MANITOBA HYDRO
2015/16 & 2016/17 GENERAL RATE APPLICATION

CAPITAL EXPENDITURE FORECAST

4.0 OVERVIEW

Tab 4 summarizes the Capital Expenditure Forecast (CEF14) and the capital investments required to meet the growing energy needs of Manitoba and to replace aging utility assets.

Sections 4.1 and 4.2 discuss Manitoba Hydro's Capital Expenditure forecast for Electric Operations (CEF14). Section 4.3 provides an overview of major new generation and transmission capital expenditures. Section 4.4 provides an overview of sustaining capital expenditure requirements. Section 4.5 summarizes the assets that are projected to enter into service. Section 4.6 provides more detailed information with respect to the condition of Manitoba Hydro's assets and future sustaining capital requirements.

The key conclusions with respect to Tab 4 are:

1. Historically, the reliability performance of Manitoba Hydro's electric system has been excellent, but has recently begun to degrade with the condition of the Corporation's assets more and more contributing to the decline in reliability.

2. Manitoba Hydro is entering a period of extensive capital investment to meet the growing energy requirements of Manitoba, to replace aging utility assets and address increased capacity needs on the system.

3. Manitoba Hydro's projected costs and revenue requirements are significantly increasing due to the investment in assets and are the key factors driving the need for rate increases.

4. The proposed 3.95% rate increases are the minimum required to continue to deliver a reliable energy supply to Manitobans, to which they are accustomed, and fund Power Smart Programs to assist customers in meeting their energy needs.

5. The key reliability risks associated with inadequate funding as a result of rate increases lower than 3.95% include:
    i. Reliability would degrade further; outages would be longer and more frequent;
    ii. Increased safety risks to public and staff; and
    iii. Increased maintenance and emergency costs.

4.1 CAPITAL EXPENDITURE FORECAST

The Capital Expenditure Forecast is a projection of Manitoba Hydro's capital expenditures for new and replacement facilities to meet the electricity requirements in the Province of Manitoba as well as expenditures required to meet firm sale commitments outside the Province. Expenditures included in the CEF provide for an ongoing safe and reliable supply of energy in the most efficient and environmentally sensitive manner. A copy of CEF14 is included as Appendix 4.1.

The CEF for the current year and subsequent nineteen year period is submitted annually to the MHEB for approval. Since capital construction projects typically span several years, each year's CEF is presented to the MHEB as a revision to the previous year's approved CEF. In addition to the identification of new projects, changes to previously approved projects are also identified.

Business Units' initiate capital expenditure proposals to meet energy load growth demands within the Province, to respond to specific customer service extension requirements, to improve the efficiency and reliability of the energy delivery system or to take advantage of revenue generating opportunities in the export market. Once the need for a capital project is identified, a Capital Project Justification (CPJ) is prepared by the initiating department. The CPJ contains detailed information relative to each project such as system load growth statistics, business case analysis, risk assessment, and other pertinent details. The requirement and justification for the project is reviewed at the department, division and business unit level before the CPJ is forwarded to either the responsible Vice-President or the Executive Committee of Manitoba Hydro for approval. Projects greater than $50 million require approval of the Executive Committee, items below $50 million are approved at the Business Unit level. Depending on the nature and

complexity of the project, the CPJ may also be advanced to Manitoba Hydro's Planning Review Committee.

CPJs are scrutinized to confirm the need for the project based on the following criteria: system reliability, safety, efficiency, customer service, environmental impacts and corporate profitability. Further consideration is given to the priority of proposed projects and whether projects of lesser priority can be displaced so overall funding levels remain within the MHEB approved CEF limits. Risks of not proceeding with the project are also assessed based on information provided within the CPJ. All projects are assessed for environmental impacts.

During the year, actual expenditures on projects are reported monthly to Business Unit Management and the Executive Committee. Variance explanations are provided for any significant variances from the approved CEF. This information is also reported to the MHEB at their regularly scheduled meetings.

Each Vice-President oversees the portfolio of capital projects within their approved target. Advancement and deferral of capital projects occurs throughout the year to manage within annual approved funding levels. Available capital is allocated to asset categories in a prioritized manner to mitigate overall operational and financial risk.

4.2 ELECTRIC OPERATIONS CAPITAL EXPENDITURE FORECAST (CEF14)

The CEF includes Major New Generation & Transmission projects which increase capacity and energy or provide increased reliability and a number of specifically identified large projects or "major items" as well as numerous unspecified smaller projects referred to as "base items." Major and base items together comprise sustaining capital.

Figure 4.1 below provides a breakdown of Major New Generation and Transmission and sustaining capital by Business Unit over the 2014/15 to 2016/17 timeframe and the 10 year forecast period.

Figure 4.1 Summary of Electric Capital Expenditure Forecast CEF14

(in millions of $)	2014/15	2015/16	2016/17	Cumulative to 2023/24*

4.3 MAJOR NEW GENERATION & TRANSMISSION CAPITAL EXPENDITURES

The CEF14 includes Major New Generation & Transmission projects which significantly increase capacity and energy or provide increased reliability for the transmission system.

As noted in Figure 4.5, Major New Generation & Transmission expenditures continue to increase primarily due to the commencement of construction of the Bipole III Reliability project and the Keeyask Generating Station.

Figure 4.5 New Major Generation & Transmission 2013-2017

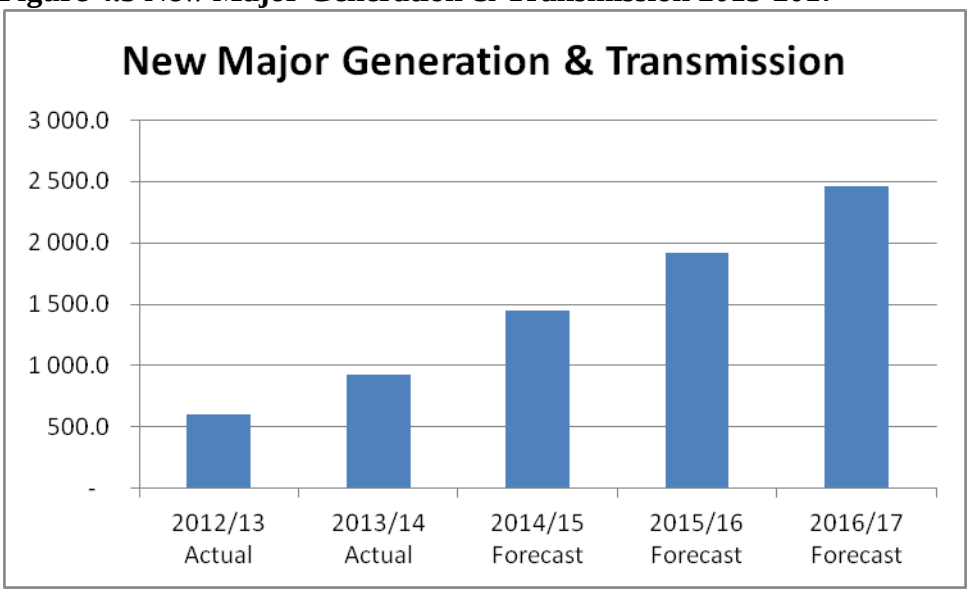

Figure 4.6 below summarizes the significant Major New Generation and Transmission capital projects.

Figure 4.6 Major New Generation & Transmission Capital Expenditure Forecast CEF14

(in millions of $)	2014/15	2015/16	2016/17	Cumulative to 2023/24*

* Excludes capital expenditures prior to 2013/14

The following sections provide a summary of cost updates with respect to the significant Major New Generation & Transmission projects and Electric Demand Side Management.

4.3.1 Bipole III Reliability Project

In August 2013, the Province of Manitoba issued an Environmental Act licence for the Bipole III Reliability project and construction has commenced with a planned in-service date of 2018/19, which represents a deferral of nine months from October 2017.

CEF14 incorporates a more detailed scope based on an issued Environmental Act licence, approved finalized route and right-of-way width and up-to-date market information. In addition, the revised estimate incorporates the awarding of major contracts and the selection of LCC technology, which has resulted in synchronous condensers being included in the updated estimate. The rating for the Bipole III Reliability project was increased from 2000MW to 2300MW to ensure adequate spare HVDC transmission on

the northern collector system. Figure 4.7 provides an explanation of the major changes in the cost estimates.

Figure 4.7 Bipole III Reliability Total Project Cost Update

Cost Breakdown (in millions of dollars)	CEF 14	CEF 13	Increase	Explanation for change
HVdc Converter Stations (Riel & Keewatinohk)	1 878.3	1 208.8	669.5	- Increased for awarded contracts: HVdc Equipment, AC Switchyard, Site Development, Camp, Camp Operations, etc. - Addition of Synchronous Condensers to project scope as result of LCC converter technology selection - Increase to 2300 MW converters
500kV T-Line	1 191.0	889.0	302.0	- Increase for extended Licencing process - Increase for revised property acquisition costs - Increased clearing costs - Increase due to additional towers required
AC Collectors	198.2	115.0	83.2	- Addition of station upgrade and breaker replacement scope of work - Estimated increase to construction costs
Riel 230kV Expansion	228.7	133.4	95.3	- Increase from attribution of Riel Sectionalization costs (realized costs) - Estimated increase to construction costs
Contingency & Reserves	347.6	203.0	144.6	- Contingency & reserves included based on analysis and recommendation of 3rd party risk and contingency expert
Interest & Escalation	747.8	730.8	17.0	
Community Development Initiative	62.0	60.8	1.2	
TOTAL	**4 653.6**	**3 340.8**	**1 312.8**	

Total project change will not tie to 10 year cost flow change shown earlier due to rollover of under expenditures in 2013/14 compared to CEF13 forecasted flow.

4.3.2 Keeyask Generating Station

In July 2014 the Province of Manitoba issued an Environmental Act licence for the Keeyask Generating Station and construction has commenced with a planned in-service date of 2019/20.

The Keeyask Project budget was updated in March 2014 as part of the Needs For and Alternatives To review. The last detailed project estimate was completed in 2009. The budget includes bid prices from the major contractors including the General Civil Contract. Figure 4.8 provides an explanation of the major changes in the cost estimates.

Figure 4.8 Keeyask Generating Station Total Project Cost Update

Cost Breakdown (in millions of dollars)	CEF 14	CEF 13	Variance	Comments
Generating Station (Including GCC and KIP)	3 681.1	3 060.6	620.5	Increase related to: - updated base expenditures from 2013$ to 2014$ on generating station and KIP - post-construction adverse effects and operational employment which were previously excluded from the estimates. Accretion is also added. - commitments made in EIS and CEC hearings related to the environment and social mitigation. - direct negotiated service contracts, interface management, forebay clearing, and community monitoring. - stage 5 engineering and construction management staff augmentation. - Increase for awarded contracts. - unforeseen conditions related to the north access road construction, and work areas site development.
Construction Power	30.4	30.4	0.0	No Change
Licensing & Planning	393.0	397.3	(4.3)	Decrease related to transfer of budget for adverse effects.
Transmission (excluding contingency)	142.1	138.3	3.8	Increase related to updated base expenditures from 2013$ to 2014$.
Contingency & Management Reserves	685.2	1 063.7	(378.5)	Decrease related to: - Contingency and labour reserve revised based on updated risk model. - Escalation reserve revised based on updated escalation reserve model.
Interest & Escalation	1 564.2	1 530.3	33.9	Increase due to Interest on higher base costs and an advanced general civil contract cash flow; partially offset by decreased Escalation indexing from the increase to 2014$.
TOTAL	**6 496.0**	**6 219.6**	**276.4**	

Note: Sunk Costs are included in each project component

Total project change will not tie to 10 year cost flow change shown earlier due to rollover of under expenditures in 2013/14 compared to CEF13 forecasted flow.

4.3.3 Conawapa Generating Station

For CEF14 forecast purposes, it is assumed that the Conawapa Generating Station has been suspended and replaced with a gas turbine required in 2037/38 to meet firm capacity requirements. While the majority of the planning and licensing activities on Conawapa have been suspended, Manitoba Hydro continues to pursue dependable firm export sales based on the earliest possible in-service date of Conawapa in 2029/30 and will re-evaluate the business case (currently anticipated by Fall of 2016). Remaining expenditures in the forecast include capitalized interest on construction in process through to August 2016, the wrap up of preliminary engineering studies and limited environmental and aboriginal studies.

Figure 4.9 Conawapa Total Project Cost Update

(in millions of dollars)	CEF 14	CEF 13	Decrease	Explanation
Conawapa GS	397	10 492	(10 095)	Majority of expenditures have been suspended pending re-evaluation of the business case. Remaining expenditures are for the wrap up of preliminary engineering studies and limited environmental and aboriginal studies including capitalized interest on construction in progress through August 2016.

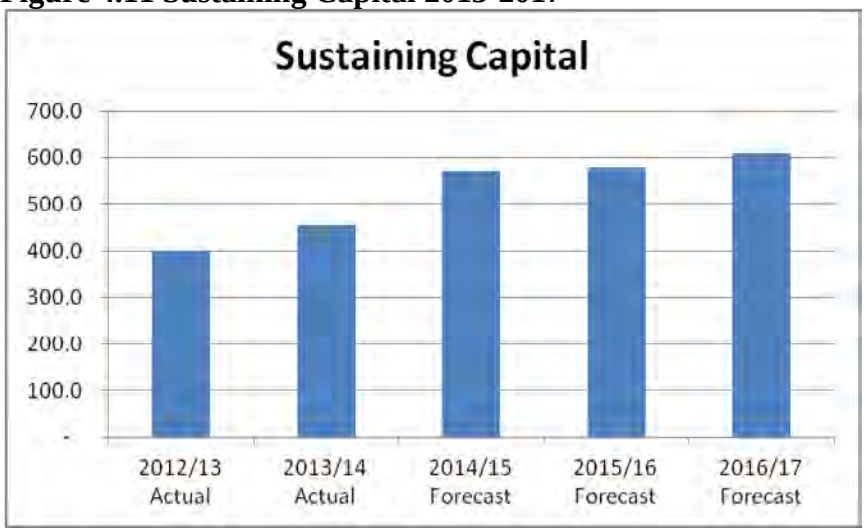
Total project change will not tie to 10 year cost flow change shown earlier due to rollover of under expenditures in 2013/14 compared to CEF13 forecasted flow and expenditures previously forecast outside the 10 year timeframe.

4.3.4 Demand Side Management

Manitoba Hydro's DSM plan targets the achievement of 1,136 MW and 3,978 GWh of savings over the next 15 years and involves an investment of more than a billion dollars and will be relied upon to meet 66% of projected load growth during this period. Figure 4.10 provides an explanation of the major changes over the 10 year forecast period associated with the updated DSM plan.

Figure 4.10 DSM 10 Year Cost Flow Update

Cost breakdown (in millions) 10 Year	CEF 14	CEF 13	Increase / (Decrease)	Explanation
Residential Energy Efficiency Programs	$68.7	$4.9	$63.8	Extended and enhanced program offerings and added new programs including but not limited to introducing Residential LED Lighting program and increased insulation incentives and introduced free energy assessments for electrically heated homes.
Commercial Energy Efficiency Programs	$210.4	$69.7	$140.7	Extended and enhanced program offerings and added new programs including but not limited to adding direct installation of high efficiency pre-rinse spray valves to the Commercial Kitchen program, higher performance levels beyond the new energy code for buildings, and increased incentives and technical assistance to support energy modeling under the Commercial New Buildings program, and increased incentives under the Refrigerator Retirement, Commercial Lighting, Commercial Building Envelope, Commercial CO2 Sensors, and Commercial Refrigeration programs.
Industrial Energy Efficiency Program	$102.0	$27.7	$74.4	Enhanced program offering by expanding financial and technical support for embedded energy managers in large commercial and industrial facilities under the Industrial Performance Optimization Program.
Load Management Program	$65.8	$57.7	$8.0	Enhanced program offering by increasing incentives in the Curtailable Rates Program.
Load Displacement & Alternative Energy Programs	$97.8	$8.8	$89.0	Added customer sited load displacement program.
Conservation Rates	$26.3	-	$26.3	Added conservation rates for residential and commercial customers.
Fuel Choice Program	$55.1	-	$55.1	Added fuel choice program.
Support & Contingency	$50.1	$44.7	$5.4	Increased activities to support the enhanced DSM portfolio such as increased program evaluation activities including external evaluation consulting services.
Demand Side Management	**$676.2**	**$213.4**	**$462.8**	



4.4 SUSTAINING CAPITAL EXPENDITURES (MAJOR & BASE CAPITAL)

Sustaining capital includes items identified in CEF14 as either Major or Base capital expenditures and consists of additions, improvements and replacements of existing infrastructure.

Capital targets established for fiscal years 2014/15 through 2020/21 in CEF14 considered increased requirements for aging infrastructure based upon asset condition assessments as well as expansion requirements to support customer growth. The target adjustment of $25 million annually beginning in 2016/17 through 2020/21 provides funding to address

future priorities. Investment in sustaining capital has increased $428 million over the ten year forecast period in order to maintain reliability and address anticipated load and customer growth as further discussed in Section 4.6.

Figure 4.11 Sustaining Capital 2013-2017

The following figure provides a further breakdown of sustaining capital for the first three forecast years of CEF14. Capital expenditures have been broken down by asset type, identifying the investment required to maintain reliable service.

Figure 4.12 CEF14 Sustaining Capital by Asset Type

(in millions of dollars)	2015	2016	2017

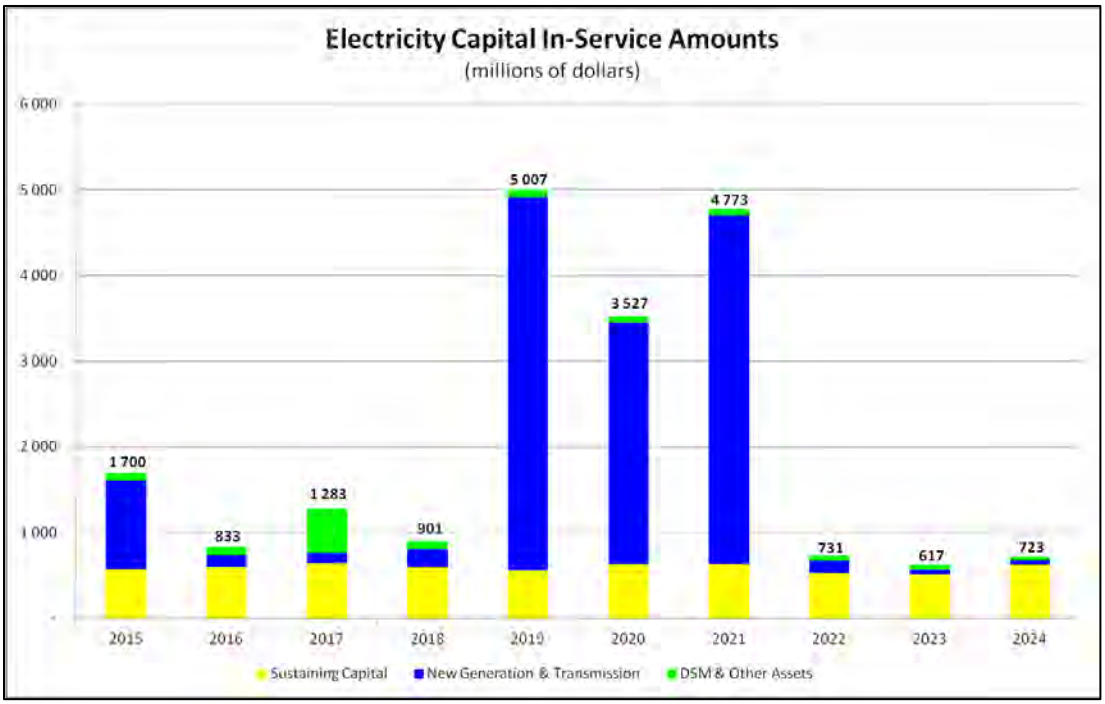
4.5 CAPITAL IN-SERVICE



While assets are under construction, the capital expenditures and associated financing costs are held in construction work in progress. Once these assets are placed into service, the associated carrying costs (depreciation and finance expense) form part of the Corporation's revenue requirements.

Figures 4.13 and 4.14 provide a summary of the amount of capital that is forecast to go in service, as well as deferred assets that will commence amortization for the first three forecast years as well as the 10 year forecast period. Figure 4.13 indicates that $1.7 billion, $0.8 billion and $1.3 billion of assets are projected to be placed in-service in 2014/15, 2015/16 and 2016/17 respectively. The most significant assets being placed in-service during this period include the Pointe du Bois spillway replacement, and the Riel 230/500kV Station in 2014/15. In this three year period, there is also approximately $1.8 billion of sustaining capital expenditures that will be placed into service, and $0.2 billion of DSM expenditures that will commence amortization.

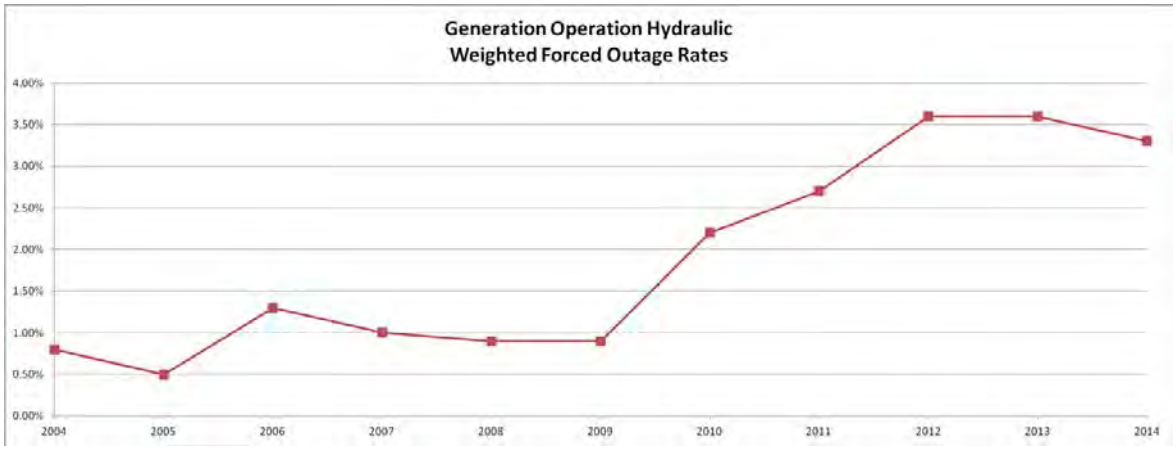
4.6 INVESTING TO MAINTAIN RELIABLE SERVICE

Manitoba Hydro's asset management has enabled the Corporation to defer hundreds of millions of dollars of capital investment to date. However, increased investments are required for generation, transmission and distribution system renewal and capacity expansion in order to support the growth requirements of Manitoba Hydro's customers. These capital investments are needed to sustain the Corporation's current electric infrastructure considering the increasing pressures associated with aging infrastructure and the need to provide more capacity to accommodate increased demand resulting from increased population and business growth. CEF14 forecasts capital expenditures of $493 million, $498 million and $525 million in 2014/15, 2015/16, and 2016/17, respectively for investment in generation, transmission and distribution assets (does not include expenditures associated with corporate infrastructure).

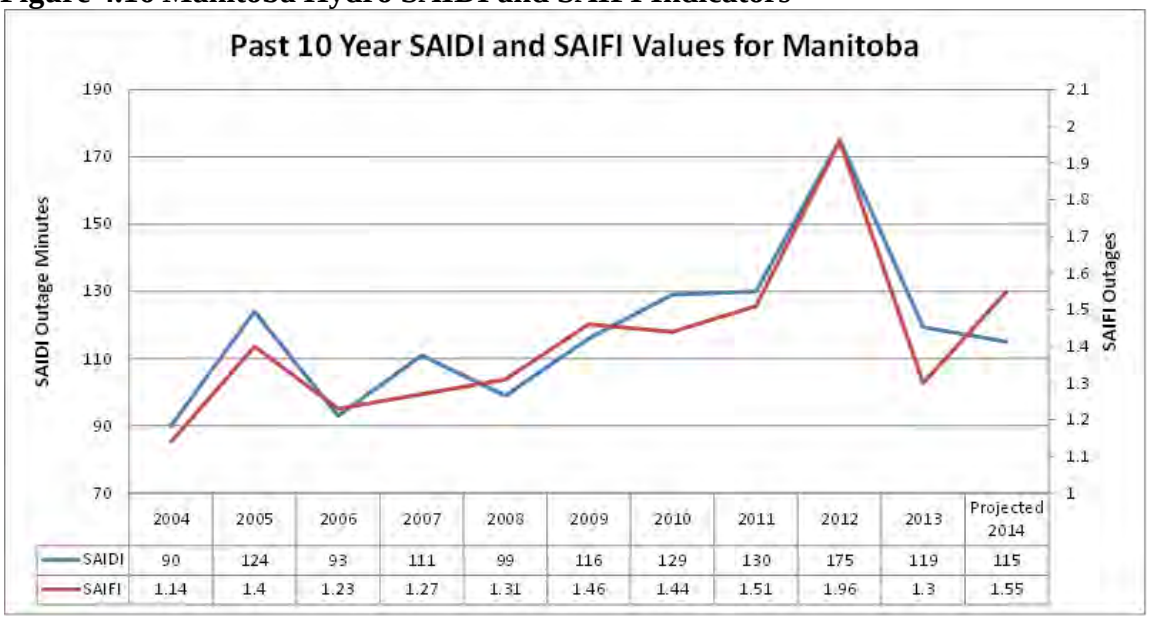
4.6.1 Impacts of Aging Infrastructure on Reliability



Manitoba Hydro has prudently invested in the electrical system which has provided reliable service to customers for decades. Where system reliability risk dictates, Manitoba

Hydro has installed redundant capacity to ensure that it can supply load in the event of an outage in an acceptable timeframe. Contingency plans, such as the transfer of load to available stations, the use of mobile stations, and allowing temporary overloads on equipment where it can be determined that such overloads are not expected to appreciably reduce equipment life, allow the Corporation to supply load at acceptable voltage levels after a system outage occurs.

In the past, Manitoba Hydro has been able to effectively deal with capacity challenges on its system by taking advantage of redundant capacity and contingency plans which has allowed the Corporation to defer capacity upgrades while maintaining reliability levels. However, the number of areas of the electric system with capacity challenges is growing, and this is the result of an aging system and strong load growth in some parts of the Province. Consequently, Manitoba Hydro's ability to respond to these challenges without negatively impacting reliability is diminishing.



Reliability is critical for Manitoba Hydro and its customers. Historically, the reliability performance of Manitoba Hydro's electric system has been excellent, but has recently begun to degrade. While reliability is impacted by factors such as adverse weather, tree contacts, and the lengthening of restoration time due to changes in work procedures to conform to safety, legal and environmental requirements, the condition of Manitoba Hydro's assets is contributing more and more to the decline in reliability. This is evident in Manitoba Hydro's performance in key reliability indicators. As illustrated in Figure 4.15 below, generation forced outage rates have significantly increased in the past four years.

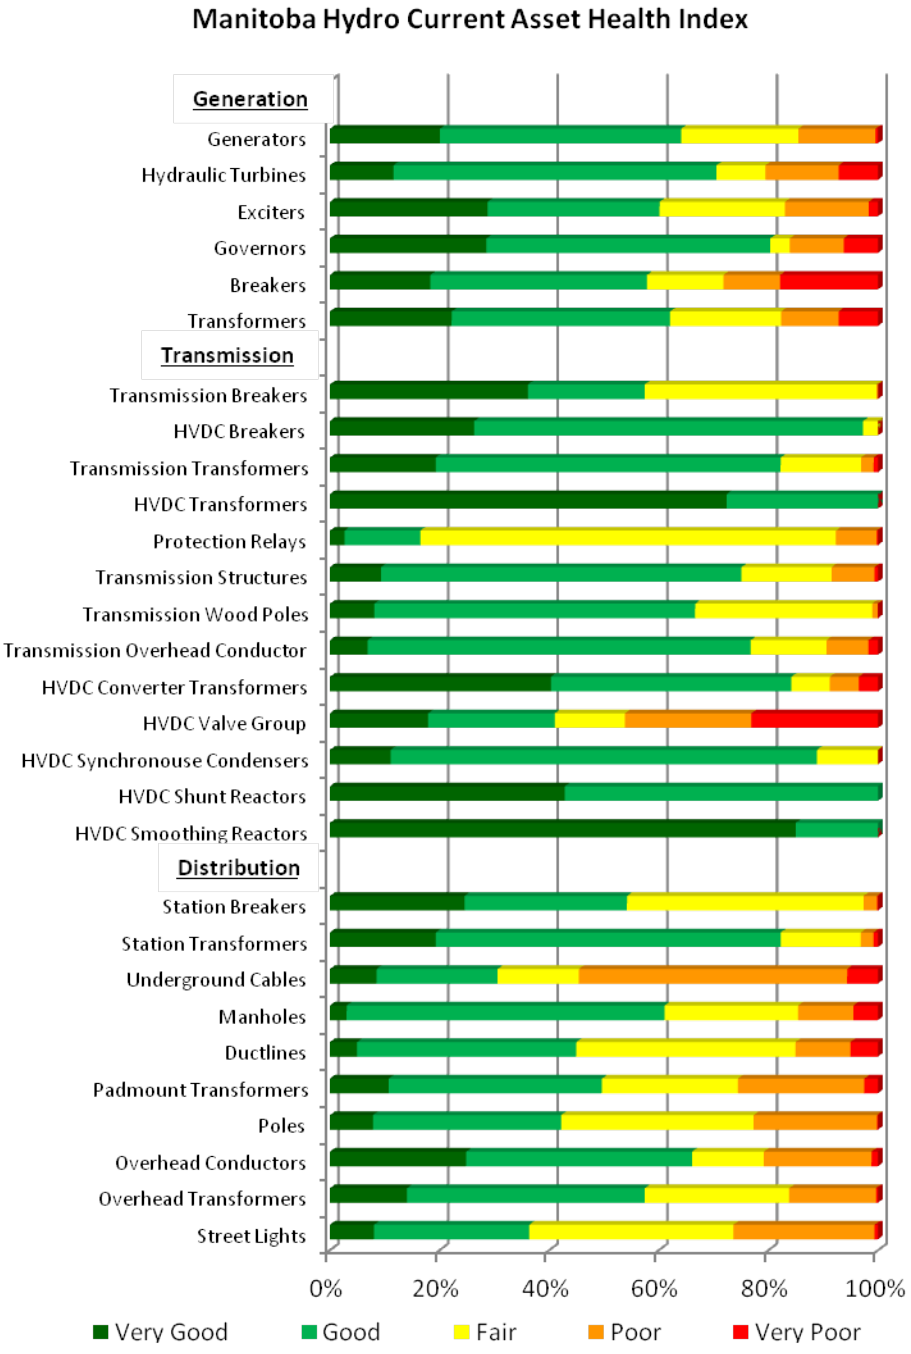
Figure 4.15 Hydraulic Generation Forced Outage Rates

Likewise, Manitoba Hydro's recent performance on the System Average Interruption Duration Index (SAIFI) and the System Average Interruption Frequency Index (SAIDI) indicators (with the exception of 2013 which reflects lower than normal storm activity) shows a trend of increased outage frequency and duration.

Figure 4.16 Manitoba Hydro SAIDI and SAIFI Indicators

	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	Projected 2014
SAIDI	90	124	93	111	99	116	129	130	175	119	115
SAIFI	1.14	1.4	1.23	1.27	1.31	1.46	1.44	1.51	1.96	1.3	1.55

Manitoba Hydro has been taking actions for many years to mitigate the impacts of aging infrastructure on reliability performance, such as implementing an integrated pole maintenance program that has allowed the Corporation to extend the pole asset



serviceable life well-beyond industry standards, and more recently, leveraging cable silicone injection technology to extend the serviceable life of underground cables. However, significant capital investments are required to address aging infrastructure and increased capacity needs on the system.

A considerable amount of Manitoba Hydro's assets were installed prior to 1960 when many of the first generating stations and transmissions systems were built (1911-1950) and a large portion of the province was electrified (1940-1960). Many of these assets have been well maintained or overhauled and are still in operation, providing decades of valuable service to the Corporation and its ratepayers. A large number of assets were subsequently installed from 1960 through to 1990 when generating stations were developed on northern Manitoba river systems along with the supporting HVDC system to transport the electricity to customers in the south.

Many components of this generation, transmission and distribution system are coming due for replacement, with some components requiring investments in the short term. Some of Manitoba Hydro's assets are in poor condition with ages well beyond industry standards and present a significant risk of failure which can result in customer outages and/or load shedding. Some of these assets types, such as breakers, generators, wood poles and valve groups, also require significant resources, lead time and capital investment to address their present condition. Though assets are being continually maintained, current levels of system reliability will not be sustained with current asset replacement rates.

As Appendix 4.2 to this Tab, Manitoba Hydro has included its Electric Infrastructure Condition Assessment Report. The report provides an overview of the condition of major electrical assets and their demographics, as well as an overview of critical assets' life expectancy versus the current replacement rates and the quantities of assets in critical condition. Manitoba Hydro used an Asset Health Index (AHI) to quantify equipment condition based on numerous parameters, as described in section 3 of Appendix 4.2. A condition index was calculated for each asset indicating whether the asset type is in very poor, poor, fair, good or very good condition. Figure 4.17 below provides a summary of current AHI results for Manitoba Hydro's generation, transmission and distribution asset types.

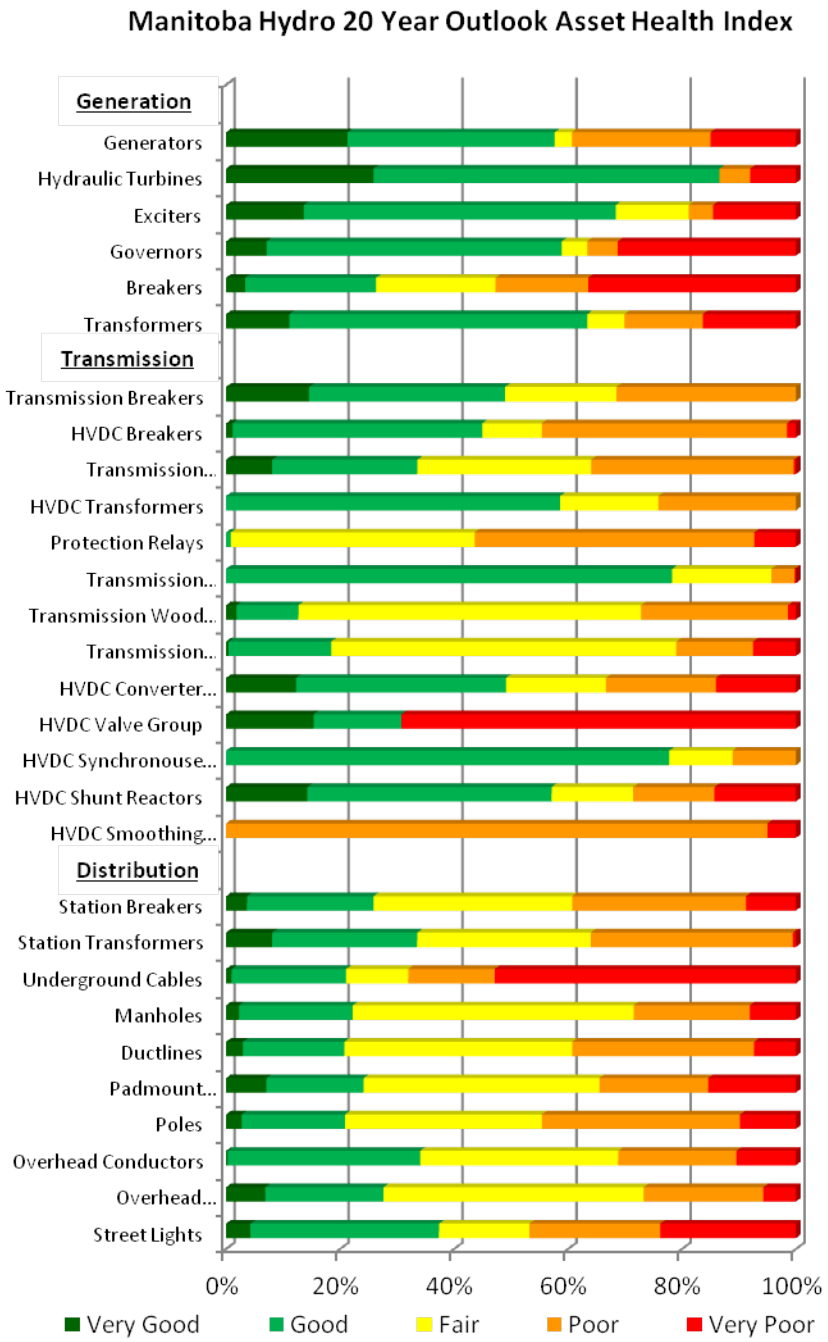
Figure 4.17 Current Asset Health Index by Asset Type

Manitoba Hydro can effectively manage its assets through the use of maintenance, spares and contingency strategies when the majority of assets in a particular asset class are in

fair to very good condition. However, as larger percentages of these assets fall into the poor and very poor categories, system failures regretfully will occur more frequently.

It is notable that the majority of critical assets are being replaced at levels substantially less than their anticipated lifespan. Today, a majority of the asset types have equipment which remains in service well beyond industry expectations, without causing significant impact to reliability. Going forward, as a larger percentage of assets age beyond life expectancy, significant changes to current replacement rates[1] will be required to mitigate the negative impacts of aging infrastructure on the electrical system. Figure 4.18 illustrates turnover at current replacement rates[2], indicating that replacement rates in the majority of Manitoba Hydro's asset types need to be increased to better align with life expectancy.

Figure 4.18 Asset Type Life Expectancy and Turnover at Current Replacement Rates



Business Unit	Asset	Life Expectancy (years)	Turnover at Current Replacement Rates (years)
Generation	Generators	60	117
	Hydraulic Turbines	90-100	84
	Exciters	50-90	117
	Governors	20-125	50
	Breakers	60-65	129
	Transformers	40-70	150
Transmission	Transmission Breakers	60-65	149
	HVDC Breakers	60-65	58
	Transmission Transformers	40-70	152
	HVDC Transformers	40-70	70
	Transmission Structures	85	285
	Transmission Wood Poles	75	255
	Transmission Overhead Conductor	85	410
	HVDC Converter Transformers	40-50	73
	HVDC Valve Group	25	48
	HVDC Synchronouse Condensers	65	65
	HVDC Shunt Reactors	35	55
	HVDC Smoothing Reactors	25	30

[1] The replacement rate is the average number of assets replaced each year divided by the total number of in service assets.
[2] Turnover at Current Replacement Rate is the number of years it would take to replace all our existing in service assets at current replacement rates.

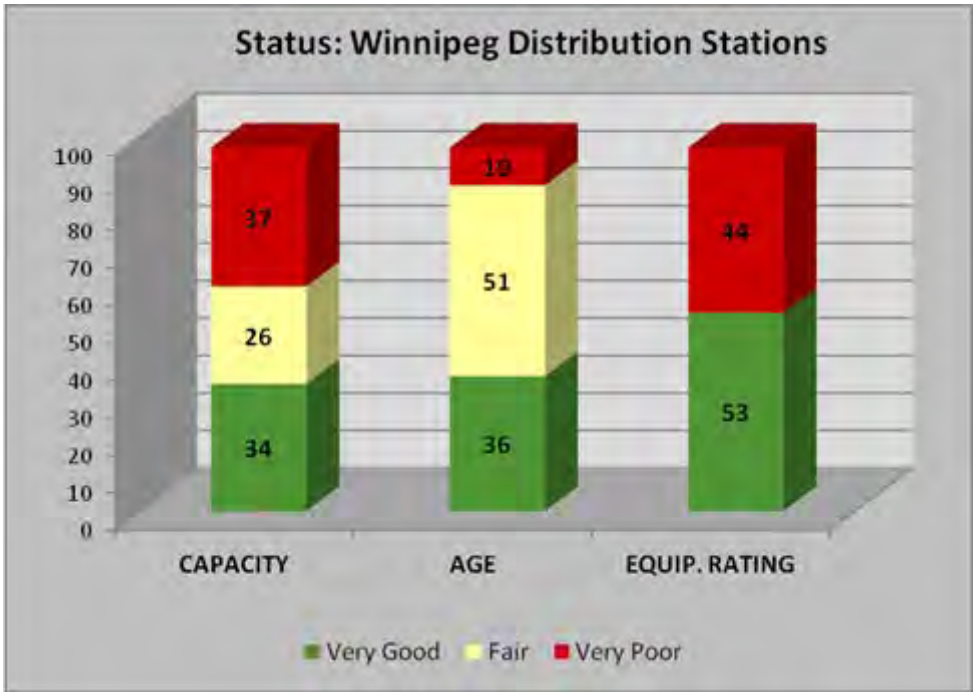
Business Unit	Asset	Life Expectancy (years)	Turnover at Current Replacement Rates (years)
Distribution	Station Breakers	60-65	180
	Station Transformers	40-70	370
	Underground Cables	30-70	328
	Manholes	80	500
	Ductlines	100	378
	Padmount Transformers	50	70
	Wood Poles	70	200
	Overhead Conductors	100	200
	Overhead Transformers	75	70
	Street Lights	50-70	100

The original cost of Manitoba Hydro's electric assets is approximately $16 billion with an estimated replacement value many multiples higher due to inflation, increases in commodity prices and other factors. An asset portfolio of this size requires significant reinvestment to ensure that performance and safety standards are achieved. As a result, it is essential that investments on asset renewal be undertaken. Manitoba Hydro will continue to extend the life of its assets to the extent feasible based on economic and risk assessments, however, current replacement rates do not allow for a sustainable electrical system in the near future. Figure 4.19 demonstrates the impact to asset health if current replacement rates are maintained, indicating a trend toward less asset reliability as more slip into the poor and very poor condition.

Figure 4.19- 20 Year Outlook Asset Health Index by Asset Type

As discussed in Appendix 4.2, it is expected that over the next 20 years more assets will slip into poor and very poor condition, which will result in lower reliability than experienced historically, reduced revenues, increased safety risks to public and

employees, increased maintenance costs, increased emergency restoration costs and consequential damages. In addition, internal resource levels to address both maintenance and asset replacement requirements would be strained and the ability to secure external resources may be limited.



4.6.2 Capacity Constraints Impacting System Performance & Customer Growth

In conjunction with the impacts of aging infrastructure, Manitoba Hydro is facing significant capacity issues. Electric load in an increasing number of service areas has grown to the point where Manitoba Hydro may not be able to adequately supply load in the event of an outage despite contingency plans. Capacity challenges also make it more difficult to respond to customer connection requests. The Corporation has identified a number of capital investment priorities for its distribution and transmission systems related to capacity and investments are being undertaken and will be required in the near future to address these capacity issues.

For example, significant capital investment in distribution stations in Winnipeg and rural Manitoba is required as a large number of the stations are currently overloaded. There are 276 distribution stations in rural Manitoba; 19 of these are loaded above their maximum capacity, while 27 stations are at or above 80% of their loading limit. There are areas of the Province experiencing load growth much higher than the system average. In addition, there are areas of the province where the distribution system is near its end of life. In areas where these issues intersect, investment requirements become more important, such as in the Steinbach area, the Morden/Winkler area, Western oil fields, Brandon South and the Eastern Lake Winnipeg Area. As is noted below, the transmission system that supports the distribution in these areas is also facing capacity challenges.

Likewise, current Winnipeg distribution system capacity is not sufficient to meet current or future loads, which results in a high likelihood of extended outages to customers. Figure 4.20 provides an overview of the current status of the distribution system in the City of Winnipeg.

Figure 4.20 Status of Distribution Stations in Winnipeg

There are 97 distribution stations supplying the City of Winnipeg; 37 stations are currently loaded beyond their maximum capacity, and 26 stations are at or above 80% of their loading limit. The in-service dates of substation capacity projects can be deferred by transferring load to other, less loaded stations; however, the use of this strategy has been exhausted and is no longer practical. Contingency plans have become ineffective to restore full load in the event of an outage. Furthermore, ten of the distribution stations are 61 years or older, exceeding the design life of the equipment, and 44 stations have fault levels that exceed equipment ratings under certain operating conditions, such as during extreme low temperatures where electrical demand is typically highest.

Based on current capital plans, Manitoba Hydro is working towards reducing the percentage of overloaded distribution stations in Winnipeg to 20% by 2020 and in rural Manitoba by 5% in 2015 with a long term objective of ensuring that no stations exceed their maximum rating. Achieving this objective requires significant investments today and in the coming years. This issue is of significant concern, not only as it limits Manitoba Hydro's ability to supply electricity reliably to existing customers, but also in light of the expected load additions in many areas of the Province, including downtown Winnipeg where load additions are much larger than anticipated. It is estimated that

service extensions are required for approximately 5,300 new electric customers each year across the Province.

Similarly, Manitoba Hydro's transmission system is facing significant capacity issues. There are a number of areas in the transmission system where significant investments are required in order to address higher than average load growth, deteriorating voltage levels, and/or impacts of increasing transmission system capacity on some existing system equipment. Manitoba Hydro has also identified a number of high-priority transmission capital investments to address capacity requirements that will need to be undertaken.

As noted above, Manitoba Hydro has experienced higher than average load growth in areas such as the eastern Lake Winnipeg area, the Winkler/Morden area, and the Steinbach area which exceed the firm capacity of its stations, and/or result in low voltage issues. In the Eastern Lake Winnipeg, load has grown beyond the maximum capacity of Pine Falls Station, a key station that supplies the area, and over the next several years, the load is expected to grow to the point that overloads could not be reduced to acceptable levels by transferring load to other stations, potentially resulting in transformer damage or rotating load shed in a difficult to serve region of the Province.

With respect to the Morden/Winkler area, the 115 kV transmission system supplying the area can experience low voltage issues, particularly during peak load conditions and outages on the system. In such cases, rotating load shed during peak winter loading conditions may be required to restore system voltages to acceptable levels.

Likewise, the Winnipeg area has become heavily loaded due to load growth and upgrades to the transmission system are required, including the construction of a new transmission line, in order to protect against blackouts, and improve the system performance and reliability during normal operations as the load grows in southern Manitoba. In addition, as the capacity of the Winnipeg area transmission system continues to increase, the ratings of some system protection/interrupting equipment in the area are expected to be exceeded. This necessitates the replacement of breakers in order to avoid potential harm to employees, the public and infrastructure.

As well, steady load growth in Western Manitoba has resulted in deteriorating voltages on the transmission system in the Portage South area, which is impacting local load and Saskatchewan export capabilities and the ability to supply new oil pipeline related load.

If the capacity-related projects are not undertaken, customers in the impacted areas would be at a higher risk of extended outages and there is a risk that Manitoba Hydro could potentially be subject to significant financial penalties if having to report North American Electric Reliability Corporation violations.

Addressing the above matters will require investments in new transmission lines, investments to address station overloading, capacity upgrades and new construction to accommodate future load growth.

The continued provision of safe and reliable service requires Manitoba Hydro to undertake investments today and in the near future. The proposed rate increases will ensure that there is adequate funding available to make the necessary investments.

COMPLEX	WUSKWATIM GENERATING STATION

Proposal

Design and construct Wuskwatim Generating Station on the Burntwood River upstream of Thompson. This will include the complete installation of equipment for 3 generators with a total installed capacity of approximately 210 MW, in accordance with the following schedule:

Unit #1 - 2016 12 31 Unit #2 - 2017 01 31 Unit #3 - 2017 03 31

JUSTIFICATION	Explanation
☒ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other	Based on the 1999 load forecast, the Power Resource Plan studies show that an additional dependable energy source will be required in 2016/17. According to current available information, Wuskwatim is the preferred choice.

COMPLEX	CONAWAPA GENERATING STATION

Proposal

DESIGN AND CONSTRUCT THE CONAWAPA GENERATING STATION ON THE NELSON RIVER. THIS WILL INCLUDE THE COMPLETE INSTALLATION OF EQUIPMENT FOR 10 GENERATORS WITH A TOTAL INSTALLED CAPACITY OF APPROXIMATELY 1390MW, IN ACCORDANCE WITH THE FOLLOWING IN SERVICE DATES:

UNIT NO. 1	2018 05 31	UNIT NO. 6	2019 06 30
UNIT NO. 2	2018 07 31	UNIT NO. 7	2019 08 31
UNIT NO. 3	2018 10 31	UNIT NO. 8	2019 11 30

UNIT NO. 5	2019 03 31	UNIT NO. 10	2020 04 30

JUSTIFICATION	Explanation
☒ Load ☐ Service ☐ Safety ☐ Efficiency ☐ Reliability ☐ Other	BASED ON THE 1999 LOAD FORECAST, THE POWER RESOURCE PLAN STUDIES INDICATE THAT AN ADDITIONAL DEPENDABLE ENERGY SOURCE WILL REQUIRED IN 2018/19. NOTE: THE CER INCLUDES AN UNAMORTIZED BALANCE OF PRELIMINARY PLANNING STUDIES ESTIMATED AT $23.4 MILLION (CURRENT DOLLARS).

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	223	☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	HVDC BIPOLE RELIABILITY ENHANCEMENTS

Proposal

Relocate and reterminate service transformer #1 (SST1) and associated equipment within Radisson Stn. Purchase and install spare converter transformers on new pads as follows: Dorsey single phase 1-300kV & 1-450kV, three phase 1-375kV& 1-500kV; Radisson single phase 1-450kV, Henday three phase 1-500kV.Purchase and install two spare air cooled smoothing reactors set rated at 750 MH reactance and 500kV DC on new pad ,one each for Dorsey and Henday.Upgrade cooling system valves and converter transformers by installing additional cooling capacity to achieve rating and provide necessary degree of redundancy on Bipole 2 at Dorsey and Henday.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☐ Safety ☒ Efficiency ☒ Reliability ☐ Other	Relocating SST1 ensures that Bipole 1 is not left in a single contingency bipole loss situation by permitting syncronization of all 3 transformers. Spare transformers and smoothing reactors provide transmission enhancements required due to the addition of Limestone, delay of Bipole 3, increased capacity for export sales, and provide improved system adequacy and reliability. Cooling system upgrades will increase DC summer output capacity by 200 MW. This will increase benefits from summer export sales, enhance maintenance scheduling/operations and DC transient performance.

COMPLEX	HVDC BIPOLE 2 THYRISTOR POLY PIPE REPLACEMENTS

Proposal

Complete replacement of all polyamide piping associated with the thyristor module and header system on valve halls 31, 32, 41 and 42 at Henday and Dorsey converter stations.

Material will be purchased in Aug/Sept 96 and 97. Piping replacement will be installed equally over two years beginning Aug 96.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The polyamide tubing directs cooling water essential for the operation of the valves. This tubing has reached the end of it's useful life and must be replaced before it fails, becomes brittle and breaks, plugging and overheating the thyristor and reactor modules.

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	54	☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	CONVERTER TRANSFORMER BUSHING REPLACEMENT

Proposal

Replace converter transformer bushings with NGK bushings, and purchase spares as follows: at Dorsey replace six 230kv AC, and six 25kv tertiary bushings; and at Radisson/Henday replace five 138kv, two 150kv, four 230kv, and three 15kv tertiary bushings, and purchase two 300kv and two 450kv spares.

JUSTIFICATION		Explanation
☒ Load	☐ Service	The bushing replacement program was undertaken due to failure of a 230kv bushing in Dorsey T21 A-phase converter transformer which resulted in costly repairs to the transformer, and loss of revenue due to the outage. Also during repair of Dorsey T31S converter transformer in Pauwel's Canada plant two out of two 230kv bushings being tested failed at far below the full test voltage. The manufacturers expected service life is 25 years. These bushings have all been in service more than 17 years. Replacement cost is justified when compared to transformer damage due to an in service failure.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX	DORSEY BIPOLE 1 SYNCH CONDENSER BREAKER REPL

Proposal
Design & replacement of six 17kV breakers and associated equipment for English Electric and ASEA synchronous condensers at Dorsey stn with new 120,000A breakers. To be replaced 2 per year over 3 years.

JUSTIFICATION		Explanation
☒ Load	☐ Service	The existing 17kV breakers have become under rated due to system changes. New breakers with increased rating are required to eliminate potential breaker damage and other adverse system and safety implications.
☒ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 216

REVISION STATUS: ☐ New complex ☐ In service change ☒ Concept change ☐ Estimate change only

COMPLEX	BIPOLE 1 & 2 DC FILTER CAPACITOR REPLACEMENT

Proposal
Replace all bipole 1 & 2 DC PCB filled capacitors at Dorsey , Radisson and Henday Stns, with non-PCB replacement capacitors.

JUSTIFICATION: ☐ Load ☐ Service ☒ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation
Existing filter capacitors are PCB filled. New capacitors contain a more flamable oil and mixing them could result in a fire if toxic compounds from the PCB's are released. There is no sensitive protection to protect them against failure, and they will be 25 years old and approaching the end of their usable life.

COMPLEX	DORSEY BRINE EFFLUENT IMPROVEMENT

Proposal

Design supply and drilling of a pilot well to determine feasibility of the deep well injection method. After satisfactory evaluation of the pilot well test results , design, supply, install and commission it with associated tanks, pumps and pipe works to transfer the salt brine effluent from the water softeners of the two bipoles. (It is assumed that Government Approval is not needed for this work.) Design and install cathodic protection for the wells.

JUSTIFICATION		Explanation
[ ] Load	[ ] Service	The existing deep well is not functioning properly. It was originally installed in 1984. In 1986 it lost its ability to accomodate the flow of effluent. Presently some effluent is being dumped to the station drainage ditches. It is now essential that a new well be drilled incorporating the latest design.

☒ Planned ☐ In progress	272	☒ New complex ☐ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	DORSEY SYNCHRONOUS CONDENSER REFURBISHMENT

Proposal

Major inspection and overhaul of synchronous condensers SC7Y, SC8Y, SC9Y, SC21Y, SC22Y, and SC23Y. Replacement of coolers to restore original thermal performance on SC21Y, SC22Y, and SC23Y.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other	Synchronous condensers are required for proper operation of the HVDC system, voltage regulation of the southern AC system and to provide reactive power for power export to the USA. A major inspection and overhaul of each machine is necessary to prevent catastrophic failure, involving the rotors and rotor bolts as indicated by the failures of SC12Y in 1987 and SC11Y in 1988. The cost of repairing a failure when conbined with our inability to export power will well exceed the cost of major inspection and overhaul.

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 3

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	GREAT FALLS G.S.REHABILITATION

Proposal

Replace existing gates, roller paths and hoists (installed between 1920 - 1928) with new fixed-roller,vertical lift gates, stainless steel roller paths and wire rope type hoists. Anchor the intake piers to bedrock, to stabilize the intake. Replace main water passage components (bottom ring, discharge ring and draft tube liner) ,install new propeller type runner, rewind generator, provide new transformer and modernize to present standards.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

The existing a) intake gates and hoists cannot be expected to provide reliable emergency closure functions as they have the potential to malfunction during an emergency. b) draft tube liner is failing in spite of expensive repairs and is in urgent need of replacement. The potential to utilize the outage to replace the seventy year old runner with a larger, more efficient unit has been reviewed and approved by the re-runnering committee. While the generator was rewound forty years ago, many of the electrical components are original equipment from the 1920's.

☐ Planned ☒ In progress	52	☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	SEVEN SISTERS G.S. REHABILITATION

Proposal

Replace Unit # 1, 2 & 3 turbine runners together with rehabilitation of the generator field poles and rewinding of the stators. Conduct turbine model tests. Modify the draft tube on Unit 1 by adding a Moody Spreading Cone, and partially fill in the draft tube elbow with concrete. Perform restoration work on the generator rotor poles, rewind exciters and install new transformer sprinkler systems. Rehabilitation, replacement of and addition to various electrical and mechanical equipment and systems such as; station lighting, 110kv line protection, bus disconnects, station grounding, oil interceptor, spillway hoist housing upgrade, powerhouse ventilation, generator cable replacement, powerhouse and tailrace cranes, standby generator and EPS, control room air conditioning, generator terminal equipment, governor system, compressed air system, line & bus potential transformers, and spillway gate limit switches.

JUSTIFICATION		Explanation
☐ Load	☒ Service	New runners would produce rated power under lower head at greater efficiency levels. A redesigned draft tube would allow increased output. The original asphalt type stator windings should be replaced by modern epoxy materials before serious coil failures occur without warning. Assessment of the electrical and mechanical systems has identified concerns in terms of obsolete equipment, safety, fire risk and adaptability to present day operating conditions and standards. Upgrading is necessary to ensure reliable safe and economical operation.

COMPLEX	PINE FALLS G.S. REHABILITATION

Proposal

Rehabilitation, replacement of and addition to various electrical and mechanical equipment and systems such as; spillway mechanical components, station service upgrade, station lighting, 11kv cable replacement, spillway electrical distribution, water system, air system, transformer lightning arrestors and station drawings. Replace Unit #1and #2 turbine runners with more efficient new design runners, rebuild existing servomotors for increased wicket gate opening allowing more discharge, and rewind the generator stators utilizing modern insulating materials.

JUSTIFICATION		Explanation
☐ Load	☒ Service	Assessment of the electrical and mechanical systems has identified concerns in terms of obsolete equipment, safety, fire risk and adaptability to present day operating conditions and standards. Upgrading is necessary to ensure reliable safe and economical operation.Pine Falls consistantly spills more water than the other Winnipeg River plants. Additional generation can be obtained (approximately 17%) with increased discharge capability. Tests have confirmed that the 2 stator windings are in danger of failure at any time.

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 48

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: GRAND RAPIDS G.S. REHABILITATION

Proposal

Disassemble Unit 1 and assess damage. Replace outer, intermediate and inner head covers, turbine guide bearings, servomotors, operating ring and links. Repair various other components and reassemble the unit utilizing the repaired existing runner for an in-service date of 1994 05 12.

Replace Kaplan turbine runners on Units 1,2 and 3 and modify servomotors, head covers, operating ring and governor pressure system on Unit 4. Rewind generators on Units 1, 2 and 3. Modify the stator frame support and add 13.8 kv ciruit breakers on all four generators. Upgrade the controls, annunciation and protection, to provide synchronous condencer capability.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

To repair the Unit 1 damage which occurred as a result of the head cover failure and return the unit to service prior to the 1993/94 winter peak.

Excessive wear of the turbine units requires complete repair or replacement with new more powerful and efficient runners on Units 1, 2 and 3. Unit 4 will be upgraded by wicket gate opening enlargement. Breakers will improve system reliability. DC zoning rearrangement will enhance security.

COMPLEX	KETTLE & LONG SPRUCE GS STATOR REWEDGING

Proposal

Kettle GS - Rewedge stators on unit 5 (93/94) unit 4 (95/96) unit 3 & 11 (96/97) units 7, 8, 10, and 12 to follow at the rate of one per year. Sequence determined by insulation tests.

Long Spruce GS - Rewedge stators on unit 3 (92/93), unit 5 and 1 (93/94) unit 6 (94/95) and unit 9 (95/96). Units 7, 8 and 10 are scheduled one per year over the next four years, based on insulation tests.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other	The stator wedges on several units are becoming loose. The insulation readings are deteriorating rapidly, thus indicating looseness of wedges and stator coils in their respective slots. Looseness can cause a coil failure due to ground fault and result in an extended generator outage.

COMPLEX	PRODUCTION NORTH DAM SAFETY UPGRADES

Proposal

Perform necessary engineering design and remedial construction, to upgrade Northern generating stations to present day dam safety standards, to allow them to continue safe and reliable operation.
Work description to include the following:
(1) Kettle Generating Station - upgrade main and saddle dams for freeboard
(2) Kelsey Generating Station - armour plating at spillway rollways, erection of heated hoist housing, insulating of spillway gates, upgrading of dykes, upgrading of spillway feeders and electrical systems at the spillway and upgrading of the station service transformers due to increased loading.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☒ Safety ☐ Efficiency ☒ Reliability ☐ Other	Manitoba Hydro has underway a formal dam safety program covering all its plants. Ulilizing present day standards, various deficiencies have been reported in the Production North generating stations. Work is therefore required to correct the deficiencies to all the plants, to operate in a safe and reliable manner.

COMPLEX	WINNIPEG RIVER CONTROL SYSTEM

Proposal

Upgrading or replacement of, and additions to, various items of electrical and mechanical systems and equipment.

Items included are:

Great Falls GS - DC distribution, and unit control, metering and relaying.
Seven Sisters GS - U#4-U#6 AVR replacement, and unit control, metering and relaying.
Pine Falls GS - 250 VDC distribution, and station control.
Mcarthur Falls GS - station annunciator upgrade, 250 VDC distribution, and station control.

JUSTIFICATION		Explanation
☐ Load	☒ Service	Previous engineering assessment of the electrical and mechanical systems in these stations have identified various areas of concern in terms of obsolete equipment, safety, fire risk and adaptability to present day operating conditions and standards and the requirement for upgrading work. Production south have identified the need for an integrated system for control of all the Winnipeg River stations, therefor this complex has been created to co-ordinate the design and installation of the various systems and System Control Centre's requirement for data acquisition.

COMPLEX	LIMESTONE OUTSTANDING WORK

Proposal

To complete outstanding work including final disposition of buildings, and final site cleanup.

To perform modifications to thrust bearings, air admissions, cooling systems, governors and install a rotor mounted scanner.

To design and construct a channel improvement in the Nelson River at Sundance Rapids, to reduce ice staging in the tailrace.

JUSTIFICATION		Explanation
☒ Load	☐ Service	To provide funding for the completion of outstanding work at Limestone G.S., and modifications to a number of the original systems. The modifications are designed to reduce failures, and eliminate revenue reducing operating restrictions. Ice staging of the tailwater is causing a loss of up to 1.5 meters of energy head, and associated generation capacity, throughout the winter.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX: WINNIPEG RIVER RIVERBANK PROTECTION PROGRAM

Proposal

Placement of rock protection and construction of slope stabilization to reduce erosion of riverbank along the Winnipeg River. The work includes inspection, design, mapping, land acquisition and remedial construction at Pine Falls and McArthur Falls.

JUSTIFICATION: ☐ Load ☐ Service ☐ Safety ☐ Efficiency ☐ Reliability ☒ Other

Explanation

Provision of riverbank protection and stabilization work along the Winnipeg River and tributaries between Seven Sisters forebay and Manitou Rapids from erosion partially due to hydraulic operations.

COMPLEX	KETTLE G.S. STATOR REWIND

Proposal
Rewind generator stators on units 1 - 12.

JUSTIFICATION: [ ] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation
The stator windings at Kettle are a polyester bonded mica which is prone to internal degredation as a result of thermal and electrical stresses. There has been a much higher failure rate for stator coils at Kettle than in any of our other generators installed since 1960. Analysis of the internal conditions of the insulation system is ongoing. Rewedging units at Kettle is an opportunity to repair isolated cases of severe slot discharge, necessary to avoid deterioration. Replacing stators as well is under investigation to include a single turn roebel bar winding with class 'f' insulation.

COMPLEX	KELSEY GS GATE REHABILITATION

Proposal
Replacement of rollers, installation of cathodic protection, touch up painting, seal replacement, and replacement of the hoist cables if required for units 1-5.

JUSTIFICATION: [X] Load [ ] Service [X] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation
The unit 2 gate inspection in 1997 established that the above mentioned work is required to ensure that the intake gates function as designed. If they do not function as designed, there is the possibility of a run away unit.

COMPLEX	THERMAL G.S. ASSURANCE

Proposal

Refurbish the thermal generating units at Brandon and Selkirk Generating Stations as follows;

Brandon - Refurbish Units 1-5. Install electrostatic precipitators and a cooling tower for Unit 5, meet environmental licence requirements, upgrade coal handling facilities, and perform unit 5 mechanical upgrades (1998/99).

Selkirk - Refurbish Units 1 and 2, install ash lagoon and effluent management systems, and modify coal handling facilities.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

Based on WP London's report, Brandon and Selkirk Generating Stations require refurbishment of equipment, installation of environmental protection equipment, and modification of the fuel handling system in order to assure; service life to planned retirement, operation under more stringent environmental standards and a continuing supply of fuel.

COMPLEX	BRANDON G.S. LICENCE RENEWAL

Proposal

Refurbish unit #5, extending the useful life of the plant to 2019. Life extension requires: procurement of a new environmental licence for the period 2006 - 2019, replacement of last two rows of L.P. turbine blading, retube condenser, upgrade electrical services, install nitrous oxides control & continuous emission monitoring. Build new ash lagoon.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The 1998 power resource plan report recommends Brandon #5 life extension as an option to meet future load requirements and increase system reliability.

REVISION STATUS: ☐ New complex ☐ In service change ☒ Concept change ☒ Estimate change only

COMPLEX: BRANDON G.S. SWITCHYARD JETAIRE BREAKER REPL

Proposal
Replacement of all thirteen 115kV Jetaire circuit breakers at Brandon G.S.

JUSTIFICATION: ☐ Load ☐ Service ☐ Safety ☒ Efficiency ☒ Reliability ☐ Other

Explanation
These breakers have been in service for 40 years and have reached the end of their useful life. Obsolescence (interim system upgrades and their age have decreased their capability), high fault levels, decreasing reliability, and high maintenance costs (8.4 times higher than similar breakers at Bdn with parts very expensive or unavailable) indicate these breakers should be replaced with existing surplus breakers, after their refurbishment.

COMPLEX	200MW ONTARIO HYDRO SALE

Proposal

Make necessary adjustments to units 1 to 6 at Seven Sisters G.S. to allow conversion of units to synchronous condenser operation.

JUSTIFICATION

☒ Load ☐ Service ☐ Safety ☒ Efficiency ☒ Reliability ☐ Other

Explanation

During low Winnipeg River generation and single contingency outage conditions, additional voltage support is required in Whiteshell area to maintain 200MW sale to Ontario. This item provides for capability to convert Seven Sisters generating units to synchronous condenser operation to provide required voltage support.

COMPLEX	OIL CONTAINMENT - POWER SUPPLY

Proposal

Modifications and/or additions are required to prevent and contain oil spills:

1) southern and northern hydraulic generating stations, install oil/water separators, modify drainage systems, and upgrade sump, fuel storage facilities and dyking systems.

2) converter stations, install an oil containment system to collect and recover any oil spilled within the station.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☒ Safety ☐ Efficiency ☐ Reliability ☒ Other	Previous experience with oil spills requires the Corporation to demonstrate "due diligence" with respect to containing and minimizing the potential for any further occurances. In addition, any plant outage as a result of a spill represents a minimum loss of $5000/hr.

COMPLEX	FIRE PROTECTION PROJECTS - POWER SUPPLY

Proposal

Design and install passive and/or active fire prevention and protection systems at all generating stations, and key transmission terminating stations as outlined by The Fire Prevention and Protection Committee and defined in the Fire Manual Part II.

Locations covered by this capital item complex are;
Pine Falls, McArthur, Kelsey, Limestone, Kettle, and Long Spruce Generating Stations, and Dorsey, Radisson, and Henday Stations.

JUSTIFICATION		Explanation
☐ Load	☐ Service	In accordance with the rules and guidelines established by The Fire Prevention and Protection Committee, implementation of this program will reduce the risk of fire to an acceptable level and mitigate the effects of any such occurance.
☒ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX	BUILDINGS - POWER SUPPLY

Proposal

1. Construct a 23500sq.ft. service building for admin, maintenance, and stores for Wpg R. gen. stations. (1998/99-1999/00)
2. Construct 32 permanent housing units, and a 6 point infrastructure renewal (5 yr plans) at Gillam. (1995/96-2000-01)
3. Build 18 new single family homes in Gillam to replace temporary modular units that cannot be rehabilitated. (1993/94-1994/95)
4. Construct a staffhouse at Grand Rapids containing 12 single and 4 suites, kitchen, dining, rec. and lounge. (1996/97-1997/98)

JUSTIFICATION	Explanation
☐ Load ☒ Service ☐ Safety ☐ Efficiency ☐ Reliability ☒ Other	To consolidate staff currently leasing space or conducting activities from substandard facilities, the corporation has a sequenced program of major building additions staged at one per year. In addition, the corporation is continuing to provide accommodations at remote or northern locations where acceptable alternatives or conditions are unavailable. Gillam housing requirements are: Production North (26), Construction (4), and Northern Region (2). Gillam infrastructure evaluation lists substandard: water quality, sewage treatment, fire hydrants, rec facility, and trailer park insulation.

COMPLEX: PRELIMINARY PLANNING STUDIES

Proposal

Carry out assessments, conceptual designs and planning studies of potential supply options, and associated transmission.
Areas of study include establishment of design parameters, structure layouts, support facilities, hydraulic model testing, exploration, data collection, environmental assessments and public input, schedules and cost estimates.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☐ Efficiency
☐ Reliability ☒ Other

Explanation

In order to plan the development of the Province's resource potential and related projects, office studies, environmental assessments and field exploration have to be carried out. The results and technical designs are required to support the planning process.

COMPLEX	DOMESTIC ITEM - POWER SUPPLY

Proposal

This complex consists of several hundred projects which are not identified as Major Items and whose individual cost is of a relatively small amount. The majority of projects are required to provide safe reliable and efficient power supply and HVDC facilities, and to replace plant facilities whose useful life has been exceeded.

JUSTIFICATION	Explanation
☒ Load ☒ Service ☒ Safety ☒ Efficiency ☒ Reliability ☒ Other	Enhancements or rehabilitation to the power supply facilities will ensure a safe reliable and efficient source of energy.

COMPLEX	WUSKWATIM TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities for Wuskwatim power transfer as follows:

Transmission: 230 KV lines 1 - 118 KM Wuskwatim - Herblet Lake, 2 - 1.5 KM Wuskwatim Switching Stn - Wuskwatim Generating Stn. Sectionalize existing Thompson Birchtree - Herblet Lake 230 KV line into Wuskwatim Switching Stn.

Terminations: Extend 230 KV facilities at Herblet Lake station. Construct 230 KV station at Wuskwatim. Communications: Microwave system.

JUSTIFICATION		Explanation
☒ Load	☐ Service	Based on the 1999 Load Forecast, generation expansion studies indicate an additional generation source is required in 2016/17 Wuskwatim is the current economic choice. Transmission and terminating facilities are necessary to connect this new power source to the Manitoba network.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Complex no. 58

Advance or deferral impact

Delay in components of this transmission complex will curtail or prevent Wuskwatim capacity from being delivered to the Manitoba system.

Factors affecting timing or viability

Timing and rating of Wuskwatim Generating Station.

COMPLEX	CONAWAPA TRANSMISSION

Proposal

Perform environmental assesments and route selection, design and construct transmission and terminal facilities for Conawapa powe transfer as follows:
Transmission: 230kV lines 3 - 31.8 KM Henday - Conawapa Converter Station, 5 - 0.6 KM Conawapa Converter Station t Conawapa Generating Station.
Terminations: Extend 230kV facilities at Henday station. Construct new 230kV facilities at Conawapa Converter station.
Communications: Integrate with Northern Collector communication system.

JUSTIFICATION		Explanation
☒ Load	☐ Service	Based on the 1999 Load Forecast, generation expansion studies indicate an additional generatio source is required in 2018/19. Conawapa is the current economic choice. Transmission an terminating facilities are necessary to connect this new power source to the Manitoba network.
☐ Safety	☐ Efficiency

COMPLEX: HVDC BIPOLE 3

Proposal
Preform environmental assessments and route selection, design and construct transmission and terminal facilities to accomodate treansfer of Nelson River power to the Southern Manitoba system as follows:
Transmission: 51 KM DC Electrode line fron Conawapa Converter station to existing Electrode station. 40 KM DC electrode line from Riel to a new Electrode station.
Terminations: Construct Bipole 3 HVDC 1300 MW (with 50% overload capability) +/-500 kV stations at Conawapa and Riel. Extend 230 kV facilities at Henday station. Construct new 230kV station at Riel, including 3 - 300 MVAR Synchronous Condensers.
Communications: Fibre Optic or Microwave system.

COMPLEX	RIEL - WINNIPEG AC TRANSMISSION

Proposal

Design and construct transmission and terminal facilities to accommodate transfer of power from Bipole 3 to the Southern Manitoba system as follows:
Transmission: Sectionalize 230kV St Vital Ridgeway lines and extend into Riel Station. Terminate pre-strung 230kV line from Riel to St Vital at those stations, resulting in 230kV lines from Riel to Ridgeway and 230kV lines from Riel to St Vital.
Terminations: Extend 230kV facilities at Riel and St Vital stations.
Communications: Intergrate with Riel - St Vital - Ridgeway area system.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

These facilities connect HVDC Bipole 3 to the Manitoba 230kV network in the Winnipeg area. They provide flexibility of power supply to Winnipeg from Bipole 3 during normal conditions and contingencies.

COMPLEX	DORSEY - RIEL 500kV AC T/L

Proposal

Design and construct transmission and terminal facilities to firm up supply to stations in east Winnipeg, and provide for paralleling of Dorsey and Riel HVDC convertors during emergencies in the future as follows:

Transmission: 500kV line (initially operated at 230kV) 48.1 KM Dorsey - Riel.
Terminations: 230kV circuit breakers at Dorsey and Riel stations. 500kV DC high speed switches at Dorsey and Riel Station. The switches will allow connection of the Dorsey - Riel line to Bipoles 2 and 3 to perform parallel operation of the bipoles.
Communications: Intergrated with existing facilities at Dorsey and Riel.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

This line will initially operate at 230kV to supply to east Winnieg stations from Dorsey via Riel station. The 500kV switches on the Dorsey - Riel 500kV AC line will permit parallel operation of Bipoles 2 and 3 under emergency conditions involving loss of any HVDC line from the north, increasing system reliability.

Complex no. 95

COMPLEX STATUS: ☐ Planned ☒ In progress

REVISION STATUS: ☐ New complex ☐ In service change ☒ Concept change ☐ Estimate change only

COMPLEX: 200 MW ONTARIO HYDRO SALE - TRANSMISSION UPGRADE

Proposal

Design and construct terminal facilities to accommodate 200 MW Ontario Hydro Sale as follows:

Transmission: Investigate current carrying capacity of sections of 115 KV lines GT1 & ST2 extending from Great Falls to Seven Sisters. Refurbish lines as required to support high load currents.
Terminations: Reconductor line end spans of parallel double circuit 115 KV line WT34 at Whiteshell and Transcona stations to accommodate increased line current.
Stations: Replace bank 8 115kV phase shifting transformer at Whiteshell station and make site improvements to upgrade drainage and oil containment for bank 7 & 8.

JUSTIFICATION: ☐ Load ☐ Service ☐ Safety ☐ Efficiency ☐ Reliability ☒ Other

Explanation

Line GT1 & ST2 refurbishment and line WT34 end span reconductoring permit high current loading of supply lines into Seven Sisters to maintain Ontario export during low Winnipeg River generation and line outages. A new phase-shifting transformer is required to ensure maximum benefits during the 200 MW Ontario Hydro sale.

☐ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The addition of Limestone has loaded the HVDC system to capacity. With Bipole 3 deferred, transmission system capacity and reliability margins for firm export sales can be partially restored economically by providing facilities to off-load 2 Kettle units from the DC system to the AC system if required.

COMPLEX	THOMPSON - HERBLET LAKE 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to transmit power of up to 3 Kettle units to the Southern AC System as follows;
Transmission: 230 KV line 166km Thompson Birchtree - Herblet Lake. Sectionalize 230 KV line K24W into Thompson Birchtree station.
Terminations: Establish station at Thompson Birchtree, line termination at Herblet Lake, and modify line protection at Kelsey and Thompson Mystery Lake Road associated with line K24W.
Communications: Protection for Kelsey - Thompson - Herblet Lake T/Ls.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other	Construction of the Thompson Birchtree - Herblet Lake 230 KV line and sectionalization of the Kelsey - Thompson Mystery Lake Road 230 KV line K24W into Thompson Birchtree station are required to transmit up to three units of Kettle generation to Southern Manitoba on the AC system under winter conditions for system reliability enhancement.

COMPLEX	NORTH CENTRAL MANITOBA PROJECT

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities for central supply to Island Lake communities from Kelsey as follows:
Transmission: 138 KV line 360 KM Kelsey - Oxford House - God's Lake Narrows - Garden Hill - Wasagamack. 25 KV feeder lines 63.0 KM God's Lake Narrows - God's River, 76.0 KM God's Lake Narrows - Red Sucker Lake, 30.5 KM of single/double circuit between Wasagamack station and Wasagamack & St. Theresa communities.
Terminations: Extend 138 KV facilities at Kelsey. Construct 138-25 KV distribution stations and required feeders at Oxford House, God's Lake Narrows, Garden Hill, and Wasagamack. Communications: VHF Mobile coverage using VHF repeaters. Supervisory control at Oxford House, God's Lake Narrows and Garden Hill.

JUSTIFICATION		Explanation
☒ Load	☒ Service	The 138 KV line and associated distribution facilities will provide central supply to seven Island Lake communities, as per agreement between Manitoba Hydro, the aboriginal communities, the Manitoba Provincial government, and the Federal Government.
☐ Safety	☐ Efficiency

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 57

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: DORSEY - NEEPAWA - CORNWALLIS 230 KV LINE

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide firm supply to Brandon as follows: Transmission: 230 KV line Dorsey - Neepawa - Cornwallis (D-N-C), consisting of 73 KM on double circuit and 157 KM on single circuit towers. New 115 KV line of 1.7 KM Warren-Line CN9 Tap. Salvage 63 KM of 115 KV line CN8 from Warren towards Neepawa and 79 KM of 115 KV line CN9 from Neepawa towards Warren. Salvage 52 KM of 115 KV line BN5 from Neepawa to north of Brandon and replace with east side of 230 KV line operating at 115 KV as 2nd circuit on D-N-C towers. Terminations: Extend 230 KV facilities at Dorsey and Cornwallis stations. Salvage 15 MVAR transformer reactor & 1 reactor switching breaker. Install 2-20 MVAR 13.2 KV shunt reactors and 3 transformer reactor switching breakers. Purchase property for future Neepawa 230 KV station. Communications: Integrate with existing Dorsey and Cornwallis facilities.

JUSTIFICATION

☒ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

These facilities provide transmission improvements required by 1999 to supply Brandon area future load growth. They also defer the future Winnipeg - Brandon 230 KV transmission complex and provide for future Neepawa area support.
One new reactor will replace an existing reactor in deteriorated condition. Both reactors are required to control 230 KV voltage at Cornwallis under light load conditions.

COMPLEX	RIDGEWAY - ST. VITAL 230 KV TRANSMISSION

Proposal

Perform environmental assessments and obtain licences, design and construct transmission and terminal facilities to provide firm supply to St. Vital station as follows:
Transmission: Construct 12.0 KM double circuit 230 KV line Ridgeway - Riel Future Station Site. Open 230 KV line R49R at Ridgeway and Riel site and reconnect south section at Riel site to Ridgeway using east side of new double circuit. Connect west side of new double circuit at Riel site to unused circuit extending to St. Vital. This results in 2nd Ridgeway-St. Vital 230 KV line, re-establishment of Ridgeway - Richer 230 KV line R49R , and one unenergized new Ridgeway-Riel Site line.
Terminations: Extend 230 & 115 KV facilities at St. Vital station, including a 2nd 230-115 KV 250 MVA transformer and 230 & 115 KV circuit breakers. Extend 230 KV facilities at Ridgeway. Communications: Integrate with existing east Winnipeg facilities.

COMPLEX	DORSEY - ROSSER 230 KV TRANSMISSION IMPROVEMENTS

Proposal

Perform environmental assessments and obtain licences, design and construct transmission and terminal facilities to refurbish Dorsey - Rosser 230 KV line D5R as follows:

Transmission: Reconductor 17.8 km of line D5R. Open temporary bypass of Dorsey - Rosser line D5R (former A4D). Restore reconductored D5R line by reconnecting at Dorsey and at Rosser.

Terminations: Modify line protection equipment at Dorsey and Rosser.

JUSTIFICATION		Explanation
☒ Load	☐ Service	Reconductoring of line D5R is part of the development of Winnipeg area 230 KV transmission. It will upgrade the line to the same current carrying capacity as all other 230 KV network lines in the Winnipeg area and prevent D5R overloads during transmission contingency outages.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX: DORSEY - ST. VITAL 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to firm up supply to stations in east Winnipeg as follows: Transmission: 230 KV line double circuit strung one side only, 14 km from Ridgeway along D36R/R23R R.O.W towards Rosser, 7.5 km from St. Vital along R32V R.O.W to Riel Corner. Open 2nd Ridgeway-St. Vital 230KV line at Riel Corner and re-establish line by connecting Ridgeway section to new 7.5 km circuit to St. Vital. Connect remaining St. Vital section of previous Ridgeway- St. Vital 230KV line, unused Ridgeway-Riel Corner line, new 14 km line, and unused former lines D36R & A4D north of Rosser to create Dorsey - St. Vital 230 KV circuit (passing through Ridgeway station). Terminations: Extend 230 KV facilities at St. Vital station. Install line protection changes at Dorsey. Communications: Integrated with existing Dorsey & St. Vital facilities.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

This line is required to provide firm supply to east Winnipeg stations from Dorsey via St. Vital station.

COMPLEX	ROSSER - SILVER 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide firm supply to Silver stn as follows: Transmission: Construct 230kV line 89 km Silver to Wpg. Connect to unused former line A4D 15 km north of Rosser. Open 230kV lines D36R & R23R at Rosser North & South Corners. Connect end of former A4D to Rosser end of former R23R at Rosser S Corner to create Rosser-Silver circuit. Construct 2.0 km 230kV line from Rosser and connect to Ridgeway end of R23R at Rosser N Corner to re-establish Rosser-Ridgeway line R23R. Connect open ends of D36R to former R23R at Rosser N & S Corners to re-establish Dorsey-Ridgeway line D36R. Terminations: Extend 230kV facilities at Rosser and Silver. Extend 66kVfacilities at Silver to terminate previously installed spare 230-66kV transformer #1 Replace line protection at Ashern. Communications: Integrate with existing facilities at Rosser and Silver.

COMPLEX	RAVEN LAKE 230-66 KV TRANSFORMATION

Proposal

Design and construct transmission and terminal facilities for supply at Raven Lake and Hamiota as follows:

Transmission: Rebuild 33 KV line 88 Raven Lake - Hamiota for 66 KV operation.

Terminations: Extend 230 and 66 KV facilities at Raven Lake station, including addition of a 230-66 KV 50 MVA transformer and associated 66 KV circuit breaker and 40 MVA grounding bank. Reconnect Hamiota 33-25 KV Bank 2 for 66-25 KV operation.

JUSTIFICATION		Explanation
☒ Load	☐ Service	This transformer is required to supply increased load at Raven Lake. Loading on the Raven Lake 115-33 KV system will be reduced by transferring part of the 33 KV load at Raven Lake and Hamiota to 66 KV supply.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX	NEEPAWA 230-66KV STATION

Proposal

Perform environmental assessments and route selection, design and construct terminal facilities to provide firm supply to Neepawa as follows:
Transmission: Sectionalize 230KV T/L D54C into Neepawa 230kV Stn, creating Dorsey-Neepawa and Neepawa -Cornwallis 230kV circuits. Build a 66KV tie line between the new 66KV terminal and the Existing 115/66/kV Station
Terminations: Establish Neepawa 230-66KV station, including three 230kV circuit breakers, a 50/66/83.3/93.3 MVA, 230-66KV LTC transformer, six 66KV circuit breakers and associated equipment. Adjust line protection equipment at Dorsey and Cornwallis 230KV stations. Terminate two 230kV transmission lines to Dorsey and Cornwallis.
Communications: Integrate with existing facilities at Neepawa , Dorsey, and Cornwallis 230KV stations.

JUSTIFICATION		Explanation
☒ Load	☐ Service	These facilities provide transmission improvements required by 2006 to supply Neepawa and related Western Region future load growth.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX	ASSINIBOINE WILKES AVE. 115-24 KV BANK 1 ADDITION

Proposal

Design and construct transmission and terminal facilities to firm supply to Assiniboine Wilkes Avenue as follows:

Transmission: 4.4 KM 115 KV line Assiniboine Wilkes - Line YV5 Tap.

Terminations: Extend 115-24.9 KV distribution station facilities at Assiniboine Wilkes, including new 115-24 KV 100 MVA transformer bank #1 and 3-24 KV additional feeder lines.

Communications: Expand and integrate with existing Assiniboine Wilkes facilities.

JUSTIFICATION		Explanation
☒ Load	☐ Service	The facilities are required to firm 115-24 KV supply at Assiniboine Wilkes and provide for future area load growth. Additional feeders are required to supply load and increase feeder tie capacities in the St. James and Kirkfield station areas.

COMPLEX: PINE FALLS - BLOODVEIN 115 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide 115 KV supply to Bloodvein station as follows:
Transmission: Construct 115 KV line 80 km Pine Falls-L48 to L5 Tap near Manigotagan. Disconnect L48 from L5 at tap location and connect L48 to new line, converting L48 from 66 KV to 115 KV operation up to Bloodvein.
Terminations: Extend 115 KV facilities at Pine Falls. Replace 66 KV transformers at Loon Straits with 2 - 115-7.2 KV 500 KVA transformers and modify station for 115 KV supply. Construct 115-66 KV station at Bloodvein, including 2 - 115-66 KV 28 MVA transformers.

JUSTIFICATION: [X] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation: This complex provides increased transmission capacity required to supply Lake Winnipeg East area load increases.

COMPLEX: ST. VITAL - STEINBACH 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, acquire property and obtain licences, design and construct transmission and terminal facilities to provide support to Steinbach as follows:
Transmission: Construct 230 KV double cct. line strung one side only along 115 KV line VJ50 r.o.w. to location 5.5 km south of St.Vital. Construct 230 KV single cct. line 45.5 km north from Steinbach and connect to south end of double cct. line. Salvage 26.5 km of 115 KV line VJ50 from Ile des Chenes tap to Randolph station tap.
Terminations: Construct 230-66 KV station at Steinbach, including 230-66 KV 83 MVA transformer and associated 230 KV and 66 KV circuit breakers. Extend 230 KV facilities at St. Vital.
Communications: Integrate with existing facilities at St. Vital.

COMPLEX	SOURIS - PEMBINA VALLEY 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, acquire property and obtain licences, design and construct transmission and terminal facilities to provide supply to Pembina Valley and firm supply to Souris as follows:
Transmission: 230 KV line 11.5 km Souris-line C28R Tap, 230 KV line 70.0 km Souris-Pembina Valley. Open line C28R west of Souris Tap to create Cornwallis-Souris 230 KV line. Connect open end of C28R to 11.5 km line to create Reston-Souris 230 KV line.
Terminations: Establish Pembina Valley 230-66 KV station, including 230-66 KV 83 MVA transformer and associated 230 KV & 66 KV circuit breakers. Extend 230 KV facilities at Souris. Modify line protection at Cornwallis and Reston.
Communications: Integrate with existing facilities at Souris, Cornwallis and Reston.

JUSTIFICATION		Explanation
☒ Load	☐ Service	This complex provides a 230 KV supply into the Killarney/Boissevain area around Pembina Valley to support load growth in south-western Manitoba.

COMPLEX	WINNIPEG AREA TRANSMISSION REFURBISHMENT

Proposal

Refurbish 292.6 KM of double circuit and 120.7 KM of single circuit 230 and 110 KV transmission lines in the Winnipeg area. Refurbish 16.9 KM of double circuit and 49.2 KM of single circuit 63.5 KV subtransmission lines in the Winnipeg area. The refurbishment will correct insufficient ground clearances of line conductors. Using resagging, reconductoring, and tower extensions where required, the lines are to be upgraded to maintain safe ground clearances under thermal conductor loading.

JUSTIFICATION

☒ Load ☐ Service
☒ Safety ☐ Efficiency
☐ Reliability ☐ Other

Explanation

Lines in the Winnipeg area built pre-1970 cannot accommodate thermal conductor loading without violating required ground clearances. The refurbishment program will increase line to ground clearances to allow higher conductor temperatures under all potential heavy current line loads.

COMPLEX	DORSEY STATION 230 KV BREAKER REPLACEMENT

Proposal

Replace 25 - 230 KV Dorsey breakers with gas insulated units of 63.5 KAMP fault current interrupting capacity.
Upgrade 5 - 230 KV breakers to 63.5 KAMP fault capacity. Replace 23 sets of underrated breaker current transformers (CT's).
Purchase 3 - 1 phase spare breaker heads and a gas cart for new breaker maintenance. Install resistors on 4KV secondary windings of station service transformers SST1 & SST2. Replacements are to be installed over a three year period.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☒ Safety ☐ Efficiency ☒ Reliability ☐ Other	The specified Dorsey 230 KV breakers are underrated for the increasing short circuit levels in the Winnipeg area. The new breakers are rated to accommodate the increased fault levels.

COMPLEX	DORSEY - US BORDER 500 KV T/L INSULATOR REPLACEMENT

Proposal

Purchase and install new 36-kip suspension insulators on the 500kv transmission line between Dorsey and the US border to replace the existing defective ones. The scope of the work includes a total of 475 suspension, and possibly 15 dead end, towers..

JUSTIFICATION		Explanation
☒ Load	☐ Service	A 1994/95 test program indicated that the existing 36-kip suspension insulators in this line are defective. This item provides for their replacement and full restoration of the lines integrity.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

COMPLEX: BIPOLE 1 & 2 LINE SPACER DAMPERS REPLACEMENT

Proposal

Design and install a new damping system for the 2 DC transmission lines Radisson/Dorsey (896 KM each) and the DC transmission line Henday/Radisson (42 KM) to restore their capacity to suppress aeolian vibration to the origional design level. The new damping system will either reuse the existing refurbished spacer dampers or use new dampers of the existing design.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

These transmission lines are experiencing fatigue failures in the cross arms of the suspension towers. The origin of these failures has been traced to deterioration and some failures of the spacer dampers after approximately 25 years of service. A rehabilitation program is necessary to prevent further failures and escalating consequential failures of conductores.

COMPLEX	FLIN FLON AREA TRANSMISSION IMPROVEMENTS

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities, and reconnect T/L in Flin Flon area to salvage Switch Tower #3, Mile 13 Stn, and Mile 13 - Sherridon section of HS15 and to enhance system reliability. Transmission: Construct115 kV line 6.0 km Herblet L Stn - Chisel L tap, 115 kV line 1.5 km Ross L Stn - Switch Tower #3 line 1. Upgrade 115 kV line 73 km HS15 Herblet L Stn - Sherridon Stn. Termination: Establish single line termination into Ross L Stn for lines I1F & I2F, terminate HBM&S line 1 & re-terminate HBM&S line 3 and re-terminate line RC56 into Ross L Stn, install former Ponton's 30/40/45 MVA transformer bank at Herblet L Stn, terminate the new line to Chisel L tap into Herblet L Stn, install a single phase station service power VT at Ponton Stn. Modify, upgrade and coordinate protection at Ross L, Herblet L, Sherridon and Ponton . Communications: Modify to accommodate 2-line supply to HBM&S and changes at Ross L and Herblet L.

JUSTIFICATION	Explanation
☒ Load ☐ Service ☒ Safety ☒ Efficiency ☒ Reliability ☐ Other	Facilities are required to decommission crumbling Mile 13 Station and Switch Tower #3, to enhance reliability of transmission to HBM&S, to firm transformation at Herblet Lake Station, and to firm supply to Snow Lake area loads.

COMPLEX	RUTTAN - SOUTH INDIAN LAKE 66KV LINE

Proposal

1. Construct 75.6 km of 66kv 2/0 acsr line from Ruttan Lake to South Indian Lake. Salvage 75.6 km of 33kv line between Ruttan Lake-South Bay-South Indian Lake.
2. Salvage Southbay 33-12kv station, complete with 3 - 100kva 33 - 7.2kV transformers
3. Ruttan Lake station "a" - salvage existing 3 -1 000kva 12-33kv transformers re-locate 1 - 15/20/25mva 138-12kv transformer from Ruttan Lake station "b". Install 2 - 7.5/10mva LTC 12-66kv transformers.
4. Construct a 66-12kv station at South Indian Lake c/w 3 - 7.5/10mva LTC transformers. Salvage existing 33-12kv station.

JUSTIFICATION	Explanation
☒ Load ☐ Service ☐ Safety ☐ Efficiency ☐ Reliability ☐ Other	The existing Ruttan Lake - South Indian Lake power supply is limited to 300 kva. Based on current load forecast, the voltage regulation on the existing system will result in inadequate customer voltages. The proposed 12-66kv Ruttan Lake station, Ruttan - South Indian Lake 66kv line and South Indian Lake 66-12kv station will provide additional capacity and adequate voltage regulation.

COMPLEX	CENTRAL SUPPLY TO PIKWITONEI AND THICKET PORTAGE

Proposal

1. Construct 5km-66kV line (operating 12kV) from Mystery L. Stn. Fdr.TM9 to jctn of PTH#6 and Jonas Rd.
2. Construct a 12-25kV interchange bank c/w 4-1000kVA single phase 7.2-14.4kV units (one spare).
3. Construct 44.3km-66kV line (operating 25kV) from jctn PTH#6 & Jonas Rd. to Sipiwesk.
4. Construct 21.5km-25kV line from Sipiwesk to Pikwitonei. Rebuild and convert Pikwitonei distribution to 25kV.
5. Construct 24.7km-25kV line from Sipiwesk to Thicket Portage. Rebuild and convert distribution to 25kV.
6. Salvage diesel units at Pikwitonei and Thicket Portage and remediate sites.

JUSTIFICATION		Explanation
☒ Load	☒ Service	The communities of Pikwitonei and Thicket Portage were scheduled for conversion to enhanced diesel supply in 1997. Due to the proximity of central station supply at Thompson and the associated benefits to our customers and Manitoba Hydro, central supply is the preferred option, provided that a contribution can be negotiated.
☐ Safety	☐ Efficiency	
☐ Reliability	☐ Other

COMPLEX	ROSSER-OAK POINT 115-24KV STATION

Proposal
Design and construct a new low profile 115/24 kV steel station in the Rosser area to accommodate 2-60/80/100//112 MVA transformers and 12-24 kV feeder lines. Use 115 kV lines RK6 and RY7 as the primary supply. Complete site selection and environmental requirements. Design and construct the subtransmission, protection, communication, and terminal facilities for the first transformer. In addition, design and construct 4-24 kV feeder lines to supply customer load

JUSTIFICATION		Explanation
[X] Load	[ ] Service	Existing 24 kV stations in the area are at firm capacity. Additional transformer capacity is required to accommodate future voltage conversions, load growth and to provide surplus firm capacity for the area.
[ ] Safety	[ ] Efficiency	
[X] Reliability	[ ] Other

COMPLEX	DIESEL UPGRADING ENHANCEMENT

Proposal

Increase capacity to provide 60 amp service at 4 diesel sites:
1) Brochet - Larger units, additional units, tanks and plant expansion.
2) Lac Brochet - Larger units, additional units, tanks and plant expansion.
3) Tadoule - Site improvements, additional units and plant expansion.
4) Shamattawa - Additional tanks, two mobiles and new plant.
5) Distribution - Pik/Thicket- 25kv tie line; other sites- rebuild distribution system to deliver enhanced.

JUSTIFICATION	Explanation
☒ Load ☒ Service ☐ Safety ☐ Efficiency ☐ Reliability ☐ Other	The provision of service to isolated diesel served customers has not been equivalent to that enjoyed by southern rural customers. Expansion of service to accommodate 60 amp residential supply is a priority.

COMPLEX	VIRDEN AREA DISTRIBUTION CHANGES

Proposal

Rebuild 136 KM (85%) of primary distribution served by Virden-Seventh, Virden-North, Hargrave & Kenton Stns, and convert 438 transformers from 4.8/8.32kV to 14.4/24.9kV. Salvage & rebuild 33kV L66 Virden to Kenton.

Rebuild 95 KM of 66kV lines #95 & 97 and 24 KM of primary distribution Elkhorn to Manson.

Build a new 66-25kV station 1 mile west of the town of Virden.

JUSTIFICATION

☒ Load ☐ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

136 km line is old (rural electrification-30 ft poles) & does not meet CSA clearance criteria. Transformer upgrades will correct high voltage fluctuations, & losses, and reduce monitoring requirements. Line 95/97 is over 40 years old, deteriorated and does not comply with CSA standards, posing a safety hazard. The new Virden-Wallace Stn is required to meet 1998 projected load requirements..

COMPLEX	E M S SCADA

Proposal

Establish site, define, procure and install an EMS SCADA to replace the existing AGC SCADA. Provide any additional renovations or plant additions required to house the new EMS SCADA and salvage the old.

JUSTIFICATION		Explanation
☐ Load	☒ Service	The existing AGC SCADA has reached its maximum capability and can not be expanded without high risk to the Corporation. The applications of the existing AGC SCADA are limited and are not able to run the new generation of applications that are required. The reliability of the existing AGC SCADA may also become a concern as supply of new and used parts diminish.
☐ Safety	☒ Efficiency	
☒ Reliability	☐ Other

COMPLEX: MICROWAVE RADIO REPLACEMENTS

Proposal

Upgrade and refurbish the Lake Winnipeg Microwave System.
Replace the Winnipeg River Microwave System.
Replace Thompson/Kelsey/Radisson Communications.
Provide a Fiber Optic cable system from Winnipeg Area to Brandon Area.
Provide replacement microwave equipment required to access Industry Canada re-allocated frequencies.
Replace the Interlake Digital Microwave System.

JUSTIFICATION

☐ Load ☒ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The joint MH/MTS Dorsey-Radisson link is nearing end of life. Details will be determined in future studies. The Wpg R MW System is less reliable due to age, and unavailability of parts. Thompson, Kelsey, Radisson comm channels will replace those which MTS is removing. Wpg/Bdn fibre optics will provide more channels and digital capacity to meet forecast requirements. Various microwave equipment must be replaced as it is dedicated to frequencies which have been re-allocated from our licence. Interlake syst repl required for all of the above reasons.

COMPLEX	SITE REMEDIATION

Proposal

Implement programs designed to minimize or ameliorate the impact of the Corporation's operations on the environment, such as;

Conduct geotechnical investigations and remediate any hydrocarbon contaminated sites at 26 former isolated diesel generating stations in; Dauphin River, Bloodvien, Berens River, Jackhead, Little Grand Rapids, Manigotogan, Matheson Island, Pauingassi, Pine Dock, Poplar River, Pukatawagan, Gods Lake Narrows, Tadoule, The Pas, Moose Lake, Norway House, Cross Lake, Ilford, Nelson House, Split Lake, Wanless, Granville Lake, Bakers Narrows, Cormorant and Cranberry Portage.

Conduct geotechnical investigation for the various contaminated Corporate facilities, prepare a report with cleanup recommendations, remediate any contaminated areas identified and issue a final report confirming the facility and surrounding area were remediated and all areas of the work were left in accordance with applicable environmental regulations.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☐ Efficiency
☐ Reliability ☒ Other

Explanation

Due to concerns and in compliance with current environmental regulations and standards applicable to unrestricted use of abandoned former diesel sites, the sites must be investigated, remediated and restored to equivalency of the surrounding area.

Various existing Corporate contaminated facilities should be brought into compliance with current environmental regulations and standards.

COMPLEX: OIL CONTAINMENT

Proposal

Implement programs designed to minimize or ameliorate the impact of the Corporation's operations on the environment, such as;

Design and construct oil containment systems to collect and recover any oil spilled within the system.

JUSTIFICATION: ☐ Load ☐ Service ☒ Safety ☐ Efficiency ☐ Reliability ☒ Other

Explanation

Previous experience with oil spills requires the Corporation to demonstrate "due diligence" with respect to containing and minimizing the potential for any further occurances.

COMPLEX	DOMESTIC ITEM - TRANSMISSION & DISTRIBUTION

Proposal

This complex consists of several hundred projects which are not identified as Major Items and whose individual cost is of a relatively small amount. The majority of projects are required to extend sub-transmission, distribution and transformation facilities to supply service to residential, farm, commercial and industrial customers and to replace plant facilities whose useful life has been exceeded.

JUSTIFICATION	
☒ Load	☒ Service
☒ Safety	☒ Efficiency
☒ Reliability	☒ Other

Explanation

The system has incurred consistant expenditures in the past which are required to meet the load growth into the foredeeable future. The residential, farm, commercial and industrial loads are expected to grow at an 20 year average rate of 1.5% per annum and will require a program of additions to the System to accommodate these anticipated loads.

COMPLEX	DEMAND SIDE MANAGEMENT COSTS - 221

Proposal

To promote conservation of electricity when it can be acheived more economically than supply and to conduct all corporate activities to minimize adverse environmental impacts.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☒ Efficiency
☐ Reliability ☐ Other

Explanation

Energy conservation can be economically efficient and environmentally beneficial. Manitoba Hydro is committed to promoting conservation of electricity when it can be acheived more economically than supply. The strategic objective is a reduction in Manitoba Hydro's peak load of 316 MW and firm annual energy requirement of 1249 GW.h by the year 2011/12.

107.

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 141 - 149

REVISION STATUS: ☐ New complex ☐ In service change ☒ Concept change ☐ Estimate change only

COMPLEX: DOMESTIC ITEM - CUSTOMER SERVICE

Proposal
This complex consists of minor projects which are not identified as Major Items and whose individual cost is of a relatively small amount. The majority of projects are required to supply service to residential, farm, commercial and industrial customers and to replace plant facilities whose useful life has been exceeded.

JUSTIFICATION: ☒ Load ☒ Service ☒ Safety ☒ Efficiency ☒ Reliability ☒ Other

Explanation
The Corporation has incurred consistant expenditures in the past to meet customer service requirements. The residential, farm, commercial and industrial loads are expected to grow at an 20 year average rate of 1.5% per annum and will require a program of additions and replacements at the customer service point to accommodate these anticipated changes.

COMPLEX	FIRE PROTECTION PROJECTS - CORPORATE GROUP

Proposal

Design and install passive and/or active fire prevention and protection systems at all generating stations, key transmission terminating stations and strategic buildings (Head Office/ Operating Centre) as outlined by The Fire Prevention and Protection Committee and defined in the Fire Manual Part II.

Locations covered by this capital item complex are; Head Office and Waverley SC.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☒ Safety ☐ Efficiency ☐ Reliability ☐ Other	In accordance with the rules and guidelines established by The Fire Prevention and Protection Committee, implementation of this program will reduce the risk of fire to an acceptable level and mitigate the effects of any such occurance.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Complex no. 245

Advance or deferral impact

Current information indicates that these systems will become totally non functional as of Jan 1, 2000.

Factors affecting timing or viability

Unavailability of an economical upgrade to current software, making it year 2000 compatible, and more powerful.
Various current and upcoming business functions.

COMPLEX SPECIFICS:

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 58

REVISION STATUS: [ ] New complex [X] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: WUSKWATIM TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities for Wuskwatim power transfer as follows:

Transmission: 230 KV lines 1 - 118 KM Wuskwatim - Herblet Lake, 2 - 1.5 KM Wuskwatim Switching Stn - Wuskwatim Generating Stn. Sectionalize existing Thompson Birchtree - Herblet Lake 230 KV line into Wuskwatim Switching Stn.

Terminations: Extend 230 KV facilities at Herblet Lake station. Construct 230 KV station at Wuskwatim. Communications: Microwave system.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

Based on the 1999 Load Forecast, generation expansion studies indicate an additional generation source is required in 2016/17 Wuskwatim is the current economic choice. Transmission and terminating facilities are necessary to connect this new power source to the Manitoba network.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Delay in components of this transmission complex will curtail or prevent Wuskwatim capacity from being delivered to the Manitoba system.

Factors affecting timing or viability

Timing and rating of Wuskwatim Generating Station.

WUSKWATIM SWITCHING STATION 230 KV TERMINATIONS	03-00-7080

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70229

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A SITE, ACQUIRE PROPERTY AND OBTAIN LICENSING FOR WUSKWATIM 230KV SWITCHING STATION. CONSTRUCT A 230KV SWITCHYARD TO TERMINATE TWO NEW LINES TO THE WUSKWATIM GENERATOR TRANSFORMERS AND ONE NEW LINE TO HERBLET LAKE. TERMINATE TWO LINES TO HERBLET LAKE AND THOMPSON BIRCHTREE FORMED BY SECTIONALIZING EXISTING THOMPSON BIRCHTREE-HERBLET LAKE 230KV CIRCUIT AT SWITCHING STATION SITE. FACILITIES ARE TO INCLUDE 5-230KV BREAKERS IN TWO BAYS, A BUILDING AND ASSOCIATED EQUIPMENT.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF WUSKWATIM GENERATING STATION. THIS ITEM PROVIDES FOR TERMINATION OF CIRCUITS REQUIRED TO TRANSMIT WUSKWATIM POWER TO THE TRANSMISSION NETWORK THROUGH THE WUSKWATIM SWITCHING STATION.

REFERENCE:
G&TP REPORT 88-07 'TRANSMISSION REQUIREMENTS FOR WUSKWATIM G.S. PRELIMINARY STUDIES'.

Title
GRAND RAPIDS LINE REACTOR CIRCUIT SWITCHERS

Budget reference number
03-00-8111

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70230

DESCRIPTION:
INSTALL 2-230KV CIRCUIT SWITCHERS ON THE LINE REACTORS OF 230KV CIRCUITS G8P AND G9F.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF WUSKWATIM GENERATING STATION. THIS ITEM PROVIDES FOR ASSOCIATED TRANSMISSION FACILITIES AT GRAND RAPIDS TO PROVIDE REQUIRED SYSTEM VOLTAGE CONTROL.

REFERENCE:
G&TP REPORT 88-07 'TRANSMISSION REQUIREMENTS FOR WUSKWATIM G.S. PRELIMINARY STUDIES'.

REVISION:
BASED ON THE 1999 POWER RESOURCE PLAN STUDIES, ISD DEFERRED TWO YEARS FROM 2014 TO 2016. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $133,000

Title: HERBLET LAKE TERMINATE WUSKWATIM 230 KV T/L

Budget reference number: 03-00-5301

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70231

DESCRIPTION:
EXPAND HERBLET LAKE 230KV STATION TO TERMINATE 230KV WUSKWATIM-HERBLET LAKE LINE. INSTALLATION INCLUDES 1 - 230KV CIRCUIT BREAKER, 1-30 MVAR 230KV LINE REACTOR WITH CIRCUIT SWITCHER AND ASSOCIATED EQUIPMENT.
MODIFY PROTECTION EQUIPMENT AT HERBLET LAKE TO CO-ORDINATE WITH CREATION OF HERBLET LAKE - WUSKWATIM 230KV LINE FROM SECTIONALIZATION OF THOMPSON BIRCHTREE - HERBLET LAKE 230KV LINE AT WUSKWATIM.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR TWO WUSKWATIM - HERBLET LAKE 230KV LINES. THIS ITEM PROVIDES FOR TERMINATION OF LINES AT HERBLET LAKE .

REFERENCE:

☒ Planned ☐ In progress	262	☒ New complex ☐ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	CONAWAPA TRANSMISSION

Proposal

Perform environmental assesments and route selection, design and construct transmission and terminal facilities for Conawapa power transfer as follows:
Transmission: 230kV lines 3 - 31.8 KM Henday - Conawapa Converter Station, 5 - 0.6 KM Conawapa Converter Station to Conawapa Generating Station.
Terminations: Extend 230kV facilities at Henday station. Construct new 230kV facilities at Conawapa Converter station.
Communications: Integrate with Northern Collector communication system.

JUSTIFICATION	Explanation
☒ Load ☐ Service ☐ Safety ☐ Efficiency ☐ Reliability ☐ Other	Based on the 1999 Load Forecast, generation expansion studies indicate an additional generation source is required in 2018/19. Conawapa is the current economic choice. Transmission and terminating facilities are necessary to connect this new power source to the Manitoba network.

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 263

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: HVDC BIPOLE 3

Proposal

Preform environmental assessments and route selection, design and construct transmission and terminal facilities to accomodate treansfer of Nelson River power to the Southern Manitoba system as follows:
Transmission: 51 KM DC Electrode line fron Conawapa Converter station to existing Electrode station. 40 KM DC electrode line from Riel to a new Electrode station.
Terminations: Construct Bipole 3 HVDC 1300 MW (with 50% overload capability) +/-500 kV stations at Conawapa and Riel. Extend 230 kV facilities at Henday station. Construct new 230kV station at Riel, including 3 - 300 MVAR Synchronous Condensers.
Communications: Fibre Optic or Microwave system.

JUSTIFICATION: [X] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation

Based on the 1999 Load Forecast, generation expansion studies indicate an additional generation source is required in 2018/19. Conawapa is the current economic choice. Bipole 3 facilities are necessary to connect this new power source to the Manitoba network.

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: RIEL - WINNIPEG AC TRANSMISSION

Proposal

Design and construct transmission and terminal facilities to accommodate transfer of power from Bipole 3 to the Southern Manitoba system as follows:
Transmission: Sectionalize 230kV St Vital Ridgeway lines and extend into Riel Station. Terminate pre-strung 230kV line from Riel to St Vital at those stations, resulting in 230kV lines from Riel to Ridgeway and 230kV lines from Riel to St Vital.
Terminations: Extend 230kV facilities at Riel and St Vital stations.
Communications: Intergrate with Riel - St Vital - Ridgeway area system.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

These facilities connect HVDC Bipole 3 to the Manitoba 230kV network in the Winnipeg area. They provide flexibility of power supply to Winnipeg from Bipole 3 during normal conditions and contingencies.

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: DORSEY - RIEL 500kV AC T/L

Proposal

Design and construct transmission and terminal facilities to firm up supply to stations in east Winnipeg, and provide for paralleling of Dorsey and Riel HVDC convertors during emergencies in the future as follows:

Transmission: 500kV line (initially operated at 230kV) 48.1 KM Dorsey - Riel.
Terminations: 230kV circuit breakers at Dorsey and Riel stations. 500kV DC high speed switches at Dorsey and Riel Station. The switches will allow connection of the Dorsey - Riel line to Bipoles 2 and 3 to perform parallel operation of the bipoles.
Communications: Intergrated with existing facilities at Dorsey and Riel.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

This line will initially operate at 230kV to supply to east Winnieg stations from Dorsey via Riel station. The 500kV switches on the Dorsey - Riel 500kV AC line will permit parallel operation of Bipoles 2 and 3 under emergency conditions involving loss of any HVDC line from the north, increasing system reliability.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 95

REVISION STATUS: ☐ New complex ☐ In service change ☒ Concept change ☐ Estimate change only

COMPLEX: 200 MW ONTARIO HYDRO SALE - TRANSMISSION UPGRADE

Proposal

Design and construct terminal facilities to accommodate 200 MW Ontario Hydro Sale as follows:

Transmission: Investigate current carrying capacity of sections of 115 KV lines GT1 & ST2 extending from Great Falls to Seven Sisters. Refurbish lines as required to support high load currents.
Terminations: Reconductor line end spans of parallel double circuit 115 KV line WT34 at Whiteshell and Transcona stations to accommodate increased line current.
Stations: Replace bank 8 115kV phase shifting transformer at Whiteshell station and make site improvements to upgrade drainage and oil containment for bank 7 & 8.

JUSTIFICATION: ☐ Load ☐ Service ☐ Safety ☐ Efficiency ☐ Reliability ☒ Other

Explanation

Line GT1 & ST2 refurbishment and line WT34 end span reconductoring permit high current loading of supply lines into Seven Sisters to maintain Ontario export during low Winnipeg River generation and line outages. A new phase-shifting transformer is required to ensure maximum benefits during the 200 MW Ontario Hydro sale.

Title			Budget reference number
WHITESHELL-TRANSCONA 110KV RECONDUCTOR WT34 END SECTIONS			02-00-5959
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70277

DESCRIPTION:
REPLACE 0.122 KM OF 336.4 MCM ACSR AT TRANSCONA END AND 0.067 KM OF 336.4 MCM ACSR AT WHITESHELL END OF 110 KV LINE WT34 WITH 795 MCM ACSR CONDUCTOR. REFURBISH THESE LINE SECTIONS TO ENSURE SUFFICIENT GROUND CLEARANCE FOR OPERATION TO A MAXIMUM CONDUCTOR TEMPERATURE OF 100 DEGREES C.

JUSTIFICATION:
FOR 200 MW SALE TO ONTARIO HYDRO WITH LOW WINNIPEG RIVER GENERATION AND NO CONTINGENCY, LINE WT34 BECOMES OVERLOADED. OVERLOADING IS CAUSED BY TWO PARALLEL CIRCUITS OF WT34 TERMINATING INTO SINGLE 336.4 MCM CONDUCTORS AT EITHER END OF LINE. THIS ITEM PROVIDES FOR RELIEVING LINE END OVERLOADS BY INSTALLING HIGHER CURRENT CAPACITY CONDUCTOR ON EACH END.

Title			Budget reference number
WINNIPEG RIVER AND WINNIPEG 110KV T/L REFURBISHMENT (WPGRTL)			02-00-5960
Originating division Planning & Control	Coordinating division Operating & Maintenance	Constructing division Construction	Project Order Group (Range): 60004

DESCRIPTION:
INVESTIGATE CURRENT CARRYING CAPACITY OF FOLLOWING 110 KV TRANSMISSION LINES. WHERE REQUIRED, REFURBISH THESE LINES TO SECURE SUFFICIENT GROUND CLEARANCE FOR LINE OPERATION AT A MAXIMUM CONDUCTOR TEMPERATURE OF 100 DEGREES C: LINE GT1-GREAT FALLS STN TO GT1/ST2 JUNCTION, EXCLUDING TRANSCONA-BEAUSEJOUR LINE SECTION. LINE ST2-SEVEN SISTERS STN TO GT1/ST2 JUNCTION, EXCLUDING TRANSCONA-BEAUSEJOUR LINE SECTN. NOTE: 110 KV LINES TR5, TV1, TV2 AND YH33 IN WINNIPEG AREA MUST ALSO BE REFURBISHED TO 100 DEGREES C. CAPACITY BY SAME ISD AS LINES GT1 AND ST2. REQUIRED REFURBISHMENT OF THESE LINES IS TO BE COMPLETED UNDER BRN --02-00-1259, WINNIPEG 230 AND 110KV NETWORK T/L REFURBISHMENT, PRIOR TO ISD OF THIS ITEM.

JUSTIFICATION:
TRANSMISSION LINES BUILT IN WINNIPEG-WHITESHELL AREA PRIOR TO 1970 WERE DESIGNED TO MAINTAIN MINIMUM GROUND CLEARANCE AT A MAXIMUM CONDUCTOR TEMPERATURE OF 50 DEGREES C. THE CURRENT LEVELS ON INDICATED LINES WHEN SERVING DOMESTIC LOAD AND 200 MW SALE TO ONTARIO HYDRO REQUIRES OPERATION UP TO A MAXIMUM CONDUCTOR TEMPERATURE OF 100 DEGREES C. THIS ITEM PROVIDES FOR REFURBISHMENT OF THESE LINES TO ENSURE SAFE OPERATING GROUND CLEARANCE.

REFERENCE:
REPORT PSPD 94-1, SYSTEM IMPROVEMENTS TO SUPPORT THE 200 MW SALE TO ONTARIO.

[X] Major Item [ ] Domestic Item

119

Title			Budget reference number
WHITESHELL - REPLACE BANK 8 115KV PHASE SHIFTING TRANSFORMER			03-00-8295
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70463:70506

DESCRIPTION:
PURCHASE AND INSTALL A NEW 115KV 200 MVA PHASE-SHIFTING TRANSFORMER TO REPLACE THE EXISTING BANK 8 PHASE-SHIFTING TRANSFORMER AT WHITESHELL. REPLACE EXISTING BANK 7 AND BANK 8 PHASE-SHIFTER CONTROLS. MAKE SITE IMPROVEMENTS TO UPGRADE DRAINAGE IN THE STATION AND PROVIDE OIL CONTAINMENT FOR BANK 7 AND BANK 8.

JUSTIFICATION:
IN ORDER TO ENSURE A RELIABLE TRANSMISSION INTERFACE WITH ONTARIO HYDRO AND TO ENSURE MAXIMUM BENEFITS FROM THIS INTERFACE DURING THE 200MV SALE (1998-2003), A NEW PHASE-SHIFTING TRANSFORMER SHOULD BE INSTALLED TO REPLACE THE EXISTING BANK 8 PHASE-SHIFTING TRANSFORMER. THE BANK 7 PHASE-SHIFTING TRANSFORMER HAS FAILED AND IS CURRENTLY UNDER REPAIR AT THE ABB FACILITY IN GUELPH. THE BANK 8 TRANSFORMER IS SUBJECT TO A SIMILAR FAILURE, AND MUST BE REPAIRED OR REPLACED PRIOR TO THE START OF THE SALE. THE COST OF REPAIR AND THE RISK OF INCREASED COSTS TO EXPEDITE THE REPAIR OF BANK 8 SO IT IS AVAILABLE PRIOR TO THE START OF THE SALE, MAKES THE PURCHASE OF A NEW PHASE-SHIFTING TRANSFORMER MORE ECONOMICALY VIABLE AND LOWER RISK ALTERNATIVE. THE EXISTING CONTROLS EMPLOY OLD TECHNOLOGY FOR WHICH SPARE PARTS ARE NO LONGER AVAILABLE. ADDITIONALLY, MODIFICATIONS REQUIRED TO PROVIDE OPERATING FLEXIBILITY, AND TO ACCOMMODATE THE NEW SCADA SYSTEM ARE NOT FEASIBLE. SITE IMPROVEMENTS ARE REQUIRED TO IMPROVE STATION DRAINAGE AS SPRING SNOW MELT HAS CAUSED FLOODING OF THE CONTROL BUILDING WHICH COULD RESULT IN SHUTDOWN OF THE STATION, AND ALSO RESULTS IN A HIGH WATER TABLE IN THE STATION WHICH IS A HAZARD TO PERSONNEL DOING ROUTINE SWITCHING. OIL CONTAINMENT IS REQUIRED TO MEET FEDERAL AND PROVINCIAL LEGISLATION AND MANITOBA HYDRO GUIDELINES AS DETERMINED IN THE OIL CONTAINMENT ASSESSMENT REPORT PREPARED BY ACRES-WARDROP.

REFERENCE:
MEMO, T.E. TYMOFICHUK TO F.A. MACATAVISH 97 04 29, 'REPLACEMENT OF WHITESHELL PHASE SHIFTER BANK 8.'

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES. CONTINGENCY HAS BEEN REMOVED. MILD WINTER WEATHER AND SOFT SOIL CONDITIONS CAUSED TRANSFORMER MOVE DIFFICULTIES INCREASING CONSTRUCTION COSTS; HIGH WATER TABLE CAUSED FOUNDATION MOVEMENT RESULTING IN RELEVELLING OF RAD BANK FOUNDATION REQUIREMENTS; PHASESHIFTER CONTROL REPLACEMENT MORE COMPLEX THAN ORIGINALLY ESTIMATED.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 268

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: GLENBORO > HARVEY 230kV T/L

Proposal

Preform environmental assessment and route selection, design and construct transmission and terminal facilities for Harvey-Glenboro interconnection power transfer as follows:
Transmission: New 230kV line of 95 KM Glenboro > Harvey(border crossing)
Terminations: Extend 230kV facilities at Glenboro station.
Comminication: Intergrate with Glenboro area system.

JUSTIFICATION

[ ] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [X] Other

Explanation

A new interconnection is required for enhancement of import capability of 500 MW under the diversity agreement.

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

KETTLE AC TRANSMISSION IMPROVEMENTS

REVISED: 1999 - 10 - 01	ISSUED BY: WNZ
COMPLEX NO. 87	

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 87

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	KETTLE AC TRANSMISSION IMPROVEMENTS

Proposal

Design and reconnect AC transmission facilities in Northern AC system to enhance transmission system reliability as follows:

Transmission & Terminations: Convert Radisson-Kelsey line R26K & Kelsey-Thompson line K24W and associated station facilities at Thompson Mystery Lake Road, Kelsey, and Radisson to 230 KV operation. Install new 230KV circuit breaker at Thompson Mystery Lake Road. Install 230-138 KV 250 MVA transformer at Kelsey.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The addition of Limestone has loaded the HVDC system to capacity. With Bipole 3 deferred, transmission system capacity and reliability margins for firm export sales can be partially restored economically by providing facilities to off-load 2 Kettle units from the DC system to the AC system if required.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral of these facilities would result in inadequate reliability of the transmission system to support system firm loads and exports and could result in lower extra-provincial revenues.

Factors affecting timing or viability

System load growth forecasts.
Timely completion of Herblet Lake - Flin Flon Cliff Lake 230 KV Transmission to permit Kettle AC power transfer.
Completion of studies to confirm Kettle AC operation protection and control requirements.

Title			Budget reference number
RADISSON CONVERT R26K TO 230KV & RETERMINATE K4/K5			03-00-3343
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70033

DESCRIPTION:
FOR AC OPERATION OF 2 KETTLE UNITS, CONVERT 138 KV LINE R26K (RADISSON-KELSEY) BACK TO 230 KV OPERATION. RECOMMISION UNUSED 230-138 KV TRANSFORMER BANK 1. RETERMINATE LINE R26K TO 230 KV WINDING OF BANK 1, AND TERMINATE 138 KV WINDING TO PREVIOUS LINE R26K BREAKER POSITION IN 138 KV AC BAY. MODIFY THOMPSON-KELSEY-RADISSON 230KV PROTECTION SCHEME TO AVOID AN OPEN ENDED LINE FROM THOMPSON TO RADISSON. ISD 2002 09 30.
RECONNECT RADISSON LINES K4 & K5 138KV AC DISCONNECTS TO PERMIT CONNECTION OF KETTLE UNITS 5, 6, 7, AND 8 ONTO AC SYSTEM. PROVIDE INTERLOCKING BETWEEN DISCONNECTS OF LINES K1 & K4 TO PREVENT SIMULTANEOUS CONNECTION OF BOTH LINES ON RADISSON 138KV AC BUS. PROVIDE SIMILAR INTERLOCKING BETWEEN DISCONNECTS OF LINES K2 & K5. THIS ITEM ALSO INCLUDES REQUIRED CHANGES TO RADISSON/KETTLE/KELSEY/THOMPSON CROSSTRIPPING SCHEME, KETTLE JOINT CONTROLS, AND RADISSON PROTECTION SCHEMES. ISD 2003 09 30.

JUSTIFICATION:
THE ADDITION OF LIMESTONE, THE DELAY OF BIPOLE 3 AND THE INCREASED CAPACITY FOR EXPORT SALES JUSTIFIES TRANSMISSION ENHANCEMENTS BASED ON THE ECONOMICS OF EXPORT SALES AND INCREASED SYSTEM ADEQUACY AND RELIABILITY. THIS ITEM PROVIDES FOR REQUIRED CONVERSION OF LINE R26K TO 230 KV OPERATION AT RADISSON, AND FOR FACILITIES TO TRANSFER UP TO TWO KETTLE UNITS FOR ANY POTENTIAL OUTAGE CONTINGENCIES.

REFERENCE:

Title	Budget reference number
THOMPSON MYSTERY LAKE ROAD STN. CONVERT T/L K24W TO 230KV	03-00-3342

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	60002

DESCRIPTION:
FOR AC OPERATION OF 2 KETTLE UNITS, CONVERT LINE K24W (KELSEY-THOMPSON) BACK TO 230 KV OPERATION. SALVAGE 138 KV BYPASS STRUCTURE CONNECTING LINES K24W AND WB45 AND RETERMINATE K24W TO 230 KV STATION BAY. FACILITIES WILL INCLUDE 1 - 230KV CIRCUIT BREAKER. NOTE: 230KV CIRCUIT BREAKER R2, REMOVED FROM THOMPSON STATION AS PART OF FS9 BREAKER ROTATIONAL UPGRADE PROGRAM, IS REPLACED BY NEW BREAKER. COSTS INCLUDE NORTHERN CROSS TRIPPING REPLACEMENTS.

JUSTIFICATION:
THE ADDITION OF LIMESTONE, THE DELAY OF BIPOLE 3 AND THE INCREASED CAPACITY FOR EXPORT SALES JUSTIFIES TRANSMISSION ENHANCEMENTS BASED ON THE ECONOMICS OF EXPORT SALES AND INCREASED SYSTEM ADEQUACY AND RELIABILITY. THIS ITEM PROVIDES FOR CONVERSION OF LINE K24W TO 230 KV AT THOMPSON TO PERMIT TWO KETTLE UNIT TRANSFER.

REFERENCE:
REPORT TPD 93-4, KETTLE AC TRANSMISSION OPTIONS.
REPORT PSPD 94-2, ENHANCEMENT OF THE NELSON RIVER TRANSMISSION SYSTEM.

REVISION:
ISD DEFERRED FROM 2000 09 30 TO 2004 09 30 FOR CAPITAL CONSTRAINT REASONS.

CONTINGENCY: $120,000

Title			Budget reference number
PONTON, HERBLET LK & CLIFF LK - KETTLE AC PROTECTION CHANGES			03-00-6122
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	71040

DESCRIPTION:
MODIFY PROTECTION EQUIPMENT AS REQUIRED AT PONTON, HERBLET LAKE, CLIFF LAKE, AND GRAND RAPIDS STATIONS IN CO-ORDINATION WITH SYSTEM ADJUSTMENTS TO ENABLE POWER TRANSFER FROM TWO KETTLE UNITS ONTO AC SYSTEM. MODIFICATIONS WILL INCLUDE CAPACITY TO SEND SIGNALS TO CROSS TRIP KETTLE AC AND KELSEY GENERATOR UNITS FOR TRIP OUT OF MAJOR 230KV LINES TERMINATING AT PONTON, HERBLET LAKE, AND CLIFF LAKE. CROSS TRIP FACILITIES WILL CO-ORDINATE WITH EXISTING AND MODIFIED RELATED FACILITIES ON THOMPSON - KELSEY - RADISSON 230-138KV NETWORK.

JUSTIFICATION:
THE ADDITION OF LIMESTONE, THE DELAY OF BIPOLE 3 AND THE INCREASED CAPACITY FOR EXPORT SALES JUSTIFIES TRANSMISSION ENHANCEMENTS BASED ON THE ECONOMICS OF EXPORT SALES AND INCREASED SYSTEM ADEQUACY AND RELIABILITY. THIS ITEM PROVIDES FOR FACILITIES TO TRANSFER UP TO TWO KETTLE UNITS AND MAINTENANCE OF TRANSIENT SYSTEM STABILITY FOR ANY POTENTIAL 230KV LINE OUTAGE CONTINGENCIES IN PONTON - HERBLET LAKE - CLIFF LAKE AREA.

REFERENCE:
REPORT TPD 93-4, 'KETTLE AC TRANSMISSION OPTIONS'. REPORT PSPD 94-2, 'ENHANCEMENT OF THE NELSON RIVER TRANSMISSION SYSTEM'.

REVISION:
ISD DEFERRED TWO YEARS FROM 2002-10-31 TO 2004-10-31 DUE TO FINANCIAL CONSTRAINTS.

CONTINGENCY: $48 000

Title			Budget reference number
KELSEY INSTALL 230-138KV TRANSFORMER			03-00-6115
iginating division anning & Control	Coordinating division Design	Constructing division Construction	Project Order Group (Range): 71017

DESCRIPTION:
PURCHASE AND INSTALL 230-138-13.8 KV 150/200/250 MVA TRANSFORMER WITH +/- 10% OLTC AT KELSEY 230KV STATION. TERMINATE TRANSFORMER WITH EXISTING 230 KV AND 138 KV CIRCUIT BREAKERS PREVIOUSLY USED FOR KELSEY TRANSFORMER BANK 10. RECOMMISSION PREVIOUS TERMINATIONS OF TRANSFORMER BETWEEN KELSEY 230 KV AND 138 KV STATIONS.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR RADISSON-KELSEY LINE R26K AND KELSEY- THOMPSON LINE K24W TO BE CONVERTED FROM 138KV TO 230KV OPERATION FOR NORTHERN TRANSMISSION RELIABILITY ENHANCEMENT AND KETTLE AC OPERATIONS. ADDITION OF A KELSEY 230-138KV TRANSFORMER WILL INCREASE SYSTEM ECONOMIC BENEFITS BY DECREASING NETWORK LOSSES AND ENHANCING KELSEY/THOMPSON AREA OPERATING FLEXIBILITY AND VOLTAGE CONTROL.

REFERENCE:
SPED REPORT, 'KETTLE UNITS ON AC TRANSMISSION PROTECTION AND CONTROL REQUIREMENTS'.

TELECOMMUNICATIONS FOR KETTLE AC OPERATION			05-00-6556
Originating division Planning & Control	Coordinating division Planning & Control	Constructing division Construction	Project Order Group (Range): 60032

DESCRIPTION:
DESIGN, INSTALL AND COMMISSION TELECOMMUNICATION FACILITIES FOR OPERATION, PROTECTION AND CONTROL OF 230KV AND 138KV TRANSMISSION FACILITY ADJUSTMENTS INSTALLED TO TRANSMIT TWO KETTLE UNIT POWER ON AC SYSTEM. FACILITIES WILL INCLUDE ENHANCEMENT OF EXISTING THOMPSON- KELSEY-RADISSON CROSSTRIP COMMUNICATIONS AND CO-ORDINATED DEVELOPMENT OF FACILITIES FOR CROSSTRIP OF KETTLE AC AND KELSEY UNITS FOR 230KV LINE TRIPOUTS IN PONTON - HERBLET LAKE - CLIFF LAKE AREA. FACILITES WILL INCLUDE TONE EQUIPMENT TO INTERFACE PROTECTION TO COMMUNICATION CHANNELS DERIVED FROM EXISTING OR NEW CARRIER FACILITIES, POINT ADDITIONS TO EXISTING OR PLANNED SUPERVISORY CONTROL SYSTEMS, AND FUTURE PROVISION FOR EXPANSION TO ACCOMMODATE THREE KETTLE AC UNIT TRANSFER.

JUSTIFICATION:
THE ADDITION OF LIMESTONE, THE DELAY OF BIPOLE 3 AND THE INCREASED CAPACITY FOR EXPORT SALES JUSTIFIES TRANSMISSION ENHANCEMENTS BASED ON THE ECONOMICS OF EXPORT SALES AND INCREASED SYSTEM ADEQUACY AND RELIABILITY. THIS ITEM PROVIDES FOR NECESSARY TELECOMMUNICATIONS FACILITIES TO OPERATE 230KV AND 138KV STATION AND LINE FACILITIES DEVELOPED TO ENABLE TWO KETTLE AC UNIT POWER TRANSFER

REFERENCE:

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 30

REVISION STATUS: [ ] New complex [X] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: THOMPSON - HERBLET LAKE 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to transmit power of up to 3 Kettle units to the Southern AC System as follows;
Transmission: 230 KV line 166km Thompson Birchtree - Herblet Lake. Sectionalize 230 KV line K24W into Thompson Birchtree station.
Terminations: Establish station at Thompson Birchtree, line termination at Herblet Lake, and modify line protection at Kelsey and Thompson Mystery Lake Road associated with line K24W.
Communications: Protection for Kelsey - Thompson - Herblet Lake T/Ls.

JUSTIFICATION: [ ] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation

Construction of the Thompson Birchtree - Herblet Lake 230 KV line and sectionalization of the Kelsey - Thompson Mystery Lake Road 230 KV line K24W into Thompson Birchtree station are required to transmit up to three units of Kettle generation to Southern Manitoba on the AC system under winter conditions for system reliability enhancement.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Complex no.
30

Advance or deferral impact

Deferral of these facilities will limit the number of Kettle units that can be transferred to the northern AC system during DC contingency or maintenance outages and thereby reduce system reliability.

Factors affecting timing or viability

Environmental Licencing.
System load growth forecasts.

COMPLEX SPECIFICS:

FORECAST HISTORY (IN THOUSANDS OF DOLLARS):

APPROVED yyyy | mm	TOTAL AMOUNT	AMENDMENT
9510	54,500	Reflects cost increases for line K24W sectionalization, protection modifications at line K24W termination stations, and added Thompson Birchtree station equipment.
9610	54,425	Revised escalation and interest rates. Complex name changed.
1997 10	54,174	Scope unchanged, estimate reflects revised costing methodology implemented with the new financial reporting system. Also reflects revised interest and escalation rates.
1998 10	55,284	Scope unchanged.
1999 10	57,148	Deferred one year to 2007 due to capital constraint reasons.

Title			Budget reference number
THOMPSON BIRCHTREE - HERBLET LAKE 230KV T/L			02-00-7006
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70278

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A ROUTE, OBTAIN LICENSING AND ACQUIRE PROPERTY FOR RIGHT-OF-WAY. DESIGN AND CONSTRUCT APPROXIMATELY 166 KM OF SINGLE CIRCUIT 230 KV WOODPOLE LINE FROM THOMPSON BIRCHTREE TO HERBLET LAKE USING 954 MCM CONDUCTOR. OPEN 230KV LINE K24W AND EXTEND INTO THOMPSON - BIRCHTREE STATION FOR RETERMINATION, CREATING 2 - 230KV LINES FROM THOMPSON BIRCHTREE TO THOMPSON MYSTERY LAKE ROAD AND KELSEY.

COMPLETION DATE FOR PROPERTY AQUISITION: 2002 12 01.

JUSTIFICATION:
THOMPSON-BIRCHTREE - HERBLET LAKE 230 KV LINE PROVIDES REQUIRED TRANSMISSION RELIABILITY ENHANCEMENT (STAGE 2) FOR SYSTEM LOAD SUPPORT. THE NEW LINE INCREASES NORTHERN AC CAPACITY TO TRANSMIT KETTLE GENERATION TO THE SOUTHERN NETWORK FROM 2 TO 3 KETTLE UNITS. LINE K24W IS SECTIONALIZED AT BIRCHTREE TO SUPPLY KETTLE POWER TO THE NEW HERBLET LAKE LINE.

REFERENCE:
TPD REPORT 93-4, 'KETTLE AC TRANSMISSION OPTIONS'.
GPD REPORT TM 93/5-GP, '1993/94 RELIABILITY EVALUATION OF REQUIREMENTS FOR GENERATION /TRANSMISSION ENHANCEMENTS'.

REVISION:
ISD DEFERRED FROM 2006 10 31 TO 2007 10 31.

CONTINGENCY: $2,603,000

Title			Budget reference number
THOMPSON BIRCHTREE ESTABLISH STATION			03-00-8103
Originating division Planning & Control	Coordinating division Design	Constructing division Construction	Project Order Group (Range): 70394

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A SITE, ACQUIRE PROPERTY AND OBTAIN LICENCING. ESTABLISH A 230KV SWITCHYARD AT THOMPSON BIRCHTREE. TERMINATE 230KV LINE TO HERBLET LAKE. TERMINATE SECTIONALIZED LINE K24W TO CREATE 230KV LINES TO THOMPSON MYSTERY LAKE ROAD AND KELSEY. FACILITIES TO INCLUDE 3-230KV CIRCUIT BREAKERS, A BUILDING AND ASSOCIATED EQUIPMENT.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR THE THOMPSON BIRCHTREE - HERBLET LAKE 230 KV LINE. THIS ITEM PROVIDES FOR TERMINATION OF THAT LINE AT THOMPSON BIRCHTREE, AND TERMINATION OF LINE K24W LINE SECTIONS.

REFERENCE:

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

NORTH CENTRAL MANITOBA TRANSMISSION

REVISED: 1999 - 10 - 01 | ISSUED BY: WNZ

COMPLEX NO. 16

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 16

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: NORTH CENTRAL MANITOBA PROJECT

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities for central supply to Island Lake communities from Kelsey as follows:
Transmission: 138 KV line 360 KM Kelsey - Oxford House - God's Lake Narrows - Garden Hill - Wasagamack. 25 KV feeder lines 63.0 KM God's Lake Narrows - God's River, 76.0 KM God's Lake Narrows - Red Sucker Lake, 30.5 KM of single/double circuit between Wasagamack station and Wasagamack & St. Theresa communities.
Terminations: Extend 138 KV facilities at Kelsey. Construct 138-25 KV distribution stations and required feeders at Oxford House, God's Lake Narrows, Garden Hill, and Wasagamack. Communications: VHF Mobile coverage using VHF repeaters. Supervisory control at Oxford House, God's Lake Narrows and Garden Hill.

JUSTIFICATION: ☒ Load ☒ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

The 138 KV line and associated distribution facilities will provide central supply to seven Island Lake communities, as per agreement between Manitoba Hydro, the aboriginal communities, the Manitoba Provincial government, and the Federal Government.

NORTH CENTRAL MB T/L R-0-W, SITE SELECTION & ENV. APPROVAL			02-00-0229
Originating division Planning & Control	Coordinating division Design	Constructing division Construction	Project Order Group (Range): 70058

DESCRIPTION:
PERFORM ROUTE ENGINEERING, ENVIRONMENTAL ASSESSMENTS, OBTAIN LICENCES AND ACQUIRE PROPERTY FOR APPROXIMATELY 360 KM OF 138KV TRANSMISSION LINE CONNECTING KELSEY WITH OXFORD HOUSE, GOD'S LAKE NARROWS, GARDEN HILL AND WASAGAMACK, FOR 25KV DISTRIBUTION LINES CONNECTING GOD'S LAKE NARROWS TO GOD'S RIVER AND RED SUCKER LAKE, AND 25KV DISTRIBUTION LINE CONNECTING WASAGAMACK AND ST.THERESA POINT. PERFORM SITE SELECTION, ENVIRONMENTAL ASSESSMENTS, OBTAIN LICENCES AND ACQUIRE PROPERTY FOR STATION SITES AT OXFORD HOUSE, GOD'S LAKE NARROWS, GARDEN HILL AND WASAGAMACK.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR THE DESIGN AND CONSTRUCTION OF A 138KV CENTRAL SUPPLY T/L BETWEEN KELSEY AND THE COMMUNITIES OF OXFORD HOUSE, GOD'S LAKE NARROWS, GARDEN HILL AND WASAGAMACK. THIS ITEM PROVIDES FOR ROUTE AND STATION SITE SELECTION, CONDUCTING THE ENVIRONMENTAL REVIEW PROCESS AND ACQUIRING THE LICENCE, AND ACQUISITION OF NECESSARY R.O.W. AND STATION SITES AT THESE COMMUNITIES.

REFERENCE:
REPORT SPD 83-12 ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES.

REVISION:
ISD ADVANCED FROM 199905 TO 199903. ORDER 115365 WINTER ROAD 1998/1999 ADDED, VALUE $500,000. CONTINGENCY HAS BEEN REMOVED.

Title			Budget reference number
NORTH CENTRAL 138KV T/L			02-00-0230
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70059

DESCRIPTION:
DESIGN AND CONSTRUCT APPROXIMATELY 360KM OF 138KV TRANSMISSION LINE FROM KELSEY TO OXFORD HOUSE, GOD'S LAKE NARROWS, GARDEN HILL AND WASAGAMACK. LINE CONSTRUCTION TO BE STAGED AS: 1997 07 31: KELSEY - OXFORD HOUSE 1998 07 31: OXFORD HOUSE - GOD'S LAKE NARROWS - GARDEN HILL. 1999 07 31 GARDEN HILL-WASAGAMACK. LINE DESIGN IS TO ACCOMMODATE 138 KV +10% NOMINAL OPERATING VOLTAGE. LINE IS TO BE CONSTRUCTED AS SINGLE CIRCUIT GUYED TUBULAR STEEL STRUCTURES USING 336.4 MCM ACSR CONDUCTOR EXCEPT FOR FOLLOWING SECTIONS: 1.2 KM 605 MCM ACSR FROM KELSEY ON UNUSED SIDE OF 138KV LINE KN36 DOUBLE CIRCUIT TOWERS. 80 KM OF WOODPOLE STRUCTURES USING 266.8 MCM CONDUCTOR FROM NELSON RIVER TO HIGH LAKE. 6.3 KM OF DOUBLE CCT 336 MCM DIRECTED NORTH FROM GOD'S LAKE NARROWS WITH 2ND SIDE BUILT FOR 25 OR 66 KV TO FORM PART OF FEEDER LINE TO GOD'S RIVER. 15.1 KM 336 MCM FOR NELSON, HAYS, AND ISLAND LAKE CROSSINGS ON STEEL TOWERS.

JUSTIFICATION:
AN AGREEMENT HAS BEEN SIGNED BETWEEN THE FEDERAL GOVERNMENT, THE PROVINCIAL GOVERNMENT AND MANITOBA HYDRO TO EXTEND CENTRAL ELECTRIC SUPPLY TO THE ISLAND LAKE COMMUNITIES ON A SHARED COST BASIS. THIS ITEM PROVIDES FOR THE DESIGN AND CONSTRUCTION OF THE TRANSMISSION LINE TO BRING CENTRAL SUPPLY FROM KELSEY INTO THE SEVEN AFFECTED COMMUNITIES.

REFERENCE:
REPORT SPD 83-12 ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES.

REVISION:
CONTINGENCY OF $1,200,000 HAS BEEN REMOVED. LINE IS COMPLETE. INSERVICE DATE ADVANCED TO 99 03 31 FROM 99 05 31.

NORTH CENTRAL-FEDERAL CAPITAL CONTRIBUTIONS-ELECTRIFICATION			02-00-0231
Originating division onstruction	Coordinating division Construction	Constructing division Construction	Project Order Group (Range): 70060:72097

DESCRIPTION:
RECORD CONTRIBUTIONS FROM THE FEDERAL GOVERNMENT TOWARDS THE COST OF THE NORTH CENTRAL MANITOBA TRANSMISSION FACILITIES.

JUSTIFICATION:
A SHARED COST AGREEMENT DATED 1992 03 16 WITH AMENDING AGREEMENT NO.1 DATED 1995 03 31, HAS BEEN NEGOTIATED BETWEEN THE GOVERNMENT OF CANADA AND MANITOBA HYDRO TO EXTEND CENTRAL ELECTRICAL SUPPLY TO SEVEN COMMUNITIES IN NORTH CENTRAL MANITOBA. THE FEDERAL GOVERNMENT WILL CONTRIBUTE 75% OF THE FIXED COSTS (UP TO A MAXIMUM) AND 75% OF APPROVED RISK COSTS (UP TO A MAXIMUM).

REFERENCE:
REPORT SPD 83-12 'ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES'.

REVISION:
UPDATED TO REFLECT ON AN ANNUAL BASIS CANADA'S SHARE (CURRENTLY ESTIMATED AT 75%) OF THE NEWLY REVISED CERS FOR THE NORTH CENTRAL PROJECT, COMPLEX #016 (EXCLUDING BRN 04-00-6517 FOR SOIL REMEDIATION, WHICH IS COVERED BY THE FEDERAL CONTRIBUTIONS FOR SOIL REMEDIATION BRN 04-00-6509).

Title			Budget reference number
NORTH CENTRAL - COMMUNITY INVOLVEMENT			02-00-0232
Originating division Construction	Coordinating division Construction	Constructing division Construction	Project Order Group (Range): 70100

DESCRIPTION:
DURING SITING AND CONSTRUCTION ACTIVITIES ASSOCIATED WITH THE NORTH CENTRAL PROJECT, TO CONTRACT A COMMUNITY SUPPORT AGENCY SO AS TO FACILITATE COMMUNITY INVOLVEMENT IN THE PROJECT. THIS AGENCY WOULD BE RESPONSIBLE FOR ESTABLISHING AND MAINTAINING EFFECTIVE COMMUNICATION NETWORKS AND INTERFACING BETWEEN THE COMMUNITIES AND MANITOBA HYDRO, CONTRACTORS ENGAGED BY MANITOBA HYDRO, THE FEDERAL AND PROVINCIAL GOVERNMENTS, AND THEIR RESPECTIVE AGENCIES, FOR PURPOSES OF ALERTING COMMUNITY RESIDENTS AS TO ACTIVITIES AND PROGRESS OF ALL PHASES OF THE PROJECT AND POTENTIAL BENEFITS INCLUDING TRAINING, EMPLOYMENT AND BUSINESS OPPORTUNITIES. TO PROVIDE FUNDS FOR THE DISSOLUTION OF WAPANUK.

JUSTIFICATION:
AN AGREEMENT HAS BEEN NEGOTIATED BETWEEN THE FEDERAL GOVERNMENT, THE PROVINCIAL GOVERNMENT AND MANITOBA HYDRO TO EXTEND CENTRAL ELECTRICAL SUPPLY TO SEVEN COMMUNITIES ON A COST SHARED BASIS. SECTION 17(2) OF THIS AGREEMENT REQUIRES THE ENGAGEMENT OF A COMMUNITY SUPPORT AGENCY SO AS TO FACILITATE THE COMMUNITIES OBTAINING OPTIMUM BENEFITS FROM THE PROJECT. SECTION 17(1) AND SCHEDULE C OF THE AGREEMENT REQUIRES MANITOBA HYDRO TO OPTIMIZE CONTRACT/SERVICE OPPORTUNITIES FOR LOCAL BUSINESSES.

NORTH CENTRAL-PROVINCIAL CAPITAL CONTRIBUTIONS			02-00-7993
Originating division Construction	Coordinating division Construction	Constructing division Construction	Project Order Group (Range): 70062:70477

DESCRIPTION:
REFLECT ANNUAL LIABILITY OF THE PROVINCE OF MANITOBA TOWARDS THEIR SHARE OF COSTS FOR THE NORTH CENTRAL PROJECT.

JUSTIFICATION:
A SHARED COST AGREEMENT DATED 1992 03 16 WITH AMENDING AGREEMENT NO.1 DATED 1995 03 31, HAS BEEN NEGOTIATED BETWEEN THE GOVERNMENT OF MANITOBA AND MANITOBA HYDRO TO EXTEND CENTRAL ELECTRICAL SUPPLY TO SEVEN COMMUNITIES IN NORTH CENTRAL MANITOBA. THE PROVINCIAL GOVERNMENT'S LIABILITY IS 15% OF THE FIXED COSTS (UP TO A MAXIMUM) AND 15% OF APPROVED RISK COSTS (UP TO MAXIMUM). SUBSEQUENTLY, AN ADMINISTRATIVE AGREEMENT WAS SIGNED BETWEEN THE PROVINCE AND HYDRO DATED 1995 07 10 WHICH OUTLINES HOW THEIR LIABILITY WILL BE MET.

REFERENCE:
REPORT SPD 83-12 'ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES'.

REVISION:
UPDATED TO REFLECT ON AN ANNUAL BASIS THE PROVINCE OF MANITOBA'S SHARE (CURRENTLY ESTIMATED AT 15%) OF THE NEWLY REVISED CERS FOR THE NORTH CENTRAL PROJECT COMPLEX #016.

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1990 10	4 517	ESTIMATE REVISED TO DETAILED LEVEL 3 AND REFLECTS ALL CONCEPT CHANGES AND RESULTS OF SITE INVESTIGATIONS TO DATE INCLUDING THE FALL 1989 FIELD PROGRAM.
1991 10	4 372	I.S.D. DEFERRED FROM 94-07-31 TO 95-07-31. F.S.T. REMOVED FROM MAJOR EQUIPMENT. DECREASE IN INTEREST AND ESCALATION RATES. DISTRIBUTION LEVEL NOW 25 KV, PREVIOUSLY 12 KV.
1992 10	4 123	I.S.D. DEFERRED FROM 95-07-31 TO 96-07-31.
1993 10	4 555	ESTIMATE INCREASE DUE TO INCREASE OF SECONDARY BUS VOLTAGE TO 25 KV, ACCESS ROAD LENGTHED TO 2.6 KM, ADDED OIL CONTAINMENT COSTS.
1994 10	6 882	IN-SERVICE DATE DEFERRED 1 YEAR TO 1997 07 31. SIGNIFICANT CONCEPT CHANGES: SUPERVISORY CONTROL ADDED, TRANSFORMERS CHANGED FROM SINGLE PHASE TO 3-7.5 MVA THREE PHASE OLTC.
1995 10	8 155	SPARE TRANSFORMER CONNECTED TO HIGH SIDE ADDED, REFLECTING ENGINEERING DIVSN. DESIGN CHANGES AND FINAL LAYOUT. COST INCREASED BY 1.132 MILLION, OF WHICH MATERIAL PRICE INCREASES REPRESENT 47%, SITE IMPROVEMENTS AND NEW CONTRACT 31%, ENGINEERING 17%, HAULAGE SERVICES 8%,OVERHEAD 23%, AND OTHER MINOR INCREASES 12%, TOTALLING 138%. DECREASES REPRESENT CONTINGENCY 3% AND OIL PROCESSOR SALVAGE 35%. THE TRANSFORMERS AND OIL PROCESSOR MATERIAL COSTS HAVE INCREASED SIGNIFICANTLY AND THE STATION SITE AREA IS LARGER.
1996 10	8 115	SUPERVISORY CONTROLLED 25KV MOTOR MECHANISMS ADDED TO DISCONNECTS ($25K). SITE IMPROVEMENTS INCREASED ($145K) AS DID OIL CONTAINMENT ESTIMATES 45K).
1997 10	8 489	SCOPE UNCHANGED. INCREASE MAINLY A RESULT OF HIGHER THAN ESTIMATED CONSTRUCTION COSTS DUE TO A LATE START HAVING FORCED THE NEED FOR WINTER WORK AND INCREASED OVERTIME IN ORDER TO MAINTAIN THE ISD. SALVAGE CREDIT REDUCED BASED ON THE SALE PRICE NOW ANTICIPATED FOR THE OIL PROCESSING UNIT THAT WAS PURCHASED FOR THE NORTH CENTRAL PROJECT.
1998 10	8 614	ITEM ESSENTIALLY COMPLETE. 1998/99 CASH FLOW TO COVER COMPLETION OF STATION SUPERVISORY CONTROL, WHILE 1999/00 CASH FLOW COVERS SALVAGE OF THE OIL PROCESSING UNIT FOLLOWING 138 kV IN-SERVICE AT GARDEN HILL AND WASAGAMACK.

KELSEY TERMINATE OXFORD HOUSE 138KV LINE			03-00-0618
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	60005

DESCRIPTION:
TERMINATE NEW NORTH CENTRAL 138KV LINE BY INSTALLING 1 - 138 KV CIRCUIT BREAKER AND ASSOCIATED EQUIPMENT. RELOCATE EXISTING LINE KN36 TERMINATION IN ORDER TO AVOID A LINE CROSSOVER, INCLUDING THE MOTOR OPERATED 138 KV TIE SWITCH BETWEEN KN36 AND THE SPLIT LAKE LINE. INSTALL A MOTOR OPERATED 138 KV TIE SWITCH BETWEEN THE NORTH CENTRAL LINE AND THE SPLIT LAKE LINE. SALVAGE 138KV BREAKER ON SPLIT LAKE LINE AND REPLACE WITH NEW BREAKER WITH SAME SPECIFICATIONS AS NORTH CENTRAL LINE BREAKER.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE DESIGN AND CONSTRUCTION OF A NEW 138KV SUPPLY LINE TO THE ISLAND LAKES AREA. THIS ITEM PROVIDES FOR THE TERMINATION AT KELSEY.

REFERENCE:
REPORT SPD 83-12 ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES.

REVISION:
ITEM COMPLETE

GOD'S LAKE NARROWS NEW 138-25KV STATION			03-00-0615
riginating division anning & Control	Coordinating division Design	Constructing division Construction	Project Order Group (Range): 70096

DESCRIPTION:
DESIGN AND CONSTRUCT A NEW 138-25KV STATION NEAR GOD'S LAKE NARROWS C/W 3-7.5/10/12.5 MVA 3 PHASE +/-15% OLTC TRANSFORMERS (1 TRANSFORMER ON HOT STANDBY), 1-138KV (+10%) CIRCUIT BREAKER, 2-5 MVAR LINE REACTORS (5 LIMB CORE) AND ASSOCIATED CIRCUIT SWITCHERS, SUPERVISORY CONTROLS, AND PROVISION FOR A 3RD 5 MVAR LINE REACTOR AND CIRCUIT SWITCHER.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE CONSTRUCTION OF A NEW 138KV LINE INTO THE ISLAND LAKE AREA. THIS STATION PROVIDES TRANSFORMATION TO THE DISTRIBUTION LEVEL. A 138KV CIRCUIT BREAKER PROVIDES PROTECTION FOR THE GOD'S LAKE - WASAGAMACK LINE SECTION. LINE REACTORS LIMIT MAXIMUM VOLTAGE UNDER LIGHT LOAD CONDITIONS.

REFERENCE:
REPORT SPD 83-12, 'ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES'.

REVISION:
REFLECTS COSTS TO COMPLETION

Title			Budget reference number.
GARDEN HILL NEW 138-25 KV STATION			03-00-0616
iginating division anning & Control	Coordinating division Design	Constructing division Construction	Project Order Group (Range): 70097

DESCRIPTION:
DESIGN AND CONSTRUCT A NEW 138-25 KV STATION AT GARDEN HILL C/W 3-7.5/10/12.5 MVA 3 PHASE +/-15% OLTC TRANSFORMERS (1 TRANSFORMER ON HOT STANDBY), 2-5 MVAR LINE REACTORS (5 LIMB CORE) AND ASSOCIATED CIRCUIT SWITCHERS, SUPERVISORY CONTROLS, AND PROVISION FOR A FUTURE 138 KV LINE BREAKER.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE CONSTRUCTION OF A NEW 138KV LINE INTO THE ISLAND LAKE AREA. THIS STATION PROVIDES TRANSFORMATION TO THE DISTRIBUTION LEVEL.

REFERENCE:
REPORT SPD 83-12 ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES.

REVISION:
CIVIL CONSTRUCTION COSTS HIGHER THAN ESTIMATED DUE TO CONTRACTED MACHINERY NOT BEING AVAILABLE AND LOCAL CREWS REQUIRE LONGER THAN ANTICIPATED TO COMPLETE THE WORK. THE BLOCKADE OF ROAD BY THE CROSS LAKE BAND PREVENTED DELIVERY OF THE TRANSFORMER AND REMOVAL OF CONTRACTOR'S EQUIPMENT. ADDITIONAL COSTS WERE INCURRED WITH MOBILIZING CREWS AND EQUIPMENT TWICE, AND THE INSTALLING OF A TEMPORARY POWER SUPPLY TO GARDEN HILL THROUGH GOD'S LAKE NARROWS. REMAINING ESTIMATE REFLECTS COSTS TO COMPLETION.

IN SERVICE DATES				Base estimate

WASAGAMACK NEW 138-25 KV STATION			03-00-1648
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70098

DESCRIPTION:
DESIGN AND CONSTRUCT A NEW 138-25 KV STATION AT WASAGAMACK C/W 3-7.5/10/12.5 MVA 3 PHASE +/- 15% OLTC TRANSFORMERS (1 TRANSFORMER ON HOT STANDBY).

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE CONSTRUCTION OF A NEW 138 KV LINE TO THE ISLAND LAKE AREA. THIS STATION PROVIDES TRANSFORMATION TO THE DISTRIBUTION LEVEL.

REFERENCE:
REPORT SPD 83-12 - 'ALTERNATIVES TO DIESEL-ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES'.

REVISION:
REFLECTS COSTS TO COMPLETION. INSERVICE DATE HAS BEEN ADVANCED FROM 1999 05 31 TO 1999 04 30.

IN SERVICE DATES				Base estimate

Budget reference number 03-00-1648

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1990 10	4 466	NEW ITEM.
1991 10	4 234	I.S.D. DEFERRED FROM 95-07-31 TO 96-07-31. F.S.T. REMOVED FROM MAJOR EQUIPMENT. DECREASE IN INTEREST AND ESCALATION RATES. DISTRIBUTION LEVEL NOW 25 KV, PREVIOUSLY 12 KV.
1992 10	3 967	I.S.D. DEFERRED FROM 96-07-31 TO 97-07-31.
1993 10	3 967	ESTIMATE INCREASE DUE TO INCREASE OF ACCESS ROAD LENGTH TO 1.8KM AND THE ADDITION OF COSTS FOR OIL CONTAINMENT AND REMOTE GROUND GRID. DECREASE IN INTEREST AND ESCALATION RATES.
1994 10	5 397	IN-SERVICE DATE DEFERRED 1 YEAR TO 1998 07 31. SIGNIFICANT CONCEPT CHANGES: TRANSFORMERS CHANGED FROM SINGLE PHASE TO 3-7.5 MVA 3-PHASE OLTC; STN. SITE CHANGE INCREASES ACCESS ROADFROM 1.8 TO 5 KM.
1995 10	6 299	SPARE TRANSFORMER CONNECTED TO HIGH SIDE ADDED, REFLECTING ENGINEERING DIVSN. DESIGN CHANGES AND FINAL LAYOUT. COST INCREASED BY $867,000, OF WHICH MATERIAL PRICE INCREASES REPRESENT 38%, SITE IMPROVEMENTS AND NEW CONTRACT 16%, ENGINEERING 10%, HAULAGE SERVICES 9%,OVERHEAD 19%, AND OTHER MINOR INCREASES 15%, TOTALLING 107%, WHILE CONTINGENCY DECREASED BY 7%. THE TRANSFORMER COST HAS INCREASED SIGNIFICANTLY AND THE STATION SITE AREA IS LARGER.
1996 10	7 168	25KV MOTOR MECHANISMS ADDED TO DISCONNECTS ($25K). RTM CONTROL BUILDING 118K) AND RADIO COMMUNICATION ADDED ($33K). THE SITE IMPROVEMENTS INCREASED ($411K) AS DID THE FOUNDATIONS AND OIL SPILL CONTAINMENT ESTIMATES (238K).
1997 10	8 023	INCREASE PRIMARILY A RESULT OF: SITE IMPROVEMENT ($640,000)/ACCESS ROAD 110,000) COSTS WERE HIGHER THAN ESTIMATED DUE TO PROBLEMS IN OBTAINING SUITABLE ROAD TOPPING MATERIAL, AND ADDITIONAL EXCAVATION REQUIRED FOR DITCHING AND SIDE SLOPING OF THE SITE (NOT PREVIOUSLY ANTICIPATED IN THE DESIGN WHICH INCREASED SURVEYS COSTS ($66,000); ADDITIONAL MATERIAL REQUIREMENTS FOR HARDWARE & INSULATORS ($53,000) AND COMMUNICATIONS/MTS COST INCREASES ($149,000) FOLLOWING THE DETAILED DESIGN REVIEW. NCREASES OFFSET BY A REDUCTION IN CONTINGENCY FROM $367,000.
1998 10	8 767	ISD DEFERRED TEN MONTHS FROM 1998 07 31 TO 1999 05 31 DUE TO POOR WINTER ROAD CONDITIONS.

Title			Budget reference number
RED SUCKER LAKE COMMUNITY - CENTRAL SUPPLY			04-00-0363
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93315

DESCRIPTION:
GOD'S LAKE NARROWS TO RED SUCKER LAKE.

STAGE 1: (POG #72294, PREV W/O #48926)
REBUILD RED SUCKER LAKE DISTRIBUTION TO ACCEPTABLE STANDARDS. COMPLETION: 1998 03 31.

STAGE 2: (POG #72293, PREV W/O #48876) EXTEND 76.0 KM Z-2/0 ACSR 25 kV LINE. COMPLETION: 1998 03 31.

STAGE 3: (POG #71661)
CONVERT RED SUCKER DISTRIBUTION TO 25 kV. COMPLETION: 1998 03 31.

JUSTIFICATION:
THE ABOVE ADDITIONS AND MODIFICATIONS ARE NECESSARY IN ORDER TO PROVIDE CENTRAL ELECTRICAL SUPPLY TO THE COMMUNITY OF RED SUCKER LAKE.

REFERENCE:
REPORT SPD 83-12 'ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES'.

REVISION:
ITEM COMPLETE. INCREASE A RESULT OF:
1) LINE LENGTH EXTENSION REQUESTED BY THE RED SUCKER LAKE 1ST NATION
2) DESIGN CHANGE REQUIRED AT WEBBER LAKE
3) LOST TIME DUE TO CLEARING NOT COMPLETED AS REQUIRED AT GOD'S LAKE NARROWS END
4) POOR WINTER CONDITIONS FOR TRANSPORTING MATERIALS & ACCESSING WORK AREAS
5) INCREASED HELICOPTER USAGE.
6) CHARGES INCURRED IN MARCH 1998 ARE REFLECTED IN FISCAL 1998/99

Title			Budget reference number
ISLAND LAKE COMMUNITIES - CENTRAL SUPPLY			04-00-0364
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93316

DESCRIPTION:
EXTEND CENTRAL SUPPLY TO GARDEN HILL, ST. THERESA AND WASAGAMACK. COMPLETION 1999 05 31.

STAGE 1: (POG #72298) REBUILD GARDEN HILL DISTRIBUTION.
STAGE 2: (POG #71656) REBUILD ST. THERESA DISTRIBUTION.
STAGE 3: (POG #72297) REBUILD WASAGAMACK DISTRIBUTION.
STAGE 4: (POG #72295) EXTEND FEEDERS FROM GARDEN HILL STATION TO GARDEN HILL.
STAGE 5: (POG #71659) CONVERT ST. THERESA TO 25 KV.
STAGE 6: (POG #72296) EXTEND FEEDERS FROM WASAGAMACK STATION.
STAGE 7: (POG #71657) CONVERT GARDEN HILL TO 25 KV.
STAGE 8: (POG #71658) CONVERT WASAGAMACK TO 25 KV.
STAGE 9: (POG #71883) TEMPORARY 25 KV SERVICE TO GARDEN HILL.
STAGE 10: (POG #71889) SALVAGE OF TEMPORARY 25 KV SERVICE TO GARDEN HILL

NOTE: STAGE 6, WASAGAMACK STATION RELOCATED TO APPROX FIVE KM WEST OF NURSING STATION.

JUSTIFICATION:
THE ABOVE ADDITIONS AND MODIFICATIONS ARE NECESSARY IN ORDER TO PROVIDE CENTRAL ELECTRIC SUPPLY TO THE COMMUNITIES OF GARDEN HILL, ST. THERESA, AND WASAGAMACK.

REFERENCE:
REPORT SPD 83-12 'ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES'.

REVISION:
ESTIMATE INCREASE PRIMARILY A RESULT OF HIGHER ACTUAL COSTS DUE TO POOR WINTER CONDITIONS AND LACK OF FROST IN 1997/98 AND 1998/99 FOR TRANSPORTING MATERIALS, ACCESSING THE WORK AREAS, ROCKSET REQUIREMENTS, BRUSHING OUT RE-GROWTH OF FEEDERS. THERE WERE ADDITIONAL COSTS ASSOCIATED WITH PROVIDING TEMPORARY 25 KV SERVICE IN LIEU OF MEETING THE ISD FOR 138 KV SERVICE. ALSO EXTRA MOBILIZATION/DEMOBILIZATION COSTS DUE TO STRETCHING OUT OF ENTIRE PROJECT.

CAPITAL EXPENDITURE REVISION

Budget reference number 04-00-0364

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1990 10	1 858	INCREASE IN SCOPE BY ADDING GARDEN HILL FEEDER, REVISED INTEREST AND ESCALATION RATES, INCREASED ACCURACY LEVEL, TRANSFER OF $458,000 (GROSS) TO BRN 9004000360.
1991 10	4 669	INCREASE IN SCOPE BY ADDING SECOND GARDEN HILL FEEDER. INCREASED ESCALATION AND INTEREST COSTS. DISTRIBUTION CHANGED FROM 12KVTO 25KV. WASAGAMACK STATION LOCATION CHANGED, RESULTING IN THE NEED FORTHE CONSTRUCTION OF 2-Z-266.8 MCM ACSR 25KV FEEDERS FROM WASAGAMACK STATION TO TIE LINE. I.S.D. DEFERRED ONE YEAR.
1992 10	3 058	REROUTING OF SECOND FEEDER FROM GARDEN HILL TO COMMUNITY. BETTER APPLICATION OF CREW COSTS. REDUCED INTEREST AND ESCALATION RATES.FINAL I.S.D. DEFERRED ONE YEAR.
1993 10	3 443	ENGINEERING COSTS INCREASED. CONSTRUCTION LABOUR & EXPENSE RATES INCREASED THROUGH CONSULTATION WITH CONSTRUCTION DEPT. DOLLARS IN-SERVICE HAVE BEEN ADJ. TO REFLECT EACH STAGE AS PUT IN SERVICE.
1994 10	6 751	COST FLOWS REFLECT DEFERRAL OF NCP IN-SERVICE DATE BY 1 YR; ON SITE FIELD INVESTIGATION REVEALED INCREASED DIST'N AREA; COST INCREASE DUE TO WASAGAMACK STATION RELOCATION AND CORRESPONDING ADDITIONAL FEEDER CONSTRUCTION.
1995 10	6 559	IMPROVED ESTIMATING TOOL (RUCES); FLOWS REVISED FOR INTEREST AND ESCALATION.
1996 10	8 398	ESTIMATE DUE TO: MATERIAL COST INCREASES FROM 1995(92); MATERIAL COST INCREASE FOUND NECESSARY DURING FINAL DESIGN PROCESS (164); L&E INCREASE FOR ADDITIONAL MATERIAL(233); INCREASED OVERHEAD (162) RISK CLAIM ITEMS INCURRED INCLUDING DELAY IN APPROVAL AND WORK STOPPAGE (234); OFF SEASON WORK L&E(646); BRUSH CLEARING(47); DECREASE MTS CONTRIBUTION FOR ANCHORING(13) INCREASED SALVAGE CREDITS(26).NCREASED SALVAGE CREDITS(26).
1997 10	9 066	Estimate increased (+686) mainly due to L&E (+543), i.e. local sourcing and contracting problems.
1999 10	10 108	ISD for remaining work deferred to 1999 05 31 as a result of poor winter conditions. Estimate increase primarily a result of higher actual costs due to poor winter conditions additional costs associated with providing temporary service.

Title			Budget reference number
NORTH CENTRAL - SALVAGE OF DIESEL GENERATING STATIONS			04-00-0369
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Operating & Maintenance	Operating & Maintenance	70101:70106

DESCRIPTION:
SALVAGE EXISTING DIESEL PLANTS AND EQUIPMENT, WITH THE FOLLOWING COMPLETION DATES:

1. WASAGAMACK 95 01 31 COMPLETE
2. OXFORD HOUSE 98 09 30 POG #70101 COMPLETE
3. ST. THERESA 00 02 28 POG #70102
4. GODS LAKE NARROWS 98 09 30 POG #70103 COMPLETE
5. GARDEN HILL 00 02 28 POG #70104
6. RED SUCKER 99 03 31 POG #70105
7. GOD'S RIVER 98 09 30 POG #70106 COMPLETE

JUSTIFICATION:
DIESEL SITES TO BE DE-COMMISSIONED AS PART OF THE NORTH CENTRAL PROJECT.

REFERENCE:
REPORT SPD 83-12 'ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES'.

REVISION:
REVISED TO REFLECT ACTUAL COSTS TO COMPLETION FOR OXFORD HOUSE, GOD'S LAKE NARROWS AND GOD'S RIVER SITES. INITIATION OF SALVAGE COMMENCED FOR GARDEN HILL AND STE. THERESA POINT IN 1999/02, FOUR MONTHS EARLIER THAN PLANNED, TO TAKE ADVANTAGE OF AVAILABLE BACK HAUL LOADS. REFLECTS UPDATED ACTIVITY AND OVERHEAD RATES.

CAPITAL EXPENDITURE REVISION

Budget reference number 04-00-0369

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1989 10	1 022	NEW ITEM
1990 10	1 179	REVISED TO A HIGHER DEGREE OF ACCURACY
1991 10	2 255	REVISION ALLOWS $250,000 OF BASE DOLLARS PER SITE, INSTEAD OF $150,000 PREVIOUSLY ESTIMATED. THE R & D PROJECT AT PUKATAWAGAN FOR CLEANUP OF THAT SIGHT GAVE US A BETTER INSIGHT OF THE WORK COMPLEXITY.
1992 10	4 230	REVISION ALLOWS $500,000 OF BASE DOLLARS PER SITE, INSTEAD OF $250,000 PREVIOUSLY ESTIMATED. ALSO, SURVEYS TO DATE INDICATE, WE WILL FIND CONSIDERABLE CONTAMINATION AT GREATER DEPTHS THAN PREVIOUSLY EXPECTED.
1993 10	9 756	REVISION TO REFLECT ANTICIPATED COSTS BASED ON ACTUAL EXPENDITURES AT PUKATAWAGAN AND GODS LAKE NARROWS OLD SITE. THE LATER SITE IS IN THE SAME GEOGRAPHIC AREA WITH A SIMILAR SITE HISTORY TO ALL NORTH CENTRAL SITES AND THE AMOUNT OF CONTAMINATED SOIL WAS 200% MORE THAN EXPECTED. I.S.D. ADJUSTED FROM 94/06 - 00/06 TO 95/09 - 99/09.
1994 10	9 570	COST FLOWS REFLECT DEFERRAL OF NCP IN-SERVICE DATE BY 1 YEAR
1995 10	137	ESTIMATE REVISED TO REFLECT ACTUAL AND FORECAST COSTS TO COMPLETE WORK AT WASAGAMACK, AND ESC. TO 1995 DOLLARS FOR OTHER SITES. CASH FLOWS REVISED TO REFLECT CURRENT PLAN. COSTS ASSOCIATED WITH SOIL REMEDIATION HAVE BEEN MOVED TO NEW BRN 9304-00-6517.
1996 10	125	ESTIMATE REVISED TO REFLECT ACTUAL COSTS TO COMPLETE WORK AT WASAGAMACK.
1997 10	1 399	REVISION REFLECTS DETAILED ESTIMATES FOR EACH SITE TO BE DECOMMISSIONED. ISD's HAVE BEEN ADVANCED ONE YEAR TO REFLECT CURRENT PROJECTED LAND LINE ISD's.
1998 10	974	REVISED ESTIMATES PREPARED TO REFLECT NEW IN SERVICE DATES. ST. THERESA POINT AND GARDEN HILL DEFERRED ONE YEAR TO 2000/02 TO RELECT CURRENT PROJECTED LAND LINE ISD's. OXFORD HOUSE AND GOD'S RIVER DEFERRED FOUR MONTHS TO 1998 06. DECREASE IN ESTIMATE MAINLY DUE TO REDUCED HAULAGE COSTS EXPERIENCED THROUGH USE OF BACKHAUL LOADS.

Title			Budget reference number
NORTH CENTRAL - SOIL REMEDIATION OF DIESEL SITES			04-00-6517
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
perating & Maintenance	Construction	Construction	70111:70122

DESCRIPTION:
INVESTIGATE SITES AND PERFORM SOIL REMEDIATION, UNDER THE FOLLOWING COMPLETION SCHEDULE:

	Investigation	Remediation
1. WASAGAMACK	95 06 30 (W.O. #45617)	95 12 13 (W.O. #44144)
2. OXFORD HOUSE	98 11 30 (POG #70111)	99 12 31 (POG #70112)
3. ST. THERESA	00 11 30 (POG #70113)	01 12 31 (POG #70114)
4. GOD'S LAKE NARROWS	99 05 31 (POG #70115)	99 05 31 (POG #70116)
5. GARDEN HILL	00 11 30 (POG #70117)	01 12 31 (POG #70118)
6. RED SUCKER	99 11 30 (POG #70119)	00 12 31 (POG #70120)
7. GOD'S RIVER	98 11 30 (POG #70121)	99 12 31 (POG #70122)

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN TO EXTEND CENTRAL SUPPLY TO NORTH CENTRAL MANITOBA. THIS ITEM PROVIDES FOR REMEDIATION OF DE-COMMISSIONED DIESEL SITES.

REFERENCE:
REPORT SPD 83-12 ALTERNATIVES TO DIESEL ELECTRIC SUPPLY AT NORTHEAST ISOLATED COMMUNITIES.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

This BRN contains Deleted, Blocked, or Closed Orders.

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1995 10	9 498	NEW ITEM TRANSFERRED FROM BRN 9304-00-0369. ESTIMATE REVISED TO REFLECT ACTUAL AND FORECAST COSTS TO COMPLETE WORK AT WASAGAMACK, AND ESCALATION TO 1995 DOLLARS FOR THE OTHER SITES. CASH FLOWS REVISED TO REFLECT CURRENT.
1996 10	9 147	WASAGAMACK SITE INVESTIGATION & SOIL REMEDIATION COMPLETED UNDER BUDGET. REMAINDER OF ESTIMATE ESCALATED TO 1996 DOLLARS AND CASK FLOWS ADJUSTED. IN SERVICE DATES CONSOLIDATED.
1997 10	9 178	ESTMATE UNCHANGED; IN-SERVICE DATES REVISED TO REFLECT CURRENT SCHEDULE FOR COMPLETION OF THE WORK.
1998 10	8 685	Investigation at God's Lake Narrows revealed no contamination beyond site property, therefore Transport Canada have agreed to take over the site as-is. Site investigation costs for God's Lake Narrows have therefore been reduced, while the Remediation costs for that site have virtually been elimated (some allowance for closing out of the project). Estimate and schedule for the remaining sites are unchanged.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	40	☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	FLIN FLON CLIFF LAKE TRANSFORMER REPLACEMENT

Proposal

Replace one 230 KV breaker at The Pas Ralls Island.

Replace Flin Flon Cliff Lake 125 MVA Transformer Bank No. 1 with 230-115-13.8 KV 120/160/200 MVA autotransformer.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The new transformer will match the rating of the existing bank no. 2 and will provide firm capacity for Flin Flon area loads. The Pas 230KV replacement breaker is required for switching of Flin Flon Cliff Lake tertiary capacitors by line P58C breakers at The Pas.

Complex no. 40

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral of the transformer will force curtailment of Flin Flon area town and HBM&S loads during outages of transformer bank no. 2. Deferral of the breaker replacement will require continued dependance on back-up protection systems to protect an existing breaker at The Pas from capacitive load interruption damage.

Factors affecting timing or viability

Flin Flon area load growth.
Sask Power requirement for Island Falls generation on the Sask Power northern system.

COMPLEX SPECIFICS:

Title: THE PAS RALLS ISLAND - REPLACE 230KV BREAKER

Budget reference number: 03-00-7226

ginating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70034

DESCRIPTION:
SALVAGE EXISTING 230KV BREAKER 'R5' TERMINATING LINE P58C AT THE PAS RALLS ISLAND STATION. REPLACE WITH A NEW BREAKER CAPABLE OF INTERRUPTING CAPACITIVE CURRENT.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS PROVIDED FOR ADDITION OF TERTIARY CAPACITORS ON THE 230-115-13.8 KV CLIFF LAKE TRANSFORMERS. THIS ITEM PROVIDES FOR SWITCHING OF CAPACITORS BY LINE P58C 230KV BREAKERS AT THE PAS. ONLY BREAKER 'R5' REQUIRES REPLACEMENT.

REFERENCE:

COMPLEX STATUS	Complex no.	REVISION STATUS
☒ Planned ☐ In progress	47	☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	HERBLET LAKE - THE PAS 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide firm supply to Flin Flon Cliff Lake and The Pas Ralls Island as follows:

Transmission: 230 KV line 160 KM Herblet Lake - The Pas Ralls Island.

Terminations: Extend 230 KV facilities at Herblet Lake and The Pas Ralls Island stations.

Communications: Upgrade and co-ordinate with existing Herblet Lake and The Pas facilities.

JUSTIFICATION	Explanation
☒ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other	The line is required to provide firm supply and voltage support for increasing Flin Flon and The Pas area loads.

Title
THE PAS RALLS ISLAND TERMINATE HERBLET LAKE 230KV T/L

Budget reference number
03-00-1695

ginating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70293

DESCRIPTION:
TERMINATE 230KV LINE FROM HERBLET LAKE, FACILITIES WILL INCLUDE 1-230KV BREAKER AND ASSOCIATED EQUIPMENT

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF HERBLET LAKE - THE PAS RALLS ISLAND 230 KV LINE. THIS ITEM PROVIDES FOR TERMINATION OF THAT LINE AT THE PAS RALLS ISLAND.

REFERENCE:
1. REPORT TPD 93-1, 'FLIN FLON AREA TRANSMISSION IMPROVEMENTS - STAGE 2'
2. TPD TM 93-20, 'FLIN FLON TRANSMISSION SECTIONALIZATION AT HERBLET LAKE'

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $191,000

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

DORSEY–NEEPAWA–CORNWALLIS 230KV LINE

REVISED: 1999 - 10 -01 | ISSUED BY: WNZ

COMPLEX NO. 57

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	57	☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: DORSEY - NEEPAWA - CORNWALLIS 230 KV LINE

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide firm supply to Brandon as follows: Transmission: 230 KV line Dorsey - Neepawa - Cornwallis (D-N-C), consisting of 73 KM on double circuit and 157 KM on single circuit towers. New 115 KV line of 1.7 KM Warren-Line CN9 Tap. Salvage 63 KM of 115 KV line CN8 from Warren towards Neepawa and 79 KM of 115 KV line CN9 from Neepawa towards Warren. Salvage 52 KM of 115 KV line BN5 from Neepawa to north of Brandon and replace with east side of 230 KV line operating at 115 KV as 2nd circuit on D-N-C towers. Terminations: Extend 230 KV facilities at Dorsey and Cornwallis stations. Salvage 15 MVAR transformer reactor & 1 reactor switching breaker. Install 2-20 MVAR 13.2 KV shunt reactors and 3 transformer reactor switching breakers. Purchase property for future Neepawa 230 KV station. Communications: Integrate with existing Dorsey and Cornwallis facilities.

JUSTIFICATION	Explanation
☒ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other	These facilities provide transmission improvements required by 1999 to supply Brandon area future load growth. They also defer the future Winnipeg - Brandon 230 KV transmission complex and provide for future Neepawa area support. One new reactor will replace an existing reactor in deteriorated condition. Both reactors are required to control 230 KV voltage at Cornwallis under light load conditions.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will reduce firm load support of the Brandon area. Delay in completing this line will impact on the retermination of Ashern - Dorsey 230KV line and subsequent Winnipeg area transmission improvements.

Factors affecting timing or viability

Manitoba Load.
Brandon thermal generation service life.

COMPLEX SPECIFICS:

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item ___ Domestic Item 155

Title: DORSEY-NEEPAWA-CORNWALLIS 230KV T/L

Budget reference number: 02-00-1235

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	60025:60047

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A ROUTE, ACQUIRE PROPERTY FOR RIGHT-OF-WAY AND OBTAIN LICENCING, DESIGN AND CONSTRUCT A 230 KV WOODPOLE & STEEL LINE FROM DORSEY TO CORNWALLIS VIA NEEPAWA WITH A TOTAL LENGTH OF APPROXIMATELY 230.0 KM. LINE SECTIONS ARE: - 16 KM DBL CCT 1272 MCM FROM DORSEY NORTH TO EAST/NORTH ROUTE ANGLE OF LINES A3R & A4D. - 157 KM OF SINGLE CCT 954 MCM FROM LOCALE 10 KM NORTH OF DORSEY TO NEEPAWA 110KV STN. - 45 KM DBL CCT 954 MCM FROM NEEPAWA 110 KV STN. TO LOCALE 12 KM NORTH OF CORNWALLIS. - 12 KM DBL CCT 1272 MCM FROM END OF DBL CCT 954 MCM TO CORNWALLIS 230 KV STATION. SALVAGE 63 KM OF 110 KV CCT CN8 FROM WARREN TOWARDS NEEPAWA AND 79 KM OF 110 KV CCT CN9 FROM NEEPAWA TOWARDS WARREN. SALVAGE 52 KM OF 110 KV CCT BN5 FROM NEEPAWA TOWARDS CORNWALLIS AND REPLACE WITH EAST SIDE OF NEW DOUBLE CIRCUIT 230 KV LINE FROM NEEPAWA TO LOCALE 4.7 KM NORTH OF CORNWALLIS WHERE IT IS RECONNECTED TO BN5 TO COMPLETE LINE. CONDUCT ENVIRONMENTAL PROCEDURES, DESIGN AND CONSTRUCT 1.7 KM OF 110 KV 266 MCM CCT FROM WARREN TO LINE CN9. JOIN OPEN ENDS OF LINES CN8 AND CN9 (200 M SPAN) RESULTING FROM SALVAGE TO RE-ESTABLISH A 110 KV CIRCUIT FROM WARREN TO NEEPAWA. NOTE: 16 KM DBL CCT FROM DORSEY TO LINES A3R/A4D REQUIRED IN-SERVICE BY 1998 03 31 TO ACCOMMODATE ASHERN-DORSEY 230KV LINE CHANGES COMPLEX.

JUSTIFICATION:
THIS ITEM PROVIDES INITIAL AC SYSTEM IMPROVEMENTS REQUIRED TO TRANSMIT POWER TO BRANDON TO SUPPLY FUTURE LOAD GROWTH, THEREBY DEFERRING WINNIPEG-BRANDON 500 KV TRANSMISSION. IT ALSO PROVIDES FOR FUTURE NEEPAWA AREA SUPPORT, OUTLETS FOR NORTHERN AC SYSTEM BURNTWOOD RIVER GENERATION, AND LINE A4D RECONNECTION INTO DORSEY TO UPGRADE WINNIPEG AREA TRANSMISSION.

REFERENCE:
1) TP REPORT 89-3 WESTERN MANITOBA SYSTEM DEVELOPMENT ALTERNATIVES, RECOMMENDATION #6.
2) MEMO B.D. RINDALL TO C.V. THIO, 1999 01 05; AND C.V. THIO TO B.D. RINDALL, 1999 01 15.

REVISION:
INSERVICE DATE DEFERRED FROM 1999 10 31 TO 2000 04 30 AS REQUESTED BY TRANSMISSION LINE CONSTRUCTION AND AGREED TO BY SYSTEM PLANNING. THIS RESULTS IN AN INCREASE TO CAPITALIZED INTEREST. 1.7 KM OF 110 KV CCT FROM WARREN TO CN9 WAS CHANGED FROM 336 MCM TO 266 MCM. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $520,000

Title
NEEPAWA STATION LAND PURCHASE

Budget reference number
03-00-1661

ginating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Planning & Control	Property	72009

DESCRIPTION:
CONDUCT THE NECESSARY ENVIRONMENTEA
AL IMPACT STUDIES, OBTAIN AND ACQUIRE THE PROPERTY TO DEVELOP A FUTURE NEEPAWA 230-115KV TERMINAL STATION NEAR EXISTING NEEPAWA 115KV STATION ALONG R.O.W. OF DORSEY-NEEPAWA-CORNWALLIS 230KV LINE. PREFORM ENGINEERING STUDY TO ASSESS REQUIREMENT AND VIABLILITY FOR UPGRADE OF EXISTING NEEPAWA 115-66KV STATION FACILITIES AND STRUCTURES. THESE ACTIVITIES ARE TO OCCUR IN CONJUNCTION WITH R.O.W. SELECTION PROCESS FOR DORSEY-NEEPAWA-CORNWALLIS 230KV LINE.

JUSTIFICATION:
THIS ITEM PROVIDES FOR ACQUISITION OF PROPERTY FOR CONSTRUCTION OF FUTURE 230KV STATION FACILITIES TO PARTIALLY SUPPORT WESTERN MANITOBA LOAD GROWTH. IT ALSO PROVIDES FOR DETERMINATION OF REQUIREMENTS TO UPGRADE EXISTING NEEPAWA FACILITIES TO PROPERLY CO-ORDINATE WITH CONSTRUCTION AND OPERATION OF NEW 230-115KV STATION.

REFERENCE:
TP REPORT 89-3 WESTERN MANITOBA SYSTEM DEVELOPMENT ALTERNATIVES, RECOMMENDATION #7.

REVISION:
ITEM COMPLETED.

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item ___ Domestic Item 157

Title: CORNWALLIS TERMINATE DORSEY (NEEPAWA) 230KV T/L

Budget reference number: 03-00-1662

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	60000

DESCRIPTION:
INSTALL ONE 230KV CIRCUIT BREAKER AND ASSOCIATED EQUIPMENT IN CORNWALLIS 230KV SWITCHYARD TO TERMINATE THE DORSEY (VIA NEEPAWA) LINE. TERMINATION WILL INCLUDE A 230KV 30 MVAR SHUNT LINE REACTOR WITH A 230KV CIRCUIT SWITCHER AND ASSOCIATED EQUIPMENT. DESIGN AND INSTALL PROTECTION AS REQUIRED AT CORNWALLIS STATION FOR THE NEW LINE. REPLACE D12C LINE PROTECTION AT CORNWALLIS.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR A 230KV CIRCUIT FROM WINNIPEG TO BRANDON VIA NEEPAWA. THIS ITEM PROVIDES FOR TERMINATION OF THAT LINE AT CORNWALLIS.

REFERENCE:
TP REPORT 89-3 WESTERN MANITOBA SYSTEM DEVELOPMENT ALTERNATIVES, RECOMMENDATION #9.
MEMO, S.M. INNES TO W. ZURBA, 1997 10 22, 'PROTECTION UPGRADES'.

REVISION:
SCOPE INCREASED TO INCLUDE REPLACEMENT OF OLD WESTINGHOUSE RTU, HOWEVER OFFSET BY DECREASE DUE TO REACTOR COST SUBSTANTIALLY LESS THAN ORIGINALLY ESTIMATED. ISD DEFERRED FROM 1999 08 TO 2000 04.

CONTINGENCY: $264,000

IN SERVICE DATES: 2000 04 30 — 2 870

Base estimate: 199903 L3

Work start date: 1994 02 01

Title: DORSEY TERMINATE CORNWALLIS (NEEPAWA) 230KV T/L

Budget reference number: 03-00-1663

)inating division	Coordinating division	Constructing division	Project Order Group (Range):
ɹnning & Control	Design	Construction	60039

DESCRIPTION:
TERMINATE CORNWALLIS (VIA NEEPAWA) 230 KV LINE IN BAY 13 AT DORSEY. INSTALLATION WILL INCLUDE 1-230 KV CIRCUIT BREAKER AND ASSOCIATED EQUIPMENT. DESIGN AND INSTALL PROTECTION AS REQUIRED AT DORSEY 230 KV STATION FOR THE NEW LINE. REPLACE D12C LINE PROTECTION AT DORSEY.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR A 230KV CIRCUIT FROM WINNIPEG TO BRANDON VIA NEEPAWA. THIS ITEM PROVIDES FOR TERMINATION OF THAT LINE AT DORSEY.

REFERENCE:
1) TP REPORT 89-3 WESTERN MANITOBA SYSTEM DEVELOPMENT ALTERNATIVES, RECOMMENDATION #8.
MEMO, S.M. INNES TO W. ZURBA, 1997 10 22, 'PROTECTION UPGRADES'.

REVISION:
ISD CHANGED TO 2000-04-30 DUE TO DEFERRAL OF DORSEY-NEEPAWA-CORNWALLIS 230KV TRANSMISSION LINE (02-1235) ALTHOUGH D12C PROTECTION REPLACEMENT WAS IDENTIFIED IN 1998 CER DESCRIPTION, COSTS HAD NOT BEEN INCLUDED.

CONTINGENCY: $137,000

Title
CORNWALLIS TERTIARY REACTOR R12 AND BREAKER REPLACEMENT

Budget reference number
03-00-6190

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	71025

DESCRIPTION:
REPLACE EXISTING 13.2KV 15 MVAR REACTOR IN POSITION R12 WITH A 13.2KV 20 MVAR REACTOR. REPLACE AN ASSOCIATED REACTOR SWITCHING BREAKER.

JUSTIFICATION:
SHUNT REACTORS ARE REQUIRED AT CORNWALLIS TO MAINTAIN CONTINUOUS 230KV VOLTAGE CONTROL IN THE BRANDON AREA UNDER LIGHT LOAD CONDITIONS. THE EXISTING REACTOR IN POSITION R12 BEING REPLACED IS CAPABLE OF ONLY 2 HOURS OF OPERATION UNDER EMERGENCY CONDITIONS. AN ASSOCIATED SWITCHING BREAKER IS REQUIRED TO REPLACE A BREAKER THAT FAILED IN THE FALL OF 1995.

REFERENCE:
MEMO, W.N. ZURBA TO C.V. THIO, 1996 04 25, 'CORNWALLIS TERTIARY REACTOR (R12) REPLACEMENT'

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $65,000

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

WINNIPEG – BRANDON 230KV TRANSMISSION

REVISED: 1999 - 10 - 01 | ISSUED BY: WNZ

COMPLEX NO. 60

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 60

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: WINNIPEG - BRANDON 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide firm supply to Brandon as follows:
Transmission: 230 KV line 192 KM Dorsey - Brandon, 230 KV double circuit line with only one side strung 8.5 KM Brandon - location north of Cornwallis. Connect to unused 230 KV line north of Cornwallis to create Dorsey - Cornwallis 230 KV circuit.

Terminations: Extend 230 KV facilities at Dorsey and Cornwallis stations.

Communications: Integrate with existing facilities at Dorsey and Cornwallis stations.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

These facilities provide transmission improvements required by 2007 to supply Brandon area future load growth.

Title			Budget reference number
DORSEY WEST PROPERTY REQUIREMENTS			02-00-5137
iginating division anning & Control	Coordinating division Design	Constructing division Design	Project Order Group (Range): 70029

DESCRIPTION:
ACQUIRE THE NECESSARY R.O.W. TO FACILITATE FUTURE TRANSMISSION EGRESS TO THE WEST FROM DORSEY STATION. MAJORITY OF THE PROPERTY HAS BEEN SECURED WITH THE EXCEPTION OF CERTAIN PARCELS WHICH ARE TO BE FINALIZED.

JUSTIFICATION:
LAND ACQUISITION IN POPULATED AREAS IS BECOMING INCREASINGLY DIFFICULT, WITH LONGER LEAD TIMES REQUIRED AND HIGHER COSTS. RIGHT-OF-WAY FOR ALL FUTURE CONTEMPLATED EHV LINES IN THE WINNIPEG AREA ARE TO BE ACQUIRED AS THEY BECOME AVAILABLE.

REFERENCE:
REPORT SPD 75-1 500 KV U.S. LINES ROUTES IN THE METRO AREA AND SOUTH EAST EHV STATION SITE. REPORT SPD 78-26 RIGHT-OF-WAY REQUIREMENTS WEST AND SOUTH OF DORSEY STATION. REPORT TP 89-3 WESTERN MANITOBA SYSTEM DEVELOPMENT ALTERNATIVES, RECOMMENDATION 15.

REVISION:
ISD DEFERRED FROM 2002 03 31 TO 2003 03 31.

CONTINGENCY: $ 14,700

WINNIPEG - BRANDON 230KV T/L			02-00-7994
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	71008

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A ROUTE, OBTAIN LICENSING AND ACQUIRE PROPERTY FOR RIGHT-OF-WAY. DESIGN AND CONSTRUCT APPROXIMATELY 192 KM OF 230KV SELF SUPPORTING STEEL LINE USING 954 MCM ACSR CONDUCTOR FROM DORSEY TO BRANDON. DESIGN AND CONSTRUCT ABOUT 8.5 KM 230KV DOUBLE CIRCUIT TOWER STRUNG ONLY ON SOUTH SIDE WITH 1272 MCM ACSR CONDUCTOR FROM BRANDON END OF NEW 954 MCM CIRCUIT TO LOCALE 1.5 KM NORTH OF CORNWALLIS STATION. CONNECT 8.5 KM LINE SECTION TO 192 KM LINE SECTION AND TO UNUSED EAST SIDE SECTION OF DOUBLE CIRCUIT 230KV LINE WHICH EXTENDS TO CORNWALLIS 230KV STATION. SWING AND RE-TERMINATE 3 EXISTING 230KV LINES AT CORNWALLIS.

JUSTIFICATION:
THIS ITEM PROVIDES FOR PART OF THE SYSTEM IMPROVEMENTS REQUIRED TO TRANSMIT POWER TO THE BRANDON AREA TO SUPPLY FUTURE LOAD GROWTH.

NOTE: COMPLETION DATE FOR PROPERTY ACQUISITION: 2003 10 31

FT. GARRY PERIMETER SOUTH BANK REPLACEMENTS			03-00-5936
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	72034

DESCRIPTION:
REPLACE 2-7.5/10 MVA, 3 PH TRANSFORMERS WITH 2-15/20/25 MVA 66-12.47Y/7.2 KV 3 PH TRANSFORMERS C/W LTC'S.

JUSTIFICATION:
THE NON-FIRM CAPACITY OF FT. GARRY PERIMETER SOUTH STATION (SET BY THE THERMAL CAPACITY OF 2-7.5/10 MVA BANKS) WILL BE EXCEEDED IN 1996/97. THIS STATION SUPPLIES SOUTH FORT GARRY AND LASALLE AREAS (BOTH FAST GROWING COMMUNITIES) AND PROVIDES A BACK-UP SUPPLY TO ST. NORBERT SINGLE BANK STATION. REPLACEMENT OF THE EXISTING BANKS WITH 15/20/25 MVA UNITS, IS THE MOST ECONOMICAL SOLUTION TO THE GROWING 12 KV LOAD, AND WILL PROVIDE SUFFICIENT CAPACITY WELL BEYOND THE YEAR 2000.

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

RIDGEWAY – ST.VITAL 230KV TRANSMISSION

REVISED: 1999 - 10 - 01	ISSUED BY: WNZ

COMPLEX NO. 78

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 78

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: RIDGEWAY - ST. VITAL 230 KV TRANSMISSION

Proposal

Perform environmental assessments and obtain licences, design and construct transmission and terminal facilities to provide firm supply to St. Vital station as follows:
Transmission: Construct 12.0 KM double circuit 230 KV line Ridgeway - Riel Future Station Site. Open 230 KV line R49R at Ridgeway and Riel site and reconnect south section at Riel site to Ridgeway using east side of new double circuit. Connect west side of new double circuit at Riel site to unused circuit extending to St. Vital. This results in 2nd Ridgeway-St. Vital 230 KV line, re-establishment of Ridgeway - Richer 230 KV line R49R , and one unenergized new Ridgeway-Riel Site line.
Terminations: Extend 230 & 115 KV facilities at St. Vital station, including a 2nd 230-115 KV 250 MVA transformer and 230 & 115 KV circuit breakers. Extend 230 KV facilities at Ridgeway. Communications: Integrate with existing east Winnipeg facilities.

JUSTIFICATION		Explanation
☒ Load	☐ Service	This complex provides transmission system improvements for firm supply to the St. Vital area.

(IN THOUSANDS OF DOLLARS)

X Major Item — Domestic Item

Title: RIDGEWAY - ST. VITAL & RIDGEWAY - RICHER 230 KV T/L

Budget reference number: 02-00-3201

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	60013

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT AND OBTAIN NECESSARY APPROVALS AND LICENSES FOR RIDGEWAY - ST. VITAL AND RIDGEWAY - RICHER 230 KV LINES ALONG EXISTING RIGHT-OF-WAY. DESIGN AND CONSTRUCT 12.0 KM OF DOUBLE CIRCUIT 230 KV LINE STRUNG ON BOTH SIDES WITH 1272 MCM ACSR ALONG LINE R32V RIGHT-OF-WAY FROM RIDGEWAY TO RIEL CORNER. OPEN RIDGEWAY- RICHER 230KV LINE R49R AT RIEL CORNER AND CONNECT RICHER END TO EAST SIDE OF NEW DOUBLE CIRCUIT LINE. EXTEND NORTH END OF EAST SIDE OF NEW DOUBLE CIRCUIT INTO RIDGEWAY FOR RETERMINATION OF RIDGEWAY - RICHER LINE. CONNECT WEST SIDE OF NEW DOUBLE CIRCUIT LINE AT RIEL CORNER TO UNUSED LINE ON SOUTH SIDE OF 230KV DOUBLE CIRCUIT FROM RIEL CORNER TO ST. VITAL. EXTEND WEST END OF UNUSED LINE INTO ST. VITAL AND WEST SIDE OF NEW DOUBLE CIRCUIT LINE INTO RIDGEWAY TO COMPLETE NEW RIDGEWAY - ST. VITAL 230KV CIRCUIT. BUILD 115KV LINE SECTIONS INSIDE ST VITAL STATION TO CONNECT 230-115KV TRANSFORMERS TO ASSOCIATED 115KV CIRCUIT BREAKERS. **** COMPLETION DATE FOR ENVIRONMENTAL ACTIVITIES: 1997 04 01 **** NOTE: LINE SECTION OF FORMER 230KV LINE R49R FROM RIDGEWAY TO RIEL CORNER IS LEFT OPEN AT BOTH ENDS TO BECOME PART OF FUTURE DORSEY-ST VITAL 230KV CIRCUIT. NOTE: RETERMINATION OF R49R TO EAST SIDE OF NEW D/C LINE TO BE COMPLETED BY 1998 04 30. IN-SERVICE DATE OF NEW RIDGEWAY-ST VITAL 230KV LINE IS 1998 06 30 IN COORDINATION WITH DEVELOPMENT OF ST VITAL STATION.

JUSTIFICATION:
THIS ITEM PROVIDES FOR PART OF SYSTEM CHANGES TO TRANSMIT POWER FROM DORSEY TO EASTERN HALF OF WINNIPEG. IT IS REQUIRED TO ACCOMMODATE WINNIPEG AREA LOAD GROWTH (INCLUDING WINNIPEG HYDRO), ONTARIO HYDRO 200 MW SALE IN 1998 AND DEFERRAL OF RIEL STATION. ELSEWHERE IN THE BUDGET IS AN ITEM FOR ADDITION OF A 2ND ST. VITAL 230-115 KV TRANSFORMER. THIS ITEM PROVIDES FOR FIRM SUPPLY TO ADDED TRANSFORMER AND MAINTAINING RICHER SUPPLY OUT OF RIDGEWAY STATION.

REFERENCE:
PSPD TM 94-6, WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF. PSPD TM 95-7, RECOMMENDED CHANGES TO ST. VITAL STATION DEVELOPMENT. PSPD TM 95-14, RIDGEWAY STATION - 1998 IMPROVEMENTS.

REVISION:
REFLECTS ACTUAL COSTS TO COMPLETION.

CONTINGENCY: $ 10 000

Title			Budget reference number
ST. VITAL TRANSFORMER ADDITION & LINE TERMINATIONS			03-00-6361
iginating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70159

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, ACQUIRE PROPERTY AND OBTAIN LICENCING FOR EXPANSION OF EXISTING ST. VITAL 230-115 KV STATION. INSTALL A 230-115 KV TRANSFORMER RATED 150/200/250 MVA WITH +/- 10% OLTC TAP RANGE IN 230 KV BAY 3. SALVAGE ALL EQUIPMENT IN 230 KV BAY 1 INCLUDING CIRCUIT BREAKER. MOVE 230-115 KV TRANSFORMER FROM BAY 1 TO BAY 2 AND RECONNECT TO EXISTING 115KV BANK TERMINATION BREAKER. TERMINATE 2 - 230 KV LINES TO RIDGEWAY IN BAY 2. REPLACE R32V LINE PROTECTION AT ST. VITAL. FACILITIES WILL INCLUDE 4 - 230 KV CIRCUIT BREAKERS, 1 - 115 KV CIRCUIT BREAKER, ASSOCIATED EQUIPMENT, AND FULL DEVELOPMENT OF 230 KV BAY 2 AND PARTIAL BAY 3.

NOTE: 230 KV BAY 1 WILL BE REDEVELOPED IN THE ST. VITAL TRANSFORMER ADDITION COMPLEX. INSTALLATION OF NEW TRANSFORMER IN BAY 3, ADDITION OF BAY 2 WITH 4 - 230KV BREAKERS, AND TERMINATION OF NEW 230KV RIDGEWAY LINE TO BE COMPLETED BY 1998 06 30 TO PERMIT SALVAGE OF BAY 1 AND RELOCATION TO BAY 2.

JUSTIFICATION:
THIS ITEM PROVIDES FOR PART OF SYSTEM CHANGES TO TRANSMIT POWER FROM DORSEY TO EASTERN HALF OF WINNIPEG. IT IS REQUIRED TO ACCOMMODATE WINNIPEG AREA LOAD GROWTH (INCLUDING WINNIPEG HYDRO), ONTARIO HYDRO 200 MW SALE IN 1998 AND DEFERRAL OF RIEL STATION.

THIS ITEM PROVIDES FOR INCREASED TRANSFORMATION TO 115KV NETWORK AT ST. VITAL, TERMINATION OF NEW 230 KV LINE TO RIDGEWAY, AND INITIAL STAGE OF UPGRADING OF OLD 230 KV FACILITIES.

REFERENCE:
PSPD TM 94-6, 'WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF'.
PSPD TM 95-7, 'RECOMMENDED CHANGES TO ST. VITAL STATION DEVELOPMENT'.
PSPD TM 95-14, 'RIDGEWAY STATION - 1998 IMPROVEMENTS'.
MEMO, S.M. INNES TO W. ZURBA, 1997 10 22, 'PROTECTION UPGRADES'.

REVISION:
REFLECTS REVISED ACTIVITY & OVERHEAD RATES. PROJECT COST INCREASED IN PART DUE TO THE INCLUSION OF A FP&P DELUGE SYSTEM FOR TRANSFORMER BANKS 7 & 8, NOT PREVIOUSLY IDENTIFIED. ADDITIONAL SITE IMPORVEMENTS WERE REQUIRED FOR ACCESS WITHIN THE SWITCHYARD DUE TO DETERIORATED DRAINAGE CONDITIONS. ADDITIONAL COSTS WERE INCURRED TO TRANSFER CONTROL AND METERING FOR EXISTING 115 KV LINES TO THE NEW CONTROL SYSTEM AND TO FACILITATE ADDITION OF THE 3RD 115/230 KV TRANSFORMER IN 2001.

Title
RIDGEWAY - TERMINATE ST. VITAL AND RICHER 230 KV T/L

Budget reference number
03-00-8493

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	60041

DESCRIPTION:
RE-TERMINATE RIDGEWAY - RICHER 230KV LINE R49R ON 230KV STATION BUS A1 IN NEW BAY 3. TERMINATE NEW ST. VITAL 230KV LINE ON BUS B1 IN BAY 3. REPLACE R32V LINE PROTECTION AT RIDGEWAY. INSTALLATION TO INCLUDE 1 - 230 KV CIRCUIT BREAKER, LINE R49R PROTECTION MODIFICATIONS, ASSOCIATED EQUIPMENT, AND STATION EXPANSION WITH DEVELOPMENT OF 230KV BAY 3. NOTE: BAY 3 FACILITIES TO BE INSTALLED BY 1998 04 30 TO PERMIT RE-TERMINATION OF R49R.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF A SECOND 230KV RIDGEWAY- ST. VITAL LINE. THIS ITEM PROVIDES FOR TERMINATION OF NEW LINE AT RIDGEWAY AND REQUIRED RE-TERMINATION OF RICHER LINE R49R.

REFERENCE:
PSPD TM 94-6,' WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF'. PSPD TM 95-14, 'RIDGEWAY STATION - 1998 IMPROVEMENTS'.
MEMO, S.M. INNES TO W. ZURBA, 1997 10 22, 'PROTECTION UPGRADES'.

REVISION:
ACTUAL COSTS HIGHER THAN ESTIMATE DUE TO CONSTRUCTION COSTS BEING GREATER THAN ORIGINALLY ESTIMATED.

CONTINGENCY: $5000

Title
RIDGEWAY STATION - UPGRADE COMPRESSED AIR SYSTEM

Budget reference number
03-00-8330

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Power Planning & Operations	Operating & Maintenance	74101

DESCRIPTION:
UPGRADE THE STATION HIGH PRESSURE AIR SYSTEM TO MEET CURRENT PERFORMANCE REQUIREMENTS:

- INSTALL 3 NEW CONTINUOUS DUTY AIR COMPRESSORS
- INSTALL 2 NEW FULLY AUTOMATIC DESSICANT-TYPE AIR DRYERS
- UPGRADE CONTROLS AND REPLACE THE EXISTING HYGROMETER

JUSTIFICATION:
THE EXISTING COMPRESSED AIR SYSTEM IS 25 YEARS OLD AND UNABLE TO MATCH SPECIFICATION PERFORMANCE, LACKS REDUNDANCY AND SUFFERS A HIGH NUMBER OF MAINTENANCE CALLS.
THIS ITEM PROVIDES FOR THE REPLACEMENT OF MAJOR AIR SYSTEM COMPONENTS IN ORDER TO IMPROVE RELIABILITY, MAINTAINABILITY AND PERFORMANCE.

REFERENCE:
REPORT PP&O 97/6 'RIDGEWAY STATION - STUDY OF ALTERNATIVES FOR THE HIGH PRESSURE AIR SYSTEM'

REVISION:
INCREASE IS DUE TO THE FOLLOWING: HIGHER MATERIAL COSTS, INSTRUMENTATION COSTS HAD BEEN ADDED, AND CONSTRUCTION COSTS INCREASED TO COMPLY WITH NEW QUALITY ASSURANCE PROGRAM.

CONTINGENCY: $39,000

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 64

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: ST. VITAL TRANSFORMER ADDITION

Proposal

Design and construct terminal facilities at St. Vital as follows:

Terminations: Extend 230 and 115 KV facilities at St. Vital station, including a 3rd 230-115 KV 250 MVA transformer and associated 230 KV circuit breakers.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The transformer is required in 2001 to supply increased Winnipeg load.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will decrease supply reliability in the St. Vital area in case of outage of an existing St. Vital 230-115 KV transformer.

Factors affecting timing or viability

Manitoba Load.
Ontario Hydro 200 MW Sale.
Supply to TCPL.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %
St. Vital 230 KV Transformer Addition		7,707	7,861	7,828	-33	-0
TOTAL		7,707	7,861	7,828	-33	-0

FORECAST HISTORY (IN THOUSANDS OF DOLLARS):

APPROVED yyyy | mm	TOTAL AMOUNT	AMENDMENT
9510	9,520	Retermination of 230 KV line R32V deleted. Transformer price increase, 1-230KV circuit brkr add'd (from Dorsey-St. Vital 230KV Trnsmssn cmplx), and add'l stn facil adj.
9610	8,198	Retermination of 2 - 115 kV lines and installation of 1 - 115 kV circuit breaker deleted. Reduced material cost based on recent autotransformer quote.
1997 10	8,885	In service date deferred 6 months to 2001 04 30 to coincide with Dorsey - St. Vital line addition at St. Vital Station. Also reflects revised interest and escalation rates.
1998 10	8,762	Scope unchanged.
1999 10	8,989	Deferred one year 2002 04 30 due to capital constraint reasons.

Title
ST. VITAL 230KV TRANSFORMER ADDITION

Budget reference number
03-00-1672

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	71009

DESCRIPTION:
RE-TERMINATE 115KV LINE XV39 AT FORMER LINE VJ50 CIRCUIT BREAKER AT ST. VITAL. RE-TERMINATE 115KV SIDE OF 230-115KV TRANSFORMER BANK #7 (230KV BAY 2) AT VACATED LINE XV39 CIRCUIT BREAKER. INSTALL A 230-115KV TRANSFORMER RATED 150/200/250 MVA WITH +/- 10% OLTC TAP RANGE IN 230KV BAY 1 AND TERMINATE 115KV SIDE AT VACATED BANK #7 CIRCUIT BREAKER. INSTALLATION WILL INCLUDE 2 - 230KV CIRCUIT BREAKERS, ASSOCIATED EQUIPMENT, AND RECONSTRUCTION OF PREVIOUSLY SALVAGED 230KV BAY 1.

JUSTIFICATION:
TRANSFORMER IS REQUIRED TO MEET INCREASED WINNIPEG AREA LOAD.

REFERENCE:
1) PSPD TM 94-6, WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF.
2) MEMO, W.N. ZURBA TO C.V. THIO, 1997 07 25, 'WINNIPEG AREA TRANSMISSION ISD CHANGES FOR 1997'.

REVISION:
ISD DEFERRED ONE YEAR FROM 2001 04 30 TO 2002 04 30 FOR CAPITAL CONSTRAINT REASONS. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $696,000

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 42

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: DORSEY - ROSSER 230 KV TRANSMISSION IMPROVEMENTS

Proposal

Perform environmental assessments and obtain licences, design and construct transmission and terminal facilities to refurbish Dorsey - Rosser 230 KV line D5R as follows:

Transmission: Reconductor 17.8 km of line D5R. Open temporary bypass of Dorsey - Rosser line D5R (former A4D). Restore reconductored D5R line by reconnecting at Dorsey and at Rosser.

Terminations: Modify line protection equipment at Dorsey and Rosser.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

Reconductoring of line D5R is part of the development of Winnipeg area 230 KV transmission. It will upgrade the line to the same current carrying capacity as all other 230 KV network lines in the Winnipeg area and prevent D5R overloads during transmission contingency outages.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will cause overloading of D5R (which has smaller conductors than parallel lines) during contingency outages. It will also delay construction of the Dorsey - St. Vital 230 KV line required for firm supply of east Winnipeg and Ontario Hydro 200 MW Sale.

Factors affecting timing or viability

Manitoba Load.
Ontario Hydro 200 MW Sale.
Ashern - Dorsey 230 KV Transmission Improvements.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %

Title
RECONDUCTOR & RECONNECT 230KV T/L D5R

Budget reference number
02-00-5962

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
...ning & Control	Design	Construction	70306

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT AND OBTAIN LICENCING, AND RECONDUCTOR 17.8 KM OF UNUSED 230KV DORSEY-ROSSER LINE D5R FROM 795 MCM TO 1113 MCM ACSS CONDUCTOR. OPEN TEMPORARY D5R REPLACEMENT LINE (FORMER A4D) 0.85 KM NORTH OF ROSSER. RECONNECT RECONDUCTORED D5R LINE TO EXISTING D5R 1272 MCM LINE SECTIONS 0.80 KM FROM DORSEY AND 0.85 KM FROM ROSSER TO RE-ESTABLISH PRE-1997 D5R LINE ROUTE FROM DORSEY TO ROSSER.

JUSTIFICATION:
LOW CAPACITY 795 MCM ACSR CONDUCTOR ON DORSEY - ROSSER LINE D5R BECOMES OVERLOADED DURING WINNIPEG AREA TRANSMISSION OUTAGES. RECONDUCTORING TO 1113 MCM ACSS RAISES CURRENT CARRYING CAPACITY OF D5R TO SAME LEVEL AS ALL OTHER WINNIPEG 230KV CIRCUITS. TEMPORARY D5R REPLACEMENT USING FORMER A4D LINE SECTION IS RELEASED (AFTER RECONDUCTORED D5R IS RE-ESTABLISHED) TO FORM PART OF DORSEY-ST. VITAL 230KV LINE REQUIRED FOR WINNIPEG AREA TRANSMISSION DEVELOPMENT.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	27	☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	DORSEY - ST. VITAL 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to firm up supply to stations in east Winnipeg as follows: Transmission: 230 KV line double circuit strung one side only, 14 km from Ridgeway along D36R/R23R R.O.W towards Rosser, 7.5 km from St. Vital along R32V R.O.W to Riel Corner. Open 2nd Ridgeway-St. Vital 230KV line at Riel Corner and re-establish line by connecting Ridgeway section to new 7.5 km circuit to St. Vital. Connect remaining St. Vital section of previous Ridgeway- St. Vital 230KV line, unused Ridgeway-Riel Corner line, new 14 km line, and unused former lines D36R & A4D north of Rosser to create Dorsey - St. Vital 230 KV circuit (passing through Ridgeway station). Terminations: Extend 230 KV facilities at St. Vital station. Install line protection changes at Dorsey. Communications: Integrated with existing Dorsey & St. Vital facilities.

JUSTIFICATION		Explanation
☒ Load	☐ Service	This line is required to provide firm supply to east Winnipeg stations from Dorsey via St. Vital station.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Complex no. 27

Advance or deferral impact

This transmission is required for supply to stations in east Winnipeg . Deferral will result in overloads or curtailment of load or Ontario Hydro 200 MW export during outages of Winnipeg area AC lines.

Factors affecting timing or viability

Manitoba Load.
Ontario Hydro 200 MW Sale.
Ashern - Dorsey - Rosser 230 KV Transmission Improvements.
Supply to TCPL.

COMPLEX SPECIFICS:

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item ___ Domestic Item 178

Title: DORSEY - ST. VITAL 230 KV T/L

Budget reference number: 02-00-5963

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70309

DESCRIPTION:
Conduct environmental impact assessment, select a route, acquire property for R.O.W. and obtain licencing. Design and construct 21.5 km of double circuit 230kV line strung on one side only with 1272 MCM ACSR conductor in following sections:
South side of double cct. towers 14.0 KM along D36R/R23R R.O.W. west from Ridgeway. North side of double cct. towers 7.5 KM along R32R R.O.W. from St Vital to 'Riel Corner'. Connect new and existing line sections as follows to create Dorsey-St Vital 230kV line: Rosser end of former A4D Dorsey-Rosser T/L to unused former D36R at 'Rosser South Corner'; north end of former D36R T/L at 'Rosser North Corner' to west end of new 14.0 KM T/L; Ridgeway end of new 14.0 KM line to end of unused east side of double circuit line R32R (by crossing through Ridgeway 230 kV station north to south); sectionalize 230kV Ridgeway-St Vital line on west side of line R49R double circuit towers at 'Riel Corner', connect unused east side of double cct. R32R to St Vital end of former Ridgeway-St Vital line. Reconnect Ridgeway end of sectionalized former Ridgeway-St Vital line to new 7.5 KM line at 'Riel Corner' to re-establish 2nd Ridgeway- St Vital circuit.
Open 230kV lines D36R and R23R at Rosser North and Rosser South Corners north of Rosser station. Connect unused portion of former A4D to Rosser end of opened R23R at Rosser South Corner to establish Rosser-Silver 230kV line. Connect Ridgeway end of opened D36R to Rosser end of opened R23R at Rosser North Corner, and connect Dorsey end of opened D36R to Ridgeway end of opened R23R of former D36R to tower 47 on west side of Rosser South Corner for future construction of Dorsey-St Vital line. Design and construct 2 KM of single circuit 230kV line using 1272 MCM ASCR and connect to Ridgeway end of opened R23R at Rosser North Corner to re-establish line R23R.
Note: Environmental assessment & route selection to include route for Dorsey - St Vital T/L along southern Wpg loop (Dorsey - Laverendrye - Floodway - St Vital).

JUSTIFICATION:
This item provides for part of system changes to transmit power from Dorsey to eastern half of Winnipeg. It is required to accommodate Winnipeg area load growth (including Winnipeg Hydro), Ontario Hydro 200 MW sale, and deferral of Riel Station. Construction of 230kV circuit is more economical than advancing Dorsey - Riel 500kV line to operate as part of Dorsey - St. Vital 230kV circuit due to delay of HVDC bipole 3 stages 2 & 3 which require 500kV line for DC paralleling.

REFERENCE:
1) PSPD TM 94-6, 'Winnipeg and Interlake Transmission Changes in 1994 IFF'.
2) Memo, W.N. Zurba to C.V. Thio, 1997 07 25, 'Winnipeg Area Transmission ISD Changes for 1997'.

REVISION:
ISD deferred two years from 2000 04 30 to 2002 04 for capital constraint reasons. Reflects revised activity and overhead rates. D36R and R23R line changes transfered from BRN 02-00-5961 due to deferral of Rosser-Silver T/L.
CONTINGENCY: $ 586,000

TELECONTROL FOR DORSEY-ST. VITAL 230KV T/L			05-00-5532
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Planning & Control	Construction	70312

DESCRIPTION:
DESIGN, INSTALL AND COMMISSION REQUIRED TELECONTROL FACILITIES FOR OPERATION OF DORSEY - ST. VITAL 230KV LINE.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF DORSEY-ST. VITAL 230KV LINE. THIS ITEM PROVIDES FOR NECESSARY TELECONTROL FACILITIES FOR OPERATION OF NEW LINE.

REFERENCE:
1) PSPD TM 94-6, 'WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF'
2) MEMO, W.N. ZURBA TO C.V. THIO, 1997 07 25, 'WINNIPEG AREA TRANSMISSION ISD CHANGES FOR 1997'

REVISION:
ISD DEFERRED ONE YEAR FROM 2001 04 30 TO 2002 04 30 DUE TO FINANCIAL CONSTRAINTS AND ALSO REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $15,000

COMPLEX	DORSEY - LA VERENDRYE - ST. VITAL 230KV TRANSMISSION

Proposal

Perform environmental assessments, acquire property along south Winnipeg loop and obtain licences; design and construct transmission and terminal facilities to firm up supply to stations in east Winnipeg as follows:
Transmission: 230 KV line double circuit strung one side only, 34.0 km from La Verendrye to St. Vital; 230 KV line double circuit strung both sides 6.0 km La Verendrye to La Verendrye Corner. Open Dorsey-St. Leon 230 KV line D14S at La Verendyre corner and join St. Leon open end to south side of double circuit to create La Verendrye - St. Leon 230 KV line. Join north side to Dorsey open end and new St. Vital line to create Dorsey - St. Vital south loop circuit. Terminations: Extend 230 KV facilities at St. Vital and La Verendrye stations. Install line protection changes at Dorsey and St. Leon.
Communications: Integrated with existing facilities at Dorsey, St. Vital, La Verendrye and St. Leon.

JUSTIFICATION		Explanation
☒ Load	☐ Service	The Dorsey - St. Vital line is required to provide firm supply to east Winnipeg stations from Dorsey via St. Vital station. Reterminating St. Leon line at La Verendrye permits use of high capacity line section from Dorsey to La Verendrye corner as part of Dorsey - St. Vital circuit.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

Title			Budget reference number
DORSEY - ST. VITAL & LA VERENDRYE - ST. LEON 230KV T/L			02-00-5964
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70313

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, OBTAIN LICENSING AND ACQUIRE RIGHT-OF WAY PROPERTY FOR SOUTH CORRIDOR LINE. DESIGN AND CONSTRUCT 6.0 KM OF DOUBLE CIRCUIT 230KV LINE STRUNG ON BOTH SIDES WITH 1272 MCM ACSR FROM LA VERENDRYE CORNER TO LA VERENDRYE. DESIGN AND CONSTRUCT 34.0 KM OF DOUBLE CIRCUIT 230KV LINE STRUNG ONLY ON SOUTHERN SIDE WITH 1272 MCM ACSR FROM LA VERENDRYE TO ST. VITAL. OPEN DORSEY-ST. LEON 230KV LINE D14S AT LA VERENDRYE CORNER. CONNECT DORSEY OPEN END OF D14S TO NORTH SIDE OF 6.0KM DOUBLE CIRCUIT LINE AND ST. LEON OPEN END TO SOUTH SIDE OF LA VERENDRYE CORNER. EXTEND SOUTH SIDE OF 6.0KM DOUBLE CIRCUIT INTO LA VERENDRYE TO CREATE LA VERENDRYE - ST. LEON 230KV LINE. CONNECT NORTH SIDE OF 6.0 KM LINE AT LA VERENDRYE TO 24.0 KM LINE END NEAR LA VERENDRYE TO CREATE DORSEY - ST. VITAL 230KV SOUTH CORRIDOR LINE.

NOTE: PROPERTY ACQUISITION ACTIVITIES COVERED IN BRN 02-00-5136 'METRO WPG LOOP DORSEY TO RIEL PROPERTY REQUIREMENTS'.

JUSTIFICATION:
THIS ITEM PROVIDES FOR PART OF SYSTEM CHANGES TO TRANSMIT POWER FROM DORSEY TO EASTERN HALF OF WINNIPEG TO ACCOMMODATE WINNIPEG AREA LOAD GROWTH. CONSTRUCTION OF LINE ALONG SOUTH CORRIDOR IMPROVES WINNIPEG TRANSMISSION RELIABILITY BY DIVERSIFYING SUPPLY ROUTES TO ST. VITAL BY ESTABLISHING INITIAL SOUTH CORRIDOR LINE, AND REDUCING NUMBER OF LINES ALONG NORTH WINNIPEG CORRIDOR.
RE-TERMINATION OF ST. LEON 230KV LINE AT LA VERENDRYE PERMITS USE OF HIGH CAPACITY LINE SECTION OF D14S FROM DORSEY TO LA VERENDRYE CORNER (1272 MCM) AS PART OF DORSEY - ST. VITAL LINE.

REFERENCE:
PSPD TM 94-6, 'WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF'

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $907,000.

Title
ST. LEON PROTECTION CHANGES FOR LA VERENDRYE 230KV T/L

Budget reference number
03-00-5921

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70317

DESCRIPTION:
MODIFY PROTECTION EQUIPMENT AS REQUIRED AT ST. LEON IN CO-ORDINATION WITH RETERMINATION OF 230KV LINE D14S FROM DORSEY INTO LA VERENDRYE

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF A DORSEY -ST. VITAL 230KV SOUTH LOOP LINE AND ASSOCIATED LA VERENDRYE - ST. LEON 230KV LINE. THIS ITEM PROVIDES FOR REQUIRED PROTECTION CHANGES AT ST. LEON ASSOCIATED WITH TERMINATION OF NEW LA VERENDRYE LINE.

REFERENCE:
PSPD TM 94-6, 'WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF'

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $6 000

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

ROSSER – SILVER 230KV TRANSMISSION

REVISED: 1999 - 10 - 01	ISSUED BY: WNZ

COMPLEX NO. 21

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 21

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: ROSSER - SILVER 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide firm supply to Silver stn as follows: Transmission: Construct 230kV line 89 km Silver to Wpg. Connect to unused former line A4D 15 km north of Rosser. Open 230kV lines D36R & R23R at Rosser North & South Corners. Connect end of former A4D to Rosser end of former R23R at Rosser S Corner to create Rosser-Silver circuit. Construct 2.0 km 230kV line from Rosser and connect to Ridgeway end of R23R at Rosser N Corner to re-establish Rosser-Ridgeway line R23R. Connect open ends of D36R to former R23R at Rosser N & S Corners to re-establish Dorsey-Ridgeway line D36R. Terminations: Extend 230kV facilities at Rosser and Silver. Extend 66kVfacilities at Silver to terminate previously installed spare 230-66kV transformer #1 Replace line protection at Ashern. Communications: Integrate with existing facilities at Rosser and Silver.

JUSTIFICATION		Explanation
☒ Load	☐ Service	This complex provides transmission system improvements for firm supply to Silver station.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will limit firm supply to the Silver area and affect timing of Dorsey - St. Vital 230 KV Transmission improvements.

Factors affecting timing or viability

Manitoba Load.
Ashern - Dorsey 230 KV Transmission Improvements.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %

Title			Budget reference number
ROSSER - SILVER 230 KV T/L			02-00-5961
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	60026

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A ROUTE, ACQUIRE PROPERTY FOR RIGHT-OF-WAY AND OBTAIN LICENCING, DESIGN AND CONSTRUCT APPROXIMATELY 86 KM OF 230 KV WOOD/STEEL POLE LINE USING 954 MCM ACSR FROM SILVER TO WINNIPEG. CONNECT WINNIPEG END TO UNUSED FORMER LINE A4D SECTION 15 KM NORTH OF ROSSER.

JUSTIFICATION:
CONTINUED LOAD GROWTH IN INTERLAKE AREA REQUIRES FIRM SUPPLY TO BE PROVIDED AT SILVER STATION. A SECOND 230KV LINE CONSTRUCTED FROM ROSSER PROVIDES BEST ALTERNATIVE FOR FIRMING SILVER SUPPLY AS WELL AS CO-ORDINATING WITH REQUIRED WINNIPEG AREA TRANSMISSION DEVELOPMENTS.

REFERENCE:
PSPD TM 94-6, WINNIPEG AND INTERLAKE TRANSMISSION CHANGES FOR 1994 IFF. PSPD REPORT 95-2, FIRM 230KV SUPPLY TO SILVER STATION.
MEMO, C.V. THIO TO A. STAUDZS, 1995 11 13, ROSSER - SILVER 230KV TRANSMISSION.

REVISION:
ISD DEFERRED ONE YEAR FROM 2002 10 31 TO 2004 10 31 DUE TO FINANCIAL CONSTRAINTS. D36R AND R23R LINE CHANGES TRANSFERRED TO BRN 02-00-5963 DUE TO DEFERRAL OF ROSSER-SILVER T/L. INCREASE IS DUE TO ISD DEFERRAL THAT CAUSED ADDITIONAL WORK FOR PROPERTY APPRAISAL AND SURVEYS.

CONTINGENCY: $1,500,000

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

RAVEN LAKE STATION
230–66 KV TRANSFORMATION

REVISED: 1999 - 10 - 01 | ISSUED BY: WNZ

COMPLEX NO. 39

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 39

REVISION STATUS: [ ] New complex [ ] In service change [ ] Concept change [X] Estimate change only

COMPLEX: RAVEN LAKE 230-66 KV TRANSFORMATION

Proposal

Design and construct transmission and terminal facilities for supply at Raven Lake and Hamiota as follows:

Transmission: Rebuild 33 KV line 88 Raven Lake - Hamiota for 66 KV operation.

Terminations: Extend 230 and 66 KV facilities at Raven Lake station, including addition of a 230-66 KV 50 MVA transformer and associated 66 KV circuit breaker and 40 MVA grounding bank. Reconnect Hamiota 33-25 KV Bank 2 for 66-25 KV operation.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

This transformer is required to supply increased load at Raven Lake. Loading on the Raven Lake 115-33 KV system will be reduced by transferring part of the 33 KV load at Raven Lake and Hamiota to 66 KV supply.

Complex no. 39

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will decrease supply reliability in the Raven Lake area in case of an outage of an existing Raven Lake 115-33 KV transformer and will overload 33 KV facilities during peak load conditions.

Factors affecting timing or viability

Manitoba Load.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %
Raven Lake Station 230-66 KV Transformation		4,451	4,540	4,619	79	2
Hamiota Stn.-Reconnect Bank 2 for 66 KV Operation		60	61	61	0	0
Line 88 Conversion to 66 KV Operation		487	497	481	-16	-3
TOTAL		4,998	5,098	5,161	63	1

FORECAST HISTORY (IN THOUSANDS OF DOLLARS):

APPROVED yyyy | mm	TOTAL AMOUNT	AMENDMENT
1995 10	3,737	Reflects revised escalation and interest rates.
1996 10	8,061	In-service date deferred 19 years to 2017. Conversion of Hamiota 33 KV line and transformer to 66 KV operation added.
1997 10	7,993	Estimate reflects revised costing methodology implemented with the new financial reporting system. Also reflects revised insterest and escalation rates.
1998 10	8,051	Scope unchanged
1999 10	8,290	Scope unchanged.

Title
RAVEN LAKE STATION 230-66KV TRANSFORMATION

Budget reference number
03-00-5898

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70324

DESCRIPTION:
INSTALL A 30/40/50/MVA 230-66 KV +/- 15% LTC TRANSFORMER C/W 1 - 66KV CIRCUIT BREAKER, 1-40 MVA GROUNDING BANK AND ASSOCIATED EQUIPMENT.

JUSTIFICATION:
THE LOADING ON THE 115-33KV TRANSFORMERS AT RAVEN LAKE IS EXPECTED TO EXCEED THEIR FIRM CAPACITY (25 MVA) DURING THE 2017/18 WINTER PEAK. IT IS PLANNED TO ADD 230-66KV TRANSFORMATION IN THE RAVEN LAKE STATION AND CONVERT HAMIOTA STATION FROM 33KV TO 66KV SUPPLY TO RELIEVE THE 33KV SYSTEM OF LOAD.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☒ Planned ☐ In progress	18	☐ New complex ☒ In service change ☒ Concept change ☐ Estimate change only

COMPLEX	NEEPAWA 230-66KV STATION

Proposal

Perform environmental assessments and route selection, design and construct terminal facilities to provide firm supply to Neepawa as follows:
Transmission: Sectionalize 230KV T/L D54C into Neepawa 230kV Stn, creating Dorsey-Neepawa and Neepawa -Cornwallis 230kV circuits. Build a 66KV tie line between the new 66KV terminal and the Existing 115/66/kV Station
Terminations: Establish Neepawa 230-66KV station, including three 230kV circuit breakers, a 50/66/83.3/93.3 MVA, 230-66KV LTC transformer, six 66KV circuit breakers and associated equipment. Adjust line protection equipment at Dorsey and Cornwallis 230KV stations. Terminate two 230kV transmission lines to Dorsey and Cornwallis.
Communications: Integrate with existing facilities at Neepawa , Dorsey, and Cornwallis 230KV stations.

JUSTIFICATION		Explanation
☒ Load	☐ Service	These facilities provide transmission improvements required by 2006 to supply Neepawa and related Western Region future load growth.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

[X] Major Item [ ] Domestic Item 20/

Title			Budget reference number
NEEPAWA TERMINATE 66 KV SUPPLY FROM NEW 230/66 KV STATION			03-00-8406
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70637

DESCRIPTION:
TERMINATE THE NEW 66 KV 'TIE' LINE BETWEEN THE NEW 230/66 KV TERMINAL STATION AND THE EXISTING 115/66 KV STATION. REPLACE EXISTING 66KV SWITCHES AND BUSWORK AS REQUIRED. SALVAGE 115 KV BREAKERS R12, R17 AND R19, 66 KV BREAKER B20, B50, 810 AND 570 AND ASSOCIATED 115 KV AND 66 KV EQUIPMENT.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR THE CONSTRUCTION OF A 230/66 KV STATION AT NEEPAWA. THIS ITEM IS REQUIRED TO SUPPLY THE EXISTING 66 KV SYSTEM IN THE AREA.

REFERENCE:
REPORT SPD 99/7, 'SYSTEM EXPANSION AT NEEPAWA'.

REVISION:
NEW ITEM.

CONTIGENCY $124 000

Title: NEEPAWA 66KV SUBTRANSMISSION

Budget reference number: 04-00-8621

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	94327

DESCRIPTION:
BUILD NEW 66 KV CIRCUITS EMANATING FROM THE 230/66 KV STATION AND CONNECT TO EXISTING FEEDERS. BUILD A 66 KV 'TIE' LINE BETWEEN THE NEW 66 KV TERMINAL AND THE EXISTING 115/66 KV STATION. MOVE ICE MELTING EQUIPMENT OVER TO THE 230/66 KV TERMINAL.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR THE CONSTRUCTION OF A 230/66 KV STATION AT NEEPAWA. THIS ITEM PROVIDES THE SUBTRANSMISSION ADDITIONS REQUIRED TO CONNECT THE STATION TO THE 66 KV FEEDERS.

REFERENCE:
REPORT SPD 99/7, 'SYSTEM EXPANSION AT NEEPAWA'.

TELECONTROL FOR NEEPAWA 230/66 kV TERMINAL STATION

Budget reference number
05-00-6553

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Planning & Control	Construction	70393

DESCRIPTION:
DESIGN, INSTALL AND COMMISSION TELECONTROL FACILITIES FOR THE OPERATION OF THE DORSEY-NEEPAWA AND NEEPAWA-CORNWALLIS 230 kV TRANSMISSION LINES AND THE NEW 230/66 kV STATION.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR THE CONSTRUCTION OF A NEW 230/66 kV STATION AT NEEPAWA INCLUDING SECTIONALIZING AND TERMINATING 230 kV TRANSMISSION LINE D54C. THIS ITEM PROVIDES FOR THE TELECONTROL FACILITIES REQUIRED TO OPERATE THE NEW STATION AND ITS ASSOCIATED TRANSMISSION LINES.

REFERENCE:
REPORT SPD 99, 'SYSTEM EXPANSION AT NEEPAWA'.

REVISION:
CONCEPT CHANGED FROM 230-115KV TO 230-66KV PROJECT. ISD DEFERRED 3 YRS FROM 2003 10 31 TO 2006 10 31. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY $100,000.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 201

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	ASSINIBOINE WILKES AVE. 115-24 KV BANK 1 ADDITION

Proposal

Design and construct transmission and terminal facilities to firm supply to Assiniboine Wilkes Avenue as follows:

Transmission: 4.4 KM 115 KV line Assiniboine Wilkes - Line YV5 Tap.

Terminations: Extend 115-24.9 KV distribution station facilities at Assiniboine Wilkes, including new 115-24 KV 100 MVA transformer bank #1 and 3-24 KV additional feeder lines.

Communications: Expand and integrate with existing Assiniboine Wilkes facilities.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The facilities are required to firm 115-24 KV supply at Assiniboine Wilkes and provide for future area load growth. Additional feeders are required to supply load and increase feeder tie capacities in the St. James and Kirkfield station areas.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will decrease supply reliability in the Assiniboine Wilkes, St James and Kirkfield areas in case of outage of the existing 115-24 KV transformer or 115 KV tap supply line.

Factors affecting timing or viability

Assiniboine-Wilkes area load growth.

Title			Budget reference number
ASSINIBOINE WILKES W71 24KV BREAKER ADDITION			03-00-6158
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	71020

DESCRIPTION:
TERMINATE 24KV W71 FEEDER LINE AT ASSINIBOINE WILKES AVE STATION. INSTALL 1-25KV 1500 MVA CIRCUIT BREAKER AND ASSOCIATED EQUIPMENT.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR THE CONSTRUCTION OF W71 FEEDER LINE FROM ASSINIBOINE WILKES AVE STATION. THIS ITEM PROVIDES FOR THE TERMINATION OF W71 FEEDER LINE.

REFERENCE:
MEMO, W. PYL TO C.V. THIO, 1996 01 10, CENTRAL REGION 24KV STUDY REQUIREMENTS.
MEMO, L.A. MILLER TO W. PYL, 1996 01 09, REPLY TO AUGIER 12KV FEEDER STUDY CR92-27.
MEMO, W. PYL TO J.N. ROIK, 1995 05 25, 12KV SUPPLY TO WESTFAIR FOODS ON SCHOOL ROAD, ST JAMES W.O.#32730.

REVISION:
COST DECREASED BECAUSE TWO BREAKER ADDITION PROJECTS WERE DESIGNED AND INSTALLED TO THE SAME ISD RESULTING IN DECREASED LABOR COSTS.

Title			Budget reference number
ASSINIBOINE WILKES W65 24KV FEEDER ADDITION			04-00-6532
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93392

DESCRIPTION:
CONSTRUCT 2.56KM OF DUCTLINE FROM ROBLIN BLVD TO PORTAGE AVE, ON MORAY AND LAKE STREETS; ON PORTAGE AVE FROM LAKE ST. TO STURGEON RD; INSTALL 5.6KM OF 3-750 KCMIL COPPER DUCTLINE CABLE FROM WILKES ASSINIBOINE AVE TO CAVALIER DR; REBUILD OAKDALE DRIVE APPROXIMATELY 2.5KM OF DOUBLE CIRCUIT 335 ACSR OVERHEAD.

JUSTIFICATION:
ADDITIONAL FEEDER LINES ARE REQUIRED TO SUPPLY LOAD GROWTH IN THE ST JAMES AND KIRKFIELD STATION AREAS AND TO INCREASE THE FEEDER TIE CAPACITY IN THE AREA.

REFERENCE:
MEMO, W. PYL TO C.V. THIO, 1996 01 10, 'CENTRAL REGION 24KV STUDY REQUIREMENTS'.
MEMO, L.A. MILLER TO W. PYL, 1996 01 09, 'REPLY TO AUGIER 12KV FEEDER STUDY CR92-27'.
MEMO, W. PYL TO J.N. ROIK, 1995 05 25, '12KV SUPPLY TO WESTFAIR FOODS ON SCHOOL ROAD', ST JAMES W.O.#32730.

REVISION:
CONSTRUCTION MANHOURS ARE SIGNIFICANTLY LESS THAN PREVIOUSLY ESTIMATED. CONTRACTOR COSTS FOR DUCTLINE WORK ARE $500,000 LESS THAN ESTIMATED. ALUMINIUM CABLE USED INSTEAD OF COPPER AND DIRECT-BURIED WHICH IS MORE COST EFFECTIVE. 500M OF WORK ON CAVALIER DRIVE WAS NOT REQUIRED.

Title			Budget reference number
ASSINIBOINE WILKES W62 24KV FEEDER ADDITION			04-00-6533
Originating division: Planning & Control	Coordinating division: Design	Constructing division: Construction	Project Order Group (Range): 93391

DESCRIPTION:
CONSTRUCT ABOUT 0.5 KM OF 750 KCMIL SINGLE CIRCUIT 25 KV UNDERGROUND FEEDER LINE FROM ASSINIBOINE WILKES AVENUE STATION TO WILKES AVENUE AND FAIRMONT ROAD. CONTINUE FOR 3.25 KM WITH 336 ACSR CONDUCTOR USING DOUBLE CIRCUIT 25 KV OVERHEAD FEEDER LINE CONSTRUCTION TO COMMUNITY ROW AND RANNOCK AVENUE. CONTINUE APPROXIMATELY 2.4 KM WITH A SINGLE CIRCUIT 336 ACSR OVERHEAD LINE TO AN EXISTING DISTRIBUTION CENTRE DC 052 NEAR ROBLIN BOULEVARD.

JUSTIFICATION:
ADDITIONAL FEEDER LINES ARE REQUIRED TO SUPPLY LOAD GROWTH IN THE ST JAMES AND KIRKFIELD STATION AREAS AND TO INCREASE THE FEEDER TIE CAPACITY IN THE AREA.

REFERENCE:

Title			Budget reference number
ASSINIBOINE WILKES AVE W71 24KV FEEDER ADDITION			04-00-6534
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93331

DESCRIPTION:
INSTALL 1.15KM OF 3.-750KCMIL COPPER DUCTLINE CABLE FROM WILKES ASSINIBOINE STATION TO OAKDALE AND RIDGEWOOD BLVD. INSTALL 2.064KM OF 750KCMIL COPPER DUCTLINE CABLE FROM ROBLIN BLVD AND MORAY TO STURGEON RD AND PORTAGE AVE. DIRECT BURY 1.6KM OF 750KCMIL ALUMINUM CABLE FROM STURGEON RD AND PORTAGE AVE TO STURGEON AVE AND NESS AVE COMPLETE WITH 5 SWITCHING CUBICLES.

JUSTIFICATION:
ADDITIONAL FEEDER LINES ARE REQUIRED TO SUPPLY LOAD GROWTH IN THE ST JAMES AND KIRKFIELD STATION AREAS AND TO INCREASE THE FEEDER TIE CAPACITY IN THE AREA.

REFERENCE:
MEMO, W. PYL TO C.V. THIO, 1996 01 10,'CENTRAL REGION 24KV STUDY REQUIREMENTS'.
MEMO, L.A. MILLER TO W. PYL, 1996 01 09, 'REPLY TO AUGIER 12KV FEEDER STUDY CR92-27'.
MEMO, W. PYL TO J.N. ROIK, 1995 05 25, '12KV SUPPLY TO WESTFAIR FOODS ON SCHOOL ROAD', ST JAMES W.O.#32730.

REVISION:
CONSTRUCTION LABOUR HOURS WERE SIGNIFICANTLY LESS THAN PREVIOUSLY ESTIMATED. CONSTRUCTION DISTANCES WERE NOT AS GREAT AS PREVIOUSLY PLANNED. MORE ALUMINUM CABLE WAS USED INSTEAD OF COPPER ALLOWING FOR DIRECT-BURIAL OF CONDUCTOR WHICH IS MORE COST-EFFECTIVE.

DESCRIPTION:
INSTALL COMMUNICATION TO UPGRADE THE PROTECTION OF ASSINIBOINE WILKES AVE STATION IN CONJUNCTION WITH THE BANK 1 ADDITION.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR THE INSTALLATION OF BANK 1 AT ASSINIBOINE WILKES AVE. THIS ITEM PROVIDES COMMUNICATION DEVICES FOR THE PROTECTION OF BANK 1 AND ASSOCIATED EQUIPMENT.

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

ROSSER – MCPHILLIPS 115KV TRANSMISSION IMPROVEMENTS

REVISED: 1999 - 10 - 01	ISSUED BY: WNZ
COMPLEX NO. 202	

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 202

REVISION STATUS: [ ] New complex [X] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: ROSSER - MCPHILLIPS 115 KV TRANSMISSION IMPROVEMENTS

Proposal

Design and construct transmission and terminal facilities for supply to McPhillips station as follows:

Transmission: Remove jumpers at both ends of paralleled double circuit 115 KV line RL3 and extend open line ends into Rosser and McPhillips to create 115 KV line RL4.

Terminations: Extend 115 KV facilities at Rosser and McPhillips stations.

Communications: Integrated with existing facilities at Rosser and McPhillips.

JUSTIFICATION: [X] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation

Addition of a second transformer bank at West Kildonan Court station and upgrade of Winnipeg Hydro phase shifters at McPhillips station requires a transmission capacity increase between Rosser and McPhillips for load support.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will cause overloading of two remaining Rosser - McPhillips 115 KV lines during an outage of double circuit line RL3.

Factors affecting timing or viability

Winnipeg Hydro Phase Shifter Upgrade.
West Kildonan Court 2nd transformer installation.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %

ROSSER - MCPHILLIPS 115KV T/L	02-00-6986

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70336

DESCRIPTION:
CREATE A NEW 115KV TRANSMISSION LINE BETWEEN ROSSER AND MCPHILLIPS STATIONS BY REMOVING JUMPERS ON DOUBLE CIRCUIT LINE RL3. EXTEND UNUSED CIRCUIT INTO ROSSER AND MCPHILLIPS STATIONS CREATING A NEW 115KV TRANSMISSION LINE.

JUSTIFICATION:
THE ADDITION OF A SECOND BANK AT WEST KILDONAN COURT STATION AND THE UPGRADE OF WINNIPEG HYDRO PHASE SHIFTERS AT MCPHILLIPS STATION NECESSITATES A CAPACITY INCREASE BETWEEN ROSSER AND MCPHILLIPS STATIONS.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will decrease supply reliability in the Richer area during an outage of the existing Richer 230-66 KV transformer.

Factors affecting timing or viability

Richer area load.
Transmission improvements from St. Vital to Randolph / Hanover.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %

Title
RICHER SOUTH 230-66KV TRANSFORMER ADDITION

Budget reference number
03-00-6164

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70340

DESCRIPTION:
INSTALL A 50/66.7/83.3//93.3 MVA, 230-66KV, +/- 15% LTC TRANSFORMER AT RICHER SOUTH STATION C/W 2 72.5KV 2500 A BREAKER, A 40 MVA GROUNDING BANK, AND ASSOCIATED EQUIPMENT.

JUSTIFICATION:
PRESENTLY RICHER SOUTH STATION HAS A 50/66.7/83.3 MVA TRANSFORMER. CONTINGENCY SUPPLY IS PROVIDED BY THE ST VITAL - HANOVER 66KV SYSTEM WHICH HAS 150 MVA OF FIRM 66KV CAPACITY. THE 1995/96 WINTER LOADING OF THE RICHER SOUTH, ST VITAL - HANOVER 66KV SYSTEM WAS 149.6 MVA. PROPOSED LOAD TRANSFERS TO THE LETELLIER 66KV SYSTEM WILL DEFER REQUIREMENTS FOR ADDITIONAL 66KV CAPACITY UNTIL 2005/06. THIS ADDITIONAL CAPACITY WILL BE PROVIDED BY THE ADDITION OF A SECOND 230-66KV TRANSFORMER AT RICHER SOUTH STATION. THERE IS ALSO A PENDING LOAD TRANSFER OF HADASHVILLE STATION FROM THE WHITESHELL 33KV SYSTEM TO RICHER SOUTH.

REFERENCE:
MEMO, 'C.V. THIO TO E.T. FLOYDE, 1996 02 19',

ST VITAL - RICHER 66KV SYSTEMS'.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $349,000

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

PINE FALLS – BLOODVEIN 115 KV TRANSMISSION

REVISED: 1999 - 10 - 01 | ISSUED BY: WNZ

COMPLEX NO. 205

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☒ Planned ☐ In progress	205	☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	PINE FALLS - BLOODVEIN 115 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide 115 KV supply to Bloodvein station as follows:
Transmission: Construct 115 KV line 80 km Pine Falls-L48 to L5 Tap near Manigotagan. Disconnect L48 from L5 at tap location and connect L48 to new line, converting L48 from 66 KV to 115 KV operation up to Bloodvein.
Terminations: Extend 115 KV facilities at Pine Falls. Replace 66 KV transformers at Loon Straits with 2 - 115-7.2 KV 500 KVA transformers and modify station for 115 KV supply. Construct 115-66 KV station at Bloodvein, including 2 - 115-66 KV 28 MVA transformers.

JUSTIFICATION		Explanation
☒ Load	☐ Service	This complex provides increased transmission capacity required to supply Lake Winnipeg East area load increases.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will reduce reliability of supply and require load curtailments in the Lake Winnipeg East area during peak load periods.

Factors affecting timing or viability

Lake Winnipeg East load growth.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %
Pine Falls - Bloodvein 115 KV Line		14,083	14,365	14,156	-209	-1
Pine Falls Stn. Termination of Bloodvein 115 KV Line		278	284	286	2	1
Bloodvein 115-66 KV Transformer Additions		6,452	6,581	7,173	592	9
Loon Straits Station Transformer Replacement		322	328	330	2	1
TOTAL		21,135	21,558	21,945	387	2

FORECAST HISTORY (IN THOUSANDS OF DOLLARS):

APPROVED yyyy mm	TOTAL AMOUNT	AMENDMENT
96 10	19,123	New complex.
1997 10	18,190	Scope unchanged, estimate reflects revised costing methodology implemented with the new financial reporting system. Also reflects revised interest and escalation rates.
1998 10	24,646	Revised design concept - a sub standard wishbone type of transmission line was used in the previous estimate. Cursory review of the terrain also indicated that it is rougher than assumed.
1999 10	29,094	ISD deferred seven years to 2011 10 31

Title
PINE FALLS - BLOODVEIN 115KV T/L

Budget reference number
02-00-6984

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
lanning & Control	Design	Construction	70342

DESCRIPTION:
PERFORM ROUTE ENGINEERING, ENVIRONMENTAL ASSESSMENTS, OBTAIN LICENCES, ACQUIRE PROPERTY FOR 80 KM OF NEW 115KV T/L AND CONVERSION OF 88.4 KM OF 115KV T/L (OPERATING AT 66KV) FROM PINE FALLS TO BLOODVEIN.

CONSTRUCT 80 KM OF 115KV LINE FROM PINE FALLS TO BLOODVEIN TAP. INCLUDE A 115KV RIVER CROSSING OF THE WINNIPEG RIVER AT PINE FALLS

CONVERT 88.4 KM OF 115KV (OPERATING AT 66KV) FROM BLOODVEIN TAP TO BLOODVEIN TO 115KV OPERATION.

JUSTIFICATION:
IN 1984-88 CENTRAL STATION SUPPLY WAS EXTENDED TO THE DIESEL-ELECTRIC SUPPLIED LAKE WINNIPEG EAST COMMUNITIES AT 66KV. BASED UPON PREVIOUS STUDIES THIS SYSTEM IS LIMITED TO 18 MVA LOAD SUPPLIED FROM PINE FALLS. THE 1995/96 LOADING IS 13.5 MVA. IT IS EXPECTED THAT THE LOAD LIMIT OF THIS SYSTEM WILL BE REACHED BY 2004/05.

REFERENCE:
LAKE WINNIPEG EAST COMMUNITIES DIESEL ELECTRIC VS CENTRAL SUPPLY 80-06

NOTE: COMPLETION DATE FOR PROPERTY ACQUISITION: 2009 03 31

REVISION:
ISD DEFERRED FROM 2004 10 31TO 2011 10 31. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

ST. VITAL – STEINBACH 230KV TRANSMISSION

REVISED: 1999 - 10 - 01 | ISSUED BY: WNZ

COMPLEX NO. 207

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☒ Planned ☐ In progress	207	☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: ST. VITAL - STEINBACH 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, acquire property and obtain licences, design and construct transmission and terminal facilities to provide support to Steinbach as follows:
Transmission: Construct 230 KV double cct. line strung one side only along 115 KV line VJ50 r.o.w. to location 5.5 km south of St.Vital. Construct 230 KV single cct. line 45.5 km north from Steinbach and connect to south end of double cct. line. Salvage 26.5 km of 115 KV line VJ50 from Ile des Chenes tap to Randolph station tap.
Terminations: Construct 230-66 KV station at Steinbach, including 230-66 KV 83 MVA transformer and associated 230 KV and 66 KV circuit breakers. Extend 230 KV facilities at St. Vital.
Communications: Integrate with existing facilities at St. Vital.

JUSTIFICATION		Explanation
☒ Load	☐ Service	This complex provides a 230 KV supply into the Steinbach area for support of load growth in south eastern Manitoba.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

Planning & Control	Design	Construction	70345

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A ROUTE, OBTAIN LICENCING AND ACQUIRE PROPERTY FOR RIGHT-OF-WAY. DESIGN AND CONSTRUCT 51 KM OF NEW 230KV LINE BETWEEN ST VITAL AND STEINBACH STATIONS CONSISTING OF THE FOLLOWING SECTIONS: 5.5 KM OF 1272 MCM ASCR ON ONE SIDE OF NEW DOUBLE CIRCUIT BETWEEN ST VITAL AND THE FLOODWAY. THIS LINE SECTION WILL BE CONNECTED TO THE EXISTING 5 KM LONG DOUBLE CIRCUIT BETWEEN THE FLOODWAY AND ILE DES CHENES TAP. 45.5 KM OF 954 MCM ASCR SINGLE CIRCUIT BETWEEN ILE DES CHENES TAP AND STEINBACH. SALVAGE 26.5 KM OF 115KV VJ50 BETWEEN ILE DES CHENES TAP AND RANDOLPH STATION.

NOTE: COMPLETION DATE FOR PROPERTY ACQUISITION: 2006 03 01.

JUSTIFICATION:
THIS ITEM PROVIDES A 230KV SUPPLY INTO THE STEINBACH AREA WHICH WILL SUPPORT LOAD GROWTH IN SOUTH EASTERN MANITOBA.

ILE DES CHENES TAP AND VJ50 LINE SALVAGE COMPLETED ON 1997 07 24 UNDER 'ST VITAL TO TCPL 115KV LINE ' COMPLEX # 212.

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item ___ Domestic Item 227

Title: SELKIRK ESTABLISH 230-115KV STATION

Budget reference number: 03-00-6180

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70350

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, AND OBTAIN LICENSING, DESIGN AND CONSTRUCT A NEW 230-115KV STATION WITHIN EXISTING SELKIRK G.S. BOUNDARIES. INSTALL 1-230-115KV 150/200/250 MVA TRANSFORMER WITH OLTC TAP RANGE +/- 10%. TERMINATE 230KV LINE TO RIDGEWAY. FACILITIES WILL INCLUDE 1-230KV CIRCUIT BREAKER, 2-115KV BREAKERS IN A NEW BAY AND ASSOCIATED EQUIPMENT.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF RIDGEWAY-SELKIRK 230KV LINE. THIS ITEM PROVIDES FACILITIES REQUIRED TO TERMINATE THIS NEW LINE AT SELKIRK AND CONNECT THE STATION TO THE 115KV NETWORK.

REFERENCE:
MEMO, W.N. ZURBA TO C.V. THIO, 1996 04 10, 'RIDGEWAY-SELKIRK 230KV TRANSMISSION'.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $825 000

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

SOURIS – PEMBINA VALLEY 230KV TRANSMISSION

REVISED: 1999 - 10 - 01	ISSUED BY: WNZ

COMPLEX NO. 210

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 210

REVISION STATUS: [ ] New complex [ ] In service change [ ] Concept change [X] Estimate change only

COMPLEX: SOURIS - PEMBINA VALLEY 230 KV TRANSMISSION

Proposal

Perform environmental assessments and route selection, acquire property and obtain licences, design and construct transmission and terminal facilities to provide supply to Pembina Valley and firm supply to Souris as follows:
Transmission: 230 KV line 11.5 km Souris-line C28R Tap, 230 KV line 70.0 km Souris-Pembina Valley. Open line C28R west of Souris Tap to create Cornwallis-Souris 230 KV line. Connect open end of C28R to 11.5 km line to create Reston-Souris 230 KV line.
Terminations: Establish Pembina Valley 230-66 KV station, including 230-66 KV 83 MVA transformer and associated 230 KV & 66 KV circuit breakers. Extend 230 KV facilities at Souris. Modify line protection at Cornwallis and Reston.
Communications: Integrate with existing facilities at Souris, Cornwallis and Reston.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

This complex provides a 230 KV supply into the Killarney/Boissevain area around Pembina Valley to support load growth in south-western Manitoba.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will reduce reliability of supply to the Killarney / Boissevain area, and to the Souris area for an outage of 230 KV line C28R.

Factors affecting timing or viability

Load growth in south-west Manitoba.

Title
SOURIS TERMINATE PEMBINA VALLEY 230KV T/L

Budget reference number
03-00-6188

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70355

DESCRIPTION:
TERMINATE 230KV LINES TO RESTON AND PEMBINA VALLEY AT SOURIS. FACILITIES WILL INCLUDE 3-230KV BREAKERS AND ASSOCIATED EQUIPMENT.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET JUSTIFICATION IS GIVEN FOR A SOURIS-PEMBINA VALLEY 230KV LINE AND FOR SECTIONALIZING C28R INTO SOURIS. THIS ITEM PROVIDES FACILITIES TO TERMINATE THE THREE NEW 230KV LINES AT SOURIS.

REFERENCE:

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 4

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: WINNIPEG AREA TRANSMISSION REFURBISHMENT

Proposal

Refurbish 292.6 KM of double circuit and 120.7 KM of single circuit 230 and 110 KV transmission lines in the Winnipeg area. Refurbish 16.9 KM of double circuit and 49.2 KM of single circuit 63.5 KV subtransmission lines in the Winnipeg area. The refurbishment will correct insufficient ground clearances of line conductors. Using resagging, reconductoring, and tower extensions where required, the lines are to be upgraded to maintain safe ground clearances under thermal conductor loading.

JUSTIFICATION

☒ Load ☐ Service
☒ Safety ☐ Efficiency
☐ Reliability ☐ Other

Explanation

Lines in the Winnipeg area built pre-1970 cannot accommodate thermal conductor loading without violating required ground clearances. The refurbishment program will increase line to ground clearances to allow higher conductor temperatures under all potential heavy current line loads.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Complex no. 4

Advance or deferral impact

Deferral would result in a continued safety hazard due to insufficient line to ground clearances under operation with high conductor temperatures.

Factors affecting timing or viability

Time required for line measurement and testing.
Evaluation and design for refurbishment of individual circuits.
Actual (undetermined) capacities of lines.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE	
					Amount	%

Title
WINNIPEG 230 AND 100KV NETWORK T/L REFURBISHMENT (WPGTL&TL2)

Budget reference number
02-00-1259

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Operating & Maintenance	Construction	60017:74570

DESCRIPTION:
REFURBISH 14-230 AND 20-110KV NETWORK TRANSMISSION LINES IN WINNIPEG AREA (292.6 KM OF DOUBLE CIRCUIT AND 120.7 KM OF SINGLE CIRCUIT) WITH INSUFFICIENT GROUND CLEARANCES. INDIVIDUAL CIRCUIT REFURBISHMENT METHODS INCLUDE RE-SAGGING, RECONDUCTORING, TOWER HEIGHT EXTENSIONS, ETC. RECORD ALL LINE CHARACTERISTICS IN AN APPROPRIATE DATABASE FOR FUTURE REFERENCE. LINES ARE TO BE REFURBISHED IN ACCORDANCE WITH PRIORITIES SET BY THE 'TRANSMISSION FACILITIES OPTIMIZATION TASK FORCE'.

JUSTIFICATION:
TRANSMISSION LINES BUILT PRE-1970 IN THE WINNIPEG AREA WERE NOT DESIGNED TO CARRY CURRENTS PRESCRIBED BY EXPECTED LOADS WITHOUT VIOLATING MINIMUM GROUND CLEARANCES DURING ADVERSE WEATHER CONDITIONS IN SUMMER. THIS ITEM PROVIDES FOR REFURBISHMENT OF LINES TO ENSURE SAFE OPERATING GROUND CLEARANCES.

REFERENCE:
1) TPD REPORT 89-2 - RE-SAGGING OF 230KV, 110KV AND 63.5KV WINNIPEG NETWORK TRANSMISSION LINES.
2) TRANSMISSION FACILITIES OPTIMIZATION TASK FORCE - MEETING MINUTES OF MEETINGS 1 & 2 - 90 04 23 - FILE 2-15A-1.

3) E&C MEMO FILE 1-30000-00021 - 1991 08 20 D.W. MILLER TO V.J. STECIUK: 'WINNIPEG TRANSMISSION LINE REFURBISHMENT'.
4) ENG MEMO, 1995 05 15, S.S. CHEUNG TO J. KANE: 'WINNIPEG AND WINNIPEG RIVER 230KV/110KV TRANSMISSION LINE UPGRADE'. NOTE: RECONDUCTORING IS NOT ENVISIONED NOR INCLUDED IN THIS ESTIMATE.

REVISION:
REVISED ESTIMATE REFLECTS REMAINING DESIGN AND CONSTRUCTION WORK BASED ON COST DATA DERIVED SINCE THE INTRODUCTION OF THE SAP ACCOUNTING SYSTEM. THE REDUCED TOTAL COST RESULTED FROM LESS THAN EXPECTED UPGRADE WORK ON SEVERAL LINES.

CONTINGENCY: $750,000

Title
WINNIPEG 63.5 KV NETWORK TRANSMISSION LINE REFURBISHMENT

Budget reference number
04-00-1414

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93410

DESCRIPTION:
REFURBISH ALL 63.5 KV NETWORK TRANSMISSION LINES IN THE WINNIPEG AREA (16.9 KM OF DOUBLE CIRCUIT AND 49.2 KM OF SINGLE CIRCUIT) WITH INSUFFICIENT GROUND CLEARANCES. INDIVIDUAL CIRCUIT REFURBISHMENT METHODS INCLUDE RESAGGING, RECONDUCTORING, TOWER HEIGHT EXTENSIONS ETC. RECORD ALL LINE CHARACTERISTICS IN AN APPROPRIATE DATABASE FOR FUTURE REFERENCE. LINES ARE TO BE REFURBISHED IN ACCORDANCE WITH PRIORITIES SET BY THE 'TRANSMISSION FACILITIES OPTIMIZATION TASK FORCE'.

JUSTIFICATION:
TRANSMISSION LINES BUILT PRE-1970 IN THE WINNIPEG AREA CANNOT CARRY ADEQUATE LINE CURRENT WITHOUT VIOLATING MINIMUM GROUND CLEARANCES DURING ADVERSE WEATHER CONDITIONS IN SUMMER. THIS ITEM PROVIDES FOR REFURBISHMENT OF LINES TO ENSURE SAFE OPERATING GROUND CLEARANCES.

REFERENCE:
TPD REPORT 89-2 - RE-SAGGING OF 230 KV, 110KV, AND 63.5 KV WINNIPEG NETWORK TRANSMISSION LINES
TRANSMISSION FACILITIES OPTIMIZATION TASK FORCE - MEETING MINUTES OF MEETINGS 1 & 2 - 90 04 23 - FILE 2-15A-1
REPORT CR.DES.93.01 63.5 KV WINNIPEG NETWORK SUBTRANSMISSION LINE CLEARANCE STUDY.

REVISION:
NO CHANGE IN PROJECT SCOPE OR IN-SERVICE DATE.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	28	☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	DORSEY STATION 230 KV BREAKER REPLACEMENT

Proposal

Replace 25 - 230 KV Dorsey breakers with gas insulated units of 63.5 KAMP fault current interrupting capacity.
Upgrade 5 - 230 KV breakers to 63.5 KAMP fault capacity. Replace 23 sets of underrated breaker current transformers (CT's).
Purchase 3 - 1 phase spare breaker heads and a gas cart for new breaker maintenance. Install resistors on 4KV secondary windings of station service transformers SST1 & SST2. Replacements are to be installed over a three year period.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☒ Safety ☐ Efficiency ☒ Reliability ☐ Other	The specified Dorsey 230 KV breakers are underrated for the increasing short circuit levels in the Winnipeg area. The new breakers are rated to accommodate the increased fault levels.

Title
DORSEY STATION REPLACEMENT OF 230KV BREAKERS

Budget reference number
03-00-2338

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70037

DESCRIPTION:
REPLACE 25 DORSEY 230 KV BREAKERS WITH UNITS OF 63.5 KAMP FAULT CURRENT INTERRUPTING CAPACITY, INCLUDING ASSOCIATED EQUIPMENT AS REQUIRED. PURCHASE 3 - 1 PHASE SPARE BREAKER HEADS AND AN SF6 MAINTENANCE GAS CART. REPLACE 23 - 3 PHASE SETS OF BREAKER CT'S WITH INSUFFICIENT FAULT CURRENT CAPACITY. UPGRADE 5 ABB 230 KV ELF BREAKERS TO 63.5 KAMP FAULT CURRENT INTERRUPTING CAPACITY.
1994 03 11 - 10 BREAKERS, 7 CT SETS
** 1994 11 25 - 8 BREAKERS, UPGRADE 5 BREAKERS
** 1995 10 31 - 5 BREAKERS, 1 CT SETS
1996 06 30 - 2 BREAKERS
1997 10 31 - 15 CT SETS
** REPLACE ONE OF THE 1994 11 25 BREAKERS WITH 230 KV BREAKER NO. 42 SALVAGED FROM MMTU PROJECT (ITEM 9203-00-1810).
PURCHASE AND INSTALL RESISTORS ON 4 KV SECONDARY WINDINGS OF STATION SERVICE TRANSFORMERS SST1 AND SST2.

JUSTIFICATION:
TRANSMISSION ADDITIONS IN THE WINNIPEG AREA ARE INCREASING FAULT LEVELS AT THE DORSEY 230 KV BUS, SURPASSING THE FAULT INTERRUPTING CAPACITIES OF 23 OF THE 230 KV BREAKERS. BREAKER AND ASSOCIATED CT REPLACEMENTS ARE RECOMMENDED WITH UNITS CAPABLE OF ACCOMMODATING FUTURE FAULT LEVEL INCREASES AFTER ADDITION OF RIEL STATION. FIVE ELF BREAKERS MUST BE UPGRADED TO THE SAME FAULT CAPACITIES. BREAKERS 48 AND 50 ARE REPLACED DUE TO EXCESSIVE WEAR FROM HEAVY SWITCHING DUTY ON FILTER BANKS F7 & 8. THE SPARE HEADS AND GAS CART ARE REQUIRED FOR EFFICIENT MAINTENANCE. STATION SERVICE TRANSFORMER RESISTORS ARE REQUIRED TO ELIMINATE STATION FERRO-RESONANCE.

REFERENCE:
TPD REPORT 91-4,' DORSEY 230 KV FAULT LEVELS AND BREAKER UPGRADE'
TPD TM 92-8, 'ADDITIONAL REQUIREMENTS FOR DORSEY 230 KV BREAKER UPGRADE'
TPD TM 92-16, 'DORSEY 230 KV STATION BREAKER UPGRADE - BREAKER INFORMATION UPDATE'.

REVISION:
DECREASE DUE TO SETTLEMENT RECEIVED FROM SQUARE D, CONTINGENCY HAS BEEN REDUCED.

CONTINGENCY: $150 000

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 43

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: DORSEY - US BORDER 500 KV T/L INSULATOR REPLACEMENT

Proposal

Purchase and install new 36-kip suspension insulators on the 500kv transmission line between Dorsey and the US border to replace the existing defective ones. The scope of the work includes a total of 475 suspension, and possibly 15 dead end, towers..

JUSTIFICATION

☒ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

A 1994/95 test program indicated that the existing 36-kip suspension insulators in this line are defective. This item provides for their replacement and full restoration of the lines integrity.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 7

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: BIPOLE 1 & 2 LINE SPACER DAMPERS REPLACEMENT

Proposal

Design and install a new damping system for the 2 DC transmission lines Radisson/Dorsey (896 KM each) and the DC transmission line Henday/Radisson (42 KM) to restore their capacity to suppress aeolian vibration to the origional design level. The new damping system will either reuse the existing refurbished spacer dampers or use new dampers of the existing design.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

These transmission lines are experiencing fatigue failures in the cross arms of the suspension towers. The origin of these failures has been traced to deterioration and some failures of the spacer dampers after approximately 25 years of service. A rehabilitation program is necessary to prevent further failures and escalating consequential failures of conductores.

RADISSON-DORSEY AND HENDAY-RADISSON DC LINES SPACER DAMPERS

Budget reference number
02-00-6977

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Operating & Maintenance	Construction	70031

DESCRIPTION:
DESIGN AND INSTALL A NEW DAMPING SYSTEM FOR THE 2 DC TRANSMISSION LINES BETWEEN RADISSON- DORSEY (896 KM EACH) AND THE DC TRANSMISSION LINE BETWEEN HENDAY-RADISSON (42 KM), TO RESTORE THEIR CAPACITY TO SUPPRESS AEOLIAN VIBRATION TO THE ORIGINAL DESIGN LEVEL. THE NEW DAMPING SYSTEM WILL EITHER REUSE THE EXISTING REFURBISHED SPACER DAMPERS OR USE NEW DAMPERS OF THE EXISTING DESIGN.

JUSTIFICATION:
THESE TRANSMISSION LINES ARE EXPERIENCING FATIGUE FAILURES IN THE CROSS ARMS OF THE SUSPENSION TOWERS. THE ORIGIN OF THESE FAILURES HAS BEEN TRACED TO THE DETERIORATION AND SOME FAILURES OF THE SPACER DAMPERS AFTER APPROXIMATELY 25 YEARS OF SERVICE. A REHABILITATION PROGRAM IS NECESSARY TO PREVENT FURTHER FAILURES AND ESCALATING CONSEQUENTIAL FAILURES OF CONDUCTORS.

REFERENCE:
MANITOBA HYDRO 500KV DC TRANSMISSION LINE VIBRATION STUDY BY HERBERT J. HUSTON & CO. INC., INDUSTRIAL TECHNOLOGY CENTRE, DATED APRIL, 1995.
TECHNICAL REVIEW COMMITTEE MINUTES OF MEETING #158, DECEMBER 10, 1996.

REVISION:
ORIGINAL CONTRACT ESTIMATE BASED ON $120/DAMPER, ACTUAL CHARGES ARE APPROXIMATING $62/DAMPER. REFURBISHING OF EXISTING DAMPERS DEFERRED FOR ONE YEAR SO THAT COLD TEMPERATURE RUBBER BUSHING SLIP PROBLEM CAN BE RECTIFIED. ADDITIONAL FUNDING IN THIS REVISION FOR RETRO-FITTING DAMPERS REFURBISHED AND INSTALLED ON THE LINES IN 1998.

CONTINGENCY: $750 000

Advance or deferral impact

System Planning report 98/2 recommended that bus enhancement be done A.S.A.P. due to the secutity risk. Deferral increases the risk of system collapse.

Factors affecting timing or viability

A detailed design study will be done due to the complexity of protection changes.

COMPLEX: FLIN FLON AREA TRANSMISSION IMPROVEMENTS

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities, and reconnect T/L in Flin Flon area to salvage Switch Tower #3, Mile 13 Stn, and Mile 13 - Sherridon section of HS15 and to enhance system reliability. Transmission: Construct115 kV line 6.0 km Herblet L Stn - Chisel L tap, 115 kV line 1.5 km Ross L Stn - Switch Tower #3 line 1. Upgrade 115 kV line 73 km HS15 Herblet L Stn - Sherridon Stn. Termination: Establish single line termination into Ross L Stn for lines I1F & I2F, terminate HBM&S line 1 & re-terminate HBM&S line 3 and re-terminate line RC56 into Ross L Stn, install former Ponton's 30/40/45 MVA transformer bank at Herblet L Stn, terminate the new line to Chisel L tap into Herblet L Stn, install a single phase station service power VT at Ponton Stn. Modify, upgrade and coordinate protection at Ross L, Herblet L, Sherridon and Ponton . Communications: Modify to accommodate 2-line supply to HBM&S and changes at Ross L and Herblet L.

JUSTIFICATION

[X] Load [ ] Service
[X] Safety [X] Efficiency
[X] Reliability [ ] Other

Explanation

Facilities are required to decommission crumbling Mile 13 Station and Switch Tower #3, to enhance reliability of transmission to HBM&S, to firm transformation at Herblet Lake Station, and to firm supply to Snow Lake area loads.

DEDICATED LINES TO HBM&S AND PARALLELING R1F / R2F	02-00-8004

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70566

DESCRIPTION:
CONSTRUCT 1.5 KM SINGLE CIRCUIT 115KV LINE BETWEEN ROSS LAKE STATION AND SWITCH TOWER #3 LOCATION USING 477 MCM CONDUCTOR. INSTALL THE REQUIRED STRUCTURES, INCLUDING A DOUBLE CIRCUIT CORNER TOWER AT SWITCH TOWER #3 SITE TO CONNECT THE NEW ROSS LAKE LINE TO HBM&S LINE 1 AND ALSO TO CONNECT FR54 TO HBM&S LINE 3. INSTALL ONE SWITCHING STRUCTURE, TWO SETS OF MANUALLY OPERATED DISCONNECT SWITCHES, AND ALL THE REQUIRED TELECOMMUNICATION HARDWARE FOR PARALLELING ISLAND FALLS LINES I1F AND I2F AT SWITCH TOWER #3 LOCATION. ON THE NEW SWITCHING STRUCTURE, CONNECT FR55 TO THE PARALLELED I1F/I2F.

JUSTIFICATION:
TWO DEDICATED ROSS LAKE STATION - HBM&S LINES SEPARATE THE HBM&S LOAD FROM SASK POWER SYSTEM. NEW CONFIGURATION ENHANCES THE RELIABILITY OF SUPPLY TO HBM&S LOAD. PARALLELING I1F/I2F AT SWITCH TOWER #3 SAVES SPACE ON ROSS LAKE STATION 115KV RING BUS AND DEFERS INSTALLATION OF BREAKER R6.

REFERENCE:
REPORT SPD 98/3, 'FLIN FLON AREA IMPROVEMENTS'.

REVISION:
NEW ITEM

CONTINGENCY: $277 000

TRANSMISSION LINE HS15 SALVAGE AND UPGRADE			02-00-8005
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70567

DESCRIPTION:
SALVAGE 65 KM OF 115 KV LINE HS15 BETWEEN I1F/I2F TAP AND SHERRIDON STATION. UPGRADE 73 KM OF HS15 BETWEEN HERBLET LAKE AND SHERRIDON STATIONS . FIX TOWERS AND INSULATORS WHERE REQUIRED AND CLEAN UP THE RIGHT OF WAY.

JUSTIFICATION:
MILE 13 - SHERRIDON SECTION OF HS15 BECOMES REDUNDANT FOLLOWING THE SALVAGE OF MILE 13 STATION. HERBLET LAKE - SHERRIDON SECTION OF HS15 SHOULD BE UPGRADED TO SUPPLY SHERRIDON STATION AND TO PROVIDE FIRM SUPPLY TO SNOW LAKE AREA LOADS.

Title	Budget reference number
FLIN FLON ROSS LAKE - SALVAGE SWITCHTOWER #3 AND RECONFIGURE	03-00-8352

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70561

DESCRIPTION:
SALVAGE SWITCH TOWER #3 AND ITS ASSOCIATED COMMUNICATION AND SWITCHING EQUIPMENT. UTILIZING A DOUBLE CIRCUIT DEAD END STRUCTURE TERMINATE THE NEW LINE TO SWITCH TOWER #3 LOCATION INTO ROSS LAKE STATION BETWEEN BREAKERS R7 AND R8. RE-TERMINATE LINE FR55 BETWEEN BREAKER R5 AND FUTURE BREAKER R6. RE-TERMINATE LINE RC56 BETWEEN BREAKER R3 AND R4. RE-TERMINATE LINE FR54 BETWEEN BREAKERS R4 AND R5. MAKE ALL THE NECESSARY PROTECTION AND COMMUNICATION CHANGES TO ACCOMMODATE TWO DEDICATED LINES FROM ROSS LAKE STATION TO HBM&S. TRANSFER CUSTOMER BILLING AND METERING EQUIPMENT FROM HBM&S TO ROSS LAKE STATION.

JUSTIFICATION:
SALVAGING OF SWITCH TOWER #3 IS DUE TO THE UNSAFE CONDITION OF THE STRUCTURE. CHANGES TO THE 115KV RING BUS ARE TO ENHANCE RELIABILITY OF SUPPLY TO HBM&S BY PROVIDING TWO DEDICATED LINES FROM ROSS LAKE STATION.

REFERENCE:
REPORT SPD 98/3 'FLIN FLON AREA IMPROVEMENTS'.

Title			Budget reference number
HERBLET LAKE - ADD SPARE 230 - 115K BANK AND 115KV T/L			03-00-8354
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70559

DESCRIPTION:
INSTALL 30/40/45 MVA 230-115-13.8 KV AUTO TRANSFORMER (FROM PONTON), TWO 230KV VERTICAL BREAK MOD'S RATED FOR INTERRUPTING THE MAGNETIZING CURRENT AND ONE NEW 115 KV BREAKER. CO-TERMINATE THE 230 KV SIDES OF NEW AND EXISTING TRANSFORMERS. TERMINATE THE NEW HERBLET LAKE - CHISEL LAKE TAP 115 KV LINE INTO HERBLET LAKE STATION UTILIZING A NEW 115KV BREAKER.

NOTE
ISD EXCEPT FOR THE TERMINATION 2000 10 31

ISD FOR LINE TERMINATION 2004 10 31

JUSTIFICATION:
115 KV OPERATION OF H59C AS A BACK UP TO HERBLET LAKE 30/40/50/56 MVA BANK WOULD COMPROMISE SUPPLY TO ROSS LAKE AND HBM&S AND WOULD REDUCE THE ABILITY TO TRANSFER POWER OUT OF THE NORTH. THE SECOND TRANSFORMER BANK FIRMS UP 230 - 115 KV TRANSFORMATION AT HERBLET LAKE STATION AND FREES H59C FOR 230 KV OPERATION.

REFERENCE:
REPORT SPD 98/3 'FLIN FLON AREA IMPROVEMENTS'.

PONTON-CONVERT STATION SERVICE AND SALVAGE AUTO TRANSFORMER			03-00-8355
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70558

DESCRIPTION:
SALVAGE 230-115-13.8 KV, 30/40/45 MVA STATION SERVICE TRANSFORMER. CONVERT THE THREE PHASE STATION AIR CONDITIONING LOAD TO SINGLE PHASE. PURCHASE TWO SINGLE PHASE 138 KV-120/240 V POWER VT UNITS. INSTALL ONE POWER VT UNIT AS MAIN STATION SERVICE SUPPLY AND STORE THE SECOND UNIT AS SPARE.

JUSTIFICATION:
RELOCATING THE 30/40/45 MVA, 230/115/13.8 KV TRANSFORMER BANK FROM PONTON TO HERBLET LAKE STATION NECESSITATES AN ALTERNATIVE STATION SERVICE SUPPLY AT PONTON.

NOTE: ONE SPARE POWER VT TO BE PURCHASED TO STORES AT $145 000.

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

PINE FALLS – GREAT FALLS
115-66 KV SYSTEM

REVISED: 1999 - 10 - 01	ISSUED BY: JEP / GKZ
COMPLEX NO. 257	

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
[X] Planned [ ] In progress	257	[X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: PINE FALLS > GREAT FALLS 115-66KV SUPPLY

Proposal
Establish a new 115-66kV Station at Great Falls, with a 115kV circuit to the Great Falls G.S. Install a new voltage regulation device at Bloodvein. Construct a new 66kV 266.8 MCM line from Great Falls 115-66kV station to Great Falls -North 66-12kVstation and re-route line #77 to the new Great Falls 115-66kV station. Salvage the existing Great Falls 115-66kV, 5/6.67 MVA autotransformer station.

JUSTIFICATION	Explanation
[X] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other	THE ADDITION OF 115-66KV CAPACITY AT GREAT FALLS WILL PROVIDE CONTINGENCY CAPACITY FOR THE PINE FALLS 66KV SYSTEM WHICH WILL RUN SHORT BY 2008/09. THE EARLIER 2003 ISD IS RECOMMENDED TO SEPARATE GREAT FALLS -N STN AND BISSETT AREA ONTO SEPARATE BREAKERS. OUTAGES HAVE BEEN A CUSTOMER CONCERN AND THIS SERVICE DOES NOT MEET BASIC RELIABILITY INTENT OF THE TRANSMISSION PLANNING CRITERIA FOR FIRM LOAD.

Estimate Level	COMPLEX START (yyyy mm)

Title			Budget reference number
BLOODVEIN VOLTAGE CONTROL DEVICE			03-00-8403
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70632

DESCRIPTION:
INSTALL A NEW VOLTAGE REGULATION DEVICE (STATIC VAR COMPENSATOR OR SIMILAR DEVICE) AT BLOODVEIN. A DETAILED OPTIMIZATION STUDY IN CONJUNCTION WITH AN EQUIPMENT VENDOR IS REQUIRED TO DETERMINE THE ACTUAL VOLTAGE REGULATION DEVICE.

JUSTIFICATION:
THE PINE FALLS - LAKE WINNIPEG EAST 66KV SYSTEM IS APPROACHING ITS LOAD LIMIT. BY 2002/03 VOLTAGE LEVELS BEYOND BLOODVEIN WILL BE BELOW MINIMUM ACCEPTABLE LEVELS FOR NORMAL SUPPLY AS REQUIRED BY THE TRANSMISSION PLANNING CRITERIA FOR FIRM LOAD. WHEN CENTRAL SUPPLY WAS FIRST EXTENDED TO THE LAKE WINNIPEG EAST COMMUNITIES IN 1983/84, IT WAS PLANNED TO EXTEND 115KV SUPPLY TO BLOODVEIN WHEN THE 66KV SUPPLY BECAME INADEQUATE. FOR THIS REASON LINE 48 WAS BUILT FOR FUTURE CONVERSION TO 115KV OPERATION. HOWEVER, SINCE THAT TIME, TECHNOLOGICAL ADVANCES HAVE MADE IT POSSIBLE TO EXTEND THE LIFE OF WEAK SYSTEMS WITH RAPID RESPONSE VOLTAGE REGULATION DEVICES CONFIGURATION.

Title			Budget reference number
GREAT FALLS NEW 115-66 KV STATION			03-00-8404
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70634

DESCRIPTION:
ESTABLISH A NEW 115-66 KV STATION AT GREAT FALLS USING ONE OF THE 15/20 MVA, 115-66 KV, 3 PHASE TRANSFORMERS SALVAGED FROM BIRTLE SOUTH. PROVIDE TWO 66 KV LINE TERMINATIONS WITH CIRCUIT BREAKER PROTECTION.

JUSTIFICATION:
THE ADDITION OF 115-66KV CAPACITY AT GREAT FALLS WILL PROVIDE CONTINGENCY CAPACITY FOR THE PINE FALLS 66KV SYSTEM WHICH WILL RUN SHORT OF FIRM 66KV CAPACITY BY 2008/09. THE EARLIER 2003 ISD IS RECOMMENDED SO THAT THE SUBSTANDARD LINE 77 CAN BE USED AS AN ALTERNATE SUPPLY TO THE BISSETT AREA, REMOVE THE 30 DEGREE PHASE SHIFT, AND SEPARATE GREAT FALLS NORTH STATION AND BISSETT AREA SUPPLIES ONTO SEPARATE BREAKERS TO IMPROVE THE RELIABILITY OF THIS SYSTEM. EXTENDED OUTAGES HAVE BEEN A CAUSE FOR CONCERN BY THE CUSTOMERS AFFECTED AND THIS SERVICE DOES NOT MEET THE BASIC RELIABILITY INTENT OF THE TRANSMISSION PLANNING CRITERIA FOR FIRM LOAD.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 55

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: JENPEG-NORWAY HOUSE 66KV SUBTRANSMISSION LINE

Proposal

Perform environmental assessments and route selection, design and construct transmission and terminal facilities to provide firm supply to Norway House as follows:

Transmission: 66 KV line 85 KM Jenpeg - Norway House.

Terminations: Extend 66 KV facilities at Jenpeg station, including 3 - 66 KV breakers and 2 - 66 KV grounding transformers.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The 66 KV line is required for reliability of supply to Norway House and voltage control.

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item — Domestic Item 255

Title: JENPEG TO NORWAY HOUSE 66 KV LINE

Budget reference number: 04-00-3029

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93309

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, SELECT A ROUTE, ACQUIRE PROPERTY AND LICENSING, AS WELL AS DESIGN AND CONSTRUCT APPROXIMATELY 85 KM OF 66kV - 266.8 MCM ACSR LINE FROM JENPEG TO NORWAY HOUSE.

INSTALL 2 - 66 kV SWITCHES NEAR THE NORWAY HOUSE STATION.

JUSTIFICATION:
STUDIES SHOW THAT THIS LINE WILL NOT BE REQUIRED UNTIL 2004 TO MAINTAIN ACCEPTABLE VOLTAGE LEVELS. HOWEVER, IT WAS TO BE ADVANCED TO 2002 TO IMPROVE SERVICE RELIABILITY TO THE NORWAY HOUSE STATION. THE SERVICE RELIABILITY RECORD OF THE EXISTING 66 kV SUPPLY TO THE NORWAY HOUSE STATION FROM THE WILLIAM RIVER TERMINAL IS MUCH WORSE THAN FOR OTHER SUPPLIES IN THE PROVINCE.

REFERENCE:
REPORT TPD 92-6, 'SECOND 66 kV SUPPLY TO NORWAY HOUSE STATION'. ALSO REFER TO ADDITIONAL OUTAGE STATISTICS IN MINUTES OF TRC MEETING #132, HELD 1992-10-14.
'ELECTRIC SUPPLY TO NORWAY HOUSE' SPD 99/1 DATED 1999-01-13

REVISION:
SYSTEM PLANNING REPORT 99/1 RECOMMENDS THAT 2 LINE SWITCHES BE INSTALLED NEAR WILLIAM RIVER IN 1999 TO IMPROVE SITUATION. ISD DEFERRED 2 YEARS FROM 2002 TO 2004 FOR CAPITAL CONSTRAINT REASONS.

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	RUTTAN - SOUTH INDIAN LAKE 66KV LINE

Proposal

1. Construct 75.6 km of 66kv 2/0 acsr line from Ruttan Lake to South Indian Lake. Salvage 75.6 km of 33kv line between Ruttan Lake-South Bay-South Indian Lake.
2. Salvage Southbay 33-12kv station, complete with 3 - 100kva 33 - 7.2kV transformers
3. Ruttan Lake station "a" - salvage existing 3 -1 000kva 12-33kv transformers re-locate 1 - 15/20/25mva 138-12kv transformer from Ruttan Lake station "b". Install 2 - 7.5/10mva LTC 12-66kv transformers.
4. Construct a 66-12kv station at South Indian Lake c/w 3 - 7.5/10mva LTC transformers. Salvage existing 33-12kv station.

JUSTIFICATION

☒ Load ☐ Service ☐ Safety ☐ Efficiency ☐ Reliability ☐ Other

Explanation

The existing Ruttan Lake - South Indian Lake power supply is limited to 300 kva. Based on current load forecast, the voltage regulation on the existing system will result in inadequate customer voltages. The proposed 12-66kv Ruttan Lake station, Ruttan - South Indian Lake 66kv line and South Indian Lake 66-12kv station will provide additional capacity and adequate voltage regulation.

Title			Budget reference number
RUTTAN LAKE STATION (A)			03-00-4858
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70000:70538

DESCRIPTION:
1. SALVAGE THE EXISTING 3-1000 KVA 12-33KV TRANSFORMER BANK AND INSTALL 2X 10/13 MVA 66-12 KV TRANSFORMERS - ISD 97 08 30.

2. CONSTRUCT A NEW 138-66 KV STATION AND SALVAGE THE EXISTING RUTTAN 'A' STATION - ISD 2002 08 31.

JUSTIFICATION:
THE EXISTING RUTTAN LAKE - SOUTH INDIAN LAKE POWER SUPPLY IS LIMITED TO 3 000 KVA DUE TO LIMITED FAULT CURRENT AVAILABLE AT SOUTH INDIAN LAKE. THE PROPOSED 12 - 66 KV STATION AT RUTTAN LAKE, RUTTAN LAKE - SOUTH INDIAN LAKE 66KV LINE AND SOUTH INDIAN LAKE 66-12KV STATION WILL PROVIDE ADDITIONAL REQUIRED CAPACITY.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $500 000

NOTE: THE CONCEPT FOR THIS PROJECT WILL CHANGE ONCE SYSTEM PLANNING FINISHES THEIR STUDY (PRESENTLY IN PROGRESS). THE ISD WILL ALSO LIKELY BE DEFERRED. THE NEW CONCEPT WILL BE LESS EXPENSIVE.

Title	Budget reference number
RUTTAN LAKE - SOUTH INDIAN LAKE 66 KV SUPPLY	04-00-5486

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93311

DESCRIPTION:
1. CONSTRUCT 75.6 KM 66 kV 266.8 MCM ACSR LINE FROM RUTTAN LAKE TO SOUTH INDIAN LAKE.
2. SALVAGE 51.5 KM 33 kV #1 ACSR LINE FROM RUTTAN LAKE TO SOUTH BAY.
3. SALVAGE 24.1 KM 33 kV 2/0 ACSR LINE FROM SOUTH BAY TO SOUTH INDIAN LAKE.
4. COMPLETE FEEDER EGRESS AND DISTRIBUTION CHANGES AT SOUTH INDIAN LAKE.
5. COMPLETE STATION EGRESS AND DISTRIBUTION CHANGES AT RUTTAN LAKE.

JUSTIFICATION:
THE EXISTING 33 kV RUTTAN LAKE TO SOUTH INDIAN LAKE LINE IS LIMITED TO 3,000 kVA DUE TO LIMITED FAULT CURRENT AND THE CAPACITY OF SUBMARINE CABLES AT SOUTH INDIAN LAKE. BASED ON LOAD FORECASTS, THE LOADS AT SOUTH INDIAN LAKE WILL EXCEED THE CAPACITY OF THE SYSTEM IN 1996/97 WINTER. THE PROPOSED 66 kV SYSTEM WILL PROVIDE ADDITIONAL REQUIRED CAPACITY.

REFERENCE:
E.R REPORT #95-22: RUTTAN LAKE - SOUTH INDIAN LAKE 66 kV SUPPLY.

REVISION:
SALVAGE FROM SOUTH BAY TO SOUTH INDIAN LAKE DELAYED UNITL HIGHWAY IS COMPLETED IN THE FALL OF YEAR 2000. ITEM DEFERRED 1 YEAR.

COMPLEX	CENTRAL SUPPLY TO PIKWITONEI AND THICKET PORTAGE

Proposal

1. Construct 5km-66kV line (operating 12kV) from Mystery L. Stn. Fdr.TM9 to jctn of PTH#6 and Jonas Rd.
2. Construct a 12-25kV interchange bank c/w 4-1000kVA single phase 7.2-14.4kV units (one spare).
3. Construct 44.3km-66kV line (operating 25kV) from jctn PTH#6 & Jonas Rd. to Sipiwesk.
4. Construct 21.5km-25kV line from Sipiwesk to Pikwitonei. Rebuild and convert Pikwitonei distribution to 25kV.
5. Construct 24.7km-25kV line from Sipiwesk to Thicket Portage. Rebuild and convert distribution to 25kV.
6. Salvage diesel units at Pikwitonei and Thicket Portage and remediate sites.

JUSTIFICATION: ☒ Load ☒ Service ☐ Safety ☐ Efficiency ☐ Reliability ☐ Other

Explanation: The communities of Pikwitonei and Thicket Portage were scheduled for conversion to enhanced diesel supply in 1997. Due to the proximity of central station supply at Thompson and the associated benefits to our customers and Manitoba Hydro, central supply is the preferred option, provided that a contribution can be negotiated.

CENTRAL SUPPLY TO PIKWITONEI AND THICKET PORTAGE	04-00-5498

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93312

DESCRIPTION:
Extend central station supply to the communities of Thicket Portage and Pikwitonei (presently supplied by diesel - electric generation) as follows:

1. Construct 5 km 66 kV - 266.8 MCM ACSR (operating 12 kV) from Mystery Lake Station Feeder TM9 to junction of PTH #6 & Jonas Road.
2. Construct a 12-25 kV interchange bank c/w 4x1000 kva single phase 7.2 - 14.4 kV units (one spare).
3. Construct 44.3 km 66 kV - 266.8 MCM ACSR (operating 25 kV) from junction PTH #6 & Jonas Road to Sipiwesk.
4. Construct 21.5 km 25 kV - 2/0 ACSR line from Sipiwesk to Pikwitonei.
5. Construct 24.7 km 25 kV - 2/0 ACSR line from Sipiwesk to Thicket Portage.
6. Pikwitonei rebuild.
7. Convert pikwitonei distibution to 25 kV.
8. Thicket Portage rebuild.
9. Convert Thicket Portage distribution to 25 kV.

*** REPORT PENDING ***

JUSTIFICATION:
The communities of Pikwitonei and Thicket Portage have been scheduled for conversion to enhanced diesel supply in 1997. Due to the proximity of central station supply at Thompson and the associated benefits to our customers and Manitoba Hydro, central station supply is the preferred option.

Provided that a capital contribution can be negotiated to reduce the central supply capital expenditure to equal the cost of enhanced diesel supply, Manitoba Hydro will extend central supply.

COMPLEX	PINEY - SPRAGUE 66 KV LINE

Proposal

Perform route selection, design and construct transmission and terminal facilities for the supply of Sprague as follows:

Transmission: 66 KV line 27 km Piney - Sprague. Salvage 33 KV line L11 Piney - Sprague.

Terminations: Construct 66-12 KV station at Sprague, including 66-12 KV 10 MVA transfomer and 2 - 66 KV bays. Salvage Sprague 33-12 KV station and Piney 66-33 KV station.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

This complex provides support for load increases and eliminates requirement for extensive 33 KV system rebuilding in Sprague area.

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1997 10	1 112	INCREASE REFLECTS CURRENT TYPICAL COSTS FOR SITE IMPROVEMENTS ($35,000) . LABOUR AND MATERIAL ESCALATED 2% OVER 1996 ESTIMATE CONVERSION TO SAP.
1998 10	1 508	THE INCREASE IS DUE IN PART TO THE INSTALLATION OF AN INTERCHANGE BANK 12KV TO 25KV STEP-UP) TO SUPPLY CUSTOMERS IN THE NORTHWEST ANGLE WHICH ADDED $200,000 TO THE ESTIMATE SINCE ALL STRUCTURES HAVE TO BE INSTALLED WHEN THE STATION IS CONSTRUCTED. THE SITE IMPROVEMENTS COST AN ADDITIONAL 91,000 MAINLY DUE TO FILL MATERIAL HAVING TO TO BE TRUCKED IN AS OPPOSED TO LOCAL MATERIALS. THE REMAINDER OF THE INCREASE IS SPREAD OVER THE OTHER ACCOUNTS. ESTIMATE REVISED TO A DETAILED LEVEL.

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

BIRTLE – ROSSBURN 66KV LINE

REVISED: 1999 - 10 - 01	ISSUED BY: WNZ

COMPLEX NO. 209

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 209

REVISION STATUS: [ ] New complex [ ] In service change [ ] Concept change [X] Estimate change only

COMPLEX: BIRTLE - ROSSBURN 66 KV LINE

Proposal

Perform route selection, design and construct transmission and terminal facilities for supply to Rossburn and Shoal Lake as follows:

Transmission: 66 KV line 46 km Birtle Queen - Rossburn, 66 KV line 19 km Shoal Lake - Tap on Birtle Queen to Rossburn line. Open 66 KV line L95 at Birtle South north of Beaulah tap and extend open end into Birtle South.

Terminations: Extend 66 KV facilities at Birtle South.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

This complex provides voltage support for distribution loads in the Rossburn area, maintains firm supply to increased load at Shoal Lake, and extends the service life of the Raven Lake 33 KV system.

CAPITAL EXPENDITURE FORECAST COMPLEX
(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral will result in inadequate Rossburn area voltage support under peak conditions and reduce firm load support capability to Shoal Lake.

Factors affecting timing or viability

Rossburn and Shoal Lake area load growth.

COMPLEX SPECIFICS:

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item — Domestic Item — 268

Title
BIRTLE SOUTH - ROSSBURN 66KV T/L

Budget reference number
04-00-6538

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70365:94208

DESCRIPTION:
CONSTRUCT 46 KM OF 66KV, 266.8 KCMIL LINE FROM BIRTLE QUEEN STATION TO ROSSBURN STATION. PROVIDE A NEW LINE SECTION AT BIRTLE SOUTH STATION TO TURN THE NORTH TAP (TOWARDS BIRTLE QUEEN STATION) OF LINE 95 INTO A NEW TERMINATION AT BIRTLE SOUTH STATION.

JUSTIFICATION:
THE 66KV STATIONS AT ANGUSVILLE, WAYWAYSEECAPO, AND ROSSBURN DEPEND ON DISTRIBUTION VOLTAGE REGULATION TO MAINTAIN ADEQUATE DISTRIBUTION VOLTAGE LEVELS. BY 2004/05 IT IS EXPECTED THAT 66KV VOLTAGE LEVELS WILL NOT PROVIDE ADEQUATE INPUT LEVELS TO MAINTAIN MINIMUM DISTRIBUTION VOLTAGE LEVELS.

269

Title: SHOAL LAKE - 66KV SUPPLY

Budget reference number: 04-00-6539

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70366:94209

DESCRIPTION:
CONSTRUCT 19 KM OF 66KV 266.8 KCMIL LINE FROM NW35-16-25W (BIRTLE - ROSSBURN LINE) TO SHOAL LAKE STATION.

JUSTIFICATION:
SHOAL LAKE IS PRESENTLY SUPPLIED AT 33KV FROM RAVEN LAKE STATION. BY 2005/06 IT IS ANTICIPATED THAT THE RAVEN L 33KV FIRM CAPACITY OF 25 MVA WILL BE EXCEEDED. THE TRANSFER OF SHOAL LAKE STATION TO BIRTLE SOUTH 66KV SUPPLY WILL EXTEND THE LIFE OF THE RAVEN LAKE 33KV SYSTEM. IN 2000/01 IT IS PLANNED TO INCREASE CAPACITY AT SHOAL LAKE. DUAL VOLTAGE (66/33KV) TRANSFORMERS WILL BE INSTALLED TO SET UP THE TRANSFER TO BIRTLE SOUTH 66KV SUPPLY.

CONTINGENCY AMOUNT: $0

REFERENCE:
BIRTLE SOUTH AND RAVEN LAKE SYSTEMS SPED REPORT 96-04

REVISION:
REVISED TO REFLECT OVERHEAD AND ACTIVITY RATE CHANGES.

CONTINGENCY AMOUNT: $0

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

ST BONIFACE – PLESSIS ROAD
115-24 KV STATION

REVISED: 1999 - 10 - 01	ISSUED BY: CS
COMPLEX NO. 237	

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no.: 237

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX	ST BONIFACE - PLESSIS RD 115-24KV STATION

Proposal

DESIGN AND CONSTRUCT A NEW STEEL 115/24 KV STN ALONG PLESSIS ROAD TO ACCOMMODATE 2- 60/80/100/112 MVA, 114.3-24/13.8 KV LTC TRANSF'S WITH NEUTRAL REACTORS, A 115KV BRKR AND 12 - 24KV FDR LINES. INTIALLY, INSTALL 1- 60/80/100/112 MVA, 114.3-24/13.8 KV +/- 10% LTC TRANSF AND NEUTRAL REACTOR, 8-24KV CIRCUIT BREAKERS, 6-24 KV CIRCUIT LINE REACTORS, 2-24 KV CIRCUIT SWITCHERS, AND 2-14.4 MVAR 24 KV CAPACITOR BANKS. PROTECTION FOR THE TRANSF AND THE SECTIONALIZED 115 KV SV23 LINE TERMINATIONS INTO THE STATION IS PROVIDED BY OPENING BRKRS ON LINES AT ST BONIFACE RD AND SELKIRK GENERATING STATION, (TRANSCONA-FUTURE) OR ST. VITAL TERMINAL VIA TELECOMMUNICATIONS. TRANSIENT VOLTAGE STUDIES MAY BE REQUIRED TO DEFINE THE TRANSIENT RECOVERY VOLTAGE MITIGATING EQUIPMENT.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

THIS NEW STATION IS REQUIRED TO SUPPORT THE LOAD GROWTH IN THE AREA AND TO PROVIDE BACKUP TO OTHER 24 KV STATIONS NEARBY.

Title: ST. BONIFACE PLESSIS ROAD STATION 115kV T/L IMPROVEMENTS

Budget reference number: 02-00-7998

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70410

DESCRIPTION:
SECTIONALIZE 115 KV TRANSMISSION LINE SV23 FROM THE SELKIRK - ST. VITAL 115 KV RIGHT-OF-WAY AND TERMINATE BOTH LINES AT THE NEW ST BONIFACE PLESSIS ROAD STATION - ISD 2000 09 30.
RECONDUCTOR/REBUILD APPROXIMATELY 2.7 KM OF GT1/ST2 FROM SV23 TO TRANSCONA WITH 795 MCM ACSR @ 100C - ISD 2001 04 30.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR ESTABLISHMENT OF THE NEW ST. BONIFACE PLESSIS ROAD STATION. THIS ITEM PROVIDES PRIMARY SUPPLY FOR BANK 1.

Title
ST BONIFACE PLESSIS RD STATION - 4-24KV FEEDER LINES

Budget reference number
04-00-7564

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93387

DESCRIPTION:
BUILD FOUR 24KV CIRCUITS FROM THE PROPOSED ST BONIFACE STATION SITE TO TIE INTO THE EXISTING 24KV LINES D41, D43, V41 AND V45. TIE TWO CIRCUITS INTO D41 AND D43 IN THE VICINITY OF LAGIMODIERE BOULEVARD AND MARION STREET. TIE TWO CIRCUITS INTO V41 AND V45 IN THE VICINITY OF LAGIMODIERE BOULEVARD AND FERMOR AVENUE.

JUSTIFICATION:
UTILIZE THE NEW FEEDER LINES TO SUPPLY LOAD GROWTH IN THE ST VITAL AND DAWSON ROAD STATION AREAS AND TO INCREASE THE FEEDER TIE CAPACITY IN THE AREA.

REFERENCE:
L.A. MILLER TO W.PYL 'GOULET 4KV FEEDER CHANGES', 96-05-29, FILE 74P
G.K. ZIELKE TO V. KOSCHIK 'DAWSON ROAD - ST VITAL 24KV SYSTEM', 96-06-20

REVISION:
CHANGE IN PROPOSED STATION LOCATION REQUIRES LONGER FEEDER LINES AND AN UNDERGROUND DUCT BANK.

Title: ST BONIFACE - PLESSIS ROAD STATION COMMUNICATION REQUIREMENT

Budget reference number: 05-00-7584

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Planning & Control	Construction	70445

DESCRIPTION:
DESIGN, PURCHASE AND INSTALL COMMUNICATIONS FACILITIES FOR THE ESTABLISHMENT OF THE 115-24 KV ST. BONIFACE STATION.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE ESTABLISHMENT OF THE NEW SPRINGFIELD-ST. BONIFACE STATION. THIS ITEM PROVIDES COMMUNICATION FACILITIES FOR THIS NEW STATION.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☒ Planned ☐ In progress	238	☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX	ROSSER-OAK POINT 115-24KV STATION

Proposal

Design and construct a new low profile 115/24 kV steel station in the Rosser area to accommodate 2-60/80/100//112 MVA transformers and 12-24 kV feeder lines. Use 115 kV lines RK6 and RY7 as the primary supply. Complete site selection and environmental requirements. Design and construct the subtransmission, protection, communication, and terminal facilities for the first transformer. In addition, design and construct 4-24 kV feeder lines to supply customer load

JUSTIFICATION		Explanation
☒ Load	☐ Service	Existing 24 kV stations in the area are at firm capacity. Additional transformer capacity is required to accommodate future voltage conversions, load growth and to provide surplus firm capacity for the area.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

Advance or deferral impact

Delay in components of this complex will reduce service reliability and quality in the St. James area.

Factors affecting timing or viability

The I.S.D. of this complex is in part, contingent upon the development of the Winport Industrial Park, west of the Winnipeg International Airport

COMPLEX SPECIFICS:

Title			Budget reference number
ROSSER - OAK POINT NEW STATION			03-00-7268
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70469

DESCRIPTION:
CONDUCT ENVIRONMENTAL ASSESSMENT, ACQUIRE PROPERTY AND OBTAIN NECESSARY APPROVALS AND LICENSES TO DESIGN AND CONSTRUCT A NEW LOW PROFILE 115/24 KV STEEL STATION IN ALONG OAK POINT HIGHWAY TO ACCOMMODATE TWO 60/80/100/112 MVA, 114.3-24/13.8 KV LTC TRANSFORMERS WITH NEUTRAL REACTORS AND TWELVE 24 KV FEEDER LINES. INITIALLY, INSTALL ONE 60/80/100/112 MVA, 114.3-24/13.8KV +/- 10% LTC TRANSFORMER AND NEUTRAL REACTOR, 8-24 KV CIRCUIT BREAKERS, 6-24 KV CIRCUIT LINE REACTORS, 2-24 KV CIRCUIT SWITCHERS, AND 2-14.4 MVAR 24 KV CAPACITOR BANKS. PROTECTION FOR THE TRANSFORMER AND THE 115 KV RY7 LINE TAP INTO THE STATION IS PROVIDED BY OPENING BREAKERS ON LINE RY7 AT KIRKFIELD PARK STATION AND ROSSER STATION VIA TELECOMMUNICATIONS. TRANSIENT VOLTAGE STUDIES MAY BE REQUIRED TO DEFINE THE TRANSIENT RECOVERY VOLTAGE MITIGATING EQUIPMENT.

JUSTIFICATION:
THIS NEW STATION IS REQUIRED TO SUPPORT THE LOAD GROWTH IN THE WINPORT INDUSTRIAL PARK AREA AND TO PROVIDE BACKUP TO OTHER 24 KV STATIONS NEARBY.

REFERENCE:

Title			Budget reference number
ROSSER STATION 115 KV LINE PROTECTION REPLACEMENT			03-00-7270
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70269

DESCRIPTION:
MODIFY RY7 AND RY6 115KV LINE PROTECTION AT ROSSER STATION TO ACCOMMODATE THE ROSSER - OAK POINT 115-24KV STATION AND NEW SECTIONALIZING BREAKERS AT KIRKFIELD PARK STATION. CHANGE PROTECTION ON 115KV LINE RY7 AND RY6 TO IMPROVE FAULT CLEARING TIMES.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE ESTABLISHMENT OF THE NEW ROSSER - OAK POINT STATION AND THE SECTIONALIZING BREAKERS AT KIRKFIELD PARK STATION. THIS ITEM PROVIDES FOR PROTECTION CHANGES REQUIRED AT ROSSER STATION TO ACCOMMODATE THIS NEW STATION AND THE SECTIONALIZING BREAKERS.

REFERENCE:

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

[X] Major Item [ ] Domestic Item

250

Title			Budget reference number
ROSSER - OAK POINT STATION - 4-24KV FEEDER LINES			04-00-7566
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93389

DESCRIPTION:
BUILD FOUR 24KV CIRCUITS FROM THE PROPOSED ROSSER-OAK POINT STATION SITE TO TIE INTO THE EXISTING 24KV LINES K21, K25, L12 AND L13. TIE TWO CIRCUITS INTO K21 AND K25 IN THE VICINITY OF CRESTVIEW STATION. TIE TWO CIRCUITS INTO L12 AND L13 NORTH EAST OF KING EDWARD STREET AND SELKIRK AVENUE.

JUSTIFICATION:
UTILIZE THE NEW FEEDER LINES TO SUPPLY THE WINPORT LOAD GROWTH IN THE KIRKFIELD AND SELKIRK STATION AREA AND TO INCREASE THE FEEDER TIE CAPACITY IN THE AREA.

REFERENCE:

ROSSER-OAK POINT STATION COMMUNICATION REQUIREMENTS			05-00-7585
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Planning & Control	Construction	70444

DESCRIPTION:
Design, purchase and install communications facilities for the establishment of the 115-24KV Rosser-Oak Point station.

JUSTIFICATION:
Elsewhere in the budget, justification is provided for the establishment of the new Rosser-Oak Point Station. This item provides communication facilities for this new sation.

CAPITAL BUDGET COMPLEX CONCEPTUAL DIAGRAM

OAK POINT
115–24 KV BANK 2 ADDITION

REVISED: 1999 - 10 - 01	ISSUED BY: WNZ

COMPLEX NO. 239

manitoba hydro

PLANNING AND CONTROL DIVISION

H2856/f Rev 99 03

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 239

REVISION STATUS: [ ] New complex [ ] In service change [ ] Concept change [X] Estimate change only

COMPLEX: ROSSER-OAK POINT BANK 2 ADDITION

Proposal

Install a second 60/80/100//112 MVA transformer, 2-24 kV 1500 MVA circuit breakers with associated equipment and 2-24 kV feeder lines. Use 115 kV line RK6 and RY7 as the primary supply. Complete environmental requirements for the second bank and the 115 kV RK6 tap. Design and construct the subtransmission, protection, communication, and terminal facilities for the second transformer.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

Additional transformer capacity is required to accomodate future voltage conversions, load growth and to provide surplus firm capacity for the area.

Complex no. 239

Advance or deferral impact

Delay in components of this complex will reduce service reliability and quality in the St. James area.

Factors affecting timing or viability

The I.S.D. of this complex is in part, contingent upon the development of the Winport Industrial Park, west of the Winnipeg International Airport.

COMPLEX SPECIFICS:

ROSSER - OAK POINT STATION 115-24KV TRANSFORMER ADDITION	03-00-7272

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70468

DESCRIPTION:
INSTALL ONE 80/90/100/112 MVA, 114.3-24/13.8 KV +/- 10% LTC TRANSFORMER AND NEUTRAL REACTOR IN BANK 2 POSITION AT ROSSER - OAK POINT STATION TO MATCH THE EXISTING BANK 1 UNIT. INSTALL 1-24 KV BREAKER TO CONNECT THE TRANSFORMER TO FACILITATE SWITCHING AND PROTECTION. TERMINATE 115KV LINE RK6 TO BANK 2 AT ROSSER - OAK POINT STATION. INSTALL 2-24 KV 1500 MVA CIRCUIT BREAKERS AND ASSOCIATED EQUIPMENT TO PROVIDE TWO ADDITIONAL 24 KV CIRCUITS.

JUSTIFICATION:
THE SECOND BANK AND ADDITIONAL CIRCUITS AT ROSSER - OAK POINT STATION ARE REQUIRED TO SUPPORT THE LOAD GROWTH IN THE AREA AND TO PROVIDE BACKUP TO OTHER 24 KV STATIONS NEARBY.

Title
ROSSER STATION 115KV LINE RK6 PROTECTION REPLACEMENT

Budget reference number
03-00-7274

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70448

DESCRIPTION:
115 KV LINE RK6 PROTECTION AT ROSSER STATION MUST BE REPLACED WITH A PROTECTION SYSTEM CAPABLE OF ACCOMMODATING THE ROSSER-OAK POINT 115-24 KV STATION BANK 2 ADDITION.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE ESTABLISHMENT OF THE ROSSER-OAK POINT STATION BANK 2 ADDITION. THIS ITEM PROVIDES FOR PROTECTION CHANGES REQUIRED AT ROSSER STATION TO ACCOMMODATE THE ROSSER-OAK POINT STATION BANK 2 ADDITION.

REFERENCE:

Title: ROSSER - OAK POINT STATION - ADDN OF 2-24KV CIRCUIT LINES

Budget reference number: 04-00-7567

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93390

DESCRIPTION:
BUILD TWO 24KV CIRCUITS FROM THE PROPOSED ROSSER-OAK POINT STATION SITE TO SUPPORT ADDITIONAL LOAD GROWTH IN THE LOCAL AREA.

JUSTIFICATION:
TWO NEW FEEDER LINES ARE REQUIRED TO SUPPLY LOAD GROWTH IN THE ST JAMES AND KIRKFIELD STATION AREAS AND TO INCREASE THE FEEDER TIE CAPACITY IN THE AREA.

REFERENCE:

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 240

REVISION STATUS: [ ] New complex [ ] In service change [ ] Concept change [X] Estimate change only

COMPLEX: ST BONIFACE - PLESSIS RD BANK 2 ADDITION

Proposal

Install a second 60/80/100//112 MVA transformer, 2-24 kV 1500 MVA circuit breakers with associated equipment and 2-24 kV feeder lines. Use sectionalized 115 kV line SV23 as the primary supply. Complete environmental requirements for the second bank Design and construct the subtransmission, protection, communication, and terminal facilities for the second transformer.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

Additional transformer capacity is required to accomodate future voltage conversions, load growth and to provide surplus firm capacity for the area.

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item — Domestic Item 290

Title: SELKIRK G.S. 115KV LINE SV24 PROTECTION REPLACEMENT

Budget reference number: 03-00-7266

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70450

DESCRIPTION:
115 kV line SV24 protection at Selkirk GS must be replaced with a protection system capable of accommodating the Springfield-St. Boniface Road Bank 2 addition.

JUSTIFICATION:
Elsewhere in the budget, justification is provided for the establishment of Bank 2 at Springfield-St. Boniface Station to be tapped off 115kV line SV24. This item provides for protection changes required at Selkirk GS to accommodate the Bank 2 addition.

REFERENCE:
L.A. Miller to W. Pyl, 'Goulet 4 kV Feeder Changes,' 96-05-29, file 74P
G.K. Zielke to V. Koschik, 'Dawson Road-St. Vital 24 kV System,' 96-06-20

REVISION:
Item cancelled. Supply concept to station changed,
SV24 tap no longer required.

Planning & Control	Design	Construction	70563

DESCRIPTION:
RETERMINATE SV23 INTO TRANSCONA STATION USING A PORTION OF LINES GT1 AND ST2. ALSO, 115KV LINE SV23 PROTECTION AT TRANSCONA STATION MUST BE REPLACED WITH A PROTECTION SYSTEM CAPABLE OF ACCOMMODATING THE ST. BONIFACE RD. STATION.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS PROVIDED FOR THE ESTABLISHMENT OF THE NEW ST. BONIFACE STATION TO BE SUPPLIED FROM SECTIONALIZED 115KV LINE SV23. THIS ITEM PROVIDES FOR PROTECTION CHANGES REQUIRED AT TRANSCONA STATION TO ACCOMMODATE THIS NEW STATION.

REFERENCE:

Title
ST BONIFACE PLESSIS RD STATION - ADDN OF 2-24KV CIRCUITS

Budget reference number
04-00-7565

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93388

DESCRIPTION:
BUILD TWO 24KV CIRCUITS FROM THE PROPOSED SPRINGFIELD-ST BONIFACE STATION SITE TO SUPPORT ADDITIONAL LOAD GROWTH IN THE LOCAL AREA.

JUSTIFICATION:
TWO NEW FEEDER LINES ARE REQUIRED TO SUPPLY LOAD GROWTH IN THE ST VITAL AND DAWSON ROAD STATION AREAS AND TO INCREASE THE FEEDER TIE CAPACITY IN THE AREA.

REFERENCE:
L.A. MILLER TO W. PYL, 'GOULET 4KV FEEDER CHANGES', 96-05-29, FILE 74P
G.K. ZIELKE TO V. KOSCHIK, 'DAWSON ROAD - ST VITAL 24KV SYSTEM" 96-06-20

REVISION:
CHANGE IN PROPOSED STATION LOCATION REQUIRES LONGER FEEDER LINES.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 242

REVISION STATUS: [ ] New complex [ ] In service change [ ] Concept change [X] Estimate change only

COMPLEX: RESTON - GLENBORO CAPACITY INCREASE

Proposal

Design and construct facilities at Reston and Glenboro as Follows:

Replace the 56.3 MVA 230-66kV Bank 1 at Reston with a 93.7 MVA unit and install the 56.3 unit at Glenboro in a new Bank 3 position.

JUSTIFICATION: [X] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation

Capacity increases at Reston and Glenboro are required to provide firm supply to distribution stations in their respective areas and for load increases at Cromer and Glenboro IPL stations.

Planning & Control	Design	Construction	70273

DESCRIPTION:
REPLACE RESTON STATION BANK 1 (230-66KV, 30/40//53.6 MVA, +/- 10% LTC) WITH A NEW 50/66.6/83.3//93.7 MVA +/- 15% LTC TRANSFORMER. (THE REPLACED UNIT WILL BE INSTALLED AT GLENBORO SOUTH STATION IN A NEW BANK 3 POSITION.)

JUSTIFICATION:
THIS TRANSFORMER REPLACEMENT IS REQUIRED TO PROVIDE FIRM 66KV TRANSFORMER CAPACITY FOR THE DISTRIBUTION STATIONS SUPPLIED BY THE RESTON 66KV SYSTEM DUE TO NORMAL LOAD GROWTH AND INCREASED LOAD AT CROMER IPL.

REFERENCE:

Title: GLENBORO SOUTH STATION - BANK 3 ADDITION

Budget reference number: 03-00-7276

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70459

DESCRIPTION:
INSTALL A 230-66 KV, 30/40/50/56.3 MVA +/-10% LTC TRANSFORMER AT GLENBORO SOUTH STATION. THIS TRANSFORMER WAS FORMERLY AT RESTON STATION DESIGNATED AS BANK 1. ALSO INSTALL A 40 MVA GROUNDING BANK, A 230 KV BREAKER, AND A 66 KV BREAKER.

JUSTIFICATION:
THIS TRANSFORMER ADDITION IS REQUIRED TO PROVIDE FIRM 66 KV SUPPLY TO THE DISTRIBUTION STATIONS IN THE GLENBORO SOUTH 66 KV SYSTEM DUE TO NORMAL LOAD GROWTH AND INCREASED LOAD AT CROMER IPL.

COMPLEX	ST LEON 230-66KV TRANSFORMER ADD'N & IPL EXPANSION

Proposal

Design and construct facilities at St Leon , Virden West, Cromer North, Letellier, Gretna IPL, Souris IPL East, Souris IPL West and Manitou IPL Stations to provide supplies to meet IPL operational requirements.

JUSTIFICATION		Explanation
☒ Load	☐ Service	IPL is implementing a major system expansion and require full voltage motor starting capability for motors sized up to 3500 HP and the ability to continue operation with failure of customer owned motor drives and PF correction.
☐ Safety	☐ Efficiency	
☒ Reliability	☐ Other

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Complex no. 80

Advance or deferral impact

Deferral will decrease supply reliability in the St. Leon area in case of an outage of the existing St. Leon 230-66 KV transformer.

Factors affecting timing or viability

Manitoba Load.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %

Title: VIRDEN WEST STATION 66KV BREAKER ADDITION

Budget reference number: 03-00-8286

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70465

DESCRIPTION:
INSTALL ONE 66KV BREAKER R28, COMPLETE WITH ASSOCIATED EQUIPMENT, AT VIRDEN WEST 230-66KV STATION. RETERMINATE LINE 95 TO THE NEW BREAKER POSITION AND TERMINATE A NEW DEDICATED SUPPLY TO CROMER IPL IN THE VACATED LINE 95 POSITION. DESIGN PROTECTION FOR NETWORKED OPERATION WITH THE EXISTING RESTON-CROMER IPL 66KV SUPPLY.

JUSTIFICATION:
THIS BREAKER IS REQUIRED TO TERMINATE A NEW DEDICATED 66KV LINE TO CROMER IPL 66-4KV STATION. THIS LINE WILL OPERATE NETWORKED WITH THE EXISTING RESTON-CROMER IPL 66KV SUPPLY. A NEW 66KV BREAKER AT CROMER WILL SECTIONALIZE THE TWO SUPPLIES TO CROMER IPL. THIS PROJECT IS CONTINGENT UPON CUSTOMER EXPANSION AT CROMER IPL.

Title: CROMER NORTH STATION 66 KV BREAKER ADDITION

Budget reference number: 03-00-8287

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70458

DESCRIPTION:
INSTALL ONE 66 KV BREAKER AND ASSOCIATED EQUIPMENT AT CROMER NORTH STATION. THIS WILL REQUIRE THE ADDITION OF ONE 66 KV STEEL BAY, RELOCATION OF 25 KV FEEDER CN25-8, AND INSTALLATION OF A CONTROL BUILDING.

JUSTIFICATION:
THIS BREAKER IS REQUIRED TO SECTIONALIZE THE TWO 66 KV SUPPLIES TO CROMER IPL 66-4KV STATION. THE VIRDEN WEST-CROMER IPL STANDARD 66 KV LINE IS LESS RELIABLE THAN THE RESTON-CROMER IPL, 230 KV CONSTRUCTED LINE, OPERATING AT 66 KV. THIS BREAKER WILL ISOLATE LINE FAULTS ON THE VIRDEN SUPPLY. THIS PROJECT IS CONTINGENT UPON CUSTOMER EXPANSION AT CROMER IPL.

Title
LETELLIER STATION - 66KV BREAKER ADDITION

Budget reference number
03-00-8288

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70462

DESCRIPTION:
INSTALL ONE 66KV BREAKER R28, COMPLETE WITH ASSOCIATED EQUIPMENT, AT LETELLIER 230-66KV STATION. TERMINATE A NEW 66KV LINE TO GRETNA IPL.

JUSTIFICATION:
THIS BREAKER IS REQUIRED TO TERMINATE A NEW DEDICATED 66KV LINE TO GRETNA IPL 66-4KV STATION. THIS PROJECT IS CONTINGENT UPON CUSTOMER EXPANSION AT GRETNA IPL.

REFERENCE:

Title: SOURIS IPL WEST STATION BANK ADDITION

Budget reference number: 03-00-8291

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70466

DESCRIPTION:
INSTALL A SECOND 7.5/10 MVA, 66-4KV TRANSFORMER AT SOURIS IPL WEST 66-4KV STATION. ALSO INSTALL 66KV SWITCHES TO TERMINATE A NEW 66KV SUPPLY FROM SOURIS EAST 230-66KV STATION.

JUSTIFICATION:
THE LOAD AT SOURIS WEST IPL IS EXPECTED TO EXCEED THE 10 MVA CAPACITY OF THIS STATION. IPL'S FORECAST IS 10.3 MVA NORMAL LOADING AND 11.2 MVA CONTINGENCY LOADING. ADDITIONAL TRANSFORMATION IS ALSO REQUIRED TO REDUCE VOLTAGE DIP DUE TO MOTOR STARTING. THIS PROJECT IS CONTINGENT UPON CUSTOMER EXPANSION AT SOURIS WEST IPL.

REFERENCE:
1) TASK FORCE REPORT ON INTERPROVINCIAL PIPELINES SEP I & II EXPANSION PROGRAMS 1997 01 17.
2) SYSTEM PLANNING DEPARTMENT REPORT ON 'INTERPROVINCIAL PIPE LINES SYSTEM EXPANSION PROGRAM (SEPI & SEPII) - SPD 97/1.

Title
SOURIS IPL EAST - SOURIS IPL WEST 66kV LINE

Budget reference number
04-00-8577

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	94203

DESCRIPTION:
CONSTRUCT APPROXIMATELY 10 KM OF 66KV, 266.8 KCMIL LINE FROM SOURIS IPL EAST 230-66KV STATION TO SOURIS IPL WEST 66-4KV STATION. THIS LINE IS TO BE EQUIPPED WITH SKY WIRE PROTECTION.

JUSTIFICATION:
THIS NEW DEDICATED 66KV LINE IS REQUIRED TO PROVIDE AN ELECTRICAL SUPPLY TO MEET IPL'S OPERATING CONDITIONS;
I) ABILITY FOR FULL VOLTAGE STARTING, 1 START/HOUR OF 3500 HP OR LESS MOTORS. II) MAINTAIN MH SUPPLY VOLTAGE AT NOMINAL +/- 5% DURING IPL EQUIPMENT CONTINGENCIES. III) MAINTAIN MAXIMUM 15% VDIP AT IPL MOTOR TERMINALS DURING FULL VOLTAGE STARTING. THIS PROJECT IS CONTINGENT UPON CUSTOMER EXPANSION AT SOURIS WEST IPL.

REFERENCE:
TASK FORCE REPORT ON INTERPROVINCIAL PIPELINES SEP I & II EXPANSION PROGRAMS 1997 01 17.

X Major Item — 308 — Domestic Item

Title
ST. LEON - MANITOU IPL 66KV LINE

Budget reference number
04-00-8578

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	94228

DESCRIPTION:
CONSTRUCT 13.3 KM OF DEDICATED 66 kV, 266.8 KCMIL LINE FROM ST. LEON 230-66kV STATION TO MANITOU IPL STATION. THIS LINE IS TO BE EQUIPPED WITH LIGHTENING PROTECTION. PROVIDE SWITCHING TO NORMAL SUPPLY MANITOU IPL FROM THE NEW LINE AND ALTERNATE SUPPLY FROM EXISTING LINE #51.

JUSTIFICATION:
THE PRESENT SUPPLY TO MANITOU IPL REQUIRES STARTING RESTRICTIONS. THIS NEW DEDICATED 66kV KINE IS REQUIRED TO PROVIDE AN ELECTRICAL SUPPLY TO MEET IPL'S OPERATING CONDITIONS:
1. ABILITY FOR FULL VOLTAGE STARTING, 1 START/HOUR OF 3 500 HP, OR LESS, MOTORS;
2. MAINTAIN MH SUPPLY VOLTAGE AT NOMINAL +/-5% DURING IPL EQUIPMENT CONTINGENCIES;
3. MAINTAIN MAXIMUM 15% VDIP AT IPL MOTOR TERMINALS DURING FULL VOLTAGE STARTING.
THIS PROJECT IS CONTINGENT UPON CUSTOMER EXPANSION AT MANITOU IPL.

REFERENCE:
TASK FORCE REPORT ON INTERPROVINCIAL PIPELINES SEP I & II EXPANSION PROGRAMS 1997 01 17.
- SYSTEM PLANNING DEPARTMENT REPORT ON 'INTERPROVINCIAL PIPE LINES SYSTEM EXPANSION PROGRAM' (SEP I & SEP II) - SPD 97/1.
- IPL/MANITOBA HYDRO JOINT TASK FORCE REPORT DATED 1997 05 15 - LOCKLEY ENGINEERING LTD.
- MEMO FROM CV THIO TO TE TYMOFICHUK, IPL/MANITOBA HYDRO JOINT TASK FORCE, 1997 05 15.

REVISION:
PRELIMINARY DESIGN COSTS INCURRED DURING 1998/99. ESTIMATE REVIEWED AND NO CHANGE NECESSARY AT THIS TIME.

NOTE:
THIS ITEM IS SUBJECT TO FULL FUNDING BY ENBRIDGE. IF FUNDING CAN NOT BE NEGOTIATED THIS PROJECT WILL BE CANCELLED AND MOTOR STARTING RESTRICTIONS WILL BE APPLIED.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 253

REVISION STATUS: ☒ New complex ☐ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: BRANDON EAST 115KV IMPROVEMENTS

Proposal

Conduct environmental assessment,acquire prorerty,and obtain licencing for construction of 2.63km of 795 MCM ACSR double circuit tubular steel transmission line between Brandon GS and structure 9A. Terminate the new 115kV, 795 MCM ACSR transmission lines replacing BD52 and BK41 at tower 9A and connect to existing transmission lines BD52 to crocus plains and BK41 to CXY Chemicals and Maple Leaf. Construct a new 115-25kV steel stn with 1x10/13.3/16.6MVA,3PH LTC transformers and two feeders at the proposed Maple Leaf hog processing plant site in Brandon and a supply line tap at 115kV line BK41.

JUSTIFICATION: ☒ Load ☒ Service ☐ Safety ☒ Efficiency ☐ Reliability ☐ Other

Explanation

New steel station and system changes required to transmit power from Brandon GS to the proposed Maple Leaf hog processing plant, to upgrade existing 115kV facilities for supplying additional load at CXY Chemicals and to accommodate Brandon area load growth.

Title: BRANDON EAST 115 KV IMPROVEMENTS

Budget reference number: 02-00-8002

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70514

DESCRIPTION:
CONDUCT ENVIRONMENTAL IMPACT ASSESSMENT, ACQUIRE ADDITIONAL PROPERTY AND OBTAIN NECESSARY APPROVALS AND LICENCES FOR CONSTRUCTION OF 2.63 KM OF 795 MCM ACSR DOUBLE CIRCUIT TUBULAR STEEL TRANSMISSION LINE BETWEEN BRANDON GENERATING STATION AND STRUCTURE 9A. TERMINATE THE NEW 115 KV, 795 MCM ACSR TRANSMISSION LINES REPLACING BD52 AND BK41 AT TOWER 9A AND CONNECT TO EXISTING TRANSMISSION LINES BD52 TO CROCUS PLAINS AND BK41 TO CXY CHEMICALS AND MAPLE LEAF. THIS WILL REPLACE 2.63 KM OF EXISTING DOUBLE CIRCUIT 336.4 MCM ACSR, 115 KV TRANSMISSION LINES BD52 AND BK41.

CONSTRUCT A 115 KV LINE TAP TO SUPPLY A NEW 115-25 KV STEEL STATION FOR THE PROPOSED MAPLE LEAF HOG PROCESSING PLANT SITE ON 65TH ST. EAST.

JUSTIFICATION:
THIS ITEM PROVIDES FOR PART OF SYSTEM CHANGES REQUIRED TO TRANSMIT POWER FROM BRANDON G.S. TO THE PROPOSED MAPLE LEAF HOG PROCESSING PLANT, TO UPGRADE EXISTING 115KV FACILITIES FOR SUPPLYING ADDITIONAL LOAD AT CXY CHEMICALS AND TO ACCOMMODATE BRANDON AREA LOAD GROWTH.

REFERENCE:
KEY ACCOUNTS - BRANDON REQUEST FOR SERVICE

REVISION:
INCREASE IS DUE TO A DESIGN CONCEPT CHANGE (FOUNDATION TYPE). REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $120,000

Title
BRANDON GS TERMINATION OF TOWER 9A 115KV T/L

Budget reference number
03-00-8343

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	70593

DESCRIPTION:
TERMINATE THE NEW 115KV, 795 MCM ACSR TRANSMISSION LINES REPLACING DB52 AND BK41 IN FORMER BD52 AND BK41 CIRCUIT BREAKER POSITIONS 22, 23, AND 24 AT BRANDON GS.

JUSTIFICATION:
ELSEWHERE IN THE BUDGET, JUSTIFICATION IS GIVEN FOR CONSTRUCTION OF 2.63 KM OF NEW 115KV DOUBLE CIRCUIT 795 MCM ACSR TO REPLACE 2.63 KM OF UNDER RATED SECTION OF BD52 AND BK41 FROM BRANDON GS TO TURNING STRUCTURE 9A. THIS ITEM PROVIDES FOR THE TERMINATION OF THESE LINES AT BRANDON GS.

REFERENCE:
KEY ACCOUNTS - BRANDON REQUEST FOR SERVICE

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	86	☐ New complex ☒ In service change ☒ Concept change ☐ Estimate change only

COMPLEX	DIESEL UPGRADING ENHANCEMENT

Proposal

Increase capacity to provide 60 amp service at 4 diesel sites:
1) Brochet - Larger units, additional units, tanks and plant expansion.
2) Lac Brochet - Larger units, additional units, tanks and plant expansion.
3) Tadoule - Site improvements, additional units and plant expansion.
4) Shamattawa - Additional tanks, two mobiles and new plant.
5) Distribution - Pik/Thicket- 25kv tie line; other sites- rebuild distribution system to deliver enhanced.

JUSTIFICATION		Explanation
☒ Load	☒ Service	The provision of service to isolated diesel served customers has not been equivalent to that enjoyed by southern rural customers. Expansion of service to accommodate 60 amp residential supply is a priority.
☐ Safety	☐ Efficiency	
☐ Reliability	☐ Other

Title
BROCHET POWERHOUSE - TANK FARM

Budget reference number
04-00-1385

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Construction	Construction	71855:93354

DESCRIPTION:
ACQUIRE A NEW SITE FOR THE NEW PLANT.
BUILD NEW POWERHOUSE C/W 1 - 450KW AND 2 - 855KW DIESEL GENERATORS.
CONSTRUCT A NEW FUEL TANK FARM.
SALVAGE OF EXISTING PLANT & SITE.

JUSTIFICATION:
ADDITIONAL FUEL STORAGE, ADDITIONAL UNITS, NEW POWERHOUSE, AND LARGER UNITS REQUIRED TO ACCOMMODATE THE 60 AMP ENHANCED SERVICE AND LOAD GROWTH.

REFERENCE:
SYSTEM PLANNING AND ENVIRONMENT DIVISION REPORT ON POWER RESOURCE OPTIONS FOR BROCHET AND LAC BROCHET SPED 95-3 REVISION 1 DATED 95-10-17.

REVISION:
ADDITIONAL COSTS INCURRED FOR THE FOLLOWING: CT & PT METERING, ENGINEERING AND CONSULTING. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CAPITAL EXPENDITURE REVISION

Budget reference number 04-00-1385

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1990 10	2 480	NEW ITEM
1991 10	2 328	REVISED INTEREST AND ESCALATION RATES.
1992 10	2 126	REVISED INTEREST AND ESCALATION RATES. GROSS REVISED TO 1992 BASE.
1993 10	2 798	REVISED INTEREST AND ESCALATION RATES. GROSS REVISED TO 1993 BASE. STAGE II IS NOW A 3-YR PROJECT RATHER THAN 2-YR. I.S.D. ADJUSTED TO REFLECT REVENUE RECOGNITION.
1994 10	2 570	REVISED GROSS DOLLARS TO1994 BASE. STUDY TO BE CONDUCTED IN 94/95, BAL OF MOVED AHEAD TO 9 5/96.
1995 10	2 570	REVISED DOLLARS TO 1995 BASE.
1996 10	2 800	PROJECT DEFERRED 2 YEARS. THE PLANT CANNOT BE EXPANDED AT THE EXISTING LOCATION.
1997 10	7 010	RELATED COSTS ($2,240K) PREVIOUSLY ALLOCATED UNDER THE DIESEL ENHANCED BRN 04-00-1413 IN 1998/99 AND 1999/00 ARE NOW PLANNED HERE TO REFLECT CLOSURE OF THAT ITEM. ACTUAL TOTAL NET INCREASE IS $1,946K. THE ORIGINAL PLAN AND ESTIMATE WAS BASED ON A PLANT EXTENSION WITHIN THE OLD SITE. DUE TO INCREASED LOAD GROWTH AND THE COLD LOAD PICKUP REQUIREMENTS, A MUCH LARGER EXTENSION AND EXPANSION WAS REQUIRED. THE COMMUNITY ALSO REQUESTED THAT THE PLANT BE RELOCATED OUTSIDE THE MAIN COMMUNITY. THIS ENTAILED A NEW SITE, PLANT, TANK FARM AND BUILDING AND ASSOCIATED EQUIPMENT. THE ESTIMATE ALSO INCLUDES NEW ITEMS NOT COVERED IN PREVIOUS ESTIMATES SUCH AS: NEW ESTIMATING SYSTEM, CATWALKS REQUIRED FOR FUEL TANKS, DIESEL FUEL TANK MONITORING SYSTEM, NEW PLC AND AUTOMATION SYSTEM, AND FOUNDATION FOR RELOCATION OF ACCOMMODATION TRAILER, GARAGE, WATER AND SEWAGE.
1998 10	7 810	INCREASE A RESULT OF (i) HIGHER DISTRIBUTION COSTS; (ii) ADDITIONAL FIRE PROTECTION REQUIREMENTS; (iii) INCREASED SCOPE FOR CONSULTANT (UNDER REVIEW).

Title
LAC BROCHET MODIFICATIONS

Budget reference number
04-00-1395

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Construction	Construction	70110

DESCRIPTION:
INSTALL 18 - 50 000 LITRE ULC FUEL TANKS.
INSTALL 1 - 855 KW DIESEL GENERATOR.
INSTALL A PLANT EXTENSION TO ACCOMMODATE GENERATORS AND EXPAND THE TANK FARM TO ACCOMMODATE ADDITIONAL FUEL TANKS.

JUSTIFICATION:
ADDITIONAL FUEL STORAGE, PLANT EXTENSION, LARGER UNITS, AND ADDITIONAL UNITS ARE REQUIRED TO ACCOMMODATE THE 60 AMP ENHANCED SERVICE SCHEDULED FOR LAC BROCHET.

REFERENCE:
NORTHERN REGION, REMOTE COMMUNITIES, DIESEL PLANNING STUDY REPORT DATED JANUARY1996.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES. ADDITIONAL ENGINEERING SERVICES REQUIRED FROM CONSULTANT TO FINISH AS-BUILT DRAWINGS. INCREASE IN COST FOR COMMISSIONING, AND FOR THE WELDING OF FUEL PIPES FOR THE ADDITIONAL TANKS.

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item — 320 Domestic Item

Title
ST. THERESA - MODIFICATIONS

Budget reference number
04-00-1405

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Operating & Maintenance	Operating & Maintenance	70373:93355

DESCRIPTION:
PURCHASE AND INSTALL 1 - 855 KW MOBILE AND 1 - 855 KW POWERHOUSE UNIT (ENHANCED PORTION ONLY). CREDIT WILL OCCUR WHEN UNIT SALVAGED FROM SITE.

JUSTIFICATION:
WE ARE INSTALLING LARGER FUEL EFFICIENT UNITS AT ST. THERESA, RATHER THAN REFURBISH THE OLD AND INEFFICIENT UNITS, TO MEET THE LOAD AT THIS SITE. THESE UNITS WILL BE REQUIRED AT THE ENHANCED COMMUNITIES ONCE THE NORTH CENTRAL MANITOBA PROJECT IS COMPLETED. THIS REPRESENTS THE INCREMENTAL COSTS ASSOCIATED WITH PROVIDING FUTURE ENHANCED SERVICE TO ONE OF THE SIX COMMUNITIES.

ST. THERESA WILL BE DECOMMISSIONED AND THE VALUE OF THE UNITS TO THE ENHANCED SITES WILL BE TRANSFERRED OUT.

REVISION:
NO CHANGE

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item — Domestic Item

321

Title: SHAMATTAWA MODIFICATIONS

Budget reference number: 04-00-9303

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Construction	Construction	70039:93353

DESCRIPTION:
INSTALL 1 X 450 KW GENERATING SETS.
INSTALL 2 X 850 KW GENERATING SETS C/W PLANT AUTOMATION.
CONSTRUCT A NEW POWERHOUSE.
INSTALL 2 X 1,070,000 LITRE FUEL TANKS OR EQUIVALENT ULC FUEL TANKS.

**** ON HOLD PENDING AGREEMENT WITH BAND ****

JUSTIFICATION:
ADDITIONAL FUEL STORAGE AND ADDITIONAL GENERATING CAPACITY IS REQUIRED TO ACCOMMODATE THE PROJECTED LOAD GROWTH AT SHAMATTAWA IN CONNECTION WITH THE ENHANCED PROGRAM.

THE TWO MOBILES WILL ALLOW EARLY IMPLEMENTATION OF THE ENHANCED SERVICE BY PROVIDING THE ADDITIONAL CAPACITY REQUIRED, WHILE DEFERRING THE MAJOR EXPENDITURES OF THE NEW PLANT UNTIL ALL LINE OPTIONS ARE EXHAUSED.

A NEW PLANT IS REQUIRED TO MEET THE LONG TERM ENHANCED REQUIREMENTS. THE EXISTING PLANT, LOCATED ON RESERVE LAND, IS ENVIRONMENTALLY SENSITIVE WITH LIMITED POTENTIAL FOR THE EXPANSION NECESSARY TO MEET THE ENHANCED NEEDS.

REFERENCE:
NORTHERN REGION, REMOTE COMMUNITIES, DIESEL PLANNING STUDY REPORT DATED JANUARY 1996.

REVISION:
PROJECT DEFERRED ONE YEAR. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 221

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: VIRDEN AREA DISTRIBUTION CHANGES

Proposal

Rebuild 136 KM (85%) of primary distribution served by Virden-Seventh, Virden-North, Hargrave & Kenton Stns, and convert 438 transformers from 4.8/8.32kV to 14.4/24.9kV. Salvage & rebuild 33kV L66 Virden to Kenton.

Rebuild 95 KM of 66kV lines #95 & 97 and 24 KM of primary distribution Elkhorn to Manson.

Build a new 66-25kV station 1 mile west of the town of Virden.

JUSTIFICATION

☒ Load ☐ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

136 km line is old (rural electrification-30 ft poles) & does not meet CSA clearance criteria. Transformer upgrades will correct high voltage fluctuations, & losses, and reduce monitoring requirements. Line 95/97 is over 40 years old, deteriorated and does not comply with CSA standards, posing a safety hazard. The new Virden-Wallace Stn is required to meet 1998 projected load requirements..

Title: VIRDEN WALLACE NEW 66-25KV STATION

Budget reference number: 03-D0-7227

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Design	Construction	70019

DESCRIPTION:
BUILD A NEW STATION 1 MILE WEST OF THE TOWN OF VIRDEN. THE STATION WILL BE EQUIPPED WITH 2 X 7.5/10 MVA 66-25KV TRANSFORMERS, AND 4 FEEDER POSITIONS.

JUSTIFICATION:
STUDY 90-W-24 OUTLINES A FUTURE REQUIREMENT FOR A VIRDEN STATION IN 1998 WHEN THE 8 KV LOAD REACHES 22 MVA. LOAD IS EXPECTED TO APPROACH THESE VALUES BY 1998.
STUDY TPD92-1 RECOMMENDS THE SALVAGE OF THE VIRDEN NORTH TERMINAL AS IT IS ANTICIPATED THAT THE REGION WILL HAVE PHASED OUT ALL THE 33KV DISTRIBUTION STATIONS IN THE AREA BY THE FALL OF 1998.

REFERENCE:
WESTERN REGION STUDY 90-W-24
TRANSMISSION PLANNING TPD92-1
WESTERN REGION STUDY 95-W-10 'VIRDEN NORTH TERMINAL SALVAGE AND NEW 66-25KV STATION'

REVISION:
MINOR COST INCREASE CAUSED BY THE INSTALLATION OF GROUND RODS. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $100,000

Title: KENTON DISTRIBUTION REBUILD

Budget reference number: 04-00-7551

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93286

DESCRIPTION:
REBUILD 136KM (85%) OF PRIMARY DISTRIBUTION PRESENTLY SERVED BY THE VIRDEN SEVENTH, VIRDEN NORTH, HARGRAVE AND KENTON STATION AREAS. CONVERT 438 TRANSFORMERS IN THESE AREAS FROM 4.8/8.32KV TO 14.4/24.9KV. TRANSFER THE KENTON STATION AREA TO SIOUX VALLEY. TRANSFER THE VIRDEN NORTH STATION AREA TO VIRDEN SOUTH STATION. TRANSFER THE HARGRAVE AND VIRDEN SEVENTH STATION AREAS TO A NEW STATION CALLED VIRDEN WALLACE. SALVAGE AND REBUILD 33KV L66 FROM VIRDEN TO KENTON. CONVERT 33KV L66 FROM KENTON TO HAMIOTA TO PRIMARY DISTRIBUTION.

JUSTIFICATION:
1. THE VIRDEN NORTH, VIRDEN SEVENTH AND KENTON STATIONS ARE APPROACHING THEIR LOADING LIMITS. A NEW 66 - 24KV STATION WILL RESOLVE THE CAPACITY ISSUE AT VIRDEN.

2. HARGRAVE STATION WAS RECOMMENDED FOR REPLACEMENT IN 1985 BECAUSE OF ITS POOR POLE AND TIMBER CONDITION. THIS STATION AREA CAN BE SERVED FROM THE NEW VIRDEN WALLACE STATION ONCE THE DISTRIBUTION IS REBUILT AND CONVERTED. THIS WILL RESOLVE THE MAINTENANCE ISSUE.

3. VIRDEN NORTH TERMINAL CONTAINS OBSOLETE 33KV EQUIPMENT. SALVAGING THIS TERMINAL RESOLVES THE MAINTENANCE ISSUE.

4. 136 KM OF DISTRIBUTION DOES NOT MEET CSA CLEARANCE CRITERIA. THIS DISTRIBUTION IS OLD, ORIGINAL RURAL ELECTRIFICATION LINE. MANY OF THE POLES ARE ONLY 30' WITH VERY LONG SPANS AND POOR SAFETY FACTORS. MANY OF THE LINES ARE BUILT ON A NON-PREFERRED ALIGNMENT.

5. 8KV IS NOT A PREFERRED DISTRIBUTION VOLTAGE BECAUSE OF THE HIGH VOLTAGE FLUCTUATIONS. THE KENTON STATION HAS 2 SETS OF REGS WITHIN THE FIRST 4 MILES. LOSSES ARE HIGH. VOLTAGE MUST BE CONTINUALLY MONITORED AT KENTON AND HARGRAVE. THIS PROJECT IS RECOMMENDED TO BE SPREAD OVER 6 YEARS, AS IN MEMO 1996 07 30, TO LEVELIZE SPENDING AND LABOUR.

REFERENCE:
WESTERN REGION STUDY 95-W-10. MEMO FROM C. B. ELLIOTT TO T. E. TYMOFICHUK DATED 96 07 30. MEMO FROM D.K. SOLKOSKI TO T.E. TYMOFICHUK DATED 98 02 04.

REVISION:
REVISED TO REFLECT CARRYOVER FROM 98/99 TO 99/00. IINCREASE IN T&D O/H RATES. INCREASE IN DISTRIBUTION CONSTRUCTION ACTIVITY RATES. L4 ESTIMATE EXCEEDED THE L2 ESTIMATE FOR 99/00 ITEMS.
CONTINGENCY AMOUNT: $0.

Title
LINE 95 & LINE 97 REBUILD

Budget reference number
04-00-7552

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	93287

DESCRIPTION:
BUILD 95.1 KM OF 66 KV LINES #95 AND #97, AND 24.1 KM. OF PRIMARY DISTRIBUTION BROKEN DOWN INTO THE FOLLOWING SECTIONS:
1999/00 - 12.9 KM FROM BIRTLE QUEEN TO FOXWARREN.
2001/02 - 30.5 KM FROM MANSON TO ELKHORN.
2002/03 - 5.6 KM FROM BIRTLE QUEEN TO FOXWARREN.
- 24.1 KM DISTRIBUTION FROM HIGHWAY #1 TO MINIOTA.
2003/04 - 4.8 KM FROM BIRTLE SOUTH TO BIRTLE QUEEN.
- 11.2 KM FROM BEULAH TO BIRTLE SOUTH.
2004/05 - 12.9 KM FROM MINIOTA TO BEULAH.
- 6.4 KM FROM INGLIS TO RUSSELL.

JUSTIFICATION:
A 1995 STUDY OUTLINED 97.3 KM OF 66KV THAT REQUIRED REBUILDING. THE STUDY INDICATED THESE LINES WERE 40 AND 41 YEARS OLD RESPECTIVELY. THE POLES ARE BUILT TO A STANDARD THAT IS UNACCEPTABLE. THE POLES ARE GENERALLY 40' THEREFORE CLEARANCE IS A PROBLEM. MOST SPAN LENGTHS ARE 10 METERS TOO LONG TO MEET SAFETY FACTOR AND CLEARANCE STANDARDS. THE ALIGNMENT OF THE LINE IS GENERALLY ON THE ROAD SIDE OF THE DITCH, AN UNSAFE LOCATION FOR TRAFFIC. SPOT REPLACEMENT IS NOT RECOMMENDED BECAUSE OF ALL OF THESE REASONS. THE REPLACEMENT WAS RECOMMENDED OVER A SPAN OF SEVEN YEARS, IN ORDER TO LEVELIZE THE COST AND WORKLOAD OVER A PERIOD OF TIME. THE LINES WILL BE 49 YEARS OLD AT THAT TIME AND IN SERIOUS CONDITION BY THE END OF THE PROGRAM.

A NEW LINE IS BEING BUILT FROM ELKHORN TO MANSON IN ORDER TO IMPROVE RELIABILITY TO THOSE STATIONS WHICH ARE RADIAL NOW. THIS LINE WAS RECOMMENDED FOR BUILDING RATHER THAN REBUILDING THE MINIOTA TO HARGRAVE TO VIRDEN LINE THAT IS IN POOR CONDITION.

REFERENCE:
WESTERN REGION STUDY 95-W-15. MEMO FROM C.B. ELLIOTT TO T. E. TYMOFICHUK DATED 96 07 30. MEMO FROM D.K. SOLKOSKI TO T.E. TYMOFICHUK DATED 98 02 04.

REVISION:
THE COST OF THE BIRTLE TO FOXWARREN SEGMENT WAS INCREASED TO COVER A TRANSMISSION PLANNING REQUEST FOR LARGER CONDUCTOR.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 217

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: DEFECTIVE RINJ CABLE REPLACEMENT

Proposal

Replace approximately 62,500 metres of rinj (red Jacket) cable within the city of Winnipeg.

JUSTIFICATION

☐ Load ☒ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

The failure rate of rinj underground cable installed in the City of Winnipeg during the 1960's is three times the rate at which CSA recommends cable replacement.

Title
DEFECTIVE RINJ CABLE REPLACEMENT

Budget reference number
04-00-7550

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Design	Construction	94277

DESCRIPTION:
REPLACE APPROXIMATELY 62,500 METERS OF RINJ (RED jACKET) CABLE WITHIN THE CITY OF WINNIPEG.

JUSTIFICATION:
THE RINJ UNDERGROUND CABLE INSTALLED DURING THE 1960'S WITHIN THE CITY OF WINNIPEG HAS BEEN FAILING AT A RATE OF 9.6 FAILURES PER 100KM. THIS EXCEEDS THE CEA RECOMMENDED RATE AT WHICH CABLE REPLACEMENT IS RECOMMENDED BY A FACTOR OF THREE. THESE FAILURES RESULT IN UNSATISFACTORY RELIABILITY FOR CUSTOMERS SERVED BY THIS CABLE.

REFERENCE:
REPORT CR96-05 'PROPOSAL FOR THE REPLACEMENT OF THE RED JACKET CABLE IN CENTRAL REGION'

REVISION:
NO CHANGE IN PROJECT SCOPE OR IN-SERVICE DATES.

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 261

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: BRERETON LAKE STATION AREA

Proposal

Construct a new 124-12/25kV steel station c/w 2-7.5/10MVA 124-12/25kV LTC transformers and 2-560A WVE 12kV OCRs.

JUSTIFICATION

[ ] Load [X] Service
[ ] Safety [X] Efficiency
[X] Reliability [ ] Other

Explanation

The existing 33kV line from SW 293 to White Lake Stn, Rennie Stn and SW 1810 is at the end of its life expectancy. There are deficiencies associated with White Lake and Rennie stations, as well. A new station complete with a rebuilt distribution system will provide more acceptable customer service reliability.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 267

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: PAINT LAKE NEW FEEDER

Proposal

Construct 24 KM Z-2/0 AASC 25kV feeder from Jonas Road, Thompson to Paint Lake.Rebuild and convert Paint Lake 12 kV distribution system to 25 kV, and salvage Pipe Lake 1500KVA 4-12kV interchange transformer bank and associated 4kV and 12kV feeder sections.

JUSTIFICATION

[ ] Load [X] Service
[ ] Safety [X] Efficiency
[X] Reliability [ ] Other

Explanation

Power supply to Paint Lake is provided from Pipe Lake 230-4kV station owned by Inco. Contract with Inco will expire in March 2001. Based on a cost analysis it is recommended to construct a new Jonas Road-Paint Lake 25kV feeder. Purchasing and upgrading Pipe Lake station would be more costly.

PAINT LAKE - NEW FEEDER			04-00-7546
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Design	Construction	74488:94242

DESCRIPTION:
1. CONSTRUCT 24 KM Z-2/0 AASC 25KV FEEDER FROM JONAS ROAD, THOMPSON TO PAINT LAKE
2. REBUILD AND CONVERT PAINT LAKE 12KV DISTRIBUTION SYSTEM TO 25KV
3. SALVAGE PIPE LAKE 1500KVA 4-12KV INTERCHANGE TRANSFORMER BANK AND ASSOCIATED 4KV AND 12KV FEEDER SECTIONS.

JUSTIFICATION:
POWER SUPPLY TO PAINT LAKE IS PROVIDED FROM PIPE LAKE 230-4KV STATION OWNED BY INCO. CONTRACT WITH INCO WILL EXPIRE IN MARCH 2001. BASED ON A COST ANALYSIS IT IS RECOMMENDED TO CONSTRUCT NEW JONAS ROAD-PAINT LAKE 25KV FEEDER. OTHER ALTERNATIVE I.E. PURCHASING AND UPGRADING PIPE LAKE STATION WOULD BE MORE COSTLY.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 10

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: E M S SCADA

Proposal
Establish site, define, procure and install an EMS SCADA to replace the existing AGC SCADA. Provide any additional renovations or plant additions required to house the new EMS SCADA and salvage the old.

JUSTIFICATION: ☐ Load ☒ Service ☐ Safety ☒ Efficiency ☒ Reliability ☐ Other

Explanation
The existing AGC SCADA has reached its maximum capability and can not be expanded without high risk to the Corporation. The applications of the existing AGC SCADA are limited and are not able to run the new generation of applications that are required. The reliability of the existing AGC SCADA may also become a concern as supply of new and used parts diminish.

Title: EMS/SCADA PROJECT

Budget reference number: 05-00-5542

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Planning & Control	Planning & Control	Planning & Control	70057:70151

DESCRIPTION:
THERE ARE 3 MAIN COMPONENTS TO THIS PROJECT:
1) PLAN, PROCURE AND INSTALL A NEW EMS/SCADA SYSTEM TO REPLACE EXISTING AGC/SCADA.
2) PLAN, DESIGN AND CONSTRUCT A NEW FACILTIY IN WINNIPEG TO HOUSE AND FULLY SUPPORT THE NEW EMS/SCADA SYSTEM.
3) PLAN, DESIGN AND INSTALL COMMUNICATIONS NECESSARY TO SUPPORT THE NEW SYSTEM AND FACILITY.

JUSTIFICATION:
THE EXISTING AGC/SCADA SYSTEM HAS REACHED ITS END OF LIFE. THE LIFE EXPECTANCY AT TIME OF PURCHASE WAS 15 YEARS MAXIMUM. WHEN REPLACED MANITOBA HYDRO'S SYSTEM WILL HAVE BEEN INSTALLED 20 YEARS. THE SYSTEM IS NO LONGER EXPANDABLE AND IS A CAUSE OF CONCERN TO THE CORPORATION FROM AN OPERATIONAL, MAINTENANCE AND RISK PERSPECTIVE. NEW SPARE PARTS ARE NO LONGER AVAILABLE.

THE EXISTING SCC AND WCC FACILITY IS INADEQUATE AND OUTDATED TO MEET THE SPACE AND FUNCTIONALITY REQUIREMENTS OF MODERN CONTROL CENTRES.

REFERENCE:
THE EMS/SCADA PROJECT TEAM HAS PREPARED THE FOLLOWING REPORTS AS PART OF THE PLANNING PHASE. THESE REPORTS SUPPORT THE RECOMMENDATIONS AND BUDGET, AND INCLUDE: 95-EMS /SCADA3 PROJECT IMPLEMENATION; 95-EMS/SCADA2 COMMUNICATIONS; 95-EMS/SCADA6 CONTROL CENTRE STUDY; 95-EMS/SCADA1 EMS/SCADA FUNCTIONAL REQUIREMENTS; 95-EMS/SCDA7 EMERGENCY CONTROL CENTRE; 95-EMS/SCADA8 OPERATIONS TRAINING SIMULATORS; 95-EMS/SCADA4 VENDOR SELECTION DOCUMENT; 95-EMS/SCADA5 MAINTENANCE AND SUPPORT STRATEGY.

REVISION:
THE INCREASE HAS OCCURRED DUE TO ADDITIONAL COSTS RELATED TO THE SALVAGE AND RENOVATION OF THE EXISTING SYSTEM CONTROL CENTRE (SCC) INTO A BACK UP CONTROL CENTRE (BUCC) AS WELL AS COSTS RELATED TO THE CLEAN-UP OF THE BRANDON CONTROL CENTRE (BCC) AND EMERGENCY CONTROL CENTRE (ECC) AT DORSEY WHICH HAD NOT BEEN PREVIOUSLY IDENTIFIED.

This BRN contains Deleted, Blocked, or Closed Orders.

1996 10	60 847	LEVEL II ESTIMATE. CASH FLOW AND DOLLARS REVISED FROM PREVIOUS CER TO REFLECT THE PLANNING WORK DESCRIBED IN THE 'EMS/SCADA PLANNING PHASE - SUMMARY REPORT' DATED 96 05 22 AND APPROVED BY THE MANITOBA HYDRO ELECTRIC BOARD (ITEM 684-96-02), MAY 30, 1996.
1997 10	60 716	SCOPE UNCHANGED. IN SERVICE DATE ADVANCED FROM 1999 01 01 TO 1998 10 31. ALTHOUGH CONTRACT AMOUNTS HAVE BEEN BELOW ESTIMATES FOR THE FACILITY, SONET COMMUNICATIONS NETWORK AND EMS/SCADA, THESE REDUCTIONS HAVE BEEN OFFSET BY RE-ESTIMATE OF OTHER ACTIVITIES. PREVIOUS ESTIMATE WAS BASED ON AN EVEN CASHFLOW WHEREAS THIS REVISION REFLECTS A DETAILED SCHEDULE.
1998 10	64 419	SCOPE UNCHANGED. COST OF WORK NOT PREVIOUSLY IDENTIFIED HAS ABSORBED ALL OF THE PROJECT CONTINGENCY AND INCREASED THE PROJECT BUDGET.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no.: 12

REVISION STATUS: ☐ New complex ☒ In service change ☒ Concept change ☐ Estimate change only

COMPLEX: MICROWAVE RADIO REPLACEMENTS

Proposal

Upgrade and refurbish the Lake Winnipeg Microwave System.
Replace the Winnipeg River Microwave System.
Replace Thompson/Kelsey/Radisson Communications.
Provide a Fiber Optic cable system from Winnipeg Area to Brandon Area.
Provide replacement microwave equipment required to access Industry Canada re-allocated frequencies.
Replace the Interlake Digital Microwave System.

JUSTIFICATION

☐ Load ☒ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The joint MH/MTS Dorsey-Radisson link is nearing end of life. Details will be determined in future studies. The Wpg R MW System is less reliable due to age, and unavailability of parts. Thompson, Kelsey, Radisson comm channels will replace those which MTS is removing. Wpg/Bdn fibre optics will provide more channels and digital capacity to meet forecast requirements. Various microwave equipment must be replaced as it is dedicated to frequencies which have been re-allocated from our licence. Interlake syst repl required for all of the above reasons.

Title			Budget reference number
LAKE WINNIPEG MICROWAVE UPGRADE			05-00-4500
Originating division Planning & Control	Coordinating division Planning & Control	Constructing division Construction	Project Order Group (Range): 70369

DESCRIPTION:
UPGRADE AND REFURBISH THE LAKE WINNIPEG MICROWAVE SYSTEM.

JUSTIFICATION:
THE JOINT MANITOBA HYDRO - MANITOBA TELECOM SERVICES MICROWAVE SYSTEM FROM DORSEY TO RADISSON EAST OF LAKE WINNIPEG HAS MAJOR COMPONENTS NEARING END OF LIFE. THE MANITOBA TELECOM SERVICES, WHO MAINTAINS AND ALSO USES THIS SYSTEM, EXPECTS THAT IT MUST REPLACE THESE COMPONENTS SOON AND BOTH PARTIES WISH TO EXPAND THE CAPACITY AND IMPROVE THE DEPENDABILTY OF THE SYSTEM. THE DATE OF REPLACEMENT AND EXACT WORK TO BE DONE ARE PENDING STUDIES.

Title			Budget reference number
WINNIPEG RIVER MICROWAVE SYSTEM REPLACEMENT			05-00-6550
Originating division Planning & Control	Coordinating division Planning & Control	Constructing division Construction	Project Order Group (Range): 71041

DESCRIPTION:
REPLACEMENT OF THE WINNIPEG RIVER MICROWAVE SYSTEM.

JUSTIFICATION:
THE WINNIPEG RIVER MICROWAVE SYSTEM PROVIDES PROTECTION, CONTROL AND TELEPHONE CIRCUITS BETWEEN THE WINNIPEG RIVER GENERATING STATIONS AND THE SYSTEM CONTROL CENTRE IN WINNIPEG. THIS SYSTEM WAS ORIGINALLY INSTALLED IN 1958 AND THE RADIO EQUIPMENT WAS SUBSEQUENTLY REPLACED IN 1975. THE RADIO EQUIPMENT MUST BE REPLACED AGAIN DUE TO THE LOSS OF THE MANUFACTURER'S REPAIR SERVICE. SPARE PARTS ARE DEPLETED. ADDITIONAL SPARE PARTS WERE SALVAGED BY REPLACING THE TAYLOR-RIDGEWAY COMMUNICATIONS LINK MICROWAVE EQUIPMENT SO THAT THE REMAINING SYSTEM CAN BE KEPT IN OPERATION UNTIL REPLACEMENT. DELAYING REPLACEMENT MAY CAUSE THE WINNIPEG RIVER GENERATING STATIONS AND THE INTEGRATED POWER SYSTEM TO EXPERIENCE UNACCEPTABLY LONG SERVICE OUTAGES TO CRITICAL PROTECTION AND CONTROL CIRCUITS.

REFERENCE:
PRODUCTION DIVISION SOUTH REPORT PS94-07 REPLACEMENT OF WINNIPEG RIVER MICROWAVE SYSTEM.

REVISION:
ISD DEFERRED FROM 19991031 TO 20000331. THE FOLLOWING ITEMS HAVE BEEN ADDED:

NEW TOWER AND SITE AT GULL LAKE, TEST EQUPMENT FOR MICROWAVE & T1 TRANSMISSION, 48V UPGRADES FOR SEVEN SISTERS, WHITESHELL, AND LAC DU BONNET; POINTE DU BOIS & SCOTLAND FIBRE CABLE AND MUX, AND SEVEN SISTERS COMM ROOM RELOCATION.

CONTINGENCIES $94,000

Title			Budget reference number
WINNIPEG AREA TO BRANDON AREA FIBRE OPTIC COMMUNICATIONS			05-00-6567
Originating division Planning & Control	Coordinating division Planning & Control	Constructing division Construction	Project Order Group (Range): 70004:70628

DESCRIPTION:
PROVIDE A FIBRE OPTIC CABLE SYSTEM TO MEET COMMUNICATIONS REQUIREMENTS BETWEEN THE WINNIPEG AREA AND THE BRANDON AREA.

JUSTIFICATION:
FORECAST REQUIREMENTS FOR COMMUNICATIONS BETWEEN THE WINNIPEG AREA AND THE BRANDON AREA. REQUIRE THAT CHANNEL CAPACITY BE INCREASED AND THAT DIGITAL CAPACITY BE PROVIDED BETWEEN THESE POINTS. THE REQUIRED EXPANSION IS THE RESULT OF MANY REQUIREMENTS, INCLUDING BUT NOT EXCLUSIVE OF TRANSMISSION LINE PROTECTION, AGC/SCADA, THE VHF MOBILE RADIO SYSTEM, TRANSIENT FAULT RECORDERS, RUCUS, MAPINFO, CSS, TRAINING AND DISPATCH AND ADMINISTRATIVE TELEPHONE REQUIREMENTS.

REFERENCE:
TELECONTROL REPORT 94-T2 REPORT ON TELECONTROL COMMUNICATIONS OPTION, WINNIPEG AREA TO BRANDON AREA, 1994 - 2014.

REVISION:
INSERVICE DATE REVISED FROM 199811 TO 199904 (PHASE I) AND PHASE II - 200003. INCREASED COSTS DUE TO THE ADDITION OF THE FOLLOWING: GREAT PLAINS MICROWAVE SITE UPGRADE, NEW 48V POWER SYSTEM AT PORTAGE RADIO AND NEW DIESEL GENERATORS AT PORTAGE, PINKERTON LAKE, AND BRANDON SOUTH.

CONTINGENCIES:
$125,000

IN SERVICE DATES				Base estimate

Title	Budget reference number
MINNEDOSA AREA 71E3 MICROWAVE REPLACEMENT (MINNTE)	05-00-3207

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
anning & Control	Planning & Control	Construction	70371

DESCRIPTION:
REPLACE THE MINNEDOSA AREA MICROWAVE SYSTEM WITH A 7GHZ DIGITAL SYSTEM.

JUSTIFICATION:
CHANGES IN MICROWAVE RADIO FREQUENCY SPECTRUM ASSIGNMENTS BY INDUSTRY CANADA HAVE MADE CONTINUATION OF USE OF THE MINNEDOSA AREA MICROWAVE SYSTEM UNCERTAIN. THIS ITEM COVERS THE COST OF REPLACING EQUIPMENT TO MOVE TO ANOTHER FREQUENCY BAND AS REQUIRED.

REF. PLANNING REPORT 92-T3 'BRANDON - RAPID CITY - MINNEDOSA - NEEPAWA - RAVEN LAKE MICROWAVE SYSTEM REPLACEMENT'

REVISION:
SCOPE OF JOB HAS CHANGED TO PARTICIPATE WITH WESTMAN'S INSTALLATION OF FIBRE OPTIC CABLE.

CONTINGENCY: $120,000

Title			Budget reference number
INTERLAKE DIGITAL MICROWAVE REPLACEMENT			05-00-8589
riginating division anning & Control	Coordinating division Planning & Control	Constructing division Construction	Project Order Group (Range): 70519

DESCRIPTION:
REPLACE THE INTERLAKE DIGITAL MICROWAVE COMMUNICATION SYSTEM FROM DORSEY T.S. TO THE LOWER NELSON RIVER.

JUSTIFICATION:
THIS SYSTEM WAS INSTALLED IN 1977 AND WILL REQUIRE REPLACEMENT DUE TO LACK OF:

1. AVAILABILITY OF SPARE PARTS AND FACTORY SUPPORT.
2. PERFORMANCE OF THE SYSTEM.
3. THE NEED FOR MORE COMMUNICATIONS CAPACITY AND/OR
4. THE LICENSED FREQUENCIES BEING GIVEN TO THE PCS INDUSTRY.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $1,500,000

COMPLEX	MAPINFO IMPLEMENTATION

Proposal

Design, implement and provide training and data conversion for a geographic information system.

JUSTIFICATION

☐ Load ☐ Service ☐ Safety ☒ Efficiency ☐ Reliability ☐ Other

Explanation

Based on a favourable benefit/cost analysis completed in 1990, the decision was made to proceed with the development of a geographical information system for Manitoba Hydro.

MAPINFO IMPLEMENTATION PART II			09-00-7807
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Design	Design	Design	72000:72001

DESCRIPTION:
DESIGN, IMPLEMENT AND PROVIDE TRAINING AND DATA CONVERSION FOR A GEOGRAPHIC INFORMATION SYSTEM.

EXECUTIVE COMMITTEE MEETING HELD ON 96/01/23 RECOMMENDED APPROVAL TO BE GRANTED TO PROCEED WITH THE PROJECT AT A COST NOT TO EXCEED 25.1 MILLION.

JUSTIFICATION:
BASED ON A FAVOURABLE BENEFIT/COST ANALYSIS COMPLETED IN 1990, THE DECISION WAS MADE TO PROCEED WITH THE DEVELOPMENT OF A GEOGRAPHICAL INFORMATION SYSTEM FOR MANITOBA HYDRO

REVISION:
CASHFLOWS REVISEDTO BALANCE CONVERSION RESOURCES TO APPROXIMATELY $1.6M PER YEAR. TRANSMISSION LINE MAINTENANCE WAS PROJECT INITIATED AND ADDED AT A COST OF $1.6M OF ADDITIONAL FUNDS. LAST ISD DELAYED FROM 2001 03 TO 2001 12.

CONTINGENCY: $100,000

This BRN contains Deleted, Blocked, or Closed Orders.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 2

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: SITE REMEDIATION

Proposal

Implement programs designed to minimize or ameliorate the impact of the Corporation's operations on the environment, such as;
Conduct geotechnical investigations and remediate any hydrocarbon contaminated sites at 26 former isolated diesel generating stations in; Dauphin River, Bloodvien, Berens River, Jackhead, Little Grand Rapids, Manigotogan, Matheson Island, Pauingassi, Pine Dock, Poplar River, Pukatawagan, Gods Lake Narrows, Tadoule, The Pas, Moose Lake, Norway House, Cross Lake, Ilford, Nelson House, Split Lake, Wanless, Granville Lake, Bakers Narrows, Cormorant and Cranberry Portage.
Conduct geotechnical investigation for the various contaminated Corporate facilities, prepare a report with cleanup recommendations, remediate any contaminated areas identified and issue a final report confirming the facility and surrounding area were remediated and all areas of the work were left in accordance with applicable environmental regulations.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☐ Efficiency
☐ Reliability ☒ Other

Explanation

Due to concerns and in compliance with current environmental regulations and standards applicable to unrestricted use of abandoned former diesel sites, the sites must be investigated, remediated and restored to equivalency of the surrounding area.
Various existing Corporate contaminated facilities should be brought into compliance with current environmental regulations and standards.

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item __ Domestic Item 342

Title
PAUINGASSI D.G.S. - SITE CLEAN-UP

Budget reference number
04-00-5465

ginating division	Coordinating division	Constructing division	Project Order Group (Range):
erating & Maintenance	Construction	Construction	70123

DESCRIPTION:
1. CONDUCT GEOTECHNICAL INVESTIGATION OF THE DECOMMISSIONED DIESEL GENERATING STATION TO DELINEATE THE EXTENT OF ANY HYDROCARBON CONTAMINATION ON AND/OR AROUND THE SITE AND PREPARE A SITE INVESTIGATION REPORT ON THE INVESTIGATION INCLUDING RECOMMENDATIONS FOR REMEDIAL ACTION TO CLEAN UP ANY CONTAMINANTS. (W.O.# 43612 CLOSED OUT)
2. REMEDIATE TO ENVIRONMENTALLY ACCEPTABLE LIMITS ANY CONTAMINATED AREAS IDENTIFIED IN THE SITE INVESTIGATION REPORT.
3. ISSUE A FINAL REPORT ON THE PROJECT CONFIRMING THE DIESEL SITE AND SURROUNDING AREA WERE REMEDIATED AND ALL AREAS OF THE WORK WERE LEFT IN ACCORDANCE WITH APPLICABLE ENVIRONMENTAL REGULATIONS.

JUSTIFICATION:
DUE TO ENVIRONMENTAL CONCERNS AND/OR REGULATIONS THE SITE MUST BE INVESTIGATED, REMEDIATED AS REQUIRED, AND RESTORED TO A LEVEL WHICH PERMITS UNRESTRICTED USE OF THE SITE AND THE SURROUNDING AREA.

REVISION:
ISD DEFERRED FROM 1999 03 31 TO 2000 11 30 AS SURFACING MATERIALS WILL BE HAULED VIA 99/00 WINTER ROAD AND BE PLACED IN THE SUMMER OF 2000. REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY AMOUNT: $ 38,000

Title: PUKATAWAGAN DIESEL SITE CLEAN-UP

Budget reference number: 04-00-5468

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Construction	Construction	70482

DESCRIPTION:
GEOTECHNICAL SURVEY CONDUCTED AT PUKATAWAGAN DIESEL SITE TO DETERMINE THE EXTENT OF FUEL CONTAMINATION AND SUBSEQUENT CLEANUP OF CONTAMINATED AREAS. THE SURVEY WAS COMPLETED IN EARLY 1991 AND CLEANUP WILL COMMENCE IN THE 1991/92 FISCAL YEAR AND CONTINUE THRU 1994/95.

JUSTIFICATION:
DUE TO CRITICAL ENVIRONMENTAL CONCERNS, CONTAMINATED AREAS WILL BE EXCAVATED AND RESTORED TO A LEVEL THAT IS CONSIDERED SUITABLE FOR UNRESTRICTED USE AT PUKATAWAGAN.

REVISION:
REFLECTS COSTS TO COMPLETION.

Title: MOOSE LAKE D.G.S. - SITE INVESTIGATION & CLEAN-UP

Budget reference number: 04-00-5472

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Construction	Construction	70126:70219

DESCRIPTION:
1. CONDUCT GEOTECHNICAL INVESTIGATION OF THE DECOMMISSIONED DIESEL GENERATING STATION TO DELINEATE THE EXTENT OF ANY HYDROCARBON CONTAMINATION ON AND/OR AROUND THE SITE AND PREPARE A SITE INVESTIGATION REPORT ON THE INVESTIGATION INCLUDING RECOMMENDATIONS FOR REMEDIAL ACTION TO CLEAN UP ANY CONTAMINANTS. (W.O.# 40238 CLOSED OUT)

2. CONDUCT RISK MANAGEMENT STUDY AND, BASED ON RESULTS , EITHER RISK MANAGE THE SITE OR REMEDIATE TO ENVIRONMENTALLY ACCEPTABLE LIMITS. (POG 70126)

3. REMEDIATE, IF NECESSARY, IN 2002/03 (POG 70219).

4. ISSUE FINAL REPORT ON THE PROJECT CONFIRMING THE DIESEL SITE AND SURROUNDING AREA WERE LEFT IN ACCORDANCE WITH APPLICABLE ENVIRONMENTAL REGULATIONS.

JUSTIFICATION:
DUE TO ENVIRONMENTAL CONCERNS AND/OR REGULATIONS THE SITE MUST BE INVESTIGATED, REMEDIATED AS REQUIRED, AND RESTORED TO A LEVEL WHICH PERMITS UNRESTRICTED USE OF THE SITE AND SURROUNDING AREA.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES. CONTINUE MONITORING AND TESTING IN 99/00 BEFORE DECIDING IF SOIL REMEDIATION IS REQUIRED IN 2002/03.

CONTINGENCY: $77,000

Title
NORWAY HOUSE D.G.S. - SITE CLEAN-UP

Budget reference number
04-00-5473

riginating division	Coordinating division	Constructing division	Project Order Group (Range):
perating & Maintenance	Construction	Construction	70127

DESCRIPTION:
1. CONDUCT GEOTECHNICAL INVESTIGATION OF THE DECOMMISSIONED DIESEL GENERATING STATION TO DELINEATE THE EXTENT OF ANY HYDROCARBON CONTAMINATION ON AND/OR AROUND THE SITE AND PREPARE A SITE INVESTIGATION REPORT ON THE INVESTIGATION INCLUDING RECOMMENDATIONS FOR REMEDIAL ACTION TO CLEAN UP ANY CONTAMINANTS. (WORK ORDER 44842 CLOSED OUT)

2. RISK MANAGE THE SITE. REMEDIATION, IF REQUIRED, WILL BE COMPLETED IN 2001/02.

3. ISSUE A FINAL REPORT ON THE PROJECT CONFIRMING THE DIESEL SITE AND SURROUNDING AREA WERE LEFT IN ACCORDANCE WITH APPLICABLE ENVIRONMENTAL REGULATIONS.

JUSTIFICATION:
DUE TO ENVIRONMENTAL CONCERNS AND/OR REGULATIONS THE SITE MUST BE INVESTIGATED, REMEDIATED AS REQUIRED, AND RESTORED TO A LEVEL WHICH PERMITS UNRESTRICTED USE OF THE SITE AND THE SURROUNDING AREA.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY AMOUNT: $ 17,000

Title: GRANVILLE LAKE D.G.S. - SITE INVESTIGATION & CLEAN-UP

Budget reference number: 04-00-5480

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Construction	Construction	70108:70109

DESCRIPTION:
1. CONDUCT GEOTECHNICAL INVESTIGATION OF THE DECOMMISSIONED DIESEL GENERATING STATION IN ORDER TO DELINEATE THE EXTENT OF HYDROCARBON CONTAMINATION ON AND/OR AROUND THE SITE AND PREPARE A SITE INVESTIGATION REPORT ON THE INVESTIGATION INCLUDING RECOMMENDATIONS FOR REMEDIAL ACTION TO CLEAN UP ANY CONTAMINANTS. (WORK ORDER 46664 CLOSED OUT)

2. REMEDIATE ANY CONTAMINATED AREAS IDENTIFED IN THE SITE INVESTIGATION REPORT TO ENVIRONMENTALLY ACCEPTABLE LIMITS AND DEVELOP ANY LANDFARM AREAS NECESSARY FOR THE REMEDIATION PROCESS.

3. LAND FARM ANY CONTAMINATED SOILS REMOVED FROM THE DIESEL SITE AREA UNTIL CONTAMINATION IS REDUCED TO ENVIRONMENTALLY ACCEPTABLE LEVELS.

4. ISSUE A FINAL REPORT ON THE PROJECT CONFIRMING THE DIESEL SITE AND SURROUNDING AREA WERE REMEDIATED AND ALL AREAS OF THE WORKS WERE LEFT IN ACCORDANCE WITH APPLICABLE ENVIRONMENTAL REGULATIONS.

JUSTIFICATION:
DUE TO ENVIRONMENTAL CONCERNS AND/OR REGULATIONS THE SITE MUST BE INVESTIGATED, REMEDIATED AS REQUIRED, AND RESTORED TO A LEVEL WHICH PERMITS UNRETRICTED USE OF THE SITE AND THE SURROUNDING AREA.

REVISION:
REFLECTS ACTUAL COSTS TO COMPLETION.

Title
CORMORANT D.G.S. - SITE CLEAN-UP

Budget reference number
04-00-5482

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Construction	Construction	70130:70131

DESCRIPTION:
1. CONDUCT GEOTECHNICAL INVESTIGATION OF THE DECOMMISSIONED DIESEL GENERATING STATION TO DELINEATE THE EXTENT OF ANY HYDROCARBON CONTAMINATION ON AND/OR AROUND THE SITE AND PREPARE A SITE INVESTIGATION REPORT ON THE INVESTIGATION INCLUDING RECOMMENDATIONS FOR REMEDIAL ACTION TO CLEAN UP ANY CONTAMINANTS. COMPLETION: 1997 07 31 (WORK ORDER #46383/POG 70130).

2. REMEDIATE TO ENVIRONMENTALLY ACCEPTABLE LIMITS ANY CONTAMINATED AREAS IDENTIFIED IN THE SITE INVESTIGATION REPORT. COMPLETION: 2000 09 30 (POG 70131).

3. ISSUE A FINAL REPORT ON THE PROJECT CONFIRMING THE DIESEL SITE AND SURROUNDING AREA WERE REMEDIATED AND ALL AREAS OF THE WORKS WERE LEFT IN ACCORDANCE WITH APPLICABLE ENVIRONMENTAL REGULATIONS. COMPLETION: 2000 11 30 (POG 70131).

JUSTIFICATION:
DUE TO ENVIRONMENTAL CONCERNS AND/OR REGULATIONS THE SITE MUST BE INVESTIGATED, REMEDIATED AS REQUIRED, AND RESTORED TO A LEVEL WHICH PERMITS UNRESTRICTED USE OF THE SITE AND THE SURROUNDING AREAS.

REVISION:
FUNDS REQUIRED IN 1999/00 FOR SITE INVESTIGATION WORK AS REQUIRED BY MANITOBA ENVIRIONMENT. RELFECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY AMOUNT: $ 36,000

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 81

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: OIL CONTAINMENT

Proposal

Implement programs designed to minimize or ameliorate the impact of the Corporation's operations on the environment, such as;

Design and construct oil containment systems to collect and recover any oil spilled within the system.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☐ Efficiency
☐ Reliability ☒ Other

Explanation

Previous experience with oil spills requires the Corporation to demonstrate "due diligence" with respect to containing and minimizing the potential for any further occurances.

Title
AC SUB-STATION OIL CONTAINMENT - CENTRAL AREA

Budget reference number
03-00-6110

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Design	Construction	70024

DESCRIPTION:
IMPLEMENT NECESSARY OIL CONTAINMENT SYSTEMS AT EACH STATION. ALL STATIONS WILL BE ASSESSED AND CONTAINMENT INSTALLED WHERE REQUIRED.

JUSTIFICATION:
EACH STATION REQUIRES AN ASSESSMENT AND IMPLEMENTATION OF NECESSARY OIL CONTAINMENT SYSTEMS FOR ENVIRONMENTAL PROTECTION IN THE EVENT OF AN OIL SPILL, AS WELL AS MEETING FEDERAL AND PROVINCIAL LEGISLATION AND MANITOBA HYDRO GUIDELINES.

REFERENCE:
OIL SPILL CONTAINMENT WORKING GROUP REPORT 95-M5 ON OIL SPILL CONTAINMENT IN CORPORATE FACILITIES.

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CONTINGENCY: $10 000.

MICROWAVE AND VHF SITES OIL SPILL CONTAINMENT

Budget reference number
05-00-6566

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Operating & Maintenance	Power Planning & Operations	Construction	70374

DESCRIPTION:
DESIGN AND INSTALL APPROPRIATE OIL SPILL CONTAINMENT FACITILITES AT THE 47 MICROWAVE AND VHF SITES. FOR THOSE SITES WITH INDOOR STORAGE TANKS, IT IS RECOMMENDED THAT CONTAINMENT CURBING BE INSTALLED, WOODEN FLOORS BE UPGRADED, AND CONCRETE FLOORS BE SEALED. FOR THOSE SITES WITH OUTDOOR STORAGE TANKS, IT IS RECOMMENDED THE TANKS BE UPGRADED TO ABOVE GROUND REGULATION DOUBLE WALLED TANKS.

JUSTIFICATION:
EACH OF THESE SITES HAS A SMALL STANDBY GENERATOR WHICH OPERATES IN THE EVENT OF A POWER OUTAGE AND TYPICALLY HAS TWO FUEL TANKS LOCATED EITHER INSIDE OR OUTSIDE OF THE BUILDING. THE CONCERN IS FAILURE OF THE FUEL STORAGE TANKS AND RELEASE OF FUEL INTO THE BUILDING AND/OR INTO THE ENVIRONMENT.

REFERENCE:
OIL SPILL CONTAINMENT WORKING GROUP REPORT 95 -M5 'OIL SPILL CONTAINMENT IN CORPORATE FACILITIES'

REVISION:
REFLECTS REVISED ACTIVITY AND OVERHEAD RATES.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 131 - 139

REVISION STATUS: ☐ New complex ☐ In service change ☒ Concept change ☐ Estimate change only

COMPLEX: DOMESTIC ITEM - TRANSMISSION & DISTRIBUTION

Proposal

This complex consists of several hundred projects which are not identified as Major Items and whose individual cost is of a relatively small amount. The majority of projects are required to extend sub-transmission, distribution and transformation facilities to supply service to residential, farm, commercial and industrial customers and to replace plant facilities whose useful life has been exceeded.

JUSTIFICATION: ☒ Load ☒ Service ☒ Safety ☒ Efficiency ☒ Reliability ☒ Other

Explanation

The system has incurred consistant expenditures in the past which are required to meet the load growth into the foredeeable future. The residential, farm, commercial and industrial loads are expected to grow at an 20 year average rate of 1.5% per annum and will require a program of additions to the System to accommodate these anticipated loads.

Complex no. 24

REVISION STATUS: [ ] New complex [X] In service change [X] Concept change [ ] Estimate change only

COMPLEX: WUSKWATIM GENERATING STATION

Proposal

Design and construct Wuskwatim Generating Station on the Burntwood River upstream of Thompson. This will include the complete installation of equipment for 3 generators with a total installed capacity of approximately 210 MW, in accordance with the following schedule:

Unit #1 - 2016 12 31 Unit #2 - 2017 01 31 Unit #3 - 2017 03 31

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

Based on the 1999 load forecast, the Power Resource Plan studies show that an additional dependable energy source will be required in 2016/17. According to current available information, Wuskwatim is the preferred choice.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 223

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: HVDC BIPOLE RELIABILITY ENHANCEMENTS

Proposal

Relocate and reterminate service transformer #1 (SST1) and associated equipment within Radisson Stn. Purchase and install spare converter transformers on new pads as follows: Dorsey single phase 1-300kV & 1-450kV, three phase 1-375kV& 1-500kV; Radisson single phase 1-450kV, Henday three phase 1-500kV.Purchase and install two spare air cooled smoothing reactors set rated at 750 MH reactance and 500kV DC on new pad ,one each for Dorsey and Henday.Upgrade cooling system valves and converter transformers by installing additional cooling capacity to achieve rating and provide necessary degree of redundancy on Bipole 2 at Dorsey and Henday.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

Relocating SST1 ensures that Bipole 1 is not left in a single contingency bipole loss situation by permitting syncronization of all 3 transformers. Spare transformers and smoothing reactors provide transmission enhancements required due to the addition of Limestone, delay of Bipole 3, increased capacity for export sales, and provide improved system adequacy and reliability. Cooling system upgrades will increase DC summer output capacity by 200 MW. This will increase benefits from summer export sales, enhance maintenance scheduling/operations and DC transient performance.

FORECAST HISTORY (IN THOUSANDS OF DOLLARS):

APPROVED yyyy | mm	TOTAL AMOUNT	AMENDMENT
96 10	61,156	New complex, items transferred from complex # 67.
9710	63,275	Reflects revised costing methodology of the new financial reporting system. Increase is also due to factory problems with Henday transf, & const and switchgear mods at Radisson.
9810	39,542	Reflects 97/98 underexp 2.6M, transf ISD def 10 Mth, spares charged to inventory, cooling removed, shipping damages (Radisson), and add'n of 5kV repl cables for SST2&3.
1999 10	32,339	Reflects increases to put transformer in service if required, and decreases due to charging transformers to inventory, and material costs less than forecast.

ASSOCIATED COMPLEXES OR REFERENCE REPORTS:

REFERENCE NUMBER	DESCRIPTION
PSPD 95-7	Radisson Stn service transformer No.1 re-termination.
PSPD 94-2	Enhancement of the Nelson River transmission system.
Minutes	HVDC task force meeting of 95 04 13 (relocation) & 95 06 28 (cooling upgr)

MajCER(1) Rev. 98 11

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item — Domestic Item 3

Title: RADISSON STATION SST1 RELOCATION & SST2 & SST3 CABLE REPLACE

Budget reference number: 03-00-6119

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	Construction	60118:61890

DESCRIPTION:
RELOCATE RADISSON STATION SERVICE TRANSFORMER NO. 1 (SST1) AND RE-TERMINATE TRANSFORMER IN A NEW POSITION BETWEEN EXISTING BREAKER 33 AND NEW BREAKER 34 IN BAY 8. FACILITIES WILL INCLUDE 1 - 138 KV CIRCUIT BREAKER AND ALL ASSOCIATED EQUIPMENT.
REMOVE THE EXISTING 5KV CABLES FOR SST2 AND SST3 AND REPLACE THESE WITH NEW CABLES.

JUSTIFICATION:
RELOCATING STATION SERVICE TRANSFORMER SST1 FROM THE NORTHERN AC BUS TO THE COLLECTOR SYSTEM WILL ENSURE THAT HVDC BIPOLE 1 IS NOT LEFT IN A SINGLE CONTINGENCY BIPOLE LOSS SITUATION BY PERMITTING ALL THREE STATION SERVICE TRANSFORMERS TO BE SYNCHRONIZED.
THE 5KV SST2 AND SST3 CABLES ARE 24 YEARS OLD AND FAILURES HAVE OCCURRED ON SST1. REPLACEMENT WILL ENSURE RELIABLILITY OF THE STATION SERVICE TO BIPOLE 1.

REFERENCE:
MINUTES OF HVDC TASK FORCE MEETING OF 1995 04 13. REPORT PSPD 95-7, RADISSON STATION SERVICE TRANSFORMER NO. 1 RE-TERMINATION.

REVISION:
DECREASE IS DUE TO ACTUAL COSTS OF SST1 RELOCATION BEING LOWER THAN ESTIMATED.
CONTINGENCY AMOUNT: $ 25 000.

s BRN contains Deleted, Blocked, or Closed Orders.

Title
DORSEY SPARE CONVERTER TRANSFORMER FOUNDATIONS

Budget reference number
03-00-5903

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
DC	HVDC	Construction	60107:62230

DESCRIPTION:
DESIGN AND INSTALL FOUNDATIONS FOR 4 SPARE CONVERTER TRANSFORMERS; 300KV, 375KV, 450KV, AND 500KV.

JUSTIFICATION:
THE ADDITION OF LIMESTONE, THE DELAY OF BIPOLE 3 AND THE INCREASED CAPACITY FOR EXPORT SALES JUSTIFIES TRANSMISSION ENHANCEMENTS BASED ON THE ECONOMICS OF EXPORT SALES AND INCREASED SYSTEM ADEQUACY AND RELIABILITY. THIS ITEM PROVIDES FOR SPARE BIPOLE 2 CONVERTER TRANSFORMERS AT DORSEY.

REFERENCE:
REPORT PSPD 94-2, ENHANCEMENT OF THE NELSON RIVER TRANSMISSION SYSTEM.

REVISION:
TO PROVIDE FOUNDATIONS FOR SPARE CONVERTER TRANSFORMERS WHICH HAVE BEEN CHARGED TO SERIALIZED EQUIPMENT INVENTORY.

Title
HENDAY BIPOLE 2 SPARE 500KV CONV. TFR (SPARE # 1)

Budget reference number
03-00-5904

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
C	HVDC	Construction	60116:61895

SCRIPTION:
URCHASE AND INSTALL A SPARE THREE-PHASE CONVERTER TRANSFORMER ON A NEW PAD RATED AT 500 KV DC AND SUITABLE FOR USE IN T31S, T32S, T41S AND T42S POSITIONS.

JUSTIFICATION:
THE ADDITION OF LIMESTONE, THE DELAY OF BIPOLE 3 AND THE INCREASED CAPACITY FOR EXPORT SALES JUSTIFIES TRANSMISSION ENHANCEMENTS BASED ON THE ECONOMICS OF EXPORT SALES AND INCREASED SYSTEM ADEQUACY AND RELIABILITY. THIS ITEM PROVIDES FOR A SPARE BIPOLE 2 CONVERTER TRANSFORMER AT HENDAY.

REFERENCE:
REPORT PSPD 94-2, ENHANCEMENT OF THE NELSON RIVER TRANSMISSION SYSTEM.

REVISION:
PROJECT COMPLETE.

Title			Budget reference number
DORSEY BIPOLE 2 COOLING UPGRADE (DORSME11)			03-00-5907
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	Planning & Control	60110

DESCRIPTION:
UPGRADE THE COOLING SYSTEM FOR BIPOLE 2 BY MODIFYING THE THYRISTOR VALVE EVAPORATIVE SPRAY WATER COOLERS AND ASSOCIATED CONTROLS TO ALLOW CONTINUOUS OPERATION AT 2000MW UNDER MAXIMUM SUMMER AMBIENT TEMPERATURE CONDITIONS AND MAINTAIN FULL REDUNDANCY OF COOLING SYSTEMS. INSTALL MORE ACCURATE TEMPERATURE MONITORING ON THE CONVERTER TRANSFORMERS.
UPGRADE OF EXISTING WELLS AND/OR ADDITION OF NEW WELLS.

JUSTIFICATION:
HVDC BIPOLE 2 COOLING SYSTEM UPGRADES WILL INCREASE DC SUMMER OUTPUT CAPACITY BY 200 MW. THIS WILL INCREASE BENEFITS FROM SUMMER EXPORT SALES, AND ENHANCE MAINTENANCE SCHEDULING, DAY-TO-DAY OPERATIONS AND DC TRANSIENT PERFORMANCE. THIS ITEM PROVIDES FOR UPGRADE OF FACILITIES AT DORSEY.

REFERENCE:
REPORT PSPD 94-2, ENHANCEMENT OF THE NELSON RIVER TRANSMISSION SYSTEM. MINUTES OF HVDC TASK FORCE MEETING OF 1995 06 28. MEMO FROM L.D. RECKSIEDLER TO I.H. MCKAY DATED 1998 04 07.

REVISION:
UPGRADE OF EXISTING WELLS AND/OR ADDITION OF NEW WELLS ADDED TO THE ESTIMATE.
CASH FLOW REVISED. ISD DEFERRED TWO MONTHS.

CONTINGENCY: $150,000

Title			Budget reference number
HENDAY - BIPOLE 2 COOLING UPGRADE (HENDME4)			03-00-5908
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	Construction	60115

DESCRIPTION:
UPGRADE THE COOLING SYSTEM FOR BIPOLE 2 BY MODIFYING THE THYRISTOR VALVE EVAPORATIVE SPRAY WATER COOLERS AND ASSOCIATED CONTROLS TO ALLOW CONTINUOUS OPERATION AT 2000MW UNDER MAXIMUM SUMMER AMBIENT TEMPERATURE CONDITIONS AND MAINTAIN FULL REDUNDANCY OF COOLING SYSTEMS. INSTALL MORE ACCURATE TEMPERATURE MONITORING ON THE CONVERTER TRANSFORMERS.

JUSTIFICATION:
HVDC BIPOLE 2 COOLING SYSTEM UPGRADES WILL INCREASE DC SUMMER OUTPUT CAPACITY BY 200 MW. THIS WILL INCREASE BENEFITS FROM SUMMER EXPORT SALES, AND ENHANCE MAINTENANCE SCHEDULING, DAY-TO-DAY OPERATIONS AND DC TRANSIENT PERFORMANCE. THIS ITEM PROVIDES FOR UPGRADE OF FACILITIES AT HENDAY.

REFERENCE:
REPORT PSPD 94-2, ENHANCEMENT OF THE NELSON RIVER TRANSMISSION SYSTEM. MINUTES OF HVDC TASK FORCE MEETING OF 1995 06 28. MEMO FROM L.D. RECKSIEDLER TO I.H. MCKAY DATED 1998 04 07.

REVISION:
CASH FLOW REVISED. ISD DEFERRED TWO MONTHS.

Title: DORSEY BIPOLE 1 SPARE 300 KV CONV. TFR (SPARE # 3)

Budget reference number: 03-00-8369

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	HVDC	61896

DESCRIPTION:
Purchase and install a spare single-phase converter treansformer. The transformer rating is: 300 kV DC suitable for use in T12, T21 and T22 positions.

JUSTIFICATION:
Dorsey T22B phase is gassing. The dissolve gas analysis indicates that there is a defective connection which could fail at any time.

REFERENCE:
HVDC 98-03, Dorsey BP1 Spare 300kV Converter transformer Spare #3 for Dorsey T22B Phase.

REVISION:
CHANGE IN ACCOUNTING TREATMENT - TRANSFORMER TO BE CHARGED TO SERIALIZED EQUIPMENT INVENTORY.

Title: HENDAY BIPOLE 2 SPARE 500KV CONV. TFR (SPARE # 2)

Budget reference number: 03-00-8370

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
[illegible]S	HVDC	Construction	61897

DESCRIPTION:
PURCHASE AND INSTALL A SPARE THREE-PHASE CONVERTER TRANSFORMER RATED AT 500 KV DC AND SUITABLE FOR USE IN T31S, T32S, T41S AND T42S POSITIONS. COST OF TRANSFORMER PUT INTO SERIALIZED EQUIPMENT INVENTORY.

JUSTIFICATION:
HENDAY T315 TRANSFORMER FAILED. THE EXISTING SPARE HAS BEEN PUT IN ITS PLACE. A NEW 500 KV SPARE IS REQUIRED BECAUSE THE EXISTING T315 FAILED UNIT CANNOT BE ECONOMICALLY AND RELIABLY REPAIRED.

REFERENCE:
REPORT HVDC 98-01, ENHANCEMENT OF THE NELSON RIVER TRANSMISSION SYSTEM.

REVISION:
CHANGE IN ACCOUNTING TREATMENT - TRANSFORMER CHARGED TO SERIALIZED EQUIPMENT INVENTORY.

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS	Complex no.	REVISION STATUS
☐ Planned ☒ In progress	88	☐ New complex ☐ In service change ☒ Concept change ☐ Estimate change only

COMPLEX: BIPOLE 1 - CONVERTER TRANSFORMERS

Proposal

Repairs to Dorsey BP1 T13A & T21A converter transformers, and completion of Radisson windings and winding clampings on one single phase converter transformer.

JUSTIFICATION	Explanation
☐ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other	Arc backs and consequential arc backs from the mercury arc valves are causing the tertiary windings to shift. This movement can cause the insulation to be damaged and result in failures.

Estimate Level	COMPLEX START (yyyy mm)

X Major Item — Domestic Item 15

Title			Budget reference number
DORSEY BP1 300kv CONV. TFR FOR T21A (SPARE # 2)			03-00-8294
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	HVDC	61856

DESCRIPTION:
REPLACE T21-A PHASE CONVERTER TRANSFORMER WITH A NEW TRANSFORMER.

JUSTIFICATION:
IN 1994 THE 230kv AC BUSHING EXPLODED SPREADING DEBRIS AND ALUMINUM FOIL THROUGH THE TRANSFORMER. THE TANK ON THE TRANSFORMER WAS REPLACED IN THE FACTORY. THE CORE AND COILS WERE THOROUGHLY FLUSHED TO CLEAN THEM AND THEY WERE REUSED. RECENTLY THE TRANSFORMER HAS BEEN GASSING AND WE HAVE DETERMINED IT IS COMING FROM THE CORE STEEL. THIS REQUIRES REPLACING BOTH THE CORE AND COILS AS THE COILS STILL HAVE DEBRIS IN THEM. ESTIMATES HAVE DETERMINED THAT THE COST OF A NEW TRANSFORMER IS LESS THAN THAT OF REPAIRING THE EXISTING UNIT (INCLUDING OUTAGE COSTS), THUS IT HAS BEEN DECIDED TO PURCHASE A NEW TRANSFORMER.

REFERENCE:
REPORT HVDC 97-06

REVISION:
CHANGE IN ACCOUNTING TREATMENT - TRANSFORMER CHARGED TO SERIALIZED EQUIPMENT INVENTORY.

Title			Budget reference number
RADISSON STATION - CONVERTER TRANSFORMER MODIFICATION			03-00-1685
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	HVDC	61826

DESCRIPTION:
REPLACE TERTIARY WINDINGS AND MODIFY THE WINDING CLAMPINGS ON THREE SINGLE PHASE CONVERTER TRANSFORMERS FROM RADISSON STATION.

JUSTIFICATION:
TESTS HAVE INDICATED THAT THE TERTIARY WINDINGS ON THESE TRANSFORMERS ARE SHIFTING. THESE TRANSFORMERS ARE LIABLE TO FAIL IF KEPT IN SERVICE WITHOUT MODIFICATIONS. THESE CONVERTER TRANSFORMERS WERE BUILT BEFORE AXIAL COMPRESSION OF THE WINDINGS BECAME AN INDUSTRY STANDARD. ARC BACKS AND CONSEQUENTIAL ARC BACKS FROM THE MERCURY ARC VALVES ARE CAUSING THE TERTIARY WINDINGS TO SHIFT. THIS MOVEMENT CAN CAUSE THE INSULATION TO BE DAMAGED AND RESULT IN FAILURES.

REVISION:
COMPLETE.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 11

REVISION STATUS: [ ] New complex [ ] In service change [ ] Concept change [X] Estimate change only

COMPLEX: BIPOLE 1 MERCURY ARC VALVES - STAGE 3

Proposal

Replace Bipole 1 HVDC Mercury Arc Valve Groups 21, 22 and 23 with Thyristor Valves at Dorsey and Radisson stations.

JUSTIFICATION

[ ] Load [ ] Service
[ ] Safety [ ] Efficiency
[X] Reliability [ ] Other

Explanation

Continuing deterioration of the Mercury Arc Valves will make change-out of the remaining valve groups necessary. State-of-the-art Thyristor Valves will be used to replace all Mercury Arc Valves in three stages. This complex is the 3rd stage.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Deferral would reduce HVDC Bipole 1 availability due to frequent outages of the Mercury Arc Valves. Loss of export revenues would result.

Factors affecting timing or viability

Rate of deterioration of Mercury Arc Valves.
Delays from Valve suppliers.
Opportunities for outages to do valve changeouts.

COMPLEX SPECIFICS:

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 5

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: HVDC BIPOLE 2 THYRISTOR POLY PIPE REPLACEMENTS

Proposal

Complete replacement of all polyamide piping associated with the thyristor module and header system on valve halls 31, 32, 41 and 42 at Henday and Dorsey converter stations.

Material will be purchased in Aug/Sept 96 and 97. Piping replacement will be installed equally over two years beginning Aug 96.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The polyamide tubing directs cooling water essential for the operation of the valves. This tubing has reached the end of it's useful life and must be replaced before it fails, becomes brittle and breaks, plugging and overheating the thyristor and reactor modules.

(IN THOUSANDS OF DOLLARS)

X Major Item — 21 Domestic Item

Title
HENDAY-BP II THYRISTOR MODULES POLYAMIDE TUBING REPL.

Budget reference number
03-00-5827

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	HVDC	61827

DESCRIPTION:
COMPLETE REPLACEMENT OF ALL PLASTIC PIPING ASSOCIATED WITH THE THYRISTOR MODULE AND HEADER SYSTEM IN VALVE HALLS 31, 32, 41, AND 42. MATERIAL WILL BE PURCHASED IN TWO BATCHES. THE FIRST SHIPMENT IS SCHEDULED FOR JAN/FEB, 1996 AND THE SECOND IS SCHEDULED FOR JAN/FEB, 1998. PIPING REPLACEMENT WILL BE INSTALLED EQUALLY OVER THE YEARS OF MARCH 1996 TO MARCH 1997 FOR THE FIRST BATCH AND MARCH 1998 TO MARCH 1999 FOR THE SECOND BATCH.

JUSTIFICATION:
THE POLYAMIDE TUBING IS USED TO DIRECT THE COOLING WATER REQUIRED BY THE THYRISTOR VALVES. THEY WILL NOT OPERATE WITHOUT THEM. THE POLYAMIDE TUBING HAS REACHED THE END OF ITS USEFUL LIFE BASED ON THE RECOMMENDATION OF THE DESIGNER/SUPPLIER, AND MUST BE REPLACED BEFORE FAILURES OCCUR IN SERVICE.

REVISION:
ESTIMATE DECREASED TO REFLECT LOWER ACTUAL COST OF POLYAMIDE TUBING AND REDUCTION IN INSTALLATION ESTIMATES.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 54

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: CONVERTER TRANSFORMER BUSHING REPLACEMENT

Proposal

Replace converter transformer bushings with NGK bushings, and purchase spares as follows: at Dorsey replace six 230kv AC, and six 25kv tertiary bushings; and at Radisson/Henday replace five 138kv, two 150kv, four 230kv, and three 15kv tertiary bushings, and purchase two 300kv and two 450kv spares.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

The bushing replacement program was undertaken due to failure of a 230kv bushing in Dorsey T21 A-phase converter transformer which resulted in costly repairs to the transformer, and loss of revenue due to the outage. Also during repair of Dorsey T31S converter transformer in Pauwel's Canada plant two out of two 230kv bushings being tested failed at far below the full test voltage. The manufacturers expected service life is 25 years. These bushings have all been in service more than 17 years. Replacement cost is justified when compared to transformer damage due to an in service failure.

Title
DORSEY CONVERTER TRANSFORMER BUSHING REPLACEMENT/SPARES

Budget reference number
03-00-6126

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
C	HVDC	HVDC	61830

DESCRIPTION:
THE AC 230KV BUSHINGS IN CONVERTER TRANSFORMERS (T22, T23, T31S, T31D, T41S AND T41D) AND THE 25KV TERTIARY BUSHINGS IN CONVERTER TRANSFORMERS (T11, T12, T13, T21, T22, AND T23) ARE BEING REPLACED WITH NGK BUSHINGS. THE PURCHASE OF ONE SPARE 125kv DC, ONE SPARE 250kv DC, ONE SPARE 300kv DC, ONE SPARE 375kv DC, ONE SPARE 450kv DC, AND ONE SPARE 500kv DC TRANSFORMER BUSHING, AND THE WORK TO TEST THE BUSHINGS AND BUILD BUSHING STANDS.

JUSTIFICATION:
THE DECISION TO GO INTO A BUSHING REPLACEMENT PROGRAM WAS MADE DUE TO A FAILURE OF A 230KV BUSHING IN DORSEY T21 A-PHASE CONVERTER TRANSFORMER WHICH RESULTED IN THE VERY COSTLY REPAIRS TO THE TRANSFORMER AND LOSS OF REVENUE DUE TO THE OUTAGE. ALSO DURING THE REPAIR OF DORSEY T31S CONVERTER TRANSFORMER IN PAUWEL'S CANADA PLANT TWO OUT OF TWO 230KV BUSHINGS BEING TESTED FAILED AT FAR BELOW THE FULL TEST VOLTAGE. THE MANUFACTURER OF THESE BUSHINGS STATES THAT THE EXPECTED SERVICE LIFE OF THESE BUSHINGS IS 25 YEARS. SERVICE LIFE MEANS THAT A FAILURE RATE OF 50 PERCENT CAN BE EXPECTED WITHIN 25 YEARS. THESE BUSHINGS HAVE ALL BEEN IN SERVICE FOR MORE THAN SEVENTEEN YEARS. THE COST OF REPLACING ALL OF THESE BUSHINGS IS JUSTIFIED WHEN COMPARED TO THE REPAIR AND OUTAGE COSTS RESULTING FROM CONVERTER TRANSFORMERS BEING DAMAGED DUE TO AN IN SERVICE BUSHING FAILURE. BECAUSE THE SERVICE LIFE IS 25 YEARS AND WE ARE STARTING TO EXPERIENCE FAILURES WE ARE ANTICIPATING THAT THE FAILURE RATE WILL INCREASE DRAMATICALLY IN THE NEXT FEW YEARS IF THE BUSHINGS ARE NOT REPLACED. THE PURCHASE OF SPARE DC TRANSFORMER BUSHINGS WILL ENSURE THAT WE HAVE REPLACEMENTS IN THE EVENT THAT THEY ARE REQUIRED.

REVISION:
ISD DEFERRED 7 MONTHS.
UPDATED INTEREST AND ESCALATION.

X Major Item — Domestic Item 24

Title
DORSEY BIPOLE 1 SYNCH CONDENSER BREAKER REPLACEMENT

Budget reference number
03-00-6185

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	Construction	61000:62222

DESCRIPTION:
DESIGN AND REPLACEMENT OF SIX 17KV BREAKERS AND ASSOCIATED EQUIPMENT FOR ENGLISH ELECTRIC AND ASEA SYNCHRONOUS CONDENSERS AT DORSEY STATION WITH NEW 120,000 A BREAKERS. THE BREAKERS ARE TO BE REPLACED 2 PER YEAR STARTING 1997 05.

JUSTIFICATION:
THE EXISTING 17KV BREAKERS HAVE BECOME UNDER RATED DUE TO SYSTEM CHANGES. NEW BREAKERS WITH INCREASED RATING ARE REQUIRED TO ELIMINATE POTENTIAL BREAKER DAMAGE AND OTHER ADVERSE SYSTEM AND SAFETY IMPLICATIONS.

REFERENCE:
SPED REPORT 96-02, DORSEY STATION 17KV SYNCHRONOUS CONDENSER BREAKER REPLACEMENT.

REVISION:
ISDS' ADVANCED 3 MONTHS DUE TO SCC REQUIREMENTS. ESTIMATE BASE DATE CHANGED TO 1999.
CONTINGENCY AMOUNT: $270,000

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 216

REVISION STATUS: ☐ New complex ☐ In service change ☒ Concept change ☐ Estimate change only

COMPLEX: BIPOLE 1 & 2 DC FILTER CAPACITOR REPLACEMENT

Proposal

Replace all bipole 1 & 2 DC PCB filled capacitors at Dorsey , Radisson and Henday Stns, with non-PCB replacement capacitors.

JUSTIFICATION: ☐ Load ☐ Service ☒ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

Existing filter capacitors are PCB filled. New capacitors contain a more flamable oil and mixing them could result in a fire if toxic compounds from the PCB's are released. There is no sensitive protection to protect them against failure, and they will be 25 years old and approaching the end of their usable life.

Title			Budget reference number
Bipole 1 & 2 DC Filter Capacitor Replacements			03-00-7223
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	HVDC	61851:62239

DESCRIPTION:
The replacement of all BP1 and 2 DC PCB filled high power capacitors at the Dorsey, Radisson and Henday Converter Stations, with non-PCB replacement capacitors.

JUSTIFICATION:
We have experienced numerous PCB filled capacitor failures at HVDC Converter Stations. This results in requests for outages via SCC to allow for repairs. The catastrophic failure of a capacitor can in a DC Filter Bank of BP2 would result in a pole outage. Manitoba Hydro is committed to being PCB free as outlined in Corporate policy statement CP486B. The capacitors will be 25 years old and are approaching the end of their usable life

COMPLEX STATUS	Complex no.	REVISION STATUS
☒ Planned ☐ In progress	213	☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: S.E.R. REPLACEMENT

Proposal

Design, purchase and install new sequence of events recorders at Dorsey & Radisson to replace the existing ones.

JUSTIFICATION

☐ Load ☐ Service
☐ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

The SER provides station operators with a central alarm annunciation to aid in the operation of the station and provide plant engineers with the means to analyse system disturbances. The existing SER has reached the end of its useful life and must be replaced. In addition the manufacturers no longer support this equipment and spare parts are unavailable.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 249

REVISION STATUS: [ ] New complex [X] In service change [ ] Concept change [X] Estimate change only

COMPLEX: DORSEY BRINE EFFLUENT IMPROVEMENT

Proposal

Design supply and drilling of a pilot well to determine feasibility of the deep well injection method. After satisfactory evaluation of the pilot well test results , design, supply, install and commission it with associated tanks, pumps and pipe works to transfer the salt brine effluent from the water softeners of the two bipoles. (It is assumed that Government Approval is not needed for this work.) Design and install cathodic protection for the wells.

JUSTIFICATION

[ ] Load [ ] Service
[ ] Safety [ ] Efficiency
[ ] Reliability [X] Other

Explanation

The existing deep well is not functioning properly. It was originally installed in 1984. In 1986 it lost its ability to accomodate the flow of effluent. Presently some effluent is being dumped to the station drainage ditches. It is now essential that a new well be drilled incorporating the latest design.

Title
DORSEY BRINE EFFLUENT DISPOSAL WELL REPLACEMENT

Budget reference number
03-00-8300

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
HVDC	HVDC	HVDC	61861

DESCRIPTION:
DESIGN, SUPPLY AND DRILLING OF A PILOT WELL TO DETERMINE FEASIBILITY OF THE DEEP WELL INJECTION METHOD. AFTER SATISFACTORY EVALUATION OF THE PILOT WELL TEST RESULTS, DESIGN, SUPPLY, INSTALL AND COMMISSION THE DEEP WELL WITH ASSOCIATED TANKS, PUMPS AND PIPE WORKS TO TRANSFER THE SALT BRINE EFFLUENT FROM THE WATER SOFTENERS OF THE TWO BIPOLES TO THE DEEP WELL. IT IS ASSUMED THAT GOVERNMENT APPROVAL IS NOT NEEDED FOR THIS WORK. DESIGN AND INSTALL CATHODIC PROTECTION FOR THE WELLS.

JUSTIFICATION:
THE EXISTING DEEP WELL IS NOT FUNCTIONING PROPERLY. IT WAS ORIGINALLY INSTALLED IN 1984. IN 1996 THE WELL LOST ITS ABILITY TO ACCOMMODATE THE FLOW OF EFFLUENT. THE WELL WAS CLEANED AND ACID FLUSHED BUT STILL CANNOT HANDLE THE NORMAL FLOW. PRESENTLY SOME EFFLUENT IS BEING DUMPED TO THE STATION DRAINAGE DITCHES. IT IS NOW ESSENTIAL THAT A NEW WELL BE DRILLED INCORPORATING THE LATEST DESIGN.

REVISION:
ESTIMATE REVISED TO REFLECT ACTUAL COST.
PROJECT COMPLETE.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 260

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: HVDC AUXILIARY POWER SUPPLY UPGRADES

Proposal

The review and upgrading of eight battery banks and four power centres at Dorsey, Radisson, and Henday Converter stations. Replacement of +/- 25VDC & 60VDC battery chargers and the 129VDC/60VDC inverters in Bipole 2 at Dorsey & Henday.

JUSTIFICATION

[X] Load [ ] Service
[ ] Safety [X] Efficiency
[X] Reliability [ ] Other

Explanation

Upgrading of the HVDC System Auxiliary Power Supplies is necessary to obtain maintenance outages for them without additional system costs and to maintain reliability of the HVDC System. This will allow Manitoba Hydro to maintain/increase firm energy sales and keep spinning reserve requirements to a minimum.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: [X] Planned [ ] In progress

Complex no. 272

REVISION STATUS: [X] New complex [ ] In service change [ ] Concept change [ ] Estimate change only

COMPLEX: DORSEY SYNCHRONOUS CONDENSER REFURBISHMENT

Proposal

Major inspection and overhaul of synchronous condensers SC7Y, SC8Y, SC9Y, SC21Y, SC22Y, and SC23Y. Replacement of coolers to restore original thermal performance on SC21Y, SC22Y, and SC23Y.

JUSTIFICATION: [ ] Load [ ] Service [ ] Safety [ ] Efficiency [X] Reliability [ ] Other

Explanation

Synchronous condensers are required for proper operation of the HVDC system, voltage regulation of the southern AC system and to provide reactive power for power export to the USA. A major inspection and overhaul of each machine is necessary to prevent catastrophic failure, involving the rotors and rotor bolts as indicated by the failures of SC12Y in 1987 and SC11Y in 1988. The cost of repairing a failure when conbined with our inability to export power will well exceed the cost of major inspection and overhaul.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 3

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: GREAT FALLS G.S.REHABILITATION

Proposal

Replace existing gates, roller paths and hoists (installed between 1920 - 1928) with new fixed-roller,vertical lift gates, stainless steel roller paths and wire rope type hoists. Anchor the intake piers to bedrock, to stabilize the intake. Replace main water passage components (bottom ring, discharge ring and draft tube liner) ,install new propeller type runner, rewind generator, provide new transformer and modernize to present standards.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

The existing a) intake gates and hoists cannot be expected to provide reliable emergency closure functions as they have the potential to malfunction during an emergency. b) draft tube liner is failing in spite of expensive repairs and is in urgent need of replacement. The potential to utilize the outage to replace the seventy year old runner with a larger, more efficient unit has been reviewed and approved by the re-runnering committee. While the generator was rewound forty years ago, many of the electrical components are original equipment from the 1920's.

Complex no. 3

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

Advance or deferral impact

Lost opportunity to coordinate two required repair jobs on unit #3 with only one shut down.
Danger of experiencing an intake gate malfunction during an emergency.

Factors affecting timing or viability

Urgency of requirement to replace intake gate and hoist.
Failing condition of the draft tube liner and age of electrical components.

COMPLEX SPECIFICS:

PROJECT	ORIGINAL COMMITTED BASE COST	PREVIOUS ESTIMATE BASE 1998	PREVIOUS ESTIMATE BASE 1999	CURRENT ESTIMATE BASE 1999	ESTIMATE CHANGE Amount	ESTIMATE CHANGE %

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	61318

DESCRIPTION:
REPLACE MAIN WATER PASSAGE COMPONENTS (BOTTOM RING, DISCHARGE RING AND DRAFT TUBE LINER), INSTALL NEW PROPELLOR TYPE RUNNER, REWIND GENERATOR, PROVIDE NEW TRANSFORMER AND MODERNIZE TO PRESENT STANDARDS.

JUSTIFICATION:
THIS WORK IS DRIVEN BY A FAILING DRAFT TUBE LINER WHICH IN SPITE OF EXTENSIVE REPAIRS IS IN URGENT NEED OF REPLACEMENT. THE POTENTIAL TO UTILIZE THE OUTAGE TO REPLACE THE SEVENTY YEAR OLD RUNNER WITH A LARGER, MORE EFFICIENT UNIT HAS BEEN REVIEWED AND APPROVED BY THE RE-RUNNERING COMMITTEE. WHILE THE GENERATOR WAS REWOUND FOURTY YEARS AGO, MANY OF THE ELECTRICAL COMPONENTS ARE ORIGINAL EQUIPMENT FROM THE 1920'S.

REVISION:
MAINTAIN SCHEDULE AND CASH FLOW AS SHOWN. ESTIMATES TO BE REFINED DURING 1999/00.

Title			Budget reference number
GREAT FALLS G.S. INTAKE GATES			01-01-8069
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	61358

DESCRIPTION:
REPLACEMENT OF EXISTING GATES, ROLLER PATHS AND HOISTS (INSTALLED BETWEEN 1920 AND 1928) WITH NEW FIXED-ROLLER, VERTICAL LIFT TYPE GATES, STAINLESS STEEL ROLLERPATHS AND WIRE ROPE TYPE HOISTS. ANCHORING OF THE INTAKE PIERS TO BEDROCK, TO STABILIZE THE INTAKE.

JUSTIFICATION:
THE EXISTING INTAKE GATES AND HOISTS CANNOT BE EXPECTED TO PROVIDE RELIABLE EMERGENCY CLOSURE FUNCTIONS AS THEY HAVE THE POTENTIAL TO MALFUNCTION DURING AN EMERGENCY.

REVISION:
PROJECT REFLECTS REVISED WORK SCHEDULE.

This BRN contains Deleted, Blocked, or Closed Orders.

COMPLEX: SEVEN SISTERS G.S. REHABILITATION

Proposal

Replace Unit # 1, 2 & 3 turbine runners together with rehabilitation of the generator field poles and rewinding of the stators. Conduct turbine model tests. Modify the draft tube on Unit 1 by adding a Moody Spreading Cone, and partially fill in the draft tube elbow with concrete. Perform restoration work on the generator rotor poles, rewind exciters and install new transformer sprinkler systems. Rehabilitation, replacement of and addition to various electrical and mechanical equipment and systems such as; station lighting, 110kv line protection, bus disconnects, station grounding, oil interceptor, spillway hoist housing upgrade, powerhouse ventilation, generator cable replacement, powerhouse and tailrace cranes, standby generator and EPS, control room air conditioning, generator terminal equipment, governor system, compressed air system, line & bus potential transformers, and spillway gate limit switches.

JUSTIFICATION	Explanation
☐ Load ☒ Service ☒ Safety ☒ Efficiency ☒ Reliability ☐ Other	New runners would produce rated power under lower head at greater efficiency levels. A redesigned draft tube would allow increased output. The original asphalt type stator windings should be replaced by modern epoxy materials before serious coil failures occur without warning. Assessment of the electrical and mechanical systems has identified concerns in terms of obsolete equipment, safety, fire risk and adaptability to present day operating conditions and standards. Upgrading is necessary to ensure reliable safe and economical operation.

SEVEN SISTERS G.S. ELECTRICAL/MECHANICAL SYSTEMS

Budget reference number
01-02-6017

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	70174

DESCRIPTION:
REHABILITATION, REPLACEMENT OF, AND ADDITION TO VARIOUS ITEMS OF ELECTRICAL AND MECHANICAL EQUIPMENT AND SYSTEMS. ITEMS INCLUDED ARE:

49312	GENERATOR AVR REPLACEMENT (UNITS 4-6)	$ 821	TRANSFERRED (POG 60082)
49338	UPGRADING OF STANDBY GENERATOR & E.P.S	144	COMPLETE
49346	SPILLWAY HOIST HOUSING UPGRADE	387	COMPLETE
49353	UNIT CONTROL METERING & RELAYING	1,877	TRANSFERRED (POG 60083)
49361	110 KV LINE PROTECTION	617	(POG 70174)
49379	GENERATOR TERMINAL EQUIPMENT	117	COMPLETE
49387	110 KV LINE & BUS DISCONNECT	555	COMPLETE
49395	110 KV LINE & BUS POTENTIAL TRANSFORMER	56	COMPLETE
49403	STATION GROUNDING	451	COMPLETE
49411	STATION LIGHTING	709	COMPLETE
49429	SPILLWAY GATE LIMIT SWITCHES	34	COMPLETE
49437	POWERHOUSE AND TAILRACE CRANES	145	COMPLETE
49445	POWERHOUSE VENTILATION	225	COMPLETE
49452	GOVERNOR SYSTEM	80	COMPLETE
49460	COMPRESSED AIR SYSTEM	60	COMPLETE
49478	OIL SEPARATION SYSTEM	691	COMPLETE
49486	CONTROL ROOM AIR CONDITIONING	99	COMPLETE
49494	GENERATOR 2 11 KV POWER CABLE REPLACEMENT	227	COMPLETE

JUSTIFICATION:
ENGINEERING ASSESSMENT OF THE ELECTRICAL AND MECHANICAL EQUIPMENT AND SYSTEMS AT SEVEN SISTERS HAS IDENTIFIED VARIOUS AREAS OF CONCERN IN TERMS OF OBSOLETE EQUIPMENT, SAFETY, FIRE RISK AND ADAPTABILITY TO PRESENT DAY OPERATING CONDITIONS AND STANDARDS. UPGRADING WORK IS NECESSARY TO ENSURE CONTINUED RELIABLE SAFE AND ECONOMIC OPERATION OF THE GENERATING STATION.

REFERENCE:
E&C DIVISION REPORT NO. 85-E-1, JULY 25, 1985- S.S.G.S. PLANT EVALUATION REPORT STAGE III.

REVISION:
REFLECTS COSTS TO COMPLETION. PROJECT CLOSED OUT.

Title
SEVEN SISTERS G.S. - UNIT #4 REHABILITATION

Budget reference number
01-02-5924

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	60084

DESCRIPTION:
REPLACEMENT OF THE TURBINE RUNNER; REWINDING OF THE GENERATOR STATOR AND FIELD POLES, PLUS OTHER UPGRADES; AND THE REPLACEMENT OF THE STEP UP TRANSFORMER ON UNIT #4 AT SEVEN SISTERS GENERATING STATION.

JUSTIFICATION:
INSTALLATION OF A NEW RUNNER OF MODERN DESIGN ON UNIT 4 WILL RESULT IN INCREASED REVENUE ACCRUING FROM IMPROVEMENTS IN POWER OUTPUT AND EFFICIENCY OF THE UNIT. UNIT #4 GENERATOR WINDING IS IN DETERIORATED CONDITION. IT MUST BE REWOUND AT AN EARLY DATE TO AVOID AN IN SERVICE FAILURE WITH COSTLY CONSEQUENCES. REPLACEMENT OF THE STEP UP TRANSFORMER IS ECONOMICAL DUE TO REDUCTION IN LOSSES FOR THE NEW TRANSFORMER DESIGNS SIMILAR TO UNITS #1-#3.

REFERENCE:
REPORT NO. PS94-03 SEVEN SISTERS GENERATING STATION UNIT #4 GENERATOR TRANSFORMER REPLACEMENT.

REVISION:
CASH FLOW REVISED BASED ON CURRENT SCHEDULE. WORK SCHEDULED FOR 1999/00 IS TO COMPLETELY REASSEMBLE AND COMMISSION THE UNIT.

CONTINGENCY AMOUNT: $100 000.

BRN contains Deleted, Blocked, or Closed Orders.

Title
SEVEN SISTERS G.S. - MAJOR CONCRETE REHABILITATION

Budget reference number
01-02-5925

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	60150

DESCRIPTION:
REHABILITATION OF INTAKE HEADBLOCKS 4 AND 5 WHICH SERVES AS A BARRIER TO PREVENT ICE FROM ENCROACHING INTO THE STOPLOG & GATE CHECKS AND, AS WELL, PROVIDES THE UPSTREAM ACCESSACROSS THE POWERHOUSE AND THE SUPPORTING STRUCTURE FOR THE UPSTREAM WALL. IT IS PARTICULARLY VULNERABLE TO FREEZE-THAW DETERIORATION AS WELL AS STRESSES RESULTING FROM THE SEVERE CLIMATIC CONDITIONS.

REHABILITATION OF THE TAILRACE PIERS AND DECK. THE TAILRACE CONSISTS OF A 9' WIDE DECK, A CRANE BEAM SUPPORTING THE RAILS FOR THE DRAFT TUBE STOP LOG CRANE AND THE PIERS. THE PIERS SEPARATE THE UNITS AND, AS WELL, SUPPORT THE CRANE BEAM AND THE DECK AND CONTAIN THE GAINS FOR THE STOP LOGS.

JUSTIFICATION:
THE LATEST CONDITION SURVEY REPORT INDICATES CONTINUING DETERIORATION OF INTAKE HEADBLOCKS 4 AND 5, TO THE POINT WHERE IT IS RECOMMENDED THAT THEY BE REHABILITATED.

AS A RESULT OF THE CONDITION OF THE CONCRETE AS DETERMINED BY THE LATEST CONCRETE INVESTIGATION, AS WELL AS A STUDY OF THE STRUCTURAL ADEQUACY OF THE PIERS AND DECK, THE RECOMMENDATION IS TO REMOVE THE EXISTING GUNITE AND DETERIORATED CONCRETE BELOW IT FROM THE UNDERSIDE OF THE DECK TO ELEVATION 840'; TO REPLACE THE DECK OVER THE FULL LENGTH WITH A WIDER, HIGHER CAPACITY DECK AND TO RESURFACE THE DOWNSTREAM WALL WITH A CEMENTITIOUS REPAIR MATERIAL.

REVISION:
SCOPE OF WORK IN 1999/00 IS COMPLETION OF MISCELLANEOUS CLEAN UP WORK.

CONTINGENCY AMOUNT: $5 000.

s BRN contains Deleted, Blocked, or Closed Orders.

Title
SEVEN SISTERS G.S. - CRANES AND SPILLWAY ANCHORS

Budget reference number
01-02-5926

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	60091

DESCRIPTION:
TO PERFORM THE NECESSARY ENGINEERING DESIGN AND REMEDIAL CONSTRUCTION TO UPGRADE SEVEN SISTERS GENERATING STATION TO PRESENT DAY DAM SAFETY STANDARDS AND TO ALLOW THEM TO CONTINUE TO OPERATE IN A SAFE AND RELIABLE MANNER.

WORK DESCRIPTION TO INCLUDE THE FOLLOWING:

(1) ANCHOR REINFORCEMENT FOR THE NORTH SPILLWAY PIERS AND ROLLWAYS, THE CENTRE SLUICEWAY PIER AND THE SOUTH NON-OVERFLOW DAM (COMPLETED);

(2) PURCHASE OF NEW OR OVERHAUL EXISTING SPUD HOISTS TO IMPROVE RELIABILITY AND STOPLOG REMOVAL RATES;

(3) PINAWA CONTROL DAM UPGRADING.

JUSTIFICATION:
IT IS RECOMMENDED THAT THE ABOVE WORK BE UNDERTAKEN TO UPGRADE SEVEN SISTERS STRUCTURES TO PRESENT DAY DAM SAFETY STANDARDS AND TO ALLOW THEM TO CONTINUE TO OPERATE IN A SAFE AND RELIABLE MANNER.

REFERENCE:
DAM SAFETY PROGRAM SEVEN SISTERS GENERATING STATION DEFICIENCY INVESTIGATIONS SUMMARY REPORT # 93DSP-S06 DATED 93 11 03.

REVISION:
SCOPE OF WORK IN 1999/00 TO COVER OUTSTANDING DEFICIENCIES ON SPILLWAY SPUD HOIST.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 32

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☐ Estimate change only

COMPLEX: PINE FALLS G.S. REHABILITATION

Proposal

Rehabilitation, replacement of and addition to various electrical and mechanical equipment and systems such as; spillway mechanical components, station service upgrade, station lighting, 11kv cable replacement, spillway electrical distribution, water system, air system, transformer lightning arrestors and station drawings. Replace Unit #1and #2 turbine runners with more efficient new design runners, rebuild existing servomotors for increased wicket gate opening allowing more discharge, and rewind the generator stators utilizing modern insulating materials.

JUSTIFICATION

☐ Load ☒ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

Assessment of the electrical and mechanical systems has identified concerns in terms of obsolete equipment, safety, fire risk and adaptability to present day operating conditions and standards. Upgrading is necessary to ensure reliable safe and economical operation.Pine Falls consistantly spills more water than the other Winnipeg River plants. Additional generation can be obtained (approximately 17%) with increased discharge capability. Tests have confirmed that the 2 stator windings are in danger of failure at any time.

Budget reference number 01-04-8005

FORECAST HISTORY (in thousands of dollars)

Approved yy mm	TOTAL AMOUNT	COMMENTS
1988 11	2 935	NEW ITEM.
1989 10	5 164	INCREASE DUE TO ADDITION OF SPILLWAY MECHANICAL UPGRADE WHICH WAS NOT INCLUDED IN PREVIOUS CER. ESTIMATE INCREASED FOR 250 DC AND STATION LIGHTING BASED ON ACTUAL COST OF SIMILAR WORK AT GREAT FALLSAND SEVEN SISTERS. START DATE DEFERRED FROM 88/12/01 TO 89/04/01.
1990 10	4 055	ESTIMATE REFLECTS A MORE DETAILED AND RESCHEDULED REHABILITATION PLAN.
1991 10	3 955	REFLECTS FAVOURABLE CONTRACT COST ON WATER SYSTEM UPGRADE PLUS REDUCED INSTALLATION COST ESTIMATE FOR STATION LIGHTING BASED ON CURRENT MARKET PRICES.
1992 10	7 610	ADDED NEW ITEM, SPILLWAY GATE AND GUIDE REHABILITATION, AS PER R.B. GIBSON'S MEMORANDUM TO L.J. HOLDEN DATED 1992 02 11. IN-SERVICE DATES REVISED TO ACCOMMODATE ENGINEERING WORKLOADS.
1993 10	8 419	INCREASE TO WO# 47977 (SPILLWAY GATE & GUIDE REHABILITATION)DUE TO ADJUSTMENT OF CONTRACT ESTIMATE FOR GATE REHABILITATION WORK. IN-SERVICE DATES OF POWERHOUSE WORK ORDERS REVISED TO ACCOMMODATE ENGINEERING WORKLOADS.
1994 10	7 990	REDUCTION DUE TO A LOWER ESTIMATE FOR STATION SERVICE UPGRADE AND IN-SERVICE DATE ADVANCED SEVEN MONTHS.
1995 10	11 863	WORK ORDERS 47878, 47886 TRANSFERRED TO BRN 9601-04-6962, AND 47977 REVISED TO REFLECT COSTS TO DATE AND WORK REMAINING, PROBABLE CHANGE IN SCOPE OF WORK.
1996 10	12 180	CORRECTION OF INTEREST AND OVERHEAD CALCULATIONS.
1997 10	11 764	ESTIMATE REWORKED BASED ON ACTUAL COSTS TO DATE.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 1

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: LAURIE RIVER PLANT # 1 AND # 2 - REHABILITATION

Proposal

Rehabilitation, replacement of and addition to various civil works, electrical and mechanical equipment and systems such as ; concrete and structures, supervisory control system, vehicle storage building, bailey bridge, road, airstrip, electrical/ mechanical systems upgrade and 2.3kv breakers.

JUSTIFICATION

☐ Load ☒ Service ☒ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

Assessment of the civil, electrical and mechanical systems has identified concerns in terms of deterioration, obsolete equipment, safety, fire risk and adaptability to present day operating conditions and standards. Upgrading is necessary to ensure reliable safe and economical operation.

Budget reference number
01-10-9006

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - North	Generation - South	Generation - South	60065:60155

DESCRIPTION:
REHABILITATION, UPGRADING OR REPLACEMENT OF, AND ADDITION TO VARIOUS ITEMS OF ELECTRICAL AND MECHANICAL SYSTEMS AND EQUIPMENT. ITEMS IDENTIFIED IN THE LAURIE RIVER ECONOMICVIABILITY STUDY ARE:
A) CONCRETE AND STRUCTURES; (COMPLETE) W/O#48082 & 48090
B) AUTOMATION AND REMOTE CONTROL; P.O.G.#60066
C) VEHICLE STORAGE BUILDING; (COMPLETE) W/O#46102
D) BAILEY BRIDGE; P.O.G.#60067
E) ROAD AND AIRSTRIP; (COMPLETE) W/O# 48066 & 48058
F) ELECTRICAL/MECHANICAL SYSTEMS UPGRADE & 2.3 KV BREAKERS. P.O.G.#'s 60065,60068,60069 & 60070. (COMPLETE)

SEPARATE BUDGET ITEMS WILL BE RAISED TO COVER PHASE II AND PHASE III.

JUSTIFICATION:
IT IS ECONOMICALLY VIABLE TO MAINTAIN AND REHABILITATE THE FACILITIES TO PRODUCE ELECTRICITY IN A SAFE, RELIABLE AND EFFICIENT MANNER. THE AGE AND CONDITION OF THE PLANT IS SUCH THAT REHABILITATION WORK IS REQUIRED

REFERENCE:
EASTERN REGION LAURIE RIVER ECONOMIC VIABILITY STUDY.

REVISION:
BRIDGE ABUTMENT WORK DEFERRED TO 99/00, AUTOMATION AND REMOTE CONTROL WORK DEFERRED TO 2000/01 AND ESTIMATED COST FOR AUTOMATION AND REMOTE CONTROL HAS INCREASED.

CONTINGENCY AMOUNT: $496,000

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 48

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: GRAND RAPIDS G.S. REHABILITATION

Proposal

Disassemble Unit 1 and assess damage. Replace outer, intermediate and inner head covers, turbine guide bearings, servomotors, operating ring and links. Repair various other components and reassemble the unit utilizing the repaired existing runner for an in-service date of 1994 05 12.

Replace Kaplan turbine runners on Units 1,2 and 3 and modify servomotors, head covers, operating ring and governor pressure system on Unit 4. Rewind generators on Units 1, 2 and 3. Modify the stator frame support and add 13.8 kv ciruit breakers on all four generators. Upgrade the controls, annunciation and protection, to provide synchronous condencer capability.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

To repair the Unit 1 damage which occurred as a result of the head cover failure and return the unit to service prior to the 1993/94 winter peak.

Excessive wear of the turbine units requires complete repair or replacement with new more powerful and efficient runners on Units 1, 2 and 3. Unit 4 will be upgraded by wicket gate opening enlargement. Breakers will improve system reliability. DC zoning rearrangement will enhance security.

GRAND RAPIDS G.S. UNIT #1 OVERHAUL			01-08-3011
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	60092:61315

DESCRIPTION:
REPLACE THE KAPLAN RUNNER, REWIND GENERATOR AND MODIFY THE STATOR FRAME SUPPORT. ADD A 13.8 KV GENERATOR CIRCUIT BREAKER.

JUSTIFICATION:
EXCESSIVE WEAR TO THE RUNNER BLADE TRUNNIONS AND LEAKING OIL SEALS REQUIRE A REPLACEMENT OF THE RUNNER. THE NEW RUNNER WILL BE MORE EFFICIENT THAN THE EXISTING ONE. THE GENERATOR WILL BE REWOUND AND RADIAL EXPANSION KEYS INSTALLED ON THE STATOR SOLE PLATES TO ACCEPT THE INCREASED POWER OUTPUT. NEW 13.8 KV BREAKERS WILL BE INSTALLED TO IMPROVE SYSTEM RELIABILITY. THE POWER TRANSFORMER WILL BE MODIFIED TO ACCEPT THE INCREASED OUTPUT. OTHER WORK WILL BE PERFORMED TO MODERNIZE THE UNIT.

REVISION:
ALLOWANCE TO COMPLETE DEFICIENCIES IDENTIFIED IN COMMISSIONING AND MODIFICATIONS TO RUNNER AND WICKET GATES. COST INCREASE DUE TO RESOLUTION OF MAJOR PROBLEMS WITHIN THE UNIT.

GRAND RAPIDS UNIT #4 OVERHAUL			01-08-1068
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	60088

DESCRIPTION:
OVERHAUL AND UPGRADE THE KAPLAN TURBINE. MODIFY THE STATOR FRAME SUPPORT. ADD A 13.8 KV GENERATOR CIRCUIT BREAKER, AND CONVERSION TO SYNCHRONOUS CONDENSER OPERATION.

JUSTIFICATION:
A MAJOR OVERHAUL OF THE TURBINE IS REQUIRED TO EXTEND THE LIFE OF THE RUNNER AND REDUCE OIL LEAKS. MAJOR STRUCTURAL REPAIRS TO THE HEADCOVERS ARE ALSO REQUIRED. THE GOVERNOR PRESSURE SYSTEM, SERVOMOTORS AND OPERATING RING WILL BE ENLARGED TO PERMIT ADDITIONAL OPENING OF THE WICKET GATES TO GENERATE MORE POWER. RADIAL EXPANSION KEYS WILL BE INSTALLED ON THE STATOR SOLE PLATES TO ACCEPT THE INCREASED POWER OUTPUT. A NEW 13.8 KV BREAKER WILL BE INSTALLED TO IMPROVE SYSTEM RELIABILITY. THE POWER TRANSFORMER WILL BE MODIFIED TO ACCEPT THE INCREASED OUTPUT. OTHER WORK WILL BE PERFORMED TO MODERNIZE THE UNIT.

REVISION:
ESTIMATE REVISED TO REFLECT THE POSSIBLE WICKET GATE BUSHINGS REPLACEMENT AND SHAFT ROD SEAL: TO BE CONFIRMED BY ENGINEERING INSPECTION/REVIEW.

GRAND RAPIDS G.S. UNIT 1 REPAIRS			01-08-3009
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	60089

DESCRIPTION:
DISASSEMBLE UNIT AND ASSESS DAMAGE.

REPLACE OUTER, INTERMEDIATE AND INNER HEAD COVERS, TURBINE GUIDE BEARINGS, SERVOMOTORS,OPERATING RING AND LINKS

REPAIR VARIOUS OTHER COMPONENTS.

REASSEMBLE UNIT UTILIZING THE REPAIRED EXISTING RUNNER FOR AN IN-SERVICE DATE OF 1994 05 12.

NOTE: GENERATOR REWINDING AND INSTALLATION OF RADIAL STATOR KEYS WILL ALSO BE DONE AT THIS TIME (INCLUDED UNDER B.R.N. 9101 08-1068).

JUSTIFICATION:
TO REPAIR THE UNIT 1 DAMAGE WHICH OCCURRED AS A RESULT OF THE HEAD COVER FAILURE AND RETURN THE UNIT TO SERVICE.

NOTE: A NEW RUNNER IS SCHEDULED FOR INSTALLATION IN THE SUMMER OF 1994 (INCLUDED UNDER B.R.N. 9101-08-1068).

REVISION:
ESTIMATE REVISED TO COVER OUTSTANDING LEGAL ISSUES ASSOCIATED WITH INSURANCE CLAIM.

DESCRIPTION:
DESIGN, ADMINISTRATION, PURCHASE, AND INSTALLATION OF THE 13.8KV GENERATOR CIRCUIT BREAKERS, TAILWATER DEPRESSION SYSTEM COMPRISING OF AIR COMPRESSORS, RECEIVERS AND PIPING, SYNCHRONOUS CONDENSER CONVERSION AND ASSOCIATED CONTROLS, ANNUNCIATION AND PROTECTION.

JUSTIFICATION:
INSTALLATION OF THE 13.8KV BREAKERS IS REQUIRED TO IMPROVE SYSTEM RELIABILITY. REPORT GP91-11 IDENTIFIED THE SUBSTANTIAL ECONOMIC BENEFITS TO PROVIDING SYNCHRONOUS CONDENSER CAPABILITY FOR THE GRAND RAPIDS UNITS. UPGRADING THE CONTROLS, ANNUNCIATION, AND PROTECTION WILL BE PERFORMED TO MODERNIZE THE UNITS.

REVISION:
ESTIMATE REVISED TO REFLECT THE EXTENDED SCHEDULE, DESIGN MODIFICATIONS, AND DEFICIENCIES. WORK WILL BE COORDINATED WITH FUTURE MAJOR OVERHAULS ON UNITS 2 AND 4.

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 25

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: JENPEG G.S. UNIT OVERHAULS

Proposal

Major overhaul of units 1-6 to inspect, repair, modify and replace components of the turbine/generator.

Areas of concern; journal bearings, thrust bearings, turbine seals, servo-motors, wicket gate seals and bushings, waterhead and oil head, stator and rotor, auxiliary systems.

JUSTIFICATION: ☐ Load ☒ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

A complete overhaul is required to ensure reliable operation of the units when maximum power requirements on the system are essential.

JENPEG GS - UNIT OVERHAULS (UNITS 1-6)			01-23-4905
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	61345:61965

DESCRIPTION:
FOR THE MAJOR OVERHAUL OF UNITS 1-6 TO INSPECT, REPAIR, MODIFY AND REPLACE COMPONENTS OF THE BULB TURBINE/GENERATOR.

JUSTIFICATION:
A COMPLETE OVERHAUL IS REQUIRED TO ENSURE RELIABLE OPERATION OF THE UNIT WHEN MAXIMUM POWER REQUIREMENTS ON THE SYSTEM ARE ESSENTIAL. AREAS OF CONCERN ARE: JOURNAL BEARINGS, THRUST BEARINGS, TURBINE SEAL, SERVO-MOTORS, WICKET GATE SEALS AND BUSHINGS, WATER HEAD AND OIL HEAD, STATOR AND ROTOR, AUXILIARY SYSTEMS.

REVISION:
SCOPE OF WORK DURING 1999/00 WILL INCLUDE COMPLETION OF OUTSTANDING WORK ON UNIT 6; INSPECTION OF UNITS 1 TO 5 AND GENERATOR COOLING TUBE CLEANING ON UNITS 3 AND 4. SCOPE OF WORK DURING 2000/01 INCLUDES GENERATOR COOLING TUBE CLEANING ON UNITS 1 AND 2 AND ENGINEERING PREPARATION FOR UNIT 1 OVERHAUL (SCHEDULED FOR 2001/02). BALANCE OF UNITS TO BE OVERHAULED AS PER PROPOSED SCHEDULED IN CPJ DATED 1999/03/31.

This BRN contains Deleted, Blocked, or Closed Orders.

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 22

REVISION STATUS: ☐ New complex ☐ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: KETTLE & LONG SPRUCE GS STATOR REWEDGING

Proposal

Kettle GS - Rewedge stators on unit 5 (93/94) unit 4 (95/96) unit 3 & 11 (96/97) units 7, 8, 10, and 12 to follow at the rate of one per year. Sequence determined by insulation tests.

Long Spruce GS - Rewedge stators on unit 3 (92/93), unit 5 and 1 (93/94) unit 6 (94/95) and unit 9 (95/96). Units 7, 8 and 10 are scheduled one per year over the next four years, based on insulation tests.

JUSTIFICATION

☐ Load ☐ Service ☐ Safety ☐ Efficiency ☒ Reliability ☐ Other

Explanation

The stator wedges on several units are becoming loose. The insulation readings are deteriorating rapidly, thus indicating looseness of wedges and stator coils in their respective slots. Looseness can cause a coil failure due to ground fault and result in an extended generator outage.

Title: LONG SPRUCE STATOR REWEDGING

Budget reference number: 01-21-5941

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - North	Generation - North	Generation - North	61623:61662

DESCRIPTION:
REWEDGE STATORS ON UNIT 3 (92/93), UNIT 5 AND UNIT 1 (93/94), UNIT 6 (94/95), UNIT 9 (95/96). UNITS 7, 8 & 10 ARE SCHEDULED TO BE COMPLETED BEGINNING 1998/99. SEQUENCING OF UNITS WILL BE DETERMINED BASED ON INSULATION TESTING RESULTS.

JUSTIFICATION:
THE STATOR WEDGES ON SEVERAL UNITS ARE BECOMING LOOSE. THE INSULATION READINGS (PDA READINGS) ARE DETERIORATING RAPIDLY, THUS INDICATING LOOSENESS OF WEDGES AND STATOR COILS IN THEIR RESPECTIVE SLOTS. THIS LOOSENESS OF WEDGES CAN CAUSE A STATOR COIL FAILURE (DUE TO GROUND FAULT) WHICH CAN RESULT IN AN EXTENDED GENERATOR OUTAGE.

REFERENCE:
DOMESTIC BRN 9301-21-3018.

REVISION:
ACTUAL COSTS HIGHER THAN ESTIMATED DUE TO INCREASED ACTIVITIES OVER THE PLAN FOR UNITS 7 AND 10. ESTIMATE FOR UNIT 8 INCREASED TO REFLECT THE CHARGES ON THE PREVIOUS TWO UNITS.

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 82

REVISION STATUS: ☐ New complex ☒ In service change ☒ Concept change ☐ Estimate change only

COMPLEX	PRODUCTION NORTH DAM SAFETY UPGRADES

Proposal

Perform necessary engineering design and remedial construction, to upgrade Northern generating stations to present day dam safety standards, to allow them to continue safe and reliable operation.
Work description to include the following:
(1) Kettle Generating Station - upgrade main and saddle dams for freeboard
(2) Kelsey Generating Station - armour plating at spillway rollways, erection of heated hoist housing, insulating of spillway gates, upgrading of dykes, upgrading of spillway feeders and electrical systems at the spillway and upgrading of the station service transformers due to increased loading.

JUSTIFICATION

☐ Load ☐ Service
☒ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

Manitoba Hydro has underway a formal dam safety program covering all its plants. Ulilizing present day standards, various deficiencies have been reported in the Production North generating stations. Work is therefore required to correct the deficiencies to all the plants, to operate in a safe and reliable manner.

GENERATION NORTH DAM SAFETY UPGRADES			01-70-6971
Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - North	Generation - South	Generation - South	60093:93352

DESCRIPTION:
TO PERFORM THE NECESSARY ENGINEERING DESIGN AND REMEDIAL CONSTRUCTION TO UPGRADE THE NORTHERN GENERATING STATIONS TO PRESENT DAY DAM SAFETY STANDARDS AND TO ALLOW THEM TO CONTINUE TO OPERATE IN A SAFE AND RELIABLE MANNER. WORK DESCRIPTION TO INCLUDE THE FOLLOWING: (1) KETTLE GENERATING STATION - UPGRADE MAIN AND SADDLE DAMS FOR FREEBOARD (2) KELSEY GENERATING STATION - ARMOUR PLATING AT SPILLWAY ROLLWAYS, ERECTION OF HEATED HOIST HOUSING, INSULATING OF SPILLWAY GATES, UPGRADING OF DYKES, UPGRADING OF SPILLWAY FEEDERS AND ELECTRICAL SYSTEMS AT THE SPILLWAY AND UPGRADING OF THE STATION SERVICE TRANSFORMERS DUE TO INCREASED LOADING.

JUSTIFICATION:
MANITOBA HYDRO HAS UNDERWAY A FORMAL DAM SAFETY PROGRAM COVERING ALL ITS PLANTS. UTILIZING PRESENT DAY SAFETY STANDARDS, VARIOUS DEFICIENCIES HAVE BEEN REPORTED IN THE GENERATION-NORTH GENERATING STATIONS. WORK IS THEREFORE REQUIRED TO CORRECT THE DEFICIENCIES TO ALL THE PLANTS TO OPERATE IN A SAFE AND RELIABLE MANNER.

REFERENCE:
KELSEY GENERATING STATION DAM SAFETY PROGRAM DEFICIENCY INVESTIGATIONS SUMMARY REPORT REPORT NO. DSP 95-S11 DATED 95 06 20 KETTLE GENERATING STATION DAM SAFETY PROGRAM DEFICIENCY INVESTIGATIONS SUMMARY REPORT NO. DSP 95-S09 DATED 95 06 20

MECHANICAL DEPT. REPORT PP&O 98/03 DATED 1998/02/27 (ISD ADVANCED TO 1999 TO CORRESPOND WITH THE CURRENT PROJECT I.E. LIMESTONE FP&P)

REVISION:
REVISED THE SCOPE OF WORK TO INCLUDE BATHEMETRIC SURVEYS; REFERENCE: I.O.M.- R.J. WITTEBOLLE TO W.D. BURBANK DATED 1998 03 20, AND TO INCLUDE SPILLWAY HOIST HOUSING FIRE PROTECTION IMPROVEMENTS; REFERENCE: PRELIMINARY REPORT P.P.& O.- 98/03. DEFERRED KELSEY G.S. STATION SERVICE WORK TO 1999/2000 DUE TO THE UNAVAILABILITY OF UNIT OUTAGES. DEFERRED INSTRUMENTATION INSTALLATION AT VARIOUS SITES AND STABILITY STUDIES AT KETTLE G.S. TO 1999/2000.

CONTINGENCY AMOUNT: $190 701

REVISION 1: TO DEFER KETTLE, LONGSPRUCE, AND KELSEY STAND PIPES--REFERENCE J. VAN DENBUSSCHE MEMO TO SPENCE OF 99/04/15.

Generation South Dam Safety Deficiency Program	01-08-7041

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	61359:61416

DESCRIPTION:
The scope of work consists of all required capital works identified in the Dam Safety Certification process or indicated through observation and discussion with staff.

JUSTIFICATION:
All the work is required to demonstrate due diligence with respect to dam safety at the various sites within.

REFERENCE:
Power Supply Generation South. Each item has a detailed capital project justification prepared.

REVISION:
Program revised from dealing exclusively with Grand Rapids to be all encompassing for all Generation South facilities.

CAPITAL EXPENDITURE FORECAST COMPLEX

(IN THOUSANDS OF DOLLARS)

COMPLEX STATUS: ☐ Planned ☒ In progress

Complex no. 26

REVISION STATUS: ☐ New complex ☒ In service change ☐ Concept change ☒ Estimate change only

COMPLEX: WINNIPEG RIVER CONTROL SYSTEM

Proposal

Upgrading or replacement of, and additions to, various items of electrical and mechanical systems and equipment.

Items included are:

Great Falls GS - DC distribution, and unit control, metering and relaying.
Seven Sisters GS - U#4-U#6 AVR replacement, and unit control, metering and relaying.
Pine Falls GS - 250 VDC distribution, and station control.
Mcarthur Falls GS - station annunciator upgrade, 250 VDC distribution, and station control.

JUSTIFICATION

☐ Load ☒ Service
☒ Safety ☒ Efficiency
☒ Reliability ☐ Other

Explanation

Previous engineering assessment of the electrical and mechanical systems in these stations have identified various areas of concern in terms of obsolete equipment, safety, fire risk and adaptability to present day operating conditions and standards and the requirement for upgrading work.
Production south have identified the need for an integrated system for control of all the Winnipeg River stations, therefor this complex has been created to co-ordinate the design and installation of the various systems and System Control Centre's requirement for data acquisition.

Title
WINNIPEG RIVER CONTROL SYSTEM COMPLEX - GREAT FALLS G.S.

Budget reference number
01-01-6959

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - South	Generation - South	Generation - South	60058:60060

DESCRIPTION:
UPGRADING OR REPLACEMENT OF, AND ADDITIONS TO, VARIOUS ITEMS OF ELECTRICAL AND MECHANICAL SYSTEMS AND EQUIPMENT.

ITEMS INCLUDED ARE:
POG 60058 (WO 47001) - DC DISTRIBUTION
POG 60060 (WO 47019) - UNIT CONTROL, METERING AND RELAYING

JUSTIFICATION:
PREVIOUS ENGINEERING ASSESSMENT OF THE ELECTRICAL AND MECHANICAL SYSTEM IN THE GREAT FALLS GENERATING STATION IDENTIFIED VARIOUS AREAS OF CONCERN IN TERMS OF OBSOLETE EQUIPMENT, SAFETY, FIRE RISK AND ADAPTABILITY TO PRESENT DAY OPERATING CONDITIONS AND STANDARDS AND THE REQUIREMENT FOR UPGRADING WORK TO ENSURE THE CONTINUED RELIABLE, SAFE AND ECONOMIC OPERATION OF THE PLANT.

REFERENCE:
E&C DIVISION REPORT NO.E2, JUNE 1984, GREAT FALLS GENERATING STATION PLANT EVALUATION REPORT STAGE III (INCLUDING ADDENDUM 1) PRODUCTION DIVISION - SOUTH HAVE IDENTIFIED THE NEED FOR AN INTEGRATED SYSTEM FOR CONTROL OF ALL THE WINNIPEG RIVER STATIONS, THEREFORE THE WINNIPEG RIVER CONTROL SYSTEM COMPLEX HAS BEEN CREATED TO CO-ORDINATE THE DESIGN AND INSTALLATION OF THE VARIOUS SYSTEMS AND SYSTEM CONTROL CENTRE'S REQUIREMENT FOR DATA ACQUISITION.

REVISION:
CASHFLOW REVISED TO REFLECT WORK PROCEEDING IN 1999/00 TO UPGRADE MONITORING AND CONTROL SYSTEMS AS PER SCOPING REP[ORT.

This BRN contains Deleted, Blocked, or Closed Orders.

Proposal

To complete outstanding work including final disposition of buildings, and final site cleanup.

To perform modifications to thrust bearings, air admissions, cooling systems, governors and install a rotor mounted scanner.

To design and construct a channel improvement in the Nelson River at Sundance Rapids, to reduce ice staging in the tailrace.

JUSTIFICATION

☒ Load ☐ Service
☐ Safety ☐ Efficiency
☒ Reliability ☐ Other

Explanation

To provide funding for the completion of outstanding work at Limestone G.S., and modifications to a number of the original systems. The modifications are designed to reduce failures, and eliminate revenue reducing operating restrictions. Ice staging of the tailwater is causing a loss of up to 1.5 meters of energy head, and associated generation capacity, throughout the winter.

Title: LIMESTONE AREA CLEANUP

Budget reference number: 01-25-7044

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - North	Generation - South	Generation - South	60146:61604

DESCRIPTION:
PREVIOUS EXPENDITURES COVERED GILLAM-LIMESTONE ROAD RESURFACING COSTS, THRUST BEARING REPAIRS , AQUATIC ENVIRONMENTAL MONITORING (POG 61604), AND SOME WORK INVOLVING DISPOSITION OF BUILDINGS AND ENVIRONMENTAL MONITORING. REMAINING DOLLARS ARE FOR FINAL DISPOSITION OF BUILDINGS AND FINAL SITE CLEAN UP.

JUSTIFICATION:
THIS ITEM IS NEEDED TO COMPLETE THE OUTSTANDING WORK FROM B.R.N.01-25-5001, AND FROM DOMESTIC ITEM 9701-25-6966.

REVISION:
DISPOSITION OF RECREATION CENTRE OUTSTANDING PLUS FINAL SITE CLEANUP SCHEDULED FOR 1999/00.

CONTINGENCY AMOUNT: $100 000

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

X Major Item — 63 Domestic Item

Title: LIMESTONE G.S. MODIFICATIONS

Budget reference number: 01-25-7045

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - North	Generation - North	Generation - North	61637:61722

DESCRIPTION:
Modifications to original equipment to correct identified deficiencies, including :
-Replacement of generator thrust bearings and high pressure oil lift systems
-Addition of oil filtration systems on generator thrust bearings
-Upgraded unit monitoring and data acquisition systems
-Additional turbine air admission valves and piping
-Increased generator cooling
-Modified governor settings
-Installation of a rotor mounted scanner on one generator

JUSTIFICATION:
Improvements to the generator thrust bearings and unit monitoring systems will decrease the frequency of thrust bearing failures and associated revenue losses. Improvements to the turbine air admission and generator cooling systems will allow operating restrictions to be removed, thereby increasing revenue from the generators.

REFERENCE:
Memorandum H.J. Clouston to A.M. Snyder, Limestone Generating Station - Financing to Correct Known Operational Concerns, dated 1996 08 08; Power Engineering Report No. 1210-03-02, Hydroelectric Turbine Generator Assessment for Limestone Generating Station, Issue 2 - March,1997; MED Report No. GN97-04, Limestone G.S. Data Acquisition Enhancements Required for Thrust Bearing; Report No. GN97-12, Limestone G.S. Cooling Modifications and Installation of a Rotor Mounted Scanner; Report No. GN97-17, Recommendations and Options for Limestone Thrust Bearing; Report No. GN97-22 Limestone Data Acquisition Enhancements; and Report No. GN98-04 Method to Correct Repeated Genius Block Failures.

REVISION:
Estimate revised for outage schedules and to reflect costs to completion.

Title: Limestone GS - Channel Improvements

Budget reference number: 01-25-8068

Originating division	Coordinating division	Constructing division	Project Order Group (Range):
Generation - North	Power Planning & Operations	Generation - South	61509

DESCRIPTION:
Design and construct a channel improvement in the Nelson River at Sundance Rapids, such that the amount of winter ice staging at the tailrace of Limestone Generating Station is reduced.

JUSTIFICATION:
Unexpected staging of the winter tailwater level at Limestone Generating Station has occured since 1991 because of an ice buildup or constriction which forms just downstream at Sundance Rapids in the Nelson River. This phenomenon causes a loss of energy head of up to 1.5 meters at the Limestone plant for an extended period of time in the winter. The estimated loss of energy associated with this head loss is in excess of $1,000,000 per annum.

REFERENCE:
Memo from R.R. Raban to K.R.F. Adams dated 1997 07 10.

REVISION:
Deferred pending final design recommendation.
