of application will be controlled.

A surfactant is required with *Restore NXT*. Add a surfactant such as *Gateway* adjuvant or a non-ionic surfactant (NIS) at 0.25 L to 0.5 L per 100 L of spray solution or methylated seed oil (MSO) at 0.5 L to 1 L per 100 L of spray solution of spray solution after adding *Restore NXT*.

**Note:** Maximum of one application of this or other products containing (aminopyralid) per year.

### **Restore NXT at 304 mL per acre will control:**

- Canada fleabane (bolting up to 20 cm)
- Canada thistle\*
- Common waterhemp (up to 3 leaf and 8 cm)
- Spotted knapweed\*
- Velvetleaf (up to 3 leaf and 8 cm)

### **Restore NXT at 352 mL per acre will control the weeds above plus:**

- Canada fleabane
- Canada goldenrod\*
- Common ragweed
- Curled dock\*
- Ox-eye daisy (pre-bud)
- Perennial sowthistle
- Scentless chamomile\*
- Spotted knapweed
- Sulphur cinquefoil (pre-bud)\*
- Tall buttercup
- Thistle (bull, Canada, musk or nodding, plumeless)

### **Restore NXT at 352 mL per acre plus 340 grams ae per acre 2,4-D will control all the weeds by 352 mL per acre of Restore NXT alone and all the weeds listed on the 2,4-D label at 340 grams ae per acre plus:**

- Annual sow thistle
- Bluebur, burdock (less than 4 leaf)
- Blue lettuce\*\*\*
- Bull thistle\*\*\*
- Buttercup, gumweed\*\*\*
- Canada goldenrod
- Canada thistle\*\*
- Cocklebur
- Common plantain
- Curled dock (less than 4 leaf)
- Flixweed
- Goat's beard
- Hoary cress\*\*\*
- Orange hawkweed
- Peppergrass
- Perennial sow thistle\*\*\*
- Prickly lettuce
- Ragweeds
- Scentless chamomile
- Stinging nettle
- Spotted knapweed
- Sweet clover

### **Restore NXT at 453 mL per acre will control:**

- Weeds controlled by *Restore NXT* at 352 mL per acre above plus:
- Absinth wormwood\*
- Canada goldenrod\*
- Clover
- Cudweed
- Curled dock
- Poison hemlock
- Scentless chamomile
- Tansy ragwort

### **Restore NXT at 453 mL per acre plus 437 grams ae per acre 2,4-D will control all the weeds by 453 mL per acre of Restore NXT alone and all the weeds listed on the 2,4-D label at 437 grams ae per acre plus:**

- absinth wormwood\*\*
- dandelion\*\*

### **Restore NXT at 607 mL per acre will control:**

- Weeds controlled by *Restore NXT* at 453 mL per acre above plus:
- Absinth wormwood
- Annual sowthistle (up to 3 cm)
- Canada goldenrod\*
- Cleavers (up to 10 cm)
- Common tansy\*
- Common yarrow\*
- Dandelion\*
- Diffuse knapweed (bolting)\*
- Fireweed
- Japanese knotweed\*
- Lamb's quarters (prior to bud stage)
- Mullein
- Orange hawkweed (bolting)\*\*\*\*
- Prickly lettuce
- Purple loosestrife
- Russian knapweed (bud to flowering)\*
- Scotch thistle
- Wild caraway
- Wild chervil
- Wild parsnip

### **Restore NXT at 607 mL per acre plus 583 grams ae per acre 2,4-D will control all the weeds by 607 mL per acre of Restore NXT alone and all the weeds listed on the 2,4-D label at 583 grams ae per acre plus:**

- common tansy\*\*

\*Suppression only.

\*\*Season long control

\*\*\*top growth control

\*\*\*\*seasonal and 12 month control

Individual plant or spot strip applications: 15 mL of *Restore NXT* plus 50 mL of surfactant (surfactant such as *Gateway* adjuvant, MSO, NIS (such as *Ag-Surf*, *Agral 90* or *Citowett Plus*) per 10 L of spray solution. Thoroughly and uniformly wet the foliage of all target plants but not to the point of runoff.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 80 L per acre.
  - **Aerial:** 12 L per acre minimum. For better coverage apply at 20 L per acre.

**Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASABE coarse droplets by ground or by air.

- For applications by air: Reduce drift caused by turbulent wingtip vortices. Nozzle distribution along the spray boom length MUST NOT exceed 65% of the wing- or rotorspan. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.
- Do not apply during periods of dead calm or when wind velocity and direction pose a risk of spray drift. Do not spray when the wind is blowing towards a nearby sensitive crop, garden, terrestrial habitat (such as shelter-belt).
- Avoid application within the dripline (outermost edge of the tree canopy) of desirable coniferous and deciduous trees unless injury can be tolerated.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Introduction section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                               | Target          | Movement                        | Spectrum       | WSSA Group |
|-------------------|--------------------------------------|-----------------|---------------------------------|----------------|------------|
| Aminopyralid      | POST (foliar) also has soil activity | Synthetic auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |
| Florpyrauxifen    | POST (foliar)                        | Synthetic auxin | Throughout the plant (Symplast) | Broadleaf only | 4          |

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- Permanent pasture and rangeland: 2,4-D

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction

## Restrictions:

- **Rainfall:** Avoid application when heavy rain is in the forecast. Contact manufacturer for more information.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Grazing:** The following restrictions for livestock or lactating dairy animals grazing in treated areas must be followed:
  - Forage: Grazing/feeding is permitted on the day of application (0 days)
  - Hay: Allow 7 days after application to cut or feed hay.
  - Allow 3 days of grazing on an untreated pasture (or feed untreated hay) before transferring livestock to areas where sensitive broadleaf crops may be grown.
  - Do not transfer livestock from treated grazing areas onto broadleaf crop areas without first allowing 3 days of grazing on untreated grass pasture.
- **Re-cropping:** DO NOT use if legumes are essential in a pasture. DO NOT break up treated pasture and plant to sensitive broadleaf crops for at least 3 years after application.
  - Aerial Application: May be applied by aircraft.
  - Storage: Store this product away from food or feed. Store product in original, labelled containers in a secure, dry, cool area. DO NOT freeze.
  - **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A,' in the general section on sprayer cleaning in the Introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

None listed.

# Reward

Herbicide Group  
22 - diquat

## Company:

Syngenta Canada (PCP#26271)

## Formulation:

240 g/L diquat formulated as a solution.

- Container size - 4 x 3.78 L

## Use:

For use in farm dugouts and other clear, slow moving water bodies to control water weeds, such as:

- Canada water weed
- Duckweed
- Pond weeds
- Coontail
- Flowering rush
- Water milfoil

Offers temporary control of certain species of algae.

High levels of suspended organic matter or clay particles in water will reduce control.

NOTE: A permit must be obtained from Saskatchewan Water Security Agency or Manitoba Sustainable Development for application of pesticides directly to or within a set distance of water bodies that are not wholly contained within a private parcel of land.

## Timing:

Mid-May through late June when water weeds or algae are actively growing. Apply before weeds have developed a heavy mat of growth for effective control.

## Rates:

**Dugouts less than 5 feet (1.5 m) deep:** Apply *Reward* at 7.4 L per acre.

- At this rate, 2.2 L of *Reward* will treat a dugout that is 160 feet by 80 feet (49 m x 24.4 m).

**Dugouts more than 5 feet (1.5 m) deep:** Apply *Reward* at 10.1 to 11.8 L per acre.

- At these rates, a dugout that is 160 feet by 80 feet (49 m x 24.4 m) will require 3.0 to 3.5 L of *Reward*. Milfoil can be controlled in early stages by 3.7 L per acre in early stages of growth.

## Application:

- Dilute 1 part *Reward* with 4 parts clean water.
- Spray over the water surface, inject below the water surface or pour directly onto the water surface from a moving boat or for small water bodies, apply from the banks. See label for detailed instructions. Note: *Reward* is bound rapidly to soil, so material must enter the water directly to be effective.

## How it Works:

*Reward* is a non-volatile fast acting herbicide for the control of water weeds. Control of susceptible weeds generally occurs within 1 to 2 weeks. *Reward* is inactivated upon contact with soil, mud or lake bottoms. Therefore, it has no residual herbicidal effect.

## Restrictions:

- **Grazing Restrictions:** DO NOT use water for animal consumption for 24 hours after application.
- **Irrigation:** DO NOT use water for irrigation for 5 days after application.
- **Domestic Use:** DO NOT use water for human consumption for 5 days after application. DO NOT swim in water for 24 hours after treatment.
- **Storage:** DO NOT freeze.
- **Environment:** If weed growth is dense, protect fish by not treating more than one-fourth of dugout at a time.

## Equipment Clean Out:

Refer to 'Method C' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Warning – Poison

Caution – Skin Irritant, Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Rexade

Herbicide Group  
2 - pyroxsulam  
4 - halauxifen, 2,4-D

## Company:

Corteva Agriscience

## Formulation:

**Rexade A (PCP #32520):** 5% halauxifen and 15% pyroxsulam formulated as water dispersible granules.

- Container size - 1 x 1.62 kg

**Rexade B (PCP #32294):** 660 g/L 2,4-D ester formulated as an emulsifiable concentrate.

- Container size - 1 x 8.58 L

## Crops and Staging:

**Wheat (spring, durum, winter):** From the 2 leaf stage up to the emergence of the flag leaf.

## Weeds, Rates and Staging:

Use *Rexade A* at 40.5 grams per acre and *Rexade B* at 215 mL per acre for control or suppression of following weed species.

### Weeds controlled:

- **Grasses: 1 to 5 leaf stage unless otherwise indicated.**
  - Barnyard grass
  - Brome, Japanese (1 to 6 leaf stage)
  - Brome, downy (2 to 6 leaf, 4 tillers)<sup>§</sup>
  - Foxtail (green<sup>§</sup>, yellow)
  - Wild oats (up to 4 leaf, 2 tiller)
- **Broadleaves:**
  - American dragonhead (up to bud stage and 15 cm in height)
  - Annual sow-thistle<sup>§</sup> (up to 5 leaf)
  - Annual (wild) sunflower
  - Bluebur
  - Burdock
  - Canada fleabane (up to 15 cm height)
  - Canada thistle (up to 30 cm tall, pre bud stage)<sup>§</sup>
  - Chickweed, common (up to 10 cm)
  - Cleavers<sup>†</sup> (1 to 9 whorl)
  - Cocklebur
  - Corn spurry (up to 2 whorl stage, <10 cm in height)
  - Cow cockle
  - Dandelion (seedlings and overwintered rosettes, up to 20 cm)<sup>§</sup>
  - Flixweed (up to 10 cm)
  - Hemp-nettle<sup>†</sup>
  - Henbit (up to bud stage, 15 cm tall)
  - Kochia<sup>\*\*†§</sup>
  - Lamb's-quarters<sup>†</sup>
  - Mustard (except dog and green tansy)
  - Night-flowering catchfly<sup>§</sup> (up to bolting stage, up to 15 cm height)
  - Plantain
  - Prickly lettuce
  - Ragweed (common, giant)
  - Redroot pigweed<sup>†</sup>
  - Round-leaved mallow (up to 6 leaf stage, < 10 cm height)
  - Russian thistle
  - Smartweed (1 to 5 leaf stage)
  - Shepherd's purse (up to 30 cm tall)
  - Stinkweed (up to 30 cm tall)
  - Stork's-bill (up to 8 leaf stage)
  - Sweet clover
  - Velvetleaf (up to 5 leaf stage)
  - Volunteer alfalfa (up to 25 cm height)
  - Volunteer canola (1 to 6 leaf stage)
  - Volunteer flax (up to 15 cm height)
  - Volunteer sunflower
  - White cockle (up to bud stage, less than 15 cm height)<sup>§§</sup>
  - Wild buckwheat
  - Wild radish

<sup>§</sup> Suppression only.

<sup>§§</sup> Season long control.

<sup>\*\*</sup> Light to moderate infestations (suppression of up to 150 plants per m<sup>2</sup>, up to 15 cm in height control of up to 50 plants per m<sup>2</sup>, up to 10 cm in height when tankmixed with 2,4-D).

<sup>†</sup> Including group 2 resistant biotypes.

## Application Information:

- **Water volume:**
  - **Ground:** 20 to 40 L per acre
  - **Aerial:** 12 L per acre
- **Nozzles and Pressure:** Use boom pressure of 235 kPa or less. Use nozzles and pressure designed to produce **ASABE coarse** droplets. To reduce drift caused by turbulent wingtip vortices, the nozzle distribution along the spray boom length must not exceed 65 percent of the wing or rotor span.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                          | Spectrum          | WSSA Group |
|-------------------|---------------|--------------------------|-----------------------------------|-------------------|------------|
| pyroxsulam        | POST (foliar) | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf & grass | 2          |
| halauxifen        | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only    | 4          |
| 2,4-D             | POST (foliar) | Synthetic Auxin          | Throughout the plant (Symplast)   | Broadleaf only    | 4          |

## Effects of Growing Conditions:

Weeds hardened off by cold weather or drought stress may not be adequately controlled or suppressed and re-growth may occur.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- 2,4-D ester up to an additional 70 g ae per acre (see 2,4-D).

**Insecticides:** None registered.

**Fungicide:** None registered.

**Fertilizers:** None registered.

Adding ingredients in the correct order is critical for optimum performance. Check label of both products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 2 hours may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated field until 12 hours post-application.
- **Grazing Restrictions:** DO NOT graze treated crops or cut for hay within 7 days of application.
- **Pre-harvest Interval:** DO NOT harvest treated crops for 50 days after application.
- **Re-cropping Interval:** Fields can be re-seeded 11 months with spring barley, spring wheat, oats, canola, flax, brown and yellow mustard, canola quality *Brassica juncea*, field peas and soybeans or fields can be fallowed. Sunflowers can be planted 10 months and lentils 22 months after application.
- **Aerial Application:** May be applied by air.
- **Storage:** Store in original containers in dry well ventilated storage. Store in heated storage. If the product is frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water before reuse. See the label for product specific cleaning details.

## Hazard Rating:

### *Rexade A:*

Caution – Eye Irritant

### *Rexade B:*

Caution – Poison

Warning – Skin Irritant

Potential Skin Sensitizer

When handling more than 400 L of *Rexade B* (2,4-D) per day use a close transfer system. Refer to the Introduction for an explanation of the symbols.

# Rezuvant XL

Herbicide Group  
1 - pinoxaden  
4 - halauxifen,  
fluroxypyr

## Company:

Corteva Agriscience

## Formulation:

**Rezuvant XL (PCP#34045):** 4.2 g/L halauxifen, 104.2 g/L fluroxypyr, 50 g/L pinoxaden co-formulated as an emulsifiable concentrate.

- Container sizes - 2 x 9.7 L, 116.4 L

## Crops and Staging:

**Wheat (spring, winter) and barley:** 3 leaf stage to just prior to emergence of the flag leaf.

## Weeds and Staging:

Apply to actively growing weeds up to 10 cm high or wide unless otherwise specified:

- **Grass weeds controlled by Axial plus the following broadleaf weeds from 1 to 8 leaf stage, unless otherwise indicated:**

- |                                                       |                                                                          |                                     |
|-------------------------------------------------------|--------------------------------------------------------------------------|-------------------------------------|
| ◦ American dragonhead (up to bud stage <sup>†</sup> ) | ◦ Kochia <sup>†</sup>                                                    | ◦ Shepherd's-purse                  |
| ◦ Chickweed                                           | ◦ Lamb's-quarters                                                        | (to bolting or 20 cm)               |
| ◦ Cleavers (1 to 9 whorl)                             | Nightshade (eastern, black, hairy and cutleaf/wild tomato) <sup>††</sup> | ◦ Sow-thistle, annual* (to 5 leaf)  |
| ◦ Cow cockle (8 leaf <sup>†</sup> ) <sup>§</sup>      | ◦ Ragweed (common <sup>††</sup> , giant)                                 | ◦ Stork's-bill                      |
| ◦ Fleabane, Canada <sup>†</sup>                       | ◦ Redroot pigweed                                                        | ◦ Velvetleaf (1 to 5 leaf stage)    |
| ◦ Flixweed (up to 8 leaf & 8 cm)                      | ◦ Round-leaved mallow <sup>††</sup>                                      | ◦ Volunteer alfalfa (to 25 cm)      |
| ◦ Hemp-nettle                                         | ◦ Russian thistle*                                                       | ◦ Volunteer flax <sup>†</sup>       |
| ◦ Henbit (up to bud stage <sup>†</sup> )              |                                                                          | ◦ Wild buckwheat                    |
|                                                       |                                                                          | ◦ Wild mustard (to 4 leaf or 10 cm) |

\* Suppression only.

<sup>†</sup> Up to 15 cm in height.

<sup>††</sup> 1 to 6 leaf stage.

## Rates:

*Note: Maximum of ONE APPLICATION of this or other products containing pinoxaden per year.*

**Rezuvant XL:** 486 mL per acre

*Rezuvant XL* is intended to be used with the addition of MCPA ester 600 at the rate of 188 to 290 mL per acre. MCPA ester 600 is not included in the *Rezuvant XL* package and must be purchased separately.

Addition of surfactant is NOT required. Use the spray suspension as soon as it is prepared. Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water volume:**
  - **Ground:** Minimum 20 to 40 L per acre
  - **Aerial:** 12 L per acre
- **Nozzles and Pressure:** Use boom pressure of 200 to 275 kPa. Use nozzles and pressure designed to produce **ASABE coarse** droplets. To reduce drift caused by turbulent wingtip vortices, the nozzle distribution along the spray boom length must not exceed 65 percent of the wing or rotor span.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                            | Movement                          | Spectrum       | WSSA Group |
|-------------------|---------------|-----------------------------------|-----------------------------------|----------------|------------|
| pinoxaden         | POST (foliar) | ACCCase Lipid synthesis inhibitor | Toward areas of growth (symplast) | Grasses only   | 1          |
| fluroxypyr        | POST (foliar) | Synthetic auxin                   | Moves throughout plant (symplast) | Broadleaf only | 4          |
| halauxifen        | POST (foliar) | Synthetic auxin                   | Moves throughout plant (symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Extreme growing conditions such as drought or near freezing temperature prior to, at or following time of application may reduce weed control and increase the risk of crop injury at all stages of growth. If foliage is wet at the time of application, control may be decreased. Under conditions of low crop and high weed density, control may be reduced.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **Wheat (spring, winter) and barley:**
  - MCPA 600 ester (188 to 280 mL per acre).
  - 2,4-D 700 ester (174 to 214 mL per acre).

**Insecticides:** None registered.

**Fungicide:** None registered.

**Fertilizers:** None registered.

**Note:** The above mixes are those listed on the *Rezuvant XL* label only.

Off-label tank mixes, as previously permitted under the Pest Management Regulatory Agency (PMRA) Off-label Tank Mix Policy memo of 2009 are no longer allowed under new guidance from PMRA. As of December 20, 2022 only products specifically indicated on product labels may be mixed, or when the labels of two or more products to be mixed include the statement quoted in the introduction. As of December 2024 this memo will no longer be recognized by Health Canada.

Adding ingredients in the correct order is critical for optimum performance. Check label of both products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Restricted Entry Interval:** DO NOT re-enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze treated crops within 7 days of application. DO NOT cut the treated crop for hay or silage within 30 days after application.
- **Pre-harvest Interval:** DO NOT harvest treated crops for 60 days after application.
- **Re-cropping Interval:** Fields can be re-seeded after a minimum of 10 months with spring wheat, barley, oats, canola, corn, soybeans, sunflowers, flax, field peas, potatoes (except seed potatoes), mustard, alfalfa, dry bean (*Phaseolus vulgaris* species including pinto, kidney and white types) and timothy or fields can be summer fallowed. Lentils can be planted 22 months after application.
- **Aerial Application:** May be applied by air.
- **Storage:** Store in a cool, dry place. Avoid freezing. If frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

This product utilizes a combination of 'Method A' and 'Method B' for cleanout requiring the use of *All Clear Spray Tank Decontaminator* for the tank plus ammonia for nozzles screens and filters for the second rinse. Refer to the general section on sprayer cleaning in introduction. Let solution stand for an extended period for better results. Flush sprayer system with water before reuse. See the label for product specific cleaning details.

## Hazard Rating:

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Rimsulfuron

Herbicide Group  
2 - rimsulfuron

## Company:

Corteva Agriscience (*Prism SG*)  
Sharda Cropchem Canada (*Sharda Rimsulfuron*)  
Albaugh (*Hinge*)

## Formulation:

**Prism SG (PCP#30057); Hinge (PCP#34352):** 25% rimsulfuron formulated as a water soluble granule.

- Container size - 480 g

**Sharda Rimsulfuron (PCP#32932):** 25% rimsulfuron formulated as a water dispersible granule.

- Container size - 480 g

## Crops and Staging:

**Irrigated potato\***: prior to flower initiation. Potato tolerance differs by variety. Limit first use to a small area of each variety prior to widespread adoption in the field. Delay cultivation for 7 to 10 days after application.

**Field Corn\*\* in the Red River Valley of Manitoba only (*Hinge* and *Sharda Rimsulfuron* only):**

- **Pre-emergent surface:** Apply to the soil surface after seeding but before the emergence of the crop and weeds.
- **Post emergent\*\*:** Coleoptile leaf (spike) to 3 leaves (2 collars visible) or 20 cm in height - leaf extended.

**\* NOTE:** Since application to irrigated potato in western Canada has been registered under the User Requested Minor Use program, the manufacturer assumes no responsibility for herbicide performance. **Application to irrigated potato in western Canada is at the risk of the user.**

**\*\* NOTE:** Corn hybrids with heat unit ratings of less than 2500 CHU have shown sensitivity to rimsulfuron. **DO NOT** make post-emergent applications to corn varieties with less than 2500 CHU or in areas with less than 2500 CHU on average. Some corn hybrids with CHU ratings of greater than 2500 may also be injured by rimsulfuron. Consult with corn seed suppliers on which varieties are sensitive to rimsulfuron.

## Weeds, Rates and Staging:

**Note:** Maximum of 6 grams per acre of the active ingredient rimsulfuron per acre (this equates to 24 g rimsulfuron products per acre) PER YEAR.

24 grams per acre controls the following weeds at the stage indicated:

| Weeds                                              | Weed Stage                                               |
|----------------------------------------------------|----------------------------------------------------------|
| Barley grass, foxtail (green, yellow*)             | Pre-emergence                                            |
| Barley grass, foxtail (green, yellow), witch grass | 1 to 6 leaf, maximum 2 tillers                           |
| Quackgrass                                         | 3 to 6 leaf (less than 10 inches or 25 cm leaf extended) |
| Lamb's-quarters*, redroot pigweed                  | 4 to 6 leaf (less than 4 inches or 10 cm tall or across) |

### \* Suppression.

Add a recommended non-ionic surfactant such as *Citowett Plus*, *Agsurf II*, or *Agral 90* at 0.2 L per 100 L spray solution.

Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:** Minimum 40 L per acre.
- **Nozzles and Pressure:** 25 to 40 psi (175 to 275 kPa) when using conventional flat fan nozzles. Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage of *ASABE medium* droplets.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                   | Movement                          | Spectrum          | WSSA Group |
|-------------------|---------------|--------------------------|-----------------------------------|-------------------|------------|
| rimsulfuron       | POST (foliar) | ALS Amino Acid Inhibitor | Toward areas of growth (Symplast) | Broadleaf & grass | 2          |

## Effects of Growing Conditions:

Apply when the temperature 24 hours before and after application is between 5°C and 28°C. Temperatures beyond this range increase the potential for crop injury. Rapid fluctuations in temperature will stress the crop (greater than a 20°C difference within 24 to 36 hours). Allow 48 to 72 hours for the crop to acclimatize before spraying if severe temperature fluctuations occur.

Crop injury may result if applications are made when potatoes are stressed by abnormally hot, humid, or cold weather conditions, frost, low fertility, drought, water saturated soil, compacted soil, previous pesticide applications, disease or insect damage. If potatoes have been injured by frost, wait 48 to 72 hours after normal growing conditions have resumed before applying.

Warm, moist conditions after application promote good weed control while cool and/or dry conditions may reduce or delay activity. Weeds hardened off by cold weather or drought stress may not be controlled.

## Tank Mixes:

None registered.

## Restrictions:

- **Rainfall:** Within 2 to 4 hours may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for at least 12 hours.
- **Pre-harvest Interval:** Leave 30 days from application to harvest.
- **Grazing Restrictions:** DO NOT graze the treated crop or cut for hay.
- **Re-cropping Interval:** Field corn may be planted any time after application. Winter wheat may be planted 4 months after application. Barley, canola\*, chickpeas\*, clover (red)\*, corn (including sweet and seed\*), dry bean\*, faba bean\*, field pea\*, flax\*, lentil\*, oats\*, potato, soybean\*, sorghum\*, wheat (spring, winter, durum\*) and sunflowers\* may be planted the year after application. For all other crops, a field bioassay is recommended before planting.  
\*Prism SG only.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A' found in the general sprayer cleaning section in the introduction. Check the label or contact the manufacturer for more specific sprayer cleaning information.

## Hazard Rating:

Warning – Eye Irritant

Warning – Contains the Allergen Sodium Sulfite

Refer to the Introduction for an explanation of the symbols.

# Roundup Xtend 2

Herbicide Group  
9 - glyphosate  
4 - dicamba

## Company:

Bayer

## Formulation:

**Roundup Xtend 2 (PCP#33502)\*:** 317 g ae/L glyphosate present as the monoethanolamine salt plus 159 g/L dicamba present as the diglycolamine salt, formulated as a solution.

- Container size - 10 L, 450 L

*Roundup Xtend 2* also contains ingredients within the formulation to reduce volatility (i.e. *VaporGrip Technology*).

## Crops and Staging:

**Glyphosate + dicamba tolerant (RR2 Xtend) soybean:**

- **Pre-plant or pre-emergence:** Apply any time prior to the emergence of the crop.
- **Post-emergence:** Apply once or twice, at least two weeks apart, up to the early flower stage (R1).

**Corn hybrids with Roundup Ready 2 Technology:**

- **Pre-emergence:** Apply prior to the emergence of the crop.
- **Post-emergence:** Spike to 5-leaf stage

*Note: The use of this chemical may result in contamination of groundwater, particularly in areas where soils are permeable (e.g. sand, loamy sand and sandy loam soils) and/or the depth to the water table is shallow. Avoid use in these situations.*

## Weeds, Staging and Rates:

Apply to small actively growing weeds that are less than 4 inches (10 cm) in height or width. Early applications when the weeds are small reduce early season weed competition and provide maximum yield potential.

**Note: DO NOT add acidifying buffering agents, acidic pH adjusting agents or adjuvants other than agriculturally approved NIS to the spray solution. DO NOT add ammonium sulfate (AMS), AMS-containing adjuvants, water conditioners, or sprayable fluid fertilizers.**

| Roundup Xtend 2<br>(L per acre) | Weeds controlled:                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                             |                                                                                                                                                                                                                                                                                          |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

\* Single application provides suppression. Sequential applications provide control. For sequential applications, ensure the crop has not advanced beyond the recommended growth stage. The sequential application should be applied at least two weeks after the first application.

\*\* Control with a single application prior to seeding in the spring. The addition of 360 g ae per acre of addition glyphosate (see tank mixes) will improve control of heavy infestation and plants over 15 cm (6 inches) across.

**NOTE: 1.52 L per acre rate of Roundup Xtend 2 to be used only once in a growing season.**

**DO NOT exceed the maximum season total 3 L per acre of Roundup Xtend 2.**

## Application Information:

DO NOT allow herbicide solution to mist, drip, drift or splash onto desirable vegetation because severe injury or destruction to desirable broadleaf plants could result. Apply when air temperature is between 10 and 25°C. DO NOT spray when the temperature is expected to exceed 30°C.

When applying *Roundup Xtend* adjacent to sensitive crops, apply as a pre-plant, pre-emergent or early post-emergent treatment to avoid potential drift onto the sensitive crops.

- **Water Volume:** Minimum 40 L per acre.
- **Nozzles and Pressure:** Use only spray nozzles that produce *ASABE S-572.1 Extremely Coarse (XC) to Ultra Coarse (UC)* spray qualities and minimal amounts of fine spray droplets. **DO NOT use conventional flat fan nozzles that produce Medium or Fine spray qualities.** Adjust pressure for selected nozzles to maintain XC to UC spray qualities. Use at least 30 psi (200 kPa) to ensure proper pattern overlap and check this visually.

DO NOT apply during a temperature inversion because off-target movement potential is high. Temperature inversions increase drift potential because fine droplets may remain suspended after application and move in unpredictable directions with light and variable wind. (See 'Avoiding Spray Drift' in introduction for more information on how to avoid drift.)

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                               | Target                              | Movement                          | Spectrum          | WSSA Group |
|-------------------|--------------------------------------|-------------------------------------|-----------------------------------|-------------------|------------|
| glyphosate        | POST (foliar)                        | EPSP Amino Acid Synthesis Inhibitor | Toward areas of growth (Symplast) | Broadleaf & grass | 9          |
| dicamba           | POST (foliar) also has soil activity | Synthetic Auxin                     | Throughout the plant (Symplast)   | Broadleaf only    | 4          |

## Effects of Growing Conditions:

Reduced control may result if treatments are made during poor growing conditions such as drought stress, disease or insect damage, or if weeds have been mowed, grazed or cut. Heavy dust on foliage or a crop or weed canopy covering smaller weeds may also reduce control. Extremely cool or cloudy weather following treatment or prolonged drought conditions may slow activity of this product and delay the visual effects of control.

## Tank Mixes:

**DO NOT add acidifying buffering agents, acidic pH adjusting agents or adjuvants other than agriculturally approved NIS to the spray solution. DO NOT add ammonium sulfate (AMS), AMS-containing adjuvants, water conditioners, or sprayable fluid fertilizers. Non-ionic surfactant (minimum 70 percent active) may be added to the spray solution at 0.25 L per 100 L of spray solution.**

### Herbicides:

- Glyphosate (*Roundup brands*) – top up of total glyphosate to a maximum of 720 g ae per acre.

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 4 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours following application.
- **Pre-harvest Interval:** 7 to 10 days for soybean forage and 13 to 15 days for soybean hay.
- **Grazing Restrictions:** DO NOT permit lactating dairy animals to graze fields within 7 days after application. DO NOT harvest forage or cut hay within 30 days after application. Withdraw meat animals from treated fields at least 3 days before slaughter.
- **Re-cropping Interval:** A plant back interval of 120 days is required for those crops not on the label.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store above -10°C to keep product in solution. If the product freezes and crystals form, place in a warm room (20°C), allow the product to reach room temperature and roll or shake periodically until crystals have re-dissolved.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

Refer to 'Method A or B' in the general section on sprayer cleaning in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

## Hazard Rating:

No specific hazards indicated. Wear chemical resistant clothing, gloves and footwear to load mix and cleanup. Avoid direct inhalation of spray mist.

# Saflufenacil

Herbicide Group  
14 - saflufenacil

## Company:

BASF Canada (*Heat WG, Heat LQ, Heat Harvest, Detail*)  
Loveland Products Canada (*Torch*)

## Formulation:

**Heat WG (PCP#29368):** 70% saflufenacil formulated as a water soluble granule.

- Container size - 8 x 844 g

*Merge* sold separately.

**Heat LQ (PCP#31468), Heat Harvest (PCP#35556), Detail (PCP#32773), Torch (PCP#35438):** 342 g/L saflufenacil formulated as a suspension concentrate.

- Container sizes:
  - *Heat LQ* - 1 x 1.73 L plus 2 x 8.1 L *Merge* adjuvant, or tote containing 4 x 10.79 L *Heat LQ* plus 1 x 400 L *Merge*
  - *Heat Harvest* - 2 x 1.73 L plus 2 x 8.1 L *Merge* adjuvant, or tote containing 2 x 10.79 L *Heat Harvest* plus 1 x 200 L *Merge*
  - *Detail* - 1.38 L
  - *Torch* - 1.73 L plus *Merge* adjuvant

*Note: Detail is only registered for Industrial Vegetation Management (IVM)*

## Crops, Rates and Staging:

**Heat WG, Heat LQ and Torch** – Prior to the seeding of, or following seeding and prior to the emergence of the following crops, fallow or post-harvest:

*Note: Must be applied as part of a tank mix with glyphosate from 180 to 360 g ae per acre (see glyphosate for specific product rates).*

| Crop                                                                                                     | Rate (per acre)    |                               |
|----------------------------------------------------------------------------------------------------------|--------------------|-------------------------------|
|                                                                                                          | <i>Heat WG</i> (g) | <i>Heat LQ and Torch</i> (mL) |
| Barley, canaryseed, chickpea, corn (field and sweet*), field pea, oats, wheat (spring, winter and durum) | 10.4 to 28.4       | 21.4 to 59                    |
| Seedling forage grasses grown for seed** (bromegrass, creeping red fescue, timothy)                      | 10.4 to 28.4       | 21.4 to 59                    |
| Faba bean                                                                                                | 10.4 to 28.4       | 21.4 to 59                    |
| Lentil†                                                                                                  | 10.4               | 21.4                          |
| Soybean†*                                                                                                | 10.4 to 14.6       | 21.4 to 29.5                  |
| Fallow and post-harvest                                                                                  | 10.4 to 28.4       | 21.4 to 59                    |

\* Some varieties may be more sensitive to saflufenacil and injury may occur.

† DO NOT use rates higher than 10.4 grams per acre of *Heat WG* or 21.4 mL per acre of *Heat LQ* or *Torch* or injury could result.

\*\* NOTE: Since this use registered under the User Requested Minor Use Label Expansion (URMULE) program, the manufacturer assumes no responsibility of herbicide performance. **Application to this crop is at the risk of the user.**

\*\*\* NR, not registered.

**Note:** Crop injury may occur in lentil when *Heat* is used in conjunction with certain soil applied/soil active herbicides. Consult with the manufacturer for more guidance.

Add either *Merge* or *Amigo* adjuvant or *MSO Concentrate* (sold separately for *Heat WG*) at 0.2 to 0.4 L per acre.

### **Heat WG, Heat LQ, Heat Harvest and Torch** – Harvest Aid/Desiccation:

Apply 14.4 to 28.4 grams per acre of *Heat WG* or 43 mL per acre of *Heat LQ*, *Heat Harvest*\* or *Torch* or 30-43 mL per acre of *Heat Harvest*\*\* to speed the rate of dry-down of the following crops and green weedy material. *Merge* adjuvant or *MSO Concentrate* (sold separately for *Heat WG*) must be added spray solutions of both *Heat WG*, *Heat LQ* and *Heat Harvest* at 0.2 to 0.4 L per acre. Use the high rate of *Heat WG* as well as the high rate of adjuvant for both products when not mixing with glyphosate. The required delay before harvest of each crop is indicated below.

\*Canola (all types), chickpeas, dry common bean, faba beans, flax, lentils (red lentils only), mustard (all classes), field peas, soybeans and sunflowers

\*\*Wheat (spring, durum, winter), barley and triticale

**Note:** as of January 1, 2025 [www.keepitclean.ca](http://www.keepitclean.ca) indicates that the use of this product on certain crop types may have market access concerns. Please see introduction for more information AND consult potential grain buyers before using this product.

| Crop                                     | Pre-Harvest Interval<br>(Days after application) | Application Stage                                                                                                      |
|------------------------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Barley (for feed only)                   | 3                                                | Hard dough stage (Zaddok's growth stage 87) <30% seed moisture                                                         |
| Canola (all types), Mustard <sup>†</sup> | 3                                                | Apply when 65 to 80% of seeds have changed colour.                                                                     |
| Chickpea                                 | 2                                                | Desi – Apply when most seeds turned yellow/brown<br>Kabuli – Apply when most seeds turned white/tan                    |
| Field pea                                | 3                                                | A majority of the pods are brown (70 to 80%)                                                                           |
| Faba bean <sup>††</sup>                  | 2                                                | Apply when 80% of lower pods have turned black, middle pods have turned yellow/tan, and top green pods have firm seed. |
| Flax                                     | 3                                                | Apply when 75% of bolls have turned colour.                                                                            |
| Red lentil varieties only*               | 3                                                | Lower most pods (15%) are brown and rattle when shaken                                                                 |
| Dry bean                                 | 2                                                | Stems are green to brown, pods are mature (yellow to brown), and 80 to 90% of leaves have dropped                      |
| Soybean                                  | 3                                                |                                                                                                                        |
| Sunflower**                              | 7                                                | The backs of flower heads and bracts are turning yellow, and seed moisture is 20 to 30%.                               |
| Triticale**                              | 3                                                | Hard dough stage (Zaddok's growth stage 87) <30% seed moisture                                                         |
| Wheat                                    | 3                                                | Hard dough stage (Zaddok's growth stage 87) <30% seed moisture                                                         |

\* Glyphosate must be added when applying *Heat WG*, *Heat LQ*, *Heat Harvest* and *Torch* – pre-harvest in red lentil varieties. Stand alone applications of *Heat WG*, *Heat LQ* and *Heat Harvest* are not registered on red lentil varieties.

\*\*DO NOT apply a tank mix with glyphosate to sunflowers and triticale. Glyphosate is NOT registered for this use.

<sup>†</sup> All classes including brown, Oriental, canola quality *Brassica juncea*, *Brassica juncea* varieties with the Clearfield trait, and yellow.

<sup>††</sup> *Heat LQ*, *Heat Harvest* and *Torch* only.

*Heat WG*, *Heat LQ* or *Heat Harvest* or *Torch* may be tank mixed with glyphosate on barley (feed only), canola (all types), chickpeas, faba beans, flax, field pea, red lentil, dry beans, mustard<sup>†</sup>, soybeans and wheat for additional pre-harvest weed control. When tank mixing with glyphosate, it is recommended to apply *Heat WG* at 20.4 grams per acre or *Heat LQ* or *Torch* at 42.8 mL per acre. DO NOT tank mix with glyphosate when the harvested grain is to be used for seed.

#### Maintenance of Bare Ground in Industrial Sites:

Apply *Detail* at rates of 58.7 to 117.4 mL per acre for non-residual broadleaf control and 176 mL per acre for residual control of broadleaf weeds. Add *Merge* adjuvant or *Hasten NT* adjuvant at 0.5 L per 100 L.

DO NOT apply *Detail* to land to be used for cropland as injury may result.

Avoid applying to areas with heavy vehicle traffic and/or fine dusty surfaces that can blow after treatment, since material moving from treated areas may injure neighboring sensitive crops.

### Weeds, Rates and Staging:

*Heat WG*, *Heat LQ* and *Torch* – Apply up to the 8 leaf stage unless otherwise indicated to control the weeds controlled by glyphosate plus rapid burndown of:

- Canada fleabane<sup>†</sup>
- Canada thistle
- Cleavers (4 whorl-stage)\*\*
- Common ragweed<sup>†</sup>
- Dandelion\*\*\*
- Kochia (up to 15 cm)
- Lamb's-quarters<sup>†</sup>
- Flixweed
- Narrow-leaved hawk's-beard (up to 8 cm)
- Pigweed (redroot)\*\*
- Round-leaved mallow
- Stinkweed\*\*
- Volunteer canola\*\*\*†
- Wild buckwheat \*\*\*†
- Wild mustard\*\*

\* All varieties

\*\* Applications at the 28.4 grams per acre rate of *Heat WG* or 59 mL per acre rate of *Heat LQ* or *Torch* will also provide suppression of the emergence of these weeds following application.

\*\*\* Top growth burndown of perennial plants, control of spring germinating plants.

<sup>†</sup> *Heat LQ*, *Heat Harvest* and *Torch* will control indicated weeds when applied for pre-harvest weed management in wheat (durum, spring and winter), barley, triticale, dry common bean, soybean, chickpea, red lentil, field pea, sunflower, canola (all types), mustard, flax and faba bean.

**Detail (for bare ground maintenance of industrial sites only):** Unless otherwise noted below, apply to young and actively growing weeds that are less than 15 cm in height or width.

• **Weeds controlled:**

- Bindweed, field<sup>†</sup>
- Canada fleabane\*
- Canada thistle<sup>†</sup>
- Chickweed (common\*)
- Cocklebur (common\*)
- Cow cockle
- Dandelion<sup>†</sup>
- Fleabane (hairy)
- Flixweed
- Groundsel (common)
- Henbit (suppression)
- Knotweed (prostrate)
- Kochia\* (including Group 2 and 9 resistant)
- Lamb's-quarters\*
- Mustard, (tumble, wild\*)
- Nightshade, (black\*, cutleaf/wild tomato, Eastern black, hairy)
- Pigweed, (redroot\*, smooth\*, prostrate\*)
- Prickly lettuce<sup>††</sup>
- Purslane (common\*)
- Ragweed (common\* giant\*)
- Round-leaved mallow
- Russian thistle\*
- Shepherd's-purse
- Smartweed (Pennsylvania\*, lady's-thumb\*)
- Sow-thistle (annual, spiny annual)
- Sow-thistle (perennial<sup>††</sup>)
- Stinkweed\*
- Sunflower (common\*)
- Velvetleaf\*
- Volunteer canola
- Wild Buckwheat\*

\* Apply **Detail** at 176 mL per acre for both post-emergence and residual control of emerging weeds.

<sup>†</sup> Control of seedling stage and suppression of perennial growth stage.

<sup>††</sup> Top growth burn down control.

## Application Information:

- **Water volume:**
  - **Preseed, pre-emergent, fallow or post-harvest by ground only (Heat WG, Heat LQ and Torch only):** 20 to 40 L per acre.
  - **Harvest aid/desiccation (Heat WG, Heat LQ, Heat Harvest and Torch only):**
    - **Ground:** 81 L per acre stand alone or 40 L per acre when tank mixed with glyphosate
    - **Aerial:** 20 L per acre.
  - **Bare ground maintenance (Detail only):** Minimum 80 L per acre for proper coverage.
- Higher volumes are required for dense weed stands. Weed control improves with the amount of coverage.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** classification droplets. Low drift nozzles may require higher pressures for proper performance. Higher pressures may be required to penetrate dense plant stands.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing                                                 | Target                               | Movement                                             | Spectrum                   | WSSA Group |
|-------------------|--------------------------------------------------------|--------------------------------------|------------------------------------------------------|----------------------------|------------|
| saflufenacil      | POST (foliar) with slight soil activity, or Preharvest | PPO Inhibitor/<br>Membrane disruptor | Little movement due to rapid cell leakage (Symplast) | Non-selective<br>Broadleaf | 14         |

## Effects of Growing Conditions:

Rainfall shortly after application can result in slight injury to the crop. See the 'Restrictions' section below for more details. Warm, moist growing conditions promote active weed growth. Weeds hardened off by environmental stress such as cold weather, drought or excessive heat may not be adequately controlled.

## Tank Mixes:

**Note:** Crop injury may occur in lentil when *Heat* is used in conjunction with certain soil applied/soil active herbicides. Consult with the manufacturer for more guidance.

### Herbicides:

- **Preseed, pre-emergent, fallow or post-harvest:** Glyphosate (180 g to 360 g ae per acre)\*  
\* must be mixed with glyphosate.
  - **Harvest Aid/Desiccation:** Glyphosate (360 g ae per acre)<sup>†</sup>  
<sup>†</sup> NOT for use on crops to be used for seed. NOT for registered for use with sunflowers and triticale. Mixes with glyphosate for harvest aid uses are for ground boom application only. DO NOT apply by air.
  - **Bare ground maintenance (Detail only):**
    - *Arsenal PowerLine* (1.21 L per acre)
    - Glyphosate (328 to 1750 g ae per acre)
- For both mixes, include adjuvants recommended for *Detail* above.  
(see glyphosate for product concentrations and equivalent application rates)

**Fungicides:** None registered

**Insecticides:** None registered

**Note:** The above mixes are those listed on the *Heat WG, Heat LQ, Heat Harvest Torch* or *Detail* labels only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfall shortly after product application can result in slight injury to the crop. Lentils will be more susceptible to injury on coarse textured (sandy or gravelly) and low organic matter soils. Injury will appear usually as burning on the outer edges of the leaves. Lentils will grow out of injury symptoms, and yield will not be impacted at recommended rates.
- **Restricted Entry Interval:**
  - **Heat WG, Heat LQ, Heat Harvest and Torch:** DO NOT enter treated fields for at least 12 hours.
  - **Detail:** DO NOT allow others to enter treated sites until sprays have dried. DO NOT allow military personnel to enter treated sites for 2 days.
- **Pre-harvest Interval (Heat WG, Heat LQ, Heat Harvest and Torch only):**
  - **Preseed and pre-emergent:** Leave 60 days between application and harvest.
  - **Harvest Aid/Desiccant:** Refer to table in 'Crops, Rates and Staging' section.
- **Grazing Interval:**
  - **Preseed and pre-emergent:** DO NOT graze or cut cereal crops for feed within 30 days of application or chickpea, corn, field pea, lentil and soybean within 60 days.
  - **Harvest aid/Desiccant:** DO NOT graze or feed dry bean, lentil or soybean. Treated field pea may be grazed or used as feed.
- **Re-cropping Interval:**

| Crop                                | Application Rate (per acre) and Timing |              |                  |
|-------------------------------------|----------------------------------------|--------------|------------------|
|                                     | Spring Application                     |              | Fall Application |
| <i>Heat WG</i> rate                 | 10.4 g                                 | up to 28.4 g | up to 28.4 g     |
| <i>Heat LQ</i> or <i>Torch</i> rate | 21.4 mL                                | up to 59 mL  | up to 59 mL      |
| Barley                              | PB                                     | PB           | 1                |
| Canary seed                         | PB                                     | PB           | 1                |
| Canola                              | 1                                      | 1            | 1                |
| Chickpea                            | PB                                     | PB           | 1                |
| Corn                                | PB                                     | PB           | 1                |
| Dry bean                            | 1                                      | 1            | 2                |
| Flax                                | 1                                      | 1            | 1                |
| Lentil                              | PB                                     | 1            | 1                |
| Mustard                             | 1                                      | 1            | 2                |
| Oat                                 | PB                                     | PB           | 1                |
| Field pea                           | PB                                     | PB           | 1                |
| Soybean                             | PB                                     | 1            | 1                |
| Spring wheat (including durum)      | PB                                     | PB           | 1                |
| Triticale                           | 1                                      | 1            | 1                |
| Winter wheat                        | PB                                     | PB           | 1                |

PB = May be planted back in the same season

1 = May only be planted the season following application

2 = May only be planted the second season following application

- **Aerial Application:** *Heat Brands* may be applied by aircraft for desiccation use only. DO NOT apply by air for any other use.
- **Storage:** Store in dry, cool storage. May be frozen.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Sprayer Cleaning:

*Heat WG, Heat LQ, Torch* and *Detail* can cause injury to sensitive crops at very low concentrations. Sprayers used to apply this product should be flushed out immediately after each day of use.

Refer to 'Method B' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

Caution – Possible Skin Irritant

Refer to the Introduction for an explanation of the symbols.

# Select Plus

## Herbicide Group 1 – clethodim, quizalofop

### Company:

UPL AgroSolutions Canada (*Select Plus* – PCP#34744 & *Amigo* – PCP#22644)

### Formulation:

240 g/L of clethodim and 120 g/L of quizalofop-p-ethyl formulated as an emulsifiable concentrate

- Container size – 3 L *Select Plus* + 9 L *Amigo*

### Crops and Staging:

Crops are tolerant at all growth stages at maximum rate, but pre-harvest intervals must be observed to prevent excess residue in the grain (see “Restrictions” section below).

#### Crops:

- Alfalfa (grown for seed)
- Canola
- Chickpea
- Dry bean
- Faba bean
- Field pea
- Flax
- Lentil
- Mustard, condiment (brown, oriental, yellow)
- Soybean

### Weeds, Rates and Staging:

Apply *Select Plus* at 51 to 76 mL per plus *Amigo Adjuvant* at 0.5 L per 100 L solution.

Unless otherwise noted below, apply to young and actively growing weeds that are at 2 to 6 leaf stage (prior to tillering)

#### Weeds Controlled:

- Barnyard grass
- Fall panicum
- Foxtail barley\*
- Green foxtail
- Japanese brome\*
- Persian darnel\*\*
- Proso millet
- Smooth crabgrass\*\*
- Volunteer barley
- Volunteer canary grass
- Volunteer corn
- Volunteer oat
- Volunteer wheat
- Wild oat
- Witchgrass
- Yellow foxtail

\*Apply at 76 mL per acre to control at 2 to 6 leaf plus 3 tillers.

\*\*Control only at 76 mL per acre rate

### Application Information:

- **Water Volume:**
  - **Ground:** 22.5 to 45 L per acre
  - **Aerial:** minimum of 11 L per acre
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASAE S572.1 droplets by ground or air.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

### How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient  | Timing        | Target                            | Movement                             | Spectrum     | WSSA Group |
|--------------------|---------------|-----------------------------------|--------------------------------------|--------------|------------|
| clethodim          | POST (foliar) | ACCCase Lipid Synthesis Inhibitor | Towards regions of growth (Symplast) | Grasses only | 1          |
| quizalofop-p-ethyl | POST (foliar) | ACCCase Lipid Synthesis Inhibitor | Toward regions of growth (Symplast)  | Grasses only | 1          |

### Effects of Growing Conditions:

*Select Plus* will be less effective when plants are stressed by the lack of moisture, excessive moisture, low temperatures and/or very low relative humidity. Regrowth by tillering may occur if application is made under any of the above stress conditions.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **In glufosinate ammonium tolerant canola:**
  - *Interline* at 1.08 to 1.6 L per acre
  - *Interline* at 1.35 L per acre + Facet L at 113 mL per acre
- **In canola:**
  - *Lontrel 360*
- **In flax:**
  - *Buctril M*
  - *Logic M*
  - *Curtail M*
  - *Lontrel 360* at 227 to 336 mL per acre
  - MCPA ester 600 at 283 mL per acre
- **In field pea:**
  - *Odyssey* at 11.7 to 17.4 grams per acre

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions.

General guidelines can be found in the Introduction.

### Restrictions:

- **Rainfall:** Within 1 hour of application may reduce control.
- **Re-entry:** DO NOT re-enter treated fields for 12 hours.
- **Pre-harvest Interval:** Canola, mustard – 64 days; dry bean, faba bean, lentil – 65 days; field peas – 75 days; soybeans – 80 days; flax – 82 days; chickpea – 85 days.
- **Grazing:** DO NOT graze treated fields.
- **Re-cropping:** No restrictions. A 30-day plant back interval should be observed for all unlabeled crops.
- **Aerial Application:** DO NOT apply to alfalfa by air.
- **Storage:** DO NOT freeze. Store this product away from food or feed. Store in a cool, dry place.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method B' in the general section on sprayer cleaning in the Introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

### Hazard Rating:

None.

# Sentrallas

Herbicide Group  
2 - thifensulfuron-methyl  
4 - fluroxypyr

## Company:

FMC of Canada distributed by Loveland Canada

## Formulation:

**Sentrallas (PCP# 32143):** 30 g/L thifensulfuron-methyl plus 150 g/L fluroxypyr formulated as a suspension.

- Container size - 2 x 8 L jug

## Crops and Staging:

**Wheat (spring, durum), barley and oats:** 2-leaf to the emergence of the flag leaf.

**Winter wheat:** Apply in the spring from the 3-tiller to just before the emergence of the flag leaf.

## Weeds and Staging:

Unless otherwise noted below, apply to young and actively growing weeds that are less than 4 inches (10 cm) in height or width.

### Weeds controlled:

- Annual smartweed (green, lady's-thumb)
- Cleavers (1 to 4 whorls)
- Common chickweed (1 to 6 leaf)
- Cow cockle
- Corn spurry
- Hemp-nettle
- Kochia
- Lamb's-quarters
- Redroot pigweed
- Russian thistle
- Stinkweed
- Wild buckwheat (1 to 5 leaf)
- Wild mustard

## Rate:

0.2 L per acre

Maximum ONE APPLICATION of this or other products containing thifensulfuron-methyl/fluroxypyr per year.

**Note:** This product may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water Volume:**
  - **Ground:** Minimum 40 L per acre.
  - **Aerial:** 10 to 20 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with **ASABE medium** droplets by ground or **ASABE coarse** droplets by air. Sprayers without drift reduction nozzles should use between 30 to 40 psi (210 to 275 kPa). Low drift nozzles may require higher pressures for proper performance.
- **Screens:** Use a 50 mesh or coarser screen and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient     | Timing | Target                             | Movement                           | Spectrum  | WSSA Group |
|-----------------------|--------|------------------------------------|------------------------------------|-----------|------------|
| thifensulfuron-methyl | POST   | ALS amino acid synthesis inhibitor | Toward areas of growth (sympplast) | Broadleaf | 2          |
| fluroxypyr            | POST   | Synthetic auxin                    | Moves throughout plant (sympplast) | Broadleaf | 4          |

## Effects of Growing Conditions:

*Sentrallas* herbicide activity is influenced by weather conditions. Optimum activity requires active crop and weed growth. Temperature is best between 12°C to 24°C. Reduced activity will occur when temperatures are below 8°C or above 27°C. Frost occurring 3 days before or after application may reduce weed control and crop tolerance. Weed control may be reduced during stress conditions, e.g. drought, heat or cold stress, or if weeds have initiated flowering, or if heavy infestations exist. Application to crops that are stressed by severe weather conditions, frost, low fertility, water-logged soil (soil at or near field capacity), disease or insect damage before or after application may result in crop injury. Under certain conditions, such as heavy rainfall, prolonged cool weather, frost or wide fluctuations in day/night temperatures, temporary lightening in crop colour, and occasionally, a slight reduction in crop height may occur.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

- **All registered crops:**
  - MCPA amine or ester
- **Wheat (spring, durum, winter) and barley:**
  - 2,4-D amine or ester
- **Spring wheat (excluding durum), winter wheat and barley:**
  - Axial
  - Axial plus MCPA ester
- **Wheat (spring, durum, winter):**
  - Simplicity
  - Simplicity plus MCPA ester
  - Varro
  - Varro plus MCPA ester
- **Wheat (spring and durum only):**
  - Horizon NG

**Insecticides:** None registered.

**Fungicide:** None registered.

**Fertilizers:** None registered.

**Use only water as a carrier. Other carriers may accelerate the breakdown of *Sentrallas* and reduce its effectiveness.**

According to the Pest Management Regulatory Agency of Health Canada's Guidance Document on Tank Mix Labelling (March 2023), unlabelled tank mixes of this product are permitted only if the label of this product and the label of the product it might be mixed with include at least general wording on their respective labels indicating they may be mixed with other pesticides. When tank mixes are permitted, apply mixes according to the most restrictive use limitations for either product.

Adding ingredients in the correct order is critical for optimum performance. Check label of both products to be mixed for directions. General guidelines can be found in the introduction.

### Restrictions:

- **Rainfall:** Within 2 hours of application may reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Pre-harvest Interval:** Leave 60 days from application to harvest.
- **Grazing Restrictions:** DO NOT graze or feed to livestock for 7 days after treatment.
- **Re-cropping Interval:** Alfalfa, barley, canola, corn, dry beans, flax, forage grasses, lentils, mustard, oats, peas, potatoes, rye, soybeans, sunflowers or wheat can be seeded the year after treatment.
- **Aerial Application:** May be applied by air.
- **Storage:** Store in a cool, dry place. Avoid freezing. If frozen, bring to room temperature and agitate before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

### Sprayer Cleaning:

Refer to 'Method A' found in the general sprayer cleaning section in the introduction. Let solution stand for an extended period for better results. Flush sprayer system with water. See the label for product specific cleaning details.

### Hazard Rating:

Warning – Contains the Allergen Soy

Potential Skin Sensitizer

Refer to the Introduction for an explanation of the symbols.

# Shieldex 400SC

Herbicide Group  
27 - tolpyralate

## Company:

ISK Biosciences Corporation, distributed in Canada by Gowan Canada (PCP#32943)

## Formulation:

400 g/L tolpyralate formulated as a suspension concentrate.

- Container size - 6 x 1.2 L

## Crops and Staging:

**Corn:** up to 50 cm tall or up to and including 6 leaf collars (V6), whichever is more restrictive.

## Weeds, Rates and Staging:

Apply to actively growing weeds less than 10 cm tall:

| Broadleaf Weeds          | 30.4 mL per acre | 40.5 mL per acre |
|--------------------------|------------------|------------------|
| Green pigweed            | S                | S                |
| Cocklebur                | S                | C                |
| Lamb's-quarters          | S                | C                |
| Redroot pigweed          | S                | C                |
| Smooth pigweed           | C                | C                |
| Purslane                 | S                | S                |
| Ragweed (common, giant)  | S                | S                |
| Shepherd's-purse         | S                | S                |
| Smartweed (Pennsylvania) | S                | S                |
| Waterhemp                | C                | C                |

Apply to grasses less than 10 cm tall or before tillering:

| Grasses          | 30.4 mL per acre | 40.5 mL per acre |
|------------------|------------------|------------------|
| Barnyard grass   | S                | S                |
| Foxtail (yellow) | S                | S                |
| Green foxtail    | S                | C                |

C = Control      S = Suppression

**MSO Concentrate (sold separately):** Apply MSO at 1 L per 100 L of spray solution.

Refer to the product label for complete mixing instructions for this product and its mixes. A general guide to mixing can be found in the introduction.

## Application Information:

- **Water volume:** 57 to 190 L per acre.
- **Nozzles and Pressure:** Use a combination of nozzles and pressure designed to deliver thorough, even coverage with *ASAE medium* or larger droplets.
- **Screens:** Use 50-mesh (or coarser) filter screen.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing        | Target                 | Movement                                                                        | Spectrum       | WSSA Group |
|-------------------|---------------|------------------------|---------------------------------------------------------------------------------|----------------|------------|
| tolpyralate       | POST (foliar) | HPPD Pigment Inhibitor | Some – both foliar and root (Apoplast)<br>Somewhat systemic (has soil residues) | Broadleaf only | 27         |

## Effects of Growing Conditions:

Poor weed control or crop injury may result from applications made to plants under stress from abnormally hot or cold weather; environmental conditions such as drought, water-saturated soils, hail damage or frost; disease, insect or nematode injury; or prior herbicide or carryover from a previous year's herbicide application.

## Tank Mixes:

### Herbicides:

- **Atrazine** (227 g ai per acre) – DO NOT apply atrazine if corn is greater than 30 cm tall.

**Fertilizers:** Use 1.25 to 2.5 L per 100 L of spray solution of a high-quality urea ammonium nitrate (UAN) such as 28 percent N or 32 percent N or 0.84 to 2.04 kg per 100 L of spray solution of a spray grade ammonium sulphate (AMS), recommended.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Rainfast in 1 hour.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Grazing Restrictions:** DO NOT graze or feed treated corn forage or silage for 21 days after application.
- **Pre-harvest Interval:** DO NOT apply to field corn within 85 days of harvest.
- **Re-cropping Interval:** The following crops may be grown 9 months after application: alfalfa, barley, bean (dry), canola, grass (grown for seed or forage), oats, pea, potato, sorghum, soybean, sunflower, spring wheat. Winter wheat or rye (annual and fall) may be seeded 3 months after application.
- **Aerial Application:** DO NOT apply by air.
- **Storage:** To prevent contamination, store this product away from food or feed.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Tank Cleaning:

Refer to 'Method A' in the general section on sprayer cleaning in the introduction.

## Hazard Rating:

None listed.

# Sightline

*This product is the equivalent of a pre-packaged tank mix of Clearview plus fluroxypyr. Information listed is restricted to Crops, Weeds, Rates and Tank mixes. For other detailed restrictions and other general information on the component products see the product pages listed above.*

**Herbicide Group**  
**4 – aminopyralid, fluroxypyr**  
**2 - metsulfuron**

## Company:

Corteva Agriscience

## Formulation:

The *Sightline* package contains two components:

- **Sightline A (PCP#30409):** 52.5% aminopyralid + 9.45% metsulfuron methyl formulated as a water dispersible granule.
  - Container size -1.84 kg
- **Sightline B (PCP#30063):** 333 g/L fluroxypyr formulated as an emulsifiable concentrate.
  - Container size - 6.72 L

**NOTE:** Limited availability through selected retail outlets.

## Crops and Staging:

Rangeland, permanent pasture, industrial sites and other non-crop areas.

## Weeds and Staging:

Weeds controlled by the comparable rates listed for *Clearview* from 55 to 93 g per acre plus:

- Suppression of kochia from 2 to 8 leaves when *Sightline B* is applied at 0.17 L per acre.
- Control of kochia from 2 to 8 leaves when *Sightline B* is applied at 0.34 L per acre.

## Rate:

**Note:** Maximum of one application of this or other products containing (list other relevant active ingredients) per year. Areas treated for 24 month control should be treated no more than once every two years.

**Sightline A:** 55 to 93 g per acre.

-plus-

**Sightline B:** 0.17 to 0.34 L per acre.

Add Gateway, Agral 90, Agsurf II, or Citowett Plus at 0.2 L per 100 L of spray solution.

*Sightline A* may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing.

Refer to the product label for complete mixing instructions. A general guide to mixing can be found in the introduction.

## Tank Mixes:

Tank mix partners applied at all label rates and include recommended adjuvants unless otherwise noted.

### Herbicides:

#### Bare ground locations:

Glyphosate

**Fungicides:** None registered.

**Insecticides:** None registered.

**Fertilizers:** None registered.

**Note:** the above Tank Mixes are those listed on the *Sightline* label only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of products to be mixed for directions. General guidelines can be found in the introduction.

*See component products for more information on restrictions, application details and handling. Unless indicated differently above use the most limiting restrictions across all components for the mix.*

# Signal FSU

Herbicide Group

1 - clodinafop

2 - thifensulfuron/tribenuron

4 - fluroxypyr

## Company:

Nufarm Agriculture

## Formulation:

The *Signal FSU* package contains the following components:

**Signal F (PCP#31434):** 112 g/L clodinafop propargyl and 217 g/L fluroxypyr ester formulated as an emulsifiable concentrate.

- Container size - 8 L

**Boost (PCP#30377):** 50% thifensulfuron methyl and 25% tribenuron methyl formulated as a water dispersible granule.

- Container size - 320 g

**NuFarm Enhance Adjuvant (PCP#29952):** Container size - 4 L

## Crops and Staging:

Wheat (spring, durum) only: 2 leaf up to the emergence of the 4<sup>th</sup> tiller.

## Weeds and Staging:

### Grass weeds:

| Weed                            | Stage                                               |
|---------------------------------|-----------------------------------------------------|
| Barnyard grass                  | 1 to 5 leaf prior to tillering                      |
| Green and yellow foxtail        | 1 to 5 leaf stage, prior to emergence of 3rd tiller |
| Volunteer canaryseed, wild oats | 1 to 6 leaf, maximum 3 tillers                      |
| Volunteer oats                  | 3 to 6 leaf, maximum 3 tillers                      |

### Broadleaf weeds:

- Unless otherwise noted below, apply to young and actively growing weeds that are less than 4 inches (10 cm) in height or width.
  - Annual smartweed (green, lady's-thumb)
  - Ball mustard
  - Chickweed (1 to 6 leaf)
  - Cleavers (1 to 4 whorls)
  - Common groundsel
  - Corn spurry
  - Cow cockle
  - Flixweed
  - Hemp-nettle
  - Kochia (2 to 8 leaf)
  - Lamb's-quarters
  - Narrow-leaved hawk's-beard
  - Redroot pigweed
  - Russian thistle
  - Shepherd's-purse
  - Stinkweed
  - Tartary buckwheat
  - Volunteer canola (not CLEARFIELD varieties)
  - Volunteer flax (up to 12 cm)
  - Volunteer sunflower
  - Wild buckwheat (1 to 3 leaf)
  - Wild mustard

### Weeds suppressed:

- Canada thistle, sow-thistle (less than 6 inches (15 cm) tall or across and prior to budding)
- Scentless chamomile
- Stork's-bill (2 to 6 leaf)

## Rate:

**Signal F:** 0.2 L per acre.

**Boost:** 8 grams per acre.

**Enhance Adjuvant:** 0.25 L per 100 L of spray solution.

Maximum ONE APPLICATION per year of *Signal FSU* or other products containing clodinafop, thifensulfuron, tribenuron, or fluroxypyr.

Thifensulfuron/tribenuron may degrade if left in the sprayer for an extended period. Apply within 24 hours of mixing. Refer to the product label for complete mixing instructions.

## Application Information:

- **Water Volume:** Minimum 40 L per acre.
- **Nozzles and Pressure:** Use 29 to 40 psi (200 to 275 kPa) if applying without drift reduction nozzles. Drift reduction nozzles may require higher pressures for proper performance. Select the nozzle and pressure combination that produces of **ASABE coarse** droplets while maintaining good coverage of foliage. Keep booms lower than 60 cm from crop canopy.
- **Screens:** Use of 50 mesh screens or coarser are required.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient             | Timing        | Target                             | Movement                              | Spectrum       | WSSA Group |
|-------------------------------|---------------|------------------------------------|---------------------------------------|----------------|------------|
| clodinafop                    | POST (foliar) | ACCCase Lipid synthesis inhibitor  | Toward growth areas (Symplast)        | Grasses only   | 1          |
| thifensulfuron/<br>tribenuron | POST (foliar) | ALS Amino Acid synthesis Inhibitor | Toward growth areas (Symplast)        | Broadleaf only | 2          |
| fluroxypyr                    | POST (foliar) | Synthetic Auxin                    | Moves throughout the plant (Symplast) | Broadleaf only | 4          |

## Effects of Growing Conditions:

Application to crops stressed by extreme weather conditions such as frost, hail, saturated soils or drought as well as low fertility, insect damage or disease pressure may result in crop injury and/or reduce weed control. Crop and weeds that are growing rapidly produce optimum activity. The optimum temperature range for the best activity is between 12 to 24°C. Activity will be reduced below 8°C and above 27°C.

## Tank Mixes:

**Herbicides:**

- **In wheat (spring and durum) only:**
  - 2,4-D ester (up to 113 g ae per acre)
  - MCPA ester (up to 190 mL of a 600 g/L form per acre)

**Fungicides:** None registered.

**Fertilizers:** None registered.

**Insecticides:** None registered.

**Note:** The above mixes are those listed on the *Signal F* and *Boost* labels only.

Adding ingredients in the correct order is critical for optimum performance. Check labels of both products to be mixed for directions.

General guidelines can be found in the introduction.

## Restrictions:

- **Rainfall:** Within 4 hours will reduce control.
- **Restricted Entry Interval:** DO NOT enter treated fields for 12 hours.
- **Pre-harvest Interval:** Leave 60 days between application and harvest.
- **Grazing Restrictions:** DO NOT graze or feed treated crop to livestock within 3 days of application.
- **Re-cropping Interval:** Barley, canola, field peas, flax, forage grasses, lentils, mustard, oats, rye and registered crops may be seeded the season after application.
- **Aerial Application:** DO NOT apply by aircraft.
- **Storage:** Store in a cool, dry place in original container. Shake well before using. If frozen, warm liquid component gradually to 10°C and shake well to reconstitute component before use.
- **Buffer Zones:** Observe buffer zones outlined in the label.

## Tank Cleaning:

Thifensulfuron/tribenuron can cause severe injury to sensitive crops at very low concentrations. Sprayers used to spray thifensulfuron/tribenuron should be drained and flushed out immediately after use.

Refer to 'Method A' in the general section on sprayer cleaning in the introduction. The addition of detergent will enhance cleanout.

**Hazard Rating:***Signal F:*

Danger – Skin Irritant

Caution – Eye Irritant

*Boost:*

Warning – Skin and Eye Irritant

*Nufarm Enhance Adjuvant:*

Caution – Skin Irritant

Warning – Contains the Allergen Soy

Refer to the Introduction for an explanation of the symbols.

# Simazine

**Herbicide Group  
5 - simazine****Company:**

Syngenta Canada (Princep Nine-T) Loveland Products Canada Simazine 480)

**Formulation:**

Princep Nine-T (PCP#16370): 90% simazine formulated as a water dispersible granular.

- Container size - 5 kg

Simazine 480 (PCP#23181): 480 g/L simazine formulated as a solution.

- Container size - 2 x 10 L

**Crops and Staging:**

Established alfalfa or bird's-foot trefoil (Princep Nine-T only):

DO NOT use in year of seeding. Apply after final cut in fall until freeze-up. DO NOT apply to the same field more than three consecutive years. Residues may build up with yearly applications.

Corn (field, sweet): Apply one week prior to seeding and incorporate to a depth of 1 inch (2.5 cm), or apply no later than 4 days after seeding corn. Rainfall is required to activate herbicide.

Established shelterbelts (elm (American, Siberian), caragana, green ash, Manitoba (boxelder) maple): Apply in fall or early spring before weeds begin growth. Injury may occur to shelter belts growing under saline conditions.

DO NOT apply to frozen ground

**Weeds and Staging:**

Simazine is applied prior to the emergence of the weeds and kills them when they are exposed to the treated layer of soil

- |                                        |                                      |                  |
|----------------------------------------|--------------------------------------|------------------|
| ◦ Barnyard grass                       | ◦ Ragweed                            | ◦ Wild buckwheat |
| ◦ Lamb's-quarters                      | ◦ Smartweed (including lady's-thumb) | ◦ Wild oats      |
| ◦ Perennial species starting from seed | ◦ Volunteer clovers                  | ◦ Yellow foxtail |
| ◦ Purslane                             |                                      |                  |

**Rates:****Forage crops:** Princep Nine-T: 0.45 kg per acre.**Corn:**\* Princep Nine-T: 0.61 to 0.81 kg per acre, Simazine 480: 1.4 to 3.4 L per acre.**Shelterbelts:** Princep Nine-T: 1.8 kg per acre, Simazine 480: 3.8 to 5.7 L per acre.

\* Rate of application to corn is dependent on soil texture. Refer to specific labels for correct application rates on corn.

**Application Information:****Water Volume:** Minimum 121 L per acre. In shelterbelts, use a minimum of 202 L per acre.**Nozzles and Pressure:** For conventional flat fan nozzles use a maximum pressure of 30 to 45 psi (200 to 300 kPa). Low drift nozzles may require higher pressures for proper performance. Use a combination of nozzles and pressure designed to deliver thorough, even coverage with ASABE medium droplets.**Screens:** Use 50 mesh or coarser nozzle screens and filter system.

## How it Works:

Refer to How Do Herbicides Work in the Weed Control Section for an explanation of the concepts used in the table below.

| Active ingredient | Timing            | Target                                | Movement                       | Spectrum             | WSSA Group |
|-------------------|-------------------|---------------------------------------|--------------------------------|----------------------|------------|
