To account for longer term energy requirements in this group of consumers, a special classification called Potential Large Industrial Loads (PLIL) has been created. PLIL is used instead of attempting to forecast each top consumer individually for the long term. It is based on the historical growth of the Top Consumers group and represents the natural growth or contraction of all the Top Consumers together, including unexpected major expansions, contractions, new customers, or loss of customers.

An econometric model of Top Consumers was used to forecast PLIL. The model was developed by fitting historical Top Consumers annual energy from 1983/84 to 2015/16 to the Top Consumer Electricity Price and to a blended Canadian and U.S. Real GDP.

The resulting model and parameters are as follows:

Total Load = 2854 - 508 x Top Price + 0.951 x CUGDP

Top Price - Manitoba Top Consumers Real Electricity Price
CUGDP - Canada / U.S. Blended Real Gross Domestic Product

R-squared: 95.7%
T-stats:

Constant:	2.94
Top Price:	-2.94
CUGDP:	12.70

The forecasted growth from this model was used in years 4 through 20 as PLIL.

Electric Vehicles

The methodology for forecasting Electric Vehicles used historical data, supplied by Statistics Canada and Manitoba Public Insurance, on automobile registrations per year in Manitoba to help estimate future trends. Appropriate assumptions from recent relevant literature were applied to Manitoba's situation. The forecast section on Electric Vehicles provides further details.

Other Sectors

Seasonal, Water Heating, Lighting

Most of the smaller sales sectors, including Seasonal, Flat Rate Water Heating and Area and Roadway Lighting were forecast by analysis of the changes in the number of customers or services and in changes in average use per customer or service. Growth rates were applied based on history and a best estimate as to what the future will bring.

Diesel

Each of the diesel generated supplied communities was individually forecast and included in the forecast under the assumption that these communities are not anticipated to be connected to the Integrated System during the forecast period.

Monthly Sales Allocations

Monthly percentages of customer growth through the year and GWh for each month of the year were averaged for the past three to five years. The most appropriate growths were applied to the forecasts of annual customers and kWh to get the monthly forecasts.

Monthly and Annual Gross Firm Energy and Gross Total Peak

The 5 year monthly percentage of Common Bus and Station Service are applied to their annual energy to calculate their monthly values. Transmission Losses are calculated using a 5 year average of their ratio to Common Bus. Monthly Common Bus, Transmission Losses and Station Service are added up to give the Monthly System Energy. Monthly Common Bus, Transmission Losses, Station Service and Gross Firm Energy are totaled to give the Annual Gross Firm Energy.

The Gross Total Peak is calculated from Load Factors applied to the forecast monthly Gross Total Energy. Prior to calculating the Load Factors, the Top Consumer energy and peak are subtracted because the Top Consumers have a higher average hourly energy relative to their peak value than the Residential and General Service Mass Market Customers. A 10 year historical average Load Factor is calculated for the remaining energy and is applied to the forecast monthly energy to get the peaks for the remaining energy. The Top Consumer peaks are added using a 92% Load Factor applied to the Top Consumer monthly energy.

The annual Gross Total Peak is calculated using the 3 winter months of December, January and February when the actual peak has typically occurred and applied a ratio from the January peak to be used as the annual peak.

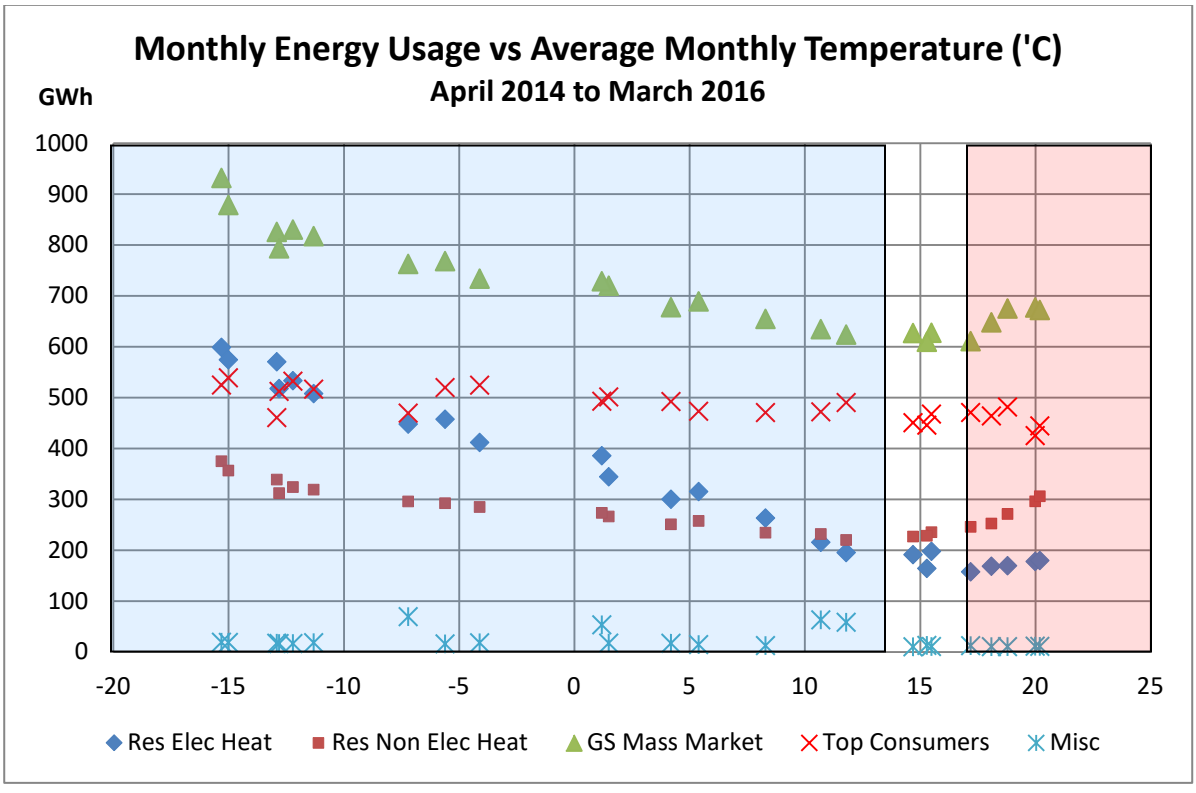
Historical weather adjusted energy is used to calculate the annual Load Factor. The historical trend of the load factor increasing 0.08% per year is applied to the forecast in the winter months when the annual system peak occurs. The number of hours in each month is used to calculate monthly Load Factors.

Growth Rates

Annual GWh/year growth rates in this document are linear growth rates, calculated as:

GWh growth / number of years.

Annual percentage growth rates in this document are compound growth rates calculated as:



(final GWh / initial GWh) ^ (1 / number of years) – 1.

Weather Normalization Model

Historical weather adjusted actuals are the foundation of the underlying historical information used in the Residential Average Use and General Service Mass Market Average Use models. Manitoba Hydro forecasts with the assumption of normal weather. The process of adjusting annual historical usage to reflect the same weather pattern reduces the inherit variability caused by weather in the underlying data in each respective model.

The relationship of energy to weather is depicted below. The energy usage in each month is compared to the average monthly temperature. Heating Degree Days (HDD) occur in the shaded blue area where daily temperature averages are less than 14°C. Similarly, Cooling Degree Days (CDD) occur in the shaded red area where the daily temperature averages are above 18°C. Sectors with significant heating and cooling loads show an increase in energy consumption as the temperature departs from the base load. Base load temperature, where there are no significant heating or cooling loads, range between 14°C to 18°C.

The sectors that are weather adjusted are the General Service Mass Market, Residential Electric Heat and Residential Non Electric Heat.

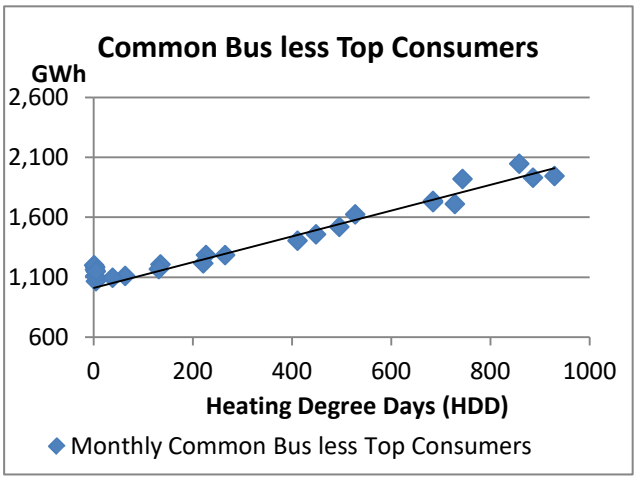
The weather effect is determined in these sectors every year by regressing the previous two years of actual monthly energies against the actual HDD and CDD for the billing month. Due to the nature of cycle billing, the weather best associated with the billing cycle is the 16th of the previous month to the 15th of the current month. The result is a GWh/HDD coefficient and a GWh/CDD coefficient for each sector for each historical year. With each sector using the exact same two year period, the coefficients produced in each sector can be added together to form the HDD and CDD coefficients for General Consumers Sales for the given year.

The weather normalization model is also applied for Common Bus. Common Bus is metered at month end and as such, the weather used for the analysis is from the 1st of the month to the last day of the month. For the Common Bus weather normalization model, the usage attributable to the Top Consumers is removed because Top Consumers energy usage fluctuations is primarily related to production and is not weather related. The weather coefficients used at Generation are the Common Bus coefficients increased proportionately for Transmission Losses.

The weather regression model in each sector would be as follows:

GWh = h * HDD + c * CDD + Constant

h - Heating Degree Day coefficient (GWh per HDD)
c - Cooling Degree Day coefficient (GWh per CDD)
Constant - Base load portion not affected by heating or cooling (GWh)



The resulting model and parameters for Common Bus calculated for April 2014 to March 2016 would be as follows:

GWh = 1009.7 + 1.074*HDD + 2.437* CDD

R-squared: 97.8%

T-stats:

Constant:	41.99
HDD:	25.45
CDD:	4.34
Standard Error:	49.6

GLOSSARY OF TERMS

Area and Roadway Lighting sector - includes electricity sales for the Sentinel Lighting and Street Lighting rate groups.

Common Bus - is the total load measured from all the distribution points (i.e. substations) within Manitoba. It includes all energy supplied to General Consumers Sales customers, Construction Power plus associated Distribution Losses, but excludes Diesel customers, Transmission Losses and Station Service.

Customer – Most metered electrical services count as a customer. Unmetered services such as flat rate water heating and sentinel rental services do not count as a customer. Street lighting counts all the services grouped as a premise as one customer.

Codes and Standards – A Demand Side Management (DSM) initiative associated with existing Provincial building codes and improved equipment efficiency standards. This is the only DSM initiative that is specifically accounted for in the forecast.

Cooling Degree Days (CDD) - CDD is a measurement designed to reflect the demand for energy needed to cool a building. CDD is the number of degrees warmer than 18 degrees Celsius each day is, based on the average of the high and low temperature of the day.

CDD = sum (max(0, (Daily high + Daily low) / 2) - 18)

Curtailable - is a load that can be curtailed on short notice. A discount is given for subscribing to this program. Curtailable loads can affect peak demand because some periods of curtailment may be at or near the system peak.

Gas Available Area – A city or town in Manitoba where customers have natural gas service available and can choose to heat their dwelling with either natural gas or electricity. Approximately 83% of Residential Basic customers, including the entire city of Winnipeg, have gas available.

General Consumers Sales - includes the energy supplied to all of Manitoba Hydro's individually billed customers. It excludes export sales.

General Service Mass Market - includes all Commercial and Industrial customers, excluding the Top Consumers group.

General Service Sector - made up of sales to Commercial and Industrial businesses served by Manitoba Hydro. This sector consists of five rate groups (Basic, Diesel, Seasonal, Flat Rate Water Heating and Surplus Energy Program).

General Service Top Consumers - is made up of the largest electricity users of Manitoba Hydro.

Gross Firm Energy - is the energy required to serve Manitoba Hydro's customers on the Integrated System. It excludes exports, interruptible (non-firm) loads and diesel customers.

Gross Total Peak - is the maximum integrated (i.e. average) hourly load required to serve Manitoba Hydro's customers on the Integrated System. It excludes exports and diesel customers. It includes curtailable loads.

GWh (gigawatt-hour) - The unit of energy primarily used in this document. One GWh equals one million kWh (kilowatt-hours), which is approximately equal to the energy of 100 typical dwellings not using electricity for heating, or 40 dwellings that use electricity for heating.

Heating Degree Days (HDD) – HDD is a measurement designed to reflect the demand for energy needed to heat a building. HDD is the number of degrees colder than 14 degrees Celsius each day is, based on the average of the high and low temperature of the day.

HDD = sum (max(0, 14 - (Daily high + Daily low) / 2))

Integrated System - is the power grid that connects Manitoba Hydro's generation sources to its customers. All Manitoba Hydro's customers except diesel are on the Integrated System.

Interruptible (Non-Firm) Energy - includes all energy sold to Manitoba customers on a non-firm basis. Currently, the only rate group for this is the Surplus Energy Program (SEP).

kWh/cust (kilowatt-hours per customer): The unit of energy primarily used in this document to represent the average use of one customer. The total usage in GWh of a group of customers is divided by the number of customers and then multiplied by one million.

Load Factor - is the ratio of the average hourly energy over a period, usually a year, divided by the energy used at a specific hour, usually the hour of system peak. A load factor of 25% means that the average energy is one-quarter of what is used at system peak. A load factor greater than 100% means that the average hourly energy is more than what is used at system peak. Given a specific energy, a lower load factor means a higher peak. The equation is:

Load Factor = (Total Energy / Hours) / (Energy over the hour of system peak)

Manitoba Load at Common Bus - is the total load measured from all the distribution points (i.e. substations) within Manitoba. It includes all energy supplied to General Consumers Sales customers plus associated Distribution Losses, but excludes diesel customers, Transmission Losses and Station Service.

MW (megawatt): The unit of peak demand primarily used in this document. One MW is a million watts. One thousand MW of peak demand for one hour equals one GWh of energy. Alternatively, one MW for a thousand hours also equals one GWh of energy.

Net Firm Energy and **Net Total Peak** - are the same as Gross Firm Energy and Gross Total Peak except they exclude Station Service. The reporting of Manitoba Load in the Load Forecast used "Net" until 2008. It presented both until 2011. Starting with the 2012 forecast, only the "Gross" is presented. Net can be calculated when needed by subtracting Station Service from the Gross.

Residential Basic – is the primary residential customer group made up of single detached and multi attached dwellings as well as individually metered apartment suites.

Residential sector - made up of sales to residential customers for non-business operations. The Residential sector is comprised of four rate groups (Basic, Diesel, Seasonal, and Flat Rate Water Heating).

Station Service - is the energy used by power plants to generate power and service their own load.

PUB MFR 9 (Revised)
Corporate Overview

Corporate Risk Analysis Report and Specific Risk Management Plans for all major risks including drought. [Appendix 11.7, 2015/16 GRA]

The response to PUB MFR 9 has been updated to include the redacted version of Manitoba Hydro's Corporate Risk Management Report Appendices.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro has filed a motion seeking confidential treatment of the redacted information contained in the attachment to this response pursuant to Rule 13.

Manitoba Hydro Corporate Risk Management Report December 2015

THIS REPORT INCORPORATES PRIVILEGED AND CONFIDENTIAL INFORMATION AND IS FOR INTERNAL REFERENCE ONLY

TABLE OF CONTENTS

1.0 INTRODUCTION **2**

2.0 HIGH CONSEQUENCE RISKS **3**
2.1 Infrastructure Risk **4**
2.2 Water Variation / Drought Risk **5**
2.3 Export Market Access Risk **6**

3.0 SIGNIFICANT AND EMERGING RISKS **7**
3.1 Infrastructure Investment **7**
3.2 Financial Strength **8**
3.3 Regulation and Licencing **11**
3.4 Indigenous Relationships **13**
3.5 Emerging Energy Technologies **15**
3.6 Human Resources **16**
3.7 Other Significant and Emerging Risks **17**

4.0 CORPORATE RISK MAP **20**

5.0 APPENDICES
A – Corporate Risk Tolerance Assessment **23**
B – Corporate Risk Profiles **38**
C – Corporate Risk Management Framework **92**

1.0 INTRODUCTION

The Corporate Risk Management Report is normally updated on an annual basis to provide Manitoba Hydro's stakeholders with information on the status of major risks facing the Corporation as it carries out its mandate. The report identifies and assesses each risk, describes activities used to manage the risk and provides estimates of the potential residual impact to the Corporation in terms of likelihood and consequence after mitigation actions have been taken. The Corporation's tolerance for each risk and an assessment of whether the risk is within or outside the desired tolerance level is also provided.

As a Crown-owned utility providing an essential and life-sustaining energy service to Manitobans, Manitoba Hydro has a relatively low tolerance for risk. However, because Manitoba Hydro is also an important economic driver for the Province, some risks are necessary in order to take advantage of opportunities to maximize value for stakeholders. These risks are managed through a systematic, proactive and integrated process which is designed to balance the objectives of:

- identifying threats that affect the achievement of the Corporation's mission and mandate;
- mitigating the consequences of negative occurrences; and
- taking advantage of opportunities to provide benefits to all stakeholders.

Most risk management efforts are focused on reducing the occurrence of negative events. However, the Corporation also has plans in place to reduce the impacts should a negative event occur. These plans are under continual assessment. In addition, all safety and reliability risks are managed through strict adherence to design, construction and operating standards and practices together with extensive public education and employee training programs. A comprehensive Emergency Response Program is also in place to ensure an effective and coordinated response to possible emergencies or disasters.

The financial and operational risks associated with the management of an integrated electricity and natural gas utility are significant. These risks include the impacts of weather on supply and demand, price and market uncertainties, interest, inflation and foreign exchange rates, skilled labour availability and costs, aging infrastructure maintenance and replacement, increasing regulatory, environmental and legal requirements, and accelerated technological change. Manitoba Hydro manages these

risks through an integrated control framework and through the maintenance of an adequate level of financial reserves through retained earnings.

Manitoba Hydro's Corporate Risk Management Report is structured to provide the following:

- A summary of the high consequence risks including:
  - Loss of major infrastructure
  - Drought
  - Loss of export markets
- An overview of significant and emerging risks and actions taken to address those risks.
- A Corporate Risk Map providing a visual depiction of Manitoba Hydro's risks categorized into high, medium and low likelihood of occurrence and the corresponding consequences.
- A Corporate Risk Tolerance Assessment of each risk.
- Corporate Risk Profiles - one page summaries of each of Manitoba Hydro's risks.

2.0 HIGH CONSEQUENCE RISKS

The most significant risks facing Manitoba Hydro are those rated as high consequence due to the potential magnitude of impact on the Corporation's ability to achieve its mandate and strategic goals and are quantified in the following table:

RISK	POTENTIAL FINANCIAL IMPACT
INFRASTRUCTURE	
Prolonged loss of supply	> $2 billion
DROUGHT	
Water Supply Variation / Drought	>$1.9 billion for a 5 year drought commencing in 2017/18 (IFF 15)
LOSS OF EXPORT MARKET ACCESS	> 30 % of electricity revenue

2.1 Infrastructure Risk (Category D)

A catastrophic infrastructure failure continues to be the most significant risk facing the Corporation and its customers. Potential impacts include prolonged loss of system supply, the inability to maintain minimum energy services, loss of life, severe environmental damage and significant costs to the Manitoba economy. Failure can be caused by a number of factors including an extreme weather event, sabotage, fire, human error, or technical malfunction.

By the nature of its business, Manitoba Hydro has an especially low tolerance for infrastructure risk. Significant efforts are expended on managing this risk in a manner that avoids the occurrence of a catastrophic event and minimizing consequences should a catastrophic event occur.

Risk Treatment

In the short term, actions are continually being taken to enhance emergency response and disaster management processes. In the longer term, major investment in renewal and expansion of the infrastructure system are underway to maintain and improve system reliability, energy security and safety. Key management plans and projects include:

- Major New Generation & Transmission projects which increase capacity and energy or provide increased reliability. These include building the Bipole III Reliability project with a planned in-service date of 2018/19 and construction of the Keeyask Generating Station with a planned in-service date of 2019/20. Manitoba Hydro is proceeding with the Manitoba-Minnesota Transmission Project, a transmission interconnection into the U.S. which supports enhanced export capability, reliability and drought risk mitigation.

- Renewal and replacement of aging electric and gas infrastructure through execution of a long term plan to improve system capacity and reliability. This includes critical distribution assets and stations, rehabilitation of existing generators, wood poles, cable and gas pipe replacement, cyber and physical security upgrades, and changes to gas distribution operations and pipelines to address emerging issues with respect to pipeline integrity and load growth. In

response to the 2014 rupture of the TransCanada main gas pipeline, the Corporation is constructing a compressed natural gas facility to help mitigate small scale outages during a natural gas supply interruption.

- Water retaining structures and flow control management, including: surveillance inspections, instrumentation monitoring, and engineering analyses of dams and dykes including emergency plans for individual facilities; systematic utilization of failure modes-based condition assessment techniques; and rehabilitation of the Pointe du Bois spillway facility.

- Continual improvement to enhance and strengthen the Corporate Emergency Management Program. In 2015, the Emergency Preparedness Policy was revised, and an Executive Emergency Management Committee was created to provide oversight of the program and to directly support the Corporate Emergency Center during an emergency event. In addition the Corporation continues to develop and maintain emergency preparedness and response management plans.

2.2 Water Supply Variation / Drought Risk (C.1 and D.2)

On average, there is a high likelihood of a drought occurring about once in every ten years. In the circumstances of an extreme drought that is more severe than the worst on record, there is a possibility of insufficient energy supplies being available to meet firm load demands. This would result in extreme financial and reputational impacts on the Corporation. The cost of a five year drought similar to the worst on record is estimated to be $1.9 billion (IFF 15) for a drought commencing in 2017/18.

Risk Treatment

There are several measures in place to manage the impacts of a drought, as follows:

- Manitoba Hydro's current generation and transmission facilities are designed and operated to ensure firm demand can be supplied given a repeat of the lowest river flows since 1912. A drought more severe than the worst on record could occur and would require non-normal operations. This may include operating reservoirs outside of the normal range for power production. Non-normal operation may also include demand reduction measures such as public appeal for conservation,

enforced conservation, or rotating reductions of non-essential load. Actions to manage drought will depend on its duration and severity and any other conditions that prevail at the time.

- Once built, the new Manitoba-Minnesota Transmission interconnection with the U.S. will provide the Corporation with increased ability to access additional amounts of energy through higher imports and through financial settlement of firm export contracts.

- Adequate financial reserves are required to protect against a repeat of the worst drought on record. At March 31, 2015 retained earnings totaled $2.8 billion. It should be noted, however, that while drought is a major quantifiable risk, an adequate level of retained earnings is required to recover from other significant risks such as a prolonged loss of supply or the loss of export market access.

2.3 Export Market Access Risk (Category A.2)

On average Manitoba Hydro derives a significant portion of its revenue from export sales to U.S. and Canadian markets. The prime impact of restricted market access would be significantly reduced net export revenues which are fundamental in keeping domestic rates low and offsetting the upfront costs of capital investments. Market access risk also includes restrictions on Manitoba Hydro's ability to import which could increase the cost of droughts, and degrade system reliability.

Risk Treatment

Manitoba Hydro continues to actively work to mitigate and manage market access uncertainties, as follows:

- In alliance with other industry participants such as the Canadian Electricity Association, and other stakeholders, Manitoba Hydro continues to lobby MISO, IESO and FERC for the development or elimination of market rules that affect electricity trade and facilitate full participation of Manitoba Hydro in US and Canadian electricity markets.

- Manitoba Hydro also engages in extensive lobbying efforts in the US to promote waterpower as a clean, reliable and renewable source of energy and to counter anti-hydro special interest group lobbying.

- The Corporation also engages with environmental, consumer and business stakeholder groups to discuss and promote its development plans.

- Market access risk is also reduced by having long term contracts and strong relationships in place with major export counterparties.

3.0 SIGNIFICANT AND EMERGING RISKS

While loss of infrastructure, drought and potential loss of export markets remain as the highest consequence risks for the Corporation, there are other significant and emerging risks that can affect the achievement of the Corporation's mission and mandate. These risks include:

3.1 Infrastructure Investment (Category D)

As noted above, Manitoba Hydro is making significant investments in a number of major new Generation and Transmission projects and initiatives in order to increase capacity and energy or provide increased reliability. These projects include construction of Bipole III and the Keeyask generating station, development of the Manitoba-Minnesota Transmission Project, replacement of aging infrastructure, and execution of new, more aggressive demand side management initiatives which target a significant increase in energy consumption savings. These plans will require the investment of approximately $17 billion (CEF 15) over the next 10 years. These projects are well into their construction cycles and any significant delays or cancellations would have significant financial, reputational and contractual consequences.

There are a number of very significant risks associated with such large initiatives that will challenge the Corporation's ability to meet Manitoba's energy needs while keeping customer rates affordable, and maintaining the Corporation's financial strength. These challenges include completing the projects on time and on budget, maintaining relationships with all stakeholders that could affect execution of these projects, and funding the investments while preserving the financial integrity of the Corporation.

Mitigation measures to address cost risks include the use of best practices in cost estimating, contracting practices and the inclusion of appropriate contingencies and management reserves. Preserving financial strength and managing stakeholder relationship issues are discussed below.

3.2 Financial Strength (B.7)

Maintaining financial strength is essential in order to make the necessary investments in infrastructure, to continue to provide safe and reliable service to customers, financially withstand the risks and uncertainties that are inherent in the Corporation's operations and to provide customers with long-term rate stability and predictability and avoid the need for large or sudden rate increases in the future.

The extensive capital investment in new and existing infrastructure will significantly weaken the Corporation's key financial ratios given that these investments will be largely funded through increased borrowing. Careful management of the Corporation's financial position is necessary in order to mitigate the risk of leaving customers exposed to sharp rate increases in the event of a prolonged drought or catastrophic outage. As well, there could be negative impacts to the credit rating of the Province if credit rating agencies were to deem Manitoba Hydro to no longer be financially self-supporting.

The Corporation has a solid plan to balance the need for investment to maintain safe and reliable service with the need to provide stable and predictable rates for customers. Key areas of focus and associated challenges are:

3.2.1 Continuing Cost Containment Measures

The Corporation continues to find and implement innovative ways to control costs without compromising the ability to deliver safe and reliable service. For example, since over 75 per cent of operating costs are comprised of wages and benefits, Manitoba Hydro has committed to reducing over 300 positions through attrition by 2016-17, resulting in annual savings of approximately $30 million. Manitoba Hydro is also targeting to limit increases in operating costs to 1% to 2021/22, excluding the impacts of accounting changes.

Other initiatives include a multi-year program to review and improve supply chain performance. The initial phase of the program has identified opportunities to reduce costs and increase operational efficiencies in materials management, fleet services and purchasing. In addition, the Corporation continues to

effectively manage costs associated with its sustaining capital investment requirements by engaging in a number of asset management strategies in order to prolong the economic life of its assets and replace assets in poor health in the most cost-effective manner.

3.2.2 Pursuing Export Sales (A.2)

Net extraprovincial revenues have enabled Manitoba Hydro to maintain low electricity rates for Manitobans and as such, the Corporation will continue to aggressively pursue a balanced portfolio of profitable export sales to provide the highest financial benefits to ratepayers and all Manitobans over the long term.

Key factors affecting the ability to increase export volumes and revenues are:

- **Export Market Prices** - In recent years export prices for electricity have been affected by the economic slowdown in the U.S. and the availability of low-cost natural gas made possible by new production techniques and wind generation. The Corporation has endeavored to reflect these factors as accurately as possible in its forecasts of future export market prices. Based on the input of external industry specialists, the Corporation is forecasting a moderate rise in export prices over the long term, restrained by the continued impact of natural gas pricing and other generation options. There is a risk that export prices could be lower than industry experts are predicting, and that would be a downside risk which could hamper the Corporation's ability to achieve forecasted export revenues. This would put pressure on financial ratios and result in the requirement for higher projected rate increases.

- **Cost of New Hydraulic Generation** – The resources currently in development are supported by a number of export agreements, including a 250-megawatt sale to Minnesota Power, a 125 MW sale to Northern States Power and a 108–megawatt sale to Wisconsin Public Service. [redacted] Should their costs exceed those forecasted, the

Corporation's ability to achieve forecasted financial targets with projected rate increases would be challenging.

- **Market Access -** The new Manitoba – Minnesota transmission interconnection will help increase export revenues by increasing export capability by 883 MW and import capability by 683 MW. These increases in transfer capability will increase the amount of firm load that can be served by the Manitoba Hydro's generating system, will enhance the value of new DSM initiatives and will result in achieving higher export prices and lower import prices. The line, while increasing export volumes, will also reduce water spillage in high water years.

3.2.3 Controlling Finance Expenses

In order to maintain business continuity in times of drought or catastrophic system outage, bridge cash flow financing will be required. Therefore, it remains critically important to maintain access to sufficient market liquidity through the use of the Corporation's short term debt credit facility, as well as ready access to the debt capital markets.

Projected finance expense is expected to double over the first ten years of the IFF15 forecast, due mainly to the borrowing requirements arising from the planned capital expenditures required to meet the growing energy needs of Manitoba and to replace aging infrastructure. In addition, the potential cumulative financial impact of a one-percent change in interest rates over the next ten years is estimated at $1.0 billion (IFF 15).

Manitoba Hydro will endeavor to manage financial expense exposure by continuing to closely monitor financial markets and take action to reduce costs where prudent and feasible. As a result of the low interest rate environment over the past several years Manitoba Hydro has been able to reduce its net weighted average interest rate by approximately 2.0% since 2006/07 and increase its weighted average term to maturity by over three years during the same period.

3.2.4 Implementing Domestic Sales Rate Increases (B.7)

Manitoba Hydro's financial forecast projects the requirement for reasonable and predictable domestic rate increases of 3.95 per cent per year over the next decade.

Implementing these rate increases to ensure ongoing safe and reliable service continues to be a significant challenge in convincing stakeholders that the projected level of rate increases are in the best long-term interests of all ratepayers. Significant efforts have, and will continue to be focused on delivering compelling and convincing arguments before the PUB to obtain the required level of rate increases going into the future. Even with the projected rate increases, it is expected that Manitoba Hydro's domestic customers will continue to have electricity rates that are affordable and competitive. As well, offering new and expanded Power Smart programs are aggressively targeting additional electricity and natural gas savings, which will aid customers in managing their overall energy costs.

3.3 Regulation and Licencing (H.1)

The Corporation requires a variety of regulatory approvals and licences to carry out its activities. Key approvals and licences include those issued under the National Energy Board Act, Water Power Act and Environment Act either to build new generation and transmission facilities or to maintain the operation of existing facilities. Failure to obtain approvals and licences on favourable terms or in a timely fashion could have significant financial, operating and water regime impacts, increasing costs, and reducing hydraulic generation, capacity and export sales. Expiration of a licence without renewal will expose the Corporation to embarrassment and loss of reputation. Although highly unlikely, cancelation of a licence could expose the Corporation to the possibility that a third party could acquire the water power rights at a location and potentially the loss of the asset.

There are two significant issues currently facing the Corporation that could have significant impact on operations and reputation if they are not addressed. These are:

3.3.1 The Listing of Lake Sturgeon under the Species at Risk Act (C.3.1)

Almost all of the Corporation's hydroelectric generating stations are located where Lake Sturgeon are found. It is possible that at most sites the Department of

Fisheries and Ocean could determine that the stations are negatively affecting the fish and/or its habitat. Due primarily to historical commercial overharvest, plus additional stressors including hydroelectric development and ongoing Indigenous domestic harvest, Lake Sturgeon populations have been severely depleted over the past 100 years and the species is currently under review for listing as endangered under SARA at most locations in Manitoba. If Lake Sturgeon is listed as "Endangered" under the SARA, the Corporation could face restrictions on current operations, structural modifications to infrastructure, delays in developing new generation due to difficulties with securing permits, and high costs of recovery measures that are potentially mandated. The Corporation continues to take significant action to minimize the need for and likelihood of listing Lake Sturgeon under SARA (see detail of risk treatment on profile C.3.1), however uncertainty remains.

3.3.2 Environmental and Social Impacts of Legacy Facilities

Many of Manitoba Hydro's legacy facilities such as Grand Rapids, Kelsey, Churchill River Diversion (CRD), Lake Winnipeg Regulation (LWR), Kettle G.S., Long Spruce G.S. and the HVDC facilities were constructed without the benefit of modern environment reviews and community and Indigenous consultations.

Manitoba Hydro is now having to deal with the impacts of these legacy projects in the context of modern societal and environmental values. This is unlike recent projects such as Wuskwatim, Bipole III and Keeyask where the impacts were studied, understood and communicated up front and consultations were held. So although legacy projects have all the necessary permits and are legally compliant, the expectations of Manitobans for legacy projects reach beyond what was legally required in the past. This gap in expectations exposes the Corporation to controversy whenever it is seeking a new licence or a change to an existing licence unless it proactively addresses all legacy issues before a licencing decision is required.

This situation arose during both the Wuskwatim and BiPole III Environment Act licencing processes where the public had opportunities to express concerns associated with the environmental and social impacts of CRD and LWR projects.

In these processes the fact their Water Power Act licences were not finalized after 30 years became a point of issue leading to the Clean Environment Commission (CEC) making a non-licencing recommendation on the need to acquire final licences.

Similarly in the BiPole III process the fact that legacy hydro projects in northern Manitoba had not undergone modern environmental reviews lead the CEC to make a non-licencing recommendation that both the Province and Manitoba Hydro conduct a Regional Cumulative Environmental Effects Assessment (RCEEA) of all Manitoba Hydro projects in the lower Nelson River sub-basin before any more projects are licenced for construction.

In the recently completed LWR Final Licence hearing the CEC went even further and recommended that all legacy hydro projects in the Province should be licenced under the Environment Act.

The issue of reviewing the environmental and social impacts from legacy projects is problematic in several ways for the Corporation. Base line data is lacking, the reviews are very costly, they take many years to complete and they can lead to delays in re-licencing existing facilities or constructing future facilities.

Over the next ten years, twelve of Manitoba Hydro's Water Power Act licences will have to be renewed. Although legally this should be a relatively simple process as prescribed under the Water Power Act regulations, public expectations, the requirement for the Province of Manitoba to consult under Section 35 of the Constitution with Indigenous peoples on all licencing decisions and the recent recommendations from the CEC on re-licencing that includes full environmental assessments and public reviews will expose Manitoba Hydro to significant costs, and potential operational restrictions. Manitoba Hydro is currently in discussions with the Province on how to proceed with re-licencing.

3.4 Indigenous Relationships and Legal (Section I)

Manitoba Hydro's relationships with Indigenous peoples and communities are complex and have been identified as one of the key areas of focus in Manitoba Hydro's Corporate Strategic Plan, where it is acknowledged that, "engaging impacted Indigenous communities in a positive way is vital to enhance working relationships."

While Manitoba Hydro has made extensive efforts to address impacts arising from its existing development, some legacy issues still remain. These issues remain a negative influence on Manitoba Hydro's ongoing relationships and engagement with communities, as well as on public perception of Manitoba Hydro's role in that relationship.

Recent judicial decisions, notably the Supreme Court of Canada decisions in the Manitoba Métis Federation and Tsilhqot'in Nation cases, provide additional complexity and have the potential to impact Manitoba Hydro's relationships with First Nation and Métis peoples in terms of the specific legal principles flowing from the decisions, and from the increased confidence communities might have to explore and assert their rights.

The recently elected federal government included the acceptance of the UN Declaration on the Rights of Indigenous Peoples (the UNDRIP) in its platform. The full adoption and implementation of UNDRIP is also included in the Truth and Reconciliation Commissions Calls to Action. The current movement towards acceptance of the UNDRIP, including its references to "Free, Prior and Informed Consent" (FPIC), has the potential to affect new project development and, potentially, changes to current operations. This may include increased process, negotiation and development costs, as well as enhanced prospects for impact benefit agreements (IBAs) on all projects (generating and transmission). How the concept of FPIC will be interpreted and approached by regulators and the courts going forward is also not known.

Risk to the Corporation from the issues noted above include the potential for strained relationships, prolonged negotiations, legal challenges, work stoppages, blockades, demonstrations and other forms of civil disobedience. Each of these in turn has the potential to impact project costs and schedule, adversely affect corporate financial strength, reduce export sales, lengthen the time and increase the cost of regulatory approvals, and damage the Corporation's reputation.

The Corporation has a number of measures in place to manage these risks. These include:

- continuing to work with Indigenous communities, groups and individuals to resolve outstanding issues and grievances to the extent possible and reasonable;

- pursuing enhanced working relationships through mutually beneficial arrangements with Indigenous groups when developing new hydro facilities;

- the development, use and/or enhancement of management systems to flag obligations and to follow up on compliance;

- where faced with legal challenges, responding with appropriate legal defences; and to this end, monitoring developments in the field of Aboriginal law to ensure ongoing awareness of evolutions in jurisprudence on Aboriginal and Treaty rights and other Aboriginal law issues;

- ongoing engagement with government to identify appropriate strategies for managing challenges in the relationships, particularly in cases where acts of civil disobedience are being used as a response to relationship impasses;

- consistent with recent Clean Environment Commission and Provincial recommendations, and the Truth and Reconciliation *Calls to Action*, shifting the corporate focus to reconciliation efforts and the development of a strategy to work with communities towards reconciliation.

3.5 Emerging Energy Technologies (J.1)

Improvements and production cost reductions are occurring in competing supply options that have set a trajectory where commercial viability of these supply sources will influence decisions of future alternative resource options. At the present time these competing options do not face the same environmental, regulatory and stakeholder challenges as constructing new hydro facilities.

Emerging technologies have also put downward pressure on export market prices and this could continue well into the future. Continued low export prices could affect the viability of new future hydro-electric generation and may also reduce a portion of existing generating facility values due to the long life spans of these facilities.

Manitoba Hydro's current resource plans indicate that no new generation is required until 2033. This requirement is based on current load forecasts that include new DSM targets that are updated annually to reflect information that is available. This time frame allows the Corporation to assess new alternative energy technologies and work towards an integrated resource plan which determines the appropriate combination of resources to meet multiple objectives (technical, environmental etc) at the lowest cost to Manitobans.

3.6 Human Resources

Attracting, developing, retaining and protecting a highly skilled and motivated workforce that reflects the demographics of Manitoba is critical to Manitoba Hydro's success. Key risks related to human resources are as follows:

3.6.1 Safety in the Workplace (E.1)

Employee safety is always a key concern to the Corporation due to the inherent nature of the operational work performed by Manitoba Hydro. To date a focus on continuous safety improvements has resulted in a steady decline in workplace accident severity and frequency rates. The Corporation is committed to continuously improving safety performance and focusing on strategies to instill a safe and health culture in all Corporate activities. Strategies include implementing a seven point safety enhancement strategy that includes annual executive site safety reviews, developing Corporate Rapid Response Teams for various issues, and moving the Corporation beyond compliance by forming a new high performance Risk Prevention Services team.

Manitoba Hydro's international operations in developing countries exposes employees and their families to increased risk of disease, crime, or injuries from political, ethnic or religious conflict. A number of measures are taken to mitigate these risks, including providing employees with medical advice and medi-vac transportation, specialized location security advice, secure accommodations and having emergency response and evacuation plans.

3.6.2 Workforce Management (E.3)

Attracting, developing and retaining a highly skilled and motivated workforce that can effectively carry out the very important, complex and new corporate initiatives are critical to the Corporation's success. Key factors that impact the ability to achieve this are the number of employees that are eligible for retirement, competition for highly skilled workers, and the ability to keep up with technological and other changes. Manitoba Hydro's contractors will also be impacted by the same competition.

The Corporation is looking at the demographic shift that is occurring in its workforce as a challenge as well as an opportunity. Nearly 900 employees are eligible for retirement in 2015. With years of accumulated experience and knowledge, many of those nearing retirement age are key contributors to the Corporation's success, and that knowledge can be lost with little notice. It is important therefore that appropriate leadership, management, succession planning, recruitment and retention activities are in place to maintain safe and reliable service and to manage the loss of valuable experience and knowledge that can result from the retirement of key contributors. Given that business needs are changing and new technologies are available, there is an opportunity to achieve efficiencies and cost reductions through attrition.

3.7 Other Significant and Emerging Risks

Other significant and emerging risks that can affect the achievement of the Corporation's mission and mandate are as follows:

3.7.1 Reputation (G.1)

The Corporation's reputation has been impacted by issues related to trust and transparency, rate increases, labour relations, and major projects (e.g. need, financial management, local reaction). Many of these challenges are likely to continue and others may emerge (e.g. new licencing requirements and Power Smart arrangements). As a result, there is a continuing need to focus on sustaining and enhancing corporate reputation. Accordingly, the Corporation will continue to take steps to enhance its reputation through all its daily actions, including comprehensive, timely communications, respectful interactions with stakeholders, and provision of safe, reliable, and affordable energy services to customers.

3.7.2 Upstream Gas Cost Uncertainty (B.5)

There is significant upward cost pressure for transportation services on the TCPL Canadian Mainline (the "Mainline"), to which Centra is currently captive in bringing natural gas to its load centre. The Mainline is significantly underutilized resulting in less revenue than that which is required to cover the Mainline's relatively high embedded cost structure. As a result, the pipeline has been seeking

regular toll increases since 2010, which costs are passed through to Manitoba natural gas ratepayers. Tolls on the Mainline also affect transportation services that Centra obtains from third parties.

This market risk is compounded by a proposal by TCPL to segment the Mainline's cost allocation and tolls post-2020 between the under-utilized Western Mainline (on which Centra moves gas) and the highly utilized Eastern Ontario Triangle, which would facilitate the avoidance of cost responsibility for under-utilized or stranded assets on the Mainline by eastern shippers at the expense of Centra and other captive shippers on the Western Mainline. Centra is the largest captive shipper on the Western Mainline. The outcome is highly uncertain at this time. The NEB has approved segmentation in principle and intends to review it and other pricing issues in future proceedings. Centra will mitigate TCPL tolls risk by actively participating in TCPL's regulatory proceedings before the NEB as appropriate in order to ensure that Manitoba natural gas consumers' interests are adequately represented.

3.7.3 Cyber Security (F.2.1)

The growth of electronic communication and automation, while delivering significant benefits, has also increased risk to the Corporation. This risk includes any cyber attack that could impact the resiliency, reliability, confidentiality, availability or the integrity of Manitoba Hydro information and operational technology assets, including the theft of personal and or business information, and or the disruption/misuse of critical operations/assets. Any computer or control system if not secured properly may be considered a potential target.

Countermeasures, management controls and processes are in place to mitigate this risk. The Corporation has implemented a series of measures to further augment cyber-security efforts consistent with recommendations of the Office of the Auditor General. Concurrently, to meet current NERC security standards Manitoba Hydro has also undertaken several projects targeted at increasing safeguards over critical cyber assets.

Ongoing assessment and enhanced mitigation strategies are required as the sophistication of external cyber threats increases, and as more computer and control systems are inter-connected. The Enterprise Security Council comprised

of senior executives provides oversight for all aspects of physical and technology security including NERC related projects and the implementation of the Auditor General's eight recommendations, of which four have now been completed.

To protect Manitoba Hydro's information technology environment an advanced corporate firewall is in place to protect the data network. Additionally, anti-virus software and security patches are closely monitored and updated immediately to prevent data corruption. The Corporation is finalizing the implementation of a Security Information & Event Management (SIEM) tool to further raise the level of protection. It will be fully operational by spring, 2016.

3.7.4 Wholesale Electricity Markets Compliance Program (A.2.1 / H.3)

To maintain market access and mitigate exposure to market manipulation risk, the Corporation is in the process of implementing a Wholesale Electricity Markets Compliance Program to establish policies, procedures and guidelines pursuant to anti-market manipulation laws in place in the U.S. and Canada. This program will outline roles and responsibilities of those identified in the program, provide direction to employees transacting in the export markets, identify permissible and prohibited trading considerations and specify policy with respect to potential violation investigations, disputes and reporting, training requirements, record retention practices and compliance monitoring related to the Corporation's participation in the wholesale electricity markets.

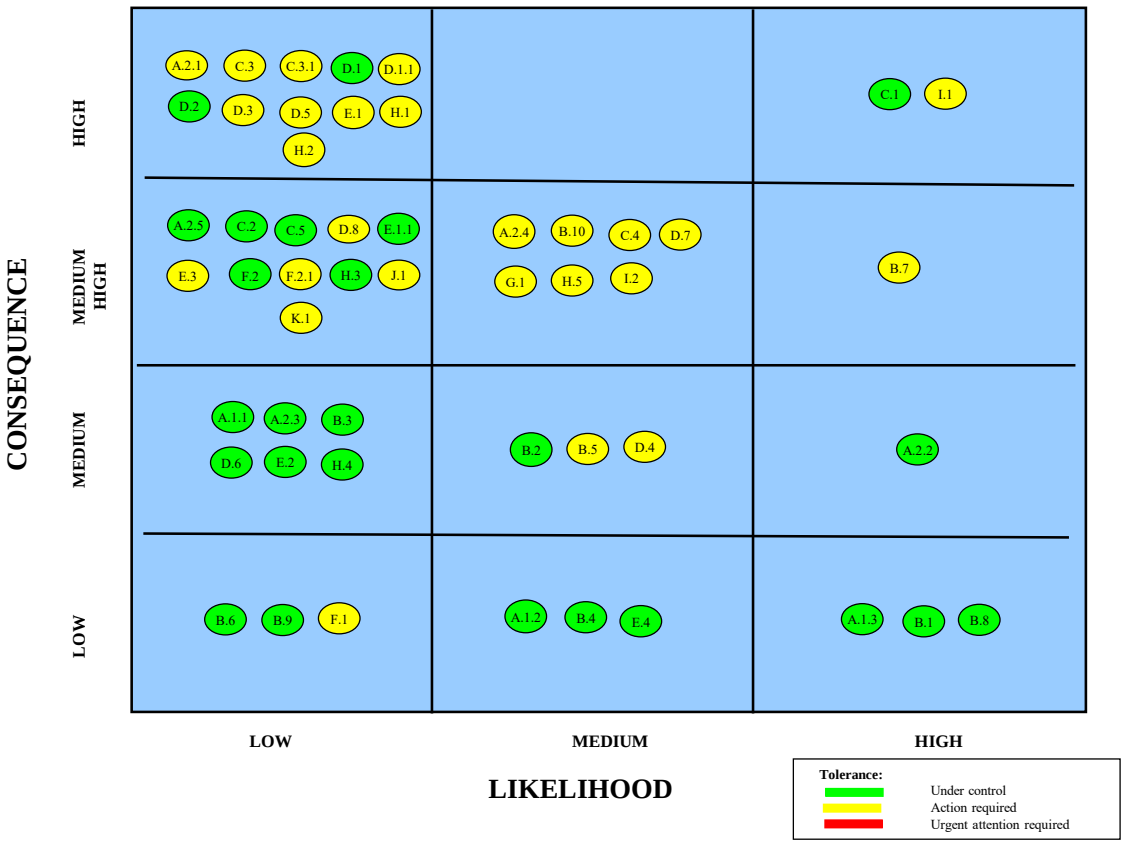
3.7.5 NERC/MRO Reliability Standards (H.5)

Achieving the highest level of reliability is one of the core tenets of Manitoba Hydro's Vision statement. In support of this vision, Manitoba Hydro is a member of the North American Electric Reliability Corporation (NERC) and has been legally required to comply with nearly 100 of its reliability standards since 2007. These standards specify requirements for planning, operating and maintaining the bulk electric system. The Corporation has developed a Corporate NERC Reliability Compliance Program to manage the demands of compliance, however uncertainty continues to exist with respect to the interpretation of some standards. As well existing standards are also continually being revised and new ones are being adopted on a regular basis.

3.7.6 Supply Chain (F.1)

The Corporation requires a variety of critical goods and services to achieve its objectives. [redacted] Action is being taken to review [redacted] requirements and contingency plans.

3.7.7 Strategic Direction and Execution K.1)



Manitoba Hydro continues to be at a critical point in renewing and expanding Manitoba's electrical and gas system. Major strategic decisions, plans and assumptions are subject to significant internal and external review and approval processes. Decisions for future power generation, transmission and distribution will depend on the best information at the time, and plans will be modified at key decision points if circumstances warrant.

4.0 CORPORATE RISK MAP

Corporate Risk Profiles (see Appendix B) identify and assess each risk facing the Corporation, describe activities used to manage the risk, and provide estimates of the potential residual impact to the Corporation in terms of likelihood and consequence after mitigation actions have been taken. The Corporation's tolerance for each risk and an assessment of whether the risk is within or outside the desired tolerance level is also provided. The risk rating and tolerance criteria are provided in Appendix C. As well, further detail of the risk tolerance assessment for each risk is provided in Appendix A.

The following Corporate Risk Map illustrates the results of a residual risk assessment for all risks facing the Corporation.

CORPORATE RISK MAP

A. Market
1. Domestic
    1. Competition
    2. Uneconomic Loads
    3. Load Growth Uncertainty
2. Export
    1. Regulatory Environment
    2. Long Term Price Uncertainty

APPENDIX A

CORPORATE

RISK TOLERANCE

ASSESSMENT

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
A. MARKET				
1. Domestic				
1.1 Competition	Medium	Natural gas market share, greater than or equal to 60%.	Manitoba Hydro's natural gas market share is currently at approximately 60%.	Manitoba Hydro intends to continue offering fixed-price primary gas products to small volume consumers compatible with product demand as well as Power Smart programs and services to meet customer needs.
1.2 Uneconomic Loads	Medium	Intensive loads do not materially exceed 25 MWs.	Substantial expansion of energy intensive industry at current rates has the potential for adverse impact on financial strength.	Continue to explore rate concepts based on marginal cost. Advance Time of Use proposal for regulatory approval.
1.3 Load Growth Uncertainty	Medium	Variations in load growth from forecast are manageable.	An extensive load growth forecast that includes DSM actions and IFF update are completed annually. Development plans to meet resource requirements are revised as necessary.	Update load forecast and resource development plans as required. Implement integrated resource planning.
2. Export				
2.1 Regulatory Environment	Medium	Unfettered market access.	Market rules are continually evolving with new rules being imposed that could impact future access. These include jurisdictional overreach by FERC and MISO Tariff changes including changes to PPA requirements. Ontario recently implemented a General Conduct Rule which will potentially sanction otherwise legitimate market behaviour.	Manitoba Hydro collectively manages its market access risks through a comprehensive set of activities to monitor and address any potential threats to market access. The Corporation is in the process of implementing a Market Compliance Program to manage the risk of any potential market manipulation activities in the wholesale electricity markets.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
2.2 Long Term Price Uncertainty	Medium	Downward price pressure due to new technologies limited to $100 million per year.	Technological developments for natural gas production & policy for wind incentives for wind development are occurring but are within tolerance limits.	Manitoba Hydro maintains a balanced portfolio with long-term contracts to reduce exposure to price variation.
2.3. Transmission Interconnection Capacity	Low	Maintain adequate transmission interconnection capacity.	Manitoba Hydro influences ratings through a cooperative process with MISO, and tie line partners. The Corporation also participates in reserve sharing agreements to maximize transfer capability. Ratings have not changed.	Maintain current efforts. To further mitigate risk, Manitoba Hydro is proceeding with a second 500 KV interconnection to the US and an additional 230 kV interconnection with Saskatchewan.
2.4 Special Interest Groups	Low	No negative image impact that materially affects opportunities for long-term firm power sales or the price that can be obtained.	Some residual risk remains. In spite of best efforts to counter anti-hydro lobbying, legislators and customers may still be negatively influenced. Regulators decisions may extend the regulatory process, deny approval or require onerous terms.	Continue to promote waterpower as clean, reliable and a renewable source of electricity. Aggressively counter Special Interest Group activities with Manitoba Hydro perspective. Expand engagement with groups who may lobby for or against Manitoba Hydro.
2.5 Protectionism	Low	Full participation in export markets	Manitoba Hydro offers a carbon-neutral energy alternative which many states will require in order to meet recently announced EPA rules requiring states to reduce CO2 emissions and develop plans as to how it will achieve those goals. MH is a sought after supplier and imports of hydropower into the US have recently been accepted as a qualifying resource in the US Clean Power Plan.	Maintain industry and regulatory representation. Continue monitoring and lobbying efforts in US and Canada for energy policy and market rules.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
B. FINANCIAL				
1. Exchange	Medium	As defined in the Foreign Currency Exchange Risk Management Program.	Current exposure falls within the target. As well a $0.10 change in FX rate results in less than a $7.6M change in net income.	Continue to monitor USD cash forecast and take appropriate actions to stay within the risk targets.
2. Interest Rates	Medium	The aggregate of: i) floating rate debt, ii) short term debt, and iii) fixed rate long term debt to be refinanced within the subsequent 12 month period; is limited to a maximum of 35% of the total debt portfolio.	Within established policies and guidelines.	Continue to monitor economic and financial market conditions, while undertaking appropriate debt management strategies and operating within policy limits.
3. Credit	Medium	As defined by counterparty credit rating, limits and arrears policy.	Within established policies and guidelines. .	Maintain existing controls, closely monitor global credit issues, establish enhanced credit risk measurement capability to quantify credit risk exposure and ensure use of consistently applied practices to mitigate exposure.
4. Inflation	Medium	Sales rate increases within justifiable and acceptable limits.	Prolonged high levels of inflation could begin to jeopardize the achievement of Manitoba Hydro financial targets and necessary capital program. Cost constraint measures have been further implemented.	Continue to monitor inflation impacts, insert inflation adjustments into export contracts if possible, ensure all costs fully justified and monitor effectiveness of cost constraint measures.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
5. Upstream Gas Cost Uncertainty	Medium	Sales rate increases due to increases in upstream gas commodity, transportation and / or storage costs within acceptable limits. Financial impacts from Fixed Rate Program also within acceptable limits.	There is the potential for significant future upward cost pressure for transportation services on the TCPL Canadian Mainline to which Centra is currently captive, as well as the ANR and GLGT systems which are wholly owned by TCPL. Gas cost rate uncertainty for the primary gas service is mitigated through a Rate Volatility Management Program, a fixed rate service or a third party marketer, and an equal payment plan. A self insurance risk premium and risk thresholds will mitigate financial impacts and trigger a review of the program.	Participate in NEB and FERC regulatory proceedings on matters related to the TCPL mainline and the ANR and GLGT systems in the U.S. Explore alternatives as required, such as the development of local underground natural gas storage.
6. Gas Derivative Instruments	Medium	Gas derivatives will not be used in the normal course.	Changes to the program were approved by the PUB and derivatives will not be used in the normal course.	Further use of derivatives justified and approved as required.
7. Financial Targets	Medium	Maintain adequate capital structure and other financial targets	Significant progress has been made toward achieving financial targets; however targets are expected to deteriorate for several years due to new major generation and transmission facilities and other significant capital expenditures. Targets are expected to recover towards the end of the 20 year IFF period.	Manage by adopting and updating appropriate targets, making annual contributions to retained earnings, achieving annual contributions through a combination of cost controls, high export revenues, and regular reasonable domestic rate increases.
8. Energy / Fuel Price Volatility	Medium	Included in drought tolerance for power purchase requirements.	Good water conditions currently exist, however volatility in prices has increased with the development of competitive energy markets.	Diverse sales portfolio and effective use of the MISO day ahead market. Hedging is a possibility. Retained earnings sufficient for any variations.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
9. Power Financial Instruments	Low	As defined in the Wholesale Export Power Policy.	Within established guidelines.	Corporate Risk Management is finalizing the installation of risk software that will provide enhanced risk measurement capability.
10. Liquidity	Low	As per the Manitoba Hydro Act, the temporary borrowing limit shall not exceed in the aggregate the sum of $500 million.	Within established guidelines.	Cash receipts and disbursements are closely monitored on a daily basis. Short term debt balances and forecasted cash requirements are also monitored, with short term debt converted to long term debt as required. Fund three months in advance of requirements.
C. ENVIRONMENTAL				
1. Water Supply Variation / Drought	Medium	Operation Planning Criteria and adequate financial reserves. Potential 5 year drought impact is $1.9 billion for a drought commencing in 2017/18 (IFF 15)	Good water conditions that could change within a year. Sufficient retained earnings to withstand extended drought. Natural gas and power prices are expected to be low for the near-term.	Retained earnings sufficient for reduced flow/revenue due to drought.
2. Climate Change	Low	Climate change impacts expected to occur gradually	Climate change issues on water supply are being studied. Any required adaptation to operations and resource plans will be made as information becomes available.	Continue to monitor progress on determining climate change impacts and respond accordingly.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
3. Operational Impact and infrastructure	Medium	No unplanned environmental impacts, ISO 14001 compliant, CSP environmental targets met.	There are a number of environmental issues that are or could affect future operations of the Corporation. The most significant include the potential of Lake Sturgeon being listed as endangered (see 3.1 below), and the need to address environmental and societal impacts and expectation for legacy facilities. See risk profile H.1.	Complete the RCEEA and continue discussions with the Province on how to proceed with re-licencing.
3.1 Legal - Species at Risk Act	Medium	No undue restrictions on current operations and ability to build future projects.	The Corporation has taken significant action to minimize the need for and likelihood of listing Lake Sturgeon under SARA. However uncertainty remains regarding whether the Federal Government will decide to list Lake Sturgeon under SARA.	Continue actions to minimize the need for listing Lake Sturgeon under SARA.
4. Reliability of Supply	Low	No major obstruction to plans and operations to build necessary facilities.	Enhanced scrutiny and regulatory oversight of proposed system improvements and the added time and cost needed to obtain licences and permits.	Be proactive in addressing concerns and ensure adequate lead times to resolve issues.
5. Upstream Regulation and Water Withdrawals	Low	Changes in water supply expected to be gradual.	Good water conditions exist reducing pressure on water supply diversions in the short term.	Continue monitoring responsible entities.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
D. INFRASTRUCTURE				
1. Loss of Plant (all property, all perils)	Low	No major facility loss. CSP reliability targets and contingency standards. Max insurance coverage is $7.0 billion.	Maintain Reliability, Dam Safety and Insurance programs including annual reviews.	Continue to assess exposures of loss and develop appropriate risk reduction alternatives and emergency plans.
1.1. Water Retaining Structures and Flow Control	Low	No water retaining structure failures, following Canadian Dam Association guidelines, maintain appropriate emergency preparedness plans.	The risk of dam breach is addressed by ensuring the integrity and reliability of water control equipment and structures through diligent maintenance and vigilant surveillance, as well as preparing for emergencies, as per Cdn Dam Assoc guidelines. Residual risk of dam failure can be mitigated but not eliminated.	Maintain Dam safety program and improve structures where deficiencies are known.
2. Extreme Drought - Shortfall of Energy Supply	Low	Historical low flows determine firm supply and operating reservoir levels.	Current water conditions suggest that loads will be met.	Maintain current water resource management systems.
3. Prolonged Loss of System Supply	Low	. No long term system outages, compliant with reliability standards, appropriate continuity plans in place.	No long term events have been experienced recently. However, an aging system has areas of significant concern.	Several capital items have been approved which will reduce exposure to a catastrophic event. Regularly maintain, review and update business continuity plans.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
4. System Shutdown (Short Term)	Low	No major system outages, CSP targets for reliability of service (e.g. SAIDI, SAIFI), compliance to reliability standards, emergency response plans in place.	Manitoba Hydro's reliability performance shows an increased trend of outage frequency and duration, and generation forced outage rates have increased in the last four years. The Corporation is continually upgrading the system.	Maintain reliability standards and ensure system reliability through planned maintenance and upgrades. Regularly maintain, review and update emergency preparedness plans for system restoration and response.
5. System Shutdown (Natural Gas)	Low	Gas supply is available to meet the needs of the province. No undue impact on electrical grid due to gas system failure.	TransCanada Pipelines has incorporated design practices to minimize the possibility of a catastrophic event occurring. The design practices have been effective over the course of several incidents in past decade with the exception of the 2014 Otterburne pipeline rupture that resulted in a loss of service to a number of communities. MH has retained standby services to provide compressed natural gas (CNG) for small scale outages during a supply interruption for the 2015/16 winter.	Ongoing monitoring to ensure that TransCanada Pipelines maintains a safe and secure natural gas transmission system. Maintain and review emergency response procedures and conduct exercises. CNG equipment and facilities are being purchased and constructed.
6 Technology	Low	Computer operations will not be compromised. Compliance with all security standards.	Highly complex area that is constantly changing and operations have not been compromised.	Continuous review and updating of the comprehensive disaster recovery plans. Complete actions to address security risks in the Enterprise IT Security Assessment

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
7. Concerned Stakeholders	Low	No restrictions to infrastructure requirements, particularly projects that are required for safety and reliability reasons.	Lobbying has caused delays and resultant impact on reliability in a number of projects, including BiPole III.	Proactively identify and address issues to ensure construction schedule.
8. Corporate Emergency Management Program (CEMP)	Low	Ability to provide emergency response to maintain or restore minimum acceptable energy services to protect human life and the environment. No undue financial consequences to the Corporation and Manitoba economy.	The CEMP continues to be enhanced with the revision of the Emergency Preparedness Policy and the establishment of the Executive Emergency Management Committee (EEMC). Initiatives currently underway include developing a corporate plan for business continuity for continuation of essential services and critical functions (electrical and gas restoration, bill collection, power trading) and constructing an emergency fuel depot.	Continuous oversight by the Executive Emergency Management Committee (EEMC) to confirm Business Continuity Plans (BCP), Hazard Risk Assessment (HRA), Preparedness, Response and Recovery Plans are reviewed and tested to ensure Manitoba Hydro has the ability and can respond to emergency events.
E. HUMAN				
1. Safety and Health	Low	Within CSP targets for high-risk accidents accident severity and frequency.	Focus on continuous safety improvements has resulted in a steady decline in workplace severity and frequency rates. MH is committed to continuously improving safety performance and instilling a safe and health culture in all activities.	Continue to focus on continuous safety improvements and instilling a safe and health culture. Strategies include implementing a seven point safety enhancement strategy and developing programs with an internal Rapid Response Team for various issues.
1.1. Infectious Disease	Low	Effective response to disease outbreak.	An Influenza Pandemic Plan was reviewed and updated in September, 2009. Monitor health authority requirements and make changes as required.	Continue to monitor and make any required changes to meet health authority requirements.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
2. Union / Employee Issues	Low	Continued positive relations and contract settlements.	A new three year agreement negotiated between the Corporation and IBEW was ratified in early January, 2016. The other three agreements were renewed in 2013 and expire in 2016.	Continue to address employee issues in good faith to ensure that relationships remain positive.
3. Workforce Management	Low	Key vacant positions filled with qualified people. Continue strong relationships and enhance partnerships with post secondary institutions.	Significant retirements in the near future combined with a shrinking labour pool. Implementation of a comprehensive succession planning program.	Completion and maintenance of detailed succession plans for all key strategic & critical positions. Continuous update of retirement forecasts and recruitment plans. Continued redeployment training programs.
4. Technology	Low	Technology issues fully understood and effectively incorporated into existing systems.	Several different technologies exist within Manitoba Hydro's infrastructure and staff have been able to keep up to both older and newer technologies. This risk will increase with time.	Maintain an appropriate level of resources to manage this increasing risk.
F. BUSINESS OPERATIONAL				
1. Supply Chain	Low	Established 90 day supply for critical items. Emergency spares maintained. Materials available when needed.	Material and services delivered within policy however the demand for construction services in some trades is still a concern. In some cases have exceeded budget expectations. .	Continue risk management protocol, including monitoring market trends, sourcing strategic alliance partners, reducing single source provider and stocking emergency spares of critical items.
2. Operational Controls	Low	Adherence to all established guidelines, procedures, policies and programs.	Adequate control structures in place and working. Exceptions reported and appropriate corrective action taken.	Maintain effective control mechanisms.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
2.1 Cyber Security	Low	No undue impacts from cyber attacks on information or critical operational assets.	Controls and processes are in place to mitigate risk. Further measures are being developed and implemented to augment efforts, consistent with recommendations of the provincial Auditor General.	Continue to develop and implement further measures under the governance of the Enterprise Security Council.
G. REPUTATION	Low	No negative image impacts. Meet CSP customer service and public attitude index targets.	Manitoba Hydro's customer satisfaction rating is just above its five year average and is well above the average for Canadian utilities. Reputation could be impacted by issues related to construction of major projects, labour relations, new Power Smart arrangements, new licencing requirements, rate increases, and corporate trust and transparency.	Continue to take steps to enhance the Corporation's reputation, through all its daily actions, including comprehensive, timely communications, respectful interactions with stakeholders, and provision of safe, reliable, and affordable energy services to customers.
H. GOVERNANCE / REGULATORY / LEGAL				
1. Regulation and Licencing	Low	Current restrictions and licences maintained. New facilities receive favourable licencing.	Issues that could have significant impact on operations and reputation include Lake Sturgeon being listed as endangered (see profile C.3.1) and addressing environmental and societal impacts and expectations for legacy facilities. These include addressing CEC recommendations for completion of a Regional Cumulative Environmental Effects Assessment (RCEEA), as well as that all legacy hydro projects be licenced under the Environment Act.	Continue to take action to minimize the need for and likelihood of Lake Sturgeon. Complete the RCEEA and continue discussions with the Province on how to proceed with re-licencing.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
2. Export market Access	Low	Current capacity to export continues (100%)	Rules are constantly changing in export markets. Corporation vigilant in monitoring changes, assessing possible impacts and advocating resolution consistent with corporate interests.	Actively participate in organizations and processes related to rule development and application. Ongoing assessment.
3. Legal Compliance	Low	Compliant with all laws and regulations.	For a large diverse company it is not realistic to reduce the risk of non-compliance to zero. Actions are intended to provide realistic assurance that compliance risks are being addressed.	Ongoing actions to address compliance issues at various levels of the Corporation.
4. Contacts and Ventures	Low	Adherence to all terms and conditions. High risk agreements appropriately reviewed and executed.	Corporation ensures adherence through an effective contract and venture control system.	Maintain control systems.
5. NERC/MRO Reliability Standards	Low	Full compliance to all applicable NERC / MRO standards.	Uncertainty continues to exist with respect to interpretation of some standards. Existing standards are also continually being revised and new ones are being adopted on a regular basis.	Continue to build a strong culture of compliance where all staff understand the impact of day-to-day activities and make corresponding decisions that support on-going compliance.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
I. INDIGENOUS				
1. Relationships	Low	Workable impact management frameworks or reasonable offsetting arrangements in place with all Indigenous communities adversely affected by Manitoba Hydro operations. Indigenous employment targets achieved. No Strained relations.	Reasonable arrangements are in place with the communities that do not have workable management frameworks. If a community raises an adverse effects concern, Manitoba Hydro will endeavour to investigate and address the concern. Employment numbers are generally exceeding targets. There are strained relations with many communities and resource user groups, including groups who have impact arrangements in place with Manitoba Hydro.	Continue working with indigenous communities to resolve outstanding issues to the extent possible and reasonable. Engage with government to identify appropriate strategies for managing challenges in the relationships, particularly in cases where acts of civil disobedience are used as a response to relationship impasses.
2. Legal	Low	No unfavourable rulings, Compliant with all existing legal requirements.	Demands exist from several sources which could ultimately result in unfavourable rulings. Management systems have not identified any compliance concerns that are not being addressed. Statements of Claims have been filed against Manitoba Hydro.	Measures include (1) Legal responses to legal challenges. (2) Maintain and continuously improve compliance management systems (3) Filing statements of defence, and (4) Monitoring developments in the field of Indigenous law, including Supreme Court decisions.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

RISK	RATING	TOLERANCE	STATUS	MGMT ACTION
J. EMERGING ENERGY TECHNOLOGIES	Low	Develop integrated resource plan which uses appropriate combination of resources to meet MH objectives.	Significant improvements and cost reductions in new emerging energy technologies could put downward pressure on market prices and affect MH marketing opportunities, thus reducing revenues from existing assets. MH is actively assessing and working towards an integrated resource plan that determines the appropriate combination of resources to meet objectives.	Continue to assess new technologies and develop integrated resource plan that determines the appropriate combination of resources to meet objectives.
K. STRATEGIC	Low	Long term goals are pursued. No missed opportunities. No unfavourable business decisions.	High level strategic considerations include large scale capital projects to meet future needs of the province and re-investment of the existing energy system. Major strategic decisions, plans and assumptions are subject to significant internal and external review and approval processes.	Decisions for future power generation, transmission and distribution will depend on the best information at the time, and plans will be modified at key decision points if circumstances warrant.

Risk is being managed appropriately and is not expected to materially change.
Some emerging issues need to be monitored and additional action may be required.
Urgent attention required

CATEGORY: A. Market

TITLE: 1.1 Domestic – Competition

RISK: Increasing competition may result in a reduction of domestic market share.

DESCRIPTION:
Over the past few decades, the energy utility industry has seen some structural changes with these changes varying somewhat throughout North America. Within these changes, there has been some movement towards creating a more competitive energy services environment with customers having a choice of energy supplier and more choice in energy products (e.g. time of use rates/green energy with electricity, customer self-generation, fixed price products with natural gas and a carbon neutral option).

In Manitoba, customers have a choice in their Primary Gas supplier and no choice with all other system supply electricity and natural gas related services. In the early 2000's, some regions including Manitoba reassessed their respective market structures involving primary natural gas services. In Manitoba, competition in the supply of primary natural gas is quite limited with only two brokers (Just Energy Manitoba and Planet Energy) offering service within the SGS Residential market and six offering services to Commercial and Industrial customers. Currently, a declining number of natural gas residential customers (approximately 6%) have entered into contractual arrangements with brokers involving four to five year terms to deliver their primary gas needs. The number of SGS Commercial and LGS customers combined in contractual arrangements with brokers has also declined (approximately 5%).

During 2007, following a review of the competitive landscape of the natural gas market in Manitoba, the PUB concluded that it was not satisfied with the service options and pricing currently available to Manitoba consumers for Primary Gas service. As a consequence, the PUB ordered Centra, a subsidiary of Manitoba Hydro to file a comprehensive proposal to enter the fixed-price primary gas market. In 2009, Manitoba Hydro started offering consumers the choice of 1, 3 or 5 year fixed-price primary gas products with the price and offering terms varying during various marketing periods. As of November 2015, less than 1% of SGS and LGS customers have entered into fixed rate contracts with Manitoba Hydro.

Although Manitoba Hydro enjoys a significant monopoly environment within the electricity and natural gas utility market, pressures may arise in the future which could change this situation. For this reason, the Corporation is exposed to risks associated with market share loss.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:
Enhanced competition in the natural gas business would impact Manitoba Hydro's strategic goal of providing customers with exceptional value and meeting its target market share in natural gas (i.e. greater than or equal to 60% of commodity sales). Loss of market share would have a negative impact on the Corporation in terms of realizing the benefits and synergies associated with serving a larger customer base. Introduction of competition in the electric business would impact Manitoba Hydro's position of being the sole supplier of electricity in Manitoba. This would result in the loss of synergies associated with being an integrated company and those benefits provided through economics of scale.

RISK TREATMENT:
The risk associated with this category is managed through all of the Corporation's strategic goals and actions. These initiatives are dynamic in nature and are outlined within the Corporation's Strategic Plan.

Likelihood	Med
Consequence	Low
Tolerance	Med

CATEGORY: A. Market

TITLE: 1.2 Domestic – Uneconomic Loads

RISK: Manitoba Hydro's low electricity rates could attract energy intensive industries which may impact short term export revenue and cause the advancement of new generation.

DESCRIPTION:

Manitoba Hydro's rates to Manitoba consumers are based on the embedded cost of its operations less a credit for net export revenues. Manitoba Hydro is one of the lowest cost producers in the world, with substantial sales into export markets at prices which reflect the real value of electricity. As a result of this export revenue subsidy, domestic loads could be considered "uneconomic" in the sense that absent the subsidization by export revenues, domestic rates do not recover the full embedded cost to serve.

While the decisions of most new businesses or residents to locate to Manitoba are not driven substantially by electricity rates, there are some energy-intensive industries that may be attracted by the low electricity rates. In some cases, it is not apparent that other benefits to the province, such as taxes and employment derived from energy-intensive industry, outweigh the losses due to foregone export revenue.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Substantial expansion of energy intensive industry at current rates has the potential for adverse affects on attainment of the Corporation's strategic objective to protect and improve its Financial Strength, as it may affect our ability to:1) Utilize resources efficiently and effectively to fulfill our mandate and provide maximum value to our stakeholders and ratepayers, and 2) Aggressively pursue a balanced portfolio of domestic and profitable export sales to provide the highest financial benefits to ratepayers and all Manitobans over the long term.

RISK TREATMENT:

Manitoba Hydro supports Time of Use rate concepts as well as rate concepts based on marginal cost which could be generally applicable to all major loads, not just energy intensive industrial loads. These types of rates have the virtue of being applicable to much more usage as well as being more specific with respect to time periods of usage.

As directed by the Public Utilities Board, a review of the Time of Use proposal and proposed changes to the Corporations Cost of Service Study will be addressed at a regulatory proceeding to be scheduled in 2016.

Likelihood	High
Consequence	Low
Tolerance	Med

CATEGORY: A. Market

TITLE: 1.3 Domestic – Load Growth Uncertainty

RISK: Variation in the domestic load from forecast can impact when new resources are required and the quantity of surplus available for export.

DESCRIPTION:

There is financial risk associated with uncertainty in the domestic load forecast. Lower than forecast domestic load will result in lower net revenues as unit revenues from the domestic market generally exceed those from the export market.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The prime impact of this risk is reduced corporate net revenues. To some extent this risk may be mitigated by an increase in MH's export sales activities. If additional long term firm sales can be arranged this may offset the decline in domestic revenues. If not, additional export market sales may be insufficient in offsetting the domestic revenue reduction

RISK TREATMENT:

The Corporation can manage load forecast uncertainty by appropriately distributing export sales commitments over the complete range of power sales time horizons from long-term down to real time. If the Manitoba load growth is higher than expected, then long term export sales commitments can be reduced over the long term. Similarly, if the Manitoba load growth is less than expected, additional long term export sales can be committed.

The Manitoba load forecast, power resource plan and IFF are updated annually to reflect any changes in long-term domestic demand due to factors such as energy pricing, economic activity, population and housing, among others. The Corporation also considers higher and lower load forecast scenarios along with the base load forecast when preparing resource development plans or long-term contract recommendations.

Likelihood	Low
Consequence	High
Tolerance	Med

CATEGORY: A. Market

TITLE: 2.1 Export – Regulatory Environment

RISK: Changes in regulation could restrict access to the export market.

DESCRIPTION:

Unfettered market access is key to the Corporation's ability to maximize export revenues. Regulatory and/or industry change both in Canada and the US is considered to be a fundamental export market risk. These changes may lead to increased costs for the Corporation or limit its access to, the US and Canadian markets as market rules may conflict with the legal requirements governing the Corporation or because they lead to discriminatory treatment of Manitoba Hydro. Entities that may contribute to or influence market access risks include MISO, IESO, AESO, FERC, NERC, MRO, NAESB, State governments (Wisconsin and Minnesota), Provincial and Federal Industry and Trade departments and the Canadian Electricity Association (CEA).

This risk profile is related to Export Market Access, Governance / Regulatory / Legal (H.2). Collectively, market access risks are legal, regulatory, or structural issues which could prevent or restrict Manitoba Hydro's surplus power from reaching a competitive marketplace.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The prime impact of restricted market access is reduced net revenue from the export power market. Similarly, the business case for building new hydro generation would also be at risk. Furthermore, changing market structure and access rules may require both legal and organizational change (e.g. adherence to reciprocity requirements of the export market).

RISK TREATMENT:

The Corporation, and when appropriate, in alliance with other industry participants such as the CEA, MISO, Transmission Owners, and other stakeholders, continues to lobby entities including MISO, IESO, AESO and FERC to develop market rules that support the elimination of barriers to trade and facilitate full participation by Canadian electrical energy producers within the US and Canadian markets. The Corporation has entered into a specialized agreement with MISO, which allows for the co-ordination and comparability in operations and tariffs, while minimizing impacts on corporate structure and maintaining Manitoba Hydro's sovereignty requirements.

Likelihood	High
Consequence	Med
Tolerance	Med

CATEGORY: A. Market

TITLE: 2.2 Export – Long Term Price Uncertainty

RISK: The average price received from future export sales may differ from forecast.

DESCRIPTION:

New technology, cost reductions or potential subsidies to various competing generation resources in Manitoba Hydro's export market may put downward pressure on the market price and result in reduced demand for the Corporation's export products.

This risk profile is related to J.1 Emerging Energy Technologies

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The impact of this risk is reduced net revenue from the export power market. Downward pressure on the market price will also negatively impact the business case for the advancement of new generation.

RISK TREATMENT:

By maintaining market intelligence associated with many factors, including resource plans in other jurisdictions and developments in technology, policy and market design, the Corporation ensures that business case analyses for the advancement of new generation or for new contracts reflect a reasonable range of possible pressures on market price.

The Corporation continues to promote waterpower as a clean, reliable and renewable source of electricity. By maintaining a positive image for its hydroelectric power, Manitoba Hydro's intention is to be seen as a responsible, competitive alternative to other renewable energy sources available in the market.

The Corporation advocates both within Canada and the US for equitable treatment for hydropower relative to other renewable sources and advocates hydropower's role in addressing climate change and air quality.
.

Likelihood	Low
Consequence	Med
Tolerance	Low

CATEGORY: A. Market

TITLE: 2.3 Export – Transmission Interconnection Capacity

RISK: Reduction in transmission interconnection capacity will reduce export revenue.

DESCRIPTION:

Maximizing export revenues and reducing import purchase costs is directly linked to available interconnection capacity and maintaining market access. Changes to reliability standards, public policy, infrastructure, load growth, and operating reserve requirements on the interconnected grid can lead to the degradation of available interconnection capacity over time. Reduced export capacity limits the volume of sales during high value times. Furthermore, limited export capability results in an increase in the volume of spilled energy during higher water years. Reduced import ratings would cause significant increased costs during low flow or high demand periods. Under these conditions, the Corporation would be forced to import energy during higher priced or on-peak periods.

Entities that influence this risk include NERC, IESO, HydroOne, SaskPower, MISO and other non-MISO Transmission Owners.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

A reduction in transmission interconnection capacity will decrease potential net revenue from the export power market.

RISK TREATMENT:

The Corporation endeavors to maintain a leadership role in and influence the policies and processes of the organizations and bodies in the USA involved with congestion management and regional transmission operations as well as those involved with transmission planning approvals. Manitoba Hydro staff also takes a leadership role in the activities associated with the formulation of transmission transfer limits for those facilities that affect Manitoba Hydro transfers with the USA. This activity occurs in a cooperative fashion (peer reviewed) with MISO and our tie line partners. Manitoba Hydro mitigates this risk by having skilled, knowledgeable staff representing the Corporation's interests at industry meetings.

In order to maximize transfer capability for commercial use, Manitoba Hydro participates in reserve sharing agreements (currently with MISO through its Coordination Agreement). The benefits of reserve sharing agreements to Manitoba Hydro include increased transmission and generator availability for commercial use.

Likelihood	Med
Consequence	M High
Tolerance	Low

CATEGORY: A. Market

TITLE: 2.4 Export – Special Interest Groups

RISK: Successful negative lobbying will result in reduced exports.

DESCRIPTION:

A positive corporate and product image enables the Corporation to maximize export sales opportunities and to develop generation and transmission projects required for both domestic needs and exports. Negative lobbying efforts by Special Interest Groups can tarnish the Corporation's image or the image of hydropower, limiting its marketability. Target groups of negative lobbying include [redacted] These Special Interest Groups can also intervene directly in capital and environmental regulatory processes (e.g. Clean Environment Commission).

Aspects of this risk profile parallel Achievement of Strategic and Operational Goals, Reputation / Image (G.1).

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Successful anti-hydro lobbying could result in fewer opportunities for long-term firm power sales or affect the price that can be obtained. Another example of a negative outcome would be the adoption of state implementation plans under the American Clean Power Plan that discriminate against Canadian hydro projects. Such discrimination could result in reduced net export revenues. In addition merchant plant decisions based upon the potential sale of firm power would be less attractive, with potential negative effects on any associated First Nation partnership (e.g. income sharing). If successful, regulatory and government approvals (e.g. environmental licences) required for export sales, generation and transmission initiatives could experience significant delays or even be denied.

RISK TREATMENT:

The Corporation continues to promote waterpower as clean, reliable and a renewable source of electricity. It engages with environmental, consumer and business stakeholder groups to discuss and promote its development plans. It is active directly and indirectly through industry groups such as CHA, IHA, and CEA and through hiring representative firms in the USA and Canada.

The Corporation aggressively counters Special Interest Group activities by sharing Manitoba Hydro's perspectives with government and community leaders, regulators, customers, industry associations, and business groups.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: A. Market

TITLE: 2.5 Export – Protectionism

RISK: Customer sentiment towards imports may negatively impact Manitoba Hydro's export sales.

DESCRIPTION:

Manitoba Hydro's energy competitors in the US may attempt to have limits or protective tariffs placed on imports of electricity from Canada for local economic benefit e.g. job creation. Alternatively, subsidies to US producers may add downward pressure on the market price.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The impact of this risk would be reduced net revenue from export power sales. The business case for building new generation would also be at risk.

RISK TREATMENT:

The Corporation actively lobbies, in alliance with other Canadian industry representatives via trade organizations such as the Canadian Electricity Association as well as US federal and state governments and regulatory bodies for full and unfettered access by Canadian power producers to the US markets. In addition, Manitoba Hydro conforms to the same Standards of Conduct as American competitors to avoid accusations of unfair trade advantage.

The Corporation supports efforts to counter US federal and state legislation that would disadvantage Canadian producers through the CEA, direct lobbying of governments and if necessary, through legal (NAFTA) avenues. In addition, the Corporation engages the services of external legal and public relations entities to stay apprised of trends and legislative activities which might threaten its export activities in the US.

Manitoba Hydro actively participates in the development of market rules in MISO and Ontario through the stakeholder process and through its customers to ensure that market rules enhance or at the very least, do not discriminate against the Corporation's export activities in those jurisdictions.

Likelihood	High
Consequence	Low
Tolerance	Med

CATEGORY: B. Financial

TITLE: 1. Exchange

RISK: Fluctuations in foreign currency impact financial performance.

DESCRIPTION:

The risk of the potential for economic gain or loss due to foreign exchange movements for any transaction denominated in a currency other than Canadian (CAD) funds. This exposure is predominantly in United States dollars ('USD') resulting from U.S. electricity exports, electricity imports, and USD long-term debt.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Manitoba Hydro has exposure to U.S. dollar foreign exchange rate fluctuations primarily through the sale and purchase of electricity in the U.S. and through borrowing in the U.S. markets.

In the current year's offset strategy, temporary fluctuations in net USD electricity exports create the risk of having a USD short or long position in which USD cash outflows will exceed or be less than USD cash inflows. These net short or long positions would be exposed to fluctuations in the USD/CAD exchange rate.

RISK TREATMENT:

Manitoba Hydro's exposures to foreign currency rate fluctuations are managed with the combination of natural and accounting hedges, along with applicable financial instruments. A natural hedge for USD is established by balancing USD cash inflows (primarily U.S. export revenues) and USD cash outflows (primarily U.S. debt coupon and principal payments). In order to bridge the actual timing of cash flows within a 12 month period, the Corporation may also execute applicable foreign currency financial instruments at appropriate times, such as spot, FX forward and FX swap transactions. As well, USD temporary investments and USD commercial paper can be utilized to bridge timing differences. Should the imbalance of USD inflows and USD outflows persist beyond the forecasted near term, Manitoba Hydro may adjust the volume of USD outflows; for example by issuing new USD long term debt to create USD coupon payments or by executing a cross-currency debt swap.

The Corporation has accounting cash flow hedging relationships between U.S. long-term debt balances and future U.S. export revenues as well as between U.S. interest payments on dual currency bonds and future U.S. export revenues. Accordingly, foreign exchange translation gains and losses for U.S. long-term debt obligations in effective hedging relationships with future export revenues are recorded in Other Comprehensive Income (OCI) until future hedged U.S. export revenues are realized, at which time the associated gains or losses in Accumulated OCI (AOCI) are recognized in net income.

Manitoba Hydro has conducted sensitivity analysis in IFF15 with respect to +/- $0.10 change in the USD/CAD exchange rate. As the incremental cumulative increase or decrease in retained earnings over a six year period to 2021/22 is only +/- $22 million, the Corporation's net exposure to USD/CAD currency fluctuations during this timeframe is largely eliminated.

Likelihood	Med
Consequence	Med
Tolerance	Med

CATEGORY: B. Financial

TITLE: 2. Interest Rates

RISK: Changes in interest rates impact financial performance.

DESCRIPTION:

Interest rate risk is the risk that the future cash flows will fluctuate due to changes in market interest rates. There are a number of forms of interest rate risk affecting the existing debt portfolio. Floating or variable rate debt is subject to interest rate reset risk during the life of the debt as the interest rate becomes adjusted at the periodic reset dates. Refinancing risk pertains to the interest rate exposure that exists upon refinancing a short or long term debt issue at its maturity. On a prospective basis, there is also interest rate risk on borrowings for new cash requirements.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

A one-percent increase in interest rates on Manitoba Hydro's existing floating rate and short term debt portfolio at March 31, 2015, offset by a change in the interest capitalization rate, would impact net income by approximately CAD $11.0 million (a 1% interest rate increase on a floating rate debt portfolio of $1.3 billion at March 31, 2015 is $13 million, less a $2 million offset from the change in the interest capitalization rate).

On a consolidated basis, risk sensitivity analysis in IFF15 shows that a +/- 1% change in interest rates may result in an incremental change to retained earnings of approximately $26 million to 2017/18. However, given the large size of the existing debt portfolio, as well as the need to add further debt to support the capital investments, the incremental change to 2024/25 arising from a +/- 1% change in interest rate rises is forecasted to be nearly $1 billion.

RISK TREATMENT:

Manitoba Hydro's interest rate policy on its existing debt portfolio is to limit the aggregate of: i) floating rate debt, ii) short term debt, and iii) fixed rate long term debt to be refinanced within the subsequent 12 month period; to a maximum of 35% of the total debt portfolio. Manitoba Hydro's interest rate risk guidelines for its existing debt portfolio include maintaining an aggregate of floating rate debt and short term debt within 15 – 25% of the total debt portfolio, and having the fixed rate long term debt to be refinanced within a 12 month period being less than 15% of the total debt portfolio.

Against the backdrop of unprecedented capital borrowing requirements and potentially rising interest rates, Manitoba Hydro is in a period of elevated sensitivity to interest rate changes. In order to mitigate this risk, the interest rate risk on the existing debt portfolio has been reduced by decreasing the percentage of floating rate debt within the existing debt portfolio and by selecting debt maturities, that upon refinancing will not compete with new borrowing requirements. Manitoba Hydro will continue to favor long term fixed rate financing at low interest rates.

Likelihood	Low
Consequence	Med
Tolerance	Med

CATEGORY: B. Financial

TITLE: 3. Credit

RISK: The Corporation is exposed to financial loss through credit default.

DESCRIPTION:

Credit risk is the risk that one party to a financial instrument will cause a financial loss to the other party by failing to discharge an obligation. Manitoba Hydro is exposed to credit risk related to sinking fund investments, short term investments and pension fund investments. Manitoba Hydro's gas and electric operations are exposed to credit risk related to domestic and export energy sales, and physical gas supply activities.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Credit risk on sinking fund investments, short-term investments, and pension fund assets is minimized as the Corporation invests exclusively in government-guaranteed bonds, highly rated investments and well-diversified investment portfolios. The majority of the Corporation's accounts receivable is owed from domestic consumers who are in diversified industries. Credit risk exists from wholesale export power transactions with bilateral counterparties and within markets (ISOs).

During the period, total credit exposure due to export power transactions peaked at approximately $54 million in August. Export power bilateral transactions peaked at $39 million in August. On average, approximately 60% of the credit settlement exposure to bilateral counterparties each month is from Northern States Power (NSP). NSP had a peak credit settlement exposure of $24 million in August. Export market transactions peaked at $28 million in April.

Manitoba Hydro's accounts receivable for energy bills outstanding in excess of 60 days is approximately $16.9 million. Of this amount, $15.8 million relates to electric operations and $1.2 million to gas operations. For the electric operations $10.8 million is associated with amounts outstanding in Northern Manitoba.

Derivative instruments will no longer be used in the normal course to manage natural gas market price risk for the Fixed Rate Primary Gas Service. The Credit-Value-at-Risk limit for the gross provincial derivative exposure is $100 million per counterparty. The Province of Manitoba will act to mitigate Manitoba Hydro's risk exposure per counterparty in the context of the gross exposure per counterparty.

RISK TREATMENT:

Credit risk for physical gas supply counterparties and derivative counterparties is mitigated by establishing credit requirements, conducting standard credit reviews of all counterparties and setting and monitoring exposure limits for each of these counterparties. Financial security (letters of credit etc) and contract provisions are also in place to provide further credit risk mitigation. Credit risk resulting from export power transactions is mitigated by aligning credit limits with counterparty creditworthiness using approved credit policies and procedures. Counterparties are assigned unsecured or secured credit limits, based on generally accepted industry standards, which are monitored and reported on a regular basis. Credit risk for domestic energy sales is managed through various reporting, control and collection procedures for overdue accounts. In addition, Manitoba Hydro continues to negotiate with northern communities to resolve the outstanding accounts receivable balance in conjunction with mitigation issues. Manitoba Hydro's First Nation Accounts Department works with Manitoba's First Nation communities to establish manageable ways for the communities to get their accounts paid in full.

Likelihood	Med
Consequence	Low
Tolerance	Med

CATEGORY: B. Financial

TITLE: 4. Inflation

RISK: Increases in inflation rates result in cost increases which the Corporation is forced to recover through increases in domestic customer rates.

DESCRIPTION:

In addition to the capital costs associated with major capital projects, Manitoba Hydro expends approximately $2.0 billion annually for its routine ongoing operating and capital expenditures including fuel and power purchases. Inflationary increases to these costs result in higher costs to the Corporation. Prices charged for the sale of electricity and natural gas within Manitoba are subject to review and approval by the PUB. The Consumer Price Index (CPI) for Manitoba is often used by stakeholders as a benchmark to determine the reasonableness of proposed Manitoba Hydro general rate increases for electricity and for the non-commodity portion of natural gas rates. Manitoba Hydro uses projections of the U.S GDP implicit price deflator to forecast future electricity export prices in the opportunity market. Other, more specific, inflation indices are also used in purchasing and sales contracts negotiated by Manitoba Hydro. In addition to CPI, composite inflation indices associated with generation resources are developed and used to reflect the forecasted costs of specific commodities that are not included in the CPI basket of goods and services.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The impact of a short duration period of inflation on the achievement of Manitoba Hydro's financial objectives and on the priority of providing excellent customer value which includes affordable rates for all Manitobans has historically been relatively small as a large portion of costs are capitalized, spreading the impact out over a longer period of time. However, as capital requirements grow for system improvements and expansion, the effects of sustained high inflation, especially with specific commodities associated with new generation or transmission construction, are more marked.. Moreover, as inflation changes, the monetary policy response from the Bank of Canada may result in impacts on Manitoba Hydro.

Current indications for Canada and the United States are that inflation expectations in the general economy are low and stable With respect to near-term outlooks of inflation for specific commodities that are significant inputs to Manitoba Hydro's capital projects, IHS Global Insight expects base metal prices to remain within a relatively tight range for the foreseeable future due to reduced demand. There has been a clear slowdown in metal and other commodity consumption growth in emerging economies such as Brazil, India, China and Indonesia and this slowdown has created an oversupply of steel products. IHS attributes the shift from strong economic activity in Asia to sluggish emerging-market demand growth and a tighter U.S. monetary policy that has weakened investor interest in commodities. In addition, sustained low oil prices over the past 18 months has caused activity in the Alberta oil sands to slow down resulting in a tempering of construction labour costs throughout western Canada. With that said, experience from the recent past has proven that sustained higher costs display resiliency to downward pressures such as reduced electricity consumption. Higher construction and operating costs driven by increases in aggregate demand both domestically and internationally may have substantial impacts on the costs and economic benefits of capital projects. Prolonged higher levels of inflation will begin to have a more significant impact if export prices do not reflect the same inflationary trends in concert with rising expenses and the costs of new plant coming into service. Inflation rates in Canada and in the US, the main export market, tend to follow similar long-run patterns, but can deviate in the short-term. Higher levels of inflation for Manitoba Hydro's costs which are not offset by similar increases in export revenues could place pressure on domestic rates for electricity and/or gas. Further, as inflation increases, there is also a risk that interest rates will be increased by the Bank of Canada, which can compound the effect cost increases will have on the Corporation.

RISK TREATMENT:

To the degree that export revenues rise as a result of corresponding increases in inflation in export markets, they can provide an offset to the higher costs of labour and materials. The Corporation's budgeting process typically imposes limits of inflation or less on baseline spending plans. With the continued downward pressure on export revenues, the Corporation has further implemented cost constraint measures. During the period of cost estimating and budgeting for major capital projects, the Corporation does not have an offset or hedge to manage the risks associated with increases in specific commodities which emphasize the need for continued cost constraint measures. Once the Corporation is in the process of negotiating contracts for major capital projects, mitigating accommodations such as including specific escalators can be incorporated. The future impacts on consumer rates due to higher capital costs will depend in part upon the long term price growth of energy exports.

Likelihood	Med
Consequence	Med
Tolerance	Med

CATEGORY: B. Financial

TITLE: 5. Upstream Gas Cost Uncertainty

RISK: A significant increase in the cost of natural gas could result in an adverse reaction from customers.

DESCRIPTION:

The cost of the physical natural gas commodity, transportation and underground gas storage represent approximately 60% of the Company's total overall annual natural gas revenue requirement in a normal weather year. Manitoba Hydro buys Primary Gas from the Western Canadian Sedimentary Basin ("WCSB") at a fairly constant level over the course of the year, with winter purchases flowing directly to customers, while a significant portion of summer purchases flow to storage. In the winter months, gas purchases flowing from the WCSB are supplemented by gas withdrawn and transported from storage. In addition, Supplemental Gas supplies are also purchased throughout the year for both immediate consumption in Manitoba and for replenishing storage inventories for use the following winter. The Corporation is currently prohibited by regulatory order from the PUB from hedging customers' exposure to volatile natural gas market prices.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Financial - The financial exposure of significant gas cost increases to the Corporation is minimal as long as gas costs are considered to be prudently incurred. This is because the cost of gas for the quarterly rate primary gas service is considered a flow-through for rate-setting purposes and follows a prescribed regulatory process. There is some market price risk associated with the Fixed Rate Primary Gas Service whereby commodity gas is acquired at market prices while selling to customers at fixed rates for a given contract duration. If the self insurance premium imbedded in the fixed rate is insufficient and residual market price risks are not properly managed, there could be program losses.

Reputation – Although natural gas market price volatility has generally been greatly reduced during the past few years, there was a short term sharp increase in Supplemental Gas costs in the first quarter of 2014 due to the extreme cold winter and the need to purchase additional supply If the extreme upward price volatility experienced during this period continued or the 2000 through 2008 period were to return and continue, the Corporation could experience an adverse reaction from customers because of their exposure to a sharp increase in their cost of gas. In addition there continues to be significant upward cost pressure for transportation services on the TransCanada Pipelines Ltd. ("TCPL") Canadian Mainline, to which Centra is currently captive, due to underutilization of the pipeline. This market risk is compounded by a proposal by TCPL to segment the Mainline's cost allocation and tolls post – 2020 between the underutilized Western Mainline (on which Centra moves gas) and the highly utilized Eastern Ontario Triangle. The outcome is highly uncertain at this time however. The National Energy Board has approved segmentation in principle and intends to review it and other pricing issues in future proceedings.

RISK TREATMENT:

The Corporation has a number or risk measures in place to manage gas cost increases, including: (1) The Rate Volatility Management Program which includes setting quarterly Primary Gas rates based on the 12-month forward average of futures prices to remove seasonality from rates; disposing of Gas Purchase Variance Account ("PGVA") balances over the coming 12-month period; the physical price hedge provided by filling underground storage inventory during the seven-month summer period and then providing this gas to customers during the five winter months at a single average inventory value; and the management of all other non-Primary Gas PGVA's over the November through October gas year period to further reduce the rate volatility associated with bringing forward large residual balances for disposition in future periods. (2) Giving customers who are concerned about potential future rate volatility the option of either subscribing to MB Hydro's Fixed Rate Primary Gas Service ("FRPGS") or contracting for a fixed Primary Gas rate with a third-party marketer under the Western Transportation Service. (3) Mitigating market price risk associated with the Fixed Rate Program by charging an 8% self insurance risk premium in rates and establishing risk thresholds (customer migration, volumes, risk margins) that will trigger a review of the FRPGS program. (4) Providing all customers, whether on the Corporation's default Primary Gas rate, or on a fixed Primary Gas rate under either the FRPGS or with a marketer, with the option to fix the amount of their overall monthly natural gas bill by enrolling in the Equal Payment Plan. (5) Participate in TCPL's. regulatory proceedings before the National Energy Board ("NEB") as appropriate in order to ensure that Manitoba natural gas consumers' interests are adequately represented., as occurred at the NEB RH-001-2014 proceeding.

Likelihood	Low
Consequence	Low
Tolerance	Med

CATEGORY: B. Financial

TITLE: 6. Gas Derivative Instruments

RISK: By their nature, derivatives have various risks (e.g. Regulatory, market, operational) associated with them which must be managed.

DESCRIPTION:

Manitoba Hydro utilized financial gas derivatives to manage market price associated with the Fixed Rate Primary Gas Service from the inception of the program until August, 2011. Changes to the program were approved by the PUB whereby derivatives will not be used in the normal course and a self insurance premium will be employed to manage market price risk. There are however some derivative positions outstanding that will not fully expire until 2016.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES

The Corporation continues to be exposed to the risk of financial losses for outstanding positions in cases where market prices fell significantly after the placement of past hedges in support of FRPGS offerings and customer demand for those offerings was materially less than that forecast. This could result in excess out-of-the-money hedges on unsubscribed volumes having to be written off against Manitoba Hydro's retained earnings. The key operational risk borne by the Corporation with respect to gas hedging activities relates to the execution of the hedge purchase transactions. Similarly, if credit limits are not established and managed, and the appropriate legal documentation is not put into place, a credit default could give rise to a financial loss. Credit risks must be identified, measured and managed.

RISK TREATMENT:

The Gas Supply Risk Management Committee in coordination with the Executive Committee has oversight over all derivative related transactions and practices. A well structured control framework continues to be in place; however no further derivative transactions will be entered into in the normal course and the exposure to current derivatives is low.

Likelihood	High
Consequence	M High
Tolerance	Med

CATEGORY: B. Financial

TITLE: 7. Financial Targets

RISK: Weak financial ratios may impede the opportunity to adequately address aging infrastructure and invest in new major generation and transmission.

DESCRIPTION:

The Corporation is subject to increased risk if it fails to maintain an adequate capital structure. This is defined, under revised financial targets approved in December 2015, as maintaining a minimum debt/equity ratio of 75:25, an annual Earnings Before Interest, Taxes and Depreciation and Amortization (EBITDA) interest coverage ratio with a minimum target of 1.80 and a capital coverage ratio (excluding major new generation and transmission) of greater than 1.20. It is recognized that financial targets may not be achieved during years of major investment in the generation and transmission system.

The current 20-year Integrated Financial Forecast (IFF15) projects that the equity ratio deteriorates to 12% by 2021/22, largely due to capital investments in generation, transmission and distribution, as well as softened export market prices before recovering to the target 25% by 2031/32. Reduced income levels also weaken the interest coverage below the 1.80 target for a period of 9 years until income levels are sufficient for the target to be met in the remaining years of the forecast as a result of the 3.95% even annual rate increases and additional export revenues following the in-service of Keeyask. Capital coverage is below target for the first 6 years of IFF15 due to capital requirements to replace aging infrastructure and address capacity constraints. Thereafter, cash flows are sufficient to enable this target to be met in the remaining years of the forecast.

Manitoba Hydro is prepared to accept weaker financial ratios during the period of significant capital investment in order to spread the recovery of costs from customers over a longer period of time and minimize the impacts to customer bills. However, it will be necessary for Manitoba Hydro to demonstrate progress towards attaining its financial targets to credit rating agencies and other stakeholders over the long-term.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

An inadequate capital structure could jeopardize the self-supporting naturkae of Manitoba Hydro's debt and negatively impact the credit ratings of the Province. As well, an inadequate capital structure could lead to the need for higher rate increases and volatility in rates.

RISK TREATMENT:

The risk of an inadequate capital structure is mitigated by: (1) formally adopting and periodically updating appropriate financial targets such as the debt/equity ratio, interest coverage and capital coverage; (2) making annual contributions to retained earnings sufficient to maintain these targets; and (3) achieving these annual contributions through a combination of cost controls, export revenues and regular reasonable domestic rate increases even in years with favourable water conditions. The latter is necessary, recognizing the unpredictability and potentially severe impacts of individual drought years.

Likelihood	High
Consequence	Low
Tolerance	Med

CATEGORY: B. Financial

TITLE: 8. Energy / Fuel Price Volatility

RISK: Market energy / fuel prices are high when Manitoba Hydro requires additional energy supply or low in adverse economic cycles resulting in low export prices.

DESCRIPTION:

Manitoba Hydro is subject to significant price risk on power sales and power and gas purchases as a result of energy price volatility. Recent history has demonstrated that energy prices in the short term are volatile. There is a risk that the price of purchased energy and natural gas will be high due to energy price and/or due to limitations in the mid-western United States transmission system (i.e. congestion). The impact of the energy price volatility is the greatest in a drought where under lowest flow conditions the Corporation may have to generate about 3 million MWh from gas-fired generation and purchase in excess of 7 million MWh from the market. Conversely, even under more favourable water flow conditions, opportunity sales revenues may be lower than forecast because of lower opportunity prices due to factors such as adverse economic conditions and / or low fuel prices. Such economic cycles may last several years and could result in lower than forecast revenues. This risk profile is related to Commodity Availability (C.5) and Water Supply Variation/ Drought (C.1)

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

While there is no risk of a significant drought in the current year, Manitoba Hydro continues to experience lower than forecast export prices that despite favourable water conditions, is resulting in a significant reduction in revenues compared to previous long term export revenue forecasts. It is very difficult to hedge the price risk for opportunity energy on a long-term basis due to the uncertainty as to whether this energy will be available in any given year.

The risk resulting from high fuel / purchased energy prices would significantly reduce the Corporation's ability to maintain stable rates for Manitoba customers were it to materialize during severe drought. Maximum exposure to this risk occurs during the winter demand period when gas-fired generation is required to meet peak loads and year round during drought conditions when gas-fired generation is required for energy supply. The risk from low prices for opportunity export energy would reduce Manitoba Hydro's equity compared to forecast and could result in rate increases.

Should a severe drought occur in 2015/16, the Corporation is exposed to a risk from energy price volatility estimated to be on the order of $200 million per year should fuel prices double compared to the prices assumed in the IFF. This $200 million figure is on top of reduced revenue of $300 million at expected export prices due to reduced flows in a severe one year drought. Past volatility in natural gas prices indicates that a doubling of gas prices compared to forecast is quite possible, but given the current supply situation appears to be unlikely in the near term. The overall cost of a drought has been reduced significantly since 2008/09 as a result of the economic decline and low natural gas prices.

RISK TREATMENT:

The Corporation's strategy in managing risk due to an adverse cycle of low export prices is largely based on having sufficient retained earnings. A number of changes in the power and energy market design over the last 10 years have improved the market liquidity and helped to reduce Manitoba Hydro's exposure to short-term energy price volatility and congestion pricing. The creation of an open, competitive market in the US has resulted in mechanisms for financial settlement, financial transmission rights and the use of brokers, which allow Manitoba Hydro to obtain more competitive pricing on imports. Since the 2003/04 drought, Manitoba Hydro has also secured almost 100% of the firm import transmission from the US, which will allow Manitoba Hydro to import power with lower risk of curtailment while not exposing Manitoba Hydro to non-competitive pricing for the use of another party's firm transmission. One objective of Manitoba Hydro's export strategy is to maintain a diverse portfolio of export products to mitigate exposure to price volatility.

Likelihood	Low
Consequence	Low
Tolerance	Low

CATEGORY: B. Financial

TITLE: 9. Power Financial Instruments

RISK: By their nature, financial instruments have various risks associated with them which must be managed.

DESCRIPTION:

Manitoba Hydro participates in the MISO and IESO standard markets. Prior to the advent of these standard markets, all of Manitoba Hydro's export sales and purchases were executed via physical bilateral transactions with inter-connected customers and utilities. With the introduction of these markets, Manitoba Hydro gained the capability to utilize financial instruments to settle contracts and hedge physical flow. Approved financial instruments are: (1) Contracts for Differences and/or Swaps (including MISO FinScheds); (2) MISO Auction Revenue Rights (ARRs) MISO Financial Transmission Rights (FTRs) or IESO Transmission Rights (TRs); (3) Virtual Bids and Virtual Offers; and (4) Put and Call Options for electricity and natural gas.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Inappropriate use of financial instruments would expose Manitoba Hydro to costs beyond those necessary for the prudent management of its assets or load obligations.

RISK TREATMENT:

Manitoba Hydro has a Board approved Wholesale Export Power Policy that governs Manitoba Hydro's export market activities including the use of financial instruments. In addition an Export Power Risk Management Committee provides executive oversight of the management of the energy supply and financial risks as a result of Manitoba Hydro's participation in the export market. In addition, a management committee approves bid/offer strategies and oversees all major transactions.

The Wholesale Export Power Policy governs the use of all financial instruments related to the purchase or sale of power/natural gas. The Approval Authority for Wholesale Power Related Transactions (P190-1) sets out volume limits, approval and execution authorities and limits by transaction type in accordance with the Wholesale Export Power Policy. Front, middle and back office duties are segregated. Manitoba Hydro uses a state-of-the-art trading, scheduling, billing and settlement system to record all physical and financial transactions.

Manitoba Hydro ensures that appropriate master agreements are in place to govern all financial instrument transactions.

As per the Wholesale Export Power Policy and the Approval Authority for Wholesale Power Related Procedures, financial instruments are required to have a high level of certainty that they will be backed by energy supplies at the time the contract is entered or the transaction is executed. This restriction ensures that financial instruments are supported by Manitoba Hydro's underlying physical power position and that financial instruments are not utilized in a speculative manner.

Likelihood	Med
Consequence	M High
Tolerance	Low

CATEGORY: B. Financial

TITLE: 10. Liquidity

RISK: Having sufficient cash or cash equivalents to meet financial obligations as they come due.

DESCRIPTION:

Liquidity risk refers to the risk that Manitoba Hydro will not have sufficient cash or cash equivalents to meet its financial obligations as they come due. Liquidity risk can generally be subdivided into two categories: 1) operational liquidity risk and 2) market liquidity risk.

Operational liquidity risk arising from the availability of internally generated cash flow from operations is most pronounced for Manitoba Hydro during drought conditions as cash shortfalls occur.

Market liquidity risk has become elevated due to the high levels of required debt financing and evolving investor responses to changing financial market conditions. During 2015, issuance was characterized by periods of volatility and uneven market tone.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Liquidity challenges arising from cash shortfalls would have potentially significant business and reputational consequences.

RISK TREATMENT:

The Corporation closely monitors its cash receipts and disbursements on a daily basis as part of regular cash balancing activities, and also monitors short term debt balances and forecasted cash requirements.

To support the Corporation's temporary cash requirements, the Manitoba Hydro Act grants the Corporation the power to issue short term borrowings in the name of the Manitoba Hydro-Electric Board up to a limit of $500 million and to have this debt unconditionally guaranteed as to principal and interest by the Province of Manitoba. With the high levels of Manitoba Hydro's cash requirements in the next few years, this short term facility provides less than two months of cash requirements.

To ensure smooth business continuity and financing flexibility during periods of intensive capital expenditures and uneven market tone, Manitoba Hydro has expanded its practice of maintaining positive cash balances. Manitoba Hydro's liquidity guideline is to be funded approximately three months in advance of the Corporation's cash requirements. Sinking fund balances, used to accumulate cash to repay future debt maturities, are another source of cash but are a restricted source of liquidity as the balances can only be withdrawn for debt maturities. In the next few years, in order to optimize the Corporation's liquidity practices and to reduce finance expense, Manitoba Hydro will seek to minimize its sinking fund balances where feasible.

Likelihood	High
Consequence	High
Tolerance	Med

CATEGORY: C. Environmental

TITLE: 1. Water Supply Variation / Drought

RISK: Reduced water supply impacts generation output

DESCRIPTION:

Variation in water (fuel) supply is a fundamental characteristic of a predominately hydro system. Actual annual hydraulic generation will vary from the long term average of all flow conditions assumed in the planning process with lower than average flows occurring approximately 40% of the time. Reduced water supply has a direct financial impact through reduced hydro generation and in turn reduced export revenues and/or the need for more expensive replacement of supply

Water Supply Variation/Drought risk is defined as a change in revenue due to deviations from average flows, under expected export market prices. The overall cost of a drought to the Corporation is a combination of this Water Supply Variation/Drought risk (i.e. volumetric risk) and the Short-Term Energy Price Volatility / Fuel Price Volatility (B.8). The possibility of a drought more severe than the drought of record is discussed in Extreme Drought-Shortfall of Energy Supply (D.2).

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Reduced water supplies impact the Corporation's ability to maximize net export revenues and maintain the projected electricity rates for Manitoba customers. The severity of impacts ranges from relatively modest costs due to subtle change in the timing of inflows, up to extreme financial losses as a result of a multi-year drought. The lost revenue due to a five year drought at expected export prices was estimated to be $1.9 billion (IFF 15) including financing costs. Risk due to Energy / Fuel Price Volatility (B.8) would be in addition to this amount.

Regulation changes that limit hydraulic operating flexibility may reduce dependable energy and, consequently, reduce net export revenue and add costs due to advancement of the in-service date for new generation. Similar effects may be realized if regulation changes upstream of Manitoba or climate change impacts alter the timing or supply of flows entering the province.

RISK TREATMENT:

The Corporation intends to have adequate retained earnings to protect against a repeat of the worst recorded drought. In addition, the Corporation constantly monitors supply conditions, updates inflow forecasts, and reviews long-term weather forecasts.

At least quarterly, the Export Power Risk Management Committee (EPRMC) reviews a quantitative assessment of the current water supply conditions and any potential financial impacts resulting from variations in market prices and water supplies including the consequences of extreme drought. During periods of increased risk, the EPRMC increases the frequency of its meetings to review and approve risk tolerances, risk mitigation strategies and significant operational decisions. The Manitoba Hydro Electric Board is also kept updated in periods of increased drought risk. Energy purchase decisions are timed and distributed appropriately to protect against price risk of electricity purchases. To protect against gas price risk, purchases are structured such that a portion of the gas needs are purchased in advance, with the option to take, store or sell the fuel.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: C. Environmental

TITLE: 2. Climate Change

RISK: A changing climate can impact hydro-electric generation, Manitoba load and export revenues.

DESCRIPTION:

There is a risk that climate change impacts could result in reduced overall hydroelectric production due to lower annual runoff, changes to the variability of the water supply, and/or extreme flooding. There is also a financial risk that climate change will increase temperatures in Manitoba which will result in increased air conditioning loads in the summer and reduced heating loads in the winter and thereby displace export sales and potentially reduce overall revenues.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Reduced hydroelectric generation would lead to a reduction in overall energy supplies to meet firm load and reduced surplus energy available for export resulting in lower export revenues to the Corporation. Extreme flooding would increase spilling at the generating stations and raise challenges for the operation which could lead to loss of potential energy supplies.

An increase in average temperature due to climate change has the potential to increase cooling loads in the summer and reduce heating loads in the winter. Increased summer loads will potentially displace on-peak export sales. Reduced heating loads in the winter will increase on-peak and off-peak export sales which will offset some of the revenue losses in the summer. In addition, reduced winter loads could delay the in-service date of future generation options if the requirement for new resources is driven by a shortage of winter peak capacity.

RISK TREATMENT:

Manitoba Hydro is currently engaged in understanding climate change processes and is actively pursuing studies to develop future climate change scenarios for its power system. These climate scenarios are being developed by using the direct outputs from an ensemble of international Global/Regional Climate Models and by using post-treatment methods to scale the information to match Manitoba Hydro's hydraulic system. These climate scenarios can then be used in combination with hydrological and load forecast models to develop an ensemble of future conditions, which can be tested in Manitoba Hydro's generation system models as a step towards reducing the uncertainties regarding future water supply, power demands and corporate finances.

Manitoba Hydro collaborates with a number of national and international bodies involved in climate change including the Ouranos Consortium, University of Manitoba, and the Center for Energy Advancement through Technological Innovation to ensure its studies meet the industry standards and to stay informed about the latest advances in the climate change field. Manitoba Hydro expects to have sufficient lead time to adapt its operations and resource plans to accommodate long-term impacts of climate change.

Likelihood	Low
Consequence	High
Tolerance	Med

CATEGORY: C. Environment

TITLE: 3. Operational Impact and Infrastructure

RISK: Environmental concerns real or perceived can negatively impact corporate operations.

DESCRIPTION:

The Corporation operates its existing electricity supply facilities and systems on a continuous basis to meet the energy needs of its customers. While the Corporation goal is to minimize operational impacts on the environment there still remains a certain amount of negative impact. The principal risks the Corporation is faced with are interruption of operations, and/or, restrictions on how operations are carried out. These risks arise as a result of pressure from changes in stakeholder sentiment, changes to licences and/or legislation and high profile noncompliance(s) and/or environmentally damaging event(s).

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The implications of imposed restrictions on facility and system operations can vary considerably and if significant could ultimately impact the operations of the Corporation. These restrictions could impact hydraulic/thermal generating facilities, water management programs, transmission facilities and distribution infrastructure. These restrictions could impact the costs/revenues of the Corporation and force future domestic rates to increase.

RISK TREATMENT:

Manitoba Hydro utilizes many different types of controls and tools to manage the environmental risk to its operations and infrastructure. These include but are not limited to:

- Management and staff whose primary responsibility is to help address environmental issues and risks that the Corporation is facing.
- An ISO 14001 registered Environmental Management Systems covering all corporate activities.
- Agreements with stakeholders suffering adverse affects from some of the Corporation's developments.
- Identification of and responsiveness to stakeholder concerns.
- Water regime monitoring and communication with affected communities about forecasted water regimes.
- Conducting environmental research and monitoring programs that address societal expectations and meet corporate environmental management practices.
- Shaping and responding to public policy and keeping abreast of and influencing regulatory and licence changes.
- Continuously improving and implementing best management practices to anticipate and address environmental concerns.
- The development and implementation of Corporate policies and procedures intended to address environmental concerns
- Training of staff whose jobs may result in impacts to the environment.
- Emergency prevention and response planning.

Likelihood	Low
Consequence	High
Tolerance	Med

CATEGORY: C. Environment

TITLE: 3. Operational Impact and Infrastructure

SUBTITLE: 1. Legal - Species at Risk Act (SARA)

RISK: If Lake Sturgeon is listed as "Endangered" the Corporation could face restrictions on current operations, structural modifications to infrastructure, significant delays and high costs of development at Keeyask , and possible cancellation of new projects.

DESCRIPTION:

Almost all of the Corporation's hydroelectric generating stations are located where Lake Sturgeon are found. It is likely that at most generating sites infrastructure and operations have negatively affected the fish and/or their habitat to some degree. Due primarily to historical commercial overharvest, plus additional stressors including hydroelectric development and ongoing Indigenous domestic harvest, Lake Sturgeon populations have been severely depleted over the past 100 years and the species is currently under review for listing as endangered under the Species at Risk Act (SARA) at most locations in Manitoba. Decisions for Churchill River, Nelson River, Saskatchewan River, Winnipeg River, Red-Assiniboine Rivers and Lake Winnipeg populations are expected in early 2018, at the earliest.

If listed under the SARA, harm to individual fish will automatically be prohibited and protection of critical habitat will be required, once it is identified. The Corporation will immediately be at risk of non-compliance with the SARA at most of its facilities due to ongoing risk of harm to individual fish as they pass through facilities. The most likely protection measures that would be required by DFO are fish screens, provisions for upstream fish passage and flow modifications at existing generating stations. There would also be a possibility that the commissioning of Keeyask would be delayed while incidental take permits are secured. There could also be high costs for recovery measures potentially mandated under the SARA.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Affects: (1) The revenues the Corporation will receive from existing operations; (2) The ability to build future projects and meet future requirements for electricity supply; (3) The goal to strengthen working relationships with Indigenous peoples; and (4) The goal to maintain financial strength. It could entail increased mitigation costs to Manitoba Hydro and its First Nations partners on Keeyask (and potentially Conawapa were it to proceed), although it is expected that these would not be sufficient to make the project uneconomic.

RISK TREATMENT:

The Corporation is proactive in addressing this risk by: (1) Conducting a Lake Sturgeon Stewardship and Enhancement Program to assist in recovery of the species., (2) Negotiating and implementing a Memorandum of Understanding on Lake Sturgeon with the Manitoba Government to guide cooperation on Lake Sturgeon stewardship and research in the province. (3) Regular coordination with the Manitoba Department of Conservation and Water Stewardship (Fisheries Branch (4) Regular communication with staff from DFO to keep them informed about Manitoba Hydro's approach to Lake Sturgeon stewardship, current activities, progress and outcomes. (5) Establishing a process with DFO and MCWS for negotiating a Lake Sturgeon Conservation Agreement under the SARA, (6) Working with the CHA and CEA in pursuing changes to the SARA and/or its implementation (7) Informing newly elected Manitoba Members of Parliament, who will be involved in the listing decision, that the social and economic costs and risks of listing Lake Sturgeon far outweigh any potential benefits and is not needed to provide stewardship necessary for Lake Sturgeon recovery. (8) Encouraging the Province to continue to take action with the DFO (9) Expanding its long-term commitment to the recovery of the species through the membership in, and funding for the Kischi Sipi Namao (formerly the Lower Nelson River Sturgeon Stewardship Committee) (10)Working to establish Lake Sturgeon stewardship arrangements for the lower Churchill River.

Likelihood	Med
Consequence	M High
Tolerance	Low

--

CATEGORY: C. Environmental

TITLE: 4. Reliability of Supply

RISK: On-going public scrutiny and further environmental licencing regulatory oversight could obstruct the Corporation's ability to build the necessary facilities required to provide a reliable supply of energy in a timely and cost effective manner.

.

DESCRIPTION:

Concerns over the environment will influence the Corporation's future facility requirements by either placing highly restrictive conditions on their operations, altering the design specifications, delaying or ultimately denying their construction.

The environmental review process could result in excessive time and cost that would result in the commissioning of facilities well after their required in service dates. Time delays will expose the system to increased reliability issues.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

This risk will cause the system reliability to degrade by delaying project in-service dates, thus causing more service interruptions. The Corporation will face increased costs to satisfy these environmental concerns as more costly alternatives and mitigation measures will be required to meet these higher standards.

RISK TREATMENT:

The Corporation is proactive in addressing this risk by:

- Ensuring environmental implications of its actions are understood.
- Possessing the knowledge and skills to make the right decision that minimizes the environmental impact of these facilities.
- Being proactive in the sharing of information with stakeholders
- Increasing dialogue with government early on and throughout the process
- Promoting efficient use of resources.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: C. Environmental

TITLE: 5. Upstream Regulation and Water Withdrawals

RISK: Upstream regulation, water withdrawals or climate change may reduce water supplies and hydraulic generation.

DESCRIPTION:

Reduced water supply is a fundamental risk to the financial position of the Corporation. The peril associated with this risk is that future water supplies are on average lower as a result of upstream reservoir regulation changes and water diversions for irrigation or other purposes. Water supply may also be reduced as a result of climate change.

This risk profile is related to risk profile C.2 Climate Change.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Upstream regulation that affects the timing of inflows and diversion or extraction of water for irrigation or other purposes can limit the Corporation's ability to generate hydroelectric energy thereby increasing operating costs and reducing net revenues. Climate change may also cause similar effects if the consequence is reduced water flows or changes in the timing of flows that result in negative consequences for hydroelectric generation. In addition, these events can make the development of new hydraulic generation less economic and cause the advancement of future generation in-service dates.

RISK TREATMENT:

Since the upstream regulation is often influenced by outside entities such as Canadian Provincial and Federal Government, U.S. State and Federal Government, and other water resource management entities, Manitoba Hydro participates in providing input, where possible, to these entities. Manitoba Hydro participates in the Lake of the Woods Control Board process and can influence decisions of the Prairie Provinces Water Board. Manitoba Hydro is also a member of the Canadian Hydropower Association and participates in other organizations that have hydroelectric affiliations that can lead to discussions and cooperation.

The Corporation maintains a record of long-term streamflow data from 1912 to present which has been modified to reflect current use patterns accounting for increased consumption and regulation strategy changes upstream. This record is used for resource planning purposes. Manitoba Hydro is also engaged in developing an understanding of the potential impacts on water supply due to climate change in its watersheds. This activity is described in more detail in risk profile C.2 Climate Change.

Likelihood	Low
Consequence	High
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 1. Loss of Plant (all property, all perils)

RISK: Loss of plant can affect the Corporation's finances, reputation and impact human life.

DESCRIPTION:

The Corporation is subject to a variety of scenarios whereby physical plant is exposed to loss. The types of value exposed to loss include property, net income, liability and personnel. Loss from a property value perspective includes equipment breakdown, loss of facility, dam failure, and other property damage.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Potential impact from a loss of plant infrastructure will affect the Corporation's ability to: continuously improve safety performance, provide excellent customer service from a reliability perspective, maintain our financial strength due to reduced revenues and increased costs, and maximize export power net revenues due to reduced availability.

RISK TREATMENT:

A risk management decision-making process is used to manage each exposure (identify exposure, examining feasibility of alternative techniques, selecting best technique, implement and monitor chosen techniques). Equipment failure, for example, is identified at the department level. Alternative techniques to deal with exposure include preventative maintenance (loss prevention), Reliability Centered Maintenance (RCM) and loss reduction (fire sprinkler systems, fire brigades). Alternative techniques to finance the property loss include risk retention and commercial insurance. Equipment failure from a net income exposure to loss is recognized at the department level and alternative risk control techniques are used such as spare equipment, replacement contracts for equipment or replacement energy.

The loss of a facility from a property value aspect is identified at the division/department level. Perils are identified and treatment determined. Risk control techniques include loss prevention and loss reduction. Examples include fire and wind resistive construction materials, smoke and heat detection units, and automatic sprinkler protection, dyking and other measures. Property insurance is purchased to finance losses to high valued locations. The loss of a facility from a net income exposure aspect is identified at the corporate/division level. Loss prevention and reduction control techniques includes duplication and segregation of exposure units, automatic sprinkler systems, emergency response plans and replacement contracts. The Corporation retains the risk financing cost of net income losses resulting from the loss of a facility.

The impact of loss of a facility from the perspective of safety and customer service is identified at the corporate/division level. Loss prevention and reduction control techniques in place to mitigate other impacts are also designed to mitigate the impact on safety and customer service. Techniques include duplication and segregation of exposure units, emergency response plans, automatic sprinkler systems, and replacement contracts.

Likelihood	Low
Consequence	High
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 1. Loss of Plant

SUBTITLE: 1. Water Retaining Structures and Flow Control

RISK: The failure of water retaining structures could have impacts which range from insignificant to catastrophic, and could include loss of life, financial/economic costs, damage to the environment, and loss of system reliability, reputation, public confidence and heritage resources.

DESCRIPTION:

Manitoba Hydro operates 17 major facilities for hydro power generation and water storage, comprising an inventory of some 220 individual dams and dykes with a net asset value exceeding $4 billion and an installed generating capacity of approximately 5000 MW. The facilities were designed to meet established standards at the time of their construction and are systematically maintained and upgraded to ensure they meet current standards and operate safely. The facilities are the major source of system supply for Manitoba Hydro.

Water retaining structures are vulnerable to different "failure modes" including external erosion (wave attack), internal erosion (piping), sliding or overturning, inability to pass sufficient water during floods resulting in overtopping of water retaining structures, or inability to pass sufficient water due to spillway equipment failure or personnel errors resulting in overtopping of water retaining structures. Terrorism is also a recognized risk to the safety of water retaining structures. Each facility's location, its proximity to other Manitoba Hydro facilities, the closeness of human settlement and environmental factors are some of the major considerations determining the extent of impacts of a dam or dyke failure. Water retaining structure failures cannot generally be controlled once they are initiated and mitigation/remediation is only feasible once flows have abated following the flood event or once the forebay has emptied. Hence, downstream effects and damage can be catastrophic.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Possible consequences include loss of life, financial/economic costs, environmental damages, reduced system reliability (worst case scenario is a maximum loss of over 70% of Manitoba Hydro's generating capacity for years), and loss of reputation and public confidence.

RISK TREATMENT:

The risk of dam breach is addressed by ensuring the integrity and reliability of water control equipment and structures through diligent maintenance and vigilant surveillance, as well as preparing for emergencies, as per the Canadian Dam Association (CDA) Dam Safety Guidelines. The Corporation has established a Dam Safety Program based on the CDA Dam Safety Guidelines. The principal activities for managing risks include:

- Surveillance inspections, instrumentation monitoring, and engineering analyses of water retaining structures and related flow control equipment within a consequence category framework.
- Systematic utilization of failure modes-based condition assessment techniques.
- Preparation, maintenance, training and testing of Emergency Preparedness Plans (EPPs).
- Periodic Dam Safety Reviews by independent consultants to examine the adequacy of the design, construction, operation, maintenance, surveillance, and emergency preparedness plans

Water retaining structures and flow control equipment are designed and assessed according to the CDA Guidelines and maintenance programs address dam safety deficiencies of existing in a prioritized manner. Operating guidelines for each facility are established with inherent dam safety considerations.

Consequence	High
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 2. Extreme Drought – Shortfall of Energy Supply

RISK: Extreme drought with a severity worse than the drought of record has the potential to cause a shortfall in energy supply.

DESCRIPTION:

The Corporation's generation and transmission facilities are designed and operated to ensure firm demand can be supplied given a repeat of the lowest river flows since 1912. Since the Manitoba Hydro system is comprised primarily of hydroelectric resources, the design criterion translates into a requirement for power resources that will be able to supply sufficient energy under the condition of a repeat of the lowest river flows on record. In the circumstance of an extreme drought that is more severe than the worst on record, there is the possibility of insufficient energy supplies being available to meet firm load demands, which will in addition, result in extreme financial and reputational impacts to the Corporation. This risk profile is related to risk profiles Energy / Fuel Price Volatility (B.8) and Water Supply / Drought (C.1).

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The peril of an extreme drought, one that is more severe than the worst on record of approximately 100 years, may limit the Corporation's ability to provide dependable power to its customers especially those served under long term export contracts. There is the potential that some portion of the firm domestic load would have to be curtailed through enforced conservation. In addition to service limitations, there would be severe financial impacts to the Corporation in excess of those estimated for the worst drought on record (ref. profiles C.5, B.8 and C.1). Financial impacts would extend to the Corporation's domestic customers through rate increases and the Province by requiring debt financing.

RISK TREATMENT:

Water flows worse than the drought of record would be deemed to be a force majeure event under Manitoba Hydro's long term export contracts. Therefore to the extent that Manitoba Hydro needed to curtail export deliveries to serve domestic load, Manitoba Hydro anticipates that it would have the right to curtail without penalty. To the extent that these actions were insufficient and domestic energy shortages were occurring in spite of maximum imports, partial curtailment of domestic load may be required.

Non-normal hydraulic operations could also be required during a drought more severe than the drought of record. This may include operating reservoirs outside of the normal range for power production. For example, the Lake Winnipeg Regulation Water Power Licence provides for operation below the minimum level for power production limit with approval from the Minister of Conservation. Non-normal operation may also include demand reduction measures such as public appeal for conservation, enforced conservation or rotating reductions of non-essential load (e.g. street lighting). To better quantify this risk, the Corporation has participated in a number of research initiatives, using both statistical techniques and techniques that employ indicators of past extremes such as tree-rings and lake sediments. Both initiatives are aimed at defining the probability of recurrence of the worst drought on record and the likelihood of more extreme drought events. However, the results of these research initiatives to date have not been able to provide definitive conclusions on the probability of drought. The best estimate is that the Manitoba Hydro system is designed for a 1 in 100 year drought event based on the fact that the design condition occurred once in the last 100 years of record.

Likelihood	Low
Consequence	High
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 3. Prolonged Loss of System Supply

RISK: The Corporation is exposed to a catastrophic event resulting in prolonged loss of system supply and therefore not able to meet its energy supply requirements.

DESCRIPTION:

System Blackout due to the loss of key infrastructure, specifically: Dorsey Converter station or HVDC corridor and 500 kV line.. Reason for loss could be severe weather events such as tornado/downburst (Dorsey 1996, Elie 2007), wide front wind, combined wind and icing, lightning (Dorsey August 2007), sabotage, flood or fire.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Key potential impacts of a prolonged loss of system supply are:

- Unable to serve Manitoba load continuously (approximately 42% of the time based on 2013 calendar year loading profile). Depending on time of day and time of year, a deficiency of up to 1550 MWs resulting in rotating blackouts throughout the province. Deficiency increases with time due to load growth and assumes the availability of maximum energy imports from neighboring regions.
- Severely impact business operations and the Manitoba economy.
- Unable to provide customers with exceptional value due to high infrastructure replacement costs.
- Threat to public safety due to an inability to supply energy needs during the coldest months of the year.
- Prolonged rolling blackouts affecting customer service and potentially damaging corporate assets such as breakers.
- Potentially weaken the Corporation's financial strength due to reduced revenues from domestic and export energy sales, and increased costs for infrastructure replacement and the purchase of import energy.
- Loss of reputation as a dependable source of supply in the export market.
- Potential political and legal consequences for the Corporation.

RISK TREATMENT:

Key risk treatment activities are:

- System expansion involving Bipole III (2018) re and a new 500 kV Interconnection to the U.S (2020)
- Additional AC network generation (Keeyask 2019)
- Hardening of Dorsey facilities
- Implementation of physical and cyber security upgrades
- Emergency Preparedness initiatives - Long term deficiency plan for managing the available resources, load and system following loss of infrastructure.
- Spare infrastructure material and equipment inventory to enable timely re-building and restoration of potentially affected assets.
- Short term emergency energy agreements with Ontario, Saskatchewan and U.S. utilities
- Mutual aid agreements with Ontario, SaskPower and U.S. utilities for labour, materials, and equipment.
- Corporate Emergency Response Program.

Likelihood	Med
Consequence	Med
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 4. System Shutdown (Short Term)

RISK: The Corporation is vulnerable to an event(s) that would cause a short term loss of system supply (electricity) resulting in the inability to meet its energy supplies requirements**.**

DESCRIPTION:

Partial or total system blackout for 8 hours or as long as several days, caused by extreme weather events, sabotage, human error, equipment failure, or an inability to import energy from the market.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

- Unable to meet customer load serving obligations and expectations.
- Threat to public safety due to inability to supply energy needs.
- Threat to Corporate reputation.

RISK TREATMENT:

- System expansion involving Bipole III (2018), an additional 500 kV interconnection to the US (2020), St. Vital – LaVerendrye 230kV transmission line (2021), and AC breaker enhancement projects (2016-2018).
- Additional AC network generation (Keeyask 2019)
- Standard Operating Practice agreements with Ontario and SaskPower for short term emergency energy.
- Restoration Plan, which includes local station restoration procedures (with/without communications) and restoration diagrams, that identify step by step restoration procedures.
- Annual participation in MISO's regional restoration drills and the development of its regional restoration plans.
- Semi-annual restoration training for System Operators.
- Annual restoration training for field staff.
- Disturbance Scenario training, such as annual ice melt training for System Operators.
- Station battery bank upgrade program.
- Regular testing of regional staffing plans that supports System Control Centre operation upon the loss of RTU communications.
- Annual black start testing at each black start facility.
- Compliance with NERC reliability standards
- Redundant communication systems (PAX, VHF, MSAT) in addition to the public telephone system.
- Storm tracker application and installed ice detection stations in ice prone areas of the province.
- Corporate Emergency Response Program.
- Actively participate and provide leadership in Congestion Management forums to exert influence on parties, such as MISO and other Congestion Process Management Council members, to ensure fair treatment of Manitoba Hydro in the formulation of industry congestion management practices.

Likelihood	Low
Consequence	High
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 5. System Shutdown (Natural Gas)

RISK: Catastrophic system failure could result in an interruption of the supply of natural gas to approximately 267,000 customers in Manitoba. An associated risk is the impact on the electrical grid due to increased loading.

DESCRIPTION:

A secure and continuous supply of natural gas is critical, particularly during the coldest months of the year. TransCanada Pipelines ("TCPL") has five high-pressure lines entering Manitoba (with a couple of sections looped making some areas six lines on its Canadian Mainline. Manitoba Hydro's meter stations are tied into two of these five lines. At Ile des Chenes, MB (Station 41 on the Mainline), three pipes divert south to Emerson through which gas interconnects with Great Lakes Gas Transmission Company and Viking Gas Transmission Company in the U.S. The three remaining pipes continue through Manitoba in an eastward direction into Northern Ontario. Separate from TCPL and on a much smaller scale, Manitoba Hydro also relies on the TransGas Limited ("TransGas) and Many Islands Pipe Lines (Canada) Limited ("MIPL") systems for delivery of natural gas supply to the Swan Valley area of the province. Gas supply to the Swan Valley area of MH's distribution system via MIPL is from the TransGas system in Saskatchewan. Gas from one or more of three storage caverns in Melville, Regina and Moosomin can deliver gas that will flow to the Swan Valley area, depending upon the requirements and operations of the TransGas system.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

A catastrophic event could occur, resulting in a total or partial loss of supply of natural gas from the Mainline, TransGas or MIPL to the respective service areas of Manitoba for a period of four to six weeks. The potential impact could be significant. Manitoba natural gas customers could be left without natural gas for heating purposes, resulting in significant collateral damage. As well, an inordinate number of workers would need to visit each and every home at least two times before service could be restored. Gas supply connections would first have to be shut-off at all homes and then the homes would have to be entered when the lines are re-energized to ensure the appliances are re-lit and working properly. There could be substantial economic losses for customers and businesses arising from such a catastrophic event.

RISK TREATMENT:

TCPL has incorporated design practices to minimize the possibility of a catastrophic event occurring. While their large diameter, high pressure pipelines are all contained within the same right-of-way, there is physical separation between the pipes. The failure of any one segment of pipe is likely to have limited impact on the system. This design practice has proven to be effective during the course of several incidents over the past decade with the exception of the 2014 rupture of one of the Emerson laterals of the Mainline near Otterburne MB, which resulted in a loss of service to a number of communities in the south-east corner of the province.

In addition, TCPL has developed and employs a rigorous safety and inspection program. Regulatory oversight is provided by the National Energy Board. MIPL relies on a single pipeline and therefore does not have the same level of redundancy built into its system as the Mainline. MIPL does, however, employ a rigorous safety and inspection program. Regulatory oversight for MIPL is provided by the NEB.

As a result of the 2014 Mainline rupture, Manitoba Hydro has determined that Compressed Natural Gas should be used to help mitigate small scale outages during a natural gas supply interruption. For the 2015-2016 season, standby services have been retained from a supplier who has the proven capability and availability to supply requirements during a supply interruption for small scale outages. For the longer term CNG equipment and facilities are being purchased and constructed. The equipment being purchased will consist of two 170 mcf CNG trailers (capable of supplying small communities or critical loads), a decanting unit for off loading the CNG and a compressor station to allow for refilling the units locally.

An emerging risk in the coming years relating to the TCPL Mainline is that of the potential for significantly reduced physical redundancy and excess capacity on the prairies segment of the Mainline. TCPL appears to be taking steps to prepare for the decommissioning of two of the six lines currently running through Manitoba. In addition, TCPL plans to convert a third line to oil transportation as part of its Energy East project proposal. If these changes are undertaken, natural gas transportation capacity and redundancy on the TCPL Mainline will be reduced by approximately 50% relative to today.

Likelihood	Low
Consequence	Med
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 6. Technology

RISK: Unforeseen physical events could impact computer operations and this would affect business processes.

DESCRIPTION:

The Corporation develops, implements and manages information systems to support core business processes and provides a secure, stable computing infrastructure to support non core business processes.

Manitoba Hydro's Corporate IT environment is housed in 2 data centres, one located at 820 Taylor, one located at 360 Portage.

The factors that could lead to a loss of all or part of our computing environments are either physical such as fire, flood, HVAC or power failure, and major weather related disasters or human in nature resulting in sabotage to key IT system components. Specifically, Manitoba Hydro has no diesel backup for the 820 Taylor Data Centre.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The extended loss of Manitoba Hydro's computing environment may limit the Corporation's ability to provide customers with exceptional value (rates, service, public safety, reliability and power quality). A physical-event of significance could negatively impact all Hydro systems, with the exception of Energy Trading and the EMS/SCADA systems.

RISK TREATMENT:

Physical risks have been mitigated through the utilization of multiple computing facilities interconnected with high-speed data lines to reduce the risk of the failure of a single data centre. Improved data backup, recovery, and restore procedures have also mitigated risk. The two Winnipeg Computing centres are equipped with fire protection systems and are secured from unauthorized access. IT Services continues to work with Facilities, System Control and Station Design to investigate the costs and options of using the existing Diesel at 700 Harrow.

An initiative to formalize and harmonize the disaster recovery plans for key Information Technology Infrastructure components and Information Systems is currently underway.

A Corporate IT Security Assessment was done in 2014 on key IT functions and operations. It identified security gaps, level of risk and recommended mitigating actions to be undertaken.

Likelihood	Med
Consequence	M High
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 7. Concerned Stakeholders

RISK: Successful lobbying efforts by concerned stakeholders could restrict implementation of the Corporation's infrastructure requirements.

DESCRIPTION:

Increased concerns voiced publically (directly or through media) may influence regulatory bodies and Governments to place restrictions on and in some cases deny the infrastructure needs of the Corporation. As well, the review process over new facilities could become excessive in regards to time and cost due to the intervention of these stakeholders. This could result in commissioning of facilities after their required in-service dates.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Successful lobbying efforts by concerned stakeholders could result in adverse impacts on the infrastructure needs of the Corporation. These impacts could be financial and system operational and may ultimately have a negative effect on the Corporation's image, on degrading the reliability of supply from Transmission systems, and the ability to satisfy export sales agreements.

The impact of lobbying on higher profile projects such as BiPole III where delays have been imposed on the project and a resultant negative impact to reliability of supply to southern Manitoba is recognized. Lobbying also has an impact on other projects and some examples include Kilkenny Drive, Sage Creek, and now the Manitoba Minnesota Transmission Project (MMTP). In the instance of Kilkenny Drive, local lobbying resulted in delays on a subtransmission line that was required for reliability of supply. In the instance of Sage Creek, local residents raised concerns about a future Manitoba Hydro facility planned in a Manitoba Hydro owned right-of-way, which resulted in changes to the project. In both examples, local residents were objecting to Manitoba Hydro facilities being developed in their neighbourhoods. With respect to MMTP lobbying by various stakeholders could result in relocation of parts of the project, extra expense, and/or project delays.

RISK TREATMENT:

The Corporation addresses the concerns of stakeholders, where feasible, through mitigation measures. Manitoba Hydro encourages stakeholder participation in its projects early in the process which permits the identification of concerns and provides the opportunity to mitigate these concerns before they become larger issues.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: D. Infrastructure

TITLE: 8. Emergency Management Program

RISK: The Corporation is exposed to a catastrophic event, likely weather induced, that results in an extended outage of the electric and natural gas infrastructure with a limited ability to restore damaged infrastructure.

.

DESCRIPTION:

System failure caused by an extended severe weather event similar to an ice storm challenges the Corporation's ability to respond and to maintain a minimum continuity of business operations

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

In today's interconnected world, all institutions depend on others to perform their daily activities. Manitoba Hydro provides essential services and has critical functions that must be maintained in the face of disruptions, emergencies, and catastrophic events

Since the creation of the Corporate Emergency Management Program in 2008, Manitoba Hydro has responded to many large scale power and natural gas outages. Manitoba Hydro infrastructure continues to be impacted by natural, manmade, accidental and deliberate events.

.

RISK TREATMENT:

Manitoba Hydro revised the Emergency Preparedness Policy in 2015 to enhance and strengthen the Corporate Emergency Management Program. Also, the Executive Emergency Management Committee was created to provide oversight of the program and to directly support the Corporate Emergency Center during an event. Manitoba Hydro continues to develop and maintain emergency preparedness and response management plans for reasonably foreseeable emergencies and risks arising from natural or man-made events that pose a real or potential threat to:

- the safety and health of employees, contractors, and the general public
- the physical assets of the Corporation and related environmental protection
- the ability to generate, transmit and distribute electricity and distribute natural gas and provide related services, and
- the ability of the Corporation to continue business in the normal course

Likelihood	Low
Consequence	High
Tolerance	Low

CATEGORY: E. Human

TITLE: 1. Safety and Health

RISK: An accident will occur that will result in loss of life or significant injury.

DESCRIPTION:

Due to the inherent nature of the operational work performed by Manitoba Hydro employee safety is always of key concern to the Corporation. Beyond the human suffering element, are the tangible and intangible costs of incidents to the Corporation for compensation and benefits, lost productivity, loss of equipment, loss of revenue, and loss of public confidence.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Safety is the Corporation's principal goal. As such, safety is reflected in the Corporate Strategic Plan to ensure the Corporation has measures that safeguard the safety and health of Manitoba Hydro employees. The Corporation is focused on activities that promote accountability, safety and health leadership, safe work practices, strict compliance with environmental regulations, and preservation of employee health. These programs are put in place to reduce risk to a tolerable level and address any potential risk to the operations side of the business.

RISK TREATMENT:

The opportunity for an incident in the workplace is high. The Corporation has built upon the recommendations of the 2006 and 2015 Safety Improvement Process Teams to further address workplace risk and to change the safety culture to positively affect the resulting safety performance of Manitoba Hydro.

Significant changes planned for the 2015/16 year include: (1) Implementing a seven point safety enhancement strategy which includes annual executive site safety reviews; in-person reporting of serious incidents at EC meetings, and a modified safety stand downs as examples; (2) Developing corporate programs with an internal Rapid Response Team on Safe Driving, Close Call Reporting, and Human Error Reduction; (3) Promoting Manitoba Hydro's safety culture through research and recommend a strategy for a safety branding, marketing, promotion and recognition program; (4) Moving the Corporation beyond compliance by forming a new high performance Risk Prevention Services team (under Workplace Safety) dedicated to working with line management to proactively identify and eliminate risk; a forensic audit of operations/incidents with the intent to define improvement opportunities; and benchmark to industry standards for safety assessments of operations; (5) Implement a SAP Environmental Health & Safety module to address technical currency issues with the data management surrounding hazardous materials, as well as streamline and enhance the processes involved with incident management, analysis and reporting; (6) Managing Contractor Safety by revising contractor safety guidelines and incorporating the guidelines into the procurement tendering process to further development the contractor safety model; (7) Developing a program to identify arc flash and clothing ignition hazards and tasks and ensure that proper communication (including labeling of equipment) and protective measures are in place throughout the Corporation; (8) Safe Work Procedures program enhancement to ensure that employees have the safe work procedures that they need to assist in planning of work, reduce incidents and increase legal compliance with MR217; (9) Updating Safety Publications; and (10) Medical Screening improvements in the hiring process to analyze, evaluate, and modify current health evaluation steps in hiring process to ensure potential employees are fit for the work, reducing potential for on-the-job injuries.

Manitoba Hydro's international operations in developing countries exposes employees and their families to increased risk of disease, crime, or injuries from political, ethnic or religious conflict. A number of measures are taken to mitigate these risks, including providing employees with medical advice and medi-vac transportation, specialized location security advice, secure accommodations and having emergency response and evacuation plans.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: E. Human

TITLE: 1. Safety and Health

SUBTITLE: 1. Infectious Disease

RISK: A significant disease outbreak will impact a large number of employees resulting in major disruptions to business operations.

DESCRIPTION:

In response to the influenza A, H1N1 (Swine Flu) outbreak in April 2009 and the World Health Organization setting the pandemic alert level globally to phase six, Manitoba Hydro formed a task force on H1N1 to address the impact an infectious outbreak would have on the Corporation. The June 2014 outbreak of the Ebola virus in West Africa also had the potential to directly impact Manitoba Hydro's operations, as a number of Hydro employees seconded to the subsidiary company Manitoba Hydro International were working in West Africa at the time.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

While neither the H1N1 nor Ebola situations resulted in large scale outbreaks in North America, the impact of such a pandemic could be significant. There are predictions that suggest that up to 35% of the population could be impacted by the next global pandemic, or over 2,000 Hydro employees.

It is expected that a pandemic will result in significant and prolonged shortages with regard to the availability of employees, supplies and services. This may be enough to possibly compromise Manitoba Hydro's ability to provide safe, reliable service to customers. These impacts could further result in financial losses as revenues diminish putting added pressure on business operations. The inability to respond to system outages and customer requests could further impact the Corporations reputation. In addition, if the Corporation is unable to meet its export commitments, the utility could face potential liabilities.

RISK TREATMENT:

A pandemic is much more than just a problem for the health care system. It is a societal problem and is best managed by the coordinated participation and cooperation of governments, businesses, organizations and citizens. All parties need to be prepared for the potential outbreak of a pandemic. Manitoba Hydro monitors Health Canada briefings and directives, along with announcements from the World Health Organization (WHO) and local health publications. Employees that returned from West Africa were instructed by Hydro's Occupational Health Nurse to see their local doctor and report any symptoms.

Likelihood	Low
Consequence	Med
Tolerance	Low

CATEGORY: E. Human

TITLE: 2. Union/Employee Issues

RISK: Employee and union demands may not be satisfied which could result in inability to attract and retain skilled workers and / or possible labour disruption.

DESCRIPTION:

Interaction between the Corporation and its unions remain positive and co-operative. The IBEW collective agreement expired on December 31, 2015. A new three year renewal agreement negotiated between the Corporation and IBEW was ratified by the IBEW membership in early January.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Employee and union demands may not be satisfied which could result in strained relationships and potential strike.

RISK TREATMENT:

Minor issues and disputes arising during the year are resolved through informal discussions, or occasionally via the grievance and arbitration process.

A comprehensive bargaining framework has been developed that includes an early start to the process and agreement to limit the number of issues at the table.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: E. Human

TITLE: 3. Workforce Management

RISK: The Corporation will not be able to attract and retain the necessary qualified workforce to meet its operational needs.

DESCRIPTION:

The electricity and gas industry will be facing significant labour force challenges in the years ahead. For Manitoba Hydro, the workforce will be impacted by the following factors: retirements; new requirements resulting from major construction and technology changes; and, a changing labour market. Retirement will have the most significant impact on Manitoba Hydro's human resource requirements due to the movement of the large cohort of "Baby Boomer" employees into retirement. Retirements have shifted from a long-term average of approximately 80 employees per year to a new long-term average of approximately 190 per year. Approximately 1000 employees are expected to leave within five years.

Voluntary resignations at Manitoba Hydro are still fairly low (< 1% of the workforce annually) when compared to the industry average (>2%). More recently, as a result of our demographic shift and cyclical economic conditions, voluntary resignations have risen over the last two years (>1%).Despite Manitoba Hydro's low rate of attrition, utilities across Canada are experiencing the same Baby Boomer retirement phenomena. Manitoba Hydro employees possess skill, education and experience valuable to other utilities. The need to retain knowledge and ensure the right employees are ready to fill key positions at Manitoba Hydro is essential for long term success.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

A loss of knowledgeable and experienced employees has significant effects on all the areas of the Corporation including reduced reliability, increased cost of production, infrastructure project delays and decreased safety and productivity. By way of example, a reduced skill base in Major Capital Projects or Transmission would negatively impact the Corporation's ability to plan, construct, commission and put into service the significant projects currently underway. In the Gas Supply area, capacity management and gas supply strategies would be impaired as it could diminish Manitoba Hydro's ability to deliver reliable, safe, sustainable and competitively priced gas.

RISK TREATMENT:

To ensure knowledge retention and transfer and the supply of qualified candidates, the completion and maintenance of detailed succession plans for all key strategic and critical positions is necessary. The Corporation has implemented a comprehensive executive and senior management succession planning program including the identification of key positions and high potential employees. In addition, the Corporation is conducting succession planning at lower levels in order to identify high potential candidates earlier.

Manitoba Hydro continuously updates retirement forecasts and recruitment plans. This provides the multiple benefit of an accurate corporate-wide forecast of recruitment needs, the ability to respond to changing labour market conditions and the integration of this information into related financial forecasts and budgets. The Corporation has undertaken a more systematic approach to workforce planning and its ability to respond to the changing internal and external workforce environment. Training programs continue to be deployed to existing staff resulting in the development and improvement of technical skills in key areas. This assists in providing an adequate supply of qualified internal applicants to fill most vacancies. In addition, individual development is a priority for all staff through the completion of personal development plans on an annual basis. Although recent resignation rates at Manitoba Hydro have increased they still remain below normal rates however we continue to monitor departures and conduct exit interviews to collect information and make recommendations to address any concerns identified by departing individuals.

Likelihood	Med
Consequence	Low
Tolerance	Low

CATEGORY: E. Human

TITLE: 4. Technology

RISK: The rapid change in technology and work requirements may present challenges to system reliability, safety or productivity.

DESCRIPTION:

The pace of change in the workforce has never been as rapid as it is today with new technologies being developed that require staff to study and assess these technological changes and their usefulness within the current business and energy systems. This situation is further compounded by maintaining systems that are older which require appropriate interfaces with these new technologies and having fewer capable resources to analyze their impacts on the Corporation's present systems. The demographics of the workforce suggest that this risk will only increase in the future.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The Corporation's energy systems are both reliable and safe and its business systems are effective in meeting the Corporation's present day requirements. However, it is also important to adapt to technological advances that are required to meet changing conditions. It is conceivable that decisions or the lack of a decision in the future could reduce system reliability, safety or productivity.

RISK TREATMENT:

Manitoba Hydro has a research and development program that will help meet the needs of its business and operations, using both internal and external personnel and facilities. The primary thrust of this program will be the creation of new or significantly improved products and processes so as to obtain operational and economic benefits that will increase efficiency, reduce costs and improve the quality of service to the Corporation's customers.

The Corporation supports research and development projects carried out by students at Manitoba universities. The Corporation also supports research chairs, in collaboration with other industrial partners and with the Natural Sciences and Engineering Council (NSERC), or equivalent funding agencies at Manitoba universities, where the area of research is of direct and continuing interest to the Corporation.

New technologies are assessed to determine whether they will meet the further anticipated needs of the Corporation and detailed studies are performed when significant changes are planned so that negative outcomes are minimized. The current wind integration project which assesses the impacts of various levels of wind generation on system operations is an example of these types of studies.

All staff are encouraged to maintain their professional standards which includes keeping abreast of changes occurring within their discipline.

Likelihood	Low
Consequence	Low
Tolerance	Low

CATEGORY: F. Business Operational

TITLE: I. Supply Chain

RISK: Goods and services may not be available when required resulting in potential reliability issues, major delays, disruptions or complete loss of service to customers.

DESCRIPTION:

Managing the Supply Chain ensures the supply of goods and services are obtained in order to maintain and upgrade the current infrastructure and capital project work. The supply chain is critical in maintaining service to customers. Manitoba Hydro is dependent upon a variety of suppliers. Market trends impact the economical and financial aspects of business and the ability of suppliers to provide required goods and services on a timely basis.

The risk to Manitoba Hydro includes:

- Increased costs and lead-times due to supplier capacity, quality of workmanship and the global demand for raw materials and finished products,
- A limited diversity of supply due to company mergers, acquisitions or insolvency and a shortage of skilled labour in some trades,
- Loss and / or inability to restore service to customers due to poor supplier delivery, availability or quality of workmanship.
- Public perception and financial implications related to fraud, corruption and unethical business transactions stemming from tendering/contracting processes.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

A disruption in the supply chain impacts a majority of Manitoba Hydro's strategic goals and objectives. The Corporation requires a variety of critical goods and services to meet its obligations and commitments. An effective supply chain contributes to the Corporation's financial strength through cost minimization, planned upgrades and maintenance and the reduction in the downtime of our major assets.

Although the market has improved, the demand for construction services, particularly skilled labour, in some trades, is still a concern. In addition, recent tenders for construction have resulted in higher levels of participation, however in some cases tenders have exceeded budget estimates.

[redacted] Lead time is approximately 18 months and growing. Equipment failure may result in an extended period of reduced transmission capability of northern generation.

RISK TREATMENT:

The supply chain will continue to be managed by monitoring all market trends, identifying critical products and services, sourcing Strategic Alliance Partners, evaluating and tracking vendor performance, performing reference checks and validating vendor credentials, reducing single sources of supply, maintaining optimum inventories and identifying alternate sources of supply in case of emergency.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: F. Business Operational

TITLE: 2. Operational Controls

RISK: Unexpected operational outcomes adversely impact the Corporation's performance.

DESCRIPTION:

The Corporation has defined a vision, mission, operating principles and goals that are supported by measures, targets and strategies to direct corporate efforts toward common strategic achievements. The only manner in which the Corporation can be certain that its efforts are intended to result in a preferred outcome is to ensure that adequate controls are built into its processes. All efforts to direct, promote, restrain, govern and check progress can be described as a control. Where an operation is subject to adequate control, the odds of a positive outcome are enhanced. Where inadequate control is practiced, the result is less certain to be as intended. Where operational controls are ineffective the chance of the Corporation achieving its vision, or a subcomponent thereof, is reduced. Some of the types of operational risks that the Corporation faces include ineffective and inefficient operations, unreliable reporting and modeling systems and technology, non-compliance with applicable laws, regulations and internal policies, inability to attract and retain knowledgeable human resources and inadequate maintenance and replacement of infrastructure, to name a few.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES

The essential purpose of operational control is to encourage the accomplishment of the goals or objectives for which each employee or manager is responsible. Ineffective operational control increases the likelihood of an adverse outcome which could mean that a goal or objective is not met. The potential impacts of ineffective operational control are many and varied. They can range from infrastructure failure due to ineffective maintenance programs or systems to fraudulent activity to lawsuits and jail.

RISK TREATMENT

The governance process designed by the Corporation has objectives inclusive of promoting appropriate ethics and values; ensuring effective organizational performance management and accountability; effectively communicating risk and control information to appropriate responsibility areas; and effectively coordinating the activities of and communicating information among the Board, external and internal auditors, and management. This framework has been adopted with the intention of ensuring reliability and integrity of financial and operational information; effectiveness and efficiency of operations; adequate safeguarding of assets; and compliance with laws, regulations and contracts. The design of operational controls rests with line management. The effectiveness of control systems are subject to ongoing monitoring through the corporate governance process (inclusive of various committees, regulatory review, the Board, etc.) and are tested through an internal audit program and an annual external attestation audit. The Internal Audit Division Charter has been approved by the Audit Committee of the Board as is the annual audit program. Line management also engages consultants and experts as deemed appropriate to aid in the design of operational control systems and practices as well as to test the effectiveness of the implemented design. The Corporation also has an integrity program which complies with the requirements of the Provincial Whistleblowing legislation. The program provides a mechanism for anyone to report a situation in which operational controls are not functioning at any level.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: F. Business Operational

TITLE: 2. Operational Controls

SUBTITLE: 1. Cyber-Security

RISK: Cyber Security incidents that could result in the theft of information and / or the disruption or misuse of critical operations / assets

DESCRIPTION:

The growth of electronic communication and automation, while delivering significant benefits, has also increased risk to the Corporation. This risk includes any cyber attack that could impact the resiliency, reliability, confidentiality, availability or the integrity of Manitoba Hydro information and \operational technology assets, including the theft of personal and or business information, and or the disruption/misuse of critical operations/assets. Any computer or control system if not secured properly may be considered a potential target.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES

These cyber attacks could have a significant impact on Manitoba Hydro operationally and financially, and may have a rippling effect on the Manitoba economy.

RISK TREATMENT

Countermeasures, management controls and processes are in place to mitigate this risk. The Corporation is has implemented a series of measures to further augment cyber-security efforts consistent with recommendations of the Office of the Auditor General. Concurrently, to meet current NERC security standards Manitoba Hydro has also undertaken several projects targeted at increasing safeguards over critical cyber assets.

Ongoing assessment and enhanced mitigation strategies are required as the sophistication of external cyber threats increases, and as more computer and control systems are inter-connected. The Enterprise Security Council comprised of senior executives provides oversight for all aspects of physical and technology security including NERC related projects and the implementation of the Auditor General's eight recommendations, of which four have now been completed.

To protect Manitoba Hydro's information technology environment an advanced corporate firewall is in place to protect the data network. Additionally, anti-virus software and security patches are closely monitored and updated immediately to prevent data corruption. The Corporation is finalizing the implementation of a Security Information & Event Management (SIEM) tool to further raise the level of protection. It will be fully operational by spring, 2016.

The Industrial Data Network has measures of protection and is being assessed to identify any required actions necessary to raise the levels of protection.

Likelihood	Med
Consequence	M High
Tolerance	Low

CATEGORY: G. Reputation

TITLE: 1. Reputation

RISK: The occurrence of a negatively public perceived event which receives significant attention and affects the Corporation's operations in a significant negative manner.

DESCRIPTION:

Reputation risk exposes Manitoba Hydro's ability to achieve its overall strategic and operational goals in an effective and efficient manner.

The impacts of reputation cover a broad range of activities at Manitoba Hydro and include many significant initiatives, including:

- Obtaining approvals and constructing new generating stations, both hydraulic and other types;
- Renewing licences (e.g. Lake Winnipeg Regulation, Churchill River Diversion, and various generating stations);
- Obtaining approvals and constructing new transmission lines and maintaining existing transmission lines;
- Extending export opportunities and protecting access to export markets;
- Maintaining market share in the domestic retail natural gas market;
- Receiving favorable regulatory (e.g. PUB) approvals;
- International operations in developing countries and emerging economies where corrupt or unethical practices are common to varying degrees, and
- Other activities.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The significance of the impact varies depending on the strategic or operational goal, however the impact can range from having insignificant costs to significant costs (e.g. the potential impact can result in the Corporation not achieving its strategic goals or achieving significant objectives such as constructing a new generating station or a major transmission line). As a publicly owned entity, Manitoba Hydro cannot under any circumstances operate outside the laws of Canada, internationally accepted standards of conduct, or the laws of the countries in which it does business.

RISK TREATMENT:

To support fulfillment of its mandate, Manitoba Hydro has identified key areas of focus which are directly related to enhancing its Corporate reputation including:

- Customer Value
- Indigenous Relations
- Financial Strength
- Protect the Environment
- Demand Side Management

Manitoba Hydro has developed and is undertaking a range of comprehensive communication actions to protect and enhance its reputation to secure trust in its ability to serve customer energy needs and gain acceptance for corporate activities. This includes effective engagement with stakeholders.

For all domestic and international operations, the Corporation requires that employees are aware of and comply with all applicable laws, regulations, standards of conduct and policies.

Likelihood	Low
Consequence	High
Tolerance	Low

CATEGORY: H. Governance / Regulatory / Legal

TITLE: 1. Regulation and Licencing

RISK: The Corporation could face regulatory and licencing issues that restrict its operations.

DESCRIPTION:

The Corporation requires a variety of regulatory approvals and licences to carry out its activities. Key approvals and licences include those issued under the National Energy Board Act, Water Power Act and Environment Act either to build new generation and transmission facilities or to maintain the operation of existing facilities.

There are two significant issues currently facing the Corporation that could have significant impact on operations and reputation if they are not addressed. These are the risk of Lake Sturgeon being listed as endangered under the Species at Risk Act (see risk profile C.3.1) and addressing environmental and societal impacts and expectations for legacy facilities. Specifically the Clean Environmental Commission (CEC) made a non-licencing recommendation that both the Province and Manitoba Hydro conduct a Regional Cumulative Environmental Effects Assessment (RCEEA) of all Manitoba Hydro projects in the lower Nelson River sub-basin before any more projects are licenced for construction. In the recently completed Lake Winnipeg Regulation (LWR) Final Licence hearing the CEC went even further and recommended that all legacy hydro projects in the Province should be licenced under the Environment Act.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Failure to obtain approvals and licences on favourable terms or in a timely fashion could have significant financial, operating and water regime impacts, increasing costs, and reducing hydraulic generation, capacity and export sales. Expiration of a licence without renewal will expose the Corporation to embarrassment and loss of reputation. Although highly unlikely, cancelation of a licence could expose the Corporation to the possibility that a third party could acquire the water power rights at a location and potentially the loss of the asset.

RISK TREATMENT:

With respect to the Lake Sturgeon issue, the Corporation continues to take significant action to minimize the need for and likelihood of listing Lake Sturgeon under SARA (see detail of risk treatment on profile C.3.1), however uncertainty remains.

Over the next ten years, twelve of Manitoba Hydro's Water Power Act licences will have to be renewed. Although legally this should be a relatively simple process as prescribed under the Water Power Act regulations, public expectations, the requirement for the Province of Manitoba to consult under Section 35 of the Constitution with Indigenous peoples on all licencing decisions and the recent recommendations from the CEC on re-licencing that includes full environmental assessments and public reviews will expose Manitoba Hydro to significant costs, and potential operational restrictions. Manitoba Hydro is currently in discussions with the Province on how to proceed with re-licencing.

Likelihood	Low
Consequence	High
Tolerance	Low

CATEGORY: H. Governance / Regulatory / Legal

TITLE: 2. Export Market Access

RISK: The Corporation loses its legal capability to sell power outside the province due to legal and industry change issues.

DESCRIPTION:

The energy industry in North America has undergone fundamental restructuring. There are now in place market-based approaches to generation, transmission, distribution and sale of energy in the Midwest region of North America in which Manitoba is located, and new industry bodies have been formed to facilitate these activities. Opportunities for the Corporation include (1) Opportunities to export power to new markets or further develop existing markets, and (2) Opportunity to define new roles for the Corporation in the delivery of gas services in Manitoba to better serve consumers.

Manitoba Hydro's access to the U.S. market is to an extent conditioned on the adoption of measures in Manitoba to level the playing field e.g. transmission tariff, standards of conduct. Risks include: (1) Measures adopted in Manitoba to level the playing field could affect rates to Manitobans or quality of service. (2) Risk of Manitoba Hydro losing functional control of its transmission facilities in Manitoba to U.S.-based transmission operators (i.e. loss of sovereignty, lose control of transmission facilities). (3) The risk of losing market access or receiving access on adverse terms (e.g. transmission pancaking, less competitive, more costly).

As well, the Corporation requires the legal ability to sell power into other provinces and the U.S. on favourable terms. Risks include: (1) The Corporation may be prevented from selling into a particular market or obtaining transmission or ancillary services that are necessary for the sale to take place. (2) Unfavourable terms may be imposed on sales, by U.S. regulators or trading partners (3) May affect amount of power Manitoba Hydro can be assured of importing during times of drought.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The above opportunities and risks may affect the amount of revenue from export sales and could impact the reliability of supply and service to Manitobans. They might also impact Manitoba Hydro's mandate, control over facilities and raise issues of Canadian and Manitoba sovereignty.

RISK TREATMENT:

The rules are constantly changing in export markets. Accordingly, corporate strategies for ensuring market access will continue to require ongoing management. Strategies (all subject to change) include: (1) Ongoing development and assessment of strategic plans. (2) Ongoing alignment of strategic plans and participation by Manitoba Hydro personnel in export based operations. This includes: coordination agreement with MISO; membership in Midwest Reliability Organization; active input into MISO committees and bodies; FERC filings; Ontario marketing licence; adoption in Manitoba of transmission tariff, standards of conduct, reliability, security and operating procedures consistent with U.S. requirements; promotion of the corporate image in export markets; and active engagement with Manitoba Hydro's principal export customers to confirm they are able to obtain needed regulatory approvals.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: H. Governance / Regulatory / Legal

TITLE: 3. Legal Compliance

RISK: The Corporation does not comply with legal requirements

DESCRIPTION:

The Corporation must comply with a broad variety of legislation, regulations, common law and other legal requirements.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Depending on the type of legal requirement the consequences of non-compliance may include:

- Financial penalties for the Corporation.
- Fines / imprisonment for individual directors, officers or employees.
- Impact on corporate reputation.
- Restrictions on corporate operations.

RISK TREATMENT:

The Corporation fosters a positive culture of compliance through measures such as a Corporate Code of Ethics, periodic messages from the President to all employees emphasizing the importance of compliance with the Law, and an Integrity Program to enable employees to report any violations of the Code of Ethics without fear of reprisal.

Management has identified a short list of compliance risks that pose the most material risk to the Corporation. Management has developed for the Audit Committee of the Board profiles of the compliance programs for these risks and provides to the Committee annual updates and metrics associated with them.

An Integrity Officer coordinates the investigation of all Integrity Program reports. Summaries and analysis of reports received pursuant to the Integrity Program are shared with the Audit Committee annually (with identifying details removed to protect confidentiality). Summaries of all material litigation, communications with licensors and other potential indicia of compliance or non-compliance are also reviewed by the Audit Committee on an annual basis.

In order to mitigate exposure to market manipulation risk, the Corporation is in the process of implementing a Wholesale Electricity Markets Compliance Program to establish policies, procedures and guidelines pursuant to anti-market manipulation laws in place in the U.S. and Canada. This program will outline roles and responsibilities of those identified in the program, provide direction to employees transacting in the export markets, identify permissible and prohibited trading considerations and specify policy with respect to potential violation investigations, disputes and reporting, training requirements, record retention practices and compliance monitoring related to the Corporation's participation in the wholesale electricity markets.

In all cases it is the responsibility of management to ensure compliance with the law. The generally accepted elements of a corporate compliance program are:

- Standards and procedures that are reasonably capable of reducing non-compliance.
- Assign specific high-level personnel to oversee compliance.
- Prevent delegation of discretion to individuals likely to engage in non-compliance.
- Effectively communicate standards and procedures to relevant employees.
- Implement monitoring, auditing and reporting systems.
- Use disciplinary measures to enforce standards and procedures.
- Respond to breaches that are detected including modification for systemic problems.
- Continually evaluate the risk of non-compliance.

Likelihood	Low
Consequence	Med
Tolerance	Low

CATEGORY: H. Governance / Regulatory / Legal

TITLE: 4. Contracts & Ventures

RISK: Contracts are not fulfilled or business ventures expose the Corporation to undesirable events.

DESCRIPTION:

The Corporation engages in a variety of commercial activities. It purchases goods and services, sells its own goods and services, purchases and sells land and intellectual property and signs a variety of other contracts and agreements. The Corporation also purchases businesses such as Centra and Winnipeg Hydro, and sets up subsidiaries and joint-ventures to pursue particular opportunities. Some of the risks include:

- Failure to comply with contract obligations and contract law (e.g. anti-corruption law).
- Acceptance of unfavourable contract risk, liability clauses or indemnity requirements.
- Failure to obtain property rights and easements needed for corporate activities.
- Failure to obtain software licences or other intellectual property.
- Failure to secure sufficient audit rights to protect the corporate interest.
- Entanglement in foreign legal proceedings.
- Failure to exercise appropriate governance over joint-ventures / subsidiaries.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Management of the above risks will impact the revenues or other advantages that the Corporation is seeking to achieve, and the potential lawsuits and financial liabilities that the Corporation may be exposed to.

RISK TREATMENT:

The Corporation has risk management programs in place for particular, high risk commercial activities such as the purchase of gas hedges and power trading.

Board approval is required for all contracts of first importance to the Corporation (meaning contracts with high impact on the Corporation's ongoing operations over the long term (e.g. Northern Flood Agreement, Joint Keeyask Development Agreement, Winnipeg Hydro Purchase Agreement), contracts introducing fundamental change to the Corporation and purchases beyond specified signing limits and discretionary payments over $5 million. There are Board guidelines for the creation of subsidiaries and joint-ventures.

The majority of commercial risks are managed within the Business Units. Management is responsible to manage the opportunities, obligations, adherence to contract law (e.g. anti-corruption law), and risks in all documents that are signed. Policy requires the approval of a Division Manager for any contract containing non-standard risk, liability or indemnity provisions. Contracts and ventures of first importance to the Corporation are coordinated at the executive level with Board reporting and approvals. Policy requires legal approval of all contracts of first importance to the Corporation. Policy requires legal approval of all consulting contracts, with any exceptions approved by a Vice-President and reported to the Audit Committee.

Likelihood	Med
Consequence	M High
Tolerance	Low

CATEGORY: H. Governance / Regulatory / Legal

TITLE: 5. NERC/MRO Reliability Standards

RISK: The Corporation could face negative consequences if it does not comply with mandatory NERC/MRO reliability standards.

DESCRIPTION:

NERC/MRO standards identify specific reliability requirements for the planning, design, reliable operation, and maintenance and security of the North American bulk power system. NERC reliability standards are binding on the Corporation pursuant to the Reliability Standards Regulation under the Manitoba Hydro Act. The National Energy Board, which regulates international power lines also requires Manitoba Hydro to comply with applicable Reliability Standards under its General Order on Mandatory Reliability Standards.

A finding of non-compliance to these standards could result in the following potential consequences: (1) Financial penalties up to $1 million per day per violation; (2) Increased regulatory scrutiny by the PUB and NEB as a result of violations; (3) Public disclosure of non-compliances, which may result in a negative impact on the Corporation's reputation and its exceptional standing in the industry; (4) Immediate Remedial Action Directives imposed by NERC/MRO on the Corporation; (5) Negative impact to Manitoba Hydro's export capability; and (6) Monetary penalties to both employees and the Corporation up to $100,000 pursuant to the NEB's Administrative Monetary Penalties (AMPs) Regulation

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The violation of mandatory standards could threaten the reliability of the bulk power system. Manitoba Hydro recognizes reliability as an important priority; one which provides exceptional value to customers. Public disclosure of non-compliance on a single significant matter, or numerous times on points of lesser significance, could put negative pressure on the Corporation's image. Furthermore, financial penalties imposed on the Corporation could be substantial.

RISK TREATMENT:

To mitigate the risks of non-compliance to reliability standards, the Corporation has developed a Corporate NERC Reliability Compliance Program to manage the demands of compliance. The role of the program is to promote a culture of compliance, act as the primary contact with external entities, manage the flow of information both internally and externally, and provide high level support for corporate compliance-related activities. A decentralized approach to the assignment of responsibility for each standard has placed accountability for the Corporation's compliance squarely in the hands of subject matter experts who can assess current practices against the requirements of the standards and take action to ensure compliance. These subject matter experts (generally Department Managers) are designated as either standard owners or requirement owners depending on their level of involvement relative to the specific requirements of the standards. The Program has created clearly defined roles and responsibilities for both standard owners and requirement owners. In addition, standard owners and requirement owners are expected to participate in the MRO/NERC standards development process, through commenting periods, voting strategies, and/or as members of standard drafting teams, to influence the development of a standard before it becomes mandatory and enforceable.

Under the Reliability Standards Regulation, the Corporation works collectively with the Province to update the list of reliability standards applicable in Manitoba as well as the NERC Rules of Procedure applicable in Manitoba, providing flexibility to deal with future events and changing circumstances.

Likelihood	High
Consequence	High
Tolerance	Low

CATEGORY: I. Indigenous

TITLE: 1. Relationships

RISK: Poor relationships will have negative impacts on future Corporate activities.

DESCRIPTION:

Manitoba Hydro ("MH") has a goal in its Corporate Strategic Plan to " Engage impacted communities in a positive way to enhance working relationships". Effective working relationships adhere to the basic principles of mutual recognition, mutual respect, sharing and mutual responsibility Working relationships encompass activities in the areas of employment, training, environmental stewardship, purchasing, contract work, customer service, business opportunities and addressing adverse effects.

Working relationships exist with Indigenous individuals, communities and organizations. In managing relationships Manitoba Hydro takes into consideration issues and concerns raised by the community, Indigenous and Treaty rights, impacts of hydro-electric development, employment equity and human rights concerns, and the societal need to move towards reconciliation.

The risks in this area include both substantive and process issues such as disputes arising in relation to: adequacy and continuation of process funding; adequacy and eligibility for compensation arising from existing and future development; eligibility for and adequacy of corporate programs and initiatives; equitable allocation of programming dollars and opportunities; and the representative capacity with respect to Indigenous interests. Any of the above can result in legal action.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

- Lack of trust on the part of many Communities which were impacted by hydro-electric development.
- Continued existence of ongoing impacts that cannot be totally eliminated even with decommissioning of the project which would have other impacts.
- Significant needs of many Indigenous communities that have resulted from numerous social, political and economic issues most of which are not related to hydro development.
- Need to create a level playing field in dealing with Indigenous communities requiring significant expenditures for the Corporation for consultants, lawyers and capacity building.
- Widely different views on respective obligations. Compensation paid under settlement agreements that does not address ongoing impacts leave future groups dissatisfied.
- Dissatisfied groups and/or their supporters damage Manitoba Hydro's image with export customers in particular and domestic stakeholders generally.
- Requests for financial donations and sponsorships increase, while fiscal constraints minimize the amount of discretionary funding available..
- Intervention by disaffected Indigenous entities adversely affects the outcome of regulatory processes.
- Significant reduction in process funding may impact communities' ability to manage their relationships with Manitoba Hydro.
- Dissatisfied groups and/or their supporters may take legal action and/or engage in acts of civil disobedience resulting in financial, operational and reputational impacts.

RISK TREATMENT:

- Behave in ways that earn trust and respect and contribute to mutual gains.
- Build on the mutual interests in the land and water that Manitoba Hydro shares with Indigenous peoples and seek to understand and accept different world views.
- Continue to design and deliver meaningful programs, projects and activities to address NFA obligations.
- Encourage fair public comment on hydropower issues and facilitate open communication with customers and government entities.
- Operate in compliance with corporate goals, operating principles and sustainable development principles.
- Agree on work plans and budgets for negotiating processes that include community assurances that a local expenditure control system exists, with expenditure control procedures in place, for both internal and external service providers.

Likelihood	Med
Consequence	M High
Tolerance	Low

CATEGORY: I. Indigenous

TITLE: 2. Legal

RISK: Unfavourable relationships and rulings could negatively impact Corporate operations.

DESCRIPTION:

Manitoba Hydro facilities can adversely affect Indigenous people with rights and interests in the area of the facilities. Interactions with Indigenous people and organizations are undertaken within a unique framework created by the following factors:

- Canada's constitution and legislation recognizes rights and provides protections to Indigenous peoples and Indian Reserve land in particular.
- Manitoba Hydro has significant contractual obligations under the NFA, the related NFA Implementation Agreements and other agreements with First Nations, the Manitoba Metis Federation (MMF), northern Indigenous communities and resource users.
- Manitoba Hydro's issues are often interwoven with broader federal and provincial responsibilities and Indigenous Self-Government issues.
- Indigenous concerns frequently command a high public profile.
- The Corporation is committed to enhancing working relationships with Indigenous peoples.
- There is often a lack of legal clarity, agreement, or common understanding with First Nations or Metis regarding the nature of Treaty and Indigenous rights (including Indigenous Title) and the obligations that arise for the Crown or proponent of a project in relation to such rights.

The risks in this area include:

- Inadvertent breach of legal obligations under contracts, legislation, regulations and constitutional requirements
- Restrictions on the use of land and water for energy production.
- Imposition of post project environmental reviews and assessments.
- Claims (e.g. breach of contract, interference with the exercise of rights, trespass, negligence) resulting in adverse orders including orders for damages or injunctions
- Delayed government approvals and unfavorable licence conditions for new projects
- Operating restrictions placed on existing projects
- Political interventions and civil disobedience (e.g. blockades)
- Lack of suitable judicial remedies
- Loss of export market opportunities
- Project delays and cost escalation.
- Competing interpretation of contractual arrangements.
- Long and costly arbitration processes and/or litigation.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Damage claims and operating restrictions have monetary implications. In an extreme case there could be risk to persons or property. Depending on the management of the risks, there is potential for damage to the corporate reputation and export market opportunities.

RISK TREATMENT:

Management systems exist or are being developed to flag obligations and to follow up on compliance which reduce the likelihood of inadvertent non-compliance with legal obligations. The Corporation is pursuing enhanced working relationships through mutually beneficial arrangements with Indigenous groups when developing new hydro facilities and is continually seeking improvements to its relationship with Indigenous peoples. The Corporation monitors developments in the field of Indigenous law to ensure ongoing awareness of evolutions in jurisprudence on Indigenous rights.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: J. Emerging Energy Technologies

TITLE: 1. Emerging Energy Technologies

RISK: New technology renders current facilities cost excessive.

DESCRIPTION:

Significant breakthroughs or improvements involving large scale mass production of new emerging technologies (energy storage, bioenergy, solar, wind, etc.) could result in lower electricity capital or production costs. Such technology breakthroughs could impact both Manitoba Hydro's export revenue and domestic revenue. The potential impact on export revenue is one of the factors discussed in category A2.2 Export - Long Term Price Uncertainty. Emerging renewables put downward pressure on export market prices along with providing more fixed price/non-emitting resource options to counterparties which affects the export marketing opportunities and related long term pricing premiums available to Manitoba Hydro. New small scale domestic emerging technology resources such as solar could reduce expected load growth, and reduce energy revenue in Manitoba over the long run, if the cost of the resources becomes low enough to become economic.

Alternative generation technologies, without tax incentives or subsidies, are currently more expensive than conventional generation. Generally the more mature alternative technologies, such as utility scale wind power, are closer to commercial parity even without subsidy as their costs continue to decrease slowly. With subsidies, new wind power in the Midwest US is currently being contacted at below market prices, creating substantial challenges for merchant generators. There remains substantial uncertainty around the availability of these subsidies (specifically for wind power) post-2015. Less mature technologies, such as solar photovoltaics, have costs which are decreasing more quickly, but costs would still need to decrease by at least a factor of two for them to be commercially viable without subsidy or mandate. However drastic technology cost reductions in the past few years has set a trajectory where commercial viability in many medium/higher cost regions of the US within the next five to ten years.

Manitoba has biomass resources, primarily from crop residues, but individual utility scale generating plants would be small (<30 MW) and disbursed. Costs associated with biomass fuel collection and transportation continue to limit the development potential for this option in Manitoba. Utilization of biomass resources would also be subject to competition from other bio-product demand such as heating.

Energy storage technology is predicted to play a significant role in future electrical grids with distributed generation components by helping to manage intermittency, which could enable the integration of more non-dispatchable energy sources such as wind or solar. The historical price drop for lithium-ion batteries has accelerated with the recent expenditures of multiple billions of dollars on new higher-scale manufacturing facilities and larger battery chemistry research laboratories.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

The impact of this risk is reduced revenue from both domestic and export energy sales from existing assets while also impacting the business case for new hydro-electric generation. Development changes in emerging energy technologies have tended to be more evolutionary than sudden, which means that relative value thresholds between conventional and emerging generation are likely to be approached gradually.

RISK TREATMENT:

Manitoba Hydro retains expertise and keeps well informed of the direction occurring within the industry. The current resource plan indicates that no new generation is required until 2033. This requirement is based on current load forecasts that include new DSM targets both of which are updated annually to reflect information that is available. This time frame allows the Corporation to assess new alternative energy technologies and work towards an integrated resource plan which determines the appropriate combination of resources to meet multiple objectives (technical, environmental etc) at the lowest cost to Manitobans.

Likelihood	Low
Consequence	M High
Tolerance	Low

CATEGORY: K. Strategic

TITLE: 1. Strategic Direction and Execution

RISK: Missed opportunities, unfavourable business decisions.

DESCRIPTION:

Strategic planning is the overarching methodology by which the Corporation sets direction and aligns corporate priorities and resources.

POTENTIAL IMPACT ON ACHIEVING CORPORATE OBJECTIVES:

Establishing, communicating and implementing strategic direction is essential in managing threats and opportunities. Strategic decisions have the potential to significantly impact corporate performance and the achievement of financial targets, either positively or negatively, pertaining to any of the Corporate Strategic Plan (CSP) goals and/or identified risk categories. High level strategic considerations may include: large scale capital projects to meet the future needs of the province, re-investment in the existing energy system to maintain high reliability, attraction and retention of a high caliber workforce, stakeholder and indigenous relationships, implications of evolving power markets including access to export markets, potential industry-wide implications of shale gas, prioritization of capital projects and resource optimization, performance management and process improvement.

RISK TREATMENT:

Manitoba Hydro's integrated planning cycle commences annually with key inputs such as: economic variables and energy price forecast, load forecast, demand side management forecast, export price assumptions, capital costs and OM&A forecasts. These inputs drive the Integrated Resource Plan (IRP), capital expenditure forecasts and ultimately the Integrated Financial Forecast (IFF). The CSP is a companion document for consideration throughout the planning cycle.

Major strategic decisions and strategic, plans are subject to an internal review and approval process. Many strategic decisions are also subject to external review and approval through regulatory processes.

Senior management is responsible for communicating and ensuring the implementation of strategy throughout the Corporation. Manitoba Hydro's Vision, Mission and corporate targets are communicated to employees via the CSP.

Business units incorporate the CSP into their respective business plans as appropriate. Applicable goals, measures and strategies become increasingly oriented to operations as the process moves downward through the organization.

APPENDIX C

CORPORATE

RISK MANAGEMENT

FRAMEWORK

APPENDIX C - CORPORATE RISK MANAGEMENT FRAMEWORK

The Corporation has adopted the following six step Risk Management Process, Risk Rating Criteria and Risk Tolerance Rating Criteria to consistently identify, assess and manage risks:

Six Step Risk Management Process

1) Mission / Mandate

The process of identifying and managing risk is initiated at the Corporate, Business Unit, Division, Department, or project level by focusing on the underlying mission / mandate and specific strategic goals established for that particular area of the Corporation.

2) Risk Identification

Risks are identified based on the factors that influence the performance of the area of the Corporation being assessed.

3) Potential Impact

Risks are analyzed for potential impact and measured in terms of consequence and likelihood. Consequence is quantified in terms of system reliability, safety, finance, environmental impact and customer satisfaction. For each consequence identified, the likelihood (probability) is determined of the event occurring.

4) Risk Treatment

Actions are taken to reduce the likelihood of a negative event occurring or to reduce the negative consequences should a negative event occur. Risk treatment can include a reduction of the risk through modification of operational activities, a sharing of the risk through external insurance or acceptance of the risk as a normal consequence of the business and/or operations. The acceptance of risk is subject to that risk being within the approved tolerance levels of the Corporation.

5) Residual Risk

Certain levels of residual risk may remain even after actions have been taken to reduce their likelihood and consequences. An assessment is performed to confirm that the residual risk levels are within approved tolerances.

6) Reporting and Monitoring

Systems are implemented to monitor key risks, and information provided by these systems are used to facilitate management actions. Reporting systems ensure that senior management and other stakeholders are appropriately informed and risks are managed within the Corporation’s approved risk tolerances.

Corporate Risk Rating Criteria

CORPORATE RISK PROFILE RATING CRITERIA

	MEASURES	RATING		
		Low	Medium	Medium High
ANNUAL CONSEQUENCE -				
Financial	Net income / capital investment	$0 - $50 million	$51 - $150 million	> $150 million
System Reliability	Domestic Customers	Outage affecting 50 customers for 4 hours Not life threatening	Outage affecting 500 customers for up to 24 hours. Have ability to serve critical loads. Not life threatening as critical loads served.	Do not have capacity to serve Manitoba load for extended period of time. Life threatening. Loss of public confidence.
	MW generation or interconnection capacity	NERC level 1 In compliance with industry reliability standards.	Loss of 2000 MW. NERC level 2 - load management procedures in effect. In compliance with industry reliability standards.	Loss of > 2000 MW. NERC level 3 - firm load interruption imminent or in progress; and / or non-compliance with industry reliability standards.
Safety - Employee and Public	High risk accidents, severity rate, frequency rate and public contacts.	Minor injuries. In compliance with laws and industry standards.	Disabling injuries. In compliance with laws and industry standards.	Severe injuries and fatalities; and / or non- compliance with legislation and industry standards resulting in imprisonment for MH mgmt, significant fines and loss public trust.
Environment	Environmental impact - air emissions, water mgmt, spills, land & habitat disturbances, etc.	Minor impact to environment. In compliance with stakeholder expectations and laws and regulations. Ability to obtain / renew environmental licensing and operating approvals.	Local and contained damage to environment. In compliance with stakeholder expectations and laws and regulations. Ability to obtain / renew environmental licensing operating approvals.	Severe widespread and uncontained damage to environment; and / or non-compliance with stakeholder expectations, laws, and regulations resulting in imprisonment for MH mgmt, significant fines, loss of public trust and long term operating restrictions
Customer Value	Customer perception service with regard to:			
	Retail electricity rates	No rate increase	Annual increase < 10%	Annual increase > 10%
	Reliability and quality service	Restoration service within 4 hours, no threat to public safety,. < 1.3 outages/customer/ year, provision energy related services.	Restoration service within 24 hours with no threat to public safety. 2 outages/customer/year,	Outage for extended period of time. Life threatening. Loss of public confidence.
	Reputation	Local media coverage with negligible impact on stakeholders.	A highly visible event attracting national media coverage or environmental concern; and /or a moderate negative impact on stakeholders.	A highly visible event attracting international media coverage or environmental concern; and / or a significant negative impact on stakeholders such as breach of privacy, contractual obligation or environmental stewardship.
LIKELIHOOD		Event is not likely to occur within 10 years.	Event is likely to occur within 5 - 10 years.	Event is likely to occur within 1 to 10 years.

Note: While risk impact ratings are outlined for low, medium and medium-high those considered more significant than others in the medium-high category are elevated to a high category to signify their potential higher impact on the Corporation.

Corporate Risk Tolerance Definition / Rating Criteria

Tolerance is defined as the allowable or permissible variation from a standard. For Manitoba Hydro's purposes, tolerance is further defined as the extent to which the amount of residual risk is deemed to be reasonably acceptable within the resources available to the Corporation. To the extent that tolerances fall beyond reasonably acceptable levels, actions have been taken (or are being taken) to mitigate that risk.

Typically, risks with high consequence have corresponding low tolerances. Safety and Health (E.1) and Reliability of Service (C.4) are examples where the Corporation has a low tolerance for risk due to the severe consequences of negative events.

Tolerance is rated as either, low, medium or high based on the following parameters:

- Low – Zero or limited variability is accepted. Low tolerance is usually associated with an area where the consequences of negative events are significant and the Corporation has the ability to control the risk.

- Medium - Some variability is accepted. Medium tolerance may also be associated with high risk but the ability of the Corporation to control the risk may be limited.

- High – Significant variability is accepted. Consequence is always low.

To ensure adequate control and monitoring of risk, management establishes rules, limits, targets and guidelines and continually monitors these indicators and responses accordingly. The Corporation has created three levels to illustrate this:

- Green: no additional action required at this time as the risk is under control and is not subject to significant change.

- Yellow: there are or appears to be some emerging issues that need to be closely monitored and addressed. Additional action is required to bring the risk back to the established tolerance. Management has time to respond in an orderly manner.

- Red: the risk has become critical to business operations and requires day to day senior management attention. If not resolved quickly, it could have catastrophic impacts on the organization.

PUB MFR 20
Financial Information

20 year forecasts of revenue requirements including cost components (Finance/ Depreciation/ Operating/ Water Rentals/ F&PP/ Taxes) for:
- Keeyask generating station
- Manitoba-Minnesota Transmission Project
- Great Northern Transmission Line
- Bipole III and Riel station
- Pointe du Bois spillway & powerhouse
- DSM
- Sustaining Capital
[Appendix 11.15, 2015/16 GRA]

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

This Minimum Filing Requirement seeks to simulate the Revenue Requirement impact of individual Major New Generation and Transmission projects. However, this type of analysis is limited by virtue of treating individual projects on an incremental cost basis. While costs such as Depreciation Expense, water rentals, and Operating & Administrative Expenses may be estimated and may be directly attributable to a Major New Generation and Transmission asset, other costs such as Finance Expense, capital taxes and benefits are not readily estimated on an incremental basis. Furthermore, this analysis disregards the estimated export revenues to be obtained through sales of surplus energy associated with new electric generating plant.

The most reliable measure of Manitoba Hydro's revenue requirement is the additional Domestic Revenue indicated on the electric operations projected operating statement (Appendix 3.3, pages 1 and 2) which is derived based on balancing the costs of the integrated hydro-electric system, for new asset additions as well as existing assets, with maintaining minimum financial ratios as well as rate stability and affordability for customers.

Reliance on the estimated carrying and operating costs in the attached schedule as a representation of revenue requirement must be viewed with caution considering the inherent limitations of the analysis, estimation assumptions and methods described below.

1) Manitoba Hydro issues debt based on the consolidated cash requirements of the Corporation and does not assign specific debt issues on a project-by-project basis. As such, finance expense attributable to a specific project is estimated for the purposes of this analysis by applying Manitoba Hydro's average cost of debt to the asset's net book value (projected in-service cost net of accumulated depreciation). Using the net book value as the principal outstanding for debt associated with an asset assumes that annual depreciation expense approximates revenues available to reduce debt over the life of the asset. This estimation method does not consider that extraprovincial revenues partially offset the costs. As a result, the implied impacts to customers for each project may not be representative.

2) Capital taxes are estimated by applying a fixed 0.5% capital tax rate to construction work in progress until the asset is in-service and the net book value thereafter. Similar to finance expense, the use of net book value as a proxy for paid up capital to estimate capital taxes may result in implied impacts to customers for each project that are not representative.

3) Manitoba Hydro operates the integrated hydro-electric system to optimize the efficient use of water resources and maximize overall Corporate revenues for the benefit of customers. The output of one facility may not be maximized on its own but contributes to the maximization of the system as a whole. The assumption that depreciation expense approximates the revenue attributable to a project may be reasonable for understanding costs but does not reflect the value of a particular asset to the integrated system and should not be used for resource planning purposes.

4) The analysis considers only the prospective costs of asset additions and does not address the ability of revenues at current PUB approved rates to cover ongoing carrying and operating costs of existing assets. Current domestic rates are lower than what they otherwise would have been due to extraprovincial revenues partially

offsetting costs. In years of low water flow or low opportunity export prices, domestic revenues are not sufficient to cover the resulting reduction in extraprovincial revenues.

5) The analysis does not consider contributions to reserves in order to maintain Manitoba Hydro's self-supporting financial status and ensure affordable, predictable rates for customers.

Thus, the summation of total costs in the attached schedule may not accurately reflect the overall revenue requirement for Manitoba Hydro or how a particular asset contributes to the overall revenue requirement.

If one accepts the estimated carrying and operating costs in the attached schedule with its inherent limitations, cumulative rate increases that would be required to cover the costs of forecast additions in the 10 year forecast period from 2017/18 to 2026/27 are up to 37 percentage points higher (99%) compared to the proposed and indicative cumulative rate increases of 62% over the same time period in MH16. Annual rate increases are between 5% and 19% in the period 2017/18 to 2023/24 with minimal rate adjustments thereafter to 2035/36.

Even if it is assumed that all extraprovincial revenues (net of water rentals and fuel and power purchases) are allocated to offset the prospective costs of additions, the cumulative rate increases that would still be required are up to 8 percentage points higher (70%) compared to the projected 62% cumulative rate increase in MH16 by 2026/27. Annual rate increases range up to 13% in the period 2017/18 to 2023/24 with minimal rate adjustments thereafter.

The lower overall revenue requirements in the integrated system analysis shown in additional Domestic Revenues in MH16 compared to this analysis demonstrates that extraprovincial revenues have a key role in offsetting the costs of investments and reducing the compounding effects of the higher carrying costs over time. The annual differences in rate increases compared to MH16's 7.90% rate increases also show that there is not a direct flow through of costs in each year to customers. Customers benefit directly from Manitoba Hydro's approach of five year even annual rate increases above inflation before reverting back to inflationary increases within six years while Manitoba Hydro deviates from its

financial targets during the capital build-out returns to a position of financial strength near the end of a ten year period.

The schedule below has been updated for IFF16 Major New Generation & Transmission, as well as the addition of DSM and Business Operations Capital Expenditures.

PUB MFR 24 (Updated)
Export & Domestic Revenues

Schedules of export volumes, revenues/costs, and average unit revenues for the 20 years of the current IFF and actual results for 2014/15, 2015/16, and 2016/17. Split firm and opportunity volumes, revenues, and average revenues for each year. [Attachment 16, 2016/17 Interim; PUB/MH-71a, 2016 COSS]

The response to PUB MFR 24 has been updated to reflect the July 2017 update to the financial forecast for electric operations (MH16 Update).

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

Please see the following tables for the requested information.

PUB MFR 79 (Updated)
Export & Domestic Revenue

Manitoba Hydro's electricity export price forecast including the supporting forecasts of any third-party forecasting firms. Explain any changes in Manitoba Hydro's forecasting methodology since the NFAT. Provide additional details of how carbon pricing is incorporated into the forecast.

The response to PUB MFR 79 has been updated to reflect the July 2017 update to the financial forecast for electric operations (MH16 Update).

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

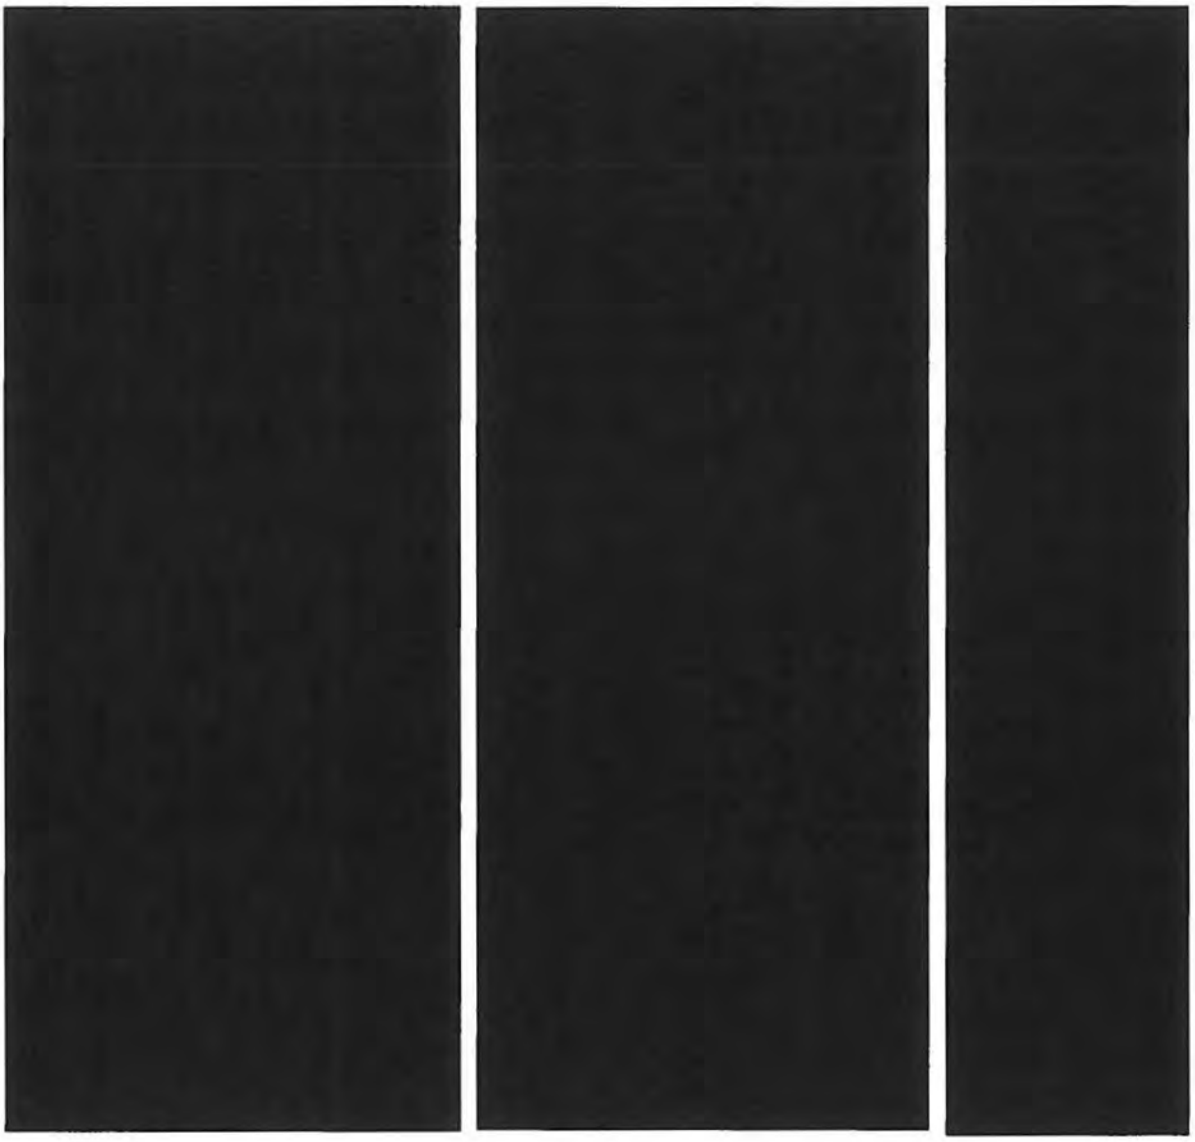
Methodological Changes since 2013 Electricity Export Price Forecast (EEPF)
Manitoba Hydro's consensus methodology to produce the long term Electricity Export Price Forecast (EEPF) Reference case for the On-Peak Energy, Off-Peak Energy and Capacity products remain unchanged from the 2013 EEPF through the 2016 EEPF.

For 2013 EEPF through the 2015 EEPF, the high and low forecasts were also produced using the consensus approach. For the 2016 EEPF, the High and Low cases for the On-Peak Energy, Off-Peak Energy and Capacity products were based on the Brattle Group's high and low price scenario work, similar to scenario work that Brattle prepared for the NFAT, and hence did not use a consensus forecast approach. This change was implemented for cost savings reasons.

For the 2013 EEPF through the 2015 EEPF, the Long Term Dependable Product forecast was based on the On-Peak Energy combined with the Capacity Product Forecast, [redacted] which is the approach discussed in the Confidential NFAT response LCA/MH I-433. For the 2016 EEPF, [redacted] to better reflect current market conditions.

For 2017, the forecast was renamed Energy Price Forecast (EPF) and combined with other forecasts (coal, crude oil and domestic prices) the Long Term Dependable Product was removed [redacted] High and Low forecasts were removed from Capacity as they weren't used by stakeholders.

2017 Third-party forecasts



The table below includes export price forecasts received in the spring of 2017 for the MHEB pricing node from four of the independent price forecast consultants. Price forecasts are generally subject to strict confidentiality requirements. The consultants have agreed to provide their forecast to the Public Utilities Board in confidence, provided their names have been removed.

2017 EPF Forecasts

Over the last 12 months, energy markets have continued to evolve in a manner that has put further downward pressure on long term power prices. The primary driver of reduced long term power price expectations is a reduction in long term natural gas prices. Increased renewable development, primarily wind generation, in the MISO market has also contributed to the downward pressure on prices. Significant changes in US energy and environmental policy continue, particularly as a result of the November 2016 election. As of 2017, there are now expectations of decreased coal generation and mining regulations, reduced oil and natural gas exploration regulations, and the elimination carbon pricing programs such as what is contained in the Clean Power Plan.

Manitoba Hydro updated the electricity export price forecast in February 2017 to reflect recent changes in the long term market outlook, referred to as the 2016 Adjusted EEPF. [redacted] Capacity prices are particularly uncertain at this time as coal closures have been delayed under the Trump administration, increasing capacity supply. The MISO Planning Resource (Capacity) Auction for the 2017/18 planning year cleared at the very low price of $1.50/MW-day (US $547.50 per MW-yr or US $0.55 per kW-yr). For IFF16, Manitoba Hydro did not firm up any surplus dependable energy not already sold under long term contract, and did not attribute any capacity revenue to surplus dependable energy not already sold under long term contract.

Carbon Forecasts

The 2017 no longer assumes the Clean Power Plan (CPP) or similar construct was put in place compared to the 2016 Adjusted. Some consultants include additional cases with and without carbon as they aren't sure which future is likely. Some forecasters still include carbon assumptions but to a lower degree.

PUB MFR 79 (Revised)
Export & Domestic Revenue

Manitoba Hydro's electricity export price forecast including the supporting forecasts of any third-party forecasting firms. Explain any changes in Manitoba Hydro's forecasting methodology since the NFAT. Provide additional details of how carbon pricing is incorporated into the forecast.

Portions of the response to this MFR would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information pursuant to Rule 13.

Methodological Changes since 2013 Electricity Export Price Forecast (EEPF)
Manitoba Hydro's consensus methodology to produce the long term Electricity Export Price Forecast (EEPF) Reference case for the On-Peak Energy, Off-Peak Energy and Capacity products remain unchanged from the 2013 EEPF through the 2016 EEPF.

For 2013 EEPF through the 2015 EEPF, the high and low forecasts were also produced using the consensus approach. For the 2016 EEPF, the High and Low cases for the On-Peak Energy, Off-Peak Energy and Capacity products were based on the Brattle Group's high and low price scenario work, similar to scenario work that Brattle prepared for the NFAT, and hence did not use a consensus forecast approach. This change was implemented for cost savings reasons.

For the 2013 EEPF through the 2015 EEPF, the Long Term Dependable Product forecast was based on the On-Peak Energy combined with the Capacity Product Forecast, [redacted], which is the approach discussed in NFAT IR PUB/MH II-301. For the 2016 EEPF, [redacted] to better reflect current market conditions.

2016 Third-party forecasts
The table below includes export price forecasts received in the spring of 2016 for the MHEB pricing node from four of the five independent price forecast consultants. Price forecasts are generally subject to strict confidentiality requirements. All five consultants have agreed

to provide their forecast to the Public Utilities Board in confidence, provided their names have been removed.

2016 (Adjusted) EEPF Forecasts

Over the last 24 months, energy markets have continued to evolve in a manner that has put further downward pressure on long term power prices. The primary driver of reduced long term power price expectations is a reduction in long term natural gas prices. Increased renewable development, primarily wind generation, in the MISO market has also contributed to the downward pressure on prices. The 2016 EEPF was prepared in the spring of 2016. Significant changes in US energy and environmental policy continue, particularly as a result of the November 2016 election. As of spring 2017, there are now expectations of decreased coal generation and mining regulations, reduced oil and natural gas exploration regulations, and the elimination carbon pricing programs such as what is contained in the Clean Power Plan.

Manitoba Hydro updated the electricity export price forecast in February 2017 to reflect recent changes in the long term market outlook, referred to as the 2016 Adjusted EEPF. Overall, electricity export prices are down about 20% relative to the comparable 2015 forecast used for IFF15. Capacity prices are particularly uncertain at this time as coal closures have been delayed under the Trump administration, increasing capacity supply. The MISO Planning Resource (Capacity) Auction for the 2017/18 planning year cleared at the very low price of $1.50/MW-day (US $547.50 per MW-yr or US $0.55 per kW-yr). For IFF16, Manitoba Hydro did not firm up any surplus dependable energy not already sold under long term contract, and did not attribute any capacity revenue to surplus dependable energy not already sold under long term contract.

Carbon Forecasts

The 2016 EEPF assumed the Clean Power Plan (CPP) or similar construct was put in place. The independent price forecast consultants may either directly use a value for carbon in computing their energy prices, or more commonly input a carbon emission limit into their models and have their model solve for a resource mix and related energy and carbon prices required to meet this carbon constraint. The 2016 Adjusted EEPF was prepared primarily on the basis of the decline in natural gas prices, and potential changes to the Clean Power Plan were not explicitly factored into the adjustment.

Preparation of the 2017 Electricity Export Price Forecast is currently underway and will be incorporated in the 2017 Integrated Financial Forecast.

PUB MFR 81
Export & Domestic Revenue

Summary table of Manitoba Hydro's export commitments showing the minimum annual energy obligation, maximum annual achievable energy sales, annual free clean energy credits to buyer, and pricing. [NFAT PUB/MH I-028]

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

Please see the following table for a summary of the minimum annual energy obligation, dependable energy sales, environmental attributes to buyer, and pricing descriptions for dependable export contracts from 2020/21 onwards [NFAT PUB/MH I-028]. Maximum annual achievable energy sales include both the dependable energy sales and any opportunity energy sales, dependent on the provisions specified in the individual contracts and water conditions. Opportunity energy forecasts can be found in PUB MFR 24.

Contract	Capacity	Min. Annual Energy Obligation (GWh)	Dependable Energy Sales (GWh)	Annual Environmental Attributes to Buyer	Energy Pricing (GWh)
NSP 375/325 MW	Summer 375 MW Winter 325 MW				
NSP 125 MW	125 MW Year Round				
MP 250 MW	250 MW Year Round				
WPS 100 MW	100 MW Year Round				
WPS 108 MW	108 MW Year Round				
SP 25 MW	25 MW Year Round				
SP 2020-2040	100 MW Year Round				

PUB MFR 82 (Revised)

Export & Domestic Revenue

Incremental revenues and unit revenues from Keeyask by year, broken down by firm and opportunity sales.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a motion seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

The following schedules have been prepared using simplifying assumptions with respect to the allocation of dependable energy that is used to serve firm sales, and consequently the revenue to attribute to Keeyask energy. There are many operational decisions made to manage reservoir levels and stream flow in order to maximize the overall value of energy generated by an integrated hydro-electric system. These decisions involve optimizing the collective generation output of the hydro-electric facilities on the system, thermal generation, and energy purchases. The output of individual facilities may appear to be sub-optimal in order to benefit the system as a whole. As a result, it is an arbitrary exercise to attribute the generation of an individual facility to serving any of Manitoba demand, the overall portfolio of firm sales or any one firm sale in an integrated hydro-electric system.

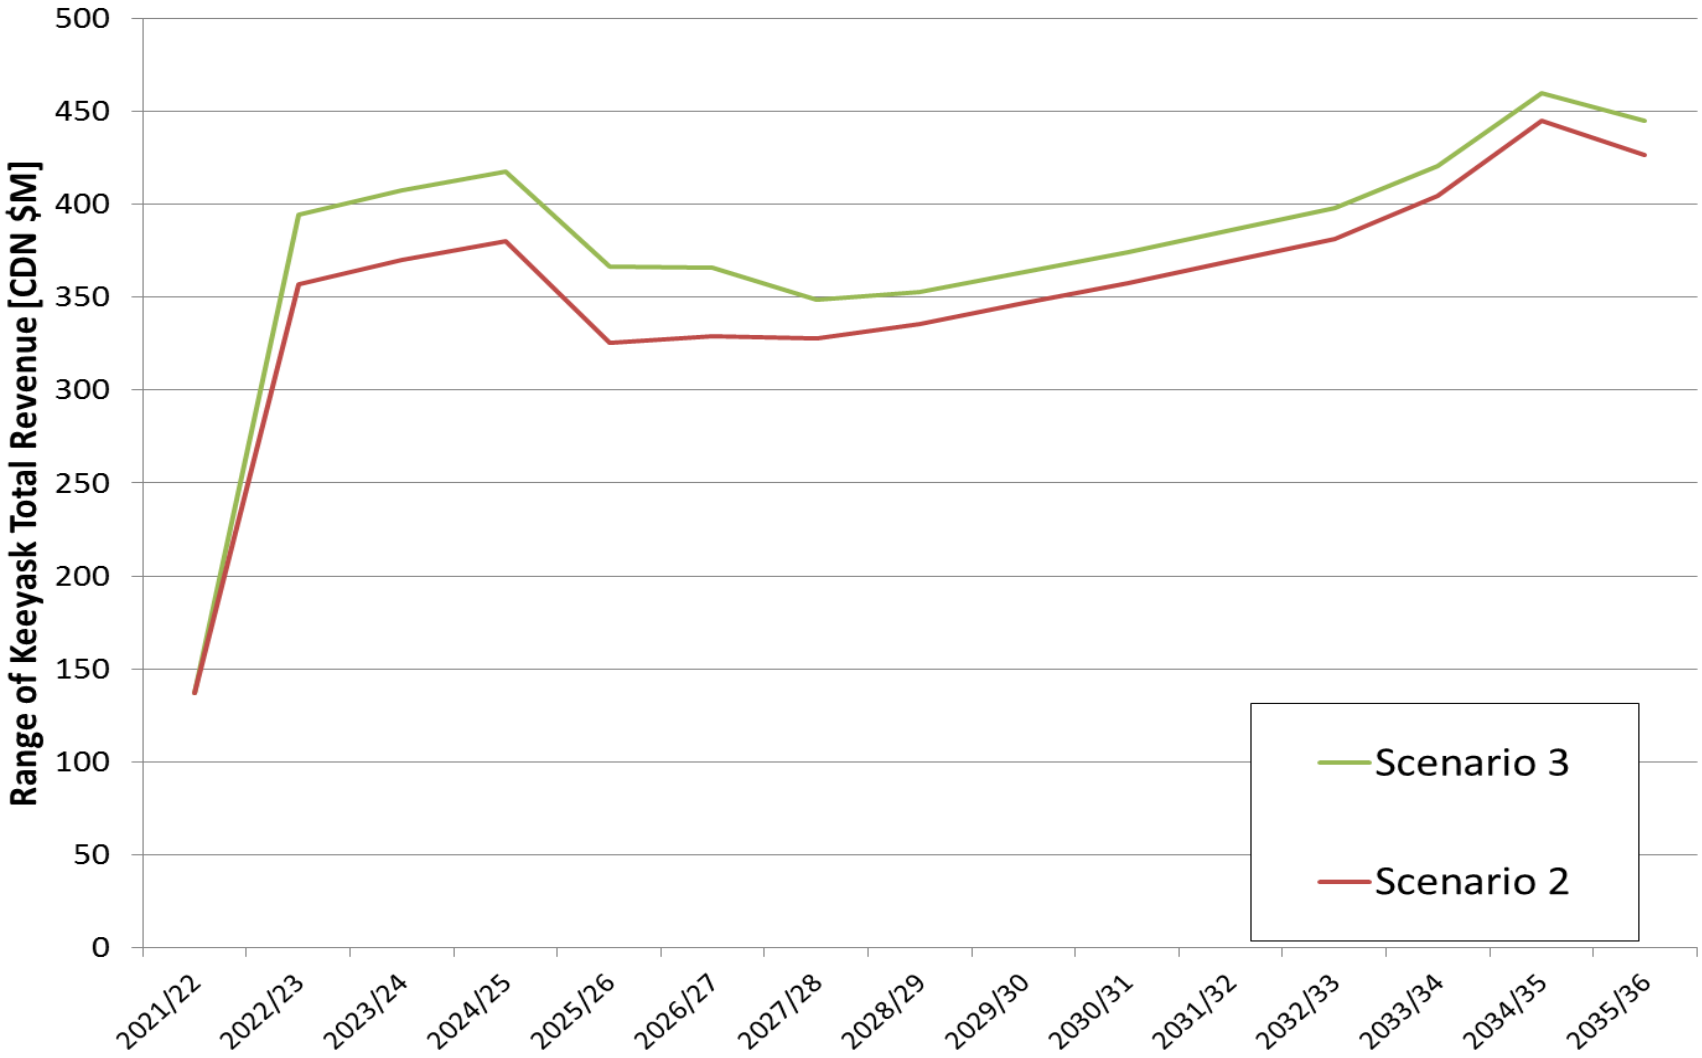
The first schedule calculates the total system average unit revenues (at generation) for domestic, firm export and non-firm export sales. The appropriate average unit revenue is applied to the Keeyask energy allocated for domestic, firm export and non-firm export energy to derive the revenue for each category.

For the purposes of this response, the Keeyask energy has been allocated between firm exports and opportunity exports under three sets of assumptions in order to provide an indicative range of revenue allocations as follows:

- Scenario 1: All of Keeyask energy assumed to be sold as opportunity sales.

- Scenario 2: Keeyask firm energy is assumed to serve the MP250 sale plus an amount of remaining firm contracts based proportionally on Keeyask firm energy to total system firm energy (approximately 10% declining gradually as Manitoba load grows).
- Scenario 3: All of Keeyask firm energy serves firm export sales.

In all three scenarios, Keeyask energy will not be used to serve domestic load until it is approximately needed for load growth. Scenarios 2 and 3 are shown below in **Figure 1** (Scenario 1 is commercially sensitive).



Total System Sales @ Generation

Fiscal	Domestic Revenue [CDN $M]	Domestic Energy [GWh]	Firm Export Revenue [CDN $M]	Non-Firm Export Revenue [CDN $M]	Total Export Revenue [CDN $M]	Firm Export Energy [GWh]	Non-Firm Export Energy [GWh]	Total Export Energy [GWh]	Domestic Average Unit Revenue [CDN $/MWh]	Firm Export Average Unit Revenue [CDN $/MWh]	Non-Firm Export Average Unit Revenue [CDN $/MWh]	Total Export Average Unit Revenue [CDN $/MWh]
2021/22	2 476.7	24 904			681.0			9 710	$ 99.45			$ 70.14

PUB MFR 83

Export & Domestic Revenue

NFAT CSI Exhibit MH-2 and an update showing the anticipated export revenues broken down by contract and by capacity, firm energy, contracted surplus energy, and non-contracted surplus energy.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

Figures 1 through **3** provide a breakdown of forecast dependable revenue by contract. All market priced dependable and surplus energy forecasts are included in revenues provided in PUB MFR 24.

Figure 1 reflects fixed price weekday capacity and dependable energy revenues, which will vary with differences in actual US exchange rate and escalation rates relative to forecast.

Figure 2 reflects fixed price weekend energy revenues, which will also vary with differences in US exchange rates and escalation rates.

Figure 3 is a summary table for all weekday and weekend capacity and dependable energy revenues.

Figure 1. MH Export Contracts and Revenues for Fiscal Year Beginning 2016 – Weekday Dependable Capacity & Energy

PUB MFR 115

Sustaining and Major Capital

For each of the capital projects in the following list, provide:

i. **Justification (technical and economic) for the proposed expenditures.**
ii. **Explanations of why each project must be initiated or completed in the test year(s) as opposed to deferring to a future date.**
iii. **Alternatives to each project, including a "do nothing" alternative, with corresponding costs, benefits or avoided costs, and risks identified.**
iv. **the risk analyses that demonstrate why the project must be completed or initiated in the test year.**
v. **the asset condition assessment for the assets being replaced or supplemented.**

Major New Projects:

1. **Kelsey Improvements and Upgrades**
2. **Kettle Improvements and Upgrades**
3. **Riel 230kV/500kV Station**
4. **Pointe du Bois Spillway Replacement**
5. **Gillam Redevelopment and Expansion Program (GREP)**

Major Generation Projects:

6. **Pointe du Bois Unit and Accessories Replacement**
7. **Pine Falls Units 1-4 Major Overhauls**
8. **Slave Falls Major Overhauls**
9. **Great Falls Unit 4 Overhaul**

Major Transmission Projects:

10. **HVDC Transformer Replacement Program**
11. **Bipole II Thyristor Valve Replacement**
12. **Dorsey Synchronous Condenser Refurbishment**
13. **Lake Winnipeg East System Improvements**
14. **Letellier-St. Vital 230kV Station**

Major Distribution Projects:

15. **Madison New 115kV/24kV Station**
16. **Adelaide New 66kV/12kV Station**
17. **St. Vital 115kV/24kV Station**

Base Capital Projects:

18. Rover 4kV Station Salvage&Feeder Conversion
19. Winnipeg Distribution Infrastructure Requirement
20. Grand Rapids Excitation Program
21. McArthur Falls/Pine Falls Breaker Replacement Program
22. Seven Sisters Protection Upgrades
23. Slave Falls G.S. Creek Spillway Rehabilitation
24. Slave Falls Spillway Rehabilitation
25. 13.2kV Shunt Reactor Replacements
26. Enterprise Asset Management (EAM) Phase 2
27. Bi-Pole I & II Spacer Damper Replacements (Phase 2)
28. HVDC BP2 Smoothing Reactor Replacement
29. Southern AC System Breaker Replacements
30. Transmission Transformer Sustainment Capital Program
31. BP1 & 2 DC Converter Transformer Bushing Replacement
32. HVDC BP2 Valve Hall Wall Bushing Replacement

Please find Capital Project Justification (CPJ) and CPJ Addendum (CPJA) for each of the projects requested at the link below:
https://www.hydro.mb.ca/regulatory_affairs/pdf/electric/general_rate_application_2017/mfrs/pub_mfr_115_attachments.pdf

PUB MFR 123
Keeyask

Provide a breakdown of the revised $8.7 billion cost estimate including reserves, contingencies, escalation, interest, and major contract costs.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

Please see the **Table 1** below.

Table 1 - Keeyask Budget Summary (in Billions $)	
Item	**Approved Budget as of Dec. 31, 2016 (2016$)**
Generating Station Costs	
Final Design Engineering – Hatch	[redacted]
Camp Operations Services - Fox, York and Sodexo Joint Venture	[redacted]
Maintenance Services - Maintenance Services Joint Venture	[redacted]
Main Camp – Britco	[redacted]
South Access Road - Amisk Construction	[redacted]
General Civil Works - BBE Hydro Construction	[redacted]
Reservoir Clearing - Amisk Construction	[redacted]
Spillway Gates, Guides, Hoists, Towers and Monorail Crane - Canmec Industriel Inc.	[redacted]
Intake Gates, Guides and Hoists - Canmec Industriel Inc.	[redacted]
Turbines & Generators - Voith Hydro	[redacted]
Other Generating Station Costs	[redacted]
Generation Outlet Transmission (GOT)	[redacted]
Escalation @ CPI[1]	0.249
Interest [1]	1.749
Base Contingency[1]	0.578
Labour Mgmt Reserve	0.000
Escalation Mgmt Reserve	0.000
Total	**8.726**
First in-service Date	**Aug-21**

[1] Base Contingency in the table above is consistent with what was reported in the response to PUB MFR 147, $0.578 billion. Contingency in the form of schedule delay from the risk analysis accrues an interest cost of $0.294 billion and $0.028 billion respectively and are shown as such in the response to PUB MFR 147. These amounts are included in the interest and escalation values in the table above.

PUB MFR 129
Keeyask

a) **Provide the Keeyask Project Risk Registry detailing the risks to the Keeyask project and Manitoba Hydro's mitigation actions [provided at NFAT]**
b) **Identify and explain whether any of the risks in the Registry with an impact score of Very High have materialized, how Manitoba Hydro addressed the risks, and what the impact of the risk has been and is expected to be on the total project cost and project schedule.**
c) **Identify whether any of the risks in the Registry with impact scores other than Very High have materialized but which have had a financial impact of greater than $20 million or a schedule impact of greater than 6 months. Explain how Manitoba Hydro attempted to mitigate the risks, and what Manitoba Hydro has done or continues to do to manage the impact of the risk.**

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response and the information in the attachment, pursuant to Rule 13.

a) The Keeyask Project Risk Registry [provided at NFAT] is included in the attached document. This document is confidential in its entirety.

b) Table 1. Keeyask Project Very High Risks Materialized. Full Risk Registry details are included in the attached document;

Table 1: Keeyask Very High Risks Materialized

Materialized Very High Risk	Mitigation Undertaken	Impact to Project Cost and/or Schedule	Future Expected Additional Impact
Labour Productivity (including the experience level of the workforce and the contractor's productivity rates assumed within the tender)	[redacted]	The estimated impact is in the [redacted] to [redacted] range. This figure represents both schedule and cost.	The estimated future impact is in the [redacted] to [redacted] range. This figure represents both schedule and cost.
Weather (including record high river flows, formation of stable ice cover in the winter)	1. Early onset of winter and late onset of spring mitigated with additional heating and hoarding to permit extension of concrete season through shoulder months. 2. High flows mitigated with cofferdam top-up of up to 10m of additional height. 3. Stable ice cover achieved through redesigned and reinstalled ice boom each spring as well as relocating of boom. 4. extensive dewatering performed to minimize cofferdam leakage into working areas	The estimated impact is in the [redacted] to [redacted] range. This figure represents both schedule and cost.	The estimated future impact is in the [redacted] to [redacted] range. This figure represents both schedule and cost.

Table 1: Keeyask Very High Risks Materialized

Materialized Very High Risk	Mitigation Undertaken	Impact to Project Cost and/or Schedule	Future Expected Additional Impact
Geotechnical / Geological Conditions More Challenging than Planned (including boreholes not representative of actual site conditions for excavation and borrow pits)	[redacted]	The estimated impact is in the [redacted] to [redacted] range. This figure represents both schedule and cost.	The estimated future impact is in the [redacted] to [redacted] range. This figure represents both schedule and cost.

c) Table 2. Keeyask Project Risks (other than Very High impacts) Realized > $20 million or Schedule > 6 months. Full Risk Registry details are included in the attached document.

Table 2. Keeyask Project Risks Realized

Materialized Risk	Mitigation Undertaken	Continued Mitigation Activities	Impact to Project Cost and/or Schedule
Inaccurate Quality Assurance (QA) / Quality Control (QC) Assessment to Meet Project Requirements	As a result of initial insufficient execution of QC work, additional quality control technicians were brought on to the construction management team to perform on-site inspections. Additionally, several alternate models for ongoing on-site QC/QA activities for this contract were developed and evaluated and a revised model implemented beginning in November 2016.	Continuing with the revised model for on-site QC/QA activities for the General Civil Contract, as well as maintaining a high degree of close collaboration between MH and GCC contractor quality teams. Increasing the presence of MH representatives in GCC supplier fabrication facilities for quality assurance (QA) and expediting of schedule-critical components for items such as: draft tube formwork, superstructure steel, rebar, piping, etc.	[redacted] related to the General Civil Contractor's increased QA/QC staff.
Extension of Service Contracts	[redacted]	[redacted]	[redacted] Delay cost impact added to the service contracts.

PUB MFR 136
Keeyask

Provide any of Manitoba Hydro's reports to senior management detailing the Keeyask general civil works proposals.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in the attachments to this response pursuant to Rule 13.

The following four reports were provided to senior management detailing the Keeyask general civil works proposals and can be found at the link below:
https://www.hydro.mb.ca/regulatory_affairs/pdf/electric/general_rate_application_2017/mfrs/pub_mfr_136_attachments.pdf

1. **243994-0020-PRES-Keeyask GCC Procurement Presentation to MHEB - 2013 11 26**
   Presentation to the Manitoba-Hydro Electric Board ("MHEB") regarding the procurement of the Keeyask General Civil Works Contract – Presented on November 26, 2013.

2. **243994-0020-016203-REC-Keeyask GCC Board Recommendation - 2014 02 11**
   Manitoba Hydro Executive Committee Recommendation to the MHEB to approve the Keeyask General Civil Works Contract.

3. **243994-0020-016203-REC-Keeyask GCC Board Recommendation - 2014 02 25 Rev1**
   Revised Manitoba Hydro-Electric Board Recommendation for award of the Keeyask General Civil Works Contract.

4. **243994-0020-PRES-Keeyask GCC Board Rec Presentation - 2014 02 26**
   Presentation to the Manitoba Hydro-Electric Board regarding the award of the Keeyask General Civil Works Contract – Presented on February 26, 2014.

PUB MFR 139

Keeyask

Provide a summary table of Keeyask turbines and generators proposals as well as any estimates prepared by Manitoba Hydro or third parties.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

The table below summarizes the estimated price from the approved bidders for the Keeyask turbines and generators request for proposal.

Manitoba Hydro prepared an initial estimate value of [redacted] for the turbine and generator contract in 2009 by soliciting budget estimates from major vendors as the basis for approval for early tendering.

	Alstom Option A	Alstom Option B	Andritz	Voith
Proposal price*	[redacted]	[redacted]	[redacted]	[redacted]

*Price in 2011 dollars. Price does not including contingency or taxes.

Voith had the lowest bid price of [redacted], and as result was selected as the successful candidate. Following negotiations, the contract was awarded at [redacted]. The final agreed contract price was subject to Manitoba Hydro-Electric Board approval, which was provided on May 24, 2012.

PUB MFR 140
Keeyask

Provide any of Manitoba Hydro's reports to senior management detailing the Keeyask turbines and generators proposals and bids.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in the attachments to this response pursuant to Rule 13.

The reports provided to senior management detailing the Keeyask turbine and generators proposal and bids are included in the attached document. The attachment consists of two reports:

1. **20101220 – Briefing Note – Keeyask – Pre Qual Design Supply Install Turbines Generators – RFPQ 016320**
   A 2010 briefing note outlining the prequalified candidates to be invited to submit proposals for the turbines and generators contract.

2. **20120425 – EC Rec – Keeyask GS Turbine and Generator Equipment 241**
   A 2012 Executive Committee Recommendation for the approval of a contract award for the design, supply and installation of the turbines and generators equipment to Voith Hydro.

Press F-11 to tab from field to field.

RFPQ 016320 - PRE-QUALIFICATION FOR KEEYASK DESIGN, SUPPLY AND INSTALLATION OF TURBINES AND GENERATORS

BRIEFING NOTE

ISSUE:

Pre-qualification for the design, supply, and installation of turbines and generators for the Keeyask Generating Station project.

RESPONSE / KEY MESSAGES:

- Andritz, Alstom, and Voith will be invited to submit proposals for the work.
- Dongfang Electric Corporation (DEC) will not be invited to submit a proposal; however we are committing to work with this company to address their shortcomings so that they will be successful in future pre-qualifications.

BACKGROUND:

Four companies responded to RFPQ 016320.

Andritz, Alstom, and Voith have adequately demonstrated that they have the commercial and technical capacity and experience to carry out the design, supply, and installation of the Keeyask Turbine and Generator work. These three companies have passed all of our pass/fail criteria for safety, experience, and technical capability.

DEC did not qualify to be invited to propose for the Keeyask turbines and generators because they have no references for installation work in North America, no installation safety plan or statistics and no existing relationship with a North American firm capable of carrying out the installation. Although DEC has demonstrated that they are capable of designing and supplying hydraulic turbines and generators, they are not prepared to manage the installation portion of the job. This represents safety and schedule risks that are not tolerable.

It is in Manitoba Hydro's best interest to have DEC as a qualified proponent on future work. New Generation Construction Division will invite DEC to meet in Winnipeg to review their response and communicate where they need to improve to be qualified in the future. Our goal is to have DEC fully qualified to provide a proposal for Conawapa and to invite DEC to compete for equipment supply contracts for overhaul projects where installation is not part of the contractor's scope of work.

EXECUTIVE COMMITTEE RECOMMENDATION

SUBJECT:

Keeyask Generating Station Project –Turbine and Generator Equipment

RECOMMENDATION:

Executive Committee approve for submission to the Manitoba Hydro Electric Board to approve a contract for the design, supply, and installation of turbine and generator equipment to Voith Hydro at a price not to exceed $[redacted] Million including contingency and excluding taxes and future escalation.

BACKGROUND:

The Keeyask Generating Station project requires seven turbine and generator units. Request for Proposals 016321 was issued in February 2011 for the design, supply, and installation of turbines and generators to three pre-qualified proponents, Voith Hydro, Alstom, and Andritz Hydro.

Voith Hydro is headquartered in Heidenheim Germany with a Canadian regional office in Brossard, Quebec and a representative based in Manitoba. Alstom and Andritz are based in France and Austria, respectively. Proposals were received from the proponents in October 2011. The evaluation process considered numerous criteria and the result was largely determined by the evaluated cost. Evaluated cost is comprised of construction cost, turbine and generator performance and the contract price. Voith Hydro has the lowest construction cost, comparable performance and the lowest lump sum contract price at $[redacted] Million. Their bid was $[redacted] Million below the second place proposal.

Negotiations with Voith Hydro commenced in December 2011 and have reached substantial completion. All significant technical and commercial issues and the allocation of contract risk have been resolved and account for the difference between the initial proposal price and the total price of this recommendation. The contractual agreement authorizes a model test for a price of $[redacted] Million commencing immediately with the balance of the work to be separately authorized upon final approval of the construction of the Keeyask Generating Station project in 2014.

JUSTIFICATION:

Voith Hydro submitted a proposal that represents the lowest price and best value to Manitoba Hydro. The contract price is within the project budget for the work.

RISKS:

The immediate financial commitment is $[redacted] Million for model testing and is required to finalize water passage geometry and validate the performance guarantees. The remaining $[redacted] Million does not represent a risk to Manitoba Hydro as there is no obligation to proceed until the Keeyask Project is formally approved in 2014. Furthermore, we may cancel the contract for convenience at any time.

Voith Hydro's supply chain plan creates currency risk due to manufacturing in Brazil and China. A risk management plan has been established that will limit Manitoba Hydro's exposure to foreign currency risk. Residual currency risk is accounted for with contingency and is included in the total price of this recommendation.

New Generation Construction
Power Supply
2012 04 25

PUB MFR 142
Keeyask

Provide a summary of the forecast contract values underpinning the $6.5 billion Keeyask capital cost, actual expenditures to date, and forecast expenditure at completion. Explain all variances between the forecast contract values and the forecast expenditures at completion.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

The table below summarizes the forecast contract values that underpinned the $6.5 billion Keeyask capital cost, actual expenditures to date and forecast at completion (the confidential portions of this response have been highlighted). Note that only contracts with values greater than $ [redacted] illion are included as this represents 90% of the total value of open contracts.

Table 1 Summary of Forecasted Contract Values
As at April 30, 2017
(in millions of dollars)

	Forecasted Contract Value	Actual costs to date	Forecast at Completion
Final Design Engineering – *Hatch*	[redacted]	[redacted]	[redacted]
Camp Operations Services - *Fox, York and Sodexo Joint Venture*	[redacted]	[redacted]	[redacted]
Maintenance Services - *Maintenance Services Joint Venture*	[redacted]	[redacted]	[redacted]
Main Camp – *Britco*	[redacted]	[redacted]	[redacted]
Work Areas Site Development - *Amisk Construction*	[redacted]	[redacted]	[redacted]
South Access Road - *Amisk Construction*	[redacted]	[redacted]	[redacted]
General Civil Works - *BBE Hydro Construction*	[redacted]	[redacted]	[redacted]
Reservoir Clearing - *Amisk Construction*	[redacted]	[redacted]	[redacted]
Spillway Gates, Guides, Hoists, Towers and Monorail Crane - *Canmec Industriel Inc.*	[redacted]	[redacted]	[redacted]
Intake Gates, Guides and Hoists - *Canmec Industriel Inc.*	[redacted]	[redacted]	[redacted]
Turbines & Generators - *Voith Hydro*	[redacted]	[redacted]	[redacted]

Note: Forecast at Completion and Actual Costs to date for South Access Road and Reservoir Clearing exclude scope relating to transmission

Variance Explanation:

The following points summarize the variances between the forecast at completion and the forecasted contract value underpinning the $6.5 billion.

- Final Design Engineering: increased as a result of the schedule extension and new scope.
- Camp Operations Services: increased as a result of an increased workforce and the schedule extension.
- Maintenance Services: increased as a result of an increased workforce and the schedule extension.
- South Access Road: increased as a result of quantity variance.
- General Civil Works: increased as a result of unachievable productivity rates provided in the bid, delayed ramp up in 2016 and more challenging geotechnical and geological conditions than anticipated.
- Reservoir Clearing: increased as a result of quantity variance.
- Spillway Gates, Guides, Hoists, Towers and Monorail Crane: increased as a result of schedule extension which caused additional costs related to storage, handling,

delivery and installation; and the addition of new scope to include the installation of spillway Stoplog guides and sills.

- Intake Gates, Guides and Hoists: increased as a result of schedule extension which caused additional costs related to storage, handling, delivery and installation; and the addition of new scope to include the installation of trashrack guides, bulkhead guides, draft tube guides and associated lintels and sills and testing of bulkhead gates and installation of trashracks.
- Turbines and Generators: increased as a result of the schedule extension which caused additional costs related to storage, handling, delivery and installation as well as staff and expenses.

PUB MFR 143
Keeyask

Explain how Manitoba Hydro calculated productivity in each of the Keeyask contracts listed in MFR#142. Provide forecast versus actual productivity for each contract by construction season. Explain any variances and identify measures implemented by Manitoba Hydro to mitigate the variances.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

On the Keeyask Project, Manitoba Hydro regularly monitors and tracks productivity for cost reimbursable forms of contract such as the General Civil Contract and the Final Design Engineering Contract. Due to the nature of other forms of contracts (such as fixed price and unit price contracts), productivity determinations are not as critical because the contractor owns this risk. On fixed price and unit price contracts, Manitoba Hydro's monitoring efforts shift to ensuring that the contractor is maintaining schedule, progressing the work and proactively mitigating schedule risks.

General Civil Contract

The General Civil Contract is a cost reimbursable target-priced contract and as such, the productivity rates are critically important to Manitoba Hydro. In this form of contract, the Contractor's risk is limited to the profit, while Manitoba Hydro retains the responsibility for all costs to execute the scope of work. Based on this contract structure, the contractor fee is at risk – in other words, profit is earned if the cost of the work is less than the target, but the profit is eroded if the contractor's cost of execution exceeds the target price. As a result, Manitoba Hydro has been monitoring actual productivity against forecasted productivity on specific work fronts including concrete and earthworks, since the start of construction.

Forecasted productivity rates were provided by contractors in their initial bid for concrete and earthworks. BBE's forecasted rates for concrete work on the Keeyask Project were based on the productivity rates achieved during the construction of the Limestone Generating Station Project. The estimated productivity rate considers cycle times

calculated for concrete related activities including placement of formwork, tying of rebar, installing embedments, batching of concrete, placement of concrete, formwork removal, green cutting, etc. Other variables considered include concrete placing methods (pumps, telebelts, buckets, etc.), and the mix of crews selected to achieve optimum rates for concrete placement.

Forecasted earthworks productivity was established through the Contractor's previous experience on other projects. The rates were developed using cycle time calculations based on the selection of appropriate earthmoving equipment, haul distances for moving material between the source (excavations, quarries, borrow areas, etc.) and the destination (excavated material placement areas, dams, dyke, crusher, etc). Based on the cycle time calculations the right mix of equipment, crews (excavators, haul trucks, etc.) were selected to achieve optimum production rates for moving material.

See the Table 1 below for forecasted versus actual productivity for each construction season.

Table 1: Productivity Rates- 2016 Construction Season

	2014		2015		2016	
Work front	**Forecasted**	**Actual**	**Forecasted**	**Actual**	**Forecasted**	**Actual**
Concrete*	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
Earthworks**	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

*These productivities do not include the supply of concrete.

**The forecast productivity for earthworks is different for each structure so a range is provided. The earthworks productivities vary based on the class of material, how the material is being placed, haul distance, equipment used, etc.

Results from the first season of concrete placement indicated that BBE's productivity assumptions were overly optimistic. The Contractor's bid for the Keeyask Project relied heavily on their experience with the Limestone Project and experience on the project-to-

date has demonstrated that those productivity rates are not achievable in the current labour market with the prevailing mega-project environment in Canada. Many factors affect the variance in productivity rates including workforce experience, complexity of the work, work environment (including rotational schedules), increased regulatory requirements for safety and the environment and planning and execution at the work fronts causing an increase in the number of person-hours per cubic meter of concrete poured. In order to further understand the cause of concrete productivity variances, the Project team undertook a root cause analysis in the fall of 2016. The recommendations from this analysis form the basis of recovery planning also referenced in PUB MFR 122.

The Contractor has been able to achieve forecast earthworks productivity rates; however, the earthworks schedule was impacted due to challenges in river management, geotechnical subsurface conditions, exploiting the borrow sources and other technical requirements.

Final Design Engineering Contract

The Final Design Engineering Contract, awarded to Hatch, is a cost reimbursable contract with a guaranteed maximum upset limit. As a result of the contract structure, the contractor assumes all labour productivity risk associated with the scope within the contracts limits. The contractor is at risk for any productivity issues resulting in cost overruns beyond the limit. Manitoba Hydro monitors productivity to ensure activities remain on schedule by utilizing the Cost Performance Index to measure the value of the work completed compared to the actual cost spent. While monitoring of productivity is the contractor's responsibility, the rate of development of the detailed design of the Project is critical to the execution of the work. Please see **Table 2** below for the productivity rate.

Table 2: Productivity Rates - since 2014.

	Forecasted	Actual
CPI*	[redacted]	[redacted]

*The forecasted and actual productivity is based on an average annual CPI for all the work packages.

Since the Project's inception no material variances between forecasted versus actual productivity have occurred.

PUB MFR 144
Keeyask

Contrast the productivity for each major Keeyask contract with those of each major Wuskwatim contract.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

The comparable major contracts for the Keeyask and Wuskwatim projects are the General Civil Contract and the Turbines and Generators Contract. BBE is the General Civil Contractor for Keeyask while O-N-E was the General Civil Contractor for Wuskwatim. Voith Hydro is the Turbines and Generators Contractor for Keeyask while Andritz Hydro was the Turbines and Generators Contractor for Wuskwatim.

Each contractor develops different means and methods of construction based on their past experiences making a direct comparison of productivity subjective. During construction, each project experiences its own challenges due to the site geology, the volume of work being executed, the available labor force, and the quality of the engineering design and/or specifications required to complete the work. As a result, the productivity levels may not be uniformly comparable from one contractor or project to another.

Additionally, Wuskwatim's productivity is based on the average levels experienced throughout the life of the Project. Keeyask's productivity is based on the productivity levels experienced to date and most likely will vary during the course of the remaining work. Productivity is likely to improve over the life of the project as workers gain additional experience. Accordingly, it would not be an objective comparison to contrast the current Keeyask levels to those of Wuskwatim.

General Civil Contract

The general civil contracts were awarded as cost reimbursable with a target price on both projects. Based on the contract structure, Manitoba Hydro assumes the risk for productivity and associated cost overruns. Manitoba Hydro currently monitors the contractor's actual

productivity on specific work fronts; including concrete and earthworks. A similar monitoring system was carried out on Wuskwatim. See **Figure 1** for the productivity figures for Keeyask and Wuskwatim (the confidential portions of this response have been highlighted).

Figure 1: Productivity Comparison – General Civil Contract

Project	Actual Concrete Productivity*	Actual Earthworks Productivity
Wuskwatim	[redacted]	[redacted]
Keeyask	[redacted]	[redacted]

*Productivities do not include the supply of concrete

**Average concrete productivity over the life of the Project

***Concrete work started in the 2016 construction season. Values only include 2016 information

****Average productivity over the life of the Project. The productivity ranges due to factors such as the class of material, how the material is being placed, haul distance, and equipment used.

Turbines and Generators Contract

The Turbines and Generators contracts on both the Keeyask and Wuskwatim projects were awarded as a performance-based milestone fixed price contracts. Due to the nature of these types of contracts, the contractor assumes responsibility for labour productivity and required mitigation strategies, including increasing the labour force. Manitoba Hydro's role is limited to ensuring the contractor is maintaining the schedule and mitigating schedule risks.

Previously, the Wuskwatim contract was completed on time and currently the Turbines and Generator work on the Keeyask Project remains on track to meet the current schedule. Productivity rate calculations were not prepared for Wuskwatim and are not undertaken for Keeyask.

PUB MFR 145

Keeyask

Provide a summary of the contingency, management reserve, and escalation reserve original budget, draw-down, remaining, and allocated amounts for the Keeyask project. Provide details of the draw-down and allocation amounts by indicating to which contract they are assigned and for what purpose. Explain how contingency, management reserve, and escalation reserve are applied.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

Table 1 provides a summary of the approved contingency, draw downs and contingency remaining in the revised Keeyask budget.

Table 1: Contingency Allocations and Drawdowns (in Millions $)

	Contingency (Based on approved CPJA #5)	Draw-down (Jan 1 - Apr 30, 2017)	Remaining
Contingency unallocated	[redacted]	[redacted]	[redacted]
Contingency allocated	[redacted]	[redacted]	[redacted]
Sub Total (Base Contingency)	578	[redacted]	[redacted]
Escalation	28	[redacted]	[redacted]
Interest	294	[redacted]	[redacted]
Total Contingency	900	[redacted]	[redacted]
Management Reserve	0	0	0
Escalation Reserve	0	0	0
Total	900	[redacted]	[redacted]

The original contingency budget of $307 million has been expended due to significant risks experienced since the start of construction. Capital Project Justification Addendum #5 (CPJA) revised the Keeyask budget to $8.7 billion and re-established a contingency budget of $900 million to account for the risks remaining on the project. Within the revised Keeyask budget of $8.7 billion, there is no budget for management reserves and similarly there is no

budget for escalation reserves. Additional details are provided in the response to PUB MFR 147

Table 2 Contingency Allocations by Contract (in Millions $)			
Contract	**Contingency (Based on CPJA#5)**	**Draw-down (Jan 1 to Apr 30, 2017)**	**Remaining**
Final Design Engineering - Hatch	[redacted]	[redacted]	[redacted]
Camp Operations Services - Fox, York and Sodexo Joint Venture	[redacted]	[redacted]	[redacted]
Maintenance Services - Maintenance Services Joint Venture	[redacted]	[redacted]	[redacted]
Main Camp - Britco	[redacted]	[redacted]	[redacted]
South Access Road - Amisk Construction	[redacted]	[redacted]	[redacted]
General Civil Works - BBE Hydro Construction	[redacted]	[redacted]	[redacted]
Reservoir Clearing - Amisk Construction	[redacted]	[redacted]	[redacted]
Spillway Gates, Guides, Hoists, Towers and Monorail Crane - Canmec Industriel Inc.	[redacted]	[redacted]	[redacted]
Intake Gates, Guides and Hoists - Canmec Industriel Inc.	[redacted]	[redacted]	[redacted]
Turbines & Generators - Voith Hydro	[redacted]	[redacted]	[redacted]
Other Generating Station Allocated Contingency	[redacted]	[redacted]	[redacted]
Unallocated Contingency	[redacted]	[redacted]	[redacted]
Total Base Contingency	578.00	[redacted]	[redacted]
[redacted]			

Contingency is allocated to contracts to cover risks and is drawn down via approved changes to the contract. Unallocated contingency is what remains after the contingency pool has been allocated to specific contracts. The amount remaining is used to manage other project-related risks as they arise. Contract risks are further detailed in the risk register referenced in MFR 129.

There are no escalation reserves and management reserves within the revised budget.

PUB MFR 155

Bipole III

Provide the original Capital Project Justifications (2001) and all subsequent addenda for the Transmission Line, Converter Stations, Collector Lines, Community Development Initiative, Bipole III Western Route, and Converter Upgrade to 2300 MW. Include any CPJ addenda recommended for implementation but not approved by Executive Committee or MHEB.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

The following CPJ / CPJ Addenda documents prepared for Bipole III are provided as Attachment 1 to this response.

			ORIGINATING

Project Description

An 800 km, ±500 kV dc transmission line is constructed between the proposed Bipole I and II emergency paralleling site near Radisson and the proposed Riel site. A dc paralleling line is constructed between the proposed Riel site and Dorsey Station to provide HVDC transmission during an Interlake corridor loss. Before Bipole III is in service, the new line will be used for Bipole II and the existing Bipole I & II lines are paralleled for Bipole I, resulting in loss savings of about 78 MW at maximum generation.

Recommendation

Build an 800 km, +/-500 kV dc transmission line between the proposed Bipole I and II emergency paralleling site near Radisson and the proposed Riel site, and build a dc paralleling line between the proposed Riel site and Dorsey station.

Project Scope

Includes the 500 kV dc transmission line from near Radisson to Riel, and a paralleling line from Riel to Dorsey.

Background

This project is being recommended based on the economics of up to 78 MW of HVDC transmission power loss savings and reliability benefits discussed in the report, Manitoba Hydro Transmission System Reliability and Enhancement Options, which will be released in the fall of 2001.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals

This transmission only alternative provides increased reliability to the Manitoba Hydro system. In normal steady-state operation, this item provides an increase in southern power of about 78 MW at full load due to decreased HVDC transmission losses.

ANALYSIS OF ALTERNATIVES:

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Henday-Riel ±500 kV HVDC Line

Recommendation (This section is required for all Addendums).

Change the location of the northern termination of the dc transmission line, from Radisson to Henday, thereby increasing the line length by 20 km for a revised length of 820 km. The revised total net cost of the complex is now $360,161,000, an increase of $8,245,000 over the previously approved budget.

Project Scope (This section is be filled out only if there is a change to the scope).

Build an 820 km, ±500 kV dc transmission line between Henday and the proposed Riel site, rather than an 800 km line between Radisson and Riel.

Background (This section is be filled out only if there is information relevant to the recommendation).

The original northern termination of the line at a remote site near Radisson was consistent with an earlier plan to locate the Bipole III rectifier at the future Gull generating station site. Further studies have resulted in a recommendation that the Bipole III rectifier be located at the future Conawapa generating station site, since it is more consistent with the ultimate 2000 MW rating of Bipole III.
The HVdc Task Force at the May 9, 2003 meeting approved this recommendation.
Since the Bipole III HVdc line was justified based on loss saving while connected to Bipole II, the line presently only needs to be built to the Bipole II rectifier site at Henday. The line would then be extended to the Conawapa generating station site when the Bipole III converters are installed at that site. The future location of the Bipole III rectifier at Conawapa can still accommodate a possible Gull generating station first generation development sequence.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is be filled out only if there is a change to the recommended alternative).

The termination of the Bipole III HVdc line at Henday reduces the risk associated with outages of the Bipole I & II HVdc lines, because the connection of Bipole I & II converters to the Bipole III line can be done in a staffed station with switches, rather than at a remote location with manual connections made by a line crew. The termination of the Bipole III HVdc line at Henday does not lead to the risk of all three HVdc lines crossing at one point, which is a difficult and expensive risk to mitigate.

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	For current corporate rates see G911 %	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	**NPV** **(= PV of BENEFITS - PV of COSTS)**

Other Alternatives Considered	NPV (= PV of BENEFITS - PV of COSTS)

Risk Analysis - (This section is be filled out only if there is a change to the project risk).

RESOURCE REQUIREMENTS AND CAPITAL BUDGET ESTIMATE:

Resource Requirements (This section is be filled out only if there is a change to the resource requirements).

Total Budget - (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Approved CPJ Budget (after Rollover to CEF02-2)	Current CEF Budget (after Rollover to CEF02-2)	Revised CPJ Budget	CPJ Increase (Decrease)	CEF/ Revised CPJ Increase (Decrease)
Prev.	$ 1,664 *	$ 1,664 *	$ 1,664 *	$ 0	$ 0

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Henday-Riel ±500 kV HVDC Line

Recommendation (This section is required for all Addendums).

Defer $2,462,000 worth of budget requirements from 2003/04 to future years.

Project Scope (This section is be filled out only if there is a change to the scope).

Background (This section is be filled out only if there is information relevant to the recommendation).

Reduction to 2003/04 was made to help offset an unexpected over-expenditure on one of Transmission & Distribution's other complexes, namely Communications (complex #1.1.2.6.2.1 – project #P2993 – Interlake and Nelson River Communications-Fibre).

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is be filled out only if there is a change to the recommended alternative).

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).
Henday-Riel ±500 kV HVDC Line

Recommendation (This section is required for all Addendums).
The extended environmental process has resulted in a delay in the expected license date by two years and thus it is recommended that the in-service date be delayed by two years from 2010 10 to 2012 10.

Project Scope (This section is be filled out only if there is a change to the scope).

Background (This section is be filled out only if there is information relevant to the recommendation).

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is be filled out only if there is a change to the recommended alternative).

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	For current corporate rates see G911 %	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	**NPV** (= PV of BENEFITS - PV of COSTS)

Other Alternatives Considered	**NPV** (= PV of BENEFITS - PV of COSTS)

Risk Analysis - (This section is be filled out only if there is a change to the project risk).
The Henday-Riel ±500 kV HVDC Line provides additional southern generation through loss savings, and also a reliability benefit to the Manitoba Hydro system. Any delay to the ISD means additional risk to the system for the duration of the delay. Riel station and Bipole III share common elements, so the environmental strategy must be considered as a whole.

RESOURCE REQUIREMENTS AND CAPITAL BUDGET ESTIMATE:

Resource Requirements (This section is be filled out only if there is a change to the resource requirements).

Total Budget - (This section is required for all Addendums).

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III with the HVdc line routed west of Lakes Winnipegosis and Manitoba.

Recommendation (This section is required for all Addendums).

Manitoba Hydro has been asked to look at other alternatives for routing the Bipole III transmission line from the east side of Lake Winnipeg. In the interim, a west side of the province (west of Lakes Winnipegosis and Manitoba) routed Bipole III transmission line from Conawapa Station to Riel Station with 2000 MW of HVdc converters at both stations is being advanced as a placeholder in the budget. In October 2006, a recommendation for an alternative to the east-side of Lake Winnipeg routed Bipole III line for Manitoba Hydro system reliability will be made. Also, the recommendation will address the reliability of equipment associated with common mode HVdc station outages in addition to common mode outages of the HVdc lines. The October 2006 recommendation may be quite different from the above.

Project Scope (This section is be filled out only if there is a change to the scope).

The Bipole III scheme as a placeholder in the budget includes:

- An HVdc transmission line of a minimum length of 1295 km from Riel Converter Station to Conawapa Converter Station.
- A converter station with 2000 MW of converters at Conawapa.
- Six ac transmission lines approximately 30 km long to connect the Conawapa Converter Station to Henday Converter Station (three of these lines are not necessary with Conawapa generation development).
- A converter station with 2000 MW of converters at Riel, including 3 synchronous compensators

A paralleling line between Dorsey Converter Station and Riel Converter Station is not required as paralleling with Bipole II will not be possible and the western-routed Bipole III line will not be usable by Bipole I or Bipole II.

Background (This section is be filled out only if there is information relevant to the recommendation).

A Bipole III transmission line routed on the east side of Lake Winnipeg was originally recommended and approved (I.M. Node Number 1.5.1.2.2.1). The Board of Manitoba Hydro has directed that alternative transmission line (Bipole III) routes other than the east side of Lake Winnipeg be evaluated.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is be filled out only if there is a change to the recommended alternative).

Due to the severe critical risk to the Province and Corporation of not mitigating an Interlake (Bipole I&II) corridor outage or a Dorsey station common mode outage, this budget item is being included as a placeholder pending an October 2006 recommendation of an alternative to an east-side of Lake Winnipeg routed Bipole III line.

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	For current corporate rates see G911 %	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	NPV (= PV of BENEFITS - PV of COSTS)

Other Alternatives Considered	NPV (= PV of BENEFITS - PV of COSTS)
An East-side routed Bipole III line.	

Risk Analysis - (This section is be filled out only if there is a change to the project risk).

The risks associated with this project are as follows:

1) Technically inferior solution to the eastern-routed Bipole III line with converters; less load served on average in situations for which the line is to be built.
2) Less reliable solution since the west side scheme would still only provide an outlet of 2000 MW of northern generation in the event of another Bipole I&II corridor outage, while an east side Bipole III line would allow the paralleling of Bipole I&II converters on the Bipole III line providing the outlet of 3300 MW of northern generation. Also the longer line length associated with a western route increases exposure to outages on Bipole III.
3) A delayed ISD over an eastern routed line, placing Manitoba customers at greater risk for a longer period of time. A western line will likely take longer for conducting environmental assessment/public work consultation and will take more time to build. The earliest date for initiation of environmental work is after the October 2006 recommendation of an alternative to the east of Lake Winnipeg Bipole III line.
4) Justification at a public hearing by Manitoba Hydro of the westerly routing concept vs. an easterly route concept will be problematic.
5) Although 1265 km is used as a proxy minimum for the line length, it is likely the actually built line will be considerably longer with more cost and losses, due to efforts to maximize separation from the existing HVDC right of way.
6) The siting of Bipole III in a western corridor would make the placement of the next north/south transmission line very problematic with the east of Lake Winnipeg routing being blocked and the Interlake routing presenting significant risk of a common mode outage.

There is a risk of further delays in the expected in-service date as the siting of the southern station at Riel may need to be re-evaluated with a western routing of Bipole III

RESOURCE REQUIREMENTS AND CAPITAL BUDGET ESTIMATE:

Resource Requirements (This section is be filled out only if there is a change to the resource requirements).

To be determined.

Total Budget - (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III with the HVdc line routed west of Lakes Winnipegosis and Manitoba.

Recommendation (This section is required for all Addendums).

Increase the proposed budget for the Bipole III western route budget placeholder by $367,940,000 to $2,247,835,000.

Project Scope (This section is be filled out only if there is a change to the scope).

No Change.

Background (This section is be filled out only if there is information relevant to the recommendation).

The estimate is higher due to:

- an increase in line length for the western route as refined for the October 2006 report, from 1296 km to 1341 km;
- moderate increases being experienced in transmission line material costs due to price volatility in the marketplace (approx. 20%);
- considerable increases being experienced in transmission line construction costs, doubling since Addendum #04 due to market conditions (approx. 40% increase applied in late 2005 due to factors such as increased labour and fuel costs, and a further 50% increase applied in 2007 due to recent experience with tendered prices for the Wuskwatim-Birchtree transmission line and further upward trends in construction costs across western Canada), and
- resultant increases in interest and escalation.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Western Route 500kV HVdc Transmission Line & 2000MW Converters

Recommendation (This section is required for all Addendums).

Increase the budget for the Bipole III complex by $1706 million to a revised total of $3954 million, in order to incorporate the following:

- review of estimates for all components of the complex (total increase of $739 million to the base estimate, 2009$),
- inclusion of contingency for all components of the complex (total increase of $525 million to the base estimate, 2009$), and
- the resultant changes to interest and escalation (increase of $442 million).

Project Scope (This section is be filled out only if there is a change to the scope).

No change to the high-level concept at this time. Potential future changes to scope (cost and schedule) that may be forthcoming in a subsequent CPJ Addendum (i.e., are not part of this submission) are as follows:

- Changes to the existing transmission network or at existing generation facilities that may be necessary as a result of the Bipole III transmission line and converters being added to the system.
- Changes that may be necessary for an HVdc transmission line and converters rated at 2500MW.
- Application of Transmission Development Fund (TDF) and/or Adverse Effects policies that may be recommended for the Bipole III complex.

Background (This section is be filled out only if there is information relevant to the recommendation).

CPJ Addendum #04, submitted in April 2005, was the first introduction to the Capital Expenditure Forecast of a western-routed 500kV HVdc transmission line with 2000MW of converters. The budget submitted with CPJ Addendum #04 was a placeholder only, pending completion of studies by System Planning, and was based on a 2001 estimate prepared by Teshmont Consultants.

CPJ Addendum #05, submitted in May 2007, addressed an increase of 45km to the length of the transmission line, as well as increases being experienced in transmission line material and construction costs due to market prices. The cost of licensing, property and converters were not updated at that time, nor was contingency identified in that estimate.

This CPJ Addendum #06 covers re-estimates that have been prepared since either the 2001 Teshmont report or the May 2007 CPJ Addendum, for all components of the Bipole III complex. These re-estimates result in an increase of $739 million to the base estimate, detailed as follows (all amounts are in 2009$).

TRANSMISSION-RELATED ITEMS (total increase of $142 million to base estimate):

a) <u>500kV dc Transmission Line</u>
The base estimate for the transmission line has increased by $72 million due to a design change from double to triple conductor, in order to lower the surface field gradient to accepted worldwide practices and thus minimize flashovers, and by $25 million due to the application of the Transmission Line Agreement (TLA), or unionization of labour.

Background (This section is be filled out only if there is information relevant to the recommendation).

b) Northern 230kV Collector Lines
Reflects increases since 2001 to both construction material and labour costs ($23 million). Also reflects an increase of 39km to the overall length of transmission line construction required ($9 million). In addition, the line from Limestone to Conawapa, previously assumed to be established with the construction power for the Conawapa G.S, is now required first for construction power of the Northern Converter Station ($9 million).

c) Licensing & Environmental Assessment
Costs have increased by $2 million due to more comprehensive aboriginal and community consultations.

d) Sectionalize 230kV Transmission Line R49R at Riel
This is a new item, estimated at $2 million. R49R sectionalization is required to accommodate and reliably transmit a 2000MW Bipole III at Riel. This had been recommenced with the Riel Sectionalization project but was deferred to coincide with Bipole III converters.

In addition to the above, the risk assessment yielded a contingency estimate of $143 million (see the Risk Analysis section for details). These changes, along with an increase of $57 million for interest and escalation, make the total net increase equal to $343 million and the revised total net cost equal to $1477 million, for the transmission-related portion of the complex.

CONVERTER-RELATED ITEMS (total increase of $596 million to base estimate):

e) Riel Converter Station
Converter and HVdc equipment costs remain relatively unchanged; however, the costs for synchronous condensers have more than doubled. Studies have also recommended the addition of a fourth synchronous condenser for the 2000MW Bipole ($193 million combined increase). Other increases to the base estimate include: higher construction management, project management and engineering costs, which were not fully considered in the 2001 placeholder ($49 million); and increase in site size, development and infrastructure costs driven by safety and maintenance requirements, as well as additional facilities for fast drain and oil spill containment systems ($29 million).

f) Northern Converter Station at Conawapa
Converter and HVdc equipment costs remain relatively unchanged. Changes to the base cost are as a result of: inclusion of the construction camp previously assumed to be built and covered by the Conawapa G.S. Project ($38 million); higher construction management, project management and engineering costs not fully considered in the 2001 placeholder ($61 million), and site size increase of 2.2 times that assumed in 2001 and the associated increase in site development and infrastructure costs driven by safety and maintenance requirements, as well as additional facilities for fast drain and oil spill containment systems ($54 million).

g) Riel Site Development for Converters & 230kV Switchyard
Part of the switchyard will be established under a separate project, Riel Sectionalization; however, the concept was developed to more easily accommodate the future HVdc requirements (5 bays and 12 breakers vs. just 3 bays and 9 breakers) and reconfiguration to accommodate a transfer bus scheme, therefore 50% of the equipment costs are included in this estimate ($33 million). An expansion of the 230kV switchyard is required with Bipole III to output the 2000MW, establishing 4 new bays and 11 breakers, and required terminations for HVdc equipment are included in the base estimate ($51

Background (This section is be filled out only if there is information relevant to the recommendation).

million). Half of the site development costs at Riel are included here as attributable to the Converter Station and 230 Switchyard, whereas the 2001 report did not have any site development costs (assumed it would be developed at Riel prior to Bipole III). Like the northern converter station, the site size at Riel has increased (approx. 2.6 times) due to maintenance and security requirements, changes to oil spill containment systems, and planning the layout to accommodate for future additions to the station (i.e. paralleling line and additional 500kV and 230kV AC lines). The associated site development and infrastructure costs have increased ($28 million).

h) Northern 230kV Switchyard
Estimate has increased by $25 million to accommodate the following scope changes: two temporary additional AC lines required to transmit a 2000MW Bipole in the interval when Bipole III is in service before Conawapa G.S. (due to the change in generation sequence), and three lines for future Gilliam Island addition, for a total of 8 bays and 32 breakers.

i) Property for the Riel Converter Station
Not previously included in the estimate. Includes $6 million worth of station site properties and $12 million worth of buffer properties, all purchased from private owners.

j) Construction Power Station for Northern Converter
This item was not previously included, as it had been assumed to be part of the construction of the Conawapa Generation Station. Due to a change in sequencing this complex will be the first to require construction power, and hence the estimated cost of $15 million is now part of this complex.

k) Electrode Lines and Stations
Other components not previously included that have now been estimated are for the electrode lines and stations for both the Northern and the Riel Converter Stations, for a total of $2 million.

In addition to the above, the risk assessment yielded a contingency estimate of $382 million (see the Risk Analysis section for details). These changes, along with an increase of $384 million for interest and escalation, make the total net increase equal to $1363 million and the revised total net cost equal to $2477 million, for the converter-related portion of the complex.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is be filled out only if there is a change to some aspect of the recommended alternative).

On July 4th, 2001 a System Planning report entitled "Minimum Transmission Requirements for HVDC Bulk System Reliability" (SPD 01/7) was issued and subsequently approved. A major recommendation of that report was for a Bipole III transmission line routed east of Lake Winnipeg. Converter capacity to be connected to the line would be considered in subsequent studies.

At the request of the MHEB, System Planning examined reliability alternatives to an eastern routed Bipole III line. The report entitled "Manitoba HVDC Reliability Alternatives" (SPD 2006/11) was issued on October 4th, 2006, and concluded that Bipole III routed west of Lakes Winnipegosis and Manitoba with 2000 MW of converter capacity was the leading reliability alternative to an eastern routed line.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is be filled out only if there is a change to some aspect of the recommended alternative).

Based on the conclusions of this report, a recommendation was made by the Executive to the MHEB to proceed with Bipole III, routed west of Lakes Winnipegosis and Manitoba, and with 2000 MW of converter capacity.

Capital Investment Categorization:

Driver	Category	Sub-category	Split	Amount
Reliability-Outage Related	Operational Enhancement	New Asset Addition	60%	$2,372,250,000
Reliability-Load Related	Capacity Enhancement (for domestic load)	New Asset Addition	20%	$ 790,750,000
Reliability-Load Related	New/increased Generation Delivery (for domestic load)	New Asset Addition	20%	$ 790,750,000
				$3,953,750,000

No change.	

Other Alternatives Considered	**NPV (= PV of BENEFITS - PV of COSTS)**
No change.	

Risk Analysis - (This section is be filled out only if there is a change to the project risk).

Contingency (total of $525 million in base 2009$):

The contingency estimate is based on risk assessments that were conducted to identify areas of uncertainty or potential fluctuation, and is detailed as follows:

TRANSMISSION-RELATED ITEMS (total contingency of $143 million or 15% of the base costs):

a) 500kV dc Transmission Line (total contingency = $116 million or 15% of the base costs)
- A potential change to the detailed route selection or line length of up to 10%, as the final route has not yet been determined ($87 million).
- Related to lack of geotechnical information, uncertainty with soil conditions calls for the purchase of extra foundation types to allow for flexibility during the tight construction window ($15 million).
- Potential premiums in association with maximizing aboriginal content ($10 million).
- Higher compensation to property owners for damages during construction, based on National Energy Board (NEB) compensation settlements recently experienced in Alberta ($4 million).

Risk Analysis - (This section is be filled out only if there is a change to the project risk).

b) Licensing & Environmental Assessment (total contingency = $13 million or 21% of the base costs)
- Greatest risk for licensing is in the costs for aboriginal and community consultations ($9 million).
- Potential for even more extensive environmental monitoring and assessments, based on our experiences with the Wuskwatim project ($4 million).

c) Northern 230kV Collector Lines (total contingency = $10 million or 12 % of the base costs)
Design uncertainty and exact location of the northern converter station could increase the total line lengths assumed.

d) Property for 500kV dc Transmission Line (total contingency = $4 million or 18% of the base costs)
Potential increases in land values, by as much as 50%, based on the NEB compensation settlements recently experienced in Alberta. Note however that this risk estimate does not include any costs for expropriation of land and the associated legal expenses.

CONVERTER-RELATED ITEMS (total contingency of $382 million or 26% of the base costs):

e) Riel Converter Station (total contingency = $200 million or 39% of the base costs)
Based on a Range Estimating session, recommend contingency for equipment costs due to limited number of suppliers worldwide and variability on exchange rates ($100 million for converters and $100 million for synchronous condensers).

f) Northern Converter Station (total contingency = $135 million or 18% of the base costs)
Based on a Range Estimating session, recommend contingency for equipment costs due to limited number of suppliers worldwide and variability on exchange rates ($100 million for converters); and potential for higher costs associated with northern work ($35 million).

g) Riel Site Development for Converters & AC Switchyard (total contingency = $25 million or 19% of the base costs)
Final Design for Phase A of the Riel Switchyard won't be available from the engineer and procure contract until January 2010, while final design for Phase B is three to six years away. There is also uncertainty with line protection, cyber security, and building strength. Re-work is anticipated for site preparation, as construction will be started ahead of final design to protect against the risk of a wet summer delaying the construction progress.

h) Northern 230kV AC Switchyard (total contingency = $15 million or 31% of the base costs)
Based on a Range Estimating session, recommend contingency for potentially higher costs associated with northern work.

i) Construction Power Station for Northern Converter Station (total contingency = $4 million or 27% of the base costs)
Design and construction estimate are based on a conceptual Single Line Diagram (SLD) only; the site size and exact location of the Converter Station is not yet confirmed.

j) Northern and Riel Electrode Lines (total contingency = $3 million or 36% of the base costs)
The length of the lines is not certain, as Electrode sites have not yet been determined. Also provides for the use of steel towers if necessary (base estimate assumes wood).

Risk Analysis - (This section is be filled out only if there is a change to the project risk).

Management Reserve (total of $334 million in base 2009$):

Also identified during the risk assessment but not included in the contingency estimate at this time, are the management reserve items listed below. Though each of the components covered by this list has a contingency amount included within the project estimate, there is potential for further increases above those contingency amounts, for the following factors:

- Premium if basing the converters estimate on pricing received from the most experienced supplier ($102 million, high probability).
- Uncertainty on the northern interconnecting station modifications at Henday Converter Station and Long Spruce Generating Station, as the scope is not well defined at this time ($20 million, high probability).
- Allowance for greater requirement for engineering, project management and construction management on the Northern Converter Station and the Riel Converter Station projects ($14 million, high probability).
- Allowance for poor soil conditions during construction of the Northern Converter Station ($12 million, high probability)
- Market conditions for transmission line construction labour may increase costs by as much as 20% ($70 million, low probability).
- Market conditions for transmission-related materials or commodities (e.g., towers, hardware, conductor, insulators, foundations, communications equipment) may increase by 10-25% ($61 million, low probability).
- Increase to design, supply and install (construction) costs for the Northern 230kV AC Switchyard if a gas-insulated station (GIS) is chosen instead of an air-insulated station (AIS), due to unknown soil conditions ($55 million, low probability).

Some of the schedule-related risks associated with meeting an October 2017 in-service are as follows:

- The detailed route selection must be finalized by December 2010.
- An Environmental Licence must be received by September 2012.
- Certain activities will need to proceed in parallel with the environmental licensing process:
  - acquiring permits to work on crown lands,
  - purchase of some materials and/or purchase of extra towers and foundations types to accommodate unexpected conditions due to lack of geotechnical information,
  - temporary permits for site investigation activities (including field drilling) in order for design of foundations to be finalized and materials ordered for the construction start date.
- Completion of the northern portion of the Western route is based on having five winter seasons for access and construction. The southern portion of the Western route can be built year-round, however it is subject to more property and land access issues.

RESOURCE REQUIREMENTS AND CAPITAL BUDGET ESTIMATE:

Resource Requirements (This section is be filled out only if there is a change to the resource requirements).

No change.

Total Budget - (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Previous CPJ / CPJ Addendum	This CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 7,613	$ 7,613	$ -
2007/08	$ 1,875	$ 1,955	$ 80

Bipole III Western Routed T/L & 2000MW Converters – **TRANSMISSION LINE**

Recommendation (This section is required for all Addendums).

Increase the budget by $177,991,000 for the Transmission Line components of the Bipole III Western Routed Transmission Line & 2000MW Converters complex, to a revised total of $1,259,915,000, in order to incorporate the following:

- review of the base estimate for the property, design and construction of the HVdc transmission line, and of the licensing and environmental assessment for the overall complex (total increase of $152,122,000);
- inclusion of contingency for the above-mentioned components (total increase of $49,353,000); and
- the resultant changes to interest and escalation (decrease of $23,485,000).

Project Scope (This section is be filled out only if there is a change to the scope).

The scope of this portion of the Bipole III complex includes the following major components:

- Design and construction of a western-routed 500kV HVdc transmission line from the Keewatinoow Converter Station to the Riel Converter Station, approximately 1341km in length.
- Licensing and environmental assessment for the overall Bipole III complex (i.e., including the 2000 MW converters and AC collector system).
- Property acquisition and/or easements for the 500kV HVdc transmission line.

Background (This section is be filled out only if there is information relevant to the recommendation).

CPJ Addendum #04, submitted in April 2005, was the first introduction to the Capital Expenditure Forecast of a western-routed 500kV HVdc transmission line with 2000MW of converters. The budget submitted with CPJ Addendum #04 was preliminary only, pending completion of studies by System Planning. It was based on an estimate prepared by Teshmont Consultants in 2001.

CPJ Addendum #05, submitted in May 2007, addressed an increase of 45km to the length of the transmission line, as well as increases being experienced in transmission line material and construction costs due to market prices. The cost estimates for licensing, property and contingency were not updated at that time.

This CPJ Addendum #06a covers a budget increase of $177,991,000 in association with the Transmission Line components of the Bipole III Western Routed Transmission Line & 2000MW Converters complex:

a) <u>500kV HVdc Transmission Line (base increase of $140,714,000):</u>
   - Design change from double to triple conductor, in order to lower the surface field gradient to accepted worldwide practices and thus minimize the likelihood of anomalous flashovers that have been experienced on the existing bipoles in the past 20 years.
   - Incorporation of the Transmission Line Agreement for unionization of construction labour.
   - Application of the revised corporate policy for compensation for private property.

b) <u>Licensing & Environmental Assessment for the Bipole III complex (base increase of $4,912,000):</u>
   - More comprehensive aboriginal and community consultations.
   - Additional studies related to converter size.

Background (This section is be filled out only if there is information relevant to the recommendation).

c) Property Acquisition and/or Easements for the Transmission Line (base increase of $6,497,000):
- More privately-owned land associated with the western route.

d) The revised budget also includes contingency at $49,353,000 (Project Risk Analysis section contains details).

The above changes to the base estimate and contingency, and a change in base dollars from 2007 to 2010, result in a net decrease of $23,485,000 to forecasted escalation and interest.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is required for all Addendums).

A third 500kV HVdc transmission line with converter stations rated for 2000MW will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	%	For current corporate rates see G91-1

Recommended Option	NPV Benefits (Costs)
No change.	

Other Alternatives Considered	NPV Benefits (Costs)

Project Risk Analysis - (This section is be filled out only if there is a change to the project risk).

A total of $49,353,000 of contingency (approximately 6% of the base estimate) is included in the budget amount for CPJ Addendum #06a, to cover the following:

a) 500kV HVdc Transmission Line (contingency of $39,967,000 or 5% of the base estimate):
Potential changes to the detailed route selection or line length.

b) Licensing & Environmental Assessment (contingency of $9,386,000 or 15% of the base estimate):
Potential for greater requirements for aboriginal and community consultations, and for more extensive environmental monitoring and assessments during construction.

Project Risk Analysis - (This section is be filled out only if there is a change to the project risk).

The following risks create a potential for additional costs:
- Market conditions for transmission line construction labour, materials or commodities.
- Unforeseen geotechnical conditions.
- Further changes to corporate policy for private property compensation.

Some of the schedule-related risks associated with meeting an October 2017 in-service are as follows:
- Environmental License to be received by September 2012.
- Certain activities will need to proceed in parallel with the environmental licensing process:
  - acquiring permits to work on crown lands,
  - purchase of some materials and/or purchase of extra towers and foundations types to accommodate unexpected conditions due to lack of geotechnical information,
  - temporary permits for site investigation activities (including field drilling) in order for design of foundations to be finalized and materials ordered for the construction start date.
- Completion of the northern portion of the line is based on having five winter seasons for access and construction.

Capital Budget Estimate - (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Previous CPJ / CPJ Addendum	This CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 17,207	$ 24,613	$ 7,406
2010/11	$ 5,801	$ 16,118	$ 10,317
2011/12	$ 10,235	$ 24,830	$ 14,595
2012/13	$ 146,630	$ 59,866	$ (86,764)
2013/14	$ 181,825	$ 162,043	$ (19,782)
2014/15	$ 201,556	$ 298,935	$ 97,379
2015/16	$ 216,344	$ 318,454	$ 102,110
2016/17	$ 227,477	$ 234,575	$ 7,098
2017/18	$ 71,665	$ 120,055	$ 48,390
2018/19	$ 3,184	$ 426	$ (2,758)
2019/20	$ -	$ -	$ -
Total	$ 1,081,923	$ 1,259,915	$ 177,991

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Western Routed T/L & 2000MW Converters – **CONVERTER STATIONS**

Recommendation (This section is required for all Addendums).

Increase the budget by $724,335,000 for the Riel and Keewatinoow Converter Station components of the Bipole III Western Routed Transmission Line & 2000MW Converters complex, to a revised total of $1,828,532,000, in order to incorporate the following:

- review of the base estimate for the property, design and construction of the Riel and Keewatinoow Converter Stations and 230kV Switchyards (total increase of $474,226,000);
- inclusion of contingency for the above-mentioned components (total increase of $138,926,000); and
- the resultant changes to interest and escalation (increase of $111,183,000).

Project Scope (This section is be filled out only if there is a change to the scope).

The scope of this portion of the Bipole III complex includes the following major components:

- Design and construction of the 2000 MW Riel Converter Station and 230kV AC Switchyard.
- Design and construction of the 2000 MW Keewatinoow Converter Station and 230kV AC Switchyard.
- Property acquisition and/or easements for the Riel and Keewatinoow Converter Stations.

The proposed budget assumes use of voltage source converters for both the Riel and Keewatinoow Converter Stations without synchronous condensers at the Riel Converter Station.

Background (This section is be filled out only if there is information relevant to the recommendation).

CPJ Addendum #04, submitted in April 2005, was the first introduction to the Capital Expenditure Forecast of a western-routed 500kV HVdc transmission line with 2000MW of converters. The budget submitted with CPJ Addendum #04 was preliminary only, pending completion of studies by System Planning. It was based on an estimate prepared by Teshmont Consultants in 2001.

CPJ Addendum #05, submitted in May 2007, did not include re-estimates for the converter stations, nor was contingency included for the converter stations, as these components had not yet been reviewed in detail.

This CPJ Addendum #06b covers a budget increase of $724,335,000 in association with the Riel and Keewatinoow Converter Station components of the Bipole III Western Routed Transmission Line & 2000MW Converters complex:

a) <u>Riel Converter Station and 230kV AC Switchyard (base increase of $169,355,000):</u>
   - Converter and HVdc equipment costs have remained relatively unchanged when comparing 2009 mini-spec pricing versus the escalated 2001 estimate figures; however, there were no explicit indirect costs in the 2001 estimate and no interfacing costs.

b) <u>Keewatinoow Converter Station and 230kV AC Switchyard (base increase of $286,069,000):</u>
   - Converter and HVdc equipment costs have remained relatively unchanged when comparing 2009 mini-spec pricing versus the escalated 2001 estimate figures; however, there were no explicit indirect costs in the 2001 estimate and no interfacing costs.

Background (This section is be filled out only if there is information relevant to the recommendation).

- Site development costs have increased for the following reasons: the previous budget assumed that the Conawapa Generating Station infrastructure would be built ahead of Bipole III and therefore costs associated with a construction camp and work areas would be covered by that project's budget; mechanical services such as fire, water, sewer and oil containment, along with security and environmental requirements, were not considered in the 2001 estimate; the site size has increased and soil conditions are worse than identified in the 2001 estimate; the transformer change-out method and the emergency response buildings were not included in the 2001 estimate.

c) Property Acquisition and/or Easements for the Converter Stations (base increase of $18,802,000): Property costs for Riel and Keewatinoow Converter Stations were not included in the 2001 estimate. Costs for the Riel site are more substantial than the Keewatinoow site, and include $6.4 million for station site properties, and $12.3 million for buffer properties that have been purchased from private owners.

In addition to the above, the revised budget also includes the introduction of contingency at $138,926,000 (Project Risk Analysis section contains details).

The changes to the base estimate and inclusion of contingency, along with the change in base dollars from 2007 to 2010, result in an increase of $111,183,000 to forecasted escalation and interest.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is required for all Addendums).

A third 500kV HVdc transmission line with converter stations rated for 2000MW will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of aDorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	%	For current corporate rates see G911

Recommended Option	NPV Benefits (Costs)
No change.	

Other Alternatives Considered	NPV Benefits (Costs)

Project Risk Analysis - (This section is be filled out only if there is a change to the project risk).

A total of $138,926,000 of contingency (approximately 11% of the base estimate) is included in the budget amount for CPJ Addendum #06b, to cover the following:

a) Keewatinoow Converter Station and 230kV AC Switchyard (contingency of $71,960,000 or 12% of the base estimate):
   - Potential changes to equipment costs due to a limited number of suppliers worldwide and variability of exchange rates until contracts are signed.
   - Potentially higher costs due to northern work conditions.

b) Riel Converter Station and 230kV AC Switchyard (contingency of $66,966,000 or 11% of the base estimate):
   - Potential changes to equipment costs due to limited number of suppliers worldwide and variability of exchange rates until contracts are signed.
   - Uncertainty with protection, cyber security and building strength (physical security).

The following risks create a potential for additional costs:
- Potential for greater requirement for engineering, project management and construction management.
- Potential for poor site conditions during construction.
- The potential requirement for synchronous condensers at the Riel Converter Station.

The assumed use of new technology in the form of voltage source converters at both the Keewatinoow and Riel Converter Stations represents an additional risk factor. Confirmation or otherwise of the feasibility of this technology is expected by late 2011.

Capital Budget Estimate - (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Previous CPJ / CPJ Addendum	This CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 4,243	$ 30,423	$ 26,181
2010/11	$ 6,812	$ 46,255	$ 39,443
2011/12	$ 14,092	$ 59,696	$ 45,604
2012/13	$ 24,477	$ 148,883	$ 124,406
2013/14	$ 141,783	$ 300,258	$ 158,475
2014/15	$ 207,019	$ 290,185	$ 83,166
2015/16	$ 344,041	$ 294,281	$ (49,759)
2016/17	$ 291,378	$ 308,460	$ 17,082
2017/18	$ 70,351	$ 347,692	$ 277,341
2018/19	$ -	$ 2,398	$ 2,398
2019/20	$ -	$ -	$ -
Total	$ 1,104,197	$ 1,828,532	$ 724,335

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums):

Bipole III Western Routed T/L & 2000MW Converters – **COLLECTOR LINES**

Recommendation (This section is required for all Addendums):

Increase the budget by $129,722,000 for the Collector Lines components of the Bipole III Western Routed Transmission Line & 2000MW Converters complex, to a revised total of $191,438,000, in order to incorporate the following:

- review of the base estimate for the property, design and construction of the 230kV collector lines for the Keewatinoow Converter Station, the construction power for the Keewatinoow Converter Station, the sectionalization of 230kV transmission line R49R at the Riel Converter Station, and the electrode lines for the Riel and Keewatinoow Converter Stations (total increase of $73,222,000);
- inclusion of contingency for the above-mentioned components (total increase of $17,203,000); and
- the resultant changes to interest and escalation (increase of $39,297,000).

Project Scope (This section is be filled out only if there is a change to the scope):

The scope of this portion of the Bipole III complex includes the following major components:

- Design and construction of three permanent and two temporary 230kV collector lines for the Keewatinoow Converter Station.
- Construction power substation for the Keewatinoow Converter Station.
- Design and construction for the Riel and Keewatinoow electrode lines.
- Sectionalization of 230kV transmission line R49R at Riel.
- Property acquisition and/or easements for the collector and electrode lines.

Background (This section is be filled out only if there is information relevant to the recommendation):

CPJ Addendum #04, submitted in April 2005, was the first introduction to the Capital Expenditure Forecast of a western-routed 500kV HVdc transmission line with 2000MW of converters. The budget submitted with CPJ Addendum #04 was preliminary only, pending completion of studies by System Planning. It was based on an estimate prepared by Teshmont Consultants in 2001.

CPJ Addendum #05, submitted in May 2007, did not include re-estimates for the northern collector lines, the two electrode lines, the related property, or contingency.

This CPJ Addendum #06c covers a budget increase of $129,722,000 in association with the Collector Lines components of the Bipole III Western Routed Transmission Line & 2000MW Converters complex:

a) <u>Keewatinoow 230kV Collector Lines (base increase of $35,756,000):</u>
The 2001 estimate included only three collector lines, while this estimate has two more (temporary) collector lines. The two temporary lines are required in lieu of an earlier introduction of additional generation in the northern collector system. At the time of the 2001 estimate, the planned in-service for the Conawapa Generating Station (GS) was only two years after Bipole III. Now that the in-service for Conawapa GS is planned for several years later, two temporary lines are required in order to permit full use of a 2000MW rating for Bipole III in the event of a Dorsey Station or Bipole I / II outage.

In addition, the cost of transmission line material and construction has increased since 2001.

Background (This section is be filled out only if there is information relevant to the recommendation).

b) Keewatinoow Construction Power (base increase of $23,381,000):
The 2001 estimate did not include the requirement for a construction power substation, as it was assumed it would have already been built for construction of the Conawapa GS. With the change in the sequence, the Bipole III project will now be the first development to require this construction power substation.

c) Property Acquisition and/or Easements for the Collector and Electrode Lines (base increase of $10,732,000):
The 2001 estimate did not include any property costs for the Keewatinoow collector lines or the Riel and Keewatinoow electrode lines.

d) Sectionalization of 230kV Transmission Line R49R at Riel (base increase of $1,955,000):
This had been included in the Riel Sectionalization project but was deferred to coincide with the Bipole III converters. It is required to accommodate and reliably transmit a 2000MW Bipole III at Riel.

e) Riel and Keewatinoow Electrode Lines (base increase of $1,398,000):
The cost of line material and construction has increased since 2001.

f) The revised budget also includes contingency at $17,203,000 (Project Risk Analysis section contains details).

The above changes to the base estimate and contingency, and a change in base dollars from 2007 to 2010, result in an increase of $39,297,000 to forecasted escalation and interest.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals (This section is required for all Addendums).

A third 500kV HVdc transmission line with converter stations rated for 2000MW will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	%	For current corporate rates see G911

Recommended Option	NPV Benefits (Costs)
No change.	

Other Alternatives Considered	NPV Benefits (Costs)

Project Risk Analysis - (This section is be filled out only if there is a change to the project risk).

A total of $17,203,000 of contingency (approximately 15% of the base estimate) is included in the budget amount for CPJ Addendum #06c, to cover the following:

a) Keewatinoow Collector Lines (contingency of $8,952,000 or 13% of the base estimate):
Provides for potentially higher costs for material and construction labour.

b) Keewatinoow Construction Power (contingency of $5,451,000 or 23% of the base estimate):
Estimates are based on a conceptual Single Line Diagram only. The site size and exact location are not yet finalized. Backup power requirements are currently under review.

c) Riel and Keewatinoow Electrode Lines (contingency of $2,800,000 or 34% of the base estimate):
Line lengths are uncertain, as the Electrode sites for Riel and Keewatinoow have not been finalized. Also provides for use of steel towers if necessary for reliability.

The following risks create a potential for additional costs:
- Potential for poor site conditions during construction.
- Potentially higher costs due to northern work conditions.
- Further changes to corporate policy for private property compensation.

Capital Budget Estimate - (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Previous CPJ / CPJ Addendum	This CPJ Addendum	Increase (Decrease)

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION

Project Name
Bipole III Community Development Initiative – **TRANSMISSION LINE**

Recommendation
Establish budget to incorporate Bipole III Community Development Initiative ("CDI") that was approved by the Manitoba Hydro-Electric Board in May 2010.

Project Scope
Estimate based on the net present value of a 10-year program valued at up to $6 million per year.

Background

The Manitoba Hydro-Electric Board approved the establishment of a Bipole III Community Development Initiative ("CDI"), valued at up to $6 million a year, for Manitoba Hydro to provide benefits to communities in the vicinity of the Bipole III project facilities (May 20, 2010, minute 808-10-03). Following this approval, the Bipole III Preliminary Preferred Route became known and was released publicly in July 2010. From the time of Board approval, a multi-business unit CDI Working Group continued to meet to refine the CDI approach, in light of the preliminary preferred route, and to develop related communications material. Following feedback regarding the CDI, there was consensus that the refinements described in the recommendation be implemented, which include the following:

a) That CDI payments be provided for a 10 year period, with the possibility of program renewal at the end of the 10 year period;
b) That CDI payments begin upon receipt of the Bipole III regulatory approvals;
c) That the boundary for communities whose eligibility is based on proximity to the line be limited to 40 km;
d) That the eligibility requirements for incorporated towns and villages be such that a town or village must be located within a municipality traversed by the line and be located within 40 km of the line; and
e) That the CDI payments to communities be adjusted annually with the change in inflation.

The requested budget increase is planned as a 2013/14 expense based on all regulatory approvals being received no later than December 2013.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals

The CDI program remains inclusive of a variety of interests; is strongly linked to the Bipole III facilities; and will be an effective means of promoting community support for hosting the Bipole III project facilities.

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **TRANSMISSION LINE**

Recommendation (This section is required for all Addendums).

Increase the budget by $395 million for the Transmission Line components of the Bipole III Project, to a revised total of $1,655 million and a revised in-service date of July, 2018.

Project Scope (This section is be filled out only if there is a change to the scope).

The scope of this portion of the Bipole III Project includes the following major components:

- Design and construction of a western-routed 500kV HVdc transmission line from the Keewatinohk (Keewatinoow) Converter Station to the Riel Converter Station.
- Property acquisition and/or easements for the 500kV HVdc transmission line.
- Design and construction of the Bipole III Communications transport system.
- Licensing and environmental assessment for the overall Bipole III complex (i.e., including the 2000 MW converters and AC collector system).

Changes to scope include: revised line length of final approved route, issued Licence & Conditions, revised landowner compensation strategy and policy, increased Bipole III rating to 2300 MW, and revised project in-service date of July 2018.

Background (This section is be filled out only if there is information relevant to the recommendation).

The last project re-estimate was completed in 2010, based on a preferred routing of the line prior to issuance of the Project Licence.

The revised estimate incorporates a more detailed scope based on an issued environment act licence, approved finalized route and right-of-way width, as well as up-to-date market information. Also since the last estimate, the project licence and permits were received later than planned, resulting in 1.5 lost winter seasons of 5 total planned. The estimate is based on the need for at least 4 more winter seasons to construct the transmission line and change to project in-service of July 2018.

The recommended budget is based on a P50 estimate that includes all base costs and contingency at a 50% confidence level and management reserves for market uncertainty risk for transmission line construction work.

P50 Estimate:

Since the last estimate was developed in 2010 it was necessary to bring the estimate to 2014$ and several items in the point estimate had to be adjusted to match the increased level of detail that has been identified within the current scope. This resulted in an increase of $363 million to the P50 Estimate as a result of the following:

- Incorporation of Environment Act Licence conditions and monitoring requirements
- Changes to the finalized route (increased length, additional towers and increased right-of-way width)
- Updated land acquisition costs
- Recommended contingency of [redacted] (increase of $61M) to address remaining uncertainty. See

Background (This section is be filled out only if there is information relevant to the recommendation).

Risk Analysis section.

Reserves:
A Management Reserve has been established to address significant risks related to bidding market and pricing uncertainty for Transmission Line construction work (increase of $100M). See Risk Analysis section.

In-Service Costs:
The overall increase to the in-service cost of the project is $395M (31%). This increase to the in-service cost is due to the increases in the P50 base estimate, the change to the project in-service date, and addition of the Management Reserve. These increases are offset by reduced interest and escalation costs.

Justification (This section is required for all addendums).

A third 500kV HVdc transmission line with converter stations will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

The rating for Bipole III was increased from 2000MW to 2300MW to ensure adequate spare HVdc transmission on the northern collector system. The increased rating ensures future generation associated with Keeyask and Conawapa can be transmitted via Bipole I, Bipole II and Bipole III in the event of a single valve group outage. The increased rating limits the amount of future upgrades and equipment replacement needed on the Bipole III HVdc system to accommodate future Conawapa generation.

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	% For current corporate rates see G911	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	**NPV Benefits/(Costs)**
No change.	

Other Alternatives Considered	**NPV Benefits/(Costs)**
N/A.	

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

The risk & contingency methodology outlined at the NFAT for Keeyask & Conawapa Projects has been applied to the revised Bipole III Project estimate. The estimate includes a recommended project contingency at a P50 confidence level to address remaining areas of uncertainty.

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

Additionally, this portion of the Bipole III Project includes a recommended Management Reserve of $100M associated with bidding market and pricing uncertainty for Transmission Line construction work. This remains the greatest area of uncertainty for Bipole III and the potential cost variation associated with this risk is best addressed through the inclusion of Management Reserve funds.

An additional, significant area of uncertainty is the potential impacts to schedule due to further delays in acquisition of private lands. A Management Reserve for this risk has not been recommended as part of the project budget. However, there will be cost impacts to the project should the risk occur.

Total Budget – (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Prev. Approved CPJ/Addendum	Proposed CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 24,613	$ 24,613	$ -
2010/11	$ 16,118	$ 19,002	$ 2,884
2011/12	$ 24,830	$ 18,350	$ (6,480)
2012/13	$ 59,866	$ 25,091	$ (34,775)
2013/14	$ 162,043	$ 54,276	$ (107,767)
2014/15	$ 298,935	$ 203,458	$ (95,477)
2015/16	$ 318,454	$ 360,455	$ 42,001
2016/17	$ 234,575	$ 381,047	$ 146,472
2017/18	$ 120,055	$ 493,821	$ 373,766
2018/19	$ 426	$ 75,257	$ 74,831
Total	$ 1,259,915	$ 1,655,371	$ 395,456

Proposed Schedule (This section is be filled out only if there is a change to the project schedule).

The schedule has been updated for the proposed change to in-service date of July 2018.

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **CONVERTER STATIONS**

Recommendation (This section is required for all Addendums).

Increase the budget by $ 846.5 million for the Converter Station components of the Bipole Project, to a revised total of $2,675 and a revised in-service date of July, 2018.

Project Scope (This section is be filled out only if there is a change to the scope).

The scope of this portion of the Bipole III complex includes the following major components:

- Design and construction 2300 MW Riel Converter Station and 230 kV AC Switchyard.
- Design and construction 2300 MW Keewatinohk (Keewatinoow) Converter Station and 230 kV AC Switchyard.
- Property acquisition and/or easements for the Riel and Keewatinohk Converter Stations.

Changes to scope include: Selection of LCC HVdc technology requiring the inclusion of Synchronous Condensers, increased Bipole III rating to 2300 MW, and revised project in-service date of July 2018.

Background (This section is be filled out only if there is information relevant to the recommendation).

The last project re-estimate was completed in 2010, based largely on historical and budgetary pricing from vendors as well as an assumption of VSC technology for the HVdc Converter and therefore no requirement for synchronous condensers.

The revised estimate is based on LCC HVdc technology as this was the technology bid by all vendors and incorporates the bid pricing received. The selection of LCC technology has resulted in synchronous condensers being included in the revised estimate. Additionally, the awarded contract prices for the Keewatinohk Camp, Keewatinohk Site Development and the Keewatinohk 230kV AC Switchyard have been incorporated into the revised estimate. The estimate is based on a project in-service of July 2018, which is required to complete the HVdc Converters installation.

The recommended budget is based on a P50 estimate that includes all base costs and contingency at a 50% confidence level.

<u>P50 Estimate:</u>

Since the last estimate was developed in 2010 it was necessary to bring the estimate to 2014$ and several items in the point estimate had to be adjusted to match the increased level of detail that has been identified within the current scope. This resulted in an increase of $649 million to the P50 Estimate as a result of the following:

- Incorporation of contract costs for the Keewatinohk 230kV AC Switchyard, Keewatinohk Site Development, Keewatinohk Camp and Keewatinohk Camp Services
- Incorporation of bid price for the Keewatinohk and Riel HVdc Converter Equipment contract
- Inclusion of Synchronous Condensers in the scope of work as a result of LCC technology for the HVdc equipment
- Incorporation of allocated portion of actual costs for Riel Sectionalization project
- Incorporation of updated costs for the Riel 230kV AC Switchyard Expansion

Background (This section is be filled out only if there is information relevant to the recommendation).

- Recommended contingency of [redacted] (decrease of $16M) to address remaining uncertainty.

Reserves:
No Management Reserve for the Converter Stations component of the project is recommended to include in the estimate at this time.

In-Service Costs:
The overall increase to the in-service cost of the project is $846.5 (46%). This increase to the in-service cost is due to the increases in the P50 base estimate, the change to the project in-service date, and addition of the Management Reserve. These increases are offset by reduced interest and escalation costs.

Justification (This section is required for all addendums).

A third 500kV HVdc transmission line with converter stations will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

The rating for Bipole III was increased from 2000MW to 2300MW to ensure adequate spare HVdc transmission on the northern collector system. The increased rating ensures future generation associated with Keeyask and Conawapa can be transmitted via Bipole I, Bipole II and Bipole III in the event of a single valve group outage. The increased rating limits the amount of future upgrades and equipment replacement needed on the Bipole III HVdc system to accommodate future Conawapa generation.

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	% For current corporate rates see G911	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	**NPV Benefits/(Costs)**
No change.	

Other Alternatives Considered	**NPV Benefits/(Costs)**

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

The risk & contingency methodology outlined at the NFAT for Keeyask & Conawapa Projects has been applied to the revised Bipole III Project estimate. The estimate includes a recommended project contingency at a P50 confidence level to address remaining areas of uncertainty.

Inclusion of a Management Reserve for this portion of the Bipole III complex is not considered necessary

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

at this time.

Total Budget – (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Prev. Approved CPJ/Addendum	Proposed CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 30,423	$ 30,423	$ -

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **COLLECTOR LINES**

Recommendation (This section is required for all Addendums).

Increase the budget by $68.7 million for the Collector Lines components of the Bipole III Project, to a revised total of $260.2 million and a revised in-service date of July, 2018.

Project Scope (This section is be filled out only if there is a change to the scope).

The scope of this portion of the Bipole III Project includes the following major components:

- Design and construction of three permanent and two temporary 230 KV collector lines for the Keewatinohk (Keewatinoow) Converter Station.
- Construction power substation, 138 KV line, microwave tower, and distribution feeders for the Keewatinohk Converter Station.
- Design and construction of the Riel and Keewatinohk electrode lines.
- Sectionalization of 230 KV transmission line R49R at Riel and associated modifications at Ridgeway and Rosser stations.
- Property acquisition and/or easements for the above components.
- Design and construction of a new bay and modifications at existing Long Spruce 230 KV AC switchyard for the new collector line to Keewatinohk Converter Station.
- Design and construction of a new bay and modifications at existing Henday 230 KV AC switchyard for the four new collector lines to Keewatinoow Converter Station.
- Design and construction of breaker replacements at existing stations (Ridgeway, Rosser, and McPhillips) for Bipole III.

Changes to scope include: the issued Licence & Conditions, double circuit requirement for one collector line, increased reliability design for electrode lines, updated assumptions for direct negotiated clearing and construction contracts, inclusion of Long Spruce and Henday 230 KV station expansions/modifications, inclusion of breaker replacements, and revised schedule and project in-service date to July 2018.

Background (This section is be filled out only if there is information relevant to the recommendation).

The last project re-estimate was completed in 2009/10, based on conceptual scope of collector line components, prior to issuance of the Project Licence.

The revised estimate incorporates a more detailed scope based on an issued environment act licence, increased scope (new items in this component), as well as up-to-date market information. The estimate is based on a project in-service of July 2018, which is required to complete the HVdc Converters installation.

The recommended budget is based on a P50 estimate that includes all base costs and contingency at a 50% confidence level.

P50 Estimate:

Since the last estimate was developed in 2010 it was necessary to bring the estimate to 2014$ and several items in the point estimate had to be adjusted to match the increased level of detail that has been identified within the current scope. In addition, new items were included in the current scope for this component.

Background (This section is be filled out only if there is information relevant to the recommendation).

This resulted in an increase of $83 million to the P50 Estimate as a result of the following:

- Incorporation of Environment Act Licence conditions and monitoring requirements
- Change to include a double circuit requirement for the Keewatinoow to Long Spruce AC collector line
- Incorporation of increased reliability design for both electrode lines
- Change to assume Clearing, 230kV AC transmission line construction and Construction Power contracts as Direct Negotiated Contracts (DNCs)
- Inclusion of new items – Long Spruce and Henday 230 KV station expansions/modifications and breaker replacements projects
- Recommended contingency of [redacted] (increase of $800K) for this component, to address remaining uncertainty. See Risk Analysis section.

Reserves:
No Management Reserve for the Collector Lines components is recommended to include in the estimate at this time. See Risk Analysis section.

In-Service Costs:
The overall increase to the in-service cost of the project for this component is $68 M (36%). This increase to the in-service cost is due to the increases in the P50 base estimate, the change to the project in-service date and increase in the recommended contingency. These increases are offset by reduced interest and escalation costs.

Justification (This section is required for all addendums).

A third 500kV HVdc transmission line with converter stations will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

The rating for Bipole III was increased from 2000MW to 2300MW to ensure adequate spare HVdc transmission on the northern collector system. The increased rating ensures future generation associated with Keeyask and Conawapa can be transmitted via Bipole I, Bipole II and Bipole III in the event of a single valve group outage. The increased rating limits the amount of future upgrades and equipment replacement needed on the Bipole III HVdc system to accommodate future Conawapa generation.

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis

Recommended Option	**NPV Benefits/(Costs)**
No change.	

Other Alternatives Considered	NPV Benefits/(Costs)
N/A	

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

The risk & contingency methodology outlined at the NFAT for Keeyask & Conawapa Projects has been applied to the revised Bipole III Project estimate. The estimate includes a recommended project contingency at a P50 confidence level to address remaining areas of uncertainty.

Inclusion of a Management Reserve for this portion of the Bipole III complex is not considered necessary at this time.

Total Budget – (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Prev. Approved CPJ/Addendum	Proposed CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 0	$ 0	$ -
2010/11	$ 2,121	$ 386	$ (1,735)
2011/12	$ 19,917	$ 2,075	$ (17,842)
2012/13	$ 52,709	$ 4,394	$ (48,315)
2013/14	$ 30,141	$ 26,265	$ (3,876)
2014/15	$ 30,927	$ 58,432	$ 27,505
2015/16	$ 34,255	$ 75,516	$ 41,261
2016/17	$ 13,549	$ 51,722	$ 38,173
2017/18	$ 7,819	$ 36,708	$ 28,889
2018/19	$ -	$ 4,653	$ 4,653
Total	$ 191,438	$ 260,150	$ 68,711

Proposed Schedule (This section is be filled out only if there is a change to the project schedule).

The schedule has been updated for the proposed change to in-service date of July 2018.

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **COMMUNITY DEVELOPMENT INITIATIVE (CDI)**

Recommendation (This section is required for all Addendums).

Increase the budget by $1.2 million for the Bipole III Community Development Initiative ("CDI") fund, that was approved by the Manitoba Hydro-Electric Board in May 2010, to a revised total of $62.0 million

Project Scope (This section is be filled out only if there is a change to the scope).

Community Development Initiative ("CDI") fund for Manitoba Hydro to provide benefits to communities in vicinity of the Bipole III Project

Background (This section is be filled out only if there is information relevant to the recommendation).

The Manitoba Hydro-Electric Board approved the establishment of a Bipole III Community Development Initiative ("CDI"), valued at up to $6 million a year, for Manitoba Hydro to provide benefits to communities in the vicinity of the Bipole III project facilities (May 20, 2010, minute 808-10-03).

Following this approval, the Bipole III Preliminary Preferred Route became known and was released publicly in July 2010. From the time of Board approval, a multi-business unit CDI Working Group continued to meet to refine the CDI approach, in light of the preliminary preferred route, and to develop related communications material. Following feedback regarding the CDI, there was consensus that the refinements described in the recommendation be implemented, which include the following:

a) That CDI payments be provided for a 10 year period, with the possibility of program renewal at the end of the 10 year period;
b) That CDI payments begin upon receipt of the Bipole III regulatory approvals;
c) That the boundary for communities whose eligibility is based on proximity to the line be limited to 40 km;
d) That the eligibility requirements for incorporated towns and villages be such that a town or village must be located within a municipality traversed by the line and be located within 40 km of the line; and
e) That the CDI payments to communities be adjusted annually with the change in inflation.

Justification (This section is required for all addendums).

The CDI program remains inclusive of a variety of interests; is required as part of Bipole III; and will be an effective means of promoting community support for hosting the Bipole III project facilities

ADDENDUM NUMBER	**DATE** (yyyy mm dd)	**REVISION**	**REVISED BY**	**APPROVED BY**

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **TRANSMISSION LINE**

Recommendation (This section is required for all Addendums).

Total net in-service cost has increased by $302.245 million, from $1,655.371 million to $1,957.616 million from the last approved CPJ addendum, with the in-service date to remain at July, 2018.

Project Scope (This section is be filled out only if there is a change to the scope).

The scope for this portion of the Bipole III complex includes the following major components:

- Design and construction of a western-routed 500kV HVdc transmission line from the Keewatinohk Converter Station to the Riel Converter Station.
- Property acquisition and/or easements for the 500kV HVdc transmission line.
- Design and construction of the Bipole III Communications transport system.
- Licensing and environmental assessment for the overall Bipole III complex (i.e. including the Converter Stations and AC Collector system).
- Contingency for this Transmission Line project.

Changes to scope: awarded contracts and compressed schedule, CEC prescribed route finalization, additional tower steel suppliers, biosecurity measures implementation in the south and some helicopter tower erection for a portion of the line.

Background (This section is be filled out only if there is information relevant to the recommendation).

The previous project re-estimate was completed in 2014 and was based on a P50 confidence level. The recommended budget is based on a P80 estimate for the Transmission Line, that includes all base costs and contingency at an 80% confidence level.

The revised estimate incorporates actual costs to date as well as awarded contracts and reflects current market conditions. The estimate is based on maintaining a project in-service date of July 2018. The resultant revised P80 point estimate of $1,751 million from $1,400 million (an increase of $350 million relative to the current approved budget) is a result of the following changes:

- Incorporation of actual construction costs and awarded values as a result of higher market rates for anchor and foundations as well as tower assembly erection and stringing contracts than planned; incorporated delay claims (weather and material) experienced to date, construction schedule compression; and increased equipment and vehicles to support construction.
- Incorporation of additional materials required for CEC prescribed southern route changes, delays in materials, premiums to accelerate materials and associated engineering.
- Incorporation of property costs for CEC prescribed southern route, inclusion of LVAC (Land Valuation Appraisal Council) certification and legal fees.
- Incorporation of greater material management costs, project management and construction management.
- Inclusion of greater than planned costs for indigenous relationships management and agreements, as well as actual licensing costs and required project environmental monitoring as a result of the licence conditions.

Background (This section is be filled out only if there is information relevant to the recommendation).

- Recommended [redacted] contingency for remaining risks and schedule acceleration (as the previously approved $210 M , of which included $100 management reserve, has been allocated and spent for the above increases in point estimate; remaining risks are detailed in the Risk Analysis portion of this CPJ addendum).

In-Service Costs:
The overall increase to the in-service cost of the project is $302 million (18%), from $1,655.4 million to $1,957.6 million. This increase to the in-service cost is due to the increases in the P80 base estimate as noted above ($350 million). These increases are offset by reduced interest and escalation costs ($48 million reduction).

Justification (This section is required for all addendums).

A third 500kV HVdc transmission line with converter stations will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

The DC converter rating was increased from 2000MW to 2300MW in the 2014 CPJA. The additional 300MW converter rating is a pre-investment to allow for economical transmission options for future generation development and to maintain adequate HVDC spare capacity to cover the valve group outages, the most frequently occurred events based on operation experience.

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	% For current corporate rates see G911	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	**NPV Benefits/(Costs)**
No Change.	

Other Alternatives Considered	**NPV Benefits/(Costs)**
N.A.	

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

The risk & contingency methodology outlined at the NFAT for Keeyask & Conawapa Projects has been applied to the revised Bipole III Project estimate. The revised estimate includes a recommended Transmission Line project contingency at a P80 confidence level to address remaining areas of uncertainty to the completion of the project and maintain desired in-service date of July 2018.

The previously approved Management Reserve ($100 million) for this portion of the Bipole III complex has been allocated or spent, no further management reserve is not considered necessary at this time.

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

The Transmission Line components require a revised contingency amount of [redacted] for remaining risks and for schedule protection of the July 2018 in-service date. The previously approved $210 million for a P50 (2014) estimate has been allocated as noted in the point estimate (see Background section of this CPJ addendum above). The $100 million in management reserve was approved to be allocated to the two major transmission line contracts for awarded values, and for increases as a result of changes to the Burntwood Nelson Agreement as part of the Converter Stations project.

Remaining risks identified for [redacted] include:

[redacted]

Total Budget – (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

ADDENDUM NUMBER	**DATE** (yyyy mm dd)	**REVISION**	**REVISED BY**	**APPROVED BY**

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **CONVERTER STATIONS**

Recommendation (This section is required for all Addendums).

Increase the budget by $106 million for the Converter Station components of the Bipole Project, to a revised total of $2,781 with the in-service date to remain at July, 2018.

Project Scope (This section is be filled out only if there is a change to the scope).

The scope for this portion of the Bipole III complex includes the following major components:

- Design and construction 2300 MW Riel Converter Station and 230 kV AC Switchyard.
- Design and construction 2300 MW Keewatinohk (Keewatinoow) Converter Station and 230 kV AC Switchyard.
- Property acquisition and/or easements for the Riel and Keewatinohk Converter Stations.
- Design & Construction of the Riel Synchronous Condensers.

Changes to scope include: Provincial Road 280, Provincial Road 290 and Conawapa Access Road upgrades.

Background (This section is be filled out only if there is information relevant to the recommendation).

The last project re-estimate was completed in 2014 and incorporated a majority of the project's contract costs and scope updates. The 2014 estimate was based on a P50 confidence level.

The revised estimate incorporates previously out of scope provincial road upgrades and an increase in contingency levels to a P75 confidence level to better address project risks to the completion of the work. There are no other scope changes from the 2014 estimate.

Justification (This section is required for all addendums).

A third 500kV HVdc transmission line with converter stations will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

The DC converter rating was increased from 2000MW to 2300MW. The additional 300MW converter rating is a pre-investment to allow for economical transmission options for future generation development and to maintain adequate HVDC spare capacity to cover the valve group outages, the most frequently occurred events based on operation experience

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	% For current corporate rates see G911	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	NPV Benefits/(Costs)
No change.	

Other Alternatives Considered	NPV Benefits/(Costs)
N/A	

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

The risk & contingency methodology outlined at the NFAT for Keeyask & Conawapa Projects has been applied to the revised Bipole III Project estimate. The revised estimate includes a recommended project contingency at a P75confidence level to address remaining areas of uncertainty to the completion of the project.

Inclusion of a Management Reserve for this portion of the Bipole III complex is not considered necessary at this time.

Total Budget – (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Prev. Approved CPJ/Addendum	Proposed CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 318,781	$ 318,781	$ -
2014/15	$ 221,051	$ 198,269	$ (22,782)
2015/16	$ 580,792	$ 468,260	$ (112,532)
2016/17	$ 828,733	$ 955,621	$ 126,888
2017/18	$ 507,689	$ 593,197	$ 85,508
2018/19	$ 195,085	$ 237,967	$ 42,882
2019/20	$ 18,432	$ 8,024	$ (10,408)
2020/21	$ 4,520	$ 574	$ (3,946)
Total	$ 2,675,083	$ 2,780,691	$ 105,609

Proposed Schedule (This section is be filled out only if there is a change to the project schedule).
The schedule remains unchanged with an in-service date of July 2018.

Related Projects (This section is be filled out only if changed).

ADDENDUM NUMBER	**DATE** (yyyy mm dd)	**REVISION**	**REVISED BY**	**APPROVED BY**

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **COLLECTOR LINES**

Recommendation (This section is required for all Addendums).

Decrease the budget by $13.6 million for the Collector Lines components of the Bipole III Project, to a revised total of $246.6 million, with the in-service date to remain at July 2018.

Project Scope (This section is be filled out only if there is a change to the scope).

The scope of this portion of the Bipole III Project remains the same as the previous estimate, with the addition of a secondary communications link between the Keewatinohk CS and Henday.

Background (This section is be filled out only if there is information relevant to the recommendation).

The previous project re-estimate was completed in 2014 and was based on a P50 confidence level.

The revised estimate incorporates a detailed scope based on the actual construction progress to date, reflects current market conditions, and includes the changes noted below. The estimate is based on maintaining a project in-service date of July 2018. The recommended budget for the Collector Lines project is based on a P75 estimate that includes all base costs and contingency at a 75% confidence level.

The Total Net Cost decrease of $13.6M relative to the current approved budget is a result of the following changes:

1. Decrease of $13.0M to forecast escalation and interest.
2. Decrease of $11.0M due to savings in accommodation costs for Long Spruce generating station (GS), Henday converter station (CS) and the AC Collector lines.
3. Decrease of $6.0M in the steel structure costs due to competitive bidding for the AC Collector lines.

These net decreases are slightly offset by the following scope changes:

4. Increase of $6.0M to the construction costs for the installation of the dead end tower footings. Final design was not complete at the time of the contract award; additional towers were required resulting in higher construction costs.
5. Increase of $3.6M for scope changes in the project (several in small amounts) now incorporated.
6. Increase of $2.8M to the construction costs as there was a change in strategy from internal resources to external contracts for the high voltage cable installations and steel modification work at Long Spruce GS, primarily due to the lack of internal resources and expertise for the given scope.
7. Increase of $2.4M for the incorporation of secondary communications link between the Keewatinohk CS and Henday CS.
8. Increase of $1.6M in construction costs as there was a change in strategy from internal resources to external contract for the steel assembly, erection, switch installation and bus modifications at Henday CS, due to the lack of availability of internal resources.

Justification (This section is required for all addendums).

A third 500kV HVdc transmission line with converter stations will provide for increased reliability to the Manitoba Hydro system, due to the critical risk to the Province and the Corporation of a Dorsey Converter

Justification (This section is required for all addendums).

Station outage or an Interlake (Bipole I and II) corridor outage. It will also provide an increase in southern power due to reduced line losses on the existing Bipoles I and II (approximately 76MW in normal steady state operation prior to the addition of new generation into the northern collector system).

The DC converter rating was increased from 2000MW to 2300MW. The additional 300MW converter rating is a pre-investment to allow for economical transmission options for future generation development and to maintain adequate HVDC spare capacity to cover the valve group outage, the most frequently occurred events based on operation experience.

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	% For current corporate rates see G911	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	**NPV Benefits/(Costs)**
No change.	
Other Alternatives Considered	**NPV Benefits/(Costs)**
N/A	

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

The risk & contingency methodology outlined at the NFAT for Keeyask & Conawapa Projects has been applied to the revised Bipole III Project estimate. The estimate includes a recommended Collector Lines project contingency at a P75 confidence level to address remaining areas of uncertainty, and has decreased from the previously approved contingency.

Inclusion of a Management Reserve for this portion of the Bipole III Project is not considered necessary at this time.

The Collector Line components require a reduced contingency amount of $1M from [redacted] to [redacted] in contingency as the project components are further along in construction and reflect remaining risks.

Remaining significant risks identified include:

- $3.2M for potential market rates for the Electrode Lines and R49R Sectionalization.
- $3.0M for potential weather delays increasing construction costs.
- $2.0M for skywire replacement with buried grounding conductor outside of Henday CS to accommodate new overhead lines.
- $2.0M for additional modifications to the Gas Insulated Switchgear at Long Spruce GS.
- $2.0M for additional crews at Long Spruce GS and Henday CS to support the overhead work.
- $1.0M for potential additional costs for 500kV line crossings.
- $1.0M for potential additional costs associated with the installation of the High Voltage cables at Long Spruce GS.
- $0.7M for potential additional construction support from design groups.

Total Budget – (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Prev. Approved CPJ/Addendum	Proposed CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 33,120	$ 33,120	$ -
2014/15	$ 58,432	$ 34,218	$ (24,214)
2015/16	$ 75,516	$ 63,240	$ (12,277)
2016/17	$ 51,722	$ 60,752	$ 9,030
2017/18	$ 36,708	$ 33,974	$ (2,733)
2018/19	$ 4,653	$ 21,264	$ 16,612
Total	$ 260,150	$ 246,568	$ (13,583)

Proposed Schedule (This section is be filled out only if there is a change to the project schedule).

No change to the in-service date of July 2018.

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION ADDENDUM

Project Name (This section is required for all Addendums).

Bipole III Project – **COMMUNITY DEVELOPMENT INTITIATIVE (CDI)**

Recommendation (This section is required for all Addendums).

Total cost has decreased from $62 million to $56.7 million from the last approved CPJ addendum. [redacted] These costs are now captured in 1.5.2.1.1.1 Transmission Line (in P:04221).

Project Scope (This section is be filled out only if there is a change to the scope).

No change.

Background (This section is be filled out only if there is information relevant to the recommendation).

The total decrease of $5.3 million is as a result of a revaluation of the Present Value of the payments, [redacted] These costs are now captured in 1.5.2.1.1.1 Transmission Line (in P:04221).

Justification (This section is required for all addendums).

The CDI program remains inclusive of a variety of interests; is required as part of Bipole III; and will be an effective means of promoting community support for hosting the Bipole III project facilities

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

PUB MFR 157
Bipole III

Provide the performance guarantee specifications that the HVDC converter equipment proponents are required to meet. Provide a summary description of these specifications.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

There are four technical "performance guarantees" for the HVDC contract for Bipole III:

- Guaranteed availability and forced outages;
- Guaranteed power transmission rating;
- Guaranteed losses; and,
- Guaranteed thyristor and capacitor failure rates.

Demonstration of performance to ensure the guarantees are being met occurs for the first three years after the in-service date of the HVDC converter equipment. Should any guarantee not be met after the first three years due to one or more issues requiring corrective action, one or two additional years of monitoring of the performance guarantees will be undertaken to ensure sufficient reliability of the solution has been demonstrated. Should any of the guarantees fail to be achieved at the end of the performance guarantee period and any granted extensions, the residual performance guarantee gaps will be addressed through liquidated damages.

Guaranteed Availability and Forced Outages:

Availability and forced outages are the two metrics used to monitor the overall reliability of the HVDC converter equipment. Availability is measured by comparing total available energy (power) transmission capacity over a given service period (usually a year) to the nominal energy transmission capacity over that same service period, and generally expressed as a percentage. [redacted] The forced outage rates are measured by number of outages

over a service period (usually a year) by type of system – valve group, pole or bipole. [redacted]

[redacted]

The method of categorizing outages and calculating availability is based on the methods described in CIGRE (International Council on Large Electrical Systems) Document 346 "Protocol for Reporting the Operational Performance of HVDC Transmission Systems", which is widely recognized and utilized in the HVDC industry as the means of monitoring, measuring, and reporting HVDC system performance.

Guaranteed Power Transmission Rating:

The specified nominal power transmission capability of Bipole III, including the specified 15% continuous overload rating, is guaranteed as 2300MW. As part of this guarantee, the contractor is required to demonstrate the power transmission capacity on a per-pole basis for a minimum 12 hour continuous period without interruption or disturbance. This is a generally accepted method of demonstrating maximum equipment capacity ratings and falls in line with methods used for factory acceptance testing some individual converter components.

Guaranteed Losses:

[redacted]

[redacted]

Losses are evaluated based on the methodology in standard IEC 61803 for HVDC converter stations.

Guaranteed Thyristor and Capacitor Failure Rates:

[redacted]

[redacted]

These rates are established based on industry experience and contractor knowledge of performance of components on other past projects. The values represent the guaranteed maximum average annual failure rate over the guarantee period for the installed device of each type.

PUB MFR 161
Bipole III

Provide a table comparing HVDC converter equipment proposals with any engineer's or third party estimates

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

The following table outlines the HVDC converter equipment proposal prices against Manitoba Hydro's reference estimates for the HVDC converter equipment. In order to provide an appropriate comparison to Manitoba Hydro's reference estimate the HVDC converter proposals have been adjusted to 2014/15 dollar amounts, i.e. addressing escalation and interest costs built into the bid prices.

Additionally, it should be noted there is not a perfect alignment between the definition of each "cost item" between the bid amounts and the reference estimates. For example, the CIGRE reference estimates incorporates spare equipment costs into the "Design & Supply of HVDC Converters and Associated Equipment" cost item whereas this is shown as a separate cost item for the HVDC converter equipment bid amounts.

The table is included on the next page.

Note: The basis estimates outlined are for LCC technology as all bids received on the HVDC converter equipment proposal were for LCC technology. These basis values were not Manitoba Hydro's estimates for the HVDC converter equipment at the time the bids were received. At the time of bid Manitoba Hydro's project estimate included an HVDC converter equipment cost estimate based on VSC technology. This value is therefore not included below as a basis/reference value against the LCC technology based HVDC converter equipment proposal prices.

Executive Summary

This report is a review of Manitoba Hydro cost estimates for the 2,000 MW Bipole III converter stations and associated facilities. Associated interest expense, environmental assessment, construction camps, cost of most property -- as well as all DC transmission line costs -- are not included. All of our cost estimates are in Canadian dollars.

In summary, an "apples-to-apples" comparison between the Manitoba Hydro cost estimate and our cost estimate for the Bipole III converter stations and associated facilities is as follows:

	Base Cost Estimate	Contingency and Escalation Estimate	Total Cost Estimate
MH Cost Estimate:	1,516 M$	763 M$	**2,279 M$**
Our Cost Estimate:	1,351 M$	107 M$	**1,458 M$**

Manitoba Hydro's base cost estimate is 1,516 M$ while our base cost estimate is 1,351 M$. The difference (which is not very significant) is primarily due to the difference in the estimated cost of the converter stations and the AC switchyards which we have assumed a portion of could be integrated into the converter station scope of supply.

The principal difference between our cost estimates is escalation and contingency. First, we believe that the converter station and associated facilities costs will not be subject to appreciable escalation as we understand Manitoba Hydro would enter into definitive and binding contracts in 2013/14. Second, we believe that Manitoba Hydro's estimates for contingency are too high, unnecessarily conservative, and not supportable.

In addition, we believe that Manitoba Hydro can defer the construction and integration of the two DC transmission lines between Dorsey and Riel and Henday and Keewatinoow until Conawapa is in service as they would not be needed until that generation resource is available. This would defer an expenditure of approximately 91 M$ for several years which should offer appreciable savings. It may also be possible to defer two of the Riel synchronous condensers until Conawapa comes on line. By doing so, Manitoba Hydro can also defer approximately 125 M$ of project investment until that generation resource is available.

We recommend that Manitoba Hydro exploit the opportunities for cost reduction and risk mitigation afforded by turnkey, engineer-procure-construct ("EPC") contract structures to the maximum extent possible.

Finally, please note that converter station scope and associated price estimates do not impact cost estimates for the DC transmission line between the Keewatinoow converter station and the Riel converter station nor does it impact any issue associated with routing the DC transmission line between the two converter stations (i.e., the "west DC transmission route" v. the "east DC transmission line route").

1. Introduction

This report is a review of Manitoba Hydro cost estimates for Bipole III converter stations and associated facilities. The review was conducted by Mohamed Rashwan, Dan Lorden, and Brad Railing. All of our cost estimates are in Canadian dollars.

2. Scope of Work

The scope of work is as follows:

1. Review cost estimates prepared by Manitoba Hydro for a 2,000 MW bipole;
2. Establish whether the cost estimates are reasonable and consistent with industry prices;
3. Establish whether the contingencies are reasonable;
4. Identify possible project staging opportunities; and
5. Recommend actions to Manitoba Hydro for consideration.

We have defined the converter station and associated facilities to be the:

1. Keewatinoow converter station and ground electrode system;
2. Keewatinoow AC switchyard;
3. Keewatinoow-Henday AC transmission lines;
4. Keewatinoow-Long Spruce AC transmission lines;
5. Riel converter station and ground electrode system;
6. Portion of Riel AC switchyard not part of the Riel Sectionalization Project; and
7. Riel synchronous condensers.

Other costs associated with these facilities under our review include:

1. Site development;
2. Project management;
3. Construction management;
4. Engineering and studies; and
5. Interfaces, communications and test equipment.

The following items are excluded from the scope of work:

1. DC transmission line from the Keewatinoow converter station to the Riel converter station;
2. DC transmission line from the Keewatinoow converter station to the Henday converter station;
3. DC transmission line from the Riel converter station to the Dorsey converter station;
4. Construction camps;
5. Environmental approvals and any stakeholder consultation; and
6. Property acquisition (with small exception of ground electrode system).

We are also not in a position to review Manitoba Hydro's Bipole III interest expense calculations as they are a function of cash flow assumptions and Manitoba Hydro's cost of capital.

Finally, please note that converter station scope and associated price estimates do not impact cost estimates for the DC transmission line between the Keewatinoow converter station and the Riel converter station nor does it impact any issue associated with routing the DC transmission line between the two converter stations (i.e., the "west DC transmission route" v. the "east DC transmission line route").

3. Manitoba Hydro documents reviewed

Manitoba Hydro provided the following documents for our review:

1. HVDC converter stations re-estimate (July 2010) – (Appendix 1)
2. Construction management
3. Engineering support, planning and consultants
4. Project management
5. Budgetary pricing request for Bipole III
6. ABB response to the mini specification
7. Areva (Alstom Grid) response to the mini specification
8. Siemens response to the mini specification
9. Bipole III converter station project pre-design and estimate report
10. Calculation of CPJ addendum amounts -- (Appendix 2)
11. Spreadsheets showing the base cost estimates -- (Appendix 3)

4. Analysis of Manitoba Hydro cost estimates

A portion of the Manitoba Hydro costs estimates for converter stations and associated facilities was supplied by the Power Supply Business Unit (see Appendix 1) and a smaller portion was supplied by the Transmission and Distribution Business Unit (see Appendix 2 and Appendix 3).

4.1. Converter station estimate

Manitoba Hydro estimated 558 M$ for the Keewatinoow converter station and Riel converter station based on budgetary prices from converter station suppliers who responded to a mini specification issued in 2009.

The lowest supplier estimate was 480 M$. Manitoba Hydro added 70 M$ to cover items not quoted by the supplier and another 8 M$ to cover items not in the mini specification for a total of 558 M$.

The converter station cost estimate per kW is 279 $/kW for two converter stations (i.e., 558,000,000 $ ÷ 2,000,000 kW) and, according to the mini specification, does not include ac circuit breakers.

4.1.1. Comments on the converter station mini-specification

We believe that converter station suppliers should be provided with design flexibility and that Manitoba Hydro should pursue developing a "functional" as opposed to a "detailed" technical specification. Certain requirements in the mini-specification would indicate that Manitoba Hydro currently intends to pursue developing a "detailed" technical specification and we recommend against that. Again, we believe that it is to Manitoba Hydro's benefit not to take detailed ownership of the converter station design and by doing so will result in a more cost effective solution.

In addition, we recommend Manitoba Hydro consider "packaging" as much of the Keewatinoow AC switchyard and Riel AC switchyard into the converter station scope of work as possible. This would benefit Manitoba Hydro as the AC switchyard equipment technical requirements will largely be determined by the converter station supplier. This will eliminate any risk with the converter station to AC switchyard interface, and -- if sourced on a turnkey EPC contract basis -- we believe would result in a lower overall cost.

4.1.2. Converter station market costs

Turnkey, EPC converter station market prices are currently between 175 $/kW and 250 $/kW and would include the following comprehensive converter station scope of work:

- Technical studies; system design; component / equipment specification and procurement
- Station layout and detailed design;
- Civil works;
- Converter equipment and buildings;
- AC switchyard;
- DC switchyard;
- Control and protection hardware and software engineering;
- Off-Site testing and QA monitoring;
- Logistics;
- DC and AC system installation and commissioning; and
- Documentation.

Also, Cigre technical brochure number 388 WG B2/B4/C1-17 (2009) provides guidance for estimating converter stations and indicates that the cost for a 2,000 MW system should be approximately 173 $/kW. The Cigre figures are based on quotes from suppliers provided to the working group and therefore -- as

these are relatively "generic" cost estimates -- need to be applied carefully. However, Cigre's cost estimates provide a good "sanity check".

So, using the current market prices of 175 $/kW to 250 $/kW, the cost estimate for the converter stations should be between 350 M$ and 500 M$. Therefore, to be conservative, we propose 500 M$ for the base converter station cost estimate.

4.2. Riel Synchronous condensers

Four (4) 250 MVAr synchronous condensers are required at the Riel AC point-of-interconnection for proper operation of Bipole III. Manitoba Hydro has based their cost estimate on quotations and meetings with the limited number of suppliers. Manitoba Hydro's estimate is 255 M$ for the four machines based on an EPC contract which would include the machines, their unit transformers and the associated circuit breakers. We believe that this cost estimate is on the conservative side and propose it remain at 255 M$ for the base synchronous condenser cost estimate.

4.3. Keewatinoow AC switchyard

The Keewatinoow AC switchyard would require 18 circuit breaker positions. Manitoba Hydro's cost estimate is 73 M$ which we concur with. However, for the purpose of this review, we have assumed that circuit breakers associated with the converter station equipment (i.e., 4 converter transformers and 4 filter banks) are included in the converter station cost estimate. Therefore, assuming that approximately 40% of the switchyard cost is included in the converter station contract, we propose that the adjusted base Keewatinoow AC switchyard cost estimate be (73 M$ • 60%) or 45 M$.

4.4. Site development

Manitoba Hydro's cost estimate for Keewatinoow site development is 54.5 M$, Riel site development is 28.7 M$, for a total site development cost estimate of 83 M$.

Manitoba Hydro's definition of site development includes: (i) geotechnical engineering tests, site improvements, transportation access, fence, infrastructure development, etc.; and (ii) converter transformer access and change out infrastructure and additional buildings and other which would not be typically included in a converter station EPC contract. The first component of site development scope would be considered typical for a converter station while the second component of site development costs might be considered discretionary or otherwise specific to Manitoba Hydro. We are not in a position to comment one way or another on these requirements and, therefore, Manitoba Hydro's cost estimate.

We propose that the base site development cost estimate remain at 83 M$, but, encourage Manitoba Hydro to revisit its requirements for site development to determine if this cost could be optimized.

4.5. Interfaces, test equipment & communications for converter stations

Manitoba Hydro's cost estimate for Keewatinoow and Riel interfaces, communication systems, and test equipment is 26 M$. We have assumed that this scope of work is included in the converter station EPC contract (which it typically is). Therefore, we recommend that this cost estimate be adjusted to 0 M$.

4.6. Property for electrodes and Keewatinoow site; Electrode sites

We have no comment on Manitoba Hydro's cost estimate and recommend that the base cost estimate for these two items remain at 15 M$.

4.7. Project & Construction management; Engineering planning studies and consultants

Manitoba Hydro's estimate for these three management and engineering activities is 189 M$ which we believe is too high. Typically we would expect 10% to15% of the total cost estimate be budgeted for this scope of work which would put this figure between 100 M$ and 150 M$. Regardless, not being familiar with Manitoba Hydro's internal cost structure and management/oversight philosophy, we assume that the base cost estimate for these services would remain unchanged at 189 M$.

4.8. Keewatinoow electrode line

Manitoba Hydro's estimate for the Keewatinoow electrode line is 4.7 M$. We believe this to be reasonable and recommend that the base cost estimate remain unchanged at 4.7 M$.

4.9. Keewatinoow converter station construction power

Manitoba Hydro's cost estimate for converter station construction power is 23.4 M$. We believe this to be reasonable and recommend that the base cost estimate remain unchanged at 23.4 M$.

4.10. Keewatinoow collector lines

Manitoba Hydro's cost estimate for the five (5) Keewatinoow 230 kV AC transmission lines (a.k.a. "collector lines") is 70.9 M$. We believe this to be reasonable and recommend that the base cost estimate remain unchanged at 70.9 M$.

4.11. Riel AC switchyard

Manitoba Hydro's cost estimate for the Riel AC switchyard is 133.5 M$. Again, for the purpose of this review, we have assumed that a portion of the Riel AC switchyard equipment would be integrated into the converter station EPC contract. Maintaining the same assumption that 40% of the Riel AC switchyard would be associated with the converter station, we propose that the adjusted base Riel AC switchyard cost estimate be 80 M$.

4.12. Riel electrode line

Manitoba Hydro's estimate for the Riel electrode line is 3.5 M$. We believe this to be reasonable and recommend that the base cost estimate remain unchanged at 3.5 M$.

4.13. Summary -- Converter stations and associated facilities

Table 1 provides a summary of Manitoba Hydro's cost estimates (including contingency and escalation) for converter stations and associated facilities. The items included in "Subtotal 1" were derived from -- and formatted in accordance with -- Appendix 1. The items included in "Subtotal 2" were derived from Appendix 2 and Appendix 3. Contingency (which includes so-called "Management Reserve") was derived from Appendix 3.

Scope	MH Base Estimate M$	MH Contingency Estimate M$	MH Escalation Estimate M$	MH Total Estimate M$

(*) Not included in our review.

Table 2 – Review Team estimate including contingency and escalation

We believe that a "Big Picture" presents itself when comparing Manitoba Hydro's converter station and associated facilities cost estimates and our cost estimates. For all intent and purposes, the base cost estimates are the same. As previously discussed, our converter station cost estimate is a little lower and we have assumed that portions of the two AC switching stations would be integrated into the converter station EPC contract. Moreover, we assumed that the converter station EPC contract would include the associated interface equipment, communication equipment and test equipment. Bottom line, we are in general agreement with Manitoba Hydro's "Base Cost Estimate". The principal difference lies within our estimates for Contingency and Escalation.

We have systematically applied a 10% contingency to all "hard" scope components (i.e., equipment as opposed to services). We believe that 10% is typical for such large capital projects and especially justified as, in most all cases, we believe that the base estimates are on the high-side of the range. For example, one might argue that our converter station cost estimate already has "embedded contingency" as we applied the highest current market price of 250 $/kW. Moreover, the absolute value of our estimated contingency of 107 M$ is a significant amount of money which we believe can be actively managed by Manitoba Hydro's risk control systems. Manitoba Hydro's estimated contingency (inc. management reserve) is 555 M$ which is 35% of its base cost estimate or approximately equal to the value of two complete 2,000 MW converter stations. We believe this estimated contingency is too high, unnecessarily conservative, and not supportable.

We also believe that the converter station and associated facilities costs will not be subject to appreciable escalation as we understand Manitoba Hydro would enter into definitive and binding contracts in 2013/14. This is the time that actual costs will be known and to most extent fixed. Moreover, we have not witnessed any significant change in converter station, synchronous machine, or switchyard equipment costs over the past several years. Manitoba Hydro has estimated 207 M$ (14% of its base cost estimate) for escalation cost which, again, is too high, unnecessarily conservative, and not supportable.

Budgetary converter station cost estimates will be subject to some currency exchange and commodity price risk. Converter station suppliers functionally "denominate" the EPC contract price in their respective European-based currencies (i.e., Euro or Krona). Moreover, suppliers typically stipulate that commodity (i.e., copper, steel, etc.) price risk be borne by its customer. Therefore, for budgetary price purposes, these risks are placed with Manitoba Hydro. However, these are subject to negotiation with potential suppliers and these risks will pass when a definitive EPC contract is executed. Moreover, financial hedging strategies are available to Manitoba Hydro to help mitigate and certainly define the price for mitigating these risks.

Finally, we have not estimated nor commented on Manitoba Hydro's cost estimate for interest expense. This is a financially-driven calculation based on cash flow, Manitoba Hydro's average cost of capital, and other accounting rules. Having said that, once a final cost estimate and associated cash flow has been established and approved, the calculation of interest expense would be programmatic, straight-forward, and should not subject to interpretation.

6. Project delivery strategy

We recommend that the "Big Five" components which comprise the scope of the converter station and associated facilities "i.e., (a) Keewatinoow converter station; (b) Keewatinoow AC switchyard; (c) Riel converter station; (d) Riel AC switchyard; and (e) Riel synchronous condensers" be packaged, functionally specified, procured, and managed by Manitoba Hydro on a turnkey EPC contract basis. This is certainly the trend, if not the rule, in converter station procurement as evidenced by the project list in Appendix 4.

In addition, we recommend that Manitoba Hydro consider packaging the converter station and associated facilities in possibly no more than two principal EPC Contracts. For example, we believe that the Keewatinoow AC switchyard, Keewatinoow converter station, Riel Converter station, and Riel AC switchyard could be packaged in one EPC Contract and the Riel synchronous condensers be packaged in a second EPC contract. In our opinion, if properly structured, this will minimize interface risk and benefit Manitoba Hydro.

Converter station suppliers are accustomed to negotiating for and providing the following technical and commercial protections:

1. Firm, fixed-price contract amount;
2. Extended equipment warranties;
3. Schedule guarantee with associated liquidated damages;
4. Transmission capacity performance guarantee with associated liquidated damages
5. Transmission loss performance guarantee with associated liquidated damages; and
6. Reliability and availability guarantees with associated liquidated damages.

Bottom line, this converter station contracting strategy is currently the norm, is understood by lenders and insurance underwriters and, we believe would provide Manitoba Hydro with manageable risk.

7. Possible deferral of expenditure

We believe that there may be two possibilities to defer project investment until such time as the Conawapa generation resource comes on line post 2020.

1. We believe that the: (i) 72 km DC transmission line between the Dorsey converter station and the Riel converter station and the: (ii) 27 km DC transmission line between the Keewatinoow converter station and the Henday converter station can be deferred until Conawapa comes on line. By doing so, Manitoba Hydro can defer approximately 91 M$ of project investment until post 2020.

2. It may also be possible to defer two of the Riel synchronous condensers until Conawapa comes on line. By doing so, Manitoba Hydro can also defer approximately 125 M$ of project investment until post 2020.

8. Project staging

Finally, there may also be net benefits by "staging" the Bipole III converter stations over time and there could be two potential staging options:

Option 1 – Three stages (similar to Bipole II development):

1. Stage 1: 1,000 MW bipolar operation at ± 250 kV DC voltage;
2. Stage 2: 1,500 MW bipolar operation at +500 kV / -250-kV DC voltage; and
3. Stage 3: 2,000 MW bipolar operation at ± 500 kV DC voltage.

Option 2 – Two stages:

1. Stage 1: 1,000 MW monopolar metallic return operation at + 500 kV DC voltage; and
2. Stage 2: 2,000 MW bipolar operation at ±500 kV DC voltage.

In both cases, the DC transmission line between the Keewatinoow converter station and the Riel converter station would initially be constructed for full 2,000 MW, ±500 kV DC voltage capability.

Either of these two options would increase converter station EPC costs but defer certain of these costs in time. Also, overall complexity, losses, outage requirements and other factors need to be considered to determine if indeed net benefits exist.

We do not necessarily recommend that Manitoba Hydro consider this staging concept further but are simply highlighting the opportunity.

9. Recommendation

In conclusion, we recommend that Manitoba Hydro:

1. Review and possibly apply certain of our modified cost estimates;
2. Consider adjusting estimated contingency and escalation costs;
3. Employ EPC contracts for the converter stations, AC switchyards and synchronous condensers;
4. Consider deferring Keewatinoow to Henday DC transmission line construction;
5. Consider deferring Riel to Dorsey DC transmission line construction;
6. Consider deferring two of the Riel synchronous condensers; and
7. Evaluate whether any Bipole III staging strategy would be beneficial and efficacious.

Appendix 1
HVDC Converter Stations Re-estimate (July 2010)

This estimate has been modified to reflect the repackaging of the BPIII Complex as per memo dated 2010 06 23 from KRF Adams and TE Tymofichuk. Only the items managed by Power Supply are shown.

D1 - HVDC Converters

Budgetary Estimate

2000MW 2017 ISD: $558 Million (2009 estimate)

2000MW + 500MW Future Option 2017 ISD (incremental): $642 Million (+$84 Million)
(Immediate purchase of Spare Converter transformers @ 4x $6M is recommended until a formal risk analysis has been performed)

Converter 2500MW Capacity (@ 2000MW Operational Rating) Benefits:
1. The 2500MW capacity would increase reliability as follows:

Capacity	Post Loss of VG Availability	Post Loss of Pole Availability	Largest single contingency (excluding lines)
2000MW	1500MW (0.75)	1000MW (0.50)	1000MW
2500MW	1875MW (0.9375)	1250MW (0.625)	750MW
2500MW + 10% continuous overload	2000MW (1.0)	1375MW (0.6875)	625MW

2. This should be considered when performing the risk analysis of deferring the spare converter transformers

Expansion from 2000MW to 2500MW 2022 ISD: $20 Million
- $15Million for an additional 200MVar AC Filter at Keewatinoow
- $5Million approximate estimate for additional Engineering, System Planning Studies and Commissioning

Budgetary estimates are based on responses to mini-specs received from HVDC suppliers (Q1 2009). Estimates for options and items not quoted by supplier were prepared by [redacted]

	2009$M		
	[redacted]	[redacted]	[redacted]
Base Cost Provided by Supplier 2000MW	480	590	556
Base Cost Provided by Supplier 2500MW	554	630	616
Base Cost Multiplier to increase to 2500MW	1.15	1.08	1.11
Est. for Options and Items Not Quoted by Supplier (2000MW)	70	54	28
Subtotal Cost (2000MW)	550	644	584
Additional HVDC items outside scope of mini-spec for (2000MW)	8	8	8
Total Cost 2000MW Option	**558**	**652**	**592**
Total Cost 2500MW Option (2000MW x Multiplier)	**642***	**704**	**657**
Incremental 2500MW Dollar Increase	**84**	**52**	**65**

Note 1: From CIGRE 186 WG 14.20, cost of converter transformers is approx. 22% of total cost, therefore, each unit is approx. $6M
Note 2: Additional HVDC items outside scope of mini-spec for 2000MW include NERC and SPS
Note 3: Estimate for Options and Items Not Quoted by Supplier include Continuous Overload, F3 tornado rating and 3D drawings as well as spare thyristors and VH HVAC for [redacted] only.

Management Reserve

2000MW
Lowest price estimate of $558 was selected for the 2000MW budgetary estimate. HVDC suppliers [redacted] and [redacted] are considered to be industry leaders in the HVDC transmission world market and [redacted] is considered to have less experience. Management reserve of $102M (difference between average base price of industry leaders and lowest vender price and associated $10M for other related costs) has been allotted for vender uncertainty and to secure a more experienced vender.

2500MW
The [redacted] price estimate of $642 is selected for the 2500MW budgetary estimate. HVDC suppliers [redacted] and [redacted] are considered to be industry leaders in the HVDC transmission world market and [redacted] is considered to have less experience. Management reserve of $80M (difference between average base price of industry leaders and lowest vender price and associated $10M for other related costs) has been allotted for vender uncertainty and to secure a more experienced vender.

2500MW Upgrade Requirements Description:

Valves:
Immediate (must be upgraded to protect 2500MW option):
- Thyristor size will increase for 2500A, size increase from 4" to 5"
- Saturable Core Reactors, Snubber components would increase
- Valve Hall buswork will increase
- Larger Air Handling requirements for additional heat dissipation
- Larger Valve Cooling equipment could be added later

Converter Transformer:
Immediate (must be upgraded to protect 2500MW option):
- Size increase from approximately 170MVA to 210MVA
- BPII units are approximately 250MVA, therefore BPIII units should be within transport limits
- Mini Specification Pricing included 4 Spare units
- Purchase of spare units should not be deferred until a risk analysis is completed

Smoothing Reactors:
Immediate (must be upgraded to protect 2500MW option):
- Size increase from 2000A to 2500A

AC Filters:
Immediate (2 x 100MVar, 2 x 200Mvar): Future (1 x 200MVar)
- Increase from 600MVar to 800MVar total per station
- Additional Filter required

DC Switchyard and Filters:
Immediate (must be upgraded to protect 2500MW option):
- Size increase of Buswork, Switch Capacity from 2000A to 2500A and DC Filtering
- Size for 2500MW now to eliminate future HVDC outage requirements for an upgrade

D2 - Synchronous Condensers

Budgetary Estimate

2000MW 2017 ISD: $255 Million (Adjusted from 2009 estimate of $305 Million)

2000MW + 500MW Future Option 2017 ISD (incremental): $255 Million ($0)

Expansion from 2000MW to 2500MW 2022 ISD: $148 Million
$128 Million for additional 2 machines plus $20 Million Indirect Costs

Budgetary estimates are based on responses to mini-specs received from HVDC suppliers (Q1 2009) and on information received during recent vendor meetings. Estimates for items not quoted by supplier were prepared by [redacted].

	2009$M			
	[redacted]	[redacted]	[redacted]	[redacted]
Base Cost Provided by Supplier (4 syncs)	219	70 Machine Only	250	203
Machine Only Costs from supplier	TBD	70	-	85
BOP and auxiliaries from supplier	TBD	TBD	-	118
Est. for Items Not Quoted by Supplier	86	TBD	-	NA
Total Cost (4 synchs)	305	TBD	250	**203**
Total Cost (6 synchs)	457.5	TBD	375	**304.5**

[redacted] Proposal dated December 22, 2009 was quite detailed and included the unit transformer, building and civil works. The proposal was based on four 250MVar machines, so the cost could be scaled up for the 2500MW option to meet the six machine requirement.

[redacted] has indicated that they would prefer to supply the existing 300Mvar Machine design in service at Dorsey. The supply of 300MVar machines could allow for a reduction of the required machines for 2500MW from six to five.

With the above new information, we recommend carrying the average between the three most detailed estimates [redacted] of $255 Million and keeping the previous contingency.

[redacted], [redacted] and [redacted] are supplying a hydrogen cooled machine, while [redacted] is a larger air cooled unit. The existing contingency will be kept since [redacted] manufacturing capabilities must be assessed. A more detailed budgetary price from [redacted] is required to validate the Hydrogen cooled machine pricing, which may allow us to reduce the required contingency.

Management Reserve

2000MW
No management reserve was allotted to synchronous condensers.

2500MW
No management reserve was allotted to synchronous condensers

D3 - 230kV AC Switchyard (Keewatinoow only)

Budgetary Estimate

2000MW 2017 ISD: $73 Million (2009 estimate +Updated costs)

2000MW + 500MW Future Option 2017 ISD (incremental): $73 Million ($0)

Expansion from 2000MW to 2500MW 2022 ISD: $5 Million
This is an approximate estimate for additional Engineering, System Planning Studies and Commissioning. Additional Bay costs would be the responsibility of the corresponding new generation facility project.

Budgetary estimates are based on AIS estimates compiled internally by Manitoba Hydro (Q1 2009).

	230kV AC SWITCHYARDS (2009$M)			
	Riel		Keewatinoow	Base Cost
	Phase A	Phase B		
	TBU	TBU	73	73*
Total	TBU			

Riel works are managed by Transmission Construction and Line Maintenance Division (**TCLM**) and are included in their TBU estimate.

Northern works are managed by New Generation Construction Division (**NGCD**).

The 2009 AIS Estimate of $49 Million for Keewatinoow was based on a 32 breaker bay; however the System Planning SLD shows 24 breakers for a 2017 ISD. Scaling down to 24 breakers, the cost is approx $45 Million. An additional $15 Million is added to account for PM and CM costs (typically 17%-18% based on Wuskwatim and Keeyask SAP reports + 10% for Site Management performed by an EPC Vendor as identified from CIGRE 186 WG 14.20). This $60 Million dollar figure used previously is consistent with the TCLP 2009 cost estimate report.

The $73 million used in this estimate was obtained from TBU.

2500MW Option:
The Riel Sectionalization Project has designed the AC switchyard to protect the 2500MW option. There are minimal differences between the Converter Station AC Switchyards for a 2500MW option and the costs associated with terminating future lines will be the responsibility of the corresponding new generation facility project.

Management Reserve

AIS option has been recommended, $15M allotted to the Keewatinoow Switchyard to account for aggressive estimating as per direction from the Working Group.

D4 - Site Development

Budgetary Estimate

2000MW 2017 ISD: $83 Million (2009 estimate)

2000MW + 500MW Future Option 2017 ISD (incremental): $85 Million (+$2 Million)
Additional $2 Million for Keewatinoow size increase to support an additional AC Filter

Expansion from 2000MW to 2500MW 2022 ISD: $5 Million
This is an approximate estimate for additional engineering and civil works.

Budgetary estimates are based on estimates compiled internally by Manitoba Hydro (Q1 2009).
Riel (Phase A) - TCLM
Riel (Phase B) & North - NGCD

	SITE DEVELOPMENT (2009$M)			
	Riel		Keewatinoow	Base Cost
	Phase A	Phase B		
	TBU	28.7	54.5	83*
TOTAL	TBU + 28.7			

Riel Phase A works are managed by the TCLM as part of the Sectionalization Project and represent costs associated with overall Riel site development. Phase B works are part of the BPIII Converter Station Complex and represent the site development directly related to synchronous condensers and HVDC converters.

Northern works are also part of the BPIII Converter Station Complex and are solely for the HVDC Converter Station.

Site development costs include all works associated with site development and can be subdivided as follows:

ITEM	% of Site Development Cost
Civil Site Improvements	42%
Mechanical Buildings and Systems	43%
Auxiliary Buildings	8%
Fire Protection	7%

2500MW Option:
Since there are minimal differences in site development for a 2500MW option, we recommend carrying the previous figures.

Management Reserve
The current estimate is based on using the optimum location at the Keewatinoow site. However, the Conawapa area exhibits poor site conditions in many locations. Management reserve of $12M has been allotted to Site Development if a site with unfavorable soil conditions is required to be selected based on Conawapa GS interfacing, system operational requirements or direction from an external organization.

NOTE: Questions have been raised about the relative cost difference between the Riel and Keewatinoow Stations. Riel includes $49.4M (Phase A & B works) under Power Supply, and $20.7M (Phase A works) under Transmission for a total of $70.1M. The total cost of Keewatinoow Site Development is $54.5M.

D5 & D6

No changes are perceived, see the estimate summary table.

D7 – Construction Power for Keewatinoow CS

This is being managed by TCLM, and now forms part of the TBU estimate.

D8 - Electrode Sites

Budgetary Estimate

2000MW 2017 ISD: $5 Million (2009 estimate + $1.5M)
This increase is based on a revised electrode site selection field program.

2000MW + 500MW Future Option 2017 ISD (incremental): $6 Million (+ $1.0 Million)

Scenario A - Candidate sites can support a 2750dcA option
- $0.5M - Increased electrode size North
- $0.5M - Increased electrode size South

Scenario B - Candidate sites cannot support a 2750dcA option
- $2.5M to site a 2500MW electrode in North
- $1.5M to site a 2500MW electrode in South
- $10.4M - additional line distance North
- $7M - additional line distance South
- $0.5M - Increased electrode size North
- $0.5M - Increased electrode size South

Expansion from 2000MW to 2500MW 2022 ISD: $0
Add $24.4 Million to Management reserve for worst case scenario B above.

Budgetary estimates are based on estimates compiled internally by NGCD (Q1 2009).

ELECTRODE SITES (2009$M)		
Riel	**Keewatinoow**	**Base Estimate**
2	3	5

2500MW Option:
We are assuming a worst case additional cost of $24.4 Million

Management Reserve
Management reserve of $20M has been allotted for Electrode Sites if mitigation of adverse effects of electrode sites is directed. The main drivers of mitigation requirements are adverse effects related to the communities surrounding the Electrode Sites.

In addition to this, $24.4 Million must be added in case candidate sites cannot support a 2750dcA option.

I1 - Construction Management

Budgetary Estimate

2000MW 2017 ISD: $77 Million (2009 estimate)

2000MW + 500MW Future Option 2017 ISD (incremental): $77 Million ($0)

Expansion from 2000MW to 2500MW 2022 ISD: $11 Million
Estimated using the ratio of I1 to total direct costs for the 2000MW and applying this ratio to the total directs for 2500MW.

Budgetary estimates are based on estimates compiled internally by NGCD (Q1 2009).

	INDIRECTS	Riel	North	Base Cost
I1	**Construction Management**	**35**	**42**	**77***
	Site Management	25	26	51
	Services, Supplies and Equipment	10	16	26

2500MW Option:
Since there are minimal differences in construction management for a 2500MW option, we recommend carrying the previous figures. The costs associated with terminating future lines will have to be estimated.

Management Reserve
5% of all Construction Management hours (equating to $4M) were removed from the Base Estimate and allotted to Management Reserve. This more aggressive estimating practice was completed as per direction from the Working Group to reduce the Base Estimate.

I2 - Camp (North) & Construction Facilities

Budgetary Estimate

2000MW 2017 ISD: $81 Million (2009 estimate)

2000MW + 500MW Future Option 2017 ISD (incremental): $81 Million ($0)

Expansion from 2000MW to 2500MW 2022 ISD: $0
No camp costs are required since the additional synchronous Condensers are in the south.

Budgetary estimates are based on estimates compiled internally by NGCD (Q1 2009).

	INDIRECTS	Riel	North	Base Cost
I2	**Camp (North) & Construction Facilities**	**7**	**74**	**81***
	Construction Facilities	2.7	39.1	41.8
	Camp Services Contract	-	19.2	19.2
	Electric Power & Communications for Construction	3.1	7.0	10.1
	Labour and Material Provisions	-	7.8	7.8
	Transportation and Stores	1.3	0.5	1.8

2500MW Option:
Since there are minimal differences in camp and construction facilities for a 2500MW option, we recommend carrying the previous figures. The cost of a camp to terminate future lines is outside the scope of the converter stations.

Management Reserve
A 5% reduction was applied to select activities in Camp (North) & Construction Facilities (equating to $4M). The $4M was removed from the Base Estimate and allotted to Management Reserve. This more aggressive estimating practice was completed as per direction from the Working Group to reduce the Base Estimate.

I3 - Engineering Support, Planning Studies & Consultants

Budgetary Estimate

2000MW 2017 ISD: $72 Million (2009 estimate with updated System Planning studies estimate)

2000MW + 500MW Future Option 2017 ISD (incremental): $72 Million ($0)

Expansion from 2000MW to 2500MW 2022 ISD: $9 Million
Estimated using the ratio of I3 to total direct costs for the 2000MW and applying this ratio to the total directs for 2500MW.

Budgetary estimates are based on estimates compiled internally by NGCD (Q1 2009).

	INDIRECTS	Riel	North	Base Cost
I3	**Engineering Support, Planning Studies & Consultants**	**45**	**27**	**72***
	Engineering Support and Consultants	29.5	19.9	49.4
	Major Consultants	13.0	7.4	20.4
	System Studies	2.2	0.1	2.3

2500MW Option:
Since the 2500MW option studies are in progress and preliminary engineering has not commenced, we recommend carrying the previous figures. The costs associated with the studies required to expand from 2000MW to 2500MW are based on previous ratios.

Management Reserve
5% of all Engineering Support, Planning Studies & Consultant hours (equating to $4M) were removed from the Base Estimate and allotted to Management Reserve. This more aggressive estimating practice was completed as per direction from the Working Group to reduce the Base Estimate.

I4 - Project Management

Budgetary Estimate

2000MW 2017 ISD: $40 Million (2009 estimate)

2000MW + 500MW Future Option 2017 ISD (incremental): $40 Million ($0)

Expansion from 2000MW to 2500MW 2022 ISD: $5 Million
Estimated using the ratio of I4 to total direct costs for the 2000MW and applying this ratio to the total directs for 2500MW.

Budgetary estimates are based on estimates compiled internally by NGCD (Q1 2009).

	INDIRECTS	Riel	North	Base Cost
I4	**Project Management**	**18**	**22**	**40***
	Project Management - NGC	13.5	13.4	26.9
	Insurance, JRS & HPMA	4.5	8.1	12.6

2500MW Option:
Since there are minimal differences in project management for a 2500MW option, we recommend carrying the previous figures. The costs associated with Project Management required to expand from 2000MW to 2500MW are based on previous ratios.

Management Reserve
5% of all Project Management hours (equating to $2M) were removed from the Base Estimate and allotted to Management Reserve. This more aggressive estimating practice was completed as per direction from the Working Group to reduce the Base Estimate.

Cost Impact Analysis (All Costs are High Level Estimates)

A) Savings and Cost to Defer 1 Synchronous Condenser
Deferring one synchronous Condenser is not recommended as the components of the BPIII Converter Station Project are planned to be designed to an N-2 redundancy. It is understood that this is an operating and power sales requirement.

B) Cost and Savings to defer one pole (Pole 5 or Pole 6) of Bipole III
Deferring one Pole is not recommended as the components of the BPIII Convertor Station Project are planned to be designed to an N-2 redundancy. As well a 50% savings would not be observed if one pole is deferred due to shared costs, and it would cost more than 50% of current estimate to construct the remaining pole after the project ISD.

C) N-1 or N-2
All components of the BPIII Convertor Station Project are planned to be designed to an N-2 redundancy. It is understood that this is an operating and power sales requirement.

- D1 - Convertor Stations
  - It is assumed that both poles of the Bipole III Converter Stations are required to meet the N-2 redundancy.
  - The Convertor Stations require 2-valve groups per pole to meet the N-2 redundancy. The 2009 [redacted] estimate identifies a 5-10% cost difference between 2-valve groups per pole vs. 1-valve group per pole (approx $55M)
- D2 - Synchronous Condensers
  - 4 syncs are required to meet the N-2 redundancy.
- D3 & D4 - Site Development and Switchyards
  - Riel Sectionalization works which include the Site Development and the 230kV Switchyard are proceeding with an N-2 redundancy.
  - Keewatinoow Site Development works and the 230kV Switchyard are planned for an N-2 redundancy.

D) Gold Plating Report

The following items will be identified in a "Gold Plating" report which was not available at the time of this estimate:

1) Spare HVDC Converter Transformer staging
2) Synchronous Condenser estimate change
3) Oil spill containment design
4) Relay buildings water requirements
5) Road requirements
6) Contracting strategies
7) Transformer moving system

Item 1 needs a formal risk assessment prior to deferring the purchase of spare transformers.
Item 2 has been incorporated into this estimate.
Items 3 - 7 are not anticipated to have any significant impact on this estimate.

Sample EPC Contracts

PUB MFR 165
Bipole III

For every expense category related to the Bipole III project, provide a summary comparing the forecast costs underpinning the $3.28 billion Bipole III capital cost estimate with those underpinning the $4.65 billion control budget. Explain all variances between the two cost estimates.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

Please find a summary of the Bipole III project costs in CEF11 and CEF14 by category and an explanation of variances below.

BPIII Project (in millions of dollars)	**CEF11**	**CEF14**	**Variance**
Material	$373.49	$302.62	($70.87)
Consulting Services	$89.98	$133.80	$43.81
Construction Services	$1,509.83	$2,400.90	$891.07
Other expenses	$122.34	$384.32	$261.98
Internal Labour	$240.86	$353.64	$112.78
Interest	$575.30	$568.00	($7.29)
Escalation	$220.43	$147.60	($72.84)
Contingency	$147.65	$361.69	$214.03
Total	**$3,279.88**	**$4,652.56**	**$1,372.67**

Material

- Decrease in Transmission Line materials primarily based on actual vendor pricing

Construction Services

Changes to scope to include:

- Revised line length of final preferred route,
- Increased converter rating to 2300 MW,
- 230kV AC Switchyard indirect and interface costs,
- Site development costs previously assumed to be shared with Conawapa,
- Addition of 2 more temporary collector lines

- Addition of the Keewatinohk construction power substation.
- Inclusion of Synchronous Condensers
- Updated HVDC Converter Equipment costs

Other Expenses

- Changes in preferred final route and right-of-way, updated land values
- Increased Camp Operations costs due to extension of In-Service Date
- [redacted]

Internal Labour

- Increased to reflect project requirements, extension of a year to In Service Date (2017 to 2018) and greater requirements, in part related to license conditions and monitoring.

Interest & Escalation

- Decrease due to lower interest rates and changes in cash flows

Contingency

- Allocation of P50 Project Contingency

Copies of the CPJ Addendums for 2011 ($3.28B), 2014 ($4.65B), and 2016 ($5.04B) were included in the attachment to PUB MFR 155.

For additional detail, the following summarizes the costs related to the previous $4.65 billion control budget and the revised $5.04 billion control budget by category:

BPIII Project (in millions of dollars)	**CEF14**	**CEF16**	**Variance**
Material	$302.62	$343.90	$41.28
Consulting Services	$133.80	$151.87	$18.08
Construction Services	$2,400.90	$2,842.01	$441.11
Other expenses	$384.32	$350.21	($34.11)
Internal Labour	$353.64	$360.61	$6.98
Interest	$568.00	$466.58	($101.43)
Escalation	$147.60	$52.86	($94.74)
Contingency	$361.69	$473.62	$111.94
Total	**$4,652.56**	**$5,041.66**	**$389.10**

Material

- Incorporation of additional materials required for CEC prescribed southern route changes, anticipated incorporation of Nav Canada re-route additional materials, delays in material supply, premiums to accelerate materials and associated engineering.
- Decrease in steel structure costs due to competitive bidding for the AC Collector lines.

Construction Services

- Incorporation of actual construction costs and awarded contract values as a result of higher market rates for anchor and foundations as well as tower assembly erection and stringing contracts than planned and incorporation of delay claims (weather and material) experienced.
- Additional costs included for Keewatinohk External Infrastructure work Including Provincial Road Upgrades (PR 280 and PR 290) and Conawapa Access Road Upgrades which were not included in the original scope of CPJ Addendum 7b.
- Decrease in accommodation costs for the following projects: Long Spruce and Henday AC station modifications, and the AC Collector lines.
- Increase to the construction costs for the installation of the dead end tower footings for the AC Collector Lines. Final design was not complete at the time of the contract award; additional towers were required resulting in higher construction costs.

Other Expenses

[redacted]

Internal Labour

- Incorporation of greater material management costs, project management and construction management.

Interest & Escalation

- Decrease due to lower interest rates and changes in cash flows

Contingency

- Increase in contingency levels to a P75 confidence level to better address project risks to the completion of the work. Previous contingency was based on a P50 confidence level. Management Reserve included in $4.65M budget depleted for actual award and market conditions realized on contracts.

PUB MFR 166
Bipole III

For every contract related to the construction of Bipole III, provide a summary of the forecast contract values underpinning the $4.65 billion Bipole III capital cost, actual expenditures to date, and forecast expenditure at completion. Explain all variances between the forecast contract values and the forecast expenditures at completion.

Public disclosure of the response to this MFR would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the information contained in this response pursuant to Rule 13.

The tables below summarize the forecast contract values and construction segment estimates that underpinned the $4.65 billion Bipole III capital cost (previously approved Capital Project Justification Addendum), actual expenditures to date and forecast at completion.

The forecast expenditures at completion include contingency amounts designated in the control budget to address unforeseen risks that have not yet materialized (or been issued to the contractors). Forecast contract values in CEF14 do not include any allocations made from the control budget contingency.

Table 1 provides a summary for the Transmission and Collector Lines and Table 2 for the Converter Stations.

Table 1. Summary for the Bipole III Transmission & Collector Lines

Summary of Forecasted Contract Values
for the Bipole III Transmission & Collector Lines
As of April 30, 2017
(in millions of dollars)

Construction Segment and Material Costs	Forecast Value (CEF14)
N1 Construction	[redacted]
N2 Construction	
N3 Construction	
N4 Construction	
C2 Construction	
S1 & S2 Construction	
C1 Construction	
Material	
Collector Line Construction	

Contract Description & Vendor	Actual Costs to April 30, 2017	Forecast Expenditures at Completion

Foundation & Anchor - Valard Construction (Manitoba) Ltd.		
Clearing - Iron North/Interlake Power		
Clearing - Muskeko Joint Venture		
Foundations - Interlake Power		
Foundations -Muskeko Joint Venture		
Clearing - Metis N4 Joint Venture*		
Clearing - Metis N4 Construction Inc.		
Foundation & Anchor - Muskeko Joint Venture		
Clearing - Pine Creek First Nation Joint Venture		
Foundation & Anchor - Metis N4 Interlake Power Joint Venture		
Clearing - Westside/Sawridge Joint Venture		
Foundation & Anchor - Tri-Core Projects Manitoba Ltd.		
Clearing - Swan Lake First Nation Joint Venture		
All Construction Activities - Forbes Bros Ltd.		
All Construction Activities - Rokstad Power Corporation		
Tower Supply - Jyoti*		
Tower Supply - Locweld Inc.		
Tower Supply - SA-RA Enerji		
Tower Supply - SAE Towers Ltd.		
Conductor Supply - Southwire Canada		
All Construction - Iron North/Interlake Power Joint Venture		

The estimating strategy in CEF14 for the Transmission and Collector Lines was based on construction segments and type of work. Actual contracts were awarded across multiple segments and in combination of types of work. As a result, a direct comparison of the estimate to the forecast at completion and variance analysis by contract is not possible for this component of the Bipole III Project. It should be noted that the forecast at complete estimates above were provisioned for in the last approved CPJA 08 (2016).

Table 2. Summary for the Bipole III Converter Stations

Summary of Forecasted Contract Values for the Bipole III Converter Stations
As of April 30, 2017
(in millions of dollars)

PUB MFR 168
Bipole III

Provide details and justification for any revised contingency, escalation, and interest amounts included in the revised $5 billion Bipole III project cost. Provide contingency and reserve amounts for P50, P90, and P95 probability levels.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

The $536 million of contingency included in the revised $5.04B Bipole III project cost was established based on a 2014 contingency analysis with an updated review of the project risks. The revised estimate incorporates an increase in contingency levels to a P75 confidence level to better address project risks to the completion of the work. The 2014 estimate was based on P50 confidence level. As more than 90% of the projects contracts had been awarded since the 2014 estimate, the new evaluation also incorporated a majority of the project's contract costs and scope updates.

Figure 1. Bipole III P75 Contingency Breakdown

Bipole III Project P75 Contingency Break-down *(billions of dollars)*	
Base Contingency	0.509
Interest & Escalation	0.027
Total Contingency	0.536

Total contingency addresses potential cost and schedule risks still present in the project such as:

- weather-related schedule remediation costs;
- transmission line route alteration costs;
- additional infrastructure upgrade commitments (e.g. roads, etc.);
- commodity escalation;

- biosecurity measures;
- helicopter erection and stringing; and
- Contract claims and close-out costs.

Interest and escalation were updated based on the revised base contingency cash flow, updated Interest Capitalization Rates and escalation rates for the Corporation.

The management reserve included in the previous estimates was based on uncertainty in transmission line construction pricing. As those contracts have now been awarded and the management reserve expended, it was determined that there was no further requirement to include a management reserve.

The contingency amounts for the P50, P75, P90 and P95 probability levels are summarized in **Figure 2**.

Figure 2. Bipole III Contingency Summary - 2016 Estimate

Bipole III Project
Contingency Summary - 2016 Estimate
(in billions of dollars, excluding Interest & Escalation)

Probability Levels	**P50**	**P75**	**P90**	**P95**
Contingency	0.279	0.509	[redacted]	[redacted]

PUB MFR 169
Bipole III

a) **If Manitoba Hydro developed one, provide the risk registry for the Bipole III Project detailing the risks to the Bipole III project and Manitoba Hydro's mitigation actions.**
b) **Identify and explain whether any of the risks in the registry with an impact score of Very High have materialized, how Manitoba Hydro addressed the risks, and what the impact of the risk has been and is expected to be on the total project cost and project schedule.**
c) **Identify whether any of the risks in the registry with impact scores other than Very High have materialized but which have had a financial impact of greater than $20 million or a schedule impact of greater than 6 months. Explain how Manitoba Hydro attempted to mitigate the risks, and what Manitoba Hydro has done or continues to do to manage the impact of the risk.**

Public disclosure of the attachment to this response would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the information contained in the attachment to this response pursuant to Rule 13.

a) Manitoba Hydro has developed and maintained a risk registry for the Bipole III Project for each of the key project elements. The key project elements are identified as follows:
    i. Converter Stations
    ii. Transmission Line
    iii. Collector Lines

    The risk registries for each element are included in the attachment to this response, which is confidential in its entirety.

    Attachment 1 outlines all risks that are presently open or that have transitioned to active issues (i.e. realized risks that are actively being managed). Risks that are not included are closed (either not realized and no longer open, or were realized but have been resolved and closed out). However, all risks including those now closed

were considered for reporting purposes under the parameters of parts b) and c) below, of which none that were closed were found to qualify.

b) Table 1. Bipole III Project Very High Risks Realized

Section	**Materialized Very High Risk**	**Mitigation Undertaken**	**Impact to Project Costs** >$300M Threshold	**Impact to Project Schedule** >1 Year Threshold

Great Northern Transmission Line Project

Recommendation (This section is required for all Addendums).

To increase the Great Northern Transmission Line's (GNTL) total project budget by [redacted] $CDN to a total of [redacted] $CDN.

Project Scope (This section is be filled out only if there is a change to the scope).

Manitoba Hydro (MH) and Minnesota Power (MP) entered into a 250 MW System Power Sale and an Energy Exchange Agreement on May 19, 2011 to provide for the export of 250 MW of capacity and energy and to provide MH the ability to import up to 250 MW of energy. The Power Sale Agreements require MP to construct a 230 kV transmission line in the U.S. in order provide for the delivery of power commencing June 1, 2020 and that by mutual agreement MH and MP may increase the transfer capability and enter additional agreements with other persons for the new US transmission line.

As part of MH's Preferred Development Plan, MH has been negotiating additional sales with Wisconsin Public Service, or WPS, and others that will be dependent upon the construction of a new hydraulic generation and additional transmission capacity beyond that possible from the 230 kV line MP is required to construct. A new 500 kV line is expected to increase firm southbound transmission capacity by 883 MW and firm northbound by 698 MW..

The following lists the significant activities/items where changes have occurred from the initial GNTL estimate to the budget for MH subsidiary (6690271 Manitoba Ltd.) portion of the Facilities Construction Agreement (FCA):

Subsidiary 6690271 54% portion of increased costs
[redacted]

Capital Project Justification Addendum

Background (This section is be filled out only if there is information relevant to the recommendation).

6690271 Manitoba Ltd. is a Manitoba Incorportated company that is 100% owned by Manitoba Hydro.

6690271 Manitoba Ltd., Minnesota Power and the Midcontinent Independent System Operator Inc. executed a FCA in which MP and 6690271 Manitoba Ltd. agreed as Transmission Line Payers to pay their allocated portion (MP - 46%, 6690271 Manitoba Ltd. - 54%) of the certification and construction costs of the GNTL project.

The FCA contained an initial estimate of $676.9 million (2013US$), excluding interest and escalation, for the GNTL project based on preliminary engineering, a proxy route and typical construction costs for the transmission line and associated substation facilities. In addition, the FCA requires the capital estimate to be revised upon approval of the route permit by the Minnesota Public Utilities Commission (MPUC).

Pursuant to the FCA, 6690271 Manitoba Ltd. and MP are also parties to a Construction Management Agreement (CMA) dated April 12, 2016 that appointed MP as the Construction Manager for the GNTL project. The CMA requires the Construction Manager to prepare a pre-construction estimated project budget (budget) for review and approval by the Management Committee appointed pursuant to the CMA.

On April 11, 2016, the Minnesota Public Utilities Commission granted Minnesota Power (MP) a route permit for the GNTL. Pursuant to the Construction Management Agreement, the Construction Manager has now prepared and recommended for approval by the Management Committee a budget of [redacted], excluding capitalized interest and escalation costs. This budget represents an increase of [redacted] from the initial FCA estimate to reflect escalation from 2013US$ to 2016US$, and adjustments for the approved GNTL route and additional engineering, design and construction details that have been since developed by the Construction Manager. 6690271 Manitoba Ltd.'s portion (54%) of the budget equates to [redacted]

Justification (This section is required for all addendums).

Acceptance of this revised capital estimate is justified as it is the best estimate of the cost to construct the GNTL as it reflects the final approved route and associated additional engineering, design and construction details that have been developed by the Construction Manager. The previous estimate included in the FCA was based on preliminary engineering, a proxy route and typical construction costs for the transmission line and associated substation facilities.

Approval of the budget of [redacted] will align with MP's estimate to ensure consistency between the parties with respect to any public disclosures.

MP has indicated that they consider the budget as a "not to exceed" estimate and that there is a high likelihood that the project's actual cost will be lower.

A new 500kV transmission line to the US is justified as follows:

- It is an integral part of MH's Development Plan.
- The Needs For and Alteratives To (NFAT) report to the Province of Manitoba recommended that MH proceed with the 500 kV US transmission project and the government subsequently accepted the recommendation

ANALYSIS OF ALTERNATIVES: (This section is be filled out only if there is a change to which alternative is being recommended).

Economic Analysis		
Discount Rate	% For current corporate rates see G911	For clarification on hurdle rates, contact Economic Analysis Department

Recommended Option	NPV Benefits/(Costs)
N/A	

Other Alternatives Considered	NPV Benefits/(Costs)

Risk Analysis – (This section is be filled out only if there is a change to the project risk).

As with any construction estimate, actual project costs will differ from the estimate as final engineering, design and construction details are not yet complete, no construction contracts have been signed and the project is still four years from in-service.

Total Budget – (This section is required for all Addendums).

The impact on annual budget requirements is as follows (in thousands of dollars):

Fiscal Year	Prev. Approved CPJ/Addendum	Proposed CPJ Addendum	Increase (Decrease)
Prev. Actuals	$ 33,128	$ [redacted]	$ [redacted]
2016/17	$ 59,455	$ [redacted]	$ [redacted]
2017/18	$ 121,800	$ [redacted]	$ [redacted]
2018/19	$ 182,384	$ [redacted]	$ [redacted]
2019/20+	$ 144,848	$ [redacted]	$ [redacted]
Total	$ 541,615	$ [redacted]	$ [redacted]

Proposed Schedule (This section is be filled out only if there is a change to the project schedule).

Related Projects (This section is be filled out only if changed).

Capital Project Justification Addendum

PUB MFR 187
GNTL

Provide updates to NFAT Exhibits Manitoba Hydro-139 (items 1-4) and Manitoba Hydro-168 related to the GNTL capital and operating cost responsibilities of Manitoba Hydro and Minnesota Power.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in this response pursuant to Rule 13.

Table 1A below provides a summary of 6690271 Manitoba Ltd funding responsibilities for the capital expenditures to develop and construct the Great Northern Transmission Line (US portion of the new 500 kV transmission interconnection) which were utilized in preparing IFF16.

Table 1A

	GNTL – Investment Distribution		
Row #	Description	% of Capital Investment	Comments
1	MP 250MW of 883MW	28.3%	Per Multi-Party Facilities Construction Agreement
2	MP Additional Capital Investment	17.7%	
3	6690271 MB Ltd. Capital Investment	54.0%	
4	Total	100%	

Row # 1 represents MP's investment in transmission associated with the 250MW System Power Sale Agreement with Manitoba Hydro (250 MW / 883 MW = 28.3%).

Row # 2 represents MP's additional investment opportunity in the Great Northern Transmission Line.

Row #3 represents 6690271 Manitoba Ltd's investment in the Great Northern Transmission Line for the residual.

Table 1B below provides a summary of Manitoba Hydro's and 6690271 Manitoba Ltd's funding responsibilities for post in-service costs which were included in preparing IFF 16.

Table 1B

	GNTL Post In-Service Cash Flows		
Row #	Description	% of Operating & Maintenance Costs	Comments
1	MP 250MW	33.3%	Per Multi-Party Facilities Construction Agreement
2	Manitoba Hydro - MP Revenue Requirement	17.7%	
3	6690271 MB Ltd.	49.0%	
	Total	100.0%	

Row #1 represents MP's responsibility for post in-service costs associated with the 250 MW System Power Sale Agreement with Manitoba Hydro that is based on the original expected southbound firm transmission capacity of the GNTL (250 MW / 750 MW = 33.3%).

Row #2 represents Manitoba Hydro's reimbursement of the annual revenue requirement for Minnesota Power's additional 17.7% capital investment and 17.7% of forty years' worth of expected Great Northern Transmission Line operating costs over a 20 year period.

Row #3 represents 6690271 Manitoba Ltd's responsibility to fund 49% of forty years' worth of expected Great Northern Transmission Line operating costs over a 20 year period.

Table 2 below provides Manitoba Hydro's Post In-service Costs with respect to the GNTL.

Table 2

Row #	Description	2016 CND $'s (millions)	Comments
1	Manitoba Hydro - MP Revenue Requirement	$472	Associated with Row #2 in Table #1B
2	6690271 MB Ltd	$315	Associated with Row #3 in Table#1B
	Total	$787	

Table 3 provides Manitoba Hydro's Combined Capital and Post In-Service Costs with respect to the GNTL.

Table 3

Row #	Description	2016 CND $'s (millions)	Comments

PUB MFR 188
GNTL

Provide the GNTL facilities construction agreement between Manitoba Hydro or its subsidiary and Minnesota Power.

Public disclosure of the response to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in the attachment to this response pursuant to Rule 13.

Please refer to the attached Multi-Party Facilities Construction Agreement for the GNTL. Exhibit A1 "Overall CUU One Line Diagram" on Original Sheet No. 71 has been removed as it is confidential.

Original Sheet No. 1

MULTI-PARTY

FACILITIES CONSTRUCTION AGREEMENT

entered into among:

Midcontinent Independent System Operator, Inc.,

and

Minnesota Power, an operating division of ALLETE, Inc.,

and

6690271 Manitoba Ltd.,
and

Minnesota Power, an operating division of ALLETE, Inc.

on the 25 day of September, 2014

THIS MULTI-PARTY FACILITIES CONSTRUCTION AGREEMENT (sometimes hereinafter referred to as the "Agreement") is made and entered into this 25 day of September, 2014, among:

Midcontinent Independent System Operator, Inc.,
(a non-profit, non-stock corporation organized and existing under the laws of the State of Delaware sometimes hereinafter referred to as the "**Transmission Provider** or **"MISO"**),

and

Minnesota Power, an operating division of ALLETE, Inc.,
(a Minnesota corporation sometimes referred to as "**MPM**"),

and

6690271 Manitoba Ltd, a wholly owned subsidiary of Manitoba Hydro
(a Manitoba corporation sometimes referred to as "**6690271**"),

and

Minnesota Power, an operating division of ALLETE, Inc.,
(a Minnesota corporation sometimes referred to as "**MP**"),

(6690271 and MPM may be collectively referred to as the "**Transmission Line Payers**" or individually as a "**Transmission Line Payer**", MP and 6690271 may be collectively referred to as the "**CUU Transmission Owners**" or individually as a "**CUU Transmission Owner**" and the Transmission Line Payers, the CUU Transmission Owners and the Transmission Provider each may be individually referred to as a "**Party**" or collectively as the "**Parties**.")

RECITALS

WHEREAS, Minnesota Power, an operating division of ALLETE, Inc. is the owner and operator of electric generation and transmission facilities in the United States and is engaged in generation, transmission, distribution, and/or sale of electric power and energy;

WHEREAS, when MPM is referred to in this Agreement it refers to the obligations being entered pursuant to this Agreement on behalf of Minnesota Power, an operating division of ALLETE, Inc.'s marketing and sales functions;

WHEREAS, when MP is referred to in this Agreement it refers to the obligations being entered into pursuant to this Agreement on behalf Minnesota Power, an operating division of ALLETE, Inc.'s transmission functions;

WHEREAS, The Manitoba Hydro-Electric Board ("**MH**") is the owner and operator of electric generation and transmission facilities in Canada and is engaged in generation, transmission, distribution, and/or sale of electric power and energy;

WHEREAS, 6690271 is a wholly owned subsidiary of MH;

WHEREAS, Wisconsin Public Service Corporation ("**WPSM**") is the owner and operator of electric generation facilities in the United States and is engaged in generation, distribution, and/or sale of electric power and energy;

WHEREAS, when WPSM is referred to in this Agreement it refers to Wisconsin Public Service Corporation's marketing and sales functions;

WHEREAS, MH's marketing and sales division ("**MHEM**") has filed transmission service requests pursuant to Reservation Request Numbers 79429002, 79258492, 79258646, and 79258668 for north bound service totaling 883 MW;

WHEREAS, WPSM has filed a transmission service request pursuant to Reservation Request Number 79258364 for south bound service totaling 200 MW;

WHEREAS, MPM has filed a transmission service request pursuant to Reservation Request Numbers 76703672 and 79258361 for south bound service totaling 383 MW;

WHEREAS, MHEM has filed transmission service requests pursuant to Reservation Request Number 80142548, 80142558, and 80142561 for south bound service totaling 300 MW;

WHEREAS, MP has functional control of the operations of the Transmission System, as defined herein, and is responsible for providing transmission and transmission service on the transmission facilities under its control;

WHEREAS, MISO has agreed with MPM that upon completion of the Common Use Upgrades that MISO will provide MPM with 250 MW of south bound Firm Transmission Service and 133 MW of south bound Firm Transmission Service in accordance with Service Agreements entered into by MISO and MPM on the Effective Date;

WHEREAS, MISO has agreed with WPSM that upon completion of the Common Use Upgrades that MISO will provide WPSM with 200 MW of south bound Firm Transmission Service in accordance with the Service Agreement entered into by MISO and WPSM on the Effective Date;

WHEREAS, MISO has agreed with MHEM that upon completion of the Common Use Upgrades that MISO will provide MHEM with 300 MW of southbound Firm Transmission Service in accordance with the Service Agreements entered into by MISO and MHEM on the Effective Date;

WHEREAS, MISO has determined that only 698 MW of northbound Firm Transmission Service will be available upon completion of the Common Use Upgrades and MISO has agreed with MHEM that upon completion of the Common Use Upgrades that MISO will provide MHEM with a total of 698 MW of northbound Firm Transmission Service in accordance with Service Agreements entered into by MISO and MHEM on the Effective Date;

WHEREAS, MPM, WPSM and MHEM in their capacity as the entities that will receive Firm Transmission Service may be collectively referred to as the "**CUU Transmission Customers**" or individually as a "**CUU Transmission Customer**");

WHEREAS, as set out in Table 2 of Appendix A each Transmission Line Payer has agreed to accept the financial responsibility for payment of the allocated cost of the Common Use Upgrades for the CUU Transmission Customers' transmission service requests that are identified in Table 2(A) and Table 2(B) for that Transmission Line Payer (the "**Transmission Line Payers Associated TSR**");

WHEREAS, the Parties acknowledge that if a Transmission Line Payer defaults under the provisions of this Agreement and its participation in this Agreement is terminated in accordance with the provisions of this Agreement, the Transmission Line Payers Associated TSR will also be withdrawn and the applicable CUU Transmission Customer will not be entitled to receive its respective Firm Transmission Service;

WHEREAS, MP and 6690271 have jointly agreed to design, own and construct the Common Use Upgrades as tenants in common;

WHEREAS, the CUU Transmission Owners as of the In-Service Date will be MISO Transmission Owners; and

WHEREAS, the Transmission Line Payers have requested, and the Transmission Provider and CUU Transmission Owners have agreed, to enter into this Agreement with the Transmission Line Payers for the purpose of facilitating construction of the CUU and to enable the Transmission Provider to provide WPSM, MPM and MHEM, as CUU Transmission Customers, with the Firm Transmission Service referred to herein for such CUU Transmission Customer.

NOW, **THEREFORE,** in consideration of and subject to the mutual covenants contained herein, it is agreed:

ARTICLE 1

DEFINITIONS

Wherever used in this Agreement with initial capitalization, the following terms shall have the meanings specified or referred to in this Article 1. Terms used in this Agreement with initial capitalization not defined in this Article 1 shall have the meanings specified in the Tariff:

1.1 "**Applicable Laws and Regulations**" shall mean all duly promulgated applicable federal, state, and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits, and other duly authorized actions of any Governmental Authority having jurisdiction over the Parties, their respective facilities, and/or the respective services they provide.

1.2 "**Applicable Reliability Council**" shall mean the reliability council of NERC applicable to the Local Balancing Authority of the Transmission System in which the CUU is located.

1.3 "**Breach**" shall mean the failure of a Party to perform or observe any material term or condition of this Agreement and shall include, but not be limited to, the events described in Article 9.1.

1.4 "**Breaching Party**" shall mean a Party that is in Breach of this Agreement.

1.5 "**Common Use Upgrades**" or "**CUU**" shall collectively mean all of the Transmission Facility, Network Upgrade, System Protection Facility, or any other classified additions, alterations, or improvements on the Transmission System of MP and on the Transmission Systems of the other Transmission Owners identified in Table 1 of Appendix A (not classified under Attachment FF as a Baseline Reliability Project, Market Efficiency Project, or Multi-Value Project) that are needed to accommodate MHEM's Reservation Request Numbers, 79258492, 79258646, 79258668 (partial service) and 79429002 for 698 MW of north bound service and 80142548, 80142558, and 80142561 for 300 MW of south bound service, WPSM's Reservation Request Number 79258364 for 200 MW of south bound service, MPM's Reservation Request Numbers 76703672 and 79258361 for 383 MW of south bound service as more particularly set out in Appendix A (the Transmission Service Requests are collectively referred to as the "**Transmission Customers' TSRs**" and individually as the "**Transmission Customer's TSR**").

1.6 "**Confidential Information**" shall mean any proprietary or commercially or competitively sensitive information, trade secret, or information regarding a plan, specification, pattern, procedure, design, device, list, concept, policy, or compilation relating to the present or planned business of a Party, or any other information as specified in Article 12, which is designated as confidential by the Party supplying the information, whether conveyed orally, electronically, in writing, through inspection, or otherwise, that is received by another Party.

1.7 "**Default**" shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 9 of this Agreement.

1.8 "**Effective Date**" shall have the meaning set forth in Section 2.1.

1.9 "**Executive Officer**" shall mean such officer designated by each Party from time to time.

1.10 "**FERC**" shall mean the Federal Energy Regulatory Commission, also known as the "Commission," or its successor.

1.11 "**Firm Transmission Service**" shall mean firm Point-To-Point Transmission Service provided under Module B of the Tariff and firm Network Integration Transmission Service under Module B of the Tariff and shall include all rights conveyed to the Transmission Customer, including but not limited to energy and capacity market congestion rights, as defined in the Tariff.

1.12 "**Force Majeure**" shall mean an event or circumstance that prevents or delays one Party from performing its obligations under this Agreement and that is not within the reasonable control of, nor the result of the negligence of, the claiming Party, and that, by the exercise of Good Utility Practice, the claiming Party is unable to overcome or avoid or cause to be avoided, including but not restricted to, acts of God, floods, droughts, earthquakes, storms, fires, lightning, tornados, strikes, lockouts and other labor disturbances, epidemics, pandemic, war (whether or not declared), blockades, acts of public enemies, acts of sabotage or terrorism, civil insurrection, riots or civil disobedience, any situation where delivery or acceptance will endanger a Party's facilities or endanger that Party's system operations, explosions, acts or omissions of any Governmental Authority taken on or after the Effective Date, (including the adoption or change in any law or regulation or environmental constraints lawfully imposed by such Governmental Authority) but only if, and to the extent that, such action or inaction by such Governmental Authority prevents or delays performance and/or renders the Party unable, despite due diligence, to obtain any license, permit, or approval required by any Governmental Authority, and the issuance of any order, injunction, or other legal or equitable decree to the extent that any of the foregoing prevents or delays the performance of a Party's obligations hereunder. A Force Majeure event does not include intentional wrongdoing by the Party claiming Force Majeure.

1.13 "**Good Utility Practice**" shall mean any of the practices, methods, and acts engaged in or approved by a significant portion of the electric industry during the relevant time period, or any of the practices, methods, and acts which, in the exercise of reasonable judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business

practices, reliability, safety, and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

1.14 "**Governmental Authority**" shall mean any federal, state, local, or other governmental, regulatory, or administrative agency, court, commission, department, board, or other governmental subdivision, legislature, rulemaking board, tribunal, or other governmental authority having jurisdiction over the Parties, their respective facilities, or the respective services they provide, and exercising or entitled to exercise any administrative, executive, or taxing authority or power; provided, however, that such term does not include any Transmission Line Payer, any Transmission Provider, any CUU Transmission Owner, any CUU Transmission Customer, or any Affiliate thereof.

1.15 "**In-Service Date**" shall mean the date that the 500 kV Line that is a component of the CUU is commissioned and comes into service, presently scheduled to be June 1, 2020.

1.16 "**Local Balancing Authority**" shall mean an operational entity or a Joint Registration Organization which is (i) responsible for compliance with the subset of NERC Balancing Authority Reliability Standards defined in the Balancing Authority Agreement for their local area within the Transmission Provider Balancing Authority Area, (ii) a Party to Balancing Authority Agreement, excluding MISO, and (iii) shown in Appendix A to the Balancing Authority Agreement.

1.17 "**Loss**" shall mean any and all damages, losses, claims, including claims and actions relating to injury to or death of any person or damage to property, demands, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's performance, or non-performance of its obligations under this Agreement on behalf of the indemnifying Party, except in cases of gross negligence or intentional wrongdoing, by the indemnified Party.

1.18 "**NERC**" shall mean the North American Electric Reliability Corporation, or its successor organization.

1.19 "**Non-Breaching Party**" shall mean a Party that is not in Breach of this Agreement with regard to a specific event of Breach by a Party and "Non-Breaching Parties" shall mean all of the Parties that are not in Breach of this Agreement with regard to a specific event of Breach by a Party.

1.20 "**Northbound Transmission Service**" shall mean any transmission service the Transmission Provider will grant contingent on construction of the CUU which is to be

utilized for the delivery of energy from within the Transmission Provider region to the interface between MH and the Transmission Provider region.

1.21 "**Reasonable Efforts**" shall have the meaning as provided in the Tariff.

1.22 "**Tariff**" shall mean the Transmission Provider's Tariff through which open access transmission service and Interconnection Service are offered, as filed with the Commission, and as amended or supplemented from time to time, or any successor tariff.

1.23 "**Total Transmission Service Capacity**" means the total of the capacities associated with all transmission service to be granted by the Transmission Provider contingent on the construction of the CUU.

1.24 "**Transmission System**" shall mean the facilities owned by MP and controlled or operated by Transmission Provider or MP that are used to provide Transmission Service or Wholesale Distribution Service under the Tariff.

ARTICLE 2
TERM OF AGREEMENT

2.1 **Effective Date.** This Agreement shall become effective on the date on which this Agreement is made and entered into by the Parties (the "**Effective Date**").

2.2 **Term.**

2.2.1 **General.** This Agreement shall become effective as provided in Article 2.1 and shall continue in full force and effect until the earlier of (i) the design, procurement, construction, and installation of the Common Use Upgrades; (ii) the Parties agree to mutually terminate this Agreement; (iii) earlier termination as permitted or provided for under Appendix A of this Agreement; and (iv) Transmission Line Payers have mutually agreed to terminate this Agreement after providing Transmission Provider and CUU Transmission Owners with written notice at least sixty (60) Calendar Days prior to the proposed termination date, provided that all of the Transmission Line Payers have no outstanding contractual obligations to Transmission Provider or CUU Transmission Owners under this Agreement as of the termination date. No purported termination of this Agreement shall be effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination. The term of this Agreement may be adjusted upon mutual agreement of the Parties.

2.2.2 Termination Upon Default. In the event of a Default by a Party, the Non-Breaching Party or Parties shall have the termination and removal rights described in Article 9.2 and in addition, if one or more Transmission Line Payers (but not all) are in Default, the CUU Transmission Owners or the Transmission Provider may terminate the participation of the defaulting Transmission Line Payer(s) without terminating this entire Agreement; provided, however, if an event described in part (a) or (c) of Article 9.1 has not occurred, and provided the Default does not pose a threat to the reliability of the Transmission System, if a Transmission Line Payer is the Breaching Party then neither the Transmission Provider nor the CUU Transmission Owners may terminate the participation of such Transmission Line Payer, if such Transmission Line Payer (i) has undertaken, in accordance with Article 9.2, to cure the Breach that led to the Default and has failed to cure the Breach for reasons other than Transmission Line Payer's failure to diligently commence reasonable and appropriate steps to cure the Breach within the thirty (30) Calendar Days allowed by Article 9.2, and (ii) compensates the Transmission Provider or the CUU Transmission Owners, as applicable, within thirty (30) Calendar Days for the amount of damage billed to such Transmission Line Payer by the Transmission Provider or the CUU Transmission Owners, as applicable, for any damages, including costs and expenses, incurred by the Transmission Provider or the CUU Transmission Owners, as applicable, as a result of such Default. In the event of an occurrence described in part (a) or (c) of Article 9.1**,** and provided the Default does not pose a threat to the reliability of the Transmission System, the Non-Breaching Party or Parties shall not terminate participation of the defaulting Transmission Line Payer(s) provided that the Breaching Party provided an assurance of payment acceptable to the Non-Breaching Party or Non-Breaching Parties, and pays any applicable damages. Notwithstanding the foregoing, Default by one or more Transmission Line Payers shall not provide the other Transmission Line Payers either individually or in concert, with the right to terminate the entire Agreement. The Non-Breaching Parties may, in concert, initiate the removal of a Transmission Line Payer that is a Breaching Party from this Agreement as described in Article 9.2. The Transmission Provider shall not terminate this Agreement or the participation of any Transmission Line Payer without provision being made for the CUU Transmission Owners to be fully reimbursed for all of their costs incurred under this Agreement. The Parties acknowledge that if a Transmission Line Payer defaults under the provisions of this Agreement and its participation in this Agreement is terminated in accordance with the provisions of this Agreement, the Transmission Line Payer's Associated TSR will also be withdrawn and the applicable CUU Transmission Customer will not be entitled to receive the Firm Transmission Service.

2.2.3 Consequences of Termination. In the event of a termination by or of any Party, other than a termination by the Transmission Line Payer(s) due to a Default by the CUU Transmission Owners, each Transmission Line Payer whose participation in this Agreement is terminated must pay to the CUU Transmission Owners the Transmission Line Payer's proportionate share of all amounts still due and payable for construction and installation of the CUU (including, without limitation, any equipment ordered related to such construction), plus all out-of-pocket expenses incurred by the CUU Transmission Owners in connection with the construction and installation of the CUU, through the date of termination and, in the event of the termination of the entire Agreement, any actual costs which the CUU Transmission Owners (A) reasonably incur in winding up work and construction demobilization (including previously incurred capital costs, penalties for early termination, removal and site restoration) and (B) reasonably incur to ensure the safety of persons and property and the integrity and safe and reliable operation of the Transmission System.

The Parties acknowledge that this Article 2.2.3 and such payments do not restrict the right of any Non-Breaching Party pursuant to any other provision of this Agreement or any other agreement or Applicable Laws and Regulations to make a claim against the Transmission Line Payer whose participation in this Agreement or the entire Agreement was terminated due its Default.

The performance assurance of a terminated Transmission Line Payer will be applied to the terminated Transmission Line Payer's proportionate share of the cost of the CUU. A Transmission Line Payer's performance assurance will not be refunded in the event the Transmission Line Payer is terminated from this Agreement, unless otherwise provided for in Article 6.8. Other Transmission Line Payers remaining as parties to the Agreement will share, subject to the provisions of this Agreement, the remaining CUU costs according to the portion of the Total Transmission Service Capacity, excluding Northbound Transmission Service, which is associated with the Transmission Line Payer or as otherwise agreed to by the Parties.

2.2.4 Material Adverse Change. In the event of a material change in law or regulation that adversely affects, or may reasonably be expected to adversely affect a Party's material rights and/or material obligations under this Agreement, the Parties shall negotiate in good faith any amendments to this Agreement necessary to adapt the terms of this Agreement to such change in law or regulation, and the Transmission Provider shall file such amendments with FERC. If, within sixty

(60) Calendar Days after the occurrence of any event described in this Article 2.2.4, the Parties are unable to reach agreement as to any necessary amendments, the Parties may proceed under Article 14 to resolve any disputes related thereto. The Transmission Provider and/or the CUU Transmission Owners shall have the right to make a unilateral filing with FERC to modify this Agreement pursuant to Section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and the Transmission Line Payer shall have the right to make a unilateral filing with FERC to modify this Agreement pursuant to Section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder; provided that a Party shall have the right to protest any such filing by another Party and to participate fully in any proceeding before FERC in which such modifications may be considered. If a Party is unable to fully perform this Agreement due to the occurrence of an event described in this Article 2.2.4 and such inability is not based on economic reasons, such Party shall not be deemed to be in Default of its obligations under this Agreement, provided that such Party is seeking dispute resolution under Article 14 or before FERC, to the extent that (i) such Party is unable to perform as a result of such an event; and (ii) such Party acts in accordance with its obligations under this Article 2.2.4. A material change in law or regulation affecting a Transmission Line Payer's ability to perform under this Agreement will not suspend any other Transmission Line Payer's obligations to perform under this Agreement.

2.2.5 Transmission Provider's Option to Add New Transmission Service Requests and Restudy. In addition to the Transmission Provider's right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under Section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, the Transmission Provider may, at its sole option after reasonable consultation with the CUU Transmission Owners, add a transmission line payer or transmission line payers as parties to this Agreement at any time, provided that: (i) the transmission customer or transmission customers TSR(s) associated with such transmission line payer(s) impacts the same CUU; (ii) the inclusion of that party or parties to this Agreement is consistent with Good Utility Practice; (iii) the addition is made prior to the completion of the CUU; (iv) the CUU scope, completion schedule and cost is not changed; (v) there are no material changes to the CUU unless the change is mutually agreed to by all the Parties, with such agreement not to be unreasonably withheld or delayed. The addition of such other party or parties to this Agreement will result in the reallocation of costs among the Transmission Line Payers and

may result in the need for a restudy as provided under this Article 2.2.5. Each new transmission line payer must meet the creditworthiness requirements pursuant to Article 6.1. As a condition of executing this Agreement, each Transmission Line Payer agrees that an additional party or parties may be added to this Agreement without the renegotiation or prior consent of the Transmission Line Payers, provided that such addition is consistent with other provisions of this Agreement, including that if a new Transmission Service Request is added, which is not Northbound Transmission Service, the costs will be reallocated to the Transmission Line Payers according to the portion of the Total Transmission Service Capacity, excluding Northbound Transmission Service, which is associated with the Transmission Line Payer or as otherwise agreed to by the Parties and if a new Transmission Service Request is added which is Northbound Transmission Service, costs will not be reallocated. This provision does not affect each Transmission Line Payer's right to seek dispute resolution under Article 14 or to make a unilateral filing with FERC to modify this Agreement pursuant to Section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder.

Subject to Section 2.2.2 in the event one or more Transmission Line Payers either withdraws from this Agreement, in accordance with the provisions of this Agreement or fails to cure a Breach, it will result in the termination of that Transmission Line Payer as a party to this Agreement and the Parties acknowledge that the Transmission Line Payers Associated TSR(s) will also be withdrawn and the applicable CUU Transmission Customer will not be entitled to receive Firm Transmission Service. The Transmission Provider shall attempt to add similarly situated Transmission Service Request(s), pursuant to this Article 2.2.5, to replace the withdrawn or terminated Transmission Service Request(s) with a new transmission customer or transmission customers. If the Transmission Provider is unable to identify similarly situated Transmission Service Request(s), and the Transmission Provider deems it likely that another CUU would be more prudent, the Transmission Provider may, in its sole discretion after reasonable consultation with the CUU Transmission Owners, declare a restudy. If one or more Transmission Line Payers either withdraws from the Agreement or fails to cure a Breach resulting in termination of that Transmission Line Payers Associated TSR(s) and the Transmission Line Payer as a party to this Agreement and the Transmission Provider does not replace it, the Transmission Provider will provide the remaining Transmission Line Payers with an analysis stating whether or not the same CUU is needed and the re-allocated proposed costs for which each Transmission Line Payer is responsible and the provisions of Article 6 will also apply. If the Transmission Provider is able to add a similarly situated

Transmission Service Request upon withdrawal or termination, the CUU costs shall be reallocated according to the portion of the Total Transmission Service Capacity, excluding Northbound Transmission Service, which is associated with the Transmission Line Payer or as otherwise agreed to by the Parties.

2.2.6 Termination of Transmission Line Payer. If a Transmission Line Payer is terminated from this Agreement, the CUU Transmission Owners will retain the performance assurance of the terminated Transmission Line Payer and all remaining Transmission Line Payers, and the Transmission Provider will determine whether to add a new transmission line payer or transmission line payers as parties to this Agreement pursuant to Article 2.2.5. Additionally, whether or not a new transmission line payer or transmission line payers are added to this Agreement, the Transmission Provider shall adjust the proportionate share of the costs to be borne by the remaining Transmission Line Payers when a Transmission Line Payer has been terminated from this Agreement in accordance with the provisions of this Agreement. If the addition of a new transmission line payer or transmission line payers to the Agreement results in a reduction of cost estimates, the cost estimates of all remaining Transmission Line Payers will be reduced proportionately subject to the provisions of this Agreement. It is expressly understood that a Transmission Line Payers' proportionate share of the responsibility for the costs of the CUU may increase or decrease. If such cost adjustment causes the cost estimate for any of the remaining Transmission Line Payers to increase by more than twenty-five (25%) percent above the cost estimate set forth in Appendix A, any such Transmission Line Payer whose proportionate share of the cost estimate increases by more than twenty-five (25%) percent may withdraw from the Agreement within thirty (30) Calendar Days of the date that the Transmission Provider notifies the Transmission Line Payer of the redetermination of its proportionate share of the cost responsibility. If a Transmission Line Payer withdraws pursuant to this option, the unused portion of its performance assurance will be released or refunded and the Transmission Line Payers Associated TSR will also be withdrawn and the applicable CUU Transmission Customer will not be entitled to receive Firm Transmission Service. If a Transmission Line Payer's withdrawal under this option causes the cost estimate for any of the remaining Transmission Line Payers to increase by more than twenty-five (25) percent from the estimate in Appendix A, that Transmission Line Payer may also withdraw pursuant to this Article 2.2.6.

2.3 Regulatory Filing. In accordance with Applicable Laws and Regulations, Transmission Provider shall file this Agreement, and any amendment to this Agreement with FERC as a service agreement under the Tariff. Subject to

Section 2.2.4 each Transmission Line Payer that has executed this Agreement or any amendment to this Agreement, shall not protest this Agreement or the amendment, shall reasonably cooperate with Transmission Provider with respect to such filing, and shall provide any information, including the rendering of testimony or pleadings, as applicable, reasonably requested by Transmission Provider to the extent reasonably needed to comply with applicable regulatory requirements.

2.4 Survival. The applicable provisions of this Agreement shall continue in effect after expiration, cancellation, or termination hereof to the extent necessary to provide for final billings, billing adjustments, and the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect.

ARTICLE 3
CONSTRUCTION OF COMMON USE UPGRADES

3.1 Construction.

3.1.1 CUU Transmission Owners Obligations. The CUU Transmission Owners shall (or shall cause such action to) design, procure, engineer, construct, install and commission the Common Use Upgrades and the Transmission Line Payers shall pay, consistent with Article 3.2, the cost of the CUU in accordance with Appendix A. The Parties acknowledge that Appendix A provides that the construction of the CUU shall proceed in two distinctive phases and the obligations of the Parties under each phase is set out in Appendix A. The CUU designed, procured, constructed, installed and tested by the CUU Transmission Owners pursuant to this Agreement shall satisfy all requirements of applicable safety and/or engineering codes, including those requirements of the CUU Transmission Owners and the Transmission Provider, and shall include all additions, modifications and upgrades required to be made to certain facilities of the Transmission System in order to accommodate the Transmission Customers' TSRs, and shall comply with Good Utility Practice, and further, shall satisfy all Applicable Laws and Regulations.

3.1.2 Right to Suspend Due to Inadequate Funding. The CUU Transmission Owners reserve the right, upon written notice to Transmission Line Payers, to suspend, at any time, work by the CUU Transmission Owners and the incurrence of additional expenses associated with the construction and installation of the CUU, upon the occurrence of a Default by a Transmission Line Payer, including a

Default caused by a Transmission Line Payer's failure to provide performance assurance pursuant to Article 6.1 that the remaining Transmission Line Payer(s) does not (do not) cure pursuant to Article 9. Any form of suspension by the CUU Transmission Owners shall not be barred by Articles 2.2.2 or 2.2.3 nor shall it affect the CUU Transmission Owners' right to terminate the work or this Agreement pursuant to Article 9. In such events, the Transmission Line Payers shall be responsible for costs which the CUU Transmission Owners incur as set forth in Article 2.2.3.

3.1.3 Construction Status. The CUU Transmission Owners shall keep the Transmission Line Payers and the Transmission Provider advised periodically as to the progress of its respective design, procurement, engineering, construction, installation and commissioning efforts as described in Appendix A. A Transmission Line Payer may, at any time, request a progress report from the CUU Transmission Owners, with a copy to be provided to all other Parties. If, at any time, a Transmission Line Payer determines that the completion of the CUU will not be required until after the specified In-Service Date, such Transmission Line Payer may provide written notice to all other Parties of such requested later date for the completion of the CUU. The CUU Transmission Owners may delay the In-Service Date accordingly, but only if agreed to in writing by all other Transmission Line Payers.

3.1.4 Timely Completion. The CUU Transmission Owners shall use Reasonable Efforts to design, procure, engineer, construct, install, and commission the CUU in accordance with the schedule set forth in Appendix A, which schedule may be revised from time to time by mutual agreement of the Parties. If any event occurs that will affect the time for completion of the CUU, or the ability to complete any component of the CUU, the CUU Transmission Owners and/or the Transmission Provider shall promptly notify all other Parties. In such circumstances, the Transmission Provider shall, within fifteen (15) Calendar Days of such notice, convene a technical meeting with the Transmission Line Payers and the CUU Transmission Owners to evaluate the alternatives available to the Transmission Line Payers. The CUU Transmission Owners and/or the Transmission Provider shall also make available to the Transmission Line Payers all studies and work papers related to the event and corresponding delay, including all information that is in the possession of the Transmission Provider or the CUU Transmission Owners that is reasonably needed by the Transmission Line Payers to evaluate alternatives. The CUU Transmission Owners shall, at any Transmission Line Payer's request and expense, use Reasonable Efforts to accelerate their work under this Agreement to meet the schedule set forth in Appendix A, provided that:

(i) Transmission Line Payers jointly authorize such actions; (ii) such authorizations to be withheld, conditioned or delayed by a given Transmission Line Payer only if it can demonstrate that the acceleration would have a material adverse effect on it; and (iii) the requesting Transmission Line Payer funds the incremental costs associated therewith.

3.2 Transmission Service Costs and Credits

3.2.1 Costs.

The Transmission Line Payers shall pay to the CUU Transmission Owners the costs (including taxes) associated with seeking and obtaining all necessary approvals and of designing, engineering, constructing, and commissioning the Common Use Upgrades, as identified in and in accordance with the cost recovery method set forth in Appendix A of this Agreement.

3.2.1.1 Lands of Other Property Owners.

If any part of the CUU is to be installed on property owned by persons other than CUU Transmission Customers, or Transmission Line Payers or CUU Transmission Owners, the CUU Transmission Owners shall at the Transmission Line Payers' expense use efforts, similar in nature and extent to those that it typically undertakes on its own behalf or on behalf of its Affiliates, including use of its eminent domain authority to the extent permitted and consistent with Applicable Laws and Regulations, to procure from such persons any rights of use, licenses, rights of way and easements that are necessary to construct, operate, maintain, test, inspect, replace or remove the CUU upon such property.

3.2.1.2 Rights not Relinquished. Notwithstanding any other provision of this Agreement, nothing herein shall be construed as relinquishing or foreclosing any rights, including but not limited to firm transmission rights, capacity rights, transmission congestion rights, or transmission credits, that each Transmission Line Payer as well as each CUU Transmission Customer shall be entitled to, now or in the future under any other agreement or tariff as a result of, or otherwise associated with, the transmission capacity, if any, created by the CUU, including the right to obtain refunds or transmission credits for transmission service.

3.3 Taxes.

3.3.1 Indemnification for Contributions in Aid of Construction. The Parties intend that any payments made by a Transmission Line Payer to a CUU Transmission

Owner for the installation of the CUU shall be non-taxable contributions to capital under Internal Revenue Code Sec. 118 to the extent the payments meet the safe harbor requirements of IRS Notice 2001-82 and IRS Notice 88-129. All CUU Transmission Owners and all Transmission Line Payers covered by this Agreement agree to cooperate in good faith to meet the intent of Section 3.3.1 in that any payments made by a Transmission Line Payer to a CUU Transmission Owner for construction of the CUU shall be treated as non-taxable contributions to capital to the extent allowed under Applicable Laws and Regulations.

With regard to any such contribution, the CUU Transmission Owner receiving the contribution shall not include a gross-up for income taxes for the amount the Transmission Line Payer is to pay pursuant to this Agreement for the installation of the CUU unless: (i) the CUU Transmission Owner and the Transmission Line Payer have determined, in good faith, that the payments or property transfers made by the Transmission Line Payer should be reported as income subject to taxation by that CUU Transmission Owner; or (ii) the Internal Revenue Service ("IRS") concludes that the contribution payments or property transfers are income subject to taxation as the result of a final settlement with the IRS, a closing agreement or accepted offer in compromise, which resolves the liability for taxes with respect to the contributions to capital or as a result of the filing of a private letter ruling request and the receipt of such ruling ("**IRS Final Determination**") (the CUU Transmission Owner that has made such determination pursuant to (i) above or has been required by the IRS to report such payments or property as income in accordance with (ii) above, referred to as the "**Affected CUU Transmission Owner**"). The Transmission Line Payer shall reimburse the Affected CUU Transmission Owner for the tax liability on the applicable amount of the capital contributions on a fully grossed up basis in the manner set out below.

If a gross-up payment for income taxes is required pursuant to this Section 3.3.1, the gross-up amount will be determined by multiplying the gross-up rate by the capital contributions that are subject to tax (the "Gross-Up Amount"). The gross-up rate is calculated as follows: (1/(1 - Combined Tax Rate)) - 1. The Combined Tax Rate is the sum of the rates for the U.S. federal corporate income tax (net of the Minnesota state tax deduction benefit) and the Minnesota Income and Franchise Taxes imposed by Chapter 290 of the Minnesota Statutes (to the extent imposed on or measured by net income). For the purposes of example the Combined Tax Rate in 2014 is 41.37%. The federal and Minnesota income tax rates used in this calculation of the Combined Tax Rate will be the rates in effect or reasonably expected to be in effect when the Affected CUU Transmission

Owner is required to pay tax on the capital contributions. If it has been determined in advance that the applicable capital contribution payments will be taxable, the Gross-Up Amounts on such capital contributions made during that tax year shall be due and payable by the Transmission Line Payer to the Affected CUU Transmission Owner within ninety (90) Calendar Days of such capital contribution. Within sixty (60) Calendar Days of the IRS Final Determination of the tax payable in any applicable year by the Affected CUU Transmission Owner, a report of such payment and accounting shall be prepared and forwarded by the Affected CUU Transmission Owner to the Transmission Line Payer together with any overpayment in the Gross-Up Amount. Any shortfall on the Gross-Up Amount paid shall be paid by the Transmission Line Payer within thirty (30) Calendar Days of the receipt of such report. If the tax liability is determined in a tax year after the original capital contribution has been made, the Gross-Up Amount is due within ninety (90) Calendar Days of the IRS Final Determination of taxability.

Following the payment of any Gross-Up Amount, commencing in the first fiscal year in which the CUU is placed in-service and for each successive fiscal year thereafter, the Affected CUU Transmission Owner shall within ninety (90) Calendar Days of its fiscal year end remit to the Transmission Line Payer the combined federal and Minnesota tax benefit of the tax depreciation from the taxable capital contribution received by the Affected Transmission Line Owner plus the corresponding federal and Minnesota tax benefit of the additional tax deduction for such payment to such Transmission Line Payer, at the Federal and Minnesota corporate tax rates in effect in the tax year of the tax depreciation deduction ("**Tax Depreciation Credit**"). For greater certainty, the Tax Depreciation Credit will be determined for each fiscal year by multiplying the tax depreciation from the taxable capital contribution for such fiscal year by the depreciation credit rate. The depreciation credit rate is calculated as follows: (1/(1 - Combined Tax Rate)) - 1.

The indemnification obligation set forth above shall terminate at the earlier of (1) the expiration of the ten-year testing period and the applicable statute of limitation, as it may be extended by a CUU Transmission Owner, upon request of the IRS, to keep these years open for audit or adjustment, but only if notice is given to the Transmission Line Payer within sixty (60) days of the statute extension; or (2) the occurrence of a subsequent taxable event and the payment of any related indemnification obligations as contemplated by this Article 3.3.1.

As described above, to the extent that the receipt of capital contributions by a CUU Transmission Owner is determined by the IRS and/or the Minnesota Department of Revenue ("**Taxation Authority**") to constitute income by a CUU Transmission Owner subject to taxation, the Transmission Line Payer shall protect, indemnify, and hold harmless such CUU Transmission Owner and its Affiliates, from all claims by any such Taxation Authority for any tax, interest and/or penalties associated with such determination. Upon receiving written notification of such determination from the Taxation Authority, such CUU Transmission Owner shall provide the Transmission Line Payer with written notification within thirty (30) Calendar Days of such determination and notification. Such CUU Transmission Owner, upon the timely written request by the Transmission Line Payer and at the expense of the Transmission Line Payer, shall appeal, protest, seek abatement of, or otherwise oppose such determination. Such CUU Transmission Owner reserves the right to make all decisions with regard to the prosecution of such appeal, protest, abatement or other contest, including the compromise or settlement of the claim; provided that such CUU Transmission Owner shall cooperate and consult in good faith with the Transmission Line Payer regarding the conduct of such contest. If requesting the action, the Transmission Line Payer shall advance to such CUU Transmission Owner on a periodic basis as requested by such CUU Transmission Owner the estimated cost of prosecuting such appeal, protest, abatement or other contest. The Transmission Line Payer shall not be required to pay such CUU Transmission Owner for the tax, interest and/or penalties prior to the seventh (7th) Calendar Day before the date on which such CUU Transmission Owner (i) is required to pay the tax, interest and/or penalties or other amount in lieu thereof pursuant to a compromise or settlement of the appeal, protest, abatement or other contest; (ii) is required to pay the tax, interest and/or penalties as the result of a final, non-appealable order by a Taxation Authority; or (iii) is required to pay the tax, interest and/or penalties as a prerequisite to an appeal, protest, abatement or other contest. In the event such appeal, protest, abatement or other contest results in a determination that such CUU Transmission Owner is not liable for any portion of any tax, interest and/or penalties for which the Transmission Line Payer has already made payment to such CUU Transmission Owner, the CUU Transmission Owner shall promptly refund to the Transmission Line Payer any payment attributable to the amount determined to be non-taxable, plus any interest or other payments such CUU Transmission Owner receives or to which such CUU Transmission Owner may be entitled with respect to such payment.

3.3.2 Private Letter Ruling and Other Cooperation. At the request of a Transmission Line Payer, a CUU Transmission Owner may and shall file with the IRS a request

for a private letter ruling as to whether any property transferred or sums paid, or to be paid, by such Transmission Line Payer to such CUU Transmission Owner under this Agreement are subject to federal income taxation. In that event, the Transmission Line Payer will prepare the initial draft of the request for a private letter ruling and will bear the expense of such ruling request. The CUU Transmission Owner and the Transmission Line Payer shall cooperate in good faith with respect to the submission of such request.

3.3.3 Other Taxes. Any Transmission Line Payer making a contribution to a CUU Transmission Owner shall cooperate in good faith to appeal, protest, seek abatement of, or otherwise contest any tax (other than federal income tax and Minnesota income taxes) asserted or assessed against such CUU Transmission Owner for which such Transmission Line Payer may be required to reimburse such CUU Transmission Owner under the terms of this Agreement.

ARTICLE 4
FORCE MAJEURE

4.1 Force Majeure. No Party shall be in breach or liable for any delay or failure in its performance under this Agreement to the extent such performance is prevented or delayed due to a Force Majeure event or circumstance, provided that:

(a) the non-performing Party shall give the other Parties notice promptly (and within forty-eight (48) hours if possible) after the non-performing Party's knowledge of the commencement of the Force Majeure, with written confirmation to be supplied within ten (10) calendar days after the commencement of the Force Majeure further describing the particulars of the occurrence of the Force Majeure;

(b) the delay in performance due to the Force Majeure shall be of no greater scope and of no longer duration than is directly caused by the Force Majeure;

(c) the Party whose performance is delayed or prevented: (i) shall proceed with Reasonable Efforts to overcome the Force Majeure which is preventing or delaying performance; and (ii) shall provide weekly written progress reports to the other Party during the period that performance is delayed or prevented describing actions taken and to be taken to remedy the consequences of the Force Majeure, the schedule for such actions and

the expected date by which performance shall no longer be affected by the Force Majeure; and

(d) when the performance of the Party claiming the Force Majeure is no longer being delayed or prevented, that Party shall give the other Parties notice to that effect.

ARTICLE 5
INFORMATION REPORTING

5.1 Information Reporting Obligations. Each Party shall, in accordance with Good Utility Practice, promptly provide to the other Parties all relevant information, documents, or data regarding the Party's facilities and equipment which may reasonably be expected to pertain to the reliability of any other Party's facilities and equipment and which has been reasonably requested by any other Party.

5.2 Non-Force Majeure Reporting. A Party shall notify the other Parties when it becomes aware of its inability to comply with the provisions of this Agreement for a reason other than Force Majeure. The Parties agree to cooperate with each other and provide necessary information regarding such inability to comply, including, but not limited to, the date, duration, and reason for the inability to comply, and corrective actions taken or planned to be taken with respect to such inability to comply. In the event of Force Majeure, a Party unable to comply with the provisions of this Agreement shall notify the other Parties in accordance with the provisions of Article 4.

ARTICLE 6

CREDITWORTHINESS, BILLING, AND PAYMENTS

6.1 Creditworthiness.

The CUU Transmission Owners will review the creditworthiness of the Transmission Line Payers to determine if performance assurance is required. If the Transmission Line Payer maintains a senior unsecured bond rating or corporate credit rating from Standard & Poor's of "BBB" or better and/or Moody's of "Baa2" or better and/or DBRS Limited's of "BBB(med)" or better (if such Party maintains multiple credit ratings, for the purposes of this Article 6.1 the lower of such credit ratings shall be utilized) and has a total asset size exceeding $1 billion (confirmed through audited financial statements) then performance assurance will not be required. If the CUU Transmission Owners determine

that performance assurance is required in accordance with Article 6.1 of this Agreement, then the following applies:

Thirty (30) Calendar Days prior to the due date for the Transmission Line Payer's first payment under the payment schedule specified in Appendix A, each Transmission Line Payer shall provide the CUU Transmission Owners with performance assurance either in the form of cash deposited into an escrow account, a parental guarantee, letter of credit, surety bond or another form of performance assurance and is reasonably acceptable to the CUU Transmission Owners as an adequate assurance of creditworthiness for the Transmission Line Payer's share of responsibility for CUU costs as set out in Appendix A. The amount of performance assurance required to be provided to the CUU Transmission Owners will be as stipulated in Appendix D Subsection 1. This amount of performance assurance will remain in place up to the day that is 20 Business Days after the last of the MPM Certification Phase Conditions Precedent and the MPM Construction Phase Conditions Precedent have been satisfied or waived by MPM.

By no later than 20 Business Days after all of the MPM Certification Phase Conditions Precedent and MPM Construction Phase Conditions Precedent have been satisfied or waived by MPM, each Transmission Line Payer shall provide the CUU Transmission Owners with performance assurance as stipulated in Appendix D Subsection 2.

By no later than the 20 Business Days after all of the MPM Construction Phase Conditions Precedent and the 6690271 Certification Phase Conditions Precedent and the 6690271 Construction Phase Conditions Precedent have been satisfied or waived by the respective Party, the amount of performance assurance required by the CUU Transmission Owners from the Transmission Line Payers will be determined by the CUU Transmission Owners based on the CUU Transmission Owners' projected cost to complete the CUU facilities multiplied by the percentage of the CUU that is required to be funded by such Transmission Line Payer minus any amount of its performance assurance held by the CUU Transmission Owner remaining from Appendix D Subsections 1 and 2.

If performance assurance is in the form of a parental guarantee or surety bond, it must be made by an entity that meets the creditworthiness requirements of the CUU Transmission Owners, as set out above, have terms and conditions reasonably acceptable to the CUU Transmission Owners and guarantee payment of the amount specified in Article 6.3. The surety bond must be issued by an insurer reasonably acceptable to the CUU Transmission Owners, specify a reasonable expiration date and shall provide that the maximum amount assured under the bond shall reduce on a quarterly basis.

If the performance assurance is in the form of a letter of credit, it must be issued by a bank reasonably acceptable to the CUU Transmission Owners, specify a reasonable expiration date and may provide that the maximum amount available to be drawn under the letter of credit shall reduce on a quarterly basis based on payments received by the CUU Transmission Owners from such Transmission Line Payer.

If the performance assurance is a cash escrow account, then the maximum amount available to be drawn under the escrow account shall reduce on a quarterly basis based on payments received by the CUU Transmission Owner from such Transmission Line Payer.

After the CUU has been placed in service and until the Transmission Line Payers have fully compensated the CUU Transmission Owners for construction of the CUU, each Transmission Line Payer shall, subject to the standards of this Article 6.1, maintain a parental guarantee, surety bond, letter of credit, or some other credit assurance sufficient to meet its monthly payment obligation under Article 3.2.1. Each Transmission Line Payer's estimated liability under Article 3.2.1 is stated in Appendix A. If a Transmission Line Payer provides the entire payment it must remit under the payment schedule as of the date of first payment, it need not provide additional performance assurance unless cost allocation changes pursuant to this Article 6.1 or additional funds are required by the CUU Transmission Owners to complete the CUU and allocated among the Transmission Line Payers according to Article 3.2.

A Transmission Line Payer's performance assurance will not be returned or refunded in the event a Transmission Line Payer is terminated from the Agreement, except as provided in this Article 6.1 and Article 6.8.

The CUU Transmission Owners may draw on the performance assurance in full or in part, acting reasonably, upon any Default, early termination or suspension in order to fund any costs and liabilities owing by such Transmission Line Payer to the CUU Transmission Owners pursuant to this Agreement. The amount of performance assurance required by or available to CUU Transmission Owners is based on estimates of costs and liabilities and shall not limit the damages that are otherwise required to be paid by Transmission Line Payers hereunder, if any. In the event the performance assurance drawn by or paid to CUU Transmission Owners is not sufficient to cover all amounts due to CUU Transmission Owners from such Transmission Line Payer under the terms of this Agreement, Transmission Line Payer shall be required to pay the full amount of the deficiency to CUU Transmission Owners.

6.2 **Failure to Provide Performance Assurance.** If a Transmission Line Payer fails to provide acceptable performance assurance pursuant to Article 6.1, the Transmission Line

Payer can be terminated from this Agreement by the CUU Transmission Owners and the Transmission Line Payers Associated TSR will also be withdrawn and the applicable CUU Transmission Customer will not be entitled to receive Firm Transmission Service.

When a Transmission Line Payer withdraws from the Agreement as a result of an increase of more than twenty-five (25%) percent in its cost estimate pursuant to Article 2.2.6, the Transmission Provider will notify all other Parties to the Agreement of the withdrawal and will provide a revised cost estimate of each Transmission Line Payer's responsibility for the cost of the CUU within thirty (30) Calendar Days. Within thirty (30) Calendar Days of receiving such notification, each remaining Transmission Line Payer(s) must either withdraw or submit additional assurance necessary to cover its revised cost responsibility, if applicable. Failure to provide such additional performance assurance, if applicable, will be a Breach of the Agreement and subject to Article 9, any Transmission Line Payer that does not provide additional performance assurance within thirty (30) Calendar Days of receiving the cost allocation notice can be withdrawn from this Agreement by the CUU Transmission Owners and if such Transmission Line Payer is withdrawn, the Transmission Line Payer's Associated TSR will also be withdrawn and the applicable CUU Transmission Customer will not be entitled to receive Firm Transmission Service. If such cost adjustment causes the cost estimate for any of the remaining Transmission Line Payers to increase by more than twenty-five (25%) percent above the cost estimate provided in response to the prior withdrawal, the Transmission Provider will perform a restudy of the CUU unless the remaining Parties agree to proceed without a restudy.

6.3 **Monthly Invoice.** The CUU Transmission Owners shall submit to each Transmission Line Payer, on a monthly basis, invoices of amounts due, if any, for the preceding month. Each invoice shall state the month to which the invoice applies and fully describe the services and equipment provided. The Parties may discharge mutual debts and payment obligations due and owing to each other on the same date through netting, in which case all amounts a Party owes to another Party under this Agreement, including interest payments or credits, shall be netted so that only the net amount remaining due shall be paid by the owing Party. The Parties may by mutual consent adjust the invoicing procedures. These procedures could include but are not limited to construction advances by the Transmission Line Payers to the CUU Transmission Owners.

6.4 Payment. Invoices shall be rendered to the paying Party at the address specified by the Parties. The Party receiving the invoice shall pay the invoice within thirty (30) Calendar Days of receipt. All payments shall be made in immediately available funds payable to the other Party, or by wire transfer to a bank named and account designated by the invoicing Party. Payment of invoices by a Party will not constitute a waiver of any rights or claims that Party may have under this Agreement.

6.5 Final Invoice. Within six (6) months after completion of the construction of the CUU, unless otherwise agreed to under Appendix A, the CUU Transmission Owners shall provide an invoice of the final cost of the construction of the CUU and shall set forth such costs in sufficient detail to enable each Transmission Line Payer to compare the actual costs with the estimates and to ascertain deviations, if any, from the cost estimates. The CUU Transmission Owner shall refund, with interest (calculated in accordance with 18 C.F.R. Section 35.19a(a)(2)(iii)), to each Transmission Line Payer any amount by which the actual payment by the Transmission Line Payer for estimated costs exceeds the actual costs of construction within thirty (30) Calendar Days of the issuance of such final construction invoice.

6.6 Interest. Interest on any unpaid amounts shall be calculated in accordance with Section 7 of the Tariff.

6.7 Payment During Dispute. In the event of a billing dispute among the Parties, the CUU Transmission Owners shall continue to construct the CUU as long as each Transmission Line Payer: (i) continues to make all payments not in dispute; and (ii) pays to the Transmission Provider or the CUU Transmission Owners or into an independent escrow account the portion of the invoice in dispute, pending resolution of such dispute. If any Transmission Line Payer fails to meet these two requirements, then the Transmission Provider may or, at the CUU Transmission Owners' request upon a Transmission Line Payer's failure to pay the CUU Transmission Owners, shall provide notice to such Transmission Line Payer of a Default pursuant to Article 9. Within thirty (30) Calendar Days after the resolution of the dispute, the Party that owes money to another Party shall pay the amount due with interest calculated in accordance with the methodology set forth in 18 C.F.R. Section 35.19a(a)(2)(iii).

6.8 Return of Excess Performance Assurance. Excess performance assurance will be refunded or released if any funds remain when the CUU is placed in service or if the Transmission Provider determines that the CUU is no longer needed. The amount of excess performance assurance to be refunded or released will be determined net of any performance assurance required by the CUU Transmission Owners for any amounts still due and payable for construction and installation of the CUU (including, without limitation, any equipment ordered related to such construction), plus all out-of-pocket expenses incurred by the CUU Transmission Owners in connection with the construction and installation of the CUU, any actual costs which the CUU Transmission Owners (A) reasonably incur in winding up work and construction demobilization (including previously incurred capital costs, penalties for early termination, removal and site restoration) and (B) reasonably incur to ensure the safety of persons and property and the integrity and safe and reliable operation of the Transmission System, through the In-

Service Date or date the Transmission Provider determines that the CUU is no longer required.

ARTICLE 7
ASSIGNMENT

7.1 Assignment. This Agreement may be assigned by any Party only with the written consent of the other Parties; provided that a Party may assign this Agreement without the consent of the other Parties to any Affiliate of the assigning Party with an equal or greater credit rating and with the legal authority and operational ability to satisfy the obligations of the assigning Party under this Agreement. In addition 6690271 may assign its interest, rights and obligations in or arising out of this Agreement: (i) as a CUU Transmission Owner to MP without the consent of MP or any other Party to this Agreement; or (ii) as a CUU Transmission Owner and/or Transmission Line Payer to Great River Energy or an Affiliate of Great River Energy (the "Assignee") with the consent of MP and without the consent any other Party to this Agreement provided that the Assignee has the legal authority and operational ability to satisfy the obligations of 6690271 as the assigning party under this Agreement, and without restricting the generality of the foregoing, if such assignment is in respect of 6690271 interests, rights and obligations as a Transmission Line Payer, the Assignee must meet or satisfy the creditworthiness provisions of Article 6. Any attempted assignment that violates this Article 7.1 is void and ineffective and shall not relieve any Party of its obligations under this Agreement. No Party's obligations shall be enlarged, in whole or in part, by reason of an assignment. Where required, consent to assignment will not be unreasonably withheld, conditioned or delayed.

ARTICLE 8
INDEMNITY

8.1 General. To the extent permitted by law, a Party (the "**Indemnifying Party**") shall at all times indemnify, defend, and hold the other Parties (each an "**Indemnified Party**") harmless from Loss, only as provided in the Tariff.

8.1.1 Indemnified Party. If an Indemnified Party is entitled to indemnification under this Article 8 as a result of a claim by a third party, and the Indemnifying Party fails, after notice and reasonable opportunity to proceed under Article 8.1, to assume the defense of such claim, such Indemnified Party may at the expense of the Indemnifying Party contest, settle or consent to the entry of any judgment with respect to, or pay in full, such claim.

8.1.2 Indemnifying Party. If an Indemnifying Party is obligated to indemnify and hold any Indemnified Party harmless under this Article 8, the amount owing to the Indemnified Party shall be the amount of such Indemnified Party's actual Loss, net of any insurance or other recovery.

8.1.3 Indemnity Procedures. Promptly after receipt by an Indemnified Party of any claim or notice of the commencement of any action or administrative or legal proceeding or investigation as to which the indemnity provided for in Article 8.1 may apply, the Indemnified Party shall notify the Indemnifying Party of such fact. Any failure of or delay in such notification shall not affect a Party's indemnification obligation unless such failure or delay is materially prejudicial to the Indemnifying Party.

The Indemnifying Party shall have the right to assume the defense thereof with counsel designated by such Indemnifying Party and reasonably satisfactory to the Indemnified Party. If the defendants in any such action include one or more Indemnified Parties and the Indemnifying Party and if the Indemnified Party reasonably concludes that there may be legal defenses available to it and/or other Indemnified Parties which are different from or additional to those available to the Indemnifying Party, the Indemnified Party shall have the right to select separate counsel to assert such legal defenses and to otherwise participate in the defense of such action on its own behalf. In such instances, the Indemnifying Party shall only be required to pay the fees and expenses of one additional attorney to represent an Indemnified Party or Indemnified Parties having such differing or additional legal defenses.

The Indemnified Party shall be entitled, at its expense, to participate in any such action, suit, or proceeding, the defense of which has been assumed by the Indemnifying Party. Notwithstanding the foregoing, the Indemnifying Party (i) shall not be entitled to assume and control the defense of any such action, suit, or proceedings if and to the extent that, in the opinion of the Indemnified Party and its counsel, such action, suit, or proceeding involves the potential imposition of criminal liability on the Indemnified Party, or there exists a conflict or adversity of interest between the Indemnified Party and the Indemnifying Party, and in such event the Indemnifying Party shall pay the reasonable expenses of the Indemnified Party, and (ii) shall not settle or consent to the entry of any judgment in any action, suit or proceeding without the consent of the Indemnified Party, which shall not be unreasonably withheld, conditioned, or delayed.

8.2 Consequential Damages. In no event shall any Party be liable to any other Party under any provision of this Agreement for any losses, damages, costs or expenses for any special, indirect, incidental, consequential, or punitive damages, including but not limited to loss of profit or revenue, loss of the use of equipment, cost of capital, cost of temporary equipment or services, whether based in whole or in part in contract, in tort, including negligence, strict liability, or any other theory of liability; provided, however, that damages for which a Party may be liable to another Party under another agreement will not be considered to be special, indirect, incidental, or consequential damages hereunder.

ARTICLE 9
BREACH, CURE AND DEFAULT

9.1 Events of Breach. A Breach of this Agreement shall include:

(a) The failure to pay any amount when due;

(b) The failure to comply with any material term or condition of this Agreement, including but not limited to any material Breach of a representation, warranty or covenant made in this Agreement;

(c) If a Party (i) is adjudicated bankrupt; (ii) files a voluntary petition in bankruptcy under any provision of any federal or state bankruptcy law or shall consent to the filing of any bankruptcy or reorganization petition against it under any similar law; (iii) makes a general assignment for the benefit of its creditors; or (iv) consents to the appointment of a receiver, trustee or liquidator;

(d) Assignment of this Agreement in a manner inconsistent with the terms of this Agreement;

(e) Failure of a Party to provide information or data to another Party as required under this Agreement, provided the Party entitled to the information or data under this Agreement requires such information or data to satisfy its obligations under this Agreement; or

(f) Failure of a Party to provide the performance assurance required pursuant to Article 6.1.

9.2 Notice of Breach, Cure and Default. Upon the occurrence of an event of Breach, any Party aggrieved by the Breach, when it becomes aware of the Breach, shall give written notice of the Breach to the Breaching Party and to any other person representing a Party to this Agreement identified in writing to the other Parties in advance. Upon receiving written notice of a Breach hereunder, the Breaching Party shall have a period to cure such Breach (sometimes hereinafter referred as "Cure Period") which shall be thirty (30) Calendar Days unless such Breach is due to an occurrence under Article 9.1(a) or (c) in which case the cure period will be five (5) Calendar Days. Such notice shall set forth, in reasonable detail, the nature of the Breach, and where known and applicable, the steps necessary to cure such Breach.

9.2.1 Upon the occurrence described in part (c) of Article 9.1, the Party experiencing such occurrence shall notify the other Parties in writing within seven (7) Calendar Days after the commencement of such occurrence.

9.2.2 If the Breach is such that it cannot be cured within the Cure Period, the Breaching Party will commence in good faith all steps as are reasonable and appropriate to cure the Breach within such Cure Period and thereafter diligently pursue such action to completion. In the event the Breaching Party fails to:

(A) cure the Breach, or to commence reasonable and appropriate steps to cure the Breach, within the Cure Period; or

(B) completely cure the Breach within sixty (60) Calendar Days if the Breach occurs pursuant to Article 9.1(b), (d), (e) or (f),

the Breaching Party shall be in Default of this Agreement and the Non-Breaching Parties may, at their option: (1) act in concert to amend the Agreement to remove a Transmission Line Payer that is in Default from this Agreement for cause and to make other changes as necessary; or (2) either in concert or individually, take whatever action at law or in equity as may appear necessary or desirable to enforce the performance or observance of any rights, remedies, obligations, agreement, or covenants under this Agreement. Alternatively, if a Transmission Line Payer is the Breaching Party and the Breach results from a failure to provide payments or performance assurance under Article 9.1, the other Transmission Line Payers, either individually or in concert, may cure the Breach by paying the amounts owed or by providing adequate performance assurance, without waiver of contribution rights against the Transmission Line Payer in Default with the right to receive an assignment of all rights the CUU Transmission Owners had in respect of such Breach. Such cure for the Breach of a Transmission Line Payer is

subject to the reasonable consent of the Transmission Provider and CUU Transmission Owners. The CUU Transmission Owners may also cure such Breach by funding the proportionate share of the CUU costs related to the Breach of the Transmission Line Payer. CUU Transmission Owners must notify all Parties that it will exercise this option within thirty (30) Calendar Days of notification that a Transmission Line Payer has failed to provide payments or performance assurance under Article 9.1.

9.3.1 Rights in the Event of Default. Notwithstanding the foregoing, upon the occurrence of an event of Default, any Non-Breaching Party shall be entitled to exercise all rights and remedies it may have in equity or at law.

ARTICLE 10
TERMINATION OF AGREEMENT

10.1 Expiration of Term. Except as otherwise specified in this Article 10, the Parties' obligations under this Agreement shall terminate at the conclusion of the term of this Agreement.

10.2 Termination. In addition to the termination provisions set forth in Article 2.2, a Party may terminate this Agreement upon the Default of another Party in accordance with this Agreement. Subject to the limitations set forth in Article 10.3, in the event of a Default, a Non-Breaching Party may terminate this Agreement only upon the later of: (i) its giving written notice of termination to the other Parties; and (ii) the filing of a notice of termination for this Agreement.

10.3 Disposition of Facilities Upon Termination of Agreement Due to Default.

10.3.1 Transmission Provider and CUU Transmission Owners Obligations.
Upon termination of this Agreement due to Default, unless otherwise agreed by the terms of this Agreement, the CUU Transmission Owners:

(a) shall, prior to the construction and installation of any portion of the CUU described in Appendix A and to the extent possible, cancel any pending orders of, or return, such equipment or material for the CUU;

(b) may keep in place any portion of the CUU already constructed and installed; and

(c) shall perform such work as may be necessary to ensure the safety of persons and property and to preserve the integrity of the Transmission System.

10.3.2 Transmission Line Payer Obligations. Upon billing by the CUU Transmission Owners, each Transmission Line Payer shall reimburse the CUU Transmission Owners for its share of any costs incurred by the CUU Transmission Owners in performance of the actions required or permitted by Article 10.3.1. The CUU Transmission Owners and the Transmission Provider shall use Reasonable Efforts to minimize costs and shall offset the amounts owed by any salvage value of facilities, if applicable. Each Transmission Line Payer shall pay these costs pursuant to Article 6.3 of this Agreement.

10.3.3 Pre-construction or Installation. Upon termination of this Agreement and prior to the construction and installation of any portion of the CUU, the CUU Transmission Owners may, at their option, retain any portion of the CUU not cancelled or returned in accordance with Article 10.3.1(a), in which case the CUU Transmission Owners shall be responsible for all costs associated with procuring the CUU. To the extent that the Transmission Line Payers have already paid the CUU Transmission Owners for any or all of such costs, the CUU Transmission Owners shall refund such amounts to the Transmission Line Payers within six (6) months. If the CUU Transmission Owners elect to not retain any portion of such facilities, and one or more of the Transmission Line Payers wish to purchase such facilities, the CUU Transmission Owners shall convey and make available to the applicable Transmission Line Payer(s) such facilities as soon as practicable after receiving payment for such facilities and the CUU Transmission Owners shall account to the other Transmission Line Payer(s) for such payment.

10.4 Survival of Rights. Termination or expiration of this Agreement shall not relieve any Party of any of its liabilities and obligations arising hereunder prior to the date termination becomes effective, and each Party may take whatever judicial or administrative actions as appear necessary or desirable to enforce its rights hereunder. The applicable provisions of this Agreement will continue in effect after expiration or early termination hereof to the extent necessary to provide for (A) final billings, billing adjustments and other billing procedures set forth in this Agreement; (B) the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and (C) the confidentiality provisions set forth in Article 12.

ARTICLE 11
SUBCONTRACTORS

11.1 Subcontractors. Nothing in this Agreement shall prevent a Party from utilizing the services of subcontractors, as it deems appropriate, to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services and each Party shall remain primarily liable to the other Parties for the performance of such subcontractor.

11.1.1 Responsibility of Principal. The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. In accordance with the provisions of this Agreement, each Party shall be fully responsible to the other Parties for the acts or omissions of any subcontractor it hires as if no subcontract had been made. Any applicable obligation imposed by this Agreement upon a Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

11.1.2 No Third-Party Beneficiary. Except as may be specifically set forth to the contrary herein, no subcontractor or any other party is intended to be, nor will it be deemed to be, a third-party beneficiary of this Agreement.

11.1.3 No Limitation by Insurance. The obligations under this Article 11 will not be limited in any way by any limitation of any insurance policies or coverages, including subcontractor's insurance.

ARTICLE 12
CONFIDENTIALITY

12.1 Confidentiality. Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied by a Party to another Party prior to the execution of this Agreement.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential. The Parties shall also maintain as confidential any information that is provided and identified by a Party as Critical Energy Infrastructure Information ("**CEII"**), as that term is defined in 18 C.F.R. Section 388.113(c).

Such confidentiality will be maintained in accordance with this Article 12. If requested by the receiving Party, the disclosing Party shall provide in writing, the basis for asserting that the information referred to in this Article warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

12.1.1 Term. During the term of this Agreement, and for a period of three (3) years after the expiration or termination of this Agreement, except as otherwise provided in this Article 12 or with regard to CEII, each Party shall hold in confidence and shall not disclose to any person Confidential Information. CEII shall be treated in accordance with Commission policies and regulations.

12.1.2 Scope. Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a non-Party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of this Agreement; or (6) is required, in accordance with Article 12.1.7 of this Agreement, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under this Agreement. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the receiving Party that it no longer is confidential.

12.1.3 Release of Confidential Information. No Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), subcontractors, employees, agents, consultants, or to non-parties who may be or are considering providing financing to the Transmission Line Payers, or to potential purchasers of the Transmission Line Payer, on a need-to-know basis in connection with this Agreement, unless such person has first been advised of the confidentiality provisions of this Article 12 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain

primarily responsible for any release of Confidential Information in contravention of this Article 12.

12.1.4 Rights. Each Party retains all rights, title, and interest in the Confidential Information that it discloses to the receiving Party. The disclosure by a Party to the receiving Party of Confidential Information shall not be deemed a waiver by the disclosing Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

12.1.5 No Warranties. By providing Confidential Information, no Party makes any warranties or representations as to its accuracy or completeness. In addition, by supplying Confidential Information, no Party obligates itself to provide any particular information or Confidential Information to another Party nor to enter into any further agreements or proceed with any other relationship or joint venture.

12.1.6 Standard of Care. Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication, or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to another Party under this Agreement or its regulatory requirements.

12.1.7 Order of Disclosure. If a court or a Governmental Authority or entity with the right, power, and apparent authority to do so requests or requires any Party, by Freedom of Information Act request, subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the disclosing Party with prompt notice of such request(s) or requirement(s) so that the disclosing Party may seek an appropriate protective order or waive compliance with the terms of this Agreement. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

12.1.8 Termination of Agreement. Upon termination of this Agreement for any reason, each Party shall, within ten (10) Calendar Days of receipt of a written request from another Party, use Reasonable Efforts to destroy, erase, or delete (with such destruction, erasure, and deletion certified in writing to the requesting Party) or return to the requesting Party any and all written or electronic

Confidential Information received from the requesting Party, except that each Party may keep one copy for archival purposes, provided that the obligation to treat it as Confidential Information in accordance with this Article 12 shall survive such termination.

12.1.9 Remedies. The Parties agree that monetary damages would be inadequate to compensate a Party for another Party's Breach of its obligations under this Article 12. Each Party accordingly agrees that the disclosing Party shall be entitled to equitable relief, by way of injunction or otherwise, if the receiving Party Breaches or threatens to Breach its obligations under this Article 12, which equitable relief shall be granted without bond or proof of damages, and the breaching Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Article 12, but shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. No Party, however, shall be liable for direct, indirect, incidental or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Article 12 except to the extent of any and all gains wrongfully acquired, directly or indirectly, from unauthorized disclosure of any Confidential Information covered by this Agreement.

12.1.10 Disclosure to FERC, Its Staff, or a State. Notwithstanding anything in this Article 12 to the contrary, and pursuant to 18 C.F.R. § 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests Confidential Information from a Party that is otherwise required to be maintained in confidence pursuant to this Agreement, the Party shall provide the requested Confidential Information to FERC or its staff, within the time provided for in the request for information. In providing the Confidential Information to FERC or its staff, the Party must, consistent with 18 C.F.R. § 388.112, request that the Confidential Information be treated as confidential and non-public by FERC and its staff and that the Confidential Information be withheld from public disclosure. To the extent provided by applicable law, the Parties are prohibited from notifying the other Parties to this Agreement prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Parties to the Agreement when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time any of the Parties may respond before such information would be made public, pursuant to 18 C.F.R. §388.112. Requests from a state regulatory body

conducting a confidential investigation shall be treated in a similar manner if consistent with applicable law.

12.1.11 Subject to the exception in Article 12.1.10, any information that a disclosing Party claims is competitively sensitive, commercial or financial information under this Agreement shall not be disclosed by the receiving Party to any person not employed or retained by the receiving Party, except to the extent disclosure is (i) required by law; (ii) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (iii) otherwise permitted by consent of the disclosing Party, such consent not to be unreasonably withheld; or (iv) necessary to fulfill its obligations under this Agreement or as the Regional Transmission Organization or a Local Balancing Authority operator including disclosing the Confidential Information to a regional or national reliability organization. The Party asserting confidentiality shall notify the receiving Party in writing of the information that Party claims is confidential. Prior to any disclosures of that Party's Confidential Information under this subparagraph, or if any non-Party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the Party who received the Confidential Information from the disclosing Party agrees to promptly notify the disclosing Party in writing and agrees to assert confidentiality and cooperate with the disclosing Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order or other reasonable measures.

ARTICLE 13
INFORMATION ACCESS AND AUDIT RIGHTS

13.1 Information Access. Each Party shall make available to the other Parties information necessary to verify the costs incurred by the other Parties for which the requesting Party is responsible under this Agreement and carry out obligations and responsibilities under this Agreement, provided that the Parties shall not use such information for purposes other than those set forth in this Article 13.1 and to enforce their rights under this Agreement.

13.2 Audit Rights. Subject to the requirements of confidentiality under Article 12 of this Agreement, the accounts and records related to the design, engineering, procurement, construction, installation and commissioning of the CUU shall be subject to audit during the period of this Agreement and for a period of twenty-four (24) months following the CUU Transmission Owners' issuance of a final invoice in accordance with Article 6.4.

The Transmission Line Payers may jointly or individually, at the expense of the requesting Party or Parties, during normal business hours and upon prior reasonable notice to the other Parties, audit such accounts and records, provided, however, that the CUU Transmission Owners shall not be required to cooperate with more than one audit per quarter (accordingly, if more than one Transmission Line Payer wishes to conduct an audit within a given calendar quarter, they must do so jointly). Any audit authorized by this Article 13.2 shall be performed at the offices where such accounts and records are maintained and shall be limited to those portions of such accounts and records that relate to obligations under this Agreement.

ARTICLE 14
DISPUTES

14.1 Submission. Any claim or dispute which a Party may have against another Party or Parties, arising out of this Agreement that concerns Tariff related matters shall be submitted for resolution in accordance with the dispute resolution provisions of the Tariff. All matters arising out of this Agreement concerning the Transmission Provider shall be submitted for resolution in accordance with the dispute resolutions of the Tariff. All other claims or disputes shall be resolved in accordance with the following provisions of this Article 14.

14.2 Condition Precedent to Arbitration. Prior to initiation of arbitration, any controversy, claim or dispute between any of the Parties shall be first referred in writing to the Executive Officers of the Parties to the dispute for review and decision. Any decision by the Executive Officers to resolve a controversy, claim or dispute must be unanimous. If the controversy, claim or dispute is not resolved within thirty (30) Calendar Days after referral to the Executive Officers, any of the Parties to the dispute may proceed to arbitration.

14.3 Initiation. Arbitration proceedings must be initiated within one hundred and twenty (120) Calendar Days of the date the controversy, claim or dispute was first referred to the Executive Officers and shall be initiated by written notice to the other Party or Parties to the dispute setting forth the point or points in dispute. Unless otherwise agreed to in writing by the Parties to the dispute, failure to initiate arbitration within such one hundred and twenty (120) day period shall be deemed a waiver of the right to arbitrate that controversy, claim or dispute. Provided however, that any such waiver shall not preclude a Party from initiating arbitration proceedings in respect of a similar claim, controversy or dispute based on facts that arise subsequent to the date the controversy, claim or dispute was first submitted to the Executive Officers.

14.4 Arbitration Proceedings. Subject to Article 14.1 above, any and all controversies, claims

or disputes between the Parties arising out of or relating to this Agreement or an alleged breach thereof, shall be settled by arbitration. For greater clarity and certainty, arbitration shall not be available to anyone who is not a Party to this Agreement, and the aforesaid requirement to arbitrate shall not preclude a Party or Parties to the dispute from seeking contribution, indemnification or damages from another Person in proceedings instituted by third parties in courts of competent jurisdiction. Unless otherwise provided in this Article, the arbitration shall be conducted before three arbitrators and shall be conducted in accordance with the International Commercial Arbitration Act (Ontario), RSO 1990, c.I9 and the UNCITRAL model Law on International Commercial Arbitration as amended and then in effect. If there are two Parties to the dispute, each Party shall select one arbitrator, and the two selected arbitrators shall jointly agree, within 30 Calendar Days after the last of the two arbitrators have been appointed, on a third arbitrator who shall chair the arbitration. If there are more than two Parties to the dispute the Parties shall jointly appoint three arbitrators provided that if the Parties are unable to reach agreement on the appointment of the three arbitrators one arbitrator shall be appointed in accordance with the International Commercial Arbitration Act (Ontario), RSO 1990, c.I9 and the UNCITRAL model Law on International Commercial Arbitration as amended and then in effect. All arbitrators shall be competent by virtue of education and experience in the particular matter subject to arbitration. Before proceeding with the first hearing, each arbitrator shall take an oath of office. The arbitrators shall require witnesses to testify under oath administered by a duly qualified person. The arbitrators shall have jurisdiction and authority only to interpret, apply or determine compliance with the provisions of this Agreement insofar as shall be necessary to determine the particular matter subject to arbitration. The arbitrators shall not have jurisdiction or authority to add to, detract from, or alter the provisions of this Agreement or any applicable law or rule of civil procedure. The arbitrators shall have the power to order specific performance under any and all provisions of this Agreement and no Party can avoid specific performance based on an argument that the other Party or Parties to the dispute has or have an adequate remedy at law. All arbitrations shall be held in or near St. Paul, Minnesota.

14.5 Jurisdiction. The arbitrators may rule on their own jurisdiction, including any objections with respect to the existence or validity of this Agreement. For that purpose, this Article shall be treated as an agreement independent of the terms of the balance of this Agreement. A decision by the arbitrators that this Agreement is null and void shall not entail ipso jure the invalidity of this Article. If a Party disputes the authority or jurisdiction of the arbitrators, it shall notify the other Party or Parties to the dispute as soon as the matter alleged to be beyond the authority or jurisdiction of the arbitrators is raised during the arbitration proceedings. The arbitrators may rule on the issue as to whether or not they have the authority or jurisdiction in dispute, either as a preliminary question or in an award on the merits.

14.6 Continuation of Performance. Pending the final decision of the arbitrators, the Parties to the dispute agree to diligently proceed with the performance of all obligations, including the payment of all sums required by this Agreement. Payment of any interest shall be as determined by the arbitrator.

14.7 Costs. All fees, costs and expenses of the arbitrators incurred in connection with the arbitration shall be allocated among the Parties to the dispute by the arbitrators. The nature of the dispute and the outcome of the arbitration shall be factors considered by the arbitrators when allocating such fees, costs, and expenses. Each Party to the dispute shall be responsible for the fees, costs, and expenses of its own employees, expert consultants and attorneys, and for the costs of exhibits and other incidental costs.

14.8 Enforcement. Any decision (including orders arising out of disputes as to the scope or appropriateness of a request for, or a response to, discovery) of an arbitrator may be enforced in a court of competent jurisdiction with all costs, including court costs and attorney's fees and disbursements, paid by the Party or Parties to the dispute found to be in error. Judgment upon the award rendered by the arbitrators may be entered in any court of competent jurisdiction and may be enforced in accordance with the Convention on the Recognition and Enforcement of Foreign Arbitral Awards.

14.9 Correction and Interpretation of Award. Within thirty (30) Calendar Days after receipt of an arbitration award, a Party, with notice to the other Party or Parties to the dispute, may request the arbitrators to correct in the award any errors in computation, any clerical or typographical errors or any errors of similar nature, or may request the arbitrators to give an interpretation of a specific point or a part of the award. If the arbitrators consider the request to be justified, they shall make the correction or give the interpretation within thirty (30) Calendar Days after receipt of the request. The interpretation shall form part of the award. The arbitrators may correct any error as herein-before referred to on their own initiative within thirty (30) calendar days after the date of award. In addition, within thirty (30) Calendar Days after receipt of an award, a Party with notice to the other Party or Parties to the dispute may request the arbitrators to make an additional award as to claims presented in the arbitration but omitted from the award. If the arbitrators consider the request to be justified, they shall make an additional award within sixty (60) Calendar Days after receipt of the request. The arbitrators may extend, at their sole discretion if necessary, the period of time within which they shall make a correction, interpretation or an additional award.

14.10 Rights under the Federal Power Act. Nothing in this Article 14 shall restrict the rights of any Party to file a complaint with FERC under relevant provisions of the Federal Power Act.

14.11 Equitable Remedies. Nothing in this Article shall prevent a Party from pursuing or seeking any equitable remedy available to it under Applicable Laws and Regulations, at any time, before a Governmental Authority.

ARTICLE 15
NOTICES

15.1 General. Except for notice required pursuant to Article 6, any notice to be provided to a Transmission Line Payer shall also be provided to the CUU Transmission Customers. Any notice, demand or request required or permitted to be given by a Party to another Party and any instrument required or permitted to be tendered or delivered by a Party in writing to another Party may be so given, tendered, or delivered, as the case may be, by depositing the same with the United States Postal Service with postage prepaid, for transmission by certified or registered mail, addressed to the Parties, or personally delivered to the Parties, at the address set out below:

ARTICLE 16
MISCELLANEOUS

16.1 Waiver. Except as otherwise provided for in this Agreement, the failure of any Party to comply with any obligation, covenant, agreement, or condition herein may be waived by the Parties entitled to the benefits thereof only by a written instrument signed by the Parties granting such waiver. Any waiver at any time by a Party of its rights with respect to a Default under this Agreement, or with respect to any other matters arising in connection with this Agreement, shall not be deemed a waiver or continuing waiver with respect to any subsequent Default or other matter.

16.2 Governing Law. The validity, interpretation and performance of this Agreement and each of its provisions shall be governed by the laws of the state where the CUU is located, without regard to its conflicts of law principles

16.3 Headings Not to Affect Meaning. The descriptive headings of the various Sections and Articles of this Agreement have been inserted for convenience of reference only and shall in no way modify or restrict any of the terms and provisions hereof.

16.4 Amendments and Rights Under the Federal Power Act. Transmission Provider shall have the right to make a unilateral filing with FERC under Section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation; provided that Transmission Provider may not exercise this unilateral filing right to alter capital cost responsibility of the Transmission Line Payers under the Agreement in a manner other than as provided under Article 2.2.5 or in a FERC order. The CUU Transmission Owners and Transmission Line Payers shall have the right to make a unilateral filing with FERC to modify this Agreement pursuant to Section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations there under; provided, however, that each Party shall have the right to protest any such filing and to participate fully in any proceeding before FERC in which such modifications may be considered. Notwithstanding the foregoing, Transmission Provider agrees that (a) at least thirty (30) days prior to making any unilateral filing with FERC to modify this Agreement, it shall provide the Parties with a copy of the proposed modification(s) to this Agreement and the reasons why Transmission Provider believes that such modification(s) are necessary and shall afford the Parties an opportunity to discuss whether such modification(s) are necessary or whether alternative modifications are in the best interests of all of the Parties; and (b) if at the time of the filing all of the Parties are not in agreement with the Transmission Provider's proposed modification(s), the Transmission Provider will include in its unilateral filing with FERC an alternative proposal supported by the CUU

Transmission Owners and Transmission Line Payers, to be considered by FERC contemporaneously with the Transmission Provider's proposed modification(s). Nothing in this Agreement shall limit the rights of the Parties or of FERC under Sections 205 or 206 of the Federal Power Act and FERC's rules and regulations there under, except to the extent that the Parties otherwise mutually agree as provided herein.

16.5 Entire Agreement. This Agreement, together with all the appendices and exhibits, constitutes the final and entire written agreement among the Parties hereto with reference to the subject matter hereof, and is a complete and exclusive statement of those terms and conditions and supersedes all prior negotiations, representations or agreements, either written or oral, with respect to the specific subject matter of this Agreement. No change or modification as to any of the provisions hereof shall be binding on any Party unless reduced to writing and approved by the duly authorized officer or agent of each of the Transmission Line Payers, each of the CUU Transmission Owners, and the Transmission Provider.

16.6 Counterparts. This Agreement may be executed in any number of counterparts, and each executed counterpart shall have the same force and effect as an original instrument.

16.7 Binding Effect. This Agreement and the rights and obligations hereof, shall be binding upon and shall inure to the benefit of the Parties hereto and their successors and assigns. No person or party shall have any rights, benefits or interests, direct or indirect, arising from this Agreement except the Parties hereto, their successors and authorized assigns. The Parties expressly disclaim any intent to create any rights in any person or party as a third party beneficiary to this Agreement.

16.8 Conflicts. In the event of a conflict between the body of this Agreement and any attachment, appendix or exhibit hereto, the terms and provisions of the body of this Agreement shall prevail and be deemed to be the final intent of the Parties except in respect of Appendix A where in the event of conflict with the body of this Agreement the provisions of Appendix A shall prevail and be deemed to the final intent of the Parties.

16.9 Regulatory Requirements. Each Party's obligations under this Agreement shall be subject to its receipt of any required approval or certificate from one or more Governmental Authorities in the form and substance satisfactory to the receiving Party, or the Party making any required filings with, or providing notice to, such Governmental Authorities, and the expiration of any time period associated therewith. Each Party shall in good faith seek these other approvals as soon as is reasonably practicable.

16.10 Trial by Jury. Each Party hereby irrevocably waives to the fullest extent permitted by applicable law, any and all rights it may have to trial by jury with respect to any legal proceeding arising out of or relating to this Agreement and any agreement executed or contemplated to be executed in conjunction with this Agreement. This provision is a material inducement to each of the Parties for entering into this Agreement. Each Party hereby waives any right to consolidate any action, proceeding, or counterclaim arising out of or in connection with this Agreement and any other agreement executed or contemplated to be executed in conjunction with this Agreement, or any matter arising hereunder or thereunder in which a jury trial has not or cannot be waived.

16.11 Enurement. This Agreement shall be binding upon and its benefits enure to the Parties and their permitted successors and assigns. This Agreement shall not create the relationship between any of the Parties of a joint venture or a partnership.

16.12 Conditions Precedent. The obligation of the CUU Transmission Owners and the Transmission Line Payers to complete all or a portion of the matters referenced in this Agreement shall be subject to and contingent upon the fulfillment of the conditions precedent set out in Appendix A in accordance with the provisions of Appendix A.

16.13 Recitals. The recitals hereto shall form an integral part of this Agreement.

ARTICLE 17

REPRESENTATIONS AND WARRANTIES

17.1 General. Each Party hereby represents, warrants and covenants as follows with these representations, warranties, and covenants effective as to the Party during the full time this Agreement is effective:

17.1.1. Good Standing. Such Party is duly organized or formed, as applicable, validity existing and in good standing under the laws of its jurisdiction of organization or formation, and is in good standing under the laws of the respective jurisdictions(s) of their organization as stated in the preamble of this Agreement.

17.1.2 Authority. Such Party has the right, power and authority to enter into this Agreement, to become a party hereto and to perform its obligations hereunder, and this Agreement is a legal, valid and binding obligation of such Party, enforceable against such Party in accordance with its terms.

17.1.3 No Conflict. The execution, delivery and performance of this Agreement does not violate or conflict with the organizational or formation documents, or bylaws or operating agreement, of such Party, or any judgment, license, permit or order or material agreement or instrument applicable to or binding upon such Party or any of its assets.

17.1.4 Consent and Approval. That it has sought or obtained, or, in accordance with this Agreement will seek or obtain, each consent, approval, authorization or order of, or acceptance of a filing with, or notice to, any Governmental Authority with jurisdiction concerning this Agreement, in connection with the execution, delivery and performance of this Agreement.

17.1.5 Solvency. That such Party is financially solvent.

IN WITNESS WHEREOF, the Parties have executed this Agreement in multiple originals, each of which shall constitute and be an original effective Agreement among the Parties as of the day and year first above written.

Multi-Party Facilities Construction Agreement

APPENDIX A

THE CUU, COST ESTIMATES AND RESPONSIBILITY, CONSTRUCTION SCHEDULE AND PAYMENT SCHEDULE

This Appendix A is an integral part of the Multi-Party Facilities Construction Agreement between the Transmission Line Payers, the CUU Transmission Owners, and the Transmission Provider (the "**Agreement**"). Terms used in this Appendix A with initial capitalization not defined in this Appendix A shall have the meaning set out in the Agreement.

1.0 Common Use Upgrades.

The Transmission Provider's TSR study disclosed that the CUU Transmission Customers' TSRs caused transmission line constraints requiring the Common Use Upgrades as more particularly set out in this Appendix A. Due to the extensive permitting and regulatory efforts, the significant financial obligations and the complex scheduling needed to construct and install the CUU, the CUU Transmission Owners have developed a two (2) phase approach to assist in meeting the In-Service Date. The two (2) phases are comprised of: (i) Certification Phase; and (ii) Construction Phase. Each phase has its own separate financial, regulatory and construction obligations and milestones and certain conditions and provisions applicable only to such phase as set out in this Appendix A. The CUU Transmission Owners shall provide quarterly progress reports to the Parties. The GNTL progress reports shall be issued no later than 30 days after each calendar quarter.

1.1 Certification Phase.

1.1.1 The certification phase will consist of the CUU Transmission Owners developing, filing and securing approvals of all major permits (the "**Major Permits**") required for the Common Use Upgrades to proceed in the United States after all Certification Phase Conditions Precedent are satisfied or waived (the "**Certification Phase**"). The Major Permits are identified in Section 1.1.4 of this Appendix A. The Certification Phase will include strategic planning, communications, agency coordination related to state and federal permits, routing, stakeholder and public involvement, field studies and surveys, preparation of permit applications, support of regulatory review processes, preliminary engineering design and legal services. Permitting activities will continue to overlap with additional engineering and construction activities during the Construction Phase.

1.1.2 The Certificate of Need and Route Permit referenced in Section 1.1.4 are required by the State of Minnesota and are issued by the Minnesota Public Utilities Commission. A Certificate of Need and a Route Permit are anticipated to be separately approved by the Minnesota Public Utilities Commission, within two and one-half years after submittal of the first application.

1.1.3 The Presidential Permit and Section 404 Wetland Permit referenced in Section 1.1.4 are Federal approvals and are issued by the US Department of Energy and U.S. Army Corps of Engineers respectively. The approval process for these two Major Permits includes a federally led environmental impact assessment. The Presidential Permit is anticipated to be issued within one and one-half years after submittal of the application for this permit. The Section 404 Wetland Permit is anticipated to be issued within one year after submittal of the application.

1.1.4 The Major Permits required for the Common Use Upgrades, referred to in Sections 1.1.2 and 1.1.3, as well as their anticipated durations of review and approval based on the review of relevant projects and the various assumptions identified, are listed below:

	Administering Agency	Anticipated Start Date (or Submittal of Application)	Anticipated End Date
Presidential Permit	U.S. Department of Energy	April 2014	December 2015
Certificate of Need	Minnesota Public Utilities Commission	October 2013	May 2015
Route Permit	Minnesota Public Utilities Commission	April 2014	December 2015
Section 404 Wetlands Permit	U.S. Army Corps of Engineers	January 2015	October 2015

1.1.5 Upon approval of the Route Permit by the Minnesota Public Utilities Commission the CUU Transmission Owners shall begin certain preliminary construction related activities deemed necessary by the CUU Transmission Owners in order to achieve the In-Service Date. These activities are comprised of the engagement of land agents, land surveys and research, land acquisition and clearing as well as initial procurement of long lead time materials such as conductors and towers and such other matters as the CUU Transmission Owners and Transmission Line

Payers may mutually agree upon. The CUU Transmission Owners acknowledge and agree that such activities will not include obtaining easements before March 31, 2016, unless the CUU Transmission Owners and Transmission Line Payers mutually agree to an earlier date. The Transmission Line Payers are to provide additional performance assurance for this activity if required by Article 6.1 of this Agreement.

1.1.6 Completion of the Certification Phase will be achieved when all of the Major Permits are obtained and all Construction Phase Conditions Precedent have been satisfied or waived. It is estimated that the Certification Phase will continue until the second half of 2016. During the Certification Phase additional state and federal approvals will also be obtained but unlike the Major Permits such approvals are not required prior to proceeding to the Construction Phase.

1.1.7 The Transmission Line Payers acknowledge that MP on behalf of and with the consent of the CUU Transmission Owners has begun the Certification Phase prior to the execution date of this Agreement and that these activities and associated cost, charges and expenses were required to ensure timely completion of the Certification Phase in order to meet the In-Service Date presently scheduled as June 1, 2020 ("**Pre-Certification Phase Expenses**"). Each Transmission Line Payer agrees to pay to the CUU Transmission Owners for the share of the costs, charges and expenses of the Certification Phase component as set out in the CUU Cost Allocation Summary Table (Table 2(B) below) including the Pre-Certification Phase Expenses after netting such amounts against payment made for such costs, charges and expenses prior to the Effective Date. A current detailed schedule of anticipated payment obligations arising from Table 2(B) shall be provided by the CUU Transmission Owners on request from a Transmission Line Payer. The costs, charges and expenses consist of internal labor expenses, travel expenses, and costs and charges of outside consultants, engineering services, regulatory expenses, and outside legal counsel and shall be limited to those incurred in accordance with Good Utility Practice. Subject to Articles 1.1.8 and 1.8 of this Appendix A, payments in respect of the Certification Phase payments will be made by the Transmission Line Payers upon submission by the CUU Transmission Owners of: (i) invoices to the Transmission Line Payers for their share of Pre-Certification Phase Expenses; and (ii) monthly invoicing to the Transmission Line Payers for expenses following the execution of this Agreement, as more particularly set out in Table 3.

1.1.8 The Parties acknowledge in accordance with Article 1.8 of this Appendix A that the obligations of each Transmission Line Payer to make its payments as set out

in Article 1.1.7 of this Appendix A and to fulfill its other obligations in respect of the Certification Phase are subject to and contingent upon the satisfaction of the Certification Phase Conditions Precedent.

1.2 Construction Phase.

1.2.1 The Construction Phase will consist of that component of the Common Use Upgrades needed for the granting of the interconnection of the Transmission Customers' TSRs after all Major Permits are secured and all Construction Phase Conditions Precedent are satisfied or waived (the "**Construction Phase**").

1.2.2 The Construction Phase will include the construction of a new 500 kV transmission line in Minnesota from the United States/Canadian border to the Minnesota Power Blackberry Substation in the Grand Rapids, Minnesota area (the "**500 kV Line**"), an associated 500 kV substation and a 500 kV series compensation station. The 500 kV Line will be approximately 220 miles in length and will be constructed on a 200 foot wide right of way. The 500 kV Line will be part of a new 500 kV international transmission interconnection (the "**500 kV Interconnection**"). Manitoba Hydro will be constructing the Canadian portion of the 500 kV Interconnection which is not part of this Agreement.

1.2.3 A detailed design for the 500 kV Line has not been prepared at this time. Conceptual structure configurations have been prepared for use during the routing process. Following the identification of a route, a detailed design will be prepared that incorporates and complies with the design criteria. As the detailed design is prepared, the preliminary design criteria in the Minnesota Power Great Northern 500kV Transmission Line Project Facilities Study will be expanded, as needed, to include the criteria and parameters established for the detailed design.

Several structure types and configurations were developed for the preliminary design of the 500 kV Line, including: a lattice guyed-V structure, a self-supporting lattice structure, a lattice guyed delta structure, and a self-supporting lattice delta structure. The type of structure in any given section of transmission line will be dependent on land type and land use.

The 500 kV Line will be designed to meet or exceed the applicable clearances recommended in the National Electrical Safety Code (NESC). The preliminary design criteria for the Project assumed a minimum conductor-to-ground clearance of 40 feet.

For the purpose of budgetary estimates, it has been assumed that, each phase of the 500 kV Line will consist of three 1,192.5kcmil ACSR 45/7 conductors, codename "Bunting", the sub-conductors will be arranged in an 'inverted delta' triangular bundle with 18" spacing and the structures will be designed to support two 48-fiber optical ground wires (OPGW). Detailed design of the 500 kV line will begin during the Certification Phase and continue into the Construction Phase.

1.2.4 The 500 kV Line will terminate at a new substation ("**Blackberry 500 kV Substation**") located on the same site as Minnesota Power's existing Blackberry 230/115 kV Substation. The Blackberry 500 kV Substation will be located adjacent to and east of the existing substation, and will be designed to accommodate the new 500 kV line, 500/230 kV transformation, existing 230 kV lines, and all associated 500 kV and 230 kV equipment.

The CUU will also require a new 500kV series compensation station ("**500 kV Series Compensation Station**"), which will be located within or adjacent to the final approved route. The 500 kV Series Compensation Station will include the 500 kV series capacitor banks necessary for the reliable operation and optimal performance of the CUU, and all associated 500 kV equipment.

The arrangement of the Blackberry 500 kV Substation is designed to accommodate the CUU and facilitate possible future expansion. The 500kV transformer breaker required for the Project will be located such that the 500kV yard can ultimately be arranged in a "ring bus" configuration. The 230kV breakers required for the CUU will be arranged in what is known as a "breaker-and-a-half" configuration. Space outside of the fence will be reserved for the 500kV expansion as well as a future 345kV yard. The appearance of the new substation will be similar to the appearance of existing substation of a similar size, including the existing Blackberry and Forbes substations nearby. The tallest structures in the substation will be the 500kV and 230kV dead-end structures, which are approximately 125 to 135 feet tall (500kV) and 70 feet tall (230kV). Exhibit A1 provides a preliminary one line drawing for the Blackberry 500 kV Substation. The site of the 500 kV Series Compensation Station has not yet been identified at this time, but for budgetary purposes, it has been assumed that the series compensation station will be a separate substation located along the line. This assumption is reflected in the preliminary one-line shown in Exhibit A1. The location of the series compensation equipment and whether it will be located in a separate station or located within the Blackberry 500 kV Substation will be determined in the final design of the 500 kV Line.

The estimate also assumes that a new permanent all weather access road approximately 500 feet in length will be constructed to the site from County Road 434. This is required to provide access for personnel, material deliveries, vehicles, trucks, heavy equipment, low-boy tractor trailer rigs (used for moving large transformers), and ongoing maintenance activities at the site.

1.2.5 The Parties acknowledge in accordance with Article 1.8 of this Appendix A that the obligations of each Transmission Line Payer to make its payments in respect of the Construction Phase and to fulfill its other obligations in respect of the Construction Phase are subject to and contingent upon: (i) the satisfaction of the Construction Phase Conditions Precedent applicable to that Transmission Line Payer; and (ii) notice being received from the CUU Transmission Owners that the Certification Phase has been successfully completed.

1.3 Cost Estimates

The Transmission Line Payers hereby acknowledge and agree that the costs, expenses and charges for the two (2) phases of the CUU set out in Table 1 are only an estimate and that the Transmission Line Payers shall pay the CUU Transmission Owners for their allocated percentages in accordance with Table 2(B) for all costs, expenses and charges, as determined pursuant to Article 3.2 of this Appendix A and subject to this Appendix A.

The total estimated costs, expenses and charges for the CUU are $676,947,930 in 2013 dollars. The estimate does not include escalation or the Tax Gross-Up Amount. Transmission Line Payers are responsible for the actual costs subject to IRS Revenue Procedures 2005-35. The Parties acknowledge that this estimate is based on a preferred route for the 500 kV Line and this estimate will be revised upon approval of the Route Permit by the Minnesota Public Utilities Commission which is anticipated to occur in the time frame described in Articles 1.1.2 and 1.1.4 of this Appendix. A detailed cost estimate updated at the end of the preceding month shall be provided to the Transmission Line Payers by the CUU Transmission Owners on request from a Transmission Line Payer.

Table 1 - CUU Cost Summary

	Certification Phase	Construction Phase	Total Project
Certification Expenses-Permitting	$22,896,300		$22,896,300
Certification Expenses-Preliminary Construction Activities	$55,253,400		$55,253,400
Line Construction		$457,336,420	$457,336,420
Blackberry Substation		$ 42,994,380	$42,994,380
GNTL Series Compensation Station		$ 49,258,220	49,258,220
Minnesota Power System Upgrades		$ 4,579,210	$ 4,579,210
Capitalize Property Taxes 1/		$ 44,200,000	$ 44,200,000
Network Upgrades to Other Systems Which Will Require Execution of Additional Facility Construction Agreements with Other Transmission Owners			
ATC Kewaunee – Point Beach Rating Increase		$ 250,000	$ 250,000
GRE-Benton County Rating Increase		$ 65,000	$ 65,000
MP-Mud Lake Rating Increase		$ 65,000	$65,000
OTP-Browns Valley-Hankinson Rating Increase		$ 50,000	$50,000
Totals	**$78,149,700**	**$598,798,230**	**$ 676,947,930**

1/ Capitalize Property Taxes were not included in the Facilities Study Estimate but were added as a line item by the CUU Transmission Owners

1.4 Cost Responsibility

The Parties have agreed that the cost allocation methodology for the construction of the CUU referenced in the Agreement shall be determined independently from traditional cost allocation methodology of pro rata cost allocation based on TSR requested amounts. The Parties further agree that the financial responsibility for funding the CUU assets will fall entirely on the Transmission Line Payers. The Transmission Line Payer financial responsibility ratio is stated in Table 2(B) below. Notwithstanding the Transmission Line Payer financial responsibility ratio, the Parties have also agreed that as of the Effective Date the ownership

share of the CUU assets as tenants in common shall be as stated in Table 2(C) below:

Table 2(A) - CUU TSR's and Associated Transmission Line Payers

TSR	CUU Transmission Customer	TSR Amount	Transmission Line Payer

Table 2(C) - CUU Ownership Summary

CUU Transmission Owner	**Percentage Ownership Share of CUU Assets**
Minnesota Power	51%
6690271 Manitoba Ltd.	49%

1.5 First Equipment Order. Will be dependent on final permitting approval.

1.6 Construction Schedule. Construction of the CUU is scheduled under Table 3-FCA Milestones and will be periodically updated as necessary.

1.7 Payment Schedule.

1.7.1 Timing of and Adjustments to Transmission Line Payers' Payments and Performance Assurance. Notwithstanding the requirements of Article 6.1 of the Agreement, the Transmission Line Payers shall make the advance payments, or if a Transmission Line Payer cannot provide advance payments because Governmental Authority approvals have not yet been granted, provide performance assurance, to the CUU Transmission Owners as set forth in the schedule in Table 3 in Section 1.7.2 of this Appendix A. The CUU Transmission Owners shall not be required to send to the Transmission Line Payers an invoice or notice for such initial payments or performance assurance; rather, such payment (or performance assurance) shall be provided by the Transmission Line Payers by the date specified in Table 3 below. Subsequent payments shall

be pursuant to invoices issued by the CUU Transmission Owners in accordance with Section 1.7.2.

1.7.2 Payment Schedule. The Transmission Line Payers' payment schedule is as follows.

Certification Phase Payments

Initial payments shall be made pursuant to Table 3 (1-A) below. Failure by any Transmission Line Payer to provide payments (or performance assurance acceptable to the CUU Transmission Owners, where applicable) by the due date in the table below to the CUU Transmission Owners is a Breach pursuant to Article 9 of the Agreement. Following the initial payment, the CUU Transmission Owners will invoice the Transmission Line Payers monthly for all expenses incurred in accordance with Table 3 (1-B) after crediting the Transmission Line Payers for any payments made prior to the Effective Date

Construction Phase Payments

Funding for the Construction Phase will utilize a construction account which the CUU Transmission Owners can access to pay all Construction Phase payments. It is expected that the CUU Transmission Owners will be requesting a two (2) month forward looking requirement be placed into the construction escrow account with monthly reconciliation and reporting. CUU Transmission Owners will provide a calculation of the interest from an interest bearing escrow account which will be used to reduce the amount of the funding request.

If, at any time during the course of the CUU Transmission Owners' work on the CUU, they become aware that the payments they have received and performance assurance they then hold will not be sufficient to fully fund the work, the CUU Transmission Owners shall submit invoices to the Transmission Line Payers for their proportionate shares of the additional funds needed. Each Transmission Line Payer shall pay the full amount of the invoice (or, if a Transmission Line Payer cannot provide advance payments because Governmental Authority approvals have not yet been granted, provide performance assurance for the full amount) within thirty 30 Calendar Days of receipt. A Transmission Line Payer's failure to make any such payment (or provide acceptable performance assurance, where

applicable) when due shall constitute a Breach by such Transmission Line Payer.

A Transmission Line Payer that fails to make payments when due will be given a Breach notice. Unless the Breach is cured in accordance with Article 9 of the Agreement, the CUU Transmission Owners are relieved from performing under this Agreement. Failure by any Transmission Line Payer to comply with Article 9.2.2(A) or 9.2.2(B) relative to such Breach may, pursuant to Article 2.2.2 of the Agreement, result in termination of the Agreement as to that Transmission Line Payer.

Table 3 FCA Milestones (Transmission Line Payer share of payments will be based on Table 2(B))

NO.	MILESTONES	PAYMENT SCHEDULE
1	The CUU Transmission Owners begin the Certification Process and Transmission Line Payers to provide to CUU Transmission Owners a guarantee, letter of credit, cash escrow account or other form of performance assurance for the Certification Phase, if required pursuant to this Agreement (Article 6.1 of the Agreement).	Required performance assurance due 30 Calendar Days after the Effective Date.
1-A	CUU Transmission Owners will submit invoices to the Transmission Line Payers for their proportional share of Pre-Certification Phase Expense pursuant to Section 1.1.7 of this Appendix A.	30 Calendar Days after the Effective Date.
1-B	CUU Transmission Owners begin monthly invoicing to the Transmission Line Payers for all other expenses for the Certification Phase.	Invoices will be submitted by the CUU Transmission Owners on the 15th of every month, beginning the month following the Effective Date.
1-C	CUU Transmission Owners notifies the Transmission Line Payers that all Major Permits have been received and all of MPM's Certification Phase Conditions Precedent and	Required performance assurance due 20 Business Days after notification by the CUU

	MPM's Construction Phase Conditions Precedent have been satisfied or waived and the CUU Transmission Owners shall begin Preliminary Construction Activities and the Transmission Line Payers to provide to CUU Transmission Owners performance assurance, if required pursuant to this Agreement (Article 6.1).	Transmission Owners.
2	Upon notification by the CUU Transmission Owners that the Certification Process has been successfully completed and all Construction Phase Conditions Precedent have been satisfied and or waived, the construction of the CUU will commence in accordance with the Construction Phase component subject to Section 1.8 of this Appendix A. The Transmission Line Payers to provide to CUU Transmission Owners performance assurance, if required pursuant to this Agreement (Article 6.1).	The Construction Phase will commence subject to Section 1.8 of this Appendix A. Required performance assurance due no later than 20 Business Days after notification by the CUU Transmission Owners.
2-A	The CUU Transmission Owner shall request the first two month advance of expected construction expenditures and the CUU Transmission Line Payer shall provide the advance. Additional requests shall be made by the CUU Transmission Owner by the 15th of each month. The Transmission Line Payers have 30 Calendars Days to satisfy the advance request.	Not later than 30 Calendar Days after the Construction Phase begins.
3	CUU Transmission Owners to complete acceptance testing and complete the Construction Phase.	In-Service Date (Expected June 1, 2020)
4	CUU Transmission Owners to provide final report to the Transmission Line Payers (Article 6.5 of this Agreement)	180 days after In-Service Date

1.7.3 When applicable, each Transmission Line Payer shall pay any difference between actual costs and actual payments in accordance with this Agreement, no later than thirty (30) Calendar Days after receipt of the CUU Transmission Owner' final construction invoice. If agreed in writing by the Parties, payments may be made in accordance with a revised schedule.

1.7.4 All costs will be paid for on a proportional basis as set out herein.

1.7.5 Any refund shall be allocated on a proportional basis as set out herein.

1.8 Conditions Precedent.

MPM

1.8.1 MPM's Certification Phase Conditions Precedent.

The obligations of MPM to complete the matters referenced herein in respect of the Certification Phase shall be subject to and contingent upon the fulfillment of the following conditions ("**MPM's Certification Phase Conditions Precedent**") to the satisfaction of MPM, as certified or waived in writing by MPM, by the dates specified:

(a) MP obtaining approval of the Board of Minnesota Power, an operating division of ALLETE, Inc. within thirty (30) days of the Effective Date approving MP entering into this Agreement.

1.8.2 MPM's Construction Phase Conditions Precedent.

The obligations of MPM to complete the matters referenced herein in respect of the Construction Phase shall be subject to and contingent upon the fulfillment of the following conditions ("**MPM's Construction Phase Conditions Precedent**") to the satisfaction of MPM, as certified or waived in writing by MPM, by the dates specified:

(a) MPM obtaining approval of its Board of Directors by July 1, 2016 approving MPM proceeding to fund its proportionate share of costs of the CUU pursuant to the Construction Phase of this Agreement;

(b) All conditions precedent to the 250 MW System Power Sale Agreement between MHEM and MPM, dated May 19, 2011 being satisfied or waived by July 1, 2016, or by such other date (if any) as the Transmission Line Payers and CUU Transmission Owners may mutually upon;

(b) The Transmission Line Payers and CUU Transmission Owners executing a Project Development Agreement, an Operations and Maintenance Agreement, a Transmission Capacity Exchange Agreement, and if deemed applicable by the Transmission Provider, an Interconnection Agreement, by June 30, 2015 and all conditions precedent to such agreements being satisfied by September 30, 2015,

or by such other date (if any) as the Transmission Line Payers and CUU Transmission Owners may mutually agree upon;

(c) All required FERC filings and authorizations related to this Agreement are accepted by FERC on or before July 1, 2016, including acceptance by FERC under Section 205 of the Federal Power Act; and

(e) Conditional approval by the Transmission Provider by June 30, 2015 of the MPM transmission service request pursuant to Reservation Number 76703672 of 250 MW south and Reservation Number 79258361 of 133 MW south on conditions acceptable to MPM.

6690271 Manitoba Ltd.

1.8.3 6690271's Manitoba Ltd. Certification Phase Conditions Precedent.

The obligations of 6690271 to complete the matters referenced herein in respect of the Certification Phase shall be subject to and contingent upon the fulfillment of the following conditions ("**6690271's Certification Phase Conditions Precedent**") (MPM's Certification Phase Conditions Precedent and 6690271's Certification Phase Conditions Precedent are collectively referred to the "**Certification Conditions Precedent**") to the satisfaction of 6690271 as certified or waived in writing by 6690271 by the dates specified:

(a) MH obtaining an Order in Council of the Lieutenant Governor (Manitoba) within ninety (90) days of the Effective Date approving 6690271 entering into this Agreement.

1.8.4 6690271's Construction Phase Conditions Precedent.

The obligations of 6690271 to complete the matters referenced herein in respect of the Construction Phase shall be subject to and contingent upon the fulfillment of the following conditions ("**6690271's Construction Phase Conditions Precedent**") (MPM's Construction Phase Conditions Precedent and 6690271's Construction Phase Conditions Precedent are collectively referred to the "**Construction Conditions Precedent"**) to the satisfaction of 6690271 as certified or waived in writing by the dates specified:

(a) 6690271 obtaining approval of its Board of Directors by October 31, 2016 approving 6690271 proceeding to fund its share of costs of the CUU pursuant to the Construction Phase of this Agreement;

(b) MH obtaining an Order in Council of the Lieutenant Governor (Manitoba) within ninety (90) days of the Effective Date approving 6690271 entering into this Agreement;

(c) MH obtaining the final non-appealable order of the National Energy Board ("**NEB**") on conditions acceptable to MH, in its sole and absolute discretion, by October 31, 2016 or by such other date (if any) as the Transmission Line Payers and CUU Transmission Owners may mutually agree upon, authorizing: (i) the construction and operation of the component of the 500 kV Interconnection in the province of Manitoba; and (ii) the modification of the component of any existing transmission interconnection in the province of Manitoba that pursuant to the laws applicable to the NEB is an international power line and that MH, in its sole and absolute discretion, determines is necessary to be modified in conjunction with the construction of the component of the 500 kV Interconnection in the province of Manitoba;

(d) MH obtaining the final non-appealable license from the Province of Manitoba, on conditions acceptable to MH, in sole and absolute discretion, authorizing MH to commence construction of the Canadian component of the 500 kV Interconnection by October 31, 2016, or such other date (if any) as the Transmission Line Payers and CUU Transmission Owners may mutually agree upon;

(e) All conditions precedent to the 250 MW System Power Sale Agreement between MHEM and MPM, dated May 19, 2011 being satisfied or waived by the dates set out in the 250 MW System Power Sale Agreement, or by such other date (if any) as the Transmission Line Payers and CUU Transmission Owners may mutually upon;

(f) The Transmission Line Payers and CUU Transmission Owners executing a Project Development Agreement, an Operations and Maintenance Agreement, a Transmission Capacity Exchange Agreement, and if deemed applicable by the Transmission Provider, an Interconnection Agreement by June 1, 2015 and all conditions precedent to such agreement being satisfied by September 30, 2015 or by such other date (if any) as the Transmission Line Payers and CUU Transmission Owners may mutually agree upon;

(g) Conditional approval by MHEM's transmission provider by June 30, 2015 of the MHEM transmission service request pursuant to Reservation Number 76703161,

79622800, 79622805, 79622810 for a minimum of 698 MW north on conditions acceptable to MHEM;

(h) Conditional approval by MHEM's transmission provider by June 30, 2015 of the MHEM transmission service request pursuant to Reservation Number 76703213, 76703216, 79622799 of 883 MW south on conditions acceptable to MHEM;

(i) Conditional approval by the Transmission Provider by June 30, 2015 of the MHEM transmission service request pursuant to Reservation Number 79429002, 79258492, 7928646, 79258668 for a minimum of 698 MW north on conditions acceptable to MHEM; and

(j) Conditional approval by the Transmission Provider by June 30, 2015 of the MHEM transmission service requests pursuant to Reservation Number 80142548, 80142558 and 80142561 of up to 300 MW south on conditions acceptable to MHEM.

1.8.5 Reasonable Assistance.

The CUU Transmission Owners and Transmission Line Payers agree to provide reasonable assistance to another Party, if requested, in order to assist that Party to obtain any approval associated with its condition precedent.

1.8.6 Conditions Precedent Notices and Termination.

Each Party shall notify the other Parties as soon as practicable following the satisfaction or waiver or the failure to satisfy or waive its condition precedent. The CUU Transmission Owners shall provide notice to all Parties when the Certification and Construction Phases have begun. The Parties acknowledge:

(a) If MPM's conditions precedent applicable to the Certification Phase or Construction Phase are not satisfied or waived in accordance with this Section 1.8: (i) MPM shall be terminated as party to the Agreement; (ii) MPM's Transmission Line Payers Associated TSR's shall be withdrawn from the Transmission Provider's transmission queue; and (iii) the Transmission Line Payers whose conditions precedent were satisfied or waived shall enter into negotiations with the CUU Transmission Owners and the Transmission Provider to amend the Agreement on mutually acceptable terms and if such amendments are not agreed to the Agreement shall terminate; and

(b) If 6690271 conditions precedent applicable to the Certification Phase or Construction Phase are not satisfied or waived in accordance with this

Section 1.8: (i) 6690271 shall be terminated as a party to this Agreement; (ii) 6690271's Transmission Line Payers Associated TSR's shall be withdrawn from the Transmission Provider's transmission queue; and (iii) the Transmission Line Payers whose conditions precedent were satisfied or waived shall enter into negotiations with the CUU Transmission Owners and the Transmission Provider to amend the Agreement on mutually acceptable terms and if such amendments are not agreed to the Agreement shall terminate.

Multi-Party Facilities Construction Agreement
APPENDIX B
NOTIFICATION OF COMPLETED CONSTRUCTION

This Appendix B is a part of the Multi-Party Facilities Construction Agreement among Transmission Line Payers, CUU Transmission Owners, and Transmission Provider. When CUU Transmission Owners have completed construction of the CUU, CUU Transmission Owners shall send notice to Transmission Line Payers, the CUU Transmission Customers and the Transmission Provider, in substantially the form following:

[Date]

MISO, Inc.

Attn: Director, Transmission Access Planning

P.O. Box 4202

Carmel, IN 46082-4202

for overnight deliveries:

720 City Center Drive

Carmel, IN 46032

Transmission Line Payer and CUU Transmission Customer contact information: please see Article 15 of the Agreement.

Re: Completion of Common Use Upgrades ("CUU")

Dear [Name or Title]:

This letter is sent pursuant to the Multi-Party Facilities Construction Agreement among [CUU Transmission Owners], [Transmission Line Payers], and the MISO, dated _____, 20___.

On [Date], CUU Transmission Owners completed to their satisfaction all work on the CUU described in the _____, 20__ Multi-Party Facilities Construction Agreement by and among _____. Further, CUU Transmission Owners confirms that the CUU have been placed "in service."

Thank you.

[Signature]

[CUU Transmission Owners Representative]

Multi-Party Facilities Construction Agreement

APPENDIX C

This Appendix C is a part of the Multi-Party Facilities Construction Agreement among Transmission Line Payers, CUU Transmission Owners, and Transmission Provider.

The following exhibits are part of this report and are attached at the end of this document.

Exhibit A1: Overall CUU One Line Diagram

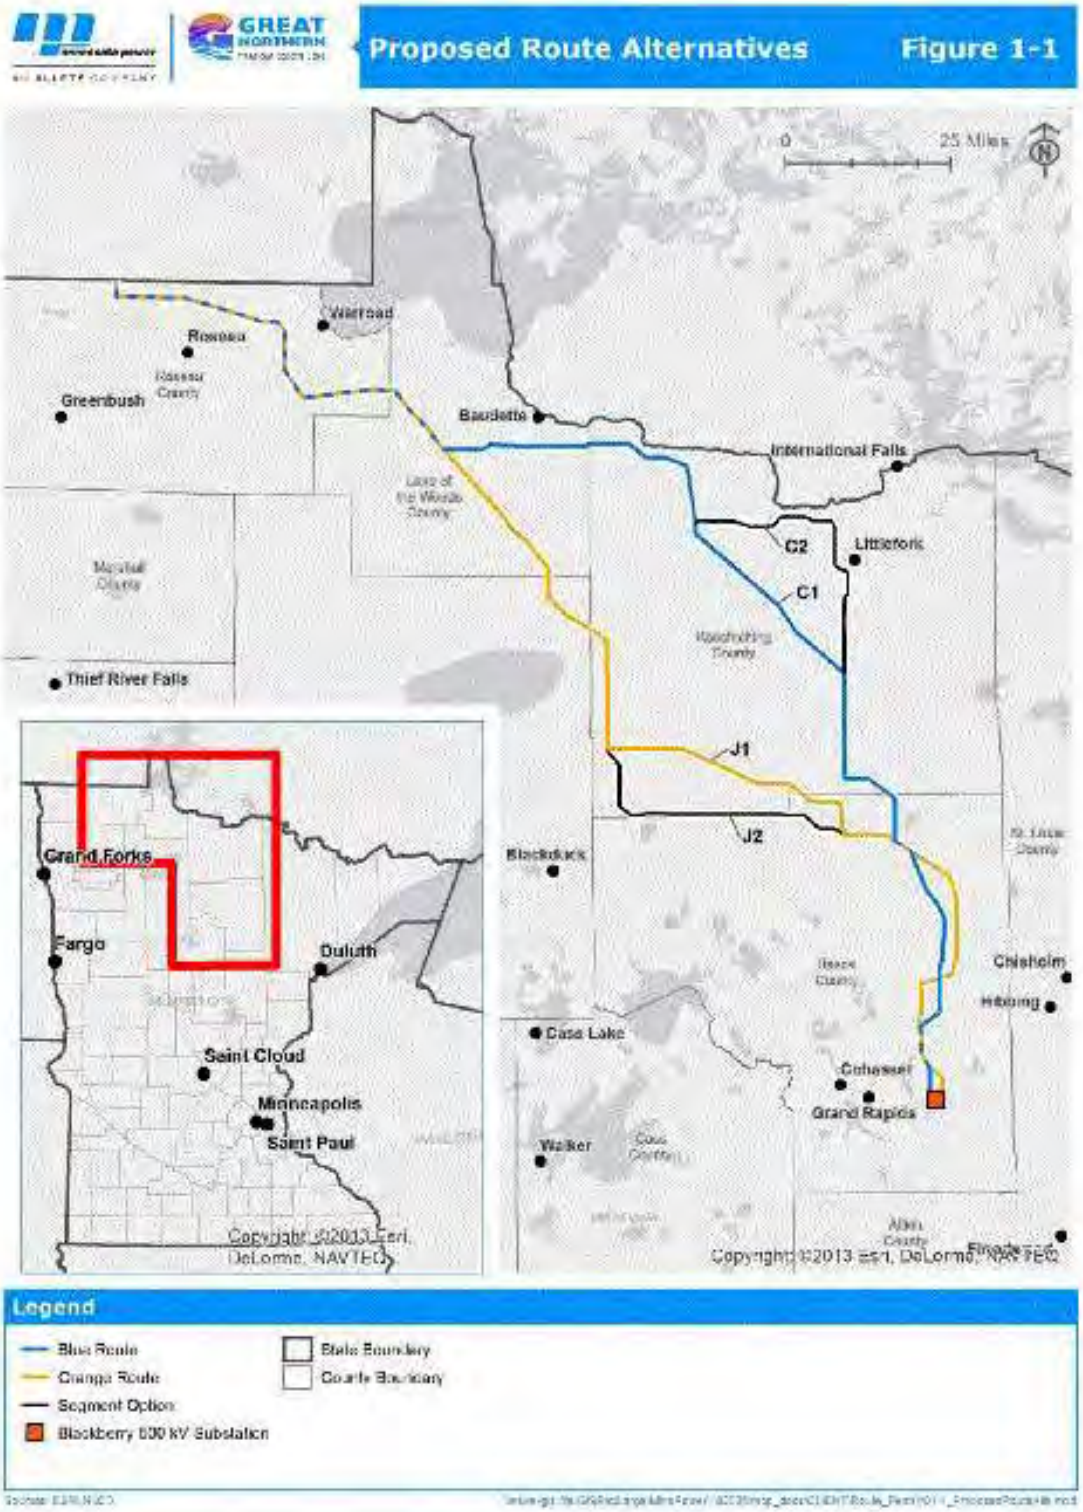
Exhibit A2: 500 kV CUU Transmission Line Route Map

Exhibit A3: Draft CUU Project Schedule

Exhibit A1 Overall CUU One Line Diagram

CEII MATERIAL

Exhibit A2 500 kV CUU Transmission Line Route Map



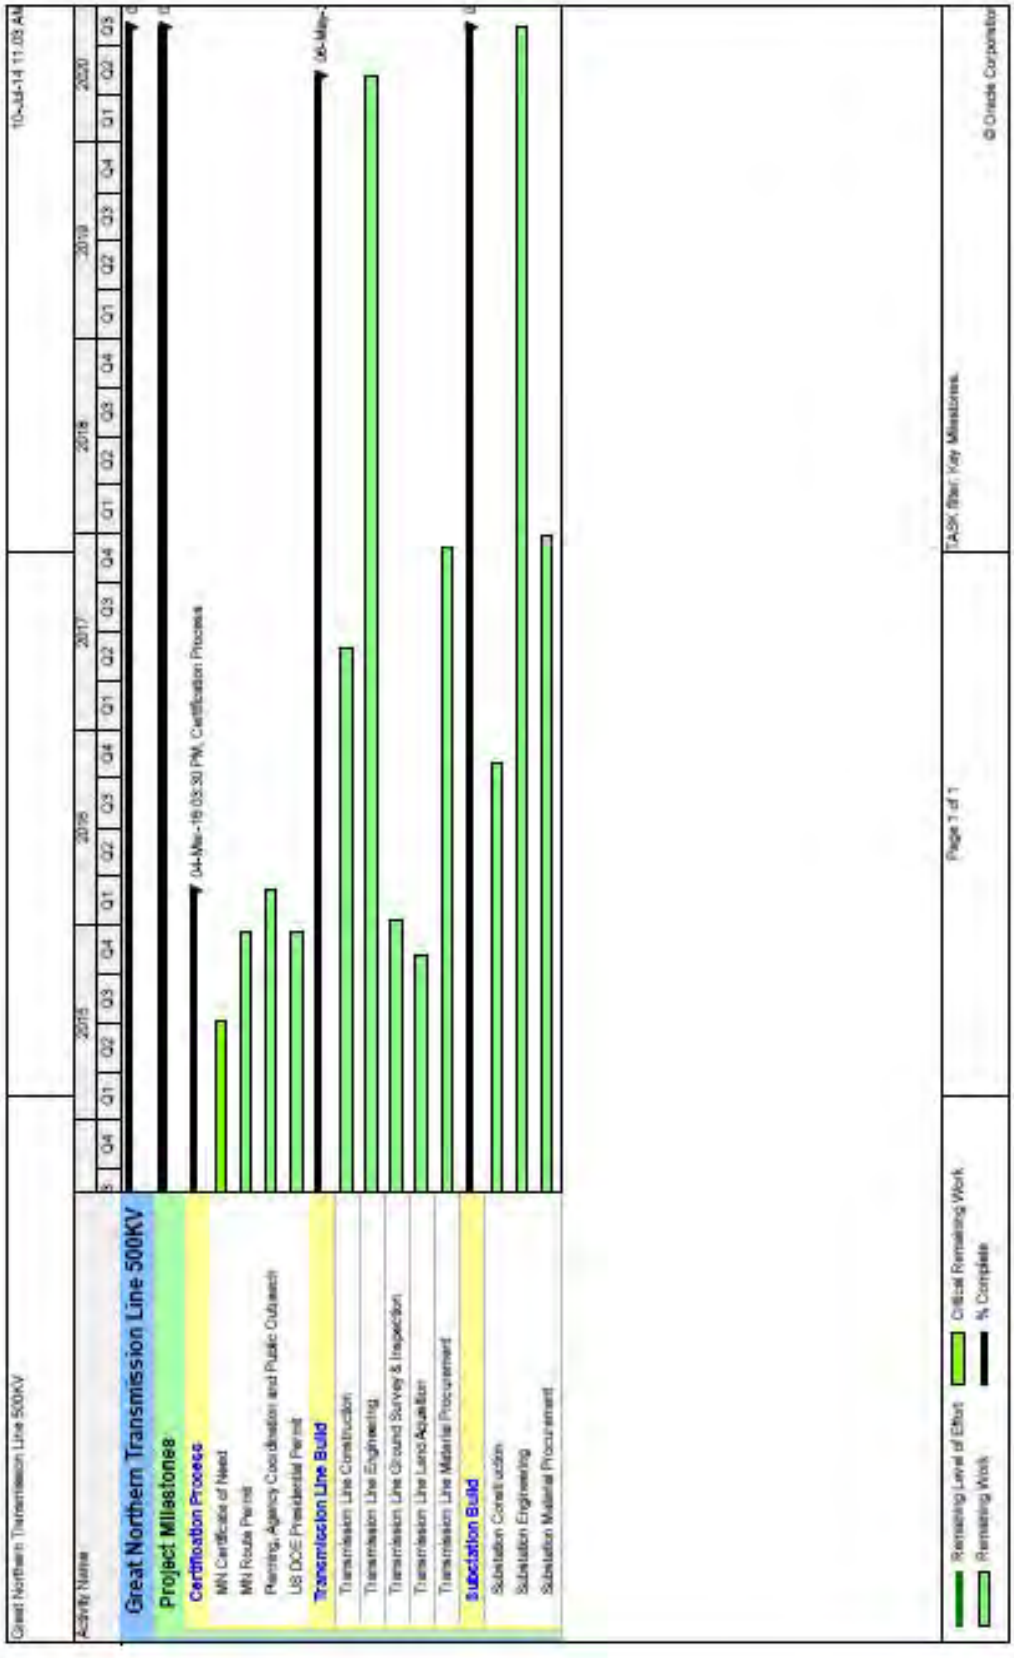


Exhibit A3 Draft CUU Project Schedule

APPENDIX D
PERFORMANCE ASSURANCES

Transmission Line Payers that are required to post performance assurance in accordance with Section 6.1, shall be responsible for providing performance assurance in accordance with the following:

Subsection 1

Transmission Line Payer will be required to post performance assurance in the amount based on the CUU Transmission Owners projected remaining costs to the day that is 20 Business Days after the last of the MPM Certification Phase Conditions Precedent and the MPM Construction Phase Conditions Precedent have been satisfied or waived by MPM (which amount is estimated to be $16 million as of the Effective Date) multiplied by the percentage of the CUU facilities that are required to be funded by such Transmission Line Payer.

Subsection 2

Transmission Line Payer will be required to post performance assurance in the amount based on the CUU Transmission Owners projected remaining costs to the day that is 20 Business Days after all of the MPM Construction Phase Conditions Precedent and the 6690271 Certification Phase Conditions Precedent and the 6690271 Construction Phase Conditions Precedent have been satisfied or waived by the respective Party (which amount is estimated to be $55 million as of the Effective Date) multiplied by the percentage of the CUU facilities that are required to be funded by such Transmission Line Payer minus any amount of its performance assurance held by the CUU Transmission Owner remaining from Subsection 1.

ASSIGNMENT OF MULTI-PARTY FACILITIES CONSTRUCTION AGREEMENT

THIS ASSIGNMENT made as of the 12th day of April, 2016.

BETWEEN:

6690271 MANITOBA LTD.

- and –

MINNESOTA POWER, AN OPERATING DIVISION OF ALLETE INC.

WHEREAS:

A. Minnesota Power, an operating division of ALLETE, Inc., in its capacity as a CUU Transmission Owner ("**MP**"), 6690271 Manitoba Ltd. in its capacity as a CUU Transmission Owner and its capacity as a Transmission Line Payer, and Minnesota Power, an operating division of ALLETE, Inc., in its capacity as a Transmission Line Payer ("**MPM**") together with the Midcontinent Independent System Operator, Inc., are parties to a Multi-Party Facilities Construction Agreement dated September 25, 2014 ("**FCA**"), whereby MP and 6690271 Manitoba Ltd. agreed as CUU Transmission Owners to own as tenants in common and to (or shall cause such action to) design, procure, engineer, install and commission the CUU in two distinct phases, consisting of the Certification Phase and the Construction Phase.

B. MPM and 6690271 Manitoba Ltd. agreed as Transmission Line Payers pursuant to the FCA to pay their allocated portion of the costs of the CUU during the Certification Phase and the Construction Phase.

C. 6690271 Manitoba Ltd. is in its capacity as a CUU Transmission Owner assigning to MP pursuant to this Assignment of Multi-Party Facilities Construction Agreement ("**Agreement**") all of its interests, rights and obligations in or arising out of the FCA as one of the CUU Transmission Owners.

NOW THEREFORE THIS AGREEMENT WITNESSETH that in consideration of the premises and the sum of One (US $1.00) U.S. Dollar (the receipt whereof is hereby acknowledged):

1. The preamble to this Agreement forms an integral part hereof and is incorporated herein.

2. 6690271 Manitoba Ltd. in its capacity as a CUU Transmission Owner does hereby assign to MP pursuant to this Agreement all of its interests, rights and obligations in or arising out of the FCA as one of the CUU Transmission Owners.

3. 6690271 Manitoba Ltd. in its capacity as a CUU Transmission Owner covenants with the MP that:

(a) it has the right to enter into this Agreement; and

(b) it has not previously assigned its interests, rights and obligations in or arising out of the FCA as one of the CUU Transmission Owners.

4. MP covenants with 6690271 Manitoba Ltd. in its capacity as a CUU Transmission Owner that:

(a) it has the right to enter into this Agreement; and

(b) it accepts the assignment from 6690271 Manitoba Ltd. pursuant to this Agreement and will observe and perform all of the covenants of 6690271 Manitoba Ltd. in its capacity as a CUU Transmission Owner pursuant to the FCA.

5. The parties hereto (6690271 Manitoba Ltd. and MPM in their capacities as Transmission Line Payers are parties to this Agreement only for the purposes of this acknowledgment) acknowledge that notwithstanding such assignment:

(a) 6690271 Manitoba Ltd. will continue to be obligated, in its capacity as a Transmission Line Payer, to pay under the FCA its allocated portion of the costs of the CUU during the Certification Phase and the Construction Phase whether incurred before or after such assignment; and.

(b) 6690271 Manitoba Ltd. will continue in its capacity as a Transmission Line Payer to have the rights and obligations under the FCA arising from being a Participant.

6. Terms used in this Agreement with initial capitalization not defined in this Agreement shall have the meaning specified in the FCA.

7. The provisions hereof shall enure to the benefit of and be binding upon each of the parties hereto, and their respective heirs, executors, administrators, successors or assigns, and the singular and masculine shall be read and construed as the plural, or the feminine or neuter wherever the context so requires.

8. This Agreement may be executed in or one more counterparts, all of which shall be read and construed as one document and any facsimile signature hereto shall be deemed to be an original signature.

IN WITNESS WHEREOF Minnesota Power, an operating division of ALLETE, INC., has executed this Agreement at the City of Duluth, in the State of Minnesota as of the date first written above and 6690271 Manitoba Ltd. has executed this Agreement at the City of Winnipeg, in the Province of Manitoba as of the date first written above.

MANITOBA HYDRO
CAPITAL PROJECT JUSTIFICATION

Project Name

Manitoba – Saskatchewan Transmission Project

Recommendation

Approve construction of the Manitoba – Saskatchewan Transmission project required to supply the SaskPower 100 MW System Power Sale.

Project Scope

Based on a 2012 Facilities Study completed by System Planning, the following Network Upgrades are required in Manitoba:

- Adding a new 44 km 230 kV transmission line between Birtle South (Manitoba) to the Manitoba-Saskatchewan border;
- Termination at Birtle South station;
- Re- tensioning of the MH section of the P52E line to 100°C design rating; and
- 230 kV line B69R current transformer (CT) ratio change at Birtle South station.

Background

MH and SPC executed a Term Sheet on June 26, 2015 for a twenty year System Power Sale commencing June 1, 2020. The capacity amount will be for a minimum of 100 MW.

The sale will require the construction of a new 230 kV interconnection between Birtle, Manitoba and Tantallon, Saskatchewan involving 44 km in Manitoba and 36 km in Saskatchewan and additional miscellaneous upgrades to the transmission grid in both provinces. The cost of the line and transmission enhancements in Manitoba is estimated at [redacted] in interest and escalation. [redacted]

In February 2012, System Planning completed a Facilities Study for 2-50 MW transmission service requests, which identified the scope of this transmission project. Transmission service requests are currently being studied to provide updated results for this project.

Approval for the Term Sheet and required transmission upgrades received approval by MH's Executive on June 9, 2015 and by MH's Board of Directors on June 24, 2015 (Board minute 860-15-04).

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals

This transmission project will allow for a twenty year 100 MW system power sale which will provide MH with a fixed revenue stream estimated at [redacted] from 2020 to 2040. At the end of this sale contract term, the likelihood of future sales to SaskPower is high given that a new interconnection is being built and SaskPower has growing supply needs that they cannot meet on their own. There is also the potential for additional surplus sales in the off peak which would increase the revenue projections as a result of this project being completed.

JUSTIFICATION—BUSINESS CASE ANALYSIS (SUMMARY):

Justification and Link to Corporate/Business Unit Goals

In addition to the sale, the new interconnection to Saskatchewan will also expand and diversify MH's market access and customer base.

This project supports the Corporate Financial goal to "Aggressively pursue a balanced portfolio of domestic and profitable export sales to provide the highest financial benefits to ratepayers and all Manitobans over the long term".

ANALYSIS OF ALTERNATIVES:

Economic Analysis

Discount Rate	For current corporate rates see G911 %	For clarification on hurdle rates, contact the Economic Analysis Department

Recommended Option	NPV Benefits (Costs)
Name the recommended option and provide its Net Present Value (NPV).	NPV is usually negative in a "cost minimization" project where the justification is other than economic or financial i.e., safety, environment etc.

Other Alternatives Considered	NPV Benefits/(Costs)
List each alternative considered as well as its calculated NPV.	

Risk Analysis

The following are some potential risks that have been identified with this project:

Delay in ISD – The current in-service date has been set as June 2021, which is a year later than what is required to serve the new sale to SaskPower which is set to commence June 1, 2020. There is a risk for a further delay of another year. The parties have agreed in the Term Sheet that they will use alternative short-term transmission arrangements until the new transmission line is available which mitigates this risk.

Transmission Cost Increases - There is a risk that the interconnection costs could increase, although the numbers included in this CPJ have been increased from the estimates provided in the 2012 Facilities Study and are deemed to be sufficient.

Termination of the sale to SaskPower - The risks related to signing the Power Purchase Agreement with SaskPower are low, as the parties have negotiated nearly all of terms and conditions that will be included in

Risk Analysis

the final agreement in the Term Sheet. In addition, the final agreement will be subject to approval by the Executive Committee, the MH Board and an Order in Council of the Lieutenant Governor (Manitoba) and the transmission project will not be initiated until all of these approvals are sought.

Capital Budget Estimate

The annual net budget requirements are as follows (in thousands of dollars):

Fiscal Year	Proposed Budget	
Prev. Actuals	$	-
2015/16	$	691
2016/17	$	2,433
2017/18	$	3,795
2018/19	$	2,232
2019/20	$	18,937
2020/21	$	18,063
2021/22	$	10,893
Total	$	57,044

Facilities Study prepared by System Planning, February 29, 2012.

CER(1) Rev. 97 12

CAPITAL EXPENDITURE REVISION
(IN THOUSANDS OF DOLLARS)

Title	Investment Management Node:
Manitoba - Saskatchewan Transmission Pro	1.5.2.6.2.1
Owning Division Power Sales & Operations	**Coordinating Division** Power Sales & Operations — **Project Number:** P-25848

DESCRIPTION
Approve construction of the Manitoba and Saskatchewan Transmission project required to supply the SaskPower 100 MW System Power Sale.

Scope:

Based on a 2012 Facilities Study completed by System Planning, the following Network Upgrades are required in Manitoba:

-Adding a new 44 km 230 kV transmission line between Birtle South (Manitoba) to the Manitoba-Saskatchewan border;

-Termination at Birtle South station;

-Re- tensioning of the MH section of the P52E line to 100°C design rating; and

-230 kV line B69R current transformer (CT) ratio change at Birtle South station.

JUSTIFICATION
This transmission project will allow for a twenty year 100 MW system power sale which will provide MH with a fixed revenue stream estimated at [redacted] from 2020 to 2040. At the end of this sale contract term, the likelihood of future sales to SaskPower is high given that a new interconnection is being built and SaskPower has growing supply needs that they cannot meet on their own. There is also the potential for additional surplus sales in the off peak which would increase the revenue projections as a result of this project being completed.

In addition to the sale, the new interconnection to Saskatchewan will also expand and diversify MH's market access and customer base.

This project supports the Corporate Financial goal to "Aggressively pursue a balanced portfolio of domestic and profitable export sales to provide the highest financial benefits to ratepayers and all Manitobans over the long term".

PUB MFR 196

MB-SK Transmission Project

Provide the economic justification, including NPV, IRR, and revenue requirement analyses, that demonstrates that the MB-SK Transmission Project is favourable to ratepayers.

Public disclosure of the attachment to this MFR (or portions thereof) would result in the release of information considered to be confidential and commercially sensitive. As directed by the PUB, Manitoba Hydro will be filing a letter seeking confidential treatment of the redacted information contained in the attachment pursuant to Rule 13.

Please refer to the attached Saskatchewan Power 100/140 MW Sale Evaluation, which has been provided as an attachment to this response.

SASKATCHEWAN POWER 100/140 MW SALE EVALUATION

NOTED BY:

DATE: JAN 5 2016
REPORT: **PPD 16/01**

Manitoba Hydro

CONFIDENTIAL

This report is intended for internal use by Manitoba Hydro only. External requests for information contained herein should be referred to Power Planning Division.

This page is intentionally blank.

The purpose of this report is to detail the key assumptions and provide a supply and economic evaluation of the draft contract dated November 26, 2015 for a 100 MW sale to Saskatchewan Power Corporation ("SaskPower").This analysis also considers that the sale could be up to 140 MWs and evaluates the impact of adding an additional 40 MWs to the sale.

1 OVERVIEW

SaskPower has agreed to purchase 100 MW of Manitoba Hydro system power for a 20 year period from June 1, 2020 to May 31, 2040; and is considering the option of adding an additional 40 MWs to the sale. This report is based on preliminary transmission studies which provide indications for costs related to 100 MWs and 140 MWs of transmission interconnection. Under the agreement firm energy deliveries will be scheduled on a 6 x 16 basis and capacity must be sourced from Manitoba Hydro system resources.

This sale provides a long-term fixed revenue stream, reducing uncertainty related to future market price. Entering into long-term firm sales is a key component of the business case made during the 2013-14 Needs For and Alternatives to process for proceeding with Keeyask; including a 500KV transmission US-Can interconnection and Demand Side Management programming.

This Resource Planning evaluation compares the sale to a potential range of capital costs, potential alternative sale options, and system benefits. [redacted] The construction of a new East/West transmission line for export provides additional benefit beyond the contract period. Although recent transmission studies have confirmed 90 MW of firm transmission can be made available on the existing system between Manitoba and Saskatchewan starting in 2020, SaskPower has indicated [redacted] SaskPower maximizes its use of the existing 45 MW firm transmission for shorter term purchases from Manitoba Hydro and [redacted] The evaluation concludes the sale provides benefits (on a net present value basis) compared to development plans without

the sale [redacted] The evaluation indicates the 100 MW to 140 MW sales are economic.

2 KEY SALE TERMS

SaskPower has agreed to purchase at least 100 MWs and up to 140 MWs of Manitoba Hydro system power for a 20 year period from June 1, 2020 to May 31, 2040. Under the agreement firm energy deliveries will be scheduled on a 6 x 16 basis. Capacity supplied under this agreement must be sourced from Manitoba Hydro system capacity resources. Manitoba Hydro has the right, but not the obligation, to source the energy provided from this agreement from third party purchases and/or markets available to Manitoba Hydro.

3 TRANSMISSION

Manitoba Hydro and SaskPower have agreed to construct a new 230 kV interconnection between Birtle, Manitoba and Tantallon, Saskatchewan involving 44 km in Manitoba and 36 km in Saskatchewan and additional upgrades to the transmission grid in both provinces. The line will provide at least 100 MWs and up to 140 MWs of firm transmission service to export the firm energy and capacity from Manitoba to Saskatchewan. Manitoba Hydro will own and be responsible for the cost to construct and operate the Manitoba portion of the interconnection and SaskPower will own and be responsible for the cost to construct and operate the Saskatchewan portion of the interconnection. For the 100 MW sale, the cost of the line and transmission enhancements in Manitoba is estimated between $38-58 million (2015$). For the 140MW sale, there are additional transmission enhancements estimated at $10 million (2015$). [redacted]

Due to the significantly higher capital costs of a two way interconnection, the contract will include an interconnection which will be built to flow only one way from Manitoba to Saskatchewan and no import capability is assumed in the analysis.

Manitoba Hydro's Approval Authority Table also requires both Executive Committee and Board approval for all power purchase agreements greater than 100 MWs which require new generation and/or transmission.

4 RESOURCE REQUIREMENTS

The SaskPower Sale is not contingent on new Manitoba Hydro resources, however adding the 100 MW sale advances the need for additional capacity imports from 2034/35 to 2033/34. Adding an additional 40 MWs [redacted] Based on 2015/16 planning assumptions[1], dependable energy deficits remain the same with the expected Manitoba load requirements in 2036/37. The supply and demand balance includes a one year period in 2034/35, where winter peak capacity shortfalls are assumed to be met through capacity purchases.

Both the 100MW and the 140MW SaskPower Sale increases Manitoba Hydro's capacity demand and advance capacity deficits; and associated need for capacity imports. The sale is not contingent on new Manitoba Hydro resources; and as such can be met by various options expected to be available in the 2032 timeframe as these deficits materialize.

[redacted]

[1] Resource Planning Assumptions & Analysis For 2015/16 Corporate Planning Report, PPD 15/07

5 ENVIRONMENTAL ATTRIBUTES

The sale agreement includes the transfer of the environmental attributes to SaskPower and is included in the price for Supplied Energy.

6 PRICING ANALYSIS

The sale agreement has fixed pricing for both capacity and energy. The pricing analysis compares the projected contract revenue to the expected forecast for the Long Term Dependable Product presented in the 2015 Electricity Export Price Forecast. Conversion from US to Cdn dollars is at a rate of 1: 1.16 as per Manitoba Hydro's October 2015 P911. The Foreign Exchange is used to compare the sale against potential sales into the MISO market.

All values are expressed in 2015 dollars. Future revenue totals have not been discounted.

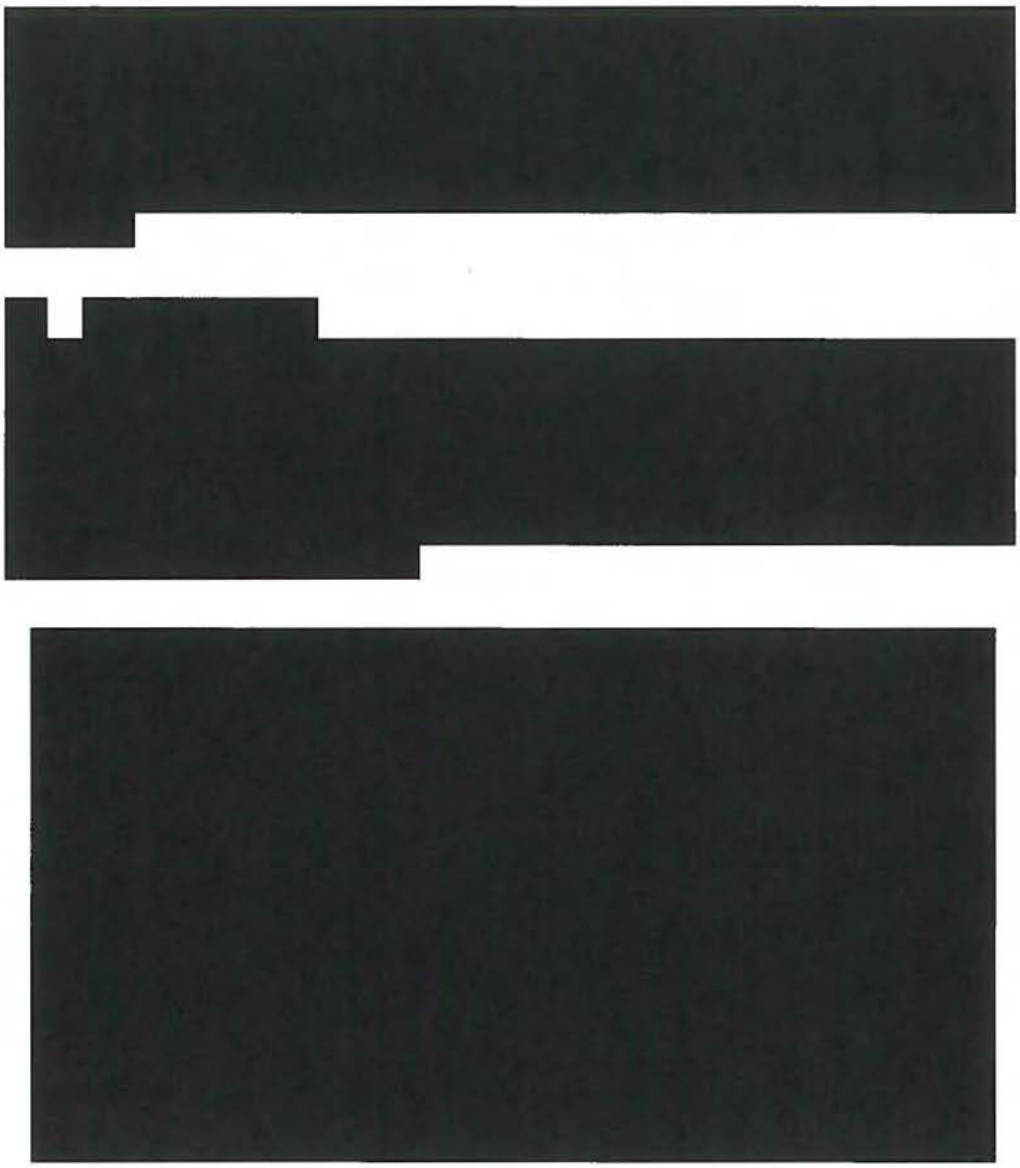
7 ECONOMIC EVALUATION

The economic evaluation is based on the assumptions of the 2015/16 Resource Planning Assumptions & Analysis[2] which includes Keeyask with an in-service date of 2019 and a new 500 kV US interconnection with an in-service date of 2020 as committed resources common to all development plans. Development plans with a sale to SaskPower include a new 230 kV interconnection between Birtle, MB and Tantallon, SK. The cost of the 44 km line and transmission enhancements in Manitoba is estimated to be $38 million (2015$) for the 100 MW sale and $48 million (2015$) for the 140 MW sale. The System Planning analysis has indicated a static var compensator (SVC) will also be required to serve this sale at an estimated additional cost of $20 million (2015$). A potential alternative to an SVC is the use of Brandon Unit #5 generator as a synchronous condenser to provide voltage support. While this is

[2] Resource Planning Assumptions & Analysis For 2015/16 Corporate Planning Report, PPD 15/07

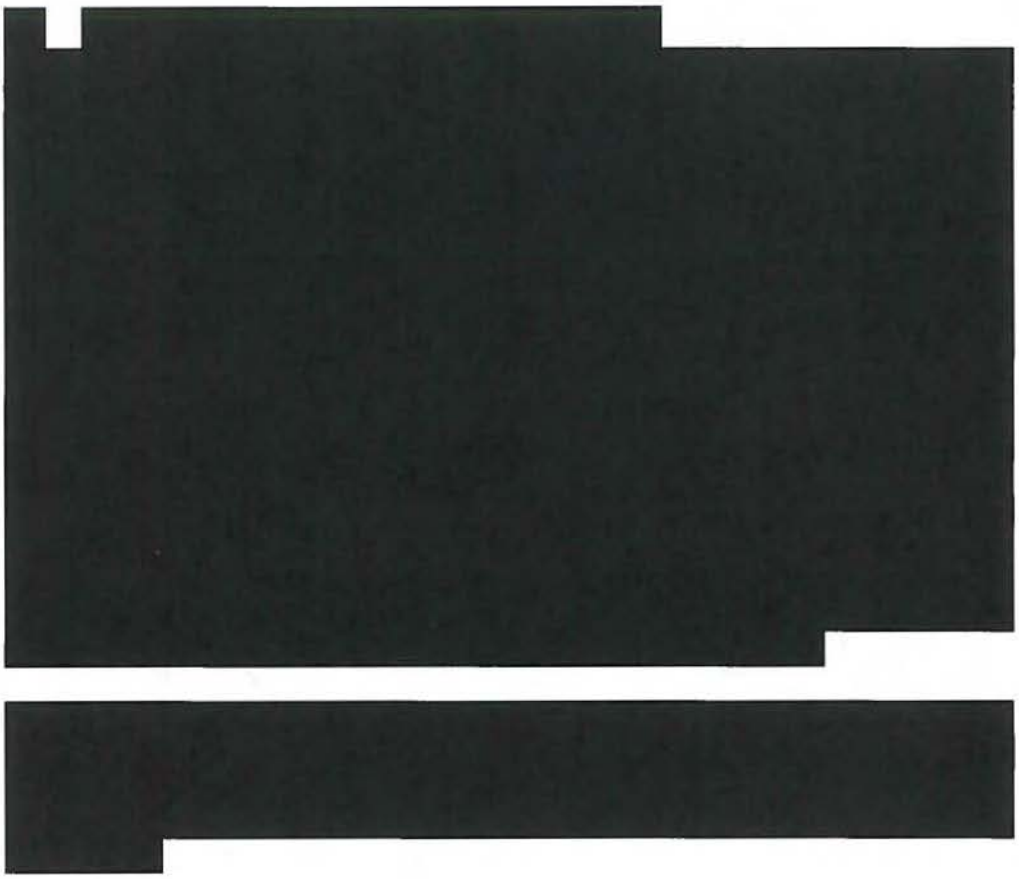
expected to be a much lower capital cost alternative, the practicality and actual lifecycle cost implications are being reviewed. [redacted]

The following development plans were used in the evaluation:

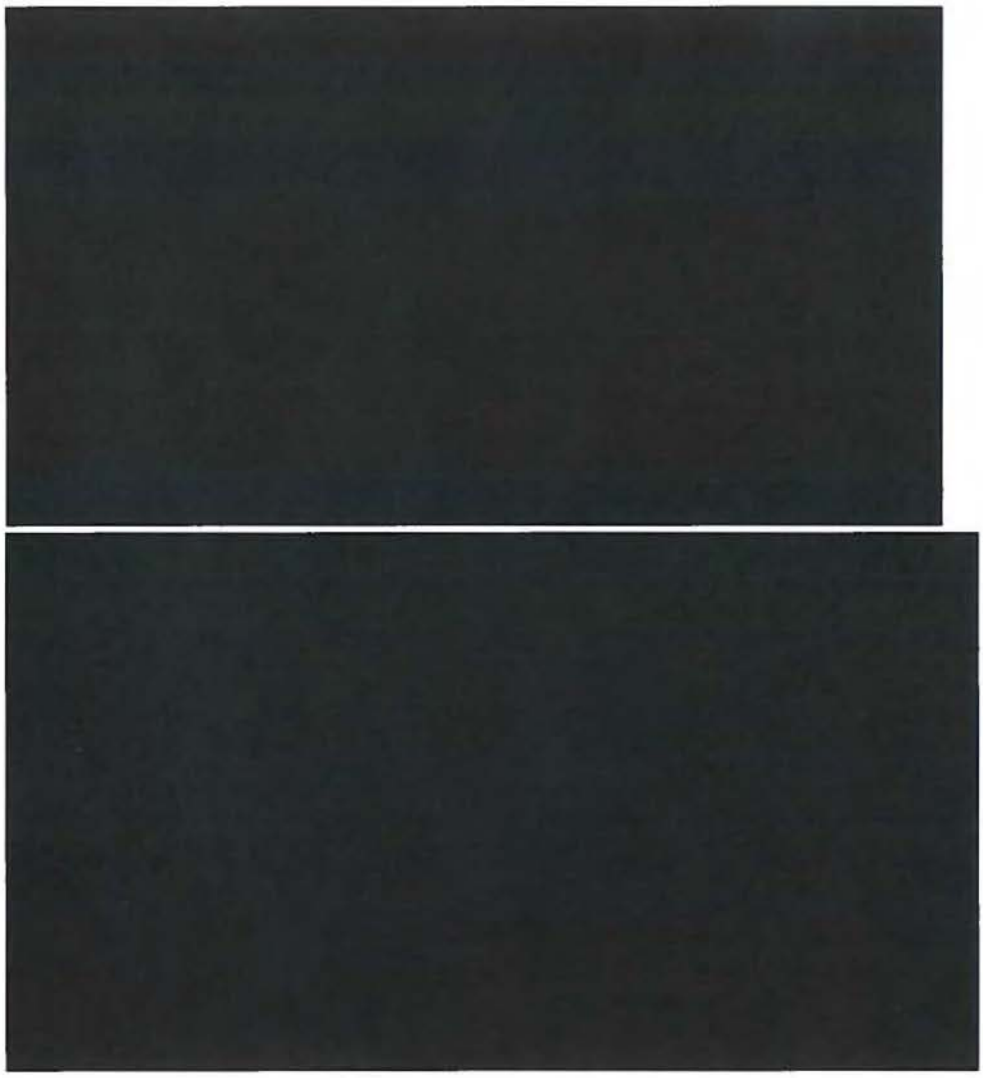


1. 2015/16 All Gas – No 100 MW SaskPower Sale
This plan is used as a base for the analysis to compare against the low capital cost option to provide the resources to meet Manitoba load. The plan includes eight (8) simple cycle gas turbines (SCGT) as required beginning in 2036 and capacity imports in 2034/35. This plan does not include 100 MW SaskPower Sale and is used as base case for comparison to a plan with the sale.

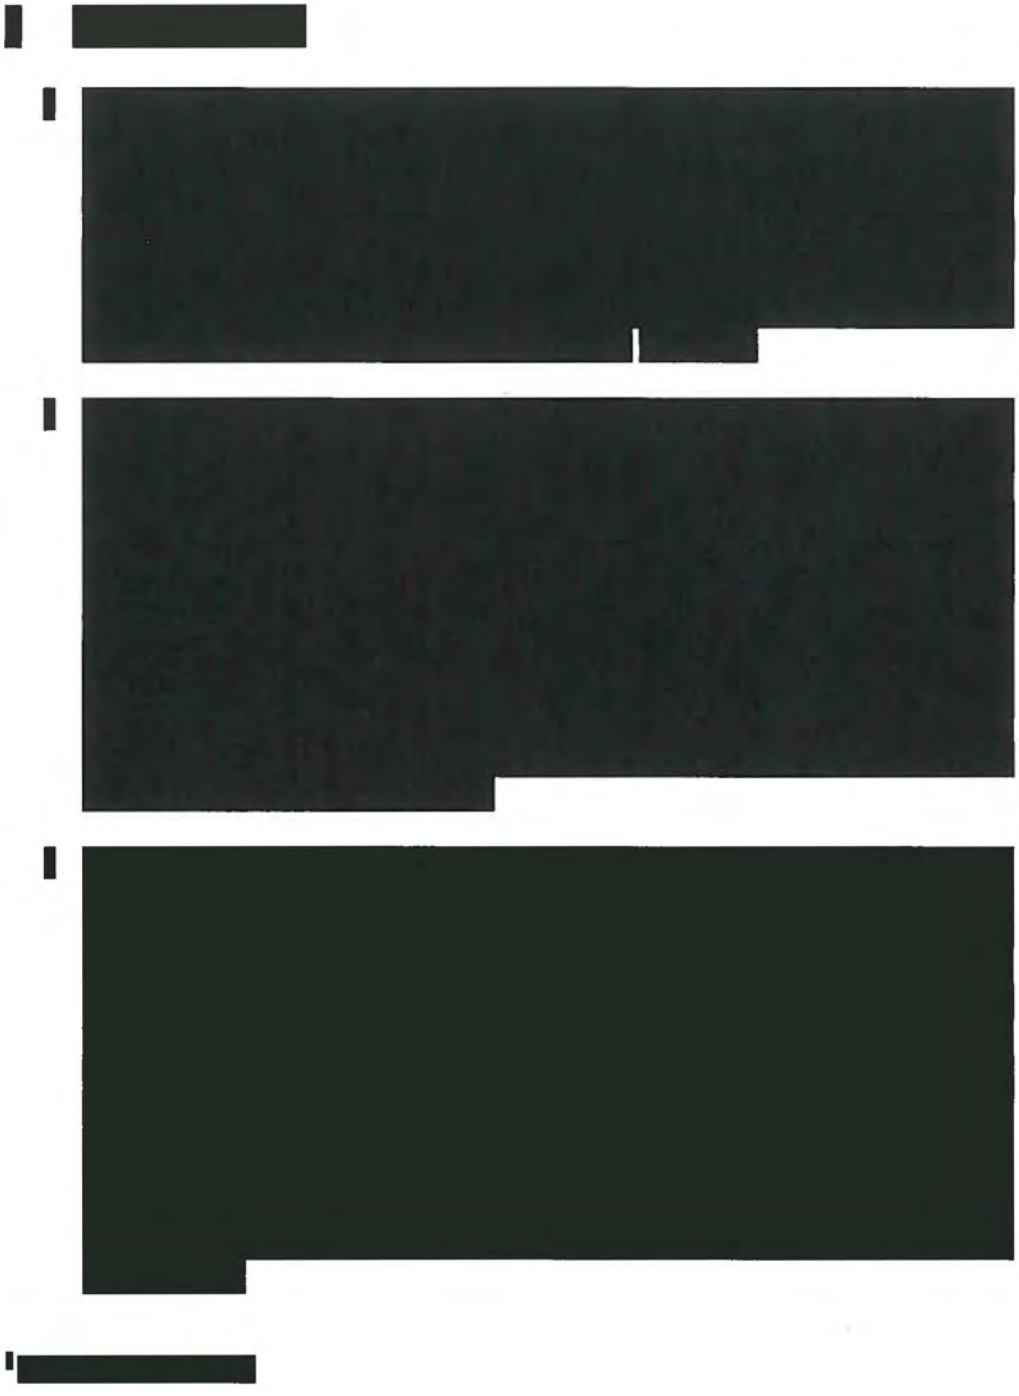
2. Diversity imports/Gas – 100 MW SaskPower Sale
This plan shows the impact of importing capacity resources in years 2033-35 until energy is needed in 2036, when an SCGT is required for the All Gas –100 MW SaskPower Sale. [redacted]



3. Diversity imports/Gas – 140 MW SaskPower Sale
This plan shows the impact of importing capacity resources in years 2032-35, until energy is needed in 2036 when an SCGT is required for the All Gas –140 MW SaskPower Sale. [redacted]



The following tables summarize the results of the economic evaluation [redacted]



[redacted]

PUB MFR 197

Focused on What Matters Most:

Manitoba's Clean Energy Strategy

Manitoba

7371

FOSSIL FUEL FREE

RED RIVER COLLEGE

MESSAGE FROM THE MINISTER

Manitoba is in the unique position of having the resources, experience and wherewithal to become Canada's renewable energy powerhouse. Already a leader in developing one of the cleanest and greenest electricity systems in the world, Manitoba plans to build on those successes and move farther down the path towards fossil fuel freedom.

To help chart that path our government is pleased to release the Manitoba Clean Energy Strategy. This strategy focuses on made-in-Manitoba solutions to harness our water, wind, solar and biomass resources in ways necessary to help provide electricity to power our homes, businesses and industries; energy to heat our buildings; and fuel to drive our vehicles. This strategy is consistent with the principles behind Tomorrow Now – Manitoba's Green Plan, which focuses on protecting the environment while ensuring a prosperous and environmentally conscious economy.

Not only does energy play a critical role in almost every part of our society, but in Manitoba's case, it has become a major cornerstone of our economy. Plans for new hydroelectric generation and transmission require a bold capital program of $20 billion over the next decade. If they are approved after environmental and economic reviews, these projects will create thousands of jobs, provide us with affordable power well into the future and support our neighbours' needs for clean electricity in the shorter term.

We recognize that fossil fuels like oil and natural gas will continue to be an important part of our society, but our goal is to reduce our reliance on these imported, greenhouse gas emitting and unpredictably priced commodities sooner rather than later. While most jurisdictions can only set 30, 40 or 50 year targets to reduce reliance on fossil fuels, Manitoba has a head start in developing our renewable energy resources in a sustainable way that is good for the economy and benefits the environment.

Our strategy focuses on building new generation hydro; expanding transmission that improves electricity reliability and security; adding more wind power as economics allow; promoting geothermal, biomass and solar for heating needs; developing our biobased fuels; and leading in new cutting edge electric transportation solutions.

Our government will do this in a way that benefits all Manitobans and ensures that our energy is affordable and clean, that it contributes to job creation and business expansion and allows opportunities for greater First Nation partnerships. As Canada's leader in energy efficiency, our government will also continue to balance new energy generation with strong demand side management programs, including Canada's first Pay-As-You-Save, on-meter financing program for efficiency retrofits.

This strategy is all about making energy choices today that will create a stronger economy and a cleaner environment for our future. Is fossil fuel freedom achievable? We're closer than you might think.

Original signed by

Dave Chomiak

Minister of Innovation, Energy and Mines

HIGHLIGHTS

Highlights of Manitoba's Clean Energy Priority Actions include the following.

Building New Hydro

- Ensure that the planning, design, consultations and negotiations necessary for developing substantial new hydroelectric generation, including Keeyask (695 MW) and Conawapa (1485 MW), proceed through environmental and economic review. These new generation hydro projects are being designed to greatly reduce environmental impacts and will be developed in partnership with First Nations.
- Improve Manitoba's transmission system reliability, increase export capabilities, and enhance the development of new hydro and wind energy by constructing a new Bipole lll line, expanding interconnections to the US, strengthening the Dorsey convertor station, adding the new Riel Station and advocating for a stronger east-west Canadian grid.
- Work to eliminate the dependence of northern off-grid communities on diesel generation and ensure all Manitoba communities have access to clean renewable power.
- Maximize the economic benefits and job creation from new hydro and transmission developments through the $30 million Renewable Energy Jobs Fund, a new Energy Opportunities Office, and training support for northern and Aboriginal communities.

Leading Canada in Energy Efficiency

- Through Manitoba Hydro, implement a new On-Meter Financing program that overcomes the high upfront costs that prevent households from implementing energy saving retrofit measures.
- Enhance Manitoba's successful Low Income Energy Efficiency programming, in partnership with social enterprises, to help build community capacity, create jobs and maximize economic benefits.
- Expand The Green Building Policy so that more government funded building construction, renovation and operations are subject to energy efficiency requirements.
- Expedite adoption of National Building Code energy efficiency updates to ensure Manitoba homes and businesses achieve the lowest lifetime costs for energy.
- Advance vehicle-related efficiency through green fleet purchasing policies, support for higher vehicle fuel efficiency standards and promotion of active transportation.
- Support the expansion of voluntary programs to benchmark, rate and label building energy performance. Manitoba will explore and pilot programs that disclose the energy performance of buildings offered for sale or lease.
- Pursue minimum energy efficiency standards for high-energy consuming products where federal standards are deemed inadequate.
- Develop and publish an annual energy efficiency plan that establishes stronger efficiency targets; identifies an expanded range of programming options; sets out costs and benefits; and reports on performance.

Keeping Rates Low

- Place Bill 18 – *The Affordable Utility Rate Accountability Act* – into law to ensure the lowest cost in Canada for a bundle of utility services – that is, the combined rates for electricity for home use, natural gas for home heating and automobile insurance.
- Within the context of *The Affordable Utility Rate Accountability Act*, support predictable, moderate rate increases for Manitoba Hydro over the coming years. The rates should be sufficient to fund the renewal of existing infrastructure; develop new generation, transmission and distribution capacity to serve growing demand; and assure continued reliable service to Manitobans.

Growing Renewable Energy Alternatives

- Continue to develop 1000 MWs of wind power as economically viable. In total, 1,000 MWs is expected to generate $2 billion in new investment and $400 million in lifetime revenues to rural communities.
- Accelerate adoption of geothermal heating and cooling systems through Manitoba's Green Building policy, available financial incentives and by promoting community scale district heating opportunities.
- Grow the province's biomass heat industry by directing revenue from the Emissions Tax on Coal to the Manitoba Biomass Energy Support Program.

- Evaluate new production opportunities and increased biofuels content requirements to pursue reductions in gasoline and diesel imports even beyond the $100 million value currently realized in Manitoba each year.
- Prepare for and accelerate the adoption of electric vehicles in Manitoba by supporting informed decision making by consumers; incorporating electric vehicles into provincial and Crown corporation fleets; providing charging infrastructure support; and expanding electric vehicle demonstration projects.
- Continue to support development of the all-electric battery transit bus and expand the project into a multi-bus and charging demonstration.

Freedom From Fossil Fuels

- Launch a Fossil Fuel Freedom campaign that promotes a path for families to move away from fossil fuel use to clean energy sources for their electricity, heating and transportation needs. This path would help more and more Manitoba families reap the benefits of lower bills, create more local jobs and improve the environment.

INTRODUCTION

Energy is critical to contemporary society. How we supply energy and how we use it has a major impact both on the prosperity of our economy and on the future health of our planet.

Since the industrial revolution and the advancement of the coal burning steam engine, the world has relied primarily on fossil fuels – coal, oil and natural gas – to meet its energy needs. Today, recognizing the need to reduce the impacts of climate change and better protect the environment, human health and the well-being of their own economies, more and more countries are committed to reducing their dependence on fossil fuels and developing cleaner energy sources. Manitoba is not a mere follower in this movement, but rather a recognized leader for its efforts to become fossil fuel free.

To build on Manitoba's clean energy successes, an energy strategy must incorporate both a clear plan for the future, while at the same time meeting current needs for electric power, heat and transportation fuels. This strategy charts that path forward for Manitoba, setting out practical, clean energy steps and strengthening our position as a renewable energy powerhouse.

Looking Forward

Manitoba will capitalize on its renewable energy strengths and through innovation, will tap its homegrown clean energy resources allowing more Manitobans to transition to fossil fuel freedom, beginning today, and in the decades to come. It will do this by encouraging more efficient use of energy and by increasing production of clean, renewable energy sources. It will do so while growing its clean energy economy for the benefit of its own citizens as well as neighboring customers.

The Strategic Objectives

- Supply sufficient energy for our needs and deliver it reliably and securely.
- Provide affordable energy, particularly for those in low income, remote or vulnerable situations.
- Produce and use that energy cleanly, sustainably and in ways which reduce our greenhouse gas (GHG) emissions. This means in ways which do not degrade the world, at home or abroad, either today or for future generations.
- Ensure that energy is used efficiently, for environmental and economic reasons.
- Maximize the economic benefits from: constructing and operating energy generation facilities; manufacturing energy related equipment; low rates and improved efficiency; selling energy and expertise abroad; and reducing the economic leakage from the overall Manitoban economy due to imported fossil fuels.
- Increase local control. The value of energy independence and the need for more made-in-Manitoba energy has been made clear by recent decades of volatile energy prices.

Manitoba's clean energy strategy is a focused strategy, one which will demonstrate the government's commitment to build on our underlying and historic comparative advantage in low cost, renewable hydro electricity. It will also build on our newly arrived advantages in ground-source heat pumps, plug-in electric vehicles and other emerging renewable sources. Together, as these energy sources grow, they will offer Manitobans an increasing array of clean, cost effective, non-fossil alternatives for heating our homes, powering industry and fuelling our vehicles. Finally, woven through these power, heating and transportation initiatives is the constant need to increase energy efficiency and reduce the costs of energy waste.

We have the resources. We have the knowledge. We have the infrastructure. And we're already on the move.

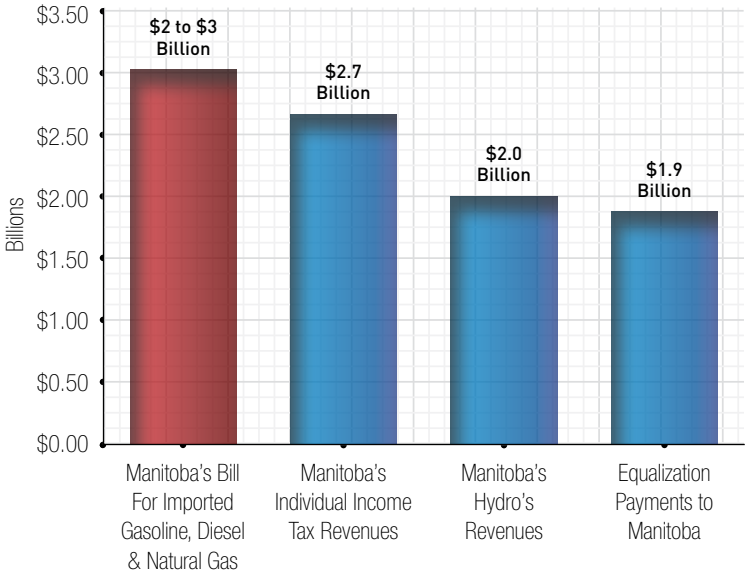
Global Challenges

The world's energy supplies have become exceedingly complicated and volatile, with four global forces in particular having significant implications:

1. Oil and natural gas prices have been enormously volatile in the 2000s. For example, natural gas prices fluctuated by as much as 600 per cent in the past decade. The rise of Asia's industrial powerhouses, with their energy needs, make it unlikely that these pressures will lessen in the years to come.

2. Economic leakage from high energy prices has challenged economies globally, with jurisdictions around the world responding by pursuing greater energy independence.

3. Energy security has frayed as grid black-outs, oil blow-outs, wars, hurricanes and tsunamis have threatened energy supplies and repeatedly triggered price spikes.



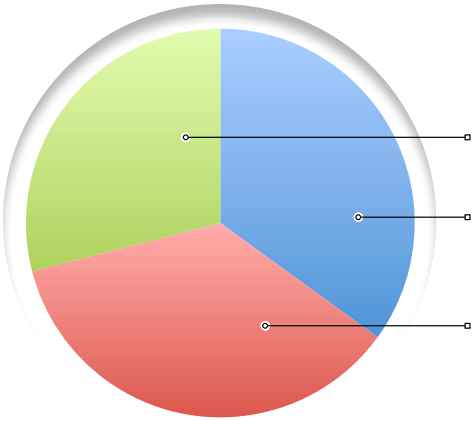
4. Climate change has been accelerated by the GHG emissions from continued fossil fuel use.

Many jurisdictions throughout the world struggle with these forces. While Manitoba has been somewhat insulated because of our strength in renewable hydroelectricity, we all still feel the effects of these forces when it comes time to heat our homes and refuel our vehicles.

Fortunately, at precisely the same time as these global energy forces have arisen, a series of global clean energy tools and innovations have begun to emerge into the mainstream. For example:

- In electricity, the past decade saw more wind-power capacity added in the US and in Europe than new coal, nuclear and hydro combined.
- In transportation, four million hybrid, plug-in hybrid and electric vehicles hit global roads.
- In heating, more than three million heat pumps have been installed globally since 2005.

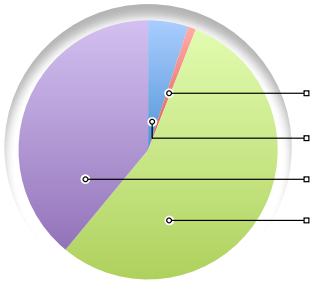
The Annual High Cost of Manitoba's Gasoline, Diesel & Natural Gas Imports



Manitoba has significant oil production in the southwest portion of the province. This oil is not refined in Manitoba but is exported as a commodity for processing. Although this oil is not directly used in Manitoba as an energy source, the industry is a significant contributor to the provincial economy. The industry pays over $100 million annually to private oil and gas rights owners and has seen investment in the province rise to $1 billion annually.

Energy in Manitoba

The following charts provide a snapshot of how we use energy in Manitoba.

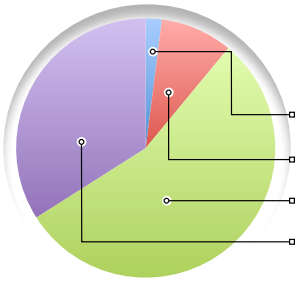


Energy Uses

35% Transportation

36% Heating & Manufacturing

29% Electricity



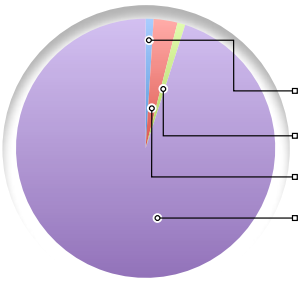
Transportation Fuels

1% Biodiesel

5% Ethanol

39% Diesel

55% Gasoline



Residential Space Heating

2% Geothermal Heat Pump

9% Other

55% Natural Gas

34% Electric Resistance

Electricity

1% Fossil

1% Other

3% Wind

96% Hydroelectric

Notes: i) "Other" in residential space heating represents a mix of renewable wood/biomass, as well as heating oil and propane. ii) The top chart on Energy Uses reflects overall energy use within Manitoba, as outlined by data from Statistics Canada. iii) The lower charts provide energy source breakdowns for selected application uses only.

Because of extreme climate conditions, a relatively large land area, growing population and significant resource based industries, energy is critical to our way of life. Like other jurisdictions, fossil fuel use is woven into that way of life and will continue to be for decades to come. This is because vehicles, heating systems and buildings have lifespans lasting decades, which makes a too rapid change-out uneconomic. However, this timespan also provides Manitobans with the opportunity to customize the shape and timing of their own personal shifts, allowing them to choose clean energy and fossil fuel free technologies when and as they feel the time is right.

Although fossil fuels will be with us for decades to come and we will continue to maintain access to those fuels, Manitoba is in the enviable position of reducing our dependence on them and becoming a renewable energy powerhouse.

- Manitoba has already taken bold steps to ensure our electricity production is more than 98 per cent renewable using hydro and wind resources.
- Manitoba is a Canadian leader in terms of renewable heat (and cooling) with 11,000 geothermal installations.
- Manitoba took early steps with biofuels in terms of production and use to reduce reliance on imported gasoline and diesel.
- Manitoba consistently rates number 1 in Canada in energy efficiency programs and policies.
- Manitoba is breaking new ground in the electrification of transportation, from hybrid taxis to the first plug-in hybrid conversions through to advanced electric bus designs.
- Manitoba is home to well positioned manufacturing and energy service sectors as well as academic institutions that will help produce the innovative technologies and services needed going forward.

Manitoba will not rest on its past accomplishments, but will focus on five strategic areas that will strengthen our position as a renewable energy powerhouse and move us down the pathway towards fossil fuel-freedom. With so much at stake with our energy future, it is important to understand the case for moving forward.

THE CASE FOR MOVING FORWARD AND TODAY'S PRIORITY ACTIONS

1 BUILDING NEW HYDRO

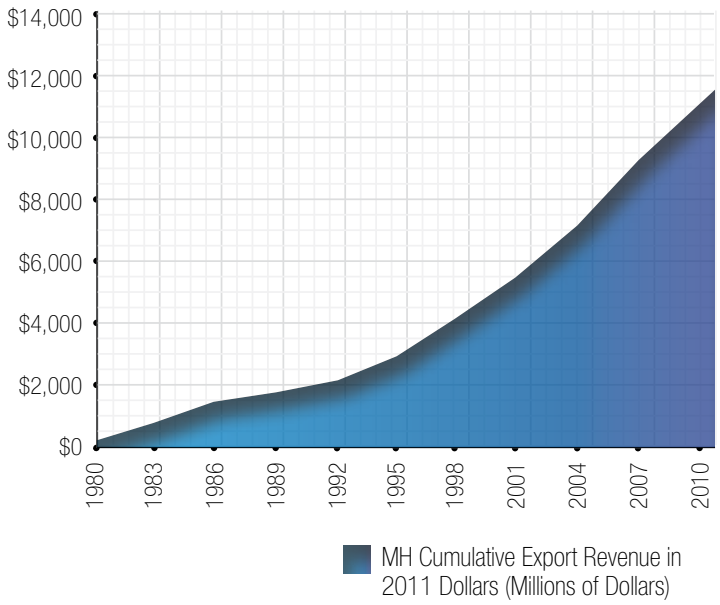
When Manitoba made the long term, strategic decision to develop its own northern hydroelectric assets – rather than going for the quick fix of expanding the use of low cost, but imported and polluting coal – it faced potentially higher costs, as well as a series of risks that seemed, at the time, insurmountable.

Manitoba Hydro Meets and Overcomes the Challenges

Through innovation and determination, Manitoba Hydro met the challenges and constructed a series of new, northern hydroelectric sites, in the face of some of the world's harshest climates. They opted to develop new technology employing the long, high-voltage, DC transmission lines that reliably deliver Manitoba's power over enormous distances. They produced dependable power from highly variable hydraulic flows. And they managed and financed multi-billion dollar, decade-long megaprojects.

Benefits for Manitobans

The benefits we enjoy today were built on these decades of hard work and innovation. But, at their source, was the long term, strategic decision to build on Manitoba's own renewable resources, rather than consume imported fossil fuels. The benefits of that decision have been many and have risen steadily over the years.



- Manitoba Hydro's rates have been among the lowest on the continent, saving Manitoba families and businesses $13 billion on their bills since 1998, compared to the average Canadian's rates.
- Through its operations, Manitoba Hydro annually creates 16,580 person-years of employment and adds $1.4 billion to Manitoba's GDP.
- More than 98 per cent of Manitoba's electricity is renewable, GHGs have been slashed at home; and electricity exports cut 178 million extra tonnes of GHGs from our neighbours' emissions.

Manitoba Hydro's performance provides strong evidence for the value of a fossil fuel free strategy. Using made-in-Manitoba, renewable energy, the province minimizes the need for fossil fuels to generate electricity, while creating huge economic and environmental benefits.

Manitoba Hydro's exports don't just benefit others. Since 1980, export revenues have risen to more than $11 billion, funds which have helped pay down the costs of the hydro projects themselves and kept rates low for Manitobans. For comparison, this amount is many times the $1.43 billion cost of the Limestone Generating Station, the last large hydro development prior to the Waskwatim dam.

MH Cumulative Export Revenues 1980 to 2011

Why Build New Hydro?

More electric generation is needed to meet Manitoba's rising demand. Even with the addition of the Wuskwatim dam, wind projects and energy efficiency measures, electricity load growth in Manitoba has outpaced the growth of new supply since the Limestone Generating Station came on stream in 1990.

This situation places increasing pressure on Manitoba's hard won energy independence in electricity. It makes us more dependent on fossil fuel imports during droughts and reduces export surpluses even in higher water years.

Manitoba's electricity demand today is growing by approximately 80 MWs per year. This rising demand requires the equivalent of a new Wuskwatim every two and a half years. Given the historic and sustained upsurge in Manitoba's population and housing starts, as well as continued economic growth, the pressure from rising load appears likely to continue. As domestic demand increases, exports are decreased and the revenue derived from exports – that aids in reducing domestic electricity rates – erodes over time.

Many of Manitoba's export customers have also experienced growth in electrical demand, but they too no longer view coal fired generation as a desirable alternative, whereas hydroelectricity from Manitoba is seen to be clean, renewable and stably priced. However, for export customers to be able to buy new hydro in the future, they often require lead times of many years to build the necessary new transmission.

Manitoba needs new generation to supply rising domestic load, while export customers wish to buy new hydro from Manitoba. By advancing the construction of new hydro plants ahead of domestic needs, Manitoba can both earn additional export revenues and expand valuable interconnection transmission, while also building the plants it will need to meet its own future requirements.

Windows of Opportunity

There are limited windows of opportunity within which Manitoba can sign new, long term export contracts, and receive vital new transmission links. If these windows are missed, customers will lock in with other suppliers, new transmission along with its market expansion and domestic reliability benefits will not be built and the window will close and be lost.

The past few years have offered just such a window, with the decision now before Manitoba.

Why Not Fossil Fuels, Like Coal or Natural Gas, Instead?

Decades ago, the largest fuel source used to generate electricity in North America and the world was coal. It was thought North America possessed endless coal reserves at unbeatable low prices. Manitoba Hydro, at the time, took a minority stand in the region with its decision not to use coal to generate most of its electricity. Over the decades, Manitoba's choice of hydroelectricity has proven itself to be the better one – for the environment, the global climate and the economy.

Manitoba Hydro's electricity is made from more than 98 per cent clean, renewable sources.

Today, the use of coal for electricity generation is being replaced by a new fossil fuel source– shale gas. Although coal plants still generate 44 per cent of the electricity in the United States, power generated by natural gas has doubled to 21 per cent. It is now the dominant source of new electricity in the United States and is rising quickly as old coal burning plants are shut down.

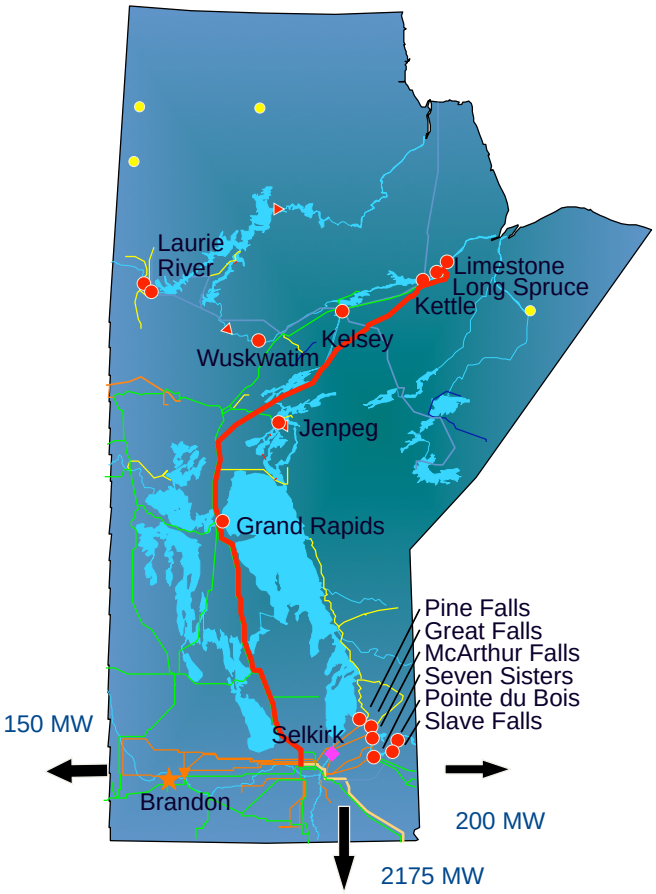
As once was said about coal, natural gas is said today to be available in the same near-endless quantities, and at the same unbeatable low prices. Natural gas has even been positioned as a cleaner fossil fuel than coal.

Manitoba's hydroelectric advantages over natural gas - jobs, stability and sustainability

When considering options, Manitoba's hydroelectricity has clear cut advantages over natural gas:

- Construction of new hydro power will create more jobs and more new business activity for Manitoba than natural gas fired imports or local plants.
- New hydro will emit far fewer GHGs than natural gas over its lifetime.
- While a natural gas plant has a life of 25 to 30 years, a key advantage of hydroelectric plants is that, once built, they will generate power for 100 years. For example, a new project like Keeyask, would likely still be generating power in the year 2100.
- Locally generated hydro will provide greater energy security for Manitoba than imported natural gas.

On the other hand: At 2012's natural gas prices of $2 to $3 per gigajoule (GJ), it can be used to produce electric power more cheaply than Manitoba's new hydro plants. But the price of natural gas is extremely volatile – the most volatile of any electricity source, cycling through a range of 600 per cent just over the past decade.



While prices are currently low, natural gas suppliers can't guarantee today's prices for the next 10 years, much less for the next 20 or 30 years or beyond – the years when Manitoba wishes to add new power. The difficulties this poses for long term energy planning in Manitoba can be seen clearly in the forecasts of the major energy planning bodies in North America. These bodies forecast natural gas prices ranging from $5 to $11 per GJ in the coming decades. With today's prices at $2 to $3 GJ, and Manitoba potentially looking at billions of dollars in investments, this uncertainty leaves Manitoba facing the risk of price swings of hundreds of percentage points if it chooses natural gas supplied projects.

Additional uncertainties surrounding natural gas and in particular shale gas include:

- the level of increased demand flowing from natural gas-powered electricity generation, expanded industrial end uses, transportation and Liquefied Natural Gas (LNG) exports
- the accuracy of estimates of shale gas reserves, production and depletion rates
- the long term sustainability of today's exploration and development business model, in the face of extremely low natural gas prices
- GHG emissions from shale gas exploration and production

With Manitoba's next two major hydro projects potentially coming online from 2019 to 2025, and then earning their major revenues in the decades to follow, natural gas prices in 2012 are of less relevance than the prices in 2032 or 2042. In the long term, Manitoba expects that hydroelectricity will continue to be the better option. Hydro's wide and long-lasting range of benefits – lower GHGs, more jobs and business in Manitoba, more stable prices and greater energy security – will still make hydroelectricity the superior choice.

Generating Stations and Interconnections

Today's Hydroelectric Priority Actions

Clean Energy Portfolio

Given the high costs of focusing development on a single new project at a time, Manitoba has made the decision to move a portfolio of diverse, new hydro projects through to the readiness stages. As a result, the province and Manitoba Hydro are taking several projects forward through planning and design, consultation and negotiation with Aboriginal communities, environmental approvals, licensing and permitting.

This means that as and when Manitoba's load or forecast load passes certain thresholds, and as sufficient, firm export contracts are signed, and the economic case moves in favour of approving new supply, Manitoba will be equipped with at least one, and potentially more, projects ready for development. In the same way, if domestic load declines or proposed export contracts are altered or capital costs escalate, Manitoba has the tools to flexibly adapt.

Adopting a Clean Energy Portfolio has also enabled Manitoba to add wind power and other emerging, renewable energies – as well as energy efficiency, improved transmission and the rehabilitation of older hydro projects – to its potential new supply-side projects.

Finally, use of a portfolio approach allows Manitoba to develop its hydro construction in a staged manner that promotes stability of training and employment opportunities for northern and Aboriginal communities. This allows the province to maximize the overall economic and social benefits.

New Generation Hydro

Each new hydro project has been redesigned to better meet the needs in Manitoba's northern communities and also in a way that ensures projects meet and exceed customer expectations not just today, but over the next 40 or more years. Recent years have made clear that changing customer expectations and political debate elsewhere can dramatically impact Manitoba's long term access to export markets. A new hydro project intending to sell into export markets over a period of decades could lose hundreds of millions of dollars – not by failing to meet the legal standards in place when the contract was signed, but by failing to consider long term future issues and trends.

Manitoba export earnings have surpassed $11 billion, keeping rates low and supporting the cost of hydro projects.

With this long term view in mind, Manitoba's New Generation Hydro projects embody two major shifts from historic practices:

1. Aboriginal communities are engaged from the earliest stages of planning, as participants during construction, as well as standing to become long term, financial beneficiaries. Aboriginal people are also consulted through the province's Crown consultation process on any action or decision that might affect an Aboriginal or treaty right.

2. The Manitoba government is responsible for environmental and water licensing processes that outline the responsibilities of Manitoba Hydro to be good stewards of the environment. With that in mind, each project has been redesigned to dramatically reduce its environmental impact. Wuskwatim, for example, experienced just 50 hectares (or half a square kilometre) of additional flooding – a fraction of the size of an average Manitoban farm, while Conawapa will flood an area about the same size as an average farm (500 hectares). Many modern shopping malls, residential developments and energy plants take as much or more land than is lost through a New Generation Hydro project.

The New Generation Hydro components of the Clean Energy Portfolio that are under development or potentially available for development include:

- Wuskwatim – a 200 MW project that saw construction launched in 2008 and began generating power in 2012.
- Keeyask – a 695 MW project awaiting final licensing. Construction could run from 2014 to 2021, with first power potentially flowing in 2019.
- Conawapa – a 1,485 MW project, if approved, would see full project construction run from 2018 to 2026, with first power potentially flowing in 2025.

This expansion, of as much as 2,300 MWs, would be large enough to replace the demand growth of recent decades and to meet the expected domestic demand beyond 2020. It would also provide Manitoba with a surplus large enough to support large long term firm contract sales and to gain other revenues from the opportunity export markets.

The potential economic benefits of the total expansion are as impressive, as in previous generations of hydro development.

- The province is looking at $20 billion in new economic activity over the next decade, with Keeyask and Bipole lll alone expected to create 18,000 person years of direct and indirect employment.
- New export contracts worth over $4 billion are already on offer, with the potential to be added to, if desired. The proceeds will help pay down the cost of the projects, while helping sustain Manitoba's low rates for decades.
- This path offers a reduction in any long term dependency on coal or natural gas, and will reduce long term payments to fossil fuel producers.
- Manitoba's clean, stably priced, hydro exports would add real value to neighbouring systems – being available on-peak if desired, offering greater price stability and reducing their GHG emissions by millions of tonnes a year.

Transmission - Moving Power to Market

Manitoba Hydro's transmission network is large with 11,700 kilometres of transmission lines and 75,000 kilometres of distribution lines. The transmission facilities are developed and operated as an integrated system, with the backbone being two 800-kilometre, high voltage, direct current (HVdc) transmission lines (Bipole I and II). The lines were historically located in a common corridor and transmit over 70 per cent of Manitoba Hydro's annual energy production from its northern hydro stations on the Nelson to southern load centres. The direct current is converted back to alternating current at Dorsey station, northwest of Winnipeg, before being transmitted to the transmission and distribution system, as well as to Ontario, Saskatchewan and the US.

Most of the transmission and distribution facilities are exposed to the elements and can be affected by severe winds, lightning, ice storms and forest fires. The system is planned and built to achieve a high degree of reliability and maintain the delivery of power to its customers.

Manitoba's electric system is dependent on its two backbone HVdc facilities. Should these two facilities suffer a simultaneous catastrophic loss, it could result in extensive, wide spread, lengthy power outages. The number of customers affected, and the duration of their interruption of electrical service, would mainly depend on outside temperatures, with the most severe and extensive power outages occurring during the coldest winter months. Should such a loss occur at the winter peak, Manitoba Hydro has estimated that it could result in a supply interruption of up to 300,000 customers until repairs are completed. As a result, a third HVdc transmission facility, Bipole III, has been proposed to be constructed to assure the reliability of delivery of power to Manitobans.

More widely, new interconnection capacity to electricity markets increases both the reliability of Manitoba's own system, as well as Manitoba's reach into export markets. Should new generation to service additional sales in Minnesota and Wisconsin be approved, new interconnection transmission would be also be required.

Today's Transmission Priority Actions

Manitoba Hydro's transmission work includes developing Bipole III for reliability purposes (expected to be commissioned in 2017), as well as new export transmission interconnections, of different sizes and configurations, to the United States (to be available by 2019.) In addition, strengthening the Dorsey Convertor Station will increase reliability, and developing a new Riel Convertor Station will provide a second delivery point for northern power.

Manitoba has also forged a national leadership position by advancing the idea of a stronger east-west Canadian grid. The timing and size of Manitoba's enhanced, east-west grid interconnections with Saskatchewan and other provinces will ultimately be determined by the results of ongoing power sale talks. Manitoba will continue to advocate for an improved national electrical grid that can transport clean, renewable energy to every region in Canada.

Taken together, these transmission projects will:

- dramatically improve the long term reliability of Manitoba's system in the face of climatic instability and extreme weather
- enhance the development of new northern hydro as well as southern wind development
- reduce the potential cost of imports by achieving greater market access
- boost both the range and the scale of Manitoba's exports
- strengthen Canada's east-west ties

Reducing Coal Fired Power

In recent years, Manitoba closed most of its old, polluting coal fired capacity. Some units were converted to burn natural gas, while two new natural gas generators were installed. In order to reduce GHGs, *The Climate Change and Emissions Reductions Act* stipulated that by 2010, coal fired generation was capped under normal conditions and could only be used in emergency situations. Today, of Manitoba Hydro's 5,500 MWs of capacity, there are 364 MWs of natural gas fired capacity in Selkirk and Brandon, and just 97 MWs of emergency, coal fired backup in Brandon.

Natural Gas to Complement Clean Energies

Manitoba's natural gas based generation is used for a range of purposes: generate power during emergencies and droughts; help during transmission outages; and respond to short term variations in the output of our renewable generation. Used in these complementary ways, natural gas not only helps the system run more smoothly, but can actually increase Manitoba's installed capacity of new hydro and wind energy. By integrating, backing up and stabilizing new hydro or wind, natural gas generation can ultimately allow more renewable energy to be produced here.

Store It Away for Another Day

Manitoba has historically used imported power during droughts. Manitoba Hydro also buys off-peak, imported power at a low cost, stores it, then resells the power back to our trading partners at lower rates than they could make it for themselves – and earns a profit performing the service. This exchange is built on another Manitoba advantage – the large storage capability of our system's reservoirs – an asset which new hydro and new wind also need as they are further developed. The province has also, traditionally, shared these storage and support services with neighbouring utilities, helping the regional grid to run smoothly and supporting wind development in the US. At the same time, Manitoba's first priority moving forward is to use these assets to ensure the development of made-in-Manitoba new hydro and new wind, thus maximizing economic benefits for Manitoba and strengthening its energy security.

Today's Gas, Coal and Import Priority Actions

Coal

The remaining coal fired electricity generator in Brandon will continue to be used only in emergency situations and droughts. The generator will need to be "exercised" on a very limited basis to ensure it is operational when needed in emergencies. Manitoba will also comply with the federal government's new regulations that will phase out the use of conventional coal generation across the country.

Natural Gas

Manitoba's existing natural gas generating capacity continues to play a number of complementary roles in the system and will be maintained. Similarly, new natural gas plants will only be added to respond to short-term variations in renewable output, thus allowing Manitoba to integrate more new hydro and wind – or to augment the complementary roles described. Decisions on whether to add natural gas will also depend on consumer demand, renewable supplies and market conditions.

Imports

Imported power can provide value to Manitoba during droughts and through sales related to peak shifting and similar variations. However, given the limits of Manitoba's system to integrate, store, firm and shape energy, these capabilities will be used in ways which do not inhibit the development of Manitoba's own high priority hydro, wind and other renewable resources.

Off-Grid Diesel Communities

The northern communities of Brochet, Lac Brochet, Shamattawa and Tadoule Lake are currently not connected to the Manitoba Hydro transmission grid. They are supplied by stand alone, diesel generating facilities. For too long, these communities have struggled with high operating costs and the environmental concerns associated with the diesel generation.

All Manitoba communities deserve access to clean, renewable power – especially those in northern Manitoba, the heart of the province's renewable generation. As with many off-grid communities across Canada, the cost of grid connection is very high. However, depending on the local situation and advantages, the addition of small scale renewable energy could potentially help reduce their reliance on diesel generation.

Today's Off-Grid Community Priority Actions

Working closely with the off-grid communities, and the Canadian government and other partners, Manitoba Hydro will reduce dependency on diesel fuel by implementing renewable alternatives to diesel generation and improving energy efficiency. Manitoba will also show national leadership on this complex issue, working with our counterparts in other territories and provinces that have off-grid communities to share best practices and seek solutions.

Energy for Jobs

With the major expansion of hydro generation and transmission over the next decade, new economic opportunities will unfold for Manitoba companies and those looking to invest here. Capital expenditures, estimated at $20 billion by Manitoba Hydro, represent a significant opportunity to increase local job creation – in the construction of new generation and transmission capacity, but also in the supply of equipment, components and construction materials for these projects.

Today's Energy for Jobs - Priority Actions

In April 2012, Manitoba established a $30 million Renewable Energy Jobs Fund to help maximize industrial benefits (including local content and industrial offsets) from these major projects. The fund will provide loans to eligible manufacturers of equipment, components or construction materials used in the generation, or transmission, of renewable energy. This includes hydro, geothermal, wind, next generation biofuels, biomass heating, solar and smart grid technologies.

An Energy Opportunities Office will also be created to work with companies looking to expand, or locate for the first time, in Manitoba. This office will serve as a one-stop business support centre for companies wishing to tap these opportunities, and seek out partnerships with other companies in the renewable energy supply chain. In addition, the Manitoba government and Manitoba Hydro will work together to ensure that northern hydro developments result in good jobs for Aboriginal communities.

Premier Greg Selinger announces the Energy Jobs Fund at Winnipeg-based Crompton Greaves (CG) Power Systems, one of the top electric transformer manufacturers in the world.

❷ LEADING CANADA IN ENERGY EFFICIENCY

Manitoba Leads Canada in Energy-Efficiency

As energy prices began to rise in the early 2000s, the Manitoba government and Manitoba Hydro fast-tracked an expansion of the Power Smart program. They launched new programs to cover all sectors, regions, income groups and fuels. By the end of the decade, 350,000 families, businesses, schools, churches and farms had participated in the newly expanded Power Smart programs. One example is Manitoba Hydro's Power Smart Loan, which provided $267 million in financing to over 65,000 Manitoban customers.

The government launched its new Green Building Policy in 2007. The policy requires that provincially funded new buildings and major renovation projects meet energy and environmental requirements including: a minimum level of energy efficiency that is 33 per cent better than the Model National Energy Code for Buildings (MNECB.) To date, approximately 297,000 square meters (3.2 million square feet) of new construction in Manitoba incorporates green building standards and practices affecting almost 40 per cent of the industrial/ commercial/ institutional construction sector.

Building codes have also been improved on an ongoing basis, provincial energy efficiency standards for gas furnaces have been raised and incentives by the province and Manitoba Hydro helped many thousands of Manitoba families retrofit their homes.

Manitoba's Power Smart Program saved Manitoba families, firms, facilities and farms more than $600 million on their utility bills since it was launched.

7390

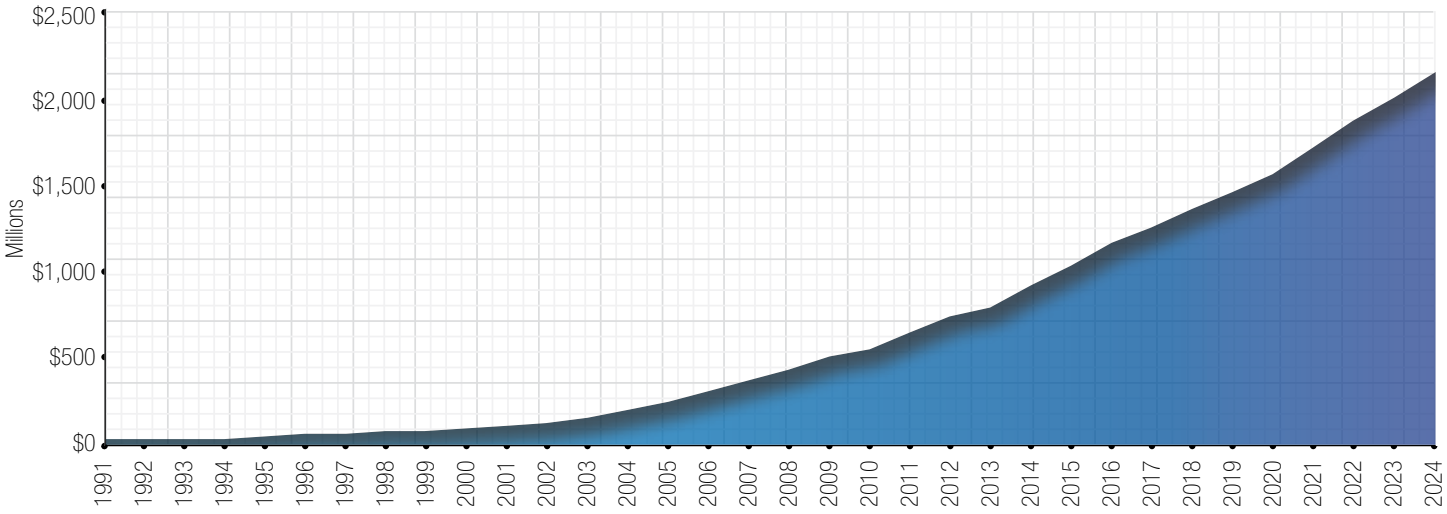
Manitoba Seizes # 1 Ranking in Canada

In two short years, Manitoba's energy efficiency programs shot up in the Canadian Energy Efficiency Alliance (CEEA) rankings, from 9th place in 2002 to 1st place in 2004 – a ranking Manitoba has successfully maintained for nearly a decade. In environmental terms, these energy efficiency improvements brought a reduction of 1,350,000 tonnes of GHGs in Manitoba and its export customers, annually. This is equal to taking 250,000 cars off the road.

$600 Million in Bill Savings for Manitobans

Perhaps even more importantly, Manitoba's homes and businesses have achieved direct, energy bill savings which surpassed the $600 million mark in 2011. This amount continues to rise and, in another testament to Manitoba's long term thinking on energy, is expected to exceed $2 billion by the next decade.

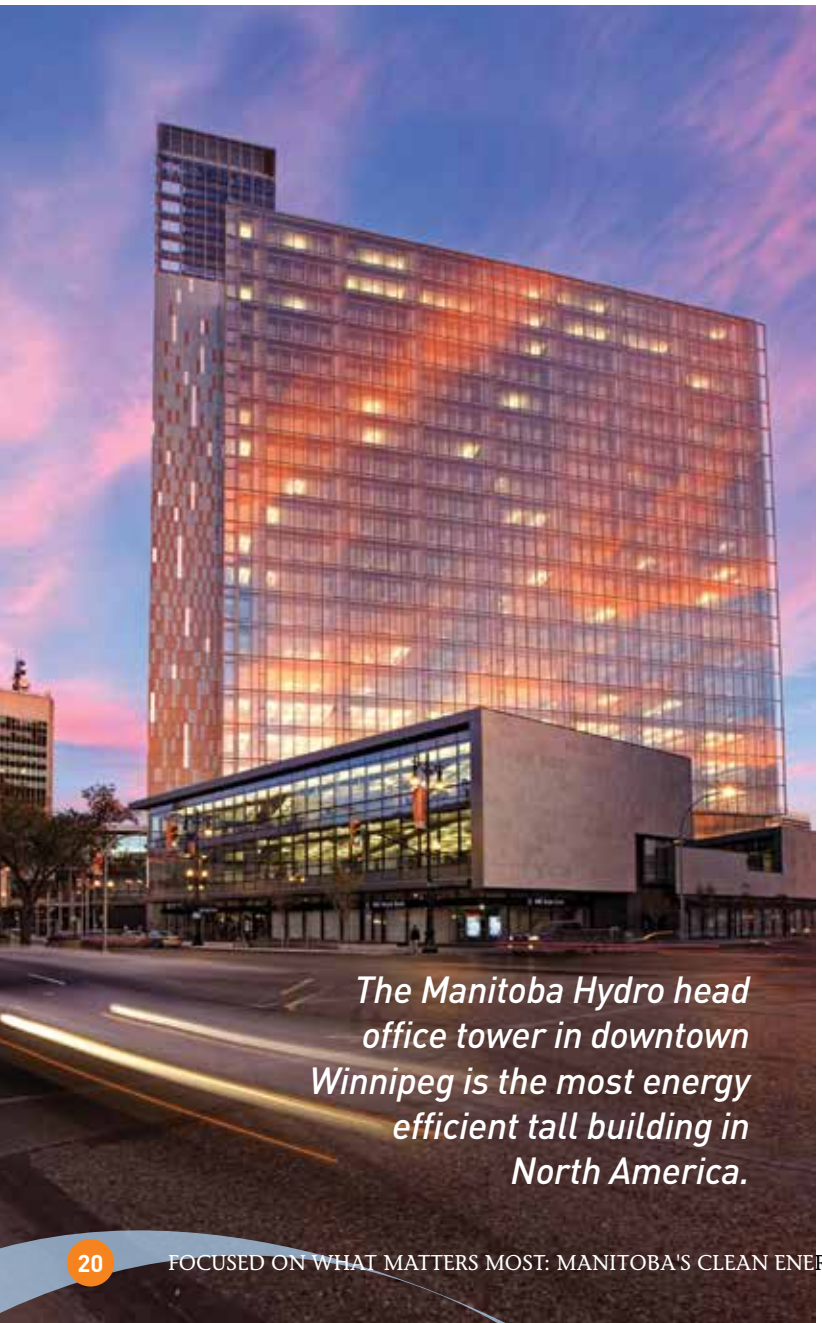
Manitoba Hydro's forecast energy and power savings achieved through energy efficiency are included in its planning as a resource option alongside hydro, wind and other resource options. Today, the energy saved by the Power Smart efficiency power plant is more than 575 MWs – equal to that of all the hydro projects on the Winnipeg River.



These efficiency savings have cost Manitoba Hydro, on average, just 1.9 ¢/kWh (kilowatt hour), well below the cost of other methods. This saved energy is then resold on the export market by Manitoba Hydro, earning profits and helping keep domestic rates down.

Incentives and Standards Have Cut Manitoba's Natural Gas Use

Manitoba's energy efficiency achievements are also seen in our natural gas sector through the use of incentives for high efficiency gas furnaces and insulation, higher product standards for furnaces and incentives for heat pumps. This effort more than offset any new demand from Manitoba's population increase, so that natural gas use has fallen by 17 per cent in our homes and nine per cent in the commercial sector. As a result, GHGs from residential and commercial natural gas use have fallen by 700,000 tonnes this past decade.



Manitoba ranked number one in Canada for energy efficiency.

Manitoba's Cumulative Bill Savings From Power Smart Programming

Low Income Communities – More Than Meeting the Challenge

Energy efficiency is a major opportunity in low income areas, where homes are often poorly insulated, and energy and water bills take a high share of family income. Social enterprises such as Building Urban Industries for Local Development (BUILD), and the Brandon Energy Efficiency Project (BEEP) in partnership with the Manitoba government and Manitoba Hydro, developed a successful business model that combines social, economic and environmental objectives.

The Manitoba Hydro head office tower in downtown Winnipeg is the most energy efficient tall building in North America.

These enterprises sought not only to address energy waste and unnecessary high bills, but also to employ local people with barriers to employment. Once trained, these employees have conducted the energy and water retrofits in their own neighbourhoods. The benefits have been huge – lowering utility bills for thousands of low income families and providing training and jobs for more than 150 Aboriginal youth and others marginalized from the mainstream labour market.

BUILD's Made-in-Manitoba Model Wins Scotiabank Award for Business Leadership

In 2011, BUILD's made-In-Manitoba model of community development was recognized by Scotiabank and awarded the national EcoLiving Award in Business Leadership. The Manitoba government and Manitoba Hydro backed BUILD and BEEP, and are aiming to raise the bar further by working with the Manitoba Housing Authority on 400 single-family units – each of which is expected to see utility bills cut by $450 a year.

Manitoba Hydro's New Head Office - An Energy Efficient and Architectural Showpiece

Perhaps the high point of the recent decade's efficiency efforts has been Manitoba Hydro's new, 22-storey, head office in downtown Winnipeg. After setting world leading performance targets, Manitoba Hydro challenged Manitoba's architectural, design, engineering and construction sectors to meet them. The result is an edifice that not only has a stunning appearance, but one that uses 70 per cent less energy than a conventional building.

Most of its remaining energy needs are met by heat pumps which draw heat and cooling from 280 bore holes – each drilled 122 metres beneath the site – as well as its many solar features. The new facility has been named North America's most energy efficient tall building. It is also the first large office tower in Canada to receive the LEED® Platinum certification from the Canada Green Building Council.

Today's Energy Efficiency Priority Actions

The Energy Savings Act

Even with significant achievements in energy efficiency, Manitobans are still using large amounts of energy, as a result of our climate, distances and building age. This means efficiency opportunities remain. As a result, Manitoba passed *The Energy Savings Act* (ESA) to ensure that investment in efficiency continues to expand and Manitobans continue to save more.

- **On-Meter Finance**

  The most powerful new tool the ESA enables Manitoba to use is On-Meter Finance. For decades, the number one barrier to energy efficiency savings has been the difficulty of financing the upfront capital costs. Most homes have energy and water savings opportunities. The problem has been that many of these opportunities are not acted upon because of high, upfront costs. Because of this, households paid higher bills than necessary, local retrofit jobs were lost and more money flowed out of Manitoba to pay for fossil fuels.

  The new financial tool developed to overcome this sees energy saving retrofit measures paid for upfront, but by the utility directly. The retrofit cost is then repaid by the residents on their regular utility bill utilizing energy savings to pay for the difference. The ongoing repayments are tied to the meter, not the individuals – thus the name, on-meter financing. This means families can make large and long-lasting efficiency investments, such as in-home insulation or on heat pumps – knowing the investment will be paid off over the measure's lifetime, by whoever is living in the home.

  The program includes plans not just for owner occupied, single family dwellings, but also for the low income sector, rental accommodations and public sector buildings.

More than 350,000 Manitoba families, firms, schools, farms and churches have participated in Power Smart programs.

- **An Energy Efficiency Plan**

  The new ESA requires Manitoba Hydro to set energy efficiency targets for the future. The act will ensure that Manitoba Hydro, the province, industry, community partners and the public are on the same page, by publishing an annual Provincial Energy Efficiency Plan. This plan will include details of stronger efficiency targets for electricity and natural gas use and an expanded range of programs; set out costs and benefits; and report on performance.

- **The Affordable Energy Fund**

  The ESA also extended the Affordable Energy Fund, to make sure all Manitobans, regardless of region, income or fuel source, are able to reap their share of energy and water savings.

Green Building Policy

Manitoba's Green Building Policy will be expanded to include provincially funded residential construction and renovation projects, operation and maintenance of provincially funded existing buildings and government leased accommodations and will include expanded program support.

Low Income Energy Efficiency

Manitoba Hydro's On-Meter Financing program and the Affordable Energy Fund will provide significant support to social enterprises in efforts to make deep retrofits in homes and buildings in low income areas. Manitoba Hydro will work closely with these community groups on a street-by-street approach to retrofit neighbourhoods, rather than one home at a time. Similar to the partnership approach Manitoba Hydro has taken with First Nations on new dam developments (but smaller scale), their partnership with social enterprises will help build community capacity, create jobs and maximize economic benefits.

Green Schools and Education for Sustainability

A centerpiece of the government's longer term energy efficiency efforts is its commitment to make every school a green school. While the Green Building Policy has led the way in building energy savings into new school construction and major renovations, efforts will also be supported to make school grounds green and access energy saving opportunities in school transportation (ex: walk to school, idle-free zones, biodiesel buses). Daily operations of schools are expected to become more energy and water efficient as sustainability school plans, including energy efficiency measures, will be encouraged to be in every school in Manitoba by 2015.

Building Codes

Building codes ensure that homes and businesses achieve the lowest costs for energy over their lifetimes. Subject to completion of consultations and upon final review and approval, Manitoba will adopt the 2011 National Energy Code for Buildings (NECB) to make new construction and major renovations in the commercial and institutional sector more energy efficient. Following this work, Manitoba will review and consider potential adoption of interim amendments to the 2010 National Building Code of Canada (NBC) related to energy and water efficiency in new homes and small buildings.

Net Zero Energy Homes

A growing number of new homes built worldwide are designed to use (or approach) net zero energy. This means they aim to generate as much energy onsite as they draw from the grid. Manitoba supports this direction, but needs to take into consideration our severe climate. The province will promote the design, building and monitoring of net zero energy and near net zero energy homes by Manitobans – for use in Manitoba conditions.

Provincial Buildings Audits

The province owns, controls or funds many public housing units, schools and public buildings, which hold significant opportunities for energy and water savings and renewable heat expansions. Energy and water audits will be encouraged in these buildings to help identify measures to increase energy savings and the use of renewable heating and cooling options such as geothermal.

Disclosure of Energy Performance

Manitoba supports the expansion of voluntary programs to benchmark, rate and label building energy performance. Manitoba will explore and test pilot programs that disclose the energy performance of buildings offered for sale or lease.

Minimum Standards for Energy-using products

Manitoba will pursue minimum energy efficiency standards for high energy consuming products where federal standards are deemed to be insufficient or unlikely.

Active Transportation

The consequences of an ever expanding dependence on car use, and ever increasing vehicle miles travelled, are also seen to be unsustainable over the long term. User friendly alternatives must increasingly be put in place to help support a shift toward reduced travel demand.

Active transportation methods (ex: walking, cycling) can make a real contribution here, while also generating a range of wider benefits. They can improve our quality of life, lower the costs of traffic congestion, enhance our environment and strengthen our economy. They also support Manitoba's energy goals by reducing our reliance on fossil fuels, lowering GHG emissions and helping the overall transport network work more efficiently.

Getting Active - A Smarter Approach

While active transportation embraces several modes of travel, cycling and walking are the most popular. Creating a strong cycling and walking culture, where existing barriers are addressed, convenience is emphasized and safety is vital, is pivotal to advancing Manitoba's active transportation objectives. Manitoba is already making strides by expanding walking trails and cycling paths, putting in better racks and facilities for cyclists, through walk-to-school programs and the Commuter Challenge.

In addition to cycling and walking, Manitobans are using other methods to reduce their fuel use from transportation. And since commuting by car to work each day is the single largest source of GHGs in Manitoba, these actions are often the single largest GHG reduction action individuals can take. Manitoba supports a range of these initiatives:

- car pooling, ride sharing and car sharing through matching and information web sites
- use of Drive Green methods, where drivers learn to reduce sudden accelerations and stops and idling and improve vehicle maintenance
- increased public transit use that has seen Manitoba accelerate its long term investment in transit
- development of technology that supports working from home and telecommuting systems

Today's Active Transportation Priority Actions

Manitoba's three-year action plan, intended to improve the policies, programs and infrastructure that support active transportation, includes the following:

- developing and adopting a provincial active transportation policy including design guidelines for active transportation infrastructure
- launching a new online portal with active transportation resources and an inventory of routes
- working to complete the Borders to Beaches section of the Trans-Canada Trail
- commencing a new active transportation overpass at the north Perimeter Highway in Winnipeg to extend the popular northeast Pioneers Greenway
- providing new funding and technical support to help municipalities integrate active transportation planning, design and use with land use and transportation planning
- working with Manitoba Public Insurance to continue raising awareness of safety issues affecting vulnerable road users (ex: cyclists, pedestrians, children, seniors)

Auto Efficiency

Energy efficiency opportunities extend well outside the home – with one of the greatest opportunities being Manitoba's current fleet of 600,000 to 700,000 light duty vehicles. The fuel consumption of Manitoba's vehicles is relatively high, around 15 litres per 100 kilometres (16 miles per gallon (mpg) US) – about 20 per cent higher than the Canadian average.

This low vehicle efficiency means our drivers pay more for fuel, increased GHG emissions and the Manitoba economy leaks hundreds of millions of extra dollars each year to pay for unnecessary gasoline. While a shift to electric vehicles and plug-in hybrid electric vehicles could potentially change this situation over the longer term, Manitobans' purchase of 40,000 to 50,000 new vehicles each year offers perhaps the fastest way to improve overall fleet efficiency, reduce fuel imports and cut our gasoline bills.

Manitoba Helps Drive North America to Higher Standards

Manitoba decided to help move auto efficiency in the mid-2000s, as consumers were hit by rising prices and oil consuming economies lost billions of dollars to oil producing regions. There had long been debate around increasing auto efficiency standards, but rising oil prices gave more weight to the effort. Since auto manufacturing is integrated continentally, and vehicle standards tend to move hand-in-hand in Canada and the US, Manitoba moved to support a cross-border alliance of states and provinces working toward higher standards.

This alliance won a major victory in 2009, when the US agreed to raise its auto efficiency targets from 25 mpg today to 35.5 mpg by 2016. The arrival and rapid progress of hybrids, EVs and PHEVs has since spurred a further increase, all the way to 54.5 mpg by 2025. The US Government expects that this change will save the average car buyer $8,000 each, and – as Canada shifts its own vehicle standards – will likely save Manitoban drivers a similar amount as they purchase the more efficient models available in years to come.

This doubling of fleet efficiency targets would not have been possible without the growth of hybrids and electric vehicle technologies. Manitoba played a key role, by identifying these technologies as game-changers early on, and launching Canada's first $2,000 consumer-incentive targeting hybrids. The province's taxi companies then put a large number of hybrids to the ultimate test – in Manitoba weather. The Manitoba government also purchased and tested many different models in its own fleet.

In 2010, Canada introduced the Passenger Automobile and Light Truck Greenhouse Gas Emission Regulations, modeled after the US's Corporate Average Fuel Economy standard. The same kind of progressively improved emissions standards will be applied to Canada's cars and light trucks between 2011 and 2016, with efforts to bring in higher standards for 2017. Further efforts regarding heavy duty vehicles are also underway within Canada.

Over time, these higher auto efficiency standards should reduce the amount of fuel used by new cars in Manitoba annually. However, with the province's recent shift to a higher rate of population growth, the number of cars may also rise quickly. As a result, Manitoba is pushing not only for higher auto efficiency standards, but also for a step change away from gasoline and toward electric vehicles over the medium and longer term.

Today's Auto Efficiency Priority Actions

Just as Manitoba helped support the effort for higher vehicle efficiency standards in the past, it will do so in the future. Higher auto efficiency standards will save Manitoba drivers thousands of dollars in the coming years, while reducing GHGs and increasing our energy security. The province will also work to help those Manitobans who wish to take bolder steps toward using more clean energy and moving off fossil fuels, through the rollout of its Fossil Fuel Freedom initiative.

Green Fleet Purchasing

Manitoba will lead by example by implementing a Green Fleet fuel efficiency standard regulation under *The Climate Change and Emission Reduction Act*. The regulation will apply to new vehicles purchased for use by the Manitoba government. Departments will be guided by a Green Fleet procurement manual that will help them achieve efficiency objectives.

Heavy-Duty Freight Transportation

The freight transportation sector, particularly heavy trucking, is a key contributor to Manitoba's economy. This sector depends on energy to transport people and goods to, from and through Manitoba. The sector operates in a tightly meshed North American operational and regulatory context, and has had to rely primarily on conventional diesel as fuel. Although fossil fuels will be a dominant source of the energy needed for heavy, freight transportation into the foreseeable future, fuel efficiency will be critical in reducing GHG emissions and keeping costs down.

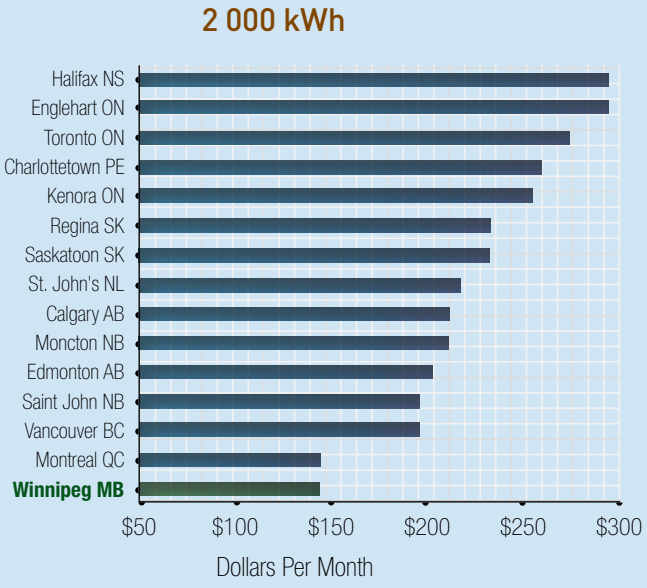
Today's Heavy-Duty Freight Transportation Priority Actions

Manitoba will continue to pursue freight fuel efficiency measures which help reduce fossil fuel use and its associated emissions. Manitoba will also evaluate the potential benefits of alternative fuel options to diesel, while ensuring that any alternatives meet the necessary vehicle performance, economic, environmental, jurisdictional as well as infrastructure requirements.

❸ KEEPING RATES LOW

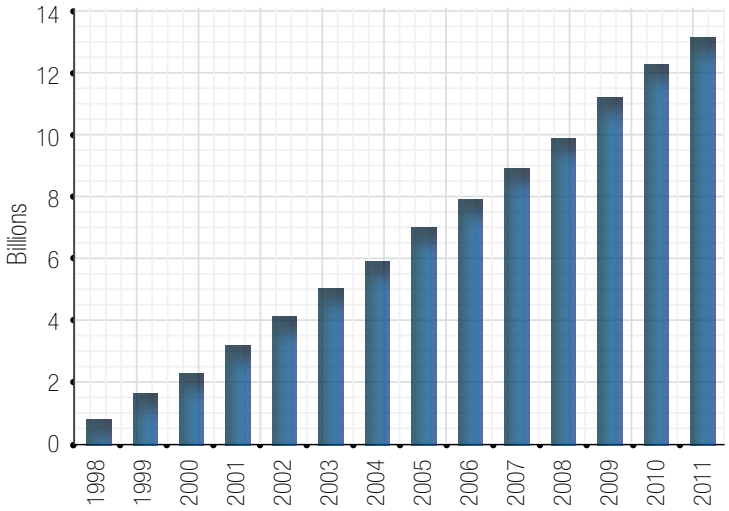
Historically, the cost of electricity in Manitoba has been either the lowest, or among the lowest, in Canada. Manitoba is committed to maintaining this low utility rate advantage.

When Manitoba's Bill 18, *The Affordable Utility Rate Accountability Act*, becomes law, it will include a requirement that Manitoba work to maintain the lowest cost, in Canada, for a bundle of utility services – that is, the combined rates for electricity for home use, natural gas for home heating and automobile insurance.



At each fiscal year end, after 2012, the minister of finance must use an independent accounting firm to prepare a report for each province, listing a comparable cost for the same bundle of utility services. For any year in which the cost of the same utility bundle is lower than that of Manitoba, the minister of finance must prepare a plan to return Manitoba to the lowest cost position.

Lowest Rates in Canada



In the past, Manitoba Hydro has used export sales to help finance the cost of large, hydroelectric generating stations. This has helped ensure the low electricity rates Manitobans enjoy today. The average rates in our two neighbouring provinces, Saskatchewan and Ontario, are significantly higher than in Manitoba – approximately 90 per cent higher in Ontario and 40 per cent to 60per cent higher in Saskatchewan, depending on the class of service. In other low cost jurisdictions in Canada, the general average rates are still higher – in Quebec, about eight per cent higher; and in British Columbia, about 17 per cent higher.

Manitobans enjoy some of the lowest electricity rates in Canada and in North America. The chart below shows the comparative monthly cost of service to residential customers in various larger cities in Canada.

The long term benefits to Manitobans of the strategic decisions to invest in hydroelectric power (as well as greater efficiency) include cumulative savings to Manitoba families and businesses of $13 billion on their utility bills, when compared to the average Canadian's rates for the period 1998 to 2011.

Manitoba's Cumulative Hydro Bill Savings 1998-2011 (vs Average Canadian Rates)

Renewal of the Electrical System Assets

Like other electric utilities in Canada, many of Manitoba's electrical system assets were purchased and installed in decades past, and therefore now need to be renewed. However, the system must be renewed and developed at today's costs – which are significantly higher than the capital cost associated with Manitoba Hydro's legacy assets (ex: some of these assets, such as Point du Bois generating station, have been in place for as long as 100 years).

Low electricity rates have provided Manitoba families, firms and farms with savings of $13 billion – more than $10,000 per Manitoban.

Today's Keeping Rates Low Priority Actions

Placing Bill 18 Into Law

Manitoba will move to proclaim Manitoba's Bill 18, *The Affordable Utility Rate Accountability Act*. This act will ensure the provided bundle of combined electricity, natural gas, and automobile insurance rates remains the lowest in Canada.

Predictable Rate Increases

Manitoba Hydro expects it will need predictable and moderate rate increases over the next decade to fund asset renewal, which can still be done in the context of *The Affordability Utility Rate Accountability Act*. These increases will fund the renewal of its existing infrastructure; develop new generation, transmission and distribution infrastructure to serve growing demand; and assure continued reliable service to Manitobans.

4 GROWING RENEWABLE ENERGY ALTERNATIVES

Recent years have seen a range of new, renewable energy technologies emerge globally (ex: wind power, heat pumps, electric vehicles). As these technologies fell in cost and grew in global sales, it became clear that Manitoba not only held a competitive advantage in clean, renewable hydroelectricity, but increasingly, across a broad range of emerging renewable energy sources.

Manitoba's Emerging Clean Energy Portfolio

Manitoba has taken a leadership role in developing emerging energy sources across all three primary energy uses: electricity, heating and transportation:

- In electricity, Manitoba saw two of Canada's larger, and lowest cost, wind farms constructed at St. Leon and St. Joseph.
- In heating, Manitoba became the Canadian leader in heat pumps, installing 11,000 units to date (including the new Manitoba Hydro head office building).
- In transportation, Manitoba led Canada by:
  - building a 130-million-litre ethanol plant in Minnedosa
  - creating one of Canada's first plug in hybrid electric vehicle demonstrations
  - launching world leading hydrogen and electric bus projects

Manitoba's desire to develop its clean energy resources was accelerated by the global fossil fuel price surges of the 2000s, when Manitoba's annual, out of province payments for fossil fuel consumption began to reach into the $2 billion to $3 billion range.

Today, Manitoba has the opportunity to harness its significant breadth and depth of clean, renewable, energy resources and to use them year by year to reduce the province's reliance on expensive, polluting and volatile imported fossil fuels. At the same time, Manitoba can create new, green jobs and business activity at home.

St. Leon and St. Joseph wind farms produce enough energy to meet the needs of 90,000 homes.

Wind Power in Manitoba

Wind power has long been known to emit almost no GHGs, to have stable prices, and – unlike natural gas or coal – to require no payments to outside fuel suppliers. Beginning in the 1990s, when the global wind industry grew by 20 per cent to 30 per cent each year, it drove the cost of wind down from 40 cents per kWh in the 1980s, to five to seven cents per kWh on the Prairies today.

Just a few years after putting up the first monitoring towers, Manitoba's developers built the 103.5 MW St. Leon project in 2005. Within months, St. Leon proved itself to be one of Canada's lowest cost wind farms (and did so without provincial subsidy). Following St. Leon's success, the province established a long term strategic target of 1,000 MWs, equal to 10 per cent of Manitoba Hydro's average annual generation. Since then, Manitoba has developed its second wind farm – the 138 MW St. Joseph project and the St. Leon facility have been expanded by 16.5 MWs.

The results of Manitoba's two wind farms have been stellar, producing benefits by:

- adding 258 MWs of new capacity and producing 880 GWhs of energy annually – more than the Pine Falls hydro plant, Brandon coal plant and Selkirk gas plant combined
- beginning to generate the more than $100 million in royalties and local taxes that will flow to rural landowners and rural municipalities (RMs) over the projects' working lifetimes – more than $10,000 per rural municipality resident
- creating more than 500 new construction jobs in these rural areas
- triggering $586 million in new capital investment

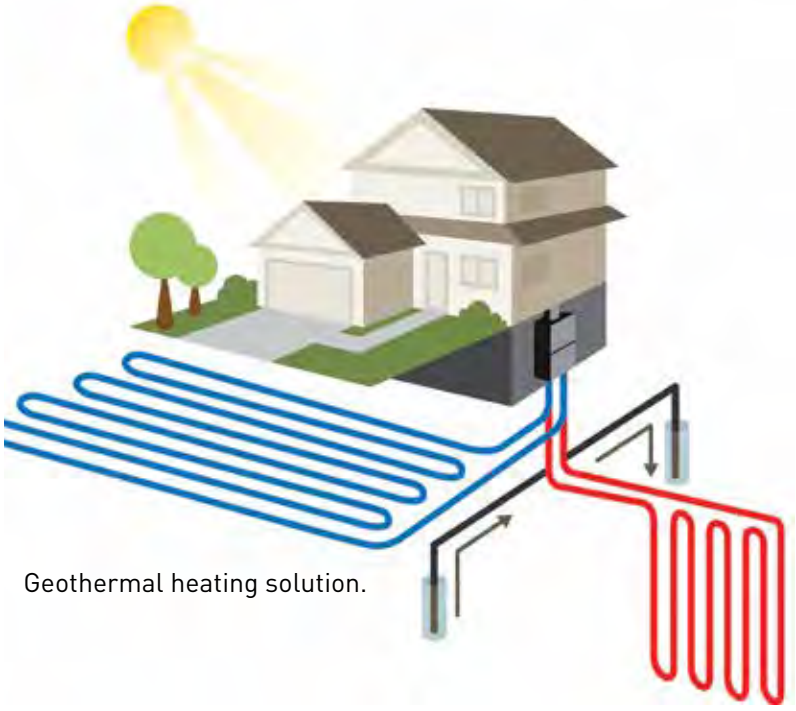
St. Leon and St. Joseph wind farms will provide more than $100 million in local and school taxes and royalties to local farmers and citizens over their lifetimes, $10,000 per person in these rural areas.

Today's Wind Priority Actions

Manitoba's 1,000 MWs of new wind will add almost 3,000 GWhs of dependable energy to the system – a substantial contribution. Economically, developing these 1,000 MWs will generate more than $2 billion in new investment, and $400 million in lifetime revenues to rural communities.

The location, scale and timing of future utility and community scale wind development in Manitoba will be shaped by circumstances such as exchange rates and export prices, federal support, global turbine prices, rural economic conditions and Manitoba Hydro's evaluation of its supply and demand situation.

A single 300-700 MW wind farm would provide the electricity required to shift every Manitoba passenger car and truck from gasoline to electricity.



Green Heat

Manitobans in search of clean, low cost, stably priced sources of heating have long faced a dilemma. While natural gas (and propane and heating oil) offered a convenient source for heating space and water, it was also an imported fossil fuel, one which emitted GHGs – and one with highly volatile prices.

While Manitoba Hydro is responsible for most natural gas distribution, it has no direct control over the price of the natural gas itself, which is set outside the province. As a result, 270,000 Manitoban families and businesses pay prices set elsewhere, prices which can be low, but which have also been highly volatile over the past decade.

In fact, $300 million to $600 million leaves the Manitoban economy each year just to pay for natural gas. This money, if redirected and spent locally, would create and support thousands of Manitoba jobs. In addition, the combustion of this fossil fuel results in 2.4 million tonnes of GHG emissions in Manitoba – a full 15 per cent of all the GHGs emitted in the province – and an area needing to be reduced if Manitoba's domestic emissions are to fall.

Geothermal heating solution.

Electric Space and Water Heating – Not the Best Solution

Historically, electric heat was the main alternative for those Manitobans who needed a stably-priced alternative to natural gas. As a result, 130,000 families use all electric heat (especially in rural areas and apartments) today and 230,000 use electric hot water. Even so, using electricity – a high value energy form – to raise air or water temperatures by only a few degrees is considered a wasteful way to create heat. It is often termed, "using a chainsaw to cut butter." As a result, the conversion of buildings heated all-electrically (many of which are in rural areas) to use geothermal heat pumps, biomass or solar sources of renewable energy can produce multiple benefits (ex: lower energy costs, new local jobs, freeing up more electricity for Manitoba Hydro exports).

Heat Pumps– All the Energy You Could Want, Right Beneath Your Feet

Manitobans have increasingly been turning to popular alternatives, often called renewable or "green" heat sources, such as heat pumps, which draw energy from the ground, water or air. A heat pump, for example, can turn one kWh of electricity into three to five kWhs of heat, offering a way to take Manitoba's clean electricity and multiply the benefits. And with almost half of all solar energy reaching the earth being stored in the ground itself, a geothermal heat pump uses the ground beneath our feet to provide a clean, renewable source of heat, or cooling and all at a stable price.

Geothermal Heat Pumps – Once Again, Manitoba Leads the Way in Canada

Beginning in the year 2000, Manitoba began to back this technology and became a Canadian leader by raising its geothermal heat pump installation rate by 400 per cent. Contributing to the industry's rapid growth are innovative policy tools like the province's Green Energy Equipment Tax Credit and Geothermal Grant, the Green Building Policy, support for industry training, quality assurance and education, and Manitoba Hydro's Earth Power loan program.

The result is: as households and businesses had to replace heating systems, more found that their particular circumstances enabled them to invest in heat pumps. There were 11,000 units installed in Manitoba as of 2012. The industry has proven its capabilities by supplying not just family homes, but apartment buildings, arenas, churches, schools, head offices, university residences, credit unions and car dealerships. In particular, Manitoba's pioneering efforts to use heat pumps to supply multi-unit apartments, district systems and commercial projects is opening up a cost effective niche, offering not only lower per unit costs, but long term energy price stability. Today, Manitoba's heat pump industry has annual sales over $35 million, and provides system drilling and installation, design and engineering, component manufacturing and system integration.

Some of the industry's more innovative, showpiece projects in Manitoba include:

- the IKEA store and mall, the largest geothermal installation in Manitoba
- Manitoba Hydro's award winning, 22 storey head office – which has, at its core, 280 heat pump bore holes, each drilled 122 metres beneath the site
- 20 storey, multi-unit apartment towers in Winnipeg
- The Forks Market harnessing heat and cooling from the ground, a well, and a river to heat and cool a central 100 year heritage building, restaurants, offices and retail shops
- Award winning, district geothermal system at Île-des-Chênes, serving the local community centre, arena and fire hall

Moving forward, while individual circumstances and site specific economics will see natural gas fuelled heating systems continued to be installed, a rising percentage of Manitoba's stock of heating systems will likely consist of heat pumps. For those Manitobans, heat pumps offer a tested, made-at-home solution – able to draw on renewable heat and cooling from the ground, water or air; to supply single family homes, apartment blocks and commercial buildings; without emitting GHGs; and all at a stable price.

Today's Geothermal Priority Actions

Manitoba has been accelerating the growth of the geothermal heat pump industry through its Green Building policy, Earth Power Loans and the Green Energy Equipment Tax Credit. The creation of Manitoba Hydro's new On-Meter Finance tool will also provide Manitoba's home and building owners with a new tool to overcome the upfront cost barrier, and to generate a positive cash flow from day one.

The On-Meter financing tool is likely to be of particular value to the 150,000 rural Manitobans who lack access to natural gas and still must rely on fuel oil, propane and all electric heat. Manitoba Hydro estimates that a geothermal heat pump will save these homeowners $750 to $2,500 each year, when compared to these older systems – offering perhaps the single largest energy bill saving available to these families.

Manitoba will continue to provide the popular Green Energy Equipment Tax Credit for geothermal installations throughout the province where equipment is purchased before 2019. It is a refundable tax credit where all Manitobans and eligible corporations can claim this credit, whether tax-paying or tax-exempt (ex: non-profit organizations), to help offset the upfront investment of geothermal.

Recognizing that district heating presents a major opportunity for geothermal and other green heat sources such as biomass, the Manitoba government will work with municipal governments and industry stakeholders to identify and break down barriers to district heating and large scale multi-unit installations, and create a supportive environment that enables community scale and multi-unit biomass and geothermal heating.

The IKEA building is heated and cooled by one of the largest geothermal systems in Manitoba.

Wood

Wood is another renewable heat source widely used in Manitoba, with more than 20,000 homes – especially in rural areas – using wood, often combined with electricity, natural gas, fuel oil or propane. Modern wood stoves have greatly improved their efficiency and now produce more heat with fewer particulates, reducing the volume of wood needed by homeowners as well as the volume of any ash to be disposed.

Biomass – Manitoba's Natural Advantage

Biomass represents a broader and more strategic opportunity for Manitoba, offering the chance to boost economic growth, environmental sustainability and rural diversification. Agricultural residues and forestry waste can be converted into biofuels suitable for heat, electricity or transport. Manitoba has a natural advantage in biomass production with 7.6 million hectares (18.8 million acres) of agricultural land, already producing four million tonnes of biomass each year.

Biomass pellets from wood waste and crop residues have achieved strong growth in Europe, rural eastern Canada and the US, often out competing fuel oil and electricity. Compared to raw wood, pellets are more easily transported, burn more cleanly and produce less ash, create new income streams for farmers, while reducing in-field burning.

The growth of Manitoba's pellet industry will depend on its ability to cut costs along the supply chain – to gather and pack biomass from crop residue or woody debris left after harvest; transform the materials into pellets; install pellet combustion, storage and ash-handling systems in buildings; distribute the pellets; and remove the ash. As a result, the industry is most likely to expand in markets such as on-farm space heating and agricultural drying and processing.

Solar Energy

Solar energy is also on the rise globally, with 200 million buildings now using solar thermal systems for hot water and heat – and solar photovoltaic sales exceeding $90 billion.

In Manitoba, solar thermal heating applications have been found to be most cost effective when built into the design of new buildings (ex: Buhler Versatile tractor manufacturing plant). There, solar energy is captured, stored and transferred throughout the building, to complement other heating sources. Solar walls can also be used to preheat air and have been installed cost effectively at more than 50 Manitoba schools, housing complexes and industrial buildings.

Fred Douglas Place, a multi-unit high rise residential building in the heart of downtown Winnipeg, was retrofitted with a solar thermal wall that compliments its existing exterior brick facade.

47 per cent of solar energy is absorbed by the ground.

Today's Wood, Biomass and Solar Priority Actions

Coal Use Ends in 2014

Manitoba has already established the Emissions Tax on Coal, with revenues being invested to speed the development of systems provided by Manitoba's new, clean energy from biomass industry. Coal was identified because it was the most GHG intensive fossil fuel, but also because many clean energy alternatives were available. Because of the speed at which the few remaining coal burning establishments are converting to cleaner energy, a target end-date on the use of coal for heat has been set for 2014.

Growing Harvest Operations for Biomass Markets

The province's wood and biomass heat industries will continue to grow through the Manitoba Biomass Energy Support Program, which helps develop biomass processing capacity, conversion technology and research and development. Using revenue generated by the Emissions Tax on Coal, Manitoba will support coal users to transition to renewable biomass and work with the forestry and agricultural industries to increase the use of debris from harvesting operations to produce biomass for these emerging markets.

New Technologies Entering Mainstream

Solar will continue to be supported through the Provincial Green Energy Equipment Tax Credit. As wood, biomass and solar technologies move into the mainstream, they will become eligible under Manitoba Hydro's On-Meter Finance program.

Taken together, the shift towards green heat technologies – heat pumps, biomass pellets and solar – should see a growing share of the $300-$600 million that currently leaves the province to pay for natural gas, instead being re-injected at home, creating permanent, new green jobs.

Manitoba's Rural Advantage

Rural Manitoba has been a clear leader in developing new and emerging renewable energy sources. It has not only attracted substantial new investment and created new employment, its entrepreneurs have developed new green businesses and it has shown itself a leader in implementing the new technologies at home and at work.

Examples of this leadership include the exceptional role that local RMs and landowners have taken in partnering with the new wind-farms at St. Leon and St. Joseph (and landing more than $500 million in new investment); the development of Minnedosa's $200 million ethanol plant, including the co-operation of local grain and canola suppliers; the prevalence of heat pumps being installed in rural areas (ex: Île-des-Chênes), as well as the enormous future opportunity On-Meter Finance offers to those using electricity, propane and oil for heat; the rapid conversion off coal by Manitoba's Hutterite colonies; and the research and development work currently going into developing biomass, biofuel and bioproduct applications.

Cleaner Transportation

It is in transportation that fossil fuels have forced Manitobans to pay the greatest cost, with rising global oil prices doubling Manitobans' bills, to $2 billion and more each year. This is money which simply leaves the Manitoban economy. The need for a long term transition off these fossil fuels is particularly underlined by the fact that every 20 cent per litre rise in the price of gasoline and diesel requires Manitobans to pay an extra $500 million – more than Manitoba Hydro's annual export earnings.

By using made-in-Manitoba biofuels and electricity to fuel its vehicles, Manitoba has begun to reclaim the billions of dollars flowing out of province, re-injecting them back into our local economy. Continuing to do so will create thousands of long term, sustainable, local jobs – while enabling more Manitoban families and businesses to regain control over their family budgets.

Homegrown Biofuels

Ethanol – a Cleaner Burning Fuel

Manitoba was home to Canada's first modern ethanol plant, at Minnedosa, in the early 1980s. After 2000, when oil prices rose and ethanol became cheaper to produce, Manitoba worked with industry to create an ethanol strategy designed to help grow local economic opportunities, increase energy security and reduce GHGs. Manitoba has since become a Canadian leader with *The Biofuels Act*, which mandated that 8.5 per cent of gasoline be replaced with ethanol. The province also created an eight year, declining incentive for new ethanol producers, to ensure there would be no impact on drivers at the pumps.

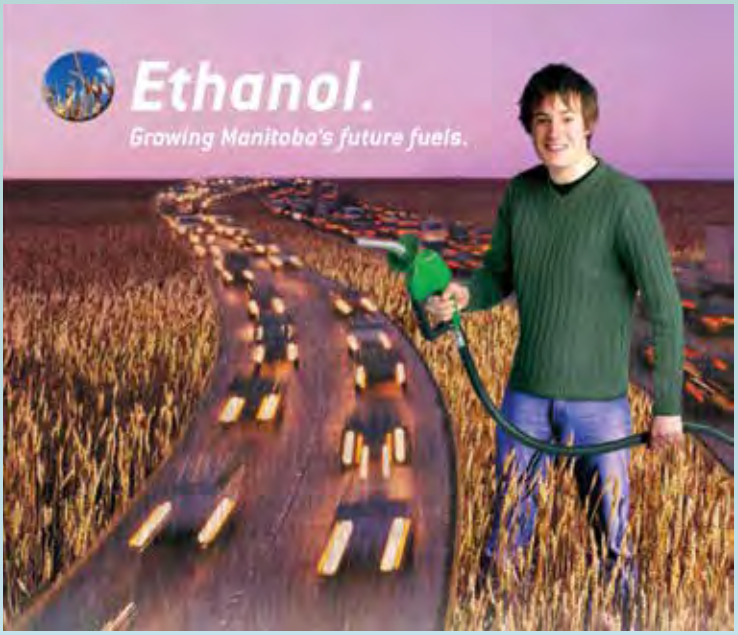
Husky's ethanol plant in Minnedosa produces 130 million litres of ethanol annually.

The results were impressive, and included:

- an investment of $200 million in the construction of Husky's new 130-million litres per year, world class, ethanol plant in Minnedosa
- the creation of a new market for 350,000 tonnes of Manitoba wheat and corn annually.
- the production of 130,000 tonnes of high protein distiller's grain (which livestock producers now use to replace imported soybean meal)
- the re-injection of $100 million that previously leaked away for gasoline payments
- a reduction in transportation emissions of more than 330,000 tonnes of GHG emissions per year

Biodiesel – a Cleaner Burning Fuel

Manitoba developed a strategy for biodiesel in 2005, which led to the creation of a biodiesel testing facility in Selkirk, incentives for producers and demonstration projects in Winnipeg school buses, trucks and underground mines. In 2009, Manitoba again led Canada by introducing its mandate of two per cent biodiesel.



Future Biofuel Technologies

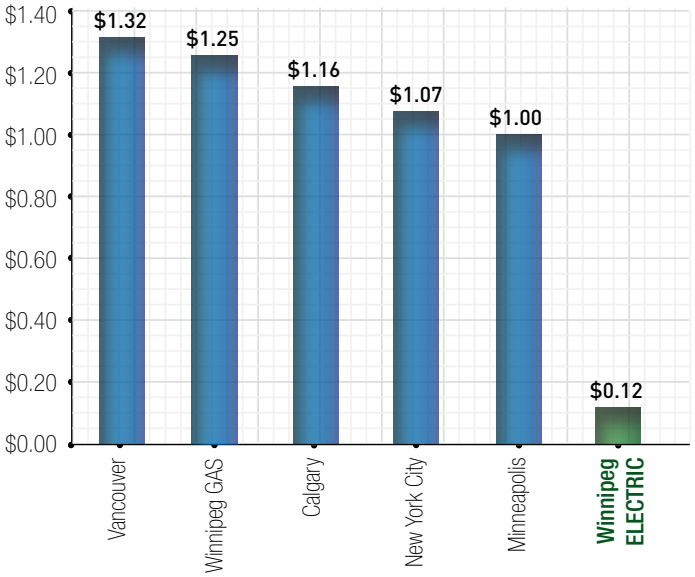
Combined use of these Manitoban biofuels now reduces gasoline and diesel imports by $100 million each year, and cuts GHGs by nearly 400,000 tonnes annually. The next step for the industry is the creation of advanced biofuels from feedstocks such as straw, crop residues, wood waste or algae. There are also new technologies being commercialized today that can produce next generation biodiesel with cold weather properties similar to conventional diesel. Manitoba also now possesses a well equipped biofuel tool kit to help support its development, including fiscal incentives, lab capabilities and mandates.

Today's Biofuel Priority Actions

Manitoba's investment in its biofuel industries over the past decade means that six per cent of our gasoline and diesel fuel is now derived from renewable sources. In the near future, biofuels could grow to supply up to 10 per cent of Manitoba's total liquid fuel consumption. Manitoba, in consultation with stakeholders, will pursue new production opportunities and increased biofuels content requirements. Manitoba will also look for opportunities to increase the production and use of second generation biofuels such as cellulosic ethanol and renewable diesel.

The Electric Transportation Revolution

The electrification of transportation has been described as, potentially, the greatest energy revolution in 100 years. Even though oil still contributes well over 90 per cent of all energy for vehicles and is more energy dense and easier to store, electricity itself has a strong set of advantages:



- Electricity can be made from more sources than oil, including from renewable sources.
- Almost every jurisdiction can make its own electricity.
- Electricity costs just a fraction of the price of gasoline.
- When made from renewable sources, electricity emits almost no air pollutants or GHGs.

As a result, electrified transport increasingly offers the world a way out of the energy insecurity, high prices, GHG emissions and economic damage of oil use. Driven in part by these forces, the major automakers have in recent years moved rapidly into this field, making a range of hybrid, plug-in hybrid electric vehicles and all electric vehicles commercially available to the public.

Technological Advances Ongoing

More hybrids and electric vehicles are forecast to be on North American roads in the medium to longer term, with the exact number in any given year heavily influenced by oil prices and battery progress. The major automakers and battery manufacturers have invested tens of billions in developing the new batteries, and have cut prices in half in just the past three years – and with a further halving forecast by 2017 to 2020. This progress means that, with each new model year, more Manitobans will find themselves entering a vehicle sales market with a greater range of hybrid, plug-in and all electric vehicle models, at lower cost and with improved performance. As their personal circumstances dictate, Manitobans who choose to access these vehicles will find the benefits available to them in Manitoba are particularly strong:

The Cost of Vehicle Fuel - At The Pump vs At The Plug

- Manitoban drivers will have North America's lowest-cost vehicle fuel – electricity from Manitoba Hydro – at approximately 12 cents per litre gasoline equivalent
- A young family shifting from two gasoline driven vehicles to two electric ones could therefore expect to save over $100,000 in vehicle fuel payments over their lifetimes.
- For Manitoba as a whole, a shift from gasoline to electricity in the decades to come will:
  - Re-inject a rising share of the $1 billion in gasoline bills back into Manitoba's economy – comparable to Manitobans receiving a $1 billion per year tax cut.
  - Create more than 10,000 new, long term jobs in the economy.
  - Reduce Manitoba's GHG emissions by three million to four million tonnes a year.
  - Convert Manitoba's number one energy weakness (the import of expensive fossil fuel) to its number one strength (its wealth of low cost, renewable electricity)

Switching from gasoline to electricity for vehicles would stop leaks of more than $1 billion from Manitoba's economy each year.

Manitoba's Advantage in Electric Vehicles

This opportunity also stands out for Manitoba because it has such strong assets in this sector:

- The province has an abundance of low cost, clean electricity. For example, given the much higher efficiencies of electric motors versus gasoline engines, a single 300 MW to 700 MW wind farm would provide enough electricity to shift every Manitoba passenger car and truck from gasoline to electricity.
- Manitoba has a prebuilt electric vehicle infrastructure of more than 500,000 plugs in our garages and parking lots. Now used for block heaters, they can also be used for recharging. If Manitoba had to build this infrastructure new (as others do), it would cost $1 billion.
- While others face cultural barriers to plugging in, Manitobans already have a well established plug in culture, driven by the need for block heaters during our winters.

Moving Towards Electrically Powered Vehicles

Manitoba has acted by creating plug in partnerships with automakers like Nissan, Toyota and Mitsubishi, Manitoba Hydro and academic institutions, to better demonstrate plug-in hybrid and electric vehicles under our climatic conditions and ensure that these options are available.

A new Electric Vehicle Technology and Education Centre (EV-TEC) was created at Red River College in Winnipeg, to demonstrate new plug-in hybrids and electric vehicles to Manitobans and train students for the future.

In 2011 Manitoba's Electric Vehicle Road Map identified ways to maximize out-of-the-gate use of Manitoba's $1 billion recharging infrastructure, identified issues around the integration of vehicle charging and the grid, and making links to northern vehicle cold weather testing in Thompson.

Every 20 cent per litre rise in the price of gasoline and diesel drains $500 million from Manitobans.

Today's Electric Vehicle Priority Actions

Building on what we've learned from our early demonstrations, plug in partnerships and work of the Electric Vehicle Advisory Committee – Manitoba will:

- Expand existing, and form new, plug-in partnerships.
- Actively promote at home charging, an option which already exists for 95 per cent of Manitobans; while working with Manitoba Hydro and other partners to ensure parking lots are capable of recharging vehicles, and providing incentives to install some Level-2 recharging systems.
- Expand fleet procurement by the province, the Crowns and others.
- Develop communication strategies to provide objective information to the public and corporations to help make informed electric vehicle purchase and operation decisions in the Manitoba context.
- Launch public participation campaigns to speed the adoption of new generation vehicles, spear headed by the Fossil Fuel Freedom program.

For Manitobans refilling with electricity, it costs just 12 cents for the equivalent of a litre of gasoline.

Hydrogen, Hybrid and Battery Powered Buses

Buses and heavy duty vehicles offer a special opportunity for hydrogen and battery power. This sector is especially significant to Manitoba, as Winnipeg is the bus manufacturing centre of North America. We are home to New Flyer Industries, the leading maker of transit buses, and Motor Coach Industries, the leader in inter city buses. New Flyer has emerged as the number one supplier of alternative fuelled buses, with hybrids, hydrogen, and most recently – in partnership with Mitsubishi Heavy Industries, the Province of Manitoba, Manitoba Hydro, and Red River College – electric buses.

Electric Bus Project – Showcase for North America

The new electric bus project will develop and demonstrate an advanced, battery electric, transit bus plus rapid charge technologies under Manitoba's highly variable climatic conditions. The $3 million project aims to validate the bus's operational capabilities and act as a showcase for potential markets. It has taken one year to develop the prototype bus (including integrating battery technologies from Mitsubishi) that will be followed by two years of operational testing.

Today's Alternative Powered Bus Priority Actions

Manitoba will continue to support development of the electric bus, and work with partners to expand the project into a multi-bus and charging system demonstration. Priority will be placed on seeking value added technology development and component manufacturing. The timing is right for such projects as US transit authorities are considering electric buses in tenders, albeit starting on a small scale. The pathway forward for this ground breaking technology was blazed by hybrid diesel/electric buses, considered cutting edge less than 10 years ago but now making up a significant portion of new bus sales throughout North America.

Hydrogen

In 2003, Manitoba launched its hydrogen strategy, leading to a Winnipeg demonstration of an advanced, fuel cell bus, as well as a bus with a hydrogen hybrid, internal combustion engine. Since then, research partnerships with regions such as Iceland have developed. As well, New Flyer Industries has gained considerable expertise in hydrogen technologies, supplying 20 fuel-cell buses for the 2010 Vancouver Olympics – buses that are still operating today.

❺ FREEDOM FROM FOSSIL FUELS

Over the coming years, a number of Manitobans will be among the first in the industrial world to live their lives without requiring substantial quantities of fossil fuels. Instead, they can meet the vast majority of their three core, daily, energy needs (for electricity, heat and transportation) by using clean, renewable energy and by being energy efficient – not by burning coal, natural gas, gasoline or diesel. These first fossil fuel free Manitobans will be pioneering a path that most nations are hoping their citizens will get to take in future decades – toward a daily life no longer dependent on fossil fuels.

These Manitobans will achieve fossil fuel freedom through a simple three-step process:

1. Their electricity from Manitoba Hydro will already be clean, more than 98 per cent or more fossil fuel free. It will supply their lighting, appliances and other power needs. A clean electricity supply, though difficult to obtain in most other nations, is already here for Manitobans.

2. Their heat will be provided – as it already is for thousands of Manitobans – through clean, renewable, energy systems (ex: heat pumps, biomass, solar), which eliminate the need for fossil fuels like natural gas. While all electric heat is also fossil free, heat pumps use 50 per cent to 70 per cent less electricity, so they're a more efficient choice.

3. The biggest step for most Manitobans will be in transportation. An option chosen by some will be to buy an electric or plug-in hybrid vehicle, which will shift their vehicle energy over to clean electricity, while cutting their gasoline use by 65 per cent to 100 per cent. Others may choose to cut their fossil fuel use by taking public transit, car pooling or ride sharing, while others opt for walking or cycling.

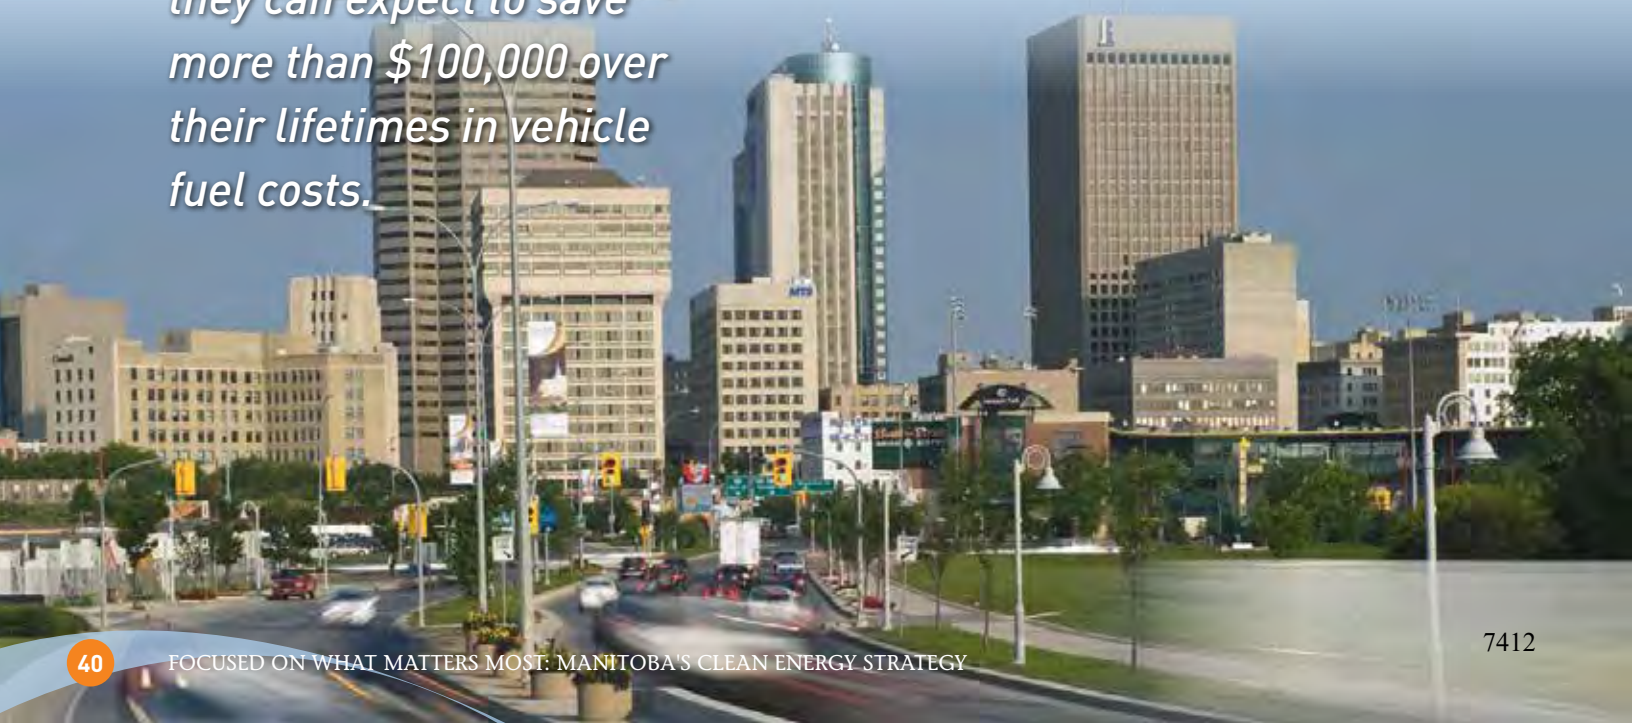
Manitoba currently has more than 500,000 plug in points in garages, parking lots and at businesses. This is a $1 billion infrastructure already in place.

Taken together, these Manitobans will have effectively reduced their use of fossil fuels by more than 90 per cent across the three major energy end uses. They will also have begun to generate a range of benefits for themselves, the environment and the Manitoban economy:

- By moving off gasoline, they will slash their pump price worries and gain the lowest cost vehicle fuel in North America – electricity from Manitoba Hydro at approximately the equivalent of 12 cents per litre.
- By changing to heat pumps and electric and plug-in hybrid vehicles, they will save $3,000 to $5,000 in fuel costs each year. Over a lifetime, this can reach to well over $100,000 per family.
- They will cut their direct GHGs to residual levels (zero to two tonnes.) This can be compared to today's families in North Dakota or Saskatchewan, many of whom emit 15 to 40 tonnes of GHGs a year by using coal fired power, gas heat and gasoline.

When a two gasoline driven vehicle family shifts to using two electric vehicles, they can expect to save more than $100,000 over their lifetimes in vehicle fuel costs.

Fossil Fuel Freedom – A Movement Towards a Healthy Future



Many nations can only set fossil fuel freedom as a visionary goal, for the years 2040 or 2050.

But in Manitoba, a significant number of its citizens can choose to achieve this freedom today. Any such transition, as we have seen, would require decades to move through a society's energy infrastructure. For example, our vehicle fleets alone requires 15 to 20 years to turn over; our furnaces and heating systems require 20 to 30 years; and our building stock and energy generating infrastructure can last another 50 to 100 years.

Nonetheless, for most Manitobans, the opportunity to move from conventional fossil fuel use to clean energy, and even on to fossil fuel freedom is increasingly a reality. More and more Manitobans are taking the quiet steps they need to ensure that their lives are less exposed to the risks and costs of fossil fuels.

And the reason Manitobans are so well positioned to make this transition, and able to consider it now, in an atmosphere free of any particular energy crisis, is because of the strong clean energy economy and infrastructure which we have come together to create, starting decades ago.

But today's good news is that for Manitobans, the fossil fuel free future starts here…and it starts now.

Today's Fossil Fuel Freedom Priority Actions

The province will support a Fossil Fuel Freedom campaign that will initially focus on families. It is expected that many companies, offices, farms and schools, etc. will want to follow in a similar fashion. The campaign will:

A. Create a public path open to all Manitobans, rather than a program designed just for a few. This will enable more and more families to participate, and reap the full benefits of lower bills, more local jobs and an improved environment.

B. Consist of three simple steps:

Step 1: Use clean electricity – a step Manitoba Hydro has already taken for you.

Step 2: Use a green heating system – such as heat pumps (or biomass or solar).

Step 3: Use clean transport – such as an electric or plug-in hybrid vehicle, public transit, car pooling or ride sharing, or active transportation methods like walking, skating and cycling.

C. Focus on promoting a positive, money saving path forward for households.

- Real world stories of fossil fuel freedom will be communicated to schools and the public, and may include tours as well as special technology demonstrations.

A plug-in hybrid can reduce the number of times you need to refill with gasoline to less than once every two months.

D. Connect to an online fossil fuel free social network, designed to support both early members, as well as to inform and engage those in the next wave who may be interested in joining.

- Families who participate in programs early on may wish to use the network to exchange experiences, discuss the process with experts, engage with those interested but who have not yet joined, and to organize peer-group activities.

E. Support these families through financial incentives and expert help.

- A number of organizations – the Manitoba government, Manitoba Hydro, private suppliers and retailers, universities etc. – already offer incentives and supports. These incentives will brought together (and can be topped up) through the Fossil Fuel Freedom campaign.

- Support from experts is also valuable to people who adopt new technologies early on. The province, Manitoba Hydro and other partners will make sure these families have access to services and expertise in plug-in hybrid and electric vehicles, heat pumps and home retrofits, through in-home visits, expert support and other assistance.

- For those at an earlier stage, partners can provide opportunities to see these new technologies demonstrated, or to speak directly with experts and participants.

CONCLUSION

Our energy future, in many ways, underpins our economic future. Managing the way we source, deliver and use energy in the years ahead will be key to growing our economy, keeping energy affordable, meeting the province's commitments to sustainability and reducing our impact on global climate change. Manitoba's strategic direction is clear – by seizing our own Manitoba domestic energy advantages we can reduce our exposure to fossil fuels while expanding our clean energy resources, all across the electricity, heat and transportation sectors.

Capturing the economic and environmental opportunities this clean energy strategy provides will require innovation and commitment, as well as a willingness to adjust as our energy options evolve. Most importantly, we need to work together to reach our goal.

With the co-operation and participation of the public sector, the private sector, our farms and our schools, industry experts and informed citizens, Manitoba is leading the way into a clean energy, and – for some pioneers – into a fossil fuel free future.

Although the goal of building on our renewable energy advantages is long term in nature, this strategy will be reviewed and updated on a regular basis and progress reports provided annually. As energy technologies evolve, environmental drivers intensify, and market conditions change, it will be important to be flexible enough to adapt as necessary.

It is equally important that Manitobans have an opportunity to provide input into this living strategy and therefore it will remain open to reflect the views of Manitobans.

To provide advice and comments about the Manitoba Clean Energy Strategy please respond in writing to:

APPENDIX I – WHAT IS ENERGY?

The term energy comes from the ancient Greek energeia, meaning activity or to cause activity. Literally, energy is what makes things work, and joules (J) are the official units of energy, whatever the form. Abbreviations are used for short form:

1 kilojoule (kJ) = 1,000 J
1 megajoule (MJ) = 1,000,000 J
1 gigajoule (GJ) = 1,000,000,000 J

Power is defined as the flow of energy, and watts (W) are the official units of power.

Watts and joules are related in that:

1 W = 1 J per second

Natural gas is sold in units of cubic metres (m3) (at standard temperature and pressure conditions) with a typical energy content of 37.8 MJ per m3.

Gasoline and diesel liquid fuels are sold in volumetric units of Litres (L) referenced to a standard temperature.

Gasoline typically has an energy content of about 35 MJ/L

Diesel fuel typically has an energy content of about 37 MJ/L

Vehicle fuel consumption is typically expressed in units of Litres per 100 kilometre (L/100 km). Lower numbers are better in this case.

Fuel economy in the United States is expressed in units of miles per U.S. Gallon (MPG). Higher numbers are better in this case. The conversion between L/100 km and MPG is more complicated given they use different units and are inverse. A fuel consumption of 15 L/100 km equates to fuel economy of 16 MPG.

1 U.S. Gallon = 3.78 L

1 mile = 1.6 km

Electricity in terms of energy is sold in units of kilowatthours (kWh). This has been used for convenience and is an official unit for electricity.

There is a simple relationship to official energy units as follows:

1 kWh = 3,600,000 J = 3.6 MJ

APPENDIX II – ENERGY ABREVIATIONS

List of Commonly-used Acronyms

AT	active transportation
BEEP	Brandon Energy Efficiency Project (social enterprise organization)
BUILD	Building Urban Industries for Local Development (social enterprise organization)
CAFE	U.S. Corporate Average Fuel Economy standard
CEEA	Canadian Energy Efficiency Alliance
DC	direct current
ESA	*Energy Savings Act*
EV	electric vehicle
EVTEC	Electric Vehicle Technology and Education Centre (at Red River College)
FFF	fossil-fuel free family
GDP	gross domestic product
GEMTC	Green Energy Manufacturing Tax Credit

Exporting 'Manitoba's oil' down south

HYDROELECTRIC SITE WILL MAKE PROVINCE BILLIONS IN REVENUE

By: Bruce Owen
Posted: **05/26/2011 1:00 AM**

It's called Keeyask and, if all goes according to plan, the cost will be equivalent to building 18 Canadian Museum for Human Rights, but in northern Manitoba, not The Forks.

Or the cost of 29 new football stadiums, but on the Nelson River, not the University of Manitoba.

In other words, it's big.

And it will be built to supply more hydroelectric power to the United States, which because of new environmental laws, are looking north to Manitoba to supply clean energy for years to come.

Keeyask's construction, already years in the works, was put on the front-burner Wednesday when Premier Greg Selinger announced a combined $4 billion deal to sell 475 megawatts of hydro power to Minnesota and Wisconsin starting in 2015.

"This is the largest dollar sale of exports that we've had in the history of Manitoba Hydro in absolute dollar terms," Premier Greg Selinger said at a news conference at Hydro's downtown headquarters. "We like to think of it as Manitoba's oil, but more sustainable and certainly greener as well."

Hydro's export deals will earn the province $21 billion over the next 20 years as clean energy from Manitoba replaces old coal burning plants and as some U.S. states pass laws that the power they use has to come from renewable resources.

The Opposition Progressive Conservatives dismissed the announcement as a rehash of an April 17, 2008 press release by former Premier Gary Doer, and used it to buttress their stance that Bipole III transmission line should not be built down the west side of the province.

"I think it's just further confirmation that the shorter, cleaner, east side route is the way to go," PC Leader Hugh McFadyen said. "Minnesota and Wisconsin are to the south and east of Manitoba. The most direct route to those markets is down the east side by a significant amount."

Selinger said the province has no intention of reversing its stance on bipole as that would open up a big can of worms.

"This would allow us to be identified as a premium product," he said of the province's plan to protect its wilderness. "We don't want to put that at risk by putting a bipole through the boreal forest and the UNESCO World Heritage site. That would generate additional controversy."

He also said Hydro continues to work on another power sale to Wisconsin. If that 500-megawatt deal happens, it would lead to the construction of the Conawapa Generating Station. If approved, it will be Manitoba Hydro's biggest power dam and take at least eight years to build.

Last year Hydro signed a deal worth $3 billion to sell between 375 and 500 megawatts to Xcel Energy of Minneapolis for 10 years starting in 2015.

The Minnesota Power deal comes as Manitoba's Public Utilities Board weighs the risks of Hydro spending $20 billion over the next decade to build Keeyask and Conawapa, plus Bipole III. That hearing continues into next month.

The two dams would add another 1,930 megawatts of electricity to Hydro's system to use in the growing domestic market and to export more to Minnesota and also Wisconsin. Hydro's new $1.3 billion Wuskwatim project on the Burntwood River is to generate 200 megawatts starting next year.

bruce.owen@freepress.mb.ca

What's Keeyask?

IT'S the next hydroelectric generation site to be built under Manitoba Hydro's plan to export more power to the United States and Saskatchewan.

It's 725 kilometres northeast of Winnipeg on the lower Nelson River.

It will cost $5.6 billion to build and will produce 695 megawatts of power, the fourth largest of Hydro's generating stations. (Hydro operates 15 dams).

Work to build it started several years ago, the most important aspect being the signing of the Joint Keeyask Development Agreement May 29, 2009.

It outlines the partnership arrangements for the First Nation's participation: Fox Lake Cree Nation, Tataskweyak Cree Nation, War Lake First Nation and York Factory First Nation.

Market forces weighing on hydro exports

By: Dennis Woodford
Posted: **04/5/2016 4:00 AM**

OPINION

The provincial government likes to describe our hydroelectric resources as "Manitoba's oil," an export commodity that can return dividends from cross-border sales. That has pushed the early construction of hydroelectric plants that will produce power Manitobans won't need until into the 2030s. We are not alone in this, B.C. Hydro is doing the same, with its Site C on the Peace River.

But at what cost to ratepayers? Manitoba Hydro's new Keeyask generating station will produce power at a cost of more than 12 cents per kilowatt-hour. Meanwhile, the average daytime spot-market price of electricity in our export target of Minnesota was recently posted at 2.05 cents per kwh.

Why is the Minnesota electricity spot market price so low? It competes on the market with natural gas, the price of which has been dropping steeply. The average futures price of natural gas last week was US$1.92 per million British thermal units; in 2006, it was more than US$7 per million BTU.

What do we do about this dilemma? Do we push on with Bipole III and Keeyask in anticipation that one year they might become economical? Or, rather, should we halt construction, do a detailed review, and determine whether to put the projects on hold on the possibility that the market will rebound some day?

Bloomberg Business on March 11 reported that in 2007, Canadian natural gas producers met 16 per cent of U.S. demand. In 2014, it had slipped to less than 10 per cent. Given that, it seems spot market electricity prices, affected by natural gas prices, will not increase significantly if at all over the next decade. The falling costs of wind, solar and energy storage will also play a significant role in keeping electricity prices from rising to where they would have to be for Keeyask and Bipole III to be cost effective, any time in the next decade or two.

Manitoba Hydro is working with Minnesota to build a new transmission line into the United States, but mainly with an eye to sell our power south. It may well be more profitable for Hydro ratepayers if it were used to import low-cost Minnesota electricity, so we could put off building Keeyask and Bipole III.

The premiers of Manitoba and B.C. have asserted that sending the hydroelectricity of their new plants into Alberta could replace a lot of the coal-fired power in that province, including to process Fort McMurray's oilsands. But a Canadian Energy Research Institute report in January revealed that Alberta can replace its coal-fired generators with what's called combined-cycle natural gas generators. They would emit half the carbon of the coal generators, at a cost of 5.7 cents/kwh. The same report noted hydroelectricity from Manitoba to Fort McMurray would be 12.4 cents/kwh, and Site C in B.C., at 14 cents/kwh. No wonder Alberta Premier Rachel Notley is not jumping to sign a deal with either province.

There is a new world confronting power producers and buyers, with alternatives emerging to compete with traditional sources of energy, small grids to transmit it and environmental pressures that could change the game. Manitoba Hydro and the provincial government should take a step back, halt the construction of Keeyask and Bipole III and ask for an independent review by experts and determine what's best for Manitobans to keep their hydro rates low.

Dennis Woodford was a transmission planning engineer at Manitoba Hydro for 15 years and now is president of Electranix Corporation.

Tab 69

Terms of Reference - Needs For and Alternatives To (NFAT) Review

NFAT review for Manitoba Hydro's proposed preferred development plan for the Keeyask and Conawapa Generating Stations, their associated domestic AC transmission facilities and a new Canada-USA transmission interconnection

INTRODUCTION

On January 13, 2011, the Government of Manitoba notified Manitoba Hydro (Hydro) of its intention to carry out a public Needs For and Alternatives To (NFAT) review and assessment of the corporation's proposed preferred development plan (Plan) for major new hydro-electric generation and Canada-USA interconnection facilities using an independent body.

On November 15, 2012 the Minister of Innovation, Energy and Mines announced that the Government of Manitoba had asked the Manitoba Public Utilities Board (PUB) to conduct the NFAT for the Keeyask and Conawapa Generating Stations and their associated transmission facilities. This document, including Appendix A, outlines the Terms of Reference for the NFAT.

THE PLAN

Hydro's Plan is intended to meet a growing provincial demand for electricity and take advantage of opportunities to export power to US customer utilities. The Plan includes the Keeyask and Conawapa Generating Stations, their associated domestic AC transmission facilities and a new Canada-USA transmission interconnection. Hydro has stated that its Plan is being brought forward now to take advantage of the proposed Canada-USA interconnection and long-term firm export sale opportunities that occur rather infrequently. Hydro's Plan is dependent upon developing a new transmission interconnection into the USA and entering into long-term firm export sales with US-based electric utilities Minnesota Power and Wisconsin Public Service.

Hydro asserts that the Plan will provide significant benefits to Manitobans. Hydro also asserts that the value proposition of its Plan is justified on a very broad basis, taking into consideration inherent uncertainties that exist over a reasonable range of future possible critical inputs into its business case, and that it is the best development option when compared to alternatives.

MANDATE

The NFAT will be conducted under the authority of Section 107 of *The Public Utilities Board Act* ("The PUB Act"). PUB members designated by the Chair to conduct the NFAT under section 15(6) of The PUB Act will constitute the NFAT Panel (the "Panel"). Panel members will exercise their duty to conduct the assigned NFAT in accordance with The PUB Act and these Terms of Reference.

For greater certainty, in conducting the NFAT, the Panel members who are designated by the Chair to conduct the review:

(a) may hear evidence *in camera* for the purpose of protecting Commercially Sensitive Information as defined in Appendix A, which forms a part of these Terms of Reference;

(b) may exercise discretion over the access of any person to Commercially Sensitive Information; and

(c) shall follow the Rules of Practice and Procedure of the PUB, as amended from time to time, if not otherwise dealt with under these Terms of Reference.

At the completion of its review, the Panel will provide a report to the Minister responsible for the administration of *The Public Utilities Board Act* (currently the Minister of Healthy Living, Seniors and Consumer Affairs) no later than June 20, 2014. The report will include recommendations to the Government of Manitoba on the needs for Hydro's preferred development Plan and an overall assessment as to whether or not the Plan is in the best long-term interest of the province of Manitoba when compared to other options and alternatives.

PUBLIC PARTICIPATION

The public will be encouraged to provide input and comment on the Plan as part of the NFAT.

SCOPE OF THE NFAT REVIEW

The Panel will review and assess the needs for and alternatives to Hydro's Plan. Its assessment will be based upon the evidence submitted by Hydro, intervenors and independent expert consultants used by PUB to assist in the NFAT. The Panel's report to the Minister will address the following items:

1. An assessment as to whether the needs for Hydro's Plan are thoroughly justified, and sound, its timing is warranted, and the factors that Hydro is relying upon to prove its needs are complete, reasonable and accurate. The assessment will take the following factors into consideration:
    a. The alignment of the Plan to Hydro's mandate, as set out in Section 2 of *The Manitoba Hydro Act*.
    b. The alignment of the Plan to Manitoba's Clean Energy Strategy and the Principles of Sustainable Development as outlined in *The Sustainable Development Act*.
    c. The extent to which the Plan is needed to address reliability and security requirements of Manitoba's electricity supply.
    d. The reasonableness, thoroughness and soundness of all critical inputs and assumptions Hydro relied upon for its justification of its needs. This should include Hydro's planning load forecast and future load scenarios, its demand and supply analysis, export expectations and commitments, and demand side management and conservation forecasts.

2. An assessment as to whether the Plan is justified as superior to potential alternatives that could fulfill the need. The assessment will take the following factors into consideration:

    a. If preferred and alternative resource and conservation evaluations are complete, accurate, thorough, reasonable and sound;
    b. The alignment of the Plan and alternatives to Manitoba's Clean Energy Strategy, *The Climate Change and Emissions Reduction Act* and the Principles of Sustainable Development as outlined in *The Sustainable Development Act*;

c. The accuracy and reasonableness of the modeling of export contract sale prices, terms, conditions, scheduling provisions, export transmission costs, and the reasonableness of projected revenues;
d. The reasonableness of forecasted critical inputs including construction costs, opportunity export revenues, future fuel prices, electricity market price forecasts, the determinants of those values, and export volumes;
e. The reasonableness of the scope and evaluation of risks and the benefits proposed to arise from the development and the reasonableness and the reliability of Hydro's interpretation of the most likely future outcomes as a result of climate changes, interest rate fluctuations, export market prices, domestic load fluctuations, droughts, competing technologies, fuel prices, carbon pricing, technology developments, economic conditions, Hydro's transmission positions and other relevant factors;
f. The impact on domestic electricity rates over time with and without the Plan and with alternatives;
g. The financial and economic risks of the Plan and export contracts and export opportunity revenues in relation to alternative development strategies;
h. The socio-economic impacts and benefits of the Plan and alternatives to northern and aboriginal communities;
i. The macro environmental impact of the Plan compared to alternatives;
j. If the Plan has been justified to provide the highest level of overall socio-economic benefit to Manitobans, and is justified to be the preferable long-term electricity development option for Manitoba when compared to alternatives.

Independent Expert Consultants

The Panel shall establish a process for the thorough review of any information that the Panel determines to be relevant to the conduct of the NFAT, including relevant Commercially Sensitive Information, as defined in Appendix A, subject to these Terms of Reference.

The Panel may use one or more independent expert consultant(s) for the purpose of the NFAT. In addition to such other questions and issues as the Panel may determine they should examine, the independent expert consultant(s) shall be expected to critically examine the following:

(a) the high level forecasts of export revenues that are filed by Hydro and whether the forecasts appropriately and accurately reflect the export contracts, including Commercially Sensitive Information.

(b) the accuracy and reasonableness of Hydro's approach to producing an assessment of financial risks (including drought), the assessment of which is derived using Commercially Sensitive Information;

(c) the appropriateness and correct application of methodologies that cannot be publicly disclosed by MH because they contain Commercially Sensitive Information, such as whether Hydro's approach to comparing generation sequences follows sound industry practice;

(d) whether high level summaries filed by Hydro of Net Present Values and Internal Rates of Return which are derived from Commercially Sensitive Information reflect sound assumptions and calculations; and

(e) the accuracy and soundness of Hydro's calculation of a consensus forecast of future market prices for electricity and fuels which is derived from Commercially Sensitive Information.

The PUB shall hire the independent expert consultant(s).

The independent expert consultant(s) shall provide a report(s) to be filed in evidence on the public record, which shall contain their analysis of the submissions filed by Hydro, with sufficient information to satisfy the Panel that the review was conducted with due diligence. The report(s) shall not draw conclusions as to the needs for or alternatives to the Plan, which is the role of the Panel.

The independent expert consultant(s) shall be available for cross-examination at the public hearing, and shall be available as a resource to legal counsel for registered intervenors as deemed necessary by the PUB to prepare for the cross-examination of Hydro witnesses on Commercially Sensitive Information.

The independent expert consultant(s) may also provide such advice to the Panel, and file such report(s) with the Panel *in camera*, that contain, reference, or analyse Commercially Sensitive Information in sufficient detail to satisfy the Panel. Cross-examination of the independent expert consultant(s) on such issues shall be permitted *in camera.*

The independent expert consultant(s) shall not quote in their publicly filed report(s) Commercially Sensitive Information or information that would enable a third party to reverse-engineer Commercially Sensitive Information ("reverse-engineer" means to discover, synthesize or otherwise recreate the Commercially Sensitive Information following a detailed examination). No public cross-examination of the independent expert consultant(s) shall take place with respect to Commercially Sensitive Information. The independent expert consultant(s) will be required to execute a non-disclosure agreement satisfactory to Hydro and the Panel.

NOT IN SCOPE

The following items are not in the scope of the NFAT:

- The Bipole III transmission line and converter station project;
- The Pointe Du Bois project;
- The commercial arrangements between Hydro and its aboriginal partners for the development of the proposed hydro-electric generating facilities (the impacts of these are included in the cost of the projects that are part of the Plan);
- The environmental reviews of the proposed projects that are part of the Plan, including Environmental Impact Statements (these will be conducted through individual processes by the Manitoba Clean Environment Commission ("CEC"), and where possible the impacts of the matters to be considered by the CEC are included in the costs of the projects that are part of the Plan);
- Aboriginal consultation pursuant to Section 35 of the *Constitution Act* (this is conducted as a separate Crown-Aboriginal consultation process);

- Any past Hydro development proposals or government assessments of past development proposals, including past NFATs;
- Historic environmental costs.

Appendix A

PROVISIONS FOR THE PROTECTION OF COMMERCIALLY SENSITIVE INFORMATION:

Transparency

The Panel is directed to conduct the NFAT in a transparent and public process. However, in conducting the NFAT, the Panel is to ensure adequate protection of any information the disclosure of which may reasonably be expected to cause undue financial loss to Manitoba Hydro ("Hydro") or any of its contractual counterparties or to harm significantly Hydro's or its contractual counterparties' or domestic customers' competitive position, including, but not limited to, any sections of the following documents containing such information (collectively, "Commercially Sensitive Information"):

(a) any and all export contracts and term sheets now or hereafter in existence for the purchase and sale of power and energy entered into between Hydro and its customers in the United States of America, including but not limited to the export contracts and term sheets commonly described as follows: Minnesota Power 250 MW Energy Exchange Agreement; Minnesota Power 250 MW Power Sale Agreement; Wisconsin Public Service 100 MW Power Sale Agreement; Wisconsin Public Service 108 MW Energy Sale Agreement; Wisconsin Public Service Term Sheet, Northern States Power 375/325 MW System Power Sale Agreement; Northern States Power 125 MW System Power Sale Agreement, and Northern States Power 350 MW Seasonal Diversity Agreement (collectively, "Export Contracts");

(b) the internal, non-public load forecast prepared by Hydro on an annual basis (collectively, "Load Forecast"); and

(c) the Hydro document dated September 24, 2010 titled "THE 2010/11 POWER RESOURCE PLAN, Report PPD #10-07" and any further existing or future power resource plans hereinafter developed by Hydro (collectively, "Power Resource Plan")

Document Filings and Evidence

In conducting the NFAT, the Panel shall be able to require the production, from Hydro, of any documents and other such evidence as the Panel determines to be relevant to the conduct of the NFAT within the scope of the Terms of Reference from the Province of Manitoba. The procedures for filings and evidence shall be as set out below:

(a) Public Filings

Any documents that do not contain Commercially Sensitive Information are to be filed on the public record. As part of its NFAT submission Hydro shall file on the public record copies of its Export Contracts, Load Forecast and Power Resource Plan, with details considered by Hydro to be Commercially Sensitive Information redacted.

To the extent that information necessary for the conduct of the NFAT cannot be made public due to the presence of Commercially Sensitive Information, Hydro shall file on the

public record high level summaries and reports that incorporate the relevant information, at a level of summary and aggregation which will not disclose Commercially Sensitive Information.

Any evidence before the Panel shall be public, other than evidence with respect to Commercially Sensitive Information, which testimony shall be received in camera as further described in (b) below. To the extent that it deems practical, the Panel shall limit the scope of *in camera* proceedings so that the major issues in the NFAT review can be canvassed and discussed in public.

(b) Confidential Filings

Any documents that the Panel determines to be relevant but that contain Commercially Sensitive Information are to be filed with the Panel in confidence in unredacted form, including unredacted copies of the Export Contracts, Load Forecast and Power Resource Plan.

On an *in camera* basis, the Panel may:

i) review the complete, unredacted versions of Hydro documents that contain Commercially Sensitive Information; and

ii) permit evidence with respect to Commercially Sensitive Information.

Access to* In Camera *Evidence

Based on the *in camera* review, the Panel may choose to publish findings and conclusions about export revenues, forecast market prices and the like, to inform the public discussion and serve as inputs to further analysis and review by participants at the public hearing, or it may choose to reserve comment until the conclusion of the hearing.

The documents filed and evidence adduced *in camera* shall not be made public, other than through the high-level summaries as described above, and shall only be disclosed to or shared with the following persons, on the terms and conditions as noted below:

1. Members of the Panel, the Board's Executive Director and Board staff may review Commercially Sensitive Information and participate in the *in camera* process for the purpose of carrying out their specific duties with respect to the NFAT without having to sign an undertaking or a non-disclosure agreement.

2. Legal counsel of record of the Board and counsel for registered interveners may review Commercially Sensitive Information and participate in the *in camera* process upon execution of an undertaking to the Panel in a form agreeable to the Panel and Hydro.

3. Any independent consultant(s) appointed by the Panel and any non-staff Panel advisors with a need to know, as determined by the Chair, may review Commercially Sensitive Information and participate in the *in camera* process upon execution of a non-disclosure agreement in a form agreeable to the Panel and Hydro.

Subject to the following dispute resolution provision, the Panel will not publish Commercially Sensitive Information in Orders or other public documents or include information that would enable a third party to reverse engineer Commercially Sensitive Information. The Panel will establish procedures to protect the documents and evidence from inadvertent disclosure and will instruct each individual who receives access to do the same. If the Panel so chooses, it may solicit Hydro's comments on particular documents that are in the process of being prepared in the interests of avoiding inadvertent disclosures.

Dispute Resolution Regarding Commercially Sensitive Information

If, during the in camera review, the Panel identifies any Commercially Sensitive Information, other than third party proprietary price forecasts, which the Panel considers would be beneficial to place on the public record at the NFAT, the Panel may refer those matters in dispute to a neutral third party to be agreed upon between the Panel and Hydro. The third party will receive written submissions and make a decision thereon, on an expedited basis, which decision will be given effect to in the proceedings before the Panel. In arriving at any such decision, the neutral third party shall specifically take into account the general undesirability of making disclosure of any Commercially Sensitive Information that may have been furnished to Hydro by third parties, in reliance upon contractual commitments by Hydro to maintain confidentiality, and the importance of maintaining such confidences.

ALLIED HYDRO COUNCIL

The Allied Hydro Council of Manitoba (AHC) is a Council of 17 construction and trades unions that build hydro projects across Manitoba under the guidelines and standards set out in the Burntwood Nelson Agreement (BNA) (https://www.hydro.mb.ca/projects/bna_agreement.pdf). The AHC and Manitoba Building Trades share 12 member unions that are founding partners of both Councils.

Since the late 1960s, the BNA has been the governing collective agreement for the AHC and the Hydro Projects Management Association and is the longest continuous agreement of its kind in Canada.

Under the BNA, tens of thousands of union members in Manitoba have partnered to construct major Hydro installations, mostly in remote northern regions. These projects have placed Manitoba as the leading producer of clean, renewable energy and include:

- Kettle Rapids Generating Station
- Jenpeg Generating Station
- Long Spruce Generating Station
- Limestone Generating Station
- Henday Convertor Station
- Wusqwatim Generating Station
- Keeyask Generating Station (http://keeyask.com/)
- Keewatinohk Convertor Station

AHC and its member unions are proud of their track record of excellence. Working in remote northern locations on a year-round basis is never easy, but it is rewarding – the legacy of these projects will benefit Manitoba for generations to come.

Presently, the AHC is actively engaged in the latest iconic and historic Manitoba Hydro projects at Keeyask (http://keeyask.com/) and Keewatinohk, both on First Nations lands. The AHC believes that a skilled northern Aboriginal workforce must be an enduring legacy of these projects. To that end, they are an active partner in training residents of First Nations communities and generating sustained employment for Aboriginal workers in the north.

For more information about ongoing Keeyask and Keewatinohk projects, please contact the AHC at info@mbtrades.ca (mailto:info@mbtrades.ca) or call 204.956.7425.

The Burntwood/Nelson River Agreement

In October 2005, Manitoba Hydro and the Allied Hydro Council, a joint council of unions representing project construction workers, agreed to renew the Burntwood Nelson Agreement (BNA) – a no strike/no lockout bargaining agreement covering any major northern hydroelectric projects commencing in the next 10 years.

The BNA, which is an extension of a collective bargaining agreement first negotiated in the late 1960s, sets out hiring preferences – including priority for northern Indigenous residents – as well as procedures for adjusting wages and certain benefits during the life of the agreement. The agreement also contains provisions relating to the recruitment, referral, placement, training and retention of northern Indigenous people and facilitates the hiring of northern Indigenous people by northern Indigenous businesses.

BETWEEN:

HYDRO PROJECTS MANAGEMENT ASSOCIATION

(hereinafter called the "Association")

OF THE FIRST PART

And

THE ALLIED HYDRO COUNCIL OF MANITOBA

(hereinafter called the "Council")

OF THE SECOND PART

CONSTRUCTION & SPECIALIZED WORKERS' UNION OF NORTH AMERICA, and Local Union 1258 of this International Union.

INTERNATIONAL UNION OF OPERATING ENGINEERS, and Local 987 of this International Union.

INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, WAREHOUSEMEN AND HELPERS OF AMERICA, and Local Union 979 of this International Union.
B
UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, and Local Union 343 (Carpenters) of this International Union and,

Local Union 1443 (Millwrights, Machine Erectors, Industrial Mechanics Maintenance) of this International Union.

INTERNATIONAL UNION OF PAINTERS & ALLIED TRADES, GLASS-WORKERS DIVISION, SIGNWORKERS & CARPET & FLOOR TILE LAYERS DIVISION, and Local Union 739 of this International Union.

INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, and Local Union 99 of this International Union.

INTERNATIONAL UNION OF BRICKLAYERS AND ALLIED CRAFTWORKERS, and Local Union No. 1 of this International Union.

SHEET METAL WORKERS INTERNATIONAL ASSOCIATION, and Local Union 511 of this International Union.

INTERNATIONAL BROTHERHOOD OF BOILERMAKERS, IRON SHIPBUILDERS & HELPERS OF AMERICA, and Local Union 555 of this International Union.

INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL, ORNAMENTAL & REINFORCING IRONWORKERS, and Local 728 of this International Union.

INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, and Local Union 2085 of this International Union.

UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES OF THE PLUMBING AND PIPEFITTING INDUSTRY OF THE UNITED STATES AND CANADA, and Local Union 254 of this International Union.

OPERATIVE PLASTERERS & CEMENT MASONS INTERNATIONAL ASSOCIATION, Local Union 222. See Letter of Agreement No. 9.

CANADIAN OFFICE AND PROFESSIONAL EMPLOYEES UNION, Local Union 342.

UNITE HERE, Local Union 206 .

INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS, and Local 102 of this International Union.

Each being a Trade Union within the meaning of the "Labour Relations Act."

OF THE THIRD PART

And

_____
(hereinafter called the "Contractor")

OF THE FOURTH PART

A G R E E M E N T

WHEREAS Manitoba Hydro is undertaking certain construction work in Manitoba (hereinafter called "the Project");

AND WHEREAS the Contractor is engaged or is about to be engaged in on-site construction work in connection with the Project and is a member of the Association and has designated the Association as its exclusive agent for negotiating and administering this Collective Bargaining Agreement (hereinafter referred to as this Agreement);

AND WHEREAS the Association has recognized the formation of the Council by the International Unions and has agreed to deal with the Council as the exclusive agent of the Unions for negotiating, executing and administering this Agreement;

AND WHEREAS the Council has recognized the Association and has agreed to deal with the Association as the exclusive agent of the Contractor for negotiating and administering this Agreement;

AND WHEREAS the Unions have designated the Council as their exclusive agent for negotiating, executing and administering this Agreement;

AND WHEREAS the Council and the International Unions have designated the Local Unions as having jurisdiction in their respective trades for the Project;

AND WHEREAS the Association, the Council, the Contractor and the Unions are desirous of carrying out the work associated with the Project in a harmonious and peaceful manner without any slowdowns, work stoppages, strikes or lockouts and ensuring a peaceful resolution of any and all grievances, disputes, and differences that may arise between them;

AND WHEREAS the Council and the Association have exchanged their respective constitutions and by-laws for review each by the other, receipt of which is hereby acknowledged, each by the other;

AND WHEREAS the parties intend to avoid unnecessary expense to the Project or to the general public, by prohibiting slowdowns, the forcing of overtime, the use of standby crews, spread work policies and other objectionable practices;

AND WHEREAS the parties are desirous of maximizing the training and employment opportunities of Northern Aboriginals;

AND WHEREAS the parties have agreed that the foregoing recitals together with the Schedules, Appendices, and Letters of Agreement hereto shall be interpreted as forming part and parcel of this Agreement;

NOW THEREFORE THE PARTIES FURTHER AGREE AS FOLLOWS:

Where the words "International Unions" are used they shall mean the International Unions as listed above as parties hereto and where the words "Local Unions" are used they shall mean the Local Unions as listed above as parties hereto.

Where the word “employee” is used, it shall mean a person employed on the Project by a Contractor or Sub-contractor in one of the classifications set out in the Appendices.

Where the word Manitoba Hydro is used, it shall mean the Manitoba Hydro-Electric Board, or the Manitoba Hydro Electric Board and its equity partners, where applicable.

ARTICLES

ARTICLE 1 - TERM OF AGREEMENT

1.1 This Agreement shall be effective on the date of signing and shall continue in effect until:

a) 2017 12 31;

OR

b) Twelve (12) months following the commissioning of the last generator of a hydro electric generating station included under Article 2.1(a) and/or 2.1(b) of this Agreement;

OR

c) Twelve (12) months following the commissioning of the work set out in Article 2.1(c).

which ever date occurs last.

1.2 This Agreement may be terminated, extended or amended, by mutual agreement of the Parties.

ARTICLE 2 - SCOPE AND RECOGNITION

*** Note – See Letter of Agreement #6, for additional information regarding Article 2.2 e) and i)
*** Note – See Letter of Agreement #34, for additional information regarding Article 2, Section 2.2 (Commissioning exemption)

2.1 The Association recognizes the Council as the exclusive bargaining agent for all employees engaged in contracted on-site construction work and services related to:

a) The construction of any new hydro electric generating station including any new northern converter station, and any switchyards and collector lines associated with either:

i) On the Nelson River;

ii) On the Burntwood River, and;

b) Any extension to the Kelsey Generating Station, and;

c) Any extension of the Henday Converter Station associated with the construction of a new hydro-electric generating station, and;

d) The construction of a new generating station, including switchyard and collector lines, at Notigi; provided the first tender call for contracted on-site construction work (excluding exploration work) for each applicable new generating station or converter station and for the extension to the Kelsey Generating Station, respectively, has been issued by Manitoba Hydro on or before 2015 12 31.

For the purposes of this Article, the construction of switchyards and collector lines shall include the following:

- for a new northern Hydro generating station, an AC Switchyard includes all work performed between the take-off structures terminating the AC transmission lines from the generating station and the take-off structures terminating the AC transmission lines to Manitoba Hydro's AC transmission systems; and

- for a Northern AC/DC converter station, a DC switchyard includes all work performed between the DC wall bushings of the converter building and the take-off structures terminating the DC transmission lines to Manitoba Hydro's DC transmission system and an AC switchyard includes all work performed between the take-off structures terminating the AC transmission lines for Manitoba Hydro's AC transmission system and the AC wall bushings of the converter building; and

- the construction of collector lines is defined as all work performed between the AC wall bushings at the generating station and the take-off structures terminating

the AC transmission lines from the generating station at the switchyard. Construction of collector lines shall be governed by Letter of Agreement No. 7.

e) Exploration work that is tendered in relation to a generating or converter station included under 2.1 a), b), c), or d), provided the exploration work is tendered subsequent to the first tender call for on-site construction work;

f) The construction of an all weather road to the site of the Wuskwatim Generating Station, the Gull Generating Station, or to the Kelsey Generating Station or any upgrading of the railspur to Kelsey if either the road or the railspur upgrading is associated with an extension to Kelsey, provided onsite work in relation to same commences prior to 2015 12 31. Moreover such construction shall not be construed to be the "first tender call" for these respective generating stations pursuant to the provisions of Article 2.1(a) or 2.1(b). The maintenance of the said all-weather roads during the project construction period shall be covered under the terms of this Agreement, unless it is performed by the Manitoba Department of Highways or an agent thereof.

2.2 Notwithstanding any other provision of this Agreement, exclusions from this Article 2, Scope and Recognition shall include, but not be limited to, the following:

a) Construction of transmission lines (except as provided in 2.1) and communication facilities, including the clearing of rights of way;

b) All exploration work not included under 2.1(e);

c) Construction work and services related to any established community;

d) Work performed for and under the administration of a Local Government District, the Province of Manitoba, the Government of Canada, or their agents;

e) Testing and/or inspection services, except radiography work (which is subject to (l) below), performed under direct contract to Manitoba Hydro;
*** See Letter of Agreement #6

f) Services provided by consultants to Manitoba Hydro;

g) The operation and maintenance of commercial, municipal and recreational services in any townsite associated with the hydroelectric generating stations defined in 2.1(a);

h) Repair/maintenance work on camp equipment performed by technical specialists;

i) Non continuous work required on heavy construction equipment covering warranty repairs and technical support for maintenance;
*** See Letter of Agreement #6

j) Specialized work performed by technical specialists from the Equipment Manufacturer on permanent equipment, which was not assembled under the Scope of this Agreement;

k) Work associated with the delivery of supplies, materials, parts, and equipment to the Project Site, on the basis of "one drop per load per Contractor". Where supplies, materials, parts, and/or equipment are delivered "Freight on Board" (F.O.B.) to a rail terminus, siding, or spur line in the vicinity of the site, designated by the Contractor as a delivery point for the project, the spotting of the rail cars shall be considered the first drop. Batching and/or delivery of concrete on site is covered under the terms of this Agreement. Processing and/or delivery of aggregate on site is covered under the terms of this Agreement. The Contractor shall designate his storage areas and designated rail delivery points at the Pre Job Conference (Article 4);

l) Provided prior mutual agreement is reached by the Council and the Association on each occasion, other work including, but not limited to, the following:

i) Radiography work of a short term nature performed under direct contract to Manitoba Hydro;

ii) Work associated with the supply of manufacturer's parts for heavy construction equipment.

m) Employees of the Manitoba Hydro Electric Board;

n) Those excluded by the Labour Relations Act of Manitoba.

2.3 It is recognized that there will be employees for whom the Council is recognized as the exclusive bargaining agent but who are not covered by an appendix to this Agreement and who are not otherwise excluded.

2.4 Any employee or group of employees referred to in Article 2.3 may make application to the Council to be covered by this Agreement. When this occurs, the Council shall notify the Association of its intention to bargain on behalf of the employee(s) concerned.

2.5 If the Association and the Council agree as to which Union the employee(s) should be members of and provided the majority of the employees concerned wish to become members of the Union agreed upon, negotiations between the Association Appendix Review Committee and the Council Appendix Review Committee shall commence to establish such additional conditions of employment as may be necessary. If the Joint Appendix Review Committee is unable to agree on:

a) The Union to which the employee(s) should belong;

b) Whether the majority of employees wish to be members of the union;

c) The conditions of employment for the employee(s) involved.

the dispute shall be resolved in accordance with Article 31 of this Agreement.

2.5.1 A Union of the Council may make application to the Council to approach an employee or group of employees, who are not covered by this Agreement and who are not otherwise excluded, to become Union members. In this event, the Council shall proceed as in 2.4 commencing with the second sentence.

2.6 The Unions and the Council shall not interfere with the right and responsibility of the Security Guards in the performance of their duties. The Unions and the Council recognize and shall not interfere in any way with the confidentiality of reports of Security Guards forwarded to Manitoba Hydro.

2.7 Notwithstanding any other provision of this Agreement, the provisions of Article 12.1 may be waived by the Security Contractor when hiring Security Guards, except the Security Contractor shall advise the Council of the names of the persons hired within three (3) working days.

2.8 In the event any Contractor (other than a Security Contractor) employs security guards on the Project associated with his own operation, the provisions of Article 2.6 and 2.7 shall apply except that any reference to Manitoba Hydro in these Articles shall be replaced by the name of the said Contractor.

2.9 A Northern Aboriginal Contractor shall be defined as a Manitoba business: a) that is at least 50% owned by an aboriginal resident(s) or organization(s) and b) that is based in or whose aboriginal owner has resided within the Northern affairs boundary for a cumulative period of 5 years or more.

The provisions of Article 12.1 may be waived by any Northern Aboriginal Contractor who is engaged by Manitoba Hydro on a non tendered direct contract basis, provided that:

a) The Contractor may only waive the said provisions of Article 12.1 if the person to be hired is a Northern Aboriginal, and;

b) Prior to such a hire, the person to be hired provides Manitoba Advanced Education and Training (M.A.E.T.) with information that confirms that he qualifies as a Northern Aboriginal in accordance with Article 12.1.1.3.2 (see also Article 13 for definition of Northern Aboriginal).

While all such employees hired under this Article 2.9 will be required to pay the current amount of applicable union dues and Council assessment, in the case of initiation fees, payment will be made on the basis of fifty cents (50¢) per hour worked and credited towards the payment of this fee. Union dues, Council assessment and payments relative to initiation fees will be collected as a payroll deduction and remitted in accordance with the provisions of Article 12.2.8, 12.2.9 and 12.2.10.

2.10 In this Agreement and the classifications contained herein, any words importing the masculine gender include female persons and, any words importing the female gender include male persons.

2.11 In the event that a provision in any Article to this Agreement is inconsistent with a provision or provisions in any of the Appendices to this Agreement, the provision in the Article shall prevail over the provision or provisions in the Appendices.

ARTICLE 3 - THE COUNCIL AND ASSOCIATION

3.1 The Unions and Contractors hereby confirm the designation of the Council and the Association as their exclusive agents, respectively, for the purpose of bargaining collectively, negotiating and entering into this Agreement, and administering the same.

3.2 As long as this Agreement remains in effect, neither the Association nor the Council nor any member Union of the Council will endeavor to seek separate bargaining rights or separate Agreements concerning work covered by this Agreement.

3.3 The Council shall be composed of the International Building and Construction Trades Unions and the Locals thereof, together with the other Unions as provided in the Constitution and By Laws of the Council in effect as of the date of this Agreement, all of whom are listed in "Schedule A" of this Agreement.

3.4 The Association shall be composed of representatives of Manitoba Hydro, Contractors engaged by Manitoba Hydro on the Project, and their sub-contractors, as provided in the Constitution of the Association in effect as of the date of this Agreement.

3.5 It shall be the responsibility of the Association and the Council to keep each other informed of the names of their respective Officers. The Council shall notify the Association of the names of the Union Business Representatives and the members of the Council Negotiating Committee. The Association shall notify the Council of the members of the Association Negotiating Committee. Prompt notice shall be given of any changes.

3.6 The Council and the Association shall not be bound to deal with anyone other than their respective Officers or Representatives concerning the administration of this Agreement.

3.7 International or Business Representatives of the Local Unions may be authorized by the Council to deal with a Contractor on matters concerning the Local Union they represent.

ARTICLE 4 -WORK ASSIGNMENTS AND JURISDICTIONS

4.1 Subject to the terms and conditions of this Agreement, the Contractor shall have the right to assign all work.

4.2 Before commencement of any work on any portion of a Project, the Contractor shall hold a pre job conference in Winnipeg, or such other location as may be mutually agreeable, attended by representatives of the Council, the Unions and the Association. The purpose of the pre job conference shall be to establish the work assignments and jurisdictions for each trade, to correspondingly mark work demarcation lines on construction drawings, and to identify and resolve any jurisdictional disputes.

4.3 Notification of the pre job conference shall be given by the Contractor to the Council and the Association at least ten (10) calendar days prior to the date set for this meeting.

4.4 The Contractor, in assigning work, shall comply with any applicable decisions of record or agreements of record and specify the basis of assignment. The decisions of record and agreements of record referred to shall be those contained in the most current edition of the book entitled, "Plan for the Settlement of Jurisdiction Disputes in the Construction Industry", approved by the Building and Construction Trades Department AFL CIO, commonly referred to as the "Green Book".

4.4.1 More specifically, work shall be assigned on the following basis:

4.4.1.1 Where the Unions involved agree that a decision of record or agreement of record referred to in 4.4 applies to the work, the Contractor shall assign the work in accordance with such agreements or decisions of record.

4.4.1.2 Where the Unions involved in the Pre Job Conference cannot agree that a particular Union is entitled to perform certain work under a decision of record or an agreement of record, referred to in 4.4, the Contractor shall:

i) Provide a detailed description of the work in dispute to the Contesting trades;

ii) Request the contesting trades to submit, within five (5) working days, evidence substantiating their claim to the work;

iii) Consult with the Association to ascertain how such work had been previously assigned.

following which, the Contractor shall assign the work and indicate the basis on which the assignment is being made including, where applicable, the reason why a decision or agreement of record referred to by one of the contesting trades is, in the opinion of the contractor, not applicable.

4.4.1.3 Where there is no decision of record or agreement of record the Contractor shall consult with representatives of the Association to ascertain how such work has previously been assigned prior to assigning the work.

4.5 If, after the assignment of the work, a dispute arises as to the proper jurisdiction of the work involved, the work shall continue in accordance with the Contractor's assignment and the procedure set out below shall be followed to resolve same. Under no circumstances shall there be any interference with the progress of the work on the Project.

4.5.1 The Association representative shall consult with the representatives of the contesting trades to consider any arguments or facts relating to the disputed work in an effort to resolve the matter.

4.5.2 Failing settlement by the foregoing the dispute will be settled and adjusted according to the prevailing plan established by the Building and Construction Trades Department or in accordance with any other plan, method or procedure that may be adopted in the future by the aforementioned Department. Any decision rendered in accordance with the foregoing shall be binding.

4.6 In the event a plan, method or procedure referred to in Article 4.5.2 is not available, the Joint Appendix Review Committee shall meet within ten (10) calendar days following notice from either party to establish a successor plan. If an agreement cannot be reached, as to the successor plan or its terms of reference, then the procedure in Article 31 shall be followed. Any decision rendered in accordance with the successor plan shall be binding.

ARTICLE 5 - MANAGEMENT'S RIGHTS

5.1 Subject to the terms and conditions of this Agreement, the Contractor has the undisputed right to operate and manage his business in all respects.

5.2 Without restricting the generality of the foregoing, it is agreed that it is the sole and exclusive function of the Contractor:

5.2.1 To determine the methods, procedures, materials, apparatus, and equipment to be utilized in the undertaking of the work; to schedule and assign the work; to direct the workforces; to determine the number of personnel required and when overtime will be worked, and by whom;

5.2.2 To hire, promote, demote, transfer, suspend, layoff, discipline, or discharge for just cause;

5.2.3 To make, enforce and revise from time to time rules and regulations to be observed by employees;

5.2.4 To select and appoint Foremen and General Foremen. Furthermore, subject to the Appendices, to make determinations as to the number of Foremen and General Foremen to be employed.

5.3 The foregoing enumeration of management’s rights shall not be deemed to exclude other functions not specifically set forth. The Contractor, therefore, retains all of its inherent rights, powers, and authority to manage its business except to the extent abridged by a specific provision of this Agreement.

ARTICLE 6 - ASSOCIATION, COUNCIL AND UNION REPRESENTATIVES

6.1 The Association shall appoint a resident Site Representative who will be vested with full authority and power to service members of the Association and administer the application of the terms of this Agreement. The Council agrees to recognize said Representative.

6.2 The Council shall appoint a resident Site Representative who will be vested with full authority and power to service members of the Unions, administer the application of the terms of this Agreement and assist the Association in the implementation of employee oriented programs. The Association agrees to recognize said Representative.

6.3 The Union, where Members of that Union are employed by a Contractor, may appoint a steward(s) from among the Members so employed.

6.3.1 A non working steward will not be permitted.

6.3.2 The union may appoint one (1) steward for each trade (Appendix) per shift for each Contractor (the shift steward), and notification of such appointment shall be provided at the time and under the conditions set out in Article 6.3.3. If work is being performed in more than one (1) separate and distinct work area, the Union may appoint one (1) additional steward (the area steward). If the union appoints more than one (1) steward, the Union shall designate one (1) of the stewards, so appointed, as the Chief Steward and notification of such appointment shall be provided at the time and under the conditions set out in Article 6.3.3.

6.3.3 The Council or the Local Union shall notify the Contractor and the Site Representative of the Association, in writing, within forty eight (48) hours (excluding non working days) of the appointment of any Steward or when an employee ceases to act as Steward.

6.3.4 The Contractor shall recognize that the Steward is acting for those Union Members employed by that Contractor. The Steward shall not be discriminated against for expressing the wishes of such employees however the Steward shall not involve himself or interfere with employees of other Contractors during working hours. The Steward may be called upon by the Contractor to assist in the settlement of grievances pursuant to the provisions of Article 8 of this Agreement.

6.3.5 The Chief Steward provided he is job qualified within the meaning of Article 12, and he is willing to perform the remaining work, shall be one of the last two (2) employees in his Appendix to be laid off. If reclassification is necessary to meet this requirement, the Contractor will determine the Chief Steward's new classification.

6.3.6 A shift steward provided he is job qualified within the meaning of Article 12, and he is willing to perform the remaining work, shall be one of the last four (4) employees in his respective classification on that shift to be laid off. An area steward provided he is job qualified within the meaning of Article 12, and he is willing to perform the remaining work, shall be one of the last four (4) employees in his respective classification in his work area to be laid off.

6.4 In addition to the Site Representative of the Council, other duly authorized Local Union representatives, carrying a properly authorized credential of the Council will be allowed access to the Project Site to conduct Union Business, provided this is done without interfering with the progress of the work and that permission has first been obtained as follows:

6.4.1 With the exception of emergencies, the Local Union Representative will notify the Council at least five (5) working days prior to the date of his intended visit. Upon receipt of this notification the Council will immediately inform the Association.

6.4.2 The Council and Association will notify their respective Site Representatives as to the date the Local Union representative wishes to visit the Site.

6.4.3 If the timing of the planned visit by the Local Union Representative is such that accommodations are not available, the Site Representatives will inform their respective officers and suggest an alternate date for the visit.

6.4.4 Arrangements to visit the Project site should be confirmed by the local union with the Council within twenty four hours of the notice referred to in 6.4.1.

6.4.5 The Site Representatives will inform all parties who may be involved when the Local Union representative is to be at Site.

6.4.6 Where possible, the Site Representatives from the Council and Association shall be present at any discussions between the Local Union representative and the Contractor relating to this Agreement.

ARTICLE 7 - STRIKES AND LOCKOUTS

7.1 Neither the Council, nor any representative of the Council or of the Unions, nor any Union, nor any member of the Unions, nor any employee covered by this Agreement shall in any way, either directly or indirectly, authorize, encourage, condone, support or participate in any strike, walkout, suspension of work, slowdown or work stoppage of any kind on the part of any employee or group of employees during the term of this Agreement.

7.2 The Association, representatives of the Association, the Contractor, representatives of the Contractor not otherwise covered by this Agreement, shall not in any way cause or direct any lockout of employees during the term of this Agreement.

7.3 The Council and the Unions shall not authorize, encourage or condone any picketing on the Project. Employees covered by the Agreement shall not picket Contractors signatory to this Agreement where such Contractors are engaged on work covered by this Agreement.

7.4 If any violation of Article 7.1 occurs, every effort shall be made by the Council and the Unions to achieve immediate full compliance with Article 7.1. Such action by the Council and the Unions shall include instructing such employees to cease the prohibited activities and immediately return to work, if work has ceased, and perform their usual duties and resort to the grievance procedure for the settlement of any complaint. The Council shall immediately advise the Association of the specific steps it has taken in this regard.

7.5 An employee who engages in any of the prohibited activities set out in this Article shall be subject to dismissal or other disciplinary action. Furthermore, if such an employee does not heed the instructions from the Council and Local Union to return to work and perform his usual duties he may as a consequence be dismissed, and in this event, he shall not be eligible for hire or rehire under this Agreement for a period of two (2) years, and his dismissal shall be deemed to be a dismissal for just cause.

7.6 The fact that the Council and/or a Union investigates or deals with an alleged violation of Article 7.1 shall not be deemed to be an acknowledgement by the Council and/or a Union that Article 7.1 has been violated.

7.7 If any violation of Article 7.2 occurs, every effort shall be made by the Association and the Contractor to achieve immediate full compliance with Article 7.2.

7.8 The fact that the Association and/or a Contractor investigates or deals with an alleged violation of Article 7.2 shall not be deemed to be an acknowledgement by the Association and/or a Contractor that Article 7.2 has been violated.

ARTICLE 8 – GRIEVANCE PROCEDURE

8.1 A grievance shall mean any difference or dispute concerning the interpretation, application, administration, or alleged violation of the Agreement. The Council and the Association shall each have the right to initiate a grievance, in relation to the aforementioned matters, at Stage 2.

8.1.1 Notwithstanding the provisions of 8.1, a jurisdictional dispute shall not be processed or settled by the grievance procedures and such disputes shall be solely dealt with pursuant to the provisions of Article 4.

8.1.2 If a Management grievance is filed, the provisions of Article 8.3.1.2 (Stage 2) shall be applied except that the procedures shall be read so that the Association (and/or its members, as stipulated in the grievance document) shall be deemed the initiator of the grievance and the Council (and/or its members, as stipulated in the grievance document) the respondent.

8.2 A grievance shall be initiated within five (5) working days of the date the circumstances giving rise to the grievance were known or ought to have been known. The time limits and procedures set out in this Article shall be complied with provided, however, the Parties may mutually agree, in writing, to extend the time limits. Where no reply is given within the time limit specified in this Article, the Council or the Association, as the case may be, will be entitled to submit the grievance to the next step of the grievance procedure. Any grievance not processed within the applicable time limits shall be deemed to have been abandoned and will be ineligible for arbitration.

8.3 Grievances properly arising under this Agreement shall be processed in the following manner:

8.3.1 Grievance

8.3.1.1 Stage One

Steps

Steps 1 and 2 below shall be completed within four (4) working days of the date Step 1 is commenced.

1. The aggrieved employee(s) will discuss his grievance with his foreman or immediate supervisor with or without his steward, in his discretion, to try and resolve the matter.

2. If the grievance is not resolved at Step 1, it shall be reduced to writing, utilizing the Councils' grievance form, and the written grievance will be submitted to the Site Representative of the Council. The grievance will indicate the relevant grievance particulars, alleged Agreement violations, remedies sought on behalf of the employee, and be signed and dated by the employee or Union Representative.

3. The Site Representative of the Council may submit the written grievance to the appropriate Contractor Representative provided this is done within a further period of three (3) working days. In this event, the Site Representative of the Council shall simultaneously submit a copy of the grievance to the Site Representative of the Association.

8.3.1.2 Stage Two

Steps

1. On receipt of the written grievance, the Contractor will investigate the grievance, meet with the Council Representative, and respond to the grievance in writing. Step 1 must be completed within four (4) working days from the time the grievance is received by the Contractor.

2. If agreement is not reached at Step 1, the Council Site Representative may submit the written grievance to the Association site Representative, provided this occurs within a further period of twenty-four (24) hours measured from the expiry of the four (4) working day period in Step 1 above.

3. On receipt of the written grievance, the Site Representative of the Association and the Council shall meet to further review the grievance details for purposes of settling the grievance. The Site Representatives may involve other persons in this process who have knowledge of the circumstances giving rise to the grievance. The Site Representative of the Association shall reply, in writing, to the Site Representative of the Council. Step 3 shall be completed in four (4) working days of the expiry of the 24 hour period in Step 2 above.

4. If settlement is not reached at Step 3, the President of the Council or his delegate or the Managing Director of the Association or his delegate may submit the grievance to Stage Three, provided this is done in writing, within a further ten (10) working days from the expiry of the four (4) working day period in Step 3 above.

8.3.1.3 Stage Three

Steps

1. Following receipt of the written notification to proceed to Stage Three, the President of the Council or his delegate (hereinafter referred to as the President) and the Managing Director of the Association or his delegate (hereinafter referred to as the Managing Director) shall meet for the purpose of settling the grievance. The President and Managing Director may each, in their sole discretion, opt to have a Union Representative or a Contractor Representative, respectively, in attendance at the meeting, who will act in an advisory capacity. Additionally, other persons may be requested to give evidence of the circumstances giving rise to the grievance. This meeting shall be held within six (6) working days from the date written notification is received to proceed to Stage Three. The Managing Director will reply in writing to the President within three (3) working days from the date of the meeting (in the case of a Management Grievance, the President will reply to the Managing Director).

2. If the grievance is not settled, either Party may process the grievance to Stage Four provided this is done within a further twenty (20) working days from the date of the meeting held under Step 1. In this instance each party will communicate to the other, in writing, whether legal counsel will be utilized.

8.3.2 Grievances Regarding Alleged Wrongful Dismissal

8.3.2.1 Notwithstanding the foregoing, grievances alleging wrongful dismissal of an employee or employees shall be dealt with as follows:

Steps

1. The grievance shall be initiated in writing under Stage Two by the employee or employees concerned or by a duly authorized representative of the Council at the job site within twenty four (24) hours of dismissal. The employee may be assisted by his Union Shop Steward.

2. Following receipt by the Contractor of the written grievance, the Contractor's Representative and the Council Representative shall meet and may involve other persons to give evidence of the incident as required for the purpose of settling the grievance.

3. The Contractor shall reply in writing to the Council's Representative within twenty four (24) hours of receipt of the written grievance.

4. If agreement is not reached at Step 2 above, the Site Representative of the Council may submit the grievance within a further twelve (12) hours following expiration of the twenty four (24) hours to the Site Representative of the Association.

5. Following receipt of this written grievance by the Site Representative of the Association, the Site Representative of the Association and of the Council shall meet and may involve other persons to give evidence of the incident as required for the purpose of settling the grievance. These meetings will normally be held in the office of either Site Representative. The Site Representatives have two (2) working days to resolve the grievance.

6. The Site Representative of the Association shall reply in writing to the Site Representative of the Council within the two (2) working days of Step 5 above.

7. From this point onwards, grievances alleging wrongful dismissal shall be dealt with in the same manner as other grievances under this Article save that, in the event a claim is entered for compensation for loss of wages in a case where reinstatement has resulted, it shall be left with the Council and Association to decide the amount, if any, to be paid and failing agreement the claim shall be referred for settlement by arbitration in accordance with the procedure at Stage Four.

8.3.2.2 If a grievance alleging wrongful dismissal is not submitted within the specified time set out in Step 1 above, the employee's employment shall be deemed to have been terminated when he was dismissed and such dismissal shall not be the subject of a grievance.

8.3.2.3 When an employee has been discharged and a grievance has been filed, the Contractor will continue to provide room and board at no charge to the employee until the completion of step three (3) above and transportation is available in accordance with Article 19.1.4.

8.3.3 Stage Four Applicable for All Grievances

8.3.3.1 For the purpose of Stage Four the President of the Council or his delegate and the Managing Director of the Association or his delegate shall agree upon a list of approved arbitrators, which may be amended from time to time. If agreement cannot be reached on an amended list of arbitrators, the Minister of Labour of the Province of Manitoba shall be asked to appoint an arbitrator(s).

An approved arbitrator shall be assigned to a Stage 4 grievance by the following procedure: the President of the Council or his delegate and the Managing Director of the Association or his delegate shall meet. The names of all approved arbitrators from the agreed list shall be placed into a container, and one name picked, completely at random. The arbitrator shall hear the grievance, deliberate, render his award and serve it upon the parties within thirty (30) working days following the conclusion of the hearing. The arbitrator shall have the authority given to a Board of Arbitration and his decision shall be binding and final upon the Parties hereto. If the arbitrator does not serve the award upon the parties within the said thirty (30) working days, either party may request the Minister of Labour of the Province of Manitoba to consult with both the parties and the arbitrator for the purpose of expediting the settlement of the grievance.

8.3.3.2 Under no circumstances shall the arbitrator have the authority to extend, modify or amend any part of this Agreement in any respect. An arbitrator appointed under this Article shall not be authorized to adjudicate on any matter which comes within the jurisdiction of the Joint Appendix Review Committee and/or the Mediator referred to in Article 31.

8.3.3.3 The expenses of the arbitrator and the arbitration proceedings shall be shared equally by the member Union of the Council, and Contractor, save that each shall pay all expenses incurred in connection with preparation and presentation of their submission.

ARTICLE 9 - ROOM AND BOARD

9.1 An employee of the Contractor shall have the option of receiving room and board in the camp or alternatively of providing his own housing.

9.2 When an employee opts to provide his own housing, the Contractor shall provide the employee with an allowance in the amount and under the conditions set out in Article 10.

9.3 Room and board in the camp shall consist of the provision of lodging and up to three meals per day. There will be no charge to the employee for this room and board under the following conditions:

a) When the employee is working;

b) When the employee is available for work and work is cancelled due to inclement weather;

c) On the employee's scheduled day(s) of rest;

d) On Holidays, as set out in Article 17, providing the employee works the complete shift on his working day immediately preceding and immediately following such a holiday, except where the employee is exempted by virtue of provision (e) below;

e) On days when the employee is sick or when the employee sustains an injury on the job, to a maximum of seven calendar days, provided the employee remains in the locale of the Project and:

i) Advises the appropriate authority of the Contractor at the onset of any absence due to illness or injury, and;

ii) Presents to the Contractor a dated medical certificate from a medical doctor or nurse authorizing the absence from work immediately on return to work.

9.4 When an employee is absent from work for reasons other than that stipulated in 9.3 (b), (c) and (d) or where the requirements of provision 9.3 (e) have not been fulfilled, he will be assessed a payroll deduction of fifteen dollars ($15.00) per day for the period of the absence.

9.5 When an employee leaves the Project site under a leave granted under Article 19, he must obtain a check out slip from the Camp Operator, otherwise he will be assessed a payroll deduction equal to the amount set out in Article 9.4 for the period of his absence.

9.6 To secure room and board in the camp, an employee must

a) Have on his person, for presentation, the identification issued to the employee by the Contractor;

b) Report to the designated office of the Camp Operator for the purpose of registration, room allocation and the issuance of a key. A deposit of five dollars ($5.00) will be required for a room key which will be refunded to the employee upon return of the key at the time of check out;

c) Report to the designated office of the Catering Contractor for the issuance of bedding.

9.7 Employees may purchase a fourth meal at a reasonable cost, to be set by the Camp Operator.

9.8 An employee required to work twelve (l2) hours or more in any one (1) day will be provided with a meal allowance by the Contractor. The value of this meal allowance shall be equivalent to the current cost of a casual meal established from time to time by the Camp Operator.

9.9 Council and Union Representatives who are on official business pertaining to the Project may purchase accommodation and meals from the camp office at a cost to be set by the Camp Operator.

9.10 If an employee residing in the camp is absent from the Project Site for a period longer than a leave granted under Article 19, the Contractor shall remove the employee's personal effects from his room and forward same collect to his last known address.

9.11 All employees shall read and comply with all Camp Rules and Regulations. A copy of the Camp Rules and Regulations will normally be issued to each employee at the time of registration, but in any event a copy will be posted on bulletin boards located within the camp complex.

9.12 In instances where a camp is not to be established and the option of room and board is to be provided in commercial facilities, such as a hotel, the Association shall consult with Manitoba Hydro and advise the Council, in advance of the contract award, of the arrangements for provision of room and board.

ARTICLE 10 - HOUSING ALLOWANCE

10.1 When an employee opts to provide his own housing, the Contractor shall provide the employee with an allowance of fifteen dollars ($15.00) per calendar day.

10.2 The conditions under which this allowance will be paid are the same as those set in Article 9.3 except in the case of provision (e) which will be subject to a further condition in that the allowance will only be paid to a maximum of three (3) calendar days from the date of the onset of any illness or injury.

10.3 An employee supplying his own housing may obtain meals at the camp at a cost to be set by the Camp Operator.

10.4 When an employee providing his own housing elects to move into the camp, this allowance shall be discontinued effective on the date a room is issued by the Camp Operator.

ARTICLE 11 - MEDICAL EXAMINATIONS

11.1 A pre employment medical examination, which shall be at the expense of the Contractor, shall be required for employees of the Caterer who are directly involved in the preparation and handling of food. This examination will normally be given by a physician designated by the Contractor, prior to the employee reporting to the Project Site.

ARTICLE 12 - THE HIRING PROCEDURE AND REFERRAL SYSTEM: UNION SECURITY & CHECK OFF: TRANSFER; LAY-OFF AND RECALL PROVISIONS

*** Note – See Letter of Agreement #40, for additional information regarding Article 12, Section 12.1 (Amendment to Hiring procedure for out of Province union referrals)
*** Note – See Letter of Agreement #44, for additional information regarding Article 12 (Special measures for hiring apprentices and trainees)
*** Note – See Letter of Agreement #48, for additional information regarding Article 12, Section 12.4 (Layoff Subject to Recall)

12.1 The Hiring Procedure and Referral System.

12.1.1 For the purposes of this Article, "job qualified" means that a candidate for employment meets or exceeds the training, accreditation, skill, and experience stipulated in a Contractor's job order. All employees shall be recruited in accordance with the procedures set out below, except as otherwise provided for in Article 12.3, 12.4.2, and Article 2.7, and Article 2.9. Further, it is understood and agreed that Contractors shall have the right to name hire all foremen and general foremen from the referral list prepared by Manitoba Advanced Education and Training (M.A.E.T) or the Unions Out-Of-Work lists, as applicable. The Contractor has the right to reject any candidate referred in accordance with this Article: a) if the candidate is not job qualified, or b) if the candidate was previously employed on the Project and resigned within 30 calendar days of being hired or re-hired or was discharged during the twelve month period preceding the job order, or c) the candidate was previously employed on the Project and received more than two written warnings or a suspension for inappropriate workplace-related conduct or activities, or d) on any other reasonable ground. The Council shall have the right to grieve the decision of a Contractor to reject any candidate referred in accordance with this Article only to the extent of and for the reason of claiming that a rejected referred candidate actually did meet the required qualifications specified in the job order.

12.1.1.1 The Contractor or his agent shall first contact a designated office of M.A.E.T. and advise M.A.E.T. of his specific requirements by placing a job order.

12.1.1.2 M.A.E.T. shall immediately forward a copy of the job order to the Council, as information. The Council shall inform the applicable Local Unions.

12.1.1.3 Except as otherwise provided by Article 12.1.1.3.1., on receipt of the Contractor's job order, M.A.E.T. shall refer, directly to the Contractor, in the sequence set out below, any of the following job qualified candidates who are registered with M.A.E.T.:

a) Northern Aboriginals who reside within the Churchill/Burntwood/ Nelson River area, which area shall be defined as: i) the area of the Churchill River Water Power Reserve from Granville Lake downstream to Hudson Bay; ii) the area of the Burntwood River Water Power Reserve from South Indian Lake downstream to Split Lake; iii) the area of the Nelson River Water Power Reserve from the outlet of Lake Winnipeg downstream to Hudson Bay; and iv) the following communities: the incorporated community of South Indian Lake; the Northern Affairs communities of Granville Lake, Nelson House, Ilford, Wabowden, Thicket Portage, Pikwitonei, Norway House and Cross Lake; the towns of Leaf Rapids, Churchill, and Gillam; the City of Thompson; and Nisichawayasihk Cree Nation, Tataskweyak Cree Nation, York Factory First Nation, Fox Lake First Nation, War Lake First Nation, Norway House Cree Nation and Cross Lake First Nation (See Schedule D for illustration of Burntwood/Nelson/ Churchill River area and communities included).;

b) Secondly, if job vacancies remain, any Northern Residents who are members of the appropriate Local Union of the Council and are not covered by a) above;

c) Thirdly, if job vacancies remain, any other Northern Aboriginals who are not covered by a) or b) above;

d) Fourthly, if job vacancies remain, any other Northern Residents who are not covered by a), b), or c) above.

The definitions of a Northern Aboriginal and Northern Resident are set out in Articles 13.1 and 13.2.

Administrative details concerning Union membership are set out in Article 12.1.4.

12.1.1.3.1 A Northern Aboriginal who:

a) Has been employed on the Project as a trainee or apprentice and such training was interrupted due to a lay-off, and;

b) Has performed on the job in a satisfactory manner and;

c) Is registered with M.A.E.T.

Shall be referred by M.A.E.T. to a Contractor, in advance of any other Northern Residents who have not worked on the Project, to fill training vacancies in that trade as they may arise from time to time.

To facilitate the foregoing, a Contractor will advise M.A.E.T. and the Council, in writing, of the name and social insurance number of any Northern Aboriginal employed as an apprentice or trainee who has been laid off and is eligible for rehire in the trade in which he was training. Such notification shall be provided within ten (10) days of the date of the lay-off.

12.1.1.3.2 To qualify for the employment preference set out in Article 12.1.1.3, candidates must meet the eligibility requirements set out in Article 13, and M.A.E.T. shall be solely responsible for determining whether or not candidates so qualify. However, at the request of M.A.E.T., the Association and the Council will provide joint guidance to M.A.E.T. relative to the application of Article 13.

12.1.1.3.3 Subject to 12.1.2, M.A.E.T. shall have up to forty-eight (48) hours, measured from the time the job order is received, in which to refer Northern Aboriginals and other Northern Residents to the Contractor. The Contractor shall have as much time as he deems appropriate to assess the said referred candidates, and shall advise M.A.E.T., forthwith, if a candidate or candidates so referred are not hired, leaving job vacancies remaining to be filled.

12.1.1.3.4 Candidates so referred, if hired by the Contractor, shall obtain a referral slip issued by M.A.E.T. and report to the Project Site:

a) as soon as possible, but in any event within a period of seventy two (72) hours measured from the time the person is hired, when the Contractor stipulates that his requirements are immediate;

or

b) on the date stipulated by the Contractor when the Contractor stipulates a reporting time in excess of

the maximum provided for in (a) immediately above.

12.1.1.3.5 If a Northern Aboriginal or other Northern Resident does not report to the Project Site as per Article 12.1.1.3.4(a) or 12.1.1.3.4(b), as the case may be, then, if there are no further Northern Aboriginal or Northern Resident candidates on M.A.E.T.'s referral list, the Contractor shall advise M.A.E.T. to proceed to the next step of the hiring procedure (i.e., 12.1.1.4). If there are further Northern Aboriginal or Northern Resident candidates on M.A.E.T's referral list who were not considered by the Contractor then the Contractor shall proceed to consider further candidates in the order of the list provided by M.A.E.T., and a second candidate, if hired by the Contractor, shall obtain a referral slip issued by M.A.E.T. and report to the Project Site as stipulated in Article 12.1.1.3.4. If the said second candidate does not report to the Project Site as per Article 12.1.1.3.4(a) or 12.1.1.3.4(b), as the case may be, then the Contractor shall advise M.A.E.T. to proceed to the next step of the hiring procedure (i.e. 12.1.1.4).

12.1.1.4 If M.A.E.T. is unable to refer a sufficient number of job qualified Northern Aboriginals and other Northern Residents to fulfil the Contractors requirements within said forty-eight (48) hours outlined in 12.1.1.3.3, M.A.E.T. shall, prior to, or at the expiry of the time limit on behalf of the Contractor, advise the Council and the applicable Local Union of the job vacancies remaining to be filled. Moreover, if the Contractor has advised M.A.E.T. under Article 12.1.1.3.3 that referred candidates have not been hired, leaving job vacancies remaining to be filled, M.A.E.T. shall immediately advise the Council and the applicable local union accordingly.

12.1.1.5 The Union, on notification of such job vacancies, may then refer job qualified persons to the Contractor through a designated office of M.A.E.T.

12.1.1.5.1 The Union shall have up to forty-eight (48) hours, measured from the time the Council and Local Union is notified in accordance with 12.1.1.4, in which to refer persons to the Contractor.

12.1.1.5.2 Persons so referred, if hired by the Contractor, shall obtain a referral slip issued by M.A.E.T. and report to the Project Site:

a) As soon as possible, but in any event within a period of seventy two (72) hours measured from the time the person is hired, when the Contractor stipulates that his requirements are immediate;

or

b) On the date stipulated by the Contractor when that date is subsequent to the maximum time period provided for in (a) immediately above.

12.1.1.6 If the Union is unable to refer a sufficient number of job qualified persons to fulfill the Contractor's requirement within the said forty-eight (48) hours, the Union shall prior to, or at the expiry of, the time limit, advise M.A.E.T. of the job order vacancies remaining to be filled. M.A.E.T. shall have an additional forty eight (48) hours, measured from the time M.A.E.T. is notified of the vacancy, in which to refer other job qualified Manitoba Residents to the Contractor.

12.1.1.6.1 Persons hired by the Contractor shall report to the Project Site as provided for in Article 12.1.1.5.2 (a) or (b).

12.1.1.7 The Contractor may recruit persons to fill job order vacancies where:

a) Job order vacancies remain after following the procedures set out in Article 12.1.1.1 to 12.1.1.6;

or

b) Persons referred pursuant to Article 12.1.1.5 and Article 12.1.1.6 do not report to the Project Site within the stipulated time period.

12.1.1.7.1 All persons hired in this manner shall obtain a referral slip issued by M.A.E.T., which referral slip shall be secured prior to commencing work.

12.1.1.8 In the event the Contractor cannot recruit the necessary personnel within a further thirty (30) day period, the Contractor shall reinitiate the job order in accordance with Article 12.1.1 to fill any remaining vacancies.

12.1.2 The time periods referred to in 12.1.1.3.3, 12.1.1.5.1 and 12.1.1.6 are exclusive of Saturday, Sunday, Statutory Holidays and Civic Holidays on which M.A.E.T. offices are closed.

12.1.3 The Contractor shall submit the names of all newly hired employees to the Council within three (3) working days.

12.1.4 In Article 12.1.1.3(b), the appropriate Local Union means the Union named in the Appendix containing the classification corresponding to the Contractor's job order.

For purposes of Article 12.1.1.3(b), each Local Union shall compile and submit to the Council the names and social insurance numbers of all Northern Residents who are members of that Union and who are seeking employment on the Project. The Council shall submit the current listing for the applicable Unions to M.A.E.T. by the tenth (10th) of each month. By mutual agreement between M.A.E.T. and the Council, arrangements differing from the foregoing may be instituted to ensure that the necessary information is available on a timely basis.

12.2 Union Security and Check off

12.2.1 Except as provided in Letter of Agreement No. 3, all employees shall, as a condition of employment and/or continuing employment, be members or obtain membership in the appropriate Union of the Council, and maintain such membership in good standing.

12.2.2 The Contractor shall, at the time of hire, advise all employees who are not members of the appropriate Union that they are required to secure such membership within thirty (30) calendar days of being hired.

12.2.3 To facilitate the obtaining of membership, employees shall sign the "Check off Authorization" form, a copy of which is attached as Schedule B of this Agreement.

12.2.4 The Council shall be responsible for:

a) Obtaining the employee's written authorization for membership in the appropriate Union;

b) Obtaining the employee's signature in respect of the Check off Authorization;

c) Submitting an executed copy of the Check off Authorization to the Contractor, which shall detail the arrangements made with the employee in respect of payment of any initiation fees.

12.2.5 The assignment of Union initiation fees, assessments and dues, and the per capita tax of the Council shall be irrevocable during the term of this Agreement.

12.2.6 Union dues and Council assessments shall be effective from the date of hire.

12.2.7 The Contractor shall make deductions from wages in respect of:

a) Union dues and assessments due to the appropriate Union;

b) Assessments due to the Council which shall be consistent with its Constitution and By Laws;

c) Initiation fees: the arrangements for the deduction of initiation fees shall be that stipulated in the Check off Authorization, but subject to the option referred to in 12.2.13 which is available to certain Trainees and Northern Residents, and the provisions set out in Article 2.9.

12.2.8 During the second week of each month, the Contractor shall transmit the monies deducted from employees up to the end of the preceding pay period. Union dues, assessments and initiation fees shall be forwarded to the officials designated by each Union. Council assessments shall be forwarded to the designated official of the Council.

12.2.9 Monies forwarded to each Union shall be accompanied by documentation, which shall state:

a) The name of the employee on whose behalf the deduction was made;

b) The individual amounts deducted in respect of dues, assessments and/or initiation fees.

12.2.10 Monies forwarded to the Council shall be accompanied by a list of employees, segregated on a trade basis, stating the amount deducted from each employee in respect of Council assessment and the Social Insurance Number.

12.2.11 The aforementioned deductions shall be consistent with Schedule C of this Agreement. The Council shall advise the Contractor and the Association, in writing, of any changes to applicable dues, assessments and initiation fees. This notification shall be provided at least fifteen (15) working days prior to the requested implementation date of any such change, otherwise the changes will be deemed to be effective for the pay period immediately following the date notification is received.

12.2.12 Where a training program is conducted on the Project Site, the following definitions shall apply in respect of this Agreement:

a) A person involved in an "on the job training program" shall be deemed to be an employee on the first day he is on the payroll of the Contractor;

b) A trainee, other than a trainee employed by a Contractor, who is participating in a training program on the Project which is operated and sponsored by the Government of Canada or the Manitoba Government or a department or agency of either, shall be deemed not to be an employee.

12.2.13 A trainee, as referred to in 12.2.l2 (b), who is subsequently hired by a Contractor, or a Northern Resident (other than a Northern Aboriginal who is covered under Article 2.9), shall have the option of paying the required initiation fees on the following basis, provided such employees have not previously been members of a Union covered by this Agreement:

a) In accordance with the arrangements extended to other employees;

or

b) At the employee's request, the Check off Authorization shall reflect the following schedule of deductions:

i) Where the initiation fee is one hundred dollars ($100.00) or less the appropriate amount shall be deducted from the employee's pay on the first full pay period following the acquiring of membership in the Union;

ii) Where the initiation fees are in excess of one hundred dollars ($100.00), an amount of one hundred dollars ($100.00) shall be deducted from the employee's pay on the first full pay period following the acquiring of membership in the Union and the applicable remaining amount in four equal installments on subsequent full pay periods.

12.3 Transfer Provision

12.3.1 A Contractor who is signatory to a construction collective agreement may request that certain persons in the employ of that Contractor be transferred to a Project covered by this Agreement. This provision shall only apply for purposes of securing:

a) Supervisory personnel covered by this Agreement;

b) Personnel with skills of a specialized nature;

c) Personnel with skills necessary for the effective operation of a Contractor's on the job training program;

d) Key personnel required for work on contracts of short duration and in which the craft or skills required to perform the work are generally limited to one or two trades.

12.3.2 A request for a transfer must be submitted to the Council and the Association, in writing, at least five (5) working days in advance of the time the person is required on the Project.

12.3.3 The transfer request shall indicate the following:

a) The name, social insurance number and trade qualifications of the person to be transferred;

b) The Appendix in this Agreement under which the person to be transferred would be working, and the corresponding classification;

c) Related experience relative to 12.3.1 (a), (b) or (c), as the case may be.

12.3.4 The Council shall consult with representatives from the applicable Local Union and within three (3) working days from the date of receipt of the transfer request, the Contractor shall be advised of the respective positions of the Association and the Council; and,

i) if the Council and Association mutually agree that the transfer meets the provisions of this Article, then the Contractor may proceed with the transfer;

or

ii) if the Council and Association mutually agree that the transfer does not meet the provisions of this Article, then the Contractor will be obliged to follow the procedures set out in Article 12.1.1;

or

iii) if either the Council or the Association does not agree that the transfer is in accord with the provisions of this Article, then the Contractor may refer the matter to the President of the Council and the Managing Director of the Association, or their respective delegates, who shall meet and attempt to resolve same. If agreement cannot be reached, the Contractor may request that the matter be resolved in accordance with Article 31.

12.3.5 When a person is transferred, the Association shall notify M.A.E.T. of the name and classification.

12.4 Lay-off and Recall Provisions

12.4.1 Lay-Off

12.4.1.1 Subject to the provisions of Article 12.4.1.2, when a reduction in the Contractor's work force is to be instituted, the Contractor shall lay-off employees, by classification, as follows:

a) Firstly, employees who at the time of hire were not residents of the Province of Manitoba.;

b) Secondly, residents of the Province of Manitoba, other than the Manitoba residents set out in (c), (d), & (e) below;

c) Thirdly, Northern Residents, other than Northern Residents set out in (d) & (e) below;

d) Fourthly, Northern Aboriginals other than those Northern Aboriginals set out in (e) below;

e) Northern Aboriginals referenced in Article 12.1.1.3 a).

12.4.1.1.1 Where classifications in any Appendix have been grouped, either on a capacity basis or because they are subject to a common wage rate, each classification in the group shall be dealt with as a separate classification.

12.4.1.2 The order of lay-off set out in Article 12.4.1.1 shall be followed except:

a) when an employee to whom continuing employment preference is intended is not job qualified to perform the remaining work or whose overall skills, abilities, or work performance, in the judgment of the Contractor, compares less favourably to the overall skills, abilities, or work performance of others similarly employed;

b) When the progress and efficiency of the work would be significantly adversely impacted, the effects of which would not be short term, because of the resultant reallocation of employees to different work locations;

c) when an employee is hired in accordance with the provisions of Article 12.3, or when an employee is covered by the provisions of Article 6.3;

d) when the Contractor elects to retain the services of an employee who has been employed with the Contractor on the Project for more than twelve (12) months during the past eighteen (18) months, provided the retention of such an employee would not result in the lay-off of another employee who also has more than twelve (12) months of employment during the past eighteen (18) months and to whom employment preference is intended in accordance with Article 12.4.1.1.

12.4.2 Lay-Off Subject to Recall

12.4.2.1 The provisions in this Article may be used by the Contractor to facilitate the re employment of an employee whose lay-off has been precipitated by breakdowns, shortages of materials or parts, or changes in the construction schedule, scheduled or unscheduled cessation of work, or other like conditions, and there is a reasonable likelihood the employee will be re employed for purposes of continuing the work to which he was assigned at the time of lay-off.

12.4.2.2 Pursuant to 12.4.2.1 an employee who was a Manitoba Resident at the time of hire may be recalled for employment by the Contractor provided:

a) The employee is advised in writing at the time of lay-off that he is eligible for recall and a copy of this notification is concurrently forwarded to the appropriate Local Union and M.A.E.T. and;

b) The recall is initiated by the Contractor prior to the expiry of 120 calendar days measured from the date of lay-off.

12.4.2.3 When more than one employee in a particular classification (i.e. classifications as set out in the Appendices) is on lay-off subject to recall and,

a) Such employees are involved in a common or collective work assignment, and;

b) Such employees are not recalled on the same date.

Then the order of recall shall be the same as the order of employment preference set out in Article 12.1., except when all such employees are scheduled to be recalled within a period not exceeding twenty-eight (28) calendar days, from the date of the first recall, in which case recalls may occur on a non-preferential basis.

12.4.2.4 To initiate the recall mechanism, the Contractor shall contact M.A.E.T. and provide the name, address and telephone number of the person to be recalled.

12.4.2.5 M.A.E.T. shall contact the person and notify the appropriate Local Union and the Council that this person is to be re employed.

ARTICLE 13 - NORTHERN RESIDENTS AND NORTHERN ABORIGINALS

13.1 When the term Northern Aboriginal is used in this Agreement, it shall mean status Indians, Métis, non-status Indians, and Inuit who qualify as Northern Residents in accordance with the definition set out in Article 13.2.

13.2 For purposes of this Agreement and subject to the provisions set out below, a person shall be deemed to be a Northern Resident if the person has resided in that part of Manitoba north of the Boundary as set out in Schedule D for:

a) A period of five (5) years accumulatively, or more;

and

b) A period of six (6) consecutive months, or more, immediately prior to being referred to employment or re employment without being absent during that six (6) month period from the employment preference zone for more than six (6) weeks accumulatively, except as may be provided for in Article 13.5, 13.6, and 13.7.

13.3 Time spent in employment on the Project shall not be counted towards the acquiring of Northern Residency status pursuant to the provisions of Article 13.2.

13.4 A Northern Resident who is absent from the employment preference zone, referred to in Article 13.2, for a period not exceeding six (6) weeks accumulatively, during the six (6) month period immediately prior to referral for employment shall continue to be considered a Northern Resident.

13.5 A person who is absent from the employment preference zone for a period of more than six (6) weeks accumulatively, during the six (6) month period immediately prior to referral for employment, for purposes of receiving medical treatment or for purposes of attending a recognized educational institution, and except for such absence would otherwise qualify as a Northern Resident, shall continue to be considered a Northern Resident.

13.6 A person who; a) qualified as a Northern Resident, was employed on the Project as an apprentice and was laid off, and b) for the purposes of employment and/or training related to that apprenticeship was absent from the employment preference zone for a period not exceeding 180 (one-hundred & eighty) calendar days measured from the date of lay-off and c) except for b) above would otherwise have qualified as a Northern Resident and d) is a member in good standing of the applicable local union (this will require union confirmation if that person's name does not appear on the monthly union listing), shall continue to be eligible for Northern Residency employment preference for purposes of re-employment as an apprentice in the trade in which that person was formerly employed.

13.7 A person who qualified as a Northern Aboriginal and successfully completed a recognized Pre-Project Training program sponsored by Manitoba, Canada, and/or Manitoba Hydro, and who left the employment preference zone for a period not exceeding ninety (90) calendar days in order to gain relevant work experience, shall continue to be considered a Northern Aboriginal.

13.8 A person who attends a designated office of M.A.E.T. for purposes of registering for possible referral to employment on the Project, and who considers himself to be a Northern Aboriginal or Northern Resident as defined in this Agreement, shall, on request of M.A.E.T., provide reasonable proof of having met the requirements.

ARTICLE 14 - PAYMENT OF WAGES

14.1 Wages shall be paid either weekly or biweekly, by cheque or direct deposit.

14.2 Where the Contractor elects to pay on a weekly basis, wages shall be paid every Thursday, during working hours, and shall include all wages earned up to and including the previous Friday.

14.3 Where the Contractor elects to pay on a biweekly basis, wages shall be paid every second Thursday, during working hours, and shall include all wages earned up to and including the previous Friday.

14.4 Contractors shall advise the Association and the Council, prior to the commencement of work, if paydays will be implemented weekly or biweekly. In either case, the practice adopted by a Contractor shall apply to all his employees.

14.5 An employee shall be provided with a dated statement of earnings, itemized deductions, and hours worked, when wages are paid.

14.6 A new or rehired employee, after working six (6) days on the Project Site, shall be given an advance of one hundred dollars ($100.00) provided the employee has requested this at the time of arrival on Site.

ARTICLE 15 - HOURS OF WORK AND COFFEE BREAKS

*** Note – See Letter of Agreement #2, for additional information regarding Article 15.1
*** Note – See Letter of Agreement #37, for additional information regarding Article 15.1
*** Note – See Letter of Agreement #55, for additional information regarding Article 15.5 (Work Breaks)

15.1 Except as provided in Appendix 1a, due to the nature of the Project, employees will normally be required, if directed, to work up to ten (10) hours per day for six (6) days per week. Unless otherwise provided in the Appendices, Sunday will normally be a day of rest.

15.2 Compensation for hours worked shall be in accordance with the provisions of the Appendices, except as follows: when an employee misses a regular shift or portion thereof during the period Monday to Friday (or the first to the fifth working day, as the case may be) of that work week, and such absence was unauthorized [e.g. not on a leave of absence, Isolation Leave, vacation, or not covered by the provisions of Article 9.3 (e)],then that employee will be paid at the straight time rate on Saturday (or the sixth working day) until he has worked, pursuant to the applicable Appendix, the prescribed hours of work at straight time that were available to be worked in the work week.

15.3 The hours of work per day and the number of days of work per week, as set out in the Appendices are not guaranteed

15.4 Employees shall be at their places of work at regular starting times and shall remain working until regular quitting time, unless otherwise directed by the Contractor.

15.5 An employee shall be provided two (2) coffee breaks per shift, once in the first half of the shift and once in the second half of the shift, each of which shall not exceed ten (10) minutes in duration. The specific timing of coffee breaks shall be determined by the Contractor. Such breaks shall be taken at the employee's work station, except where the Contractor determines that working conditions makes this impractical in which case the Contractor will designate an alternate location.

15.6 An employee will be provided an unpaid lunch break during the shift, which shall not be less than forty-five (45) minutes in duration. The timing and duration of the lunch break will be designated by the Contractor.

ARTICLE 16 - REPORTING TIME

16.1 When an employee takes his tools on the job and reports to the Contractor for the first time after being hired and is refused work for reasons other than inclement weather or the result thereof, or any other reason beyond the control of the Contractor, he shall be paid for the hours remaining in the shift, for which he initially reports, up to a maximum of four (4) hours at his straight time rate.

16.2 Every employee shall be advised of his marshalling point on the Project. If an employee's marshalling point is to be changed by the Contractor, he shall be advised before quitting time on the preceding shift.

16.3 When an employee is notified at the marshalling point, designated by the Contractor, that no work is available on that day, the employee shall not be eligible for reporting pay.

16.4 In the event work is cancelled by the Contractor after an employee has gone beyond the marshalling point, he/she shall receive a minimum of three (3) hours pay at his/her straight time rate.

ARTICLE 17 - STATUTORY AND GENERAL HOLIDAYS

*** Note – See Letter of Agreement #11, for additional information regarding Article 17.1 and 17.3 (Louis Riel Day)

17.1 The following shall be observed as Holidays each year:

New Year's Day	Canada Day	Thanksgiving Day
Good Friday	Labour Day	Christmas Day
Victoria Day	Remembrance Day	Boxing Day

17.2 No work shall be done on Labour Day except in an emergency as necessary for the protection of life and property.

17.3 Any other day, which is proclaimed by the Federal or Provincial Government as a Holiday, shall also be observed.

ARTICLE 18 - SAFETY

18.1 All Regulations of the Workplace Safety and Health Act and all safety regulations established by the Contractor shall be complied with at all times.

18.2 Each Contractor shall establish a safety committee to consist of representatives of the Contractor and an employee designated from each trade in his employ.

18.3 To promote, co ordinate and facilitate the implementation of safety initiatives on a Project basis, a Project Safety Committee shall be established. This Committee shall consist of not less than four (4) or more than twelve (12) persons, of whom half shall include the Site Representative of the Council and employees of the Contractors.

18.3.1 The Site Representative of the Council shall co ordinate and assist in the selection of employee representatives.

18.3.2 The Management members shall consist of representatives of prime Contractors (those Contractors with direct contractual arrangements with Manitoba Hydro), a representative from Manitoba Hydro, and the Site Representative of the Association. The Council shall appoint its Chairperson from the employee representatives serving on the Committee, and the Management members shall appoint their Chairperson. The respective Chairpersons shall chair alternate meetings.

18.3.3 The Committee shall meet at least every two (2) months, however, if conditions warrant, a meeting may be convened at any time, at the request of either Chairperson, or the Site Representative of either the Council or the Association. Minutes of each meeting shall be prepared which shall record in appropriate detail:

a) The issues discussed;

b) Any recommendations of the Committee;

c) Whether or not the issues have been resolved to the satisfaction of the Committee.

18.3.4 Unless otherwise agreed to by the Chairpersons, minutes of meetings shall be prepared, on an alternate basis, by the Site Representative of the Council and Association, respectively. Copies of the minutes shall be posted and appropriately distributed.

18.4 To benefit the overall program of accident control any unsafe conditions, unsafe acts and violations of safety regulations, shall be reported as follows for immediate corrective action:

a) In the case of employees, directly to the Contractor's Foreman;

b) In the case of Job Stewards functioning for each Union, directly to the Contractor's Foreman and/or Safety Officer.

18.5 An employee shall accept responsibility for the safety equipment issued to him by the Contractor. An employee shall report the loss or damage of this equipment to his superior. An employee may be charged for the loss or damage to this equipment if he has been negligent.

18.6 Every employee shall, as a condition of employment, be required to wear a safety helmet of a type approved by the Construction Safety Association.

18.7 Every employee shall own and wear suitable protective footwear and other personal equipment required in the normal course of duties. Special protective clothing may be required for abnormal conditions, for which provisions are made in the applicable Appendices.

ARTICLE 19 - TRANSPORTATION AND TRAVEL TIME, ISOLATION LEAVE, LEAVES OF ABSENCE AND CHRISTMAS LEAVE PROVISIONS

*** Note – See Letters of Agreement #5, #26, #27, #36, and #53, for additional information regarding Article 19.2 (Isolation Leave)

Transportation Departure Point and Project Transportation Point

For purposes of this Article, a Transportation Departure Point (T.D.P.) and the Project Transportation Point (P.T.P.) shall be determined and/or defined as follows:

Location of a Person's Normal Place of Residence	**T.D.P. or Method of Determining T.D.P.**
a) Where a person's normal place of residence at time of hire or rehire is located in that part of Manitoba south of the 52nd parallel on the west side of Lake Winnipeg, or south of the 53rd parallel on the east side of Lake Winnipeg, but including the Community of Poplar River.	Winnipeg
b) Where a person's normal place or residence at time of hire or rehire is located, in Manitoba, in an area, other than the area described in (a) above.	The community or location closest to a person's normal place of residence at time of hire or rehire which is serviced by at least one (1) mode of public transportation, (i.e. regularly scheduled rail, bus or air) which itself, or in combination with other modes of public transportation, provides access to the Project Transportation Point (P.T.P.) (See definition of P.T.P. set out below).
c) Where a person's normal place of residence at time of hire or rehire is located outside of Manitoba.	Winnipeg, except if that person's normal place of residence is located in an adjacent province or territory, and is also located closer to a T.D.P. located within the area described in (b) above, in which case the closest T.D.P. will be utilized.

The Project Transportation Point (P.T.P.) will be that community or location in Manitoba which is:

i) Closest to the Project Site and;

ii) Served by regularly scheduled air transportation from Winnipeg and;

iii) Accessible by air or road or rail to the Project Camp Site.

19.1 Transportation and Travel Time

19.1.1 Transportation and travel time shall apply as provided in this Article, except as otherwise provided in Article 19.2.4.

19.1.2 Transportation on Hire or Rehire

19.1.2.1 Employee's or Prospective Employee's Responsibility Relative to Transportation

Each person will be responsible for arranging and providing transportation from that person's place of residence to that person's T.D.P., and return.

19.1.2.2 Contractor's Responsibility Relative to Transportation

The Contractor shall provide transportation for a person and his required tools as follows, subject to 19.1.2.3.

a) When Winnipeg is the Transportation Departure Point

The Contractor shall arrange and pay for air transportation, including all taxes and fees, if any, associated therewith, from Winnipeg to the P.T.P. in which case the provisions of Article 19.1.2.4 shall apply;

b) When the Transportation Departure Point Is Other Than Winnipeg

The Contractor shall pay for transportation, including all taxes and fees, if any, associated therewith, by bus, rail or air, or a combination thereof if required, from the applicable T.D.P.:

i) To the P.T.P., in which case the provisions of Article 19.1.2.4 shall apply;

or

ii) To the Project Camp Site.

If more than one type of transportation mode is available, the type of transportation to be utilized shall be decided by the Contractor.

c) When a Prospective Employee Requests to Provide His Own Transportation to the Project Camp Site

Provided the Contractor agrees, a person may elect to provide his own transportation (including transportation of the person's tools) to the Project Camp Site for which he will be reimbursed, on his first regular pay, an amount calculated in accordance with the following:

As of February 3, 2019, thirty-seven cents ($0.37) multiplied by the road distance in kilometers, by the most direct route, between:

i) A person's normal place of residence and the Project Camp Site;

or

ii) That person's T.D.P. and the Project Camp Site.

whichever is the shorter distance, to a maximum of one thousand (1000) kilometers.

Effective January 1, of each year, the rate referred to above shall be adjusted in accordance with the following formula:

Regular Bus Fare - Wpg. to Thompson - Jan. 1 - Current Year x .28¢ / $86.40 (April 30 2003 Greyhound rate)

= new rate (rounded to nearest one cent)

The new rate shall be effective on February 1st of the current year. At least ten (10) calendar days in advance of this date, the Association will advise the Council, in writing, of the new rate.

19.1.2.3 Maximum Transportation Costs Payable

The Contractor's cost of providing one way transportation pursuant to the provisions of Article 19.1.2.2(b) shall not exceed the cost of one way economy air-fare on a regularly scheduled flight from Winnipeg to the P.T.P., in effect on the day the person travels.

19.1.2.4 Transportation From the Project Transportation Point (P.T.P.)

Except in the case of 19.1.2.2(b)(ii) and 19.1.2.2(c), the Contractor shall provide transportation from the P.T.P. to the Project Camp Site including the transportation of any required tools. If such transportation is not readily available and it is necessary for the person to purchase meals and/or overnight accommodation at the P.T.P., he will be reimbursed by the Contractor, on the presentation of receipts, for reasonable out of pocket expenses for meals and accommodation, provided he has notified the Contractor on his arrival at the P.T.P. Such expenses shall be paid to an employee on his first regular pay.

19.1.2.5 Travel Time

Subject to 19.1.2.6, a person directed by the Contractor to travel to the Project Site shall be paid for his travel time at the employee's straight time rate.

19.1.2.5.1 Except as otherwise provided in 19.1.2.5.2 and 19.1.2.5.3 below, the amount of travel time to be paid shall be the lesser of:

i) Actual travel time from the person's T.D.P. to the Project Camp Site;

or

ii) The normal equivalent of scheduled air transportation travel time, plus an extra one-half (1/2) hour for clearing security and boarding, from Winnipeg to the P.T.P., and the normal equivalent of travel time from the P.T.P. to the Project Camp Site.

19.1.2.5.2 In the case of a person whose T.D.P. and P.T.P. are the same, travel time shall be:

i) Actual travel time from the P.T.P. to the Project Camp Site when the Contractor provides the transportation;

or

ii) The normal equivalent of travel time from the P.T.P. to the Project Camp Site when a person provides his own transportation, as the case may be.

19.1.2.5.3 When the Contractor provides transportation from the P.T.P. to the Project Camp Site as set out in Article 19.1.2.4., travel time shall apply for any delay in the provision of this transportation, however, if this occurs, the total amount of travel time to be paid from the T.D.P. to the Project camp site shall not exceed eight (8) hours.

19.1.2.6 Payment of Travel Time

Except in the case of a lay-off, travel time will only be paid provided the employee remains in employment for a minimum of twenty (20) calendar days measured from the date of arrival at the Project Camp Site. Travel time shall be paid and included with the employee's first pay which occurs subsequent to the twenty (20) calendar day period, except in the case of a lay-off occurring prior thereto, in which case the travel time shall be paid and included with the employee's final pay.

19.1.2.7 Deduction of Transportation Costs and Expenses

An employee must be employed at the site for a minimum of thirty (30) calendar days, unless laid off by the Contractor, otherwise the transportation costs incurred by the Contractor pursuant to the provisions of Article 19.1.2.2(a) or (b) or (c), as the case may be, and Article 19.1.2.4 will be deducted from the employee's final pay.

19.1.3 Lay-off

19.1.3.1 When an employee is laid off, the Contractor shall provide transportation for the employee and the employee's required tools, as follows:

a) An employee with a Winnipeg T.D.P.:

Such an employee shall have the option of being treated in accordance with the provisions of Article 19.1.2.2(a) in respect of transportation (except the transportation to be provided shall be from the Project Camp Site to Winnipeg) and Article 19.1.2.5.1 in respect of travel time, or the employee may elect to provide his own transportation from the Project Camp Site in which case he will be reimbursed an amount calculated in accordance with the provisions of Article 19.1.2.2(c) and paid travel time in accordance with the provisions of Article 19.1.2.5.1.

b) An employee with other than a Winnipeg T.D.P.:

Such an employee shall have the option of being treated in accordance with the provisions of Article 19.1.2.2(b) in respect of transportation (except the transportation to be provided shall be from the Project Camp Site to the employee's T.D.P.) and Article 19.1.2.5.1 or 19.1.2.5.2, as applicable, in respect of travel time, or the employee may elect to provide his own transportation from the Project Camp Site in which case he will be reimbursed an amount calculated in accordance with the provisions of Article 19.1.2.2(c) and paid travel time in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as applicable.

The reimbursement amounts and travel time in (a) and (b) above shall be included on the employee's final pay.

19.1.3.2 When laying off employees, the Contractor shall not make any distinction between employees, in similar classifications, who have taken Isolation Leave and those who have not taken Isolation Leave provided the duration of their employment on the Project Site is equal.

19.1.4 Resignation and Discharge

19.1.4.1 An employee who terminates his employment of his own volition or who is discharged by the Contractor shall be provided with transportation as follows:

a) To the departure point of the public transportation, if public transportation (rail, bus or air) is available at the Project Camp Site;

or

b) To the P.T.P., if public transportation is not available at the Project Camp Site.

For the provision of transportation to the P.T.P., the Contractor may deduct from the employee's final pay, an amount equal to the road distance in kilometers between the Project Camp Site and the P.T.P. multiplied by the prevailing per kilometer rate in effect pursuant to Article 19.1.2.2(c).

19.1.4.2 When an employee who is eligible for Isolation Leave resigns, the provisions of Article 19.2 in respect of transportation shall apply for one way transportation.

19.1.4.3 When an employee is discharged and provided sufficient funds are owing to the employee, the Contractor, on request, shall provide an advance equal to the cost of transportation to the employee's T.D.P. to a maximum of the cost of one way air fare on a regularly scheduled flight between the P.T.P. and Winnipeg.

19.2 Isolation Leave (Return Transportation Time Periods)

***See Letters of Agreement #5, #26, #27, #36, and #53

19.2.1 Frequency of Isolation Leaves

19.2.1.1 Frequency When Isolation Leave Frequency Is Not Stipulated In An Appendix

An employee working on the Project who is covered by an Appendix which does not stipulate Isolation Leave frequency shall have the option of taking an Isolation Leave after forty (40) calendar days.

19.2.1.2 Frequency When Isolation Leave Provisions Are Set Out In An Appendix

Subject to Article 19.2.1.3, the frequency of Isolation Leaves for an employee working on the Project and covered by an Appendix which contains Isolation Leave provisions shall be that stipulated in the Appendix.

19.2.1.3 Limitation Relative to Frequency of Isolation Leaves

Notwithstanding any other provisions set out in this Agreement, the time period between Isolation Leaves may be greater than but shall not be less than thirty-five (35) calendar days.

19.2.1.4 Make up of Calendar Day Periods

The calendar day periods as set out above or in the Appendices shall be computed on the following basis:

a) A period shall commence from and include the day the employee arrives on the Project Site following hire, rehire, recall, an Isolation Leave or a Leave granted under the provisions of Article 19.3.2;

b) A period shall not include any calendar days on which the employee does not report to work excepting and limited to the conditions set out in Article 9.3(b), (c) and (d), and Article 9.3(e) to a maximum of three (3) calendar days.

19.2.1.5 Duration of Isolation Leave

When an employee is eligible for and opts to take an Isolation Leave, the employee shall be granted a minimum of six (6) working days as leave without pay. However, at the option of the employee, the leave of absence without pay may be for less than six (6) working days but not less than three (3) working days, except when the Contractor and the employee mutually agree that the leave will be less than three (3) days.

Additionally, provided an employee requests same in writing at least fourteen (14) calendar days prior to the commencement of his Isolation Leave, the Contractor shall grant an additional four (4) calendar days leave without pay in the following circumstances:

a) When the employee is eligible for his second consecutive Isolation Leave, and every second (2nd) consecutive Isolation Leave thereafter.

b) When the employee is eligible for an Isolation Leave but elects to continue working and to defer commencement of the Leave for a period equal to the period the employee would have otherwise been required to work to be eligible for consecutive Isolation Leave.

c) On other occasions the employee is eligible for an Isolation Leave, provided the Contractor and employee mutually agree.

19.2.1.6 Requirement to Notify Contractor

To allow the Contractor sufficient time to plan for accommodating Isolation Leaves and for meeting the requirements of Article 19.2.3, an employee shall obtain and submit a completed Isolation Leave Form at least five (5) working days in advance of the completion of a tour of duty, or in the case of an employee electing to delay the commencement of his Isolation Leave, at least five (5) working days prior to the date the employee intends to commence his Isolation Leave.

If such notification is not provided, the Contractor may request an employee to provide the required notification and to schedule the commencement of his Isolation Leave to conform with such notification.

Isolation Leave Forms will be provided by the Contractor. The purpose of these forms will be to confirm whether or not an employee will be taking an Isolation Leave. In the case of an employee taking an Isolation Leave, the form will confirm:

a) The date the employee is eligible for an Isolation Leave;
b) The date the employee intends to leave the Project Site;
c) The date the employee will be returning to the Project Site;
d) Transportation particulars pursuant to (b) and (c) above and Article 19.2.3.1.

Failure to submit a completed Isolation Leave Form will be deemed to be notification that the employee is opting to delay the commencement of his Isolation Leave.

19.2.1.7 Provision for Advancing or Retarding the Commencement of an Isolation Leave

To enhance the planning and execution of the work, and provided the employee is notified at least fourteen (14) calendar days prior to the completion of a tour of duty, the Contractor may request that an employee advance or retard the commencement of his Isolation Leave, by up to three (3) working days or longer than three (3) working days if such additional time is mutually agreed to by the Contractor and the employee. If this occurs any deficit or surplus

of calendar days will be taken into account during the employee's next calendar day accumulation period.

19.2.2 Failure To Return on Time From An Isolation Leave

An employee who does not return to work on the specified date following an approved Isolation Leave shall be deemed to have resigned, except where the employee at the earliest opportunity advises the Contractor of being detained en route due to a lack of transportation and, if requested by the Contractor, provides proof of same.

19.2.3 Transportation Relative to Isolation Leaves

19.2.3.1 An employee, other than an employee in receipt of the housing allowance set out in Article 10, who is eligible for an Isolation Leave and who elects to take his Isolation Leave shall be provided with the following:

a) Employees Whose Transportation Departure Point is Winnipeg

The Contractor shall provide transportation for the employee from the Project Camp Site to the P.T.P. and return, and air transportation from the P.T.P. to Winnipeg and return. However, an employee may elect to provide his own transportation from the Project Camp Site to the employee's T.D.P., and return, in which case the employee will be paid, at the time of departure, an allowance calculated in accordance with the provisions of Article 19.1.2.2(c) and the same amount on the employee's return from Isolation Leave which shall be included with his first (1st) regular pay;

b) Employees Whose Transportation Departure Point is Other Than Winnipeg

Subject to Article 19.1.2.3, the Contractor shall provide transportation for such an employee from the Project Camp Site to the employee's T.D.P., and return, as set out in Article 19.1.2.2(b). However, an employee may elect to provide his own transportation from the Project Camp Site in which case the Contractor will pay such an employee, at the time of his departure on Isolation Leave, an allowance calculated in accordance with the provisions of Article 19.1.2.2(c) and the same amount on the employee's return from Isolation Leave which shall be included with his first regular pay.

19.2.3.2 Transportation Relative to Employees in Receipt of Housing Allowance

An employee who is in receipt of the Housing Allowance set out in Article 10 during any part of a tour of duty shall receive the transportation benefits set out in 19.2.3.1(a) or (b), as applicable when the employee has completed two (2) consecutive tours of duty (as defined in Article 19.2.1.1 to 19.2.1.4 inclusive) and who elects to take his Isolation Leave; and on completion of every second consecutive tour of duty thereafter.

19.2.3.3 Deduction of Isolation Leave Transportation Costs

On return from an Isolation Leave, an employee must be employed at the site for a minimum of thirty (30) calendar days, unless laid off by the Contractor, otherwise the applicable amount, determined in accordance with the schedule set out below, will be deducted from the employee's final pay:

No. Of Calendar Days of Employment Measured from the Employees return from Isolation Leave	**Amount to be Deducted**
a) Less than twenty-one (21) calendar days	a) One-half (1/2) of the transportation costs incurred by the Contractor pursuant to Article 19.2.3.1(a) or (b), as the case may be.
b) Twenty-one (21) to thirty (30) calendar days inclusive	b) The amount set out in (a) above reduced by ten per cent (10%) of this amount for each calendar day of employment beyond twenty (20) calendar days.

19.2.3.4 Lay-off Prior to Isolation Leave

If an employee is laid off subsequent to earning an Isolation Leave but before such leave is actually taken, the employee will be eligible to receive the benefits of Article 19.1.3 and will not be eligible to receive the benefits of Article 19.2.3.

19.2.4 Travel Time Associated With Isolation Leaves

An employee will only be eligible for travel time associated with the taking of an Isolation Leave if the Appendix covering that employee specifically provides for the payment of Isolation Leave travel time.

19.2.5 Employees Not Taking Isolation Leave

Any employee who elects not to take Isolation Leave shall not be entitled to any of the transportation expenses set out in Article 19.2.

19.3 Leaves of Absence (Other than Isolation Leaves)

19.3.1 When an employee requests a leave of absence because of a Workers Compensation Claim, union business, or a death or illness in the family and the request is approved by the Contractor, the employee shall continue to accumulate time towards his next Isolation Leave on his return to work.

19.3.2 When an employee requests a Leave of Absence other than Isolation Leave or other than identified in 19.3.1 and the request is approved by the Contractor, the employee shall forfeit any time accrued towards his next Isolation Leave.

19.3.3 When an employee takes a leave of absence because of a Workers Compensation claim or a death or illness in the family, upon request the Contractor shall provide transportation to the P.T.P.

19.3.4 When an employee takes leave under 19.3.1 or 19.3.2 he shall provide his own transportation to and from the Project Site except as provided for in 19.3.3.

19.4 Christmas Leave

19.4.1 Christmas Leave shall normally be granted. The Christmas Leave period shall commence not later than December 22nd and extend to at least January 3rd. The Contractor shall provide the Association and the Council with his proposed schedule of shutdown as well as those functions that will be required to continue during this period. The schedule and list of continuing functions shall be forwarded to the Site Representative of the Council and of the Association not later than December 1st.

19.4.2 An employee who is eligible for an Isolation Leave at the time of Christmas Leave shall be provided transportation in accordance with the provisions of Article 19.2.3 and that employee shall be deemed to have taken an Isolation Leave and shall commence accruing time towards his next Isolation Leave on his return following Christmas Leave. The provisions of Article 19.2.3.3 shall apply to such an employee.

19.4.3 An employee who:

a) Is not eligible for an Isolation Leave at the time of Christmas Leave, or;

b) Is in receipt of Housing Allowance but who is not eligible, at the time of Christmas Leave, to receive the transportation benefits pursuant to the provisions of Article 19.2.3.2.

Shall be required to provide his own transportation, or the employee may request the Contractor to arrange transportation in which case the cost of providing such transportation shall be collected from the employee by a payroll deduction.

Such an employee shall continue accruing time towards his next Isolation Leave on his return from Christmas Leave.

19.5 Project Transportation Points (P.T.P.)

19.5.1 When the Contractor is required to provide transportation to and/or from the P.T.P. as set out in Article 19, it shall be provided to the location in the P.T.P. from which the employee will be arriving or departing.

ARTICLE 20 - GOVERNMENT LEGISLATION

20.1 In the event that any of the provisions of this Agreement are found to be in conflict with any applicable Federal or Provincial law now existing, or hereinafter enacted, it is agreed that such law shall supersede the conflicting provision without in any way affecting the remainder of this Agreement.

20.2 A determination that any provision of this Agreement is found null and void or in any way conflicts with any applicable Federal, Provincial or common law in no way affects the validity of all other provisions of this Agreement.

ARTICLE 21 - TOOLS

21.1 Journeymen and Apprentices shall be required to supply the tools listed in the Appendices and/or in accordance with accepted practices.

21.2 An employee's tools shall be kept in good condition at all times.

21.3 An employee shall accept responsibility for the tools furnished to him by the Contractor. The Contractor shall inform all employees of the system to be used for the issue, control and return of tools. The Contractor shall give an employee sufficient time to put tools in their designated place. An employee shall immediately report the breakage or loss of any of these tools to his superior.

21.4 The Contractor shall provide guidance to the employees, where necessary, to promote proper use and care of the Contractor's tools.

21.5 An employee shall be held responsible for damage caused by proven misuse or abuse of the Contractor's tools. The Contractor's tools mean hand instruments and portable power tools commonly used as part of his trade and furnished by the Contractor.

21.6 An employee shall not be held responsible for normal wear and tear of tools supplied by the Contractor, provided broken or worn tools are returned.

21.7 The Contractor shall provide a securely locked facility in which employees may store their tools. The employee shall secure his tools in accordance with trade practice when stored in this facility.

21.8 Unless otherwise provided in the applicable Appendix, the Contractor shall be responsible for providing compensation, to replacement value, for tools referred to in Article 21.1 above, which have been destroyed by fire or lost by breaking and entering, while stored in the facility referred to in Article 21.7 above. Any claim for lost or destroyed tools must be submitted in writing, to the Contractor, within ten (10) calendar days of loss unless good reason can be shown for not having done so. The claim must be accompanied by a list itemizing the tools lost or destroyed, their respective value and evidence of loss.

ARTICLE 22 - WORK SITE SHELTER AND SANITARY CONDITIONS

22.1 The Contractor shall provide a clean, heated place of shelter on the work site in which employees may eat their lunch and a heated, secure area in which employees may store their clothes.

22.2 The Contractor shall be responsible for the provision, maintenance and cleanliness of sanitary facilities on the work site. Employees shall exercise care in the use of these facilities to assist in maintaining cleanliness. Sanitary facilities will be heated to a comfortable temperature during the winter months. If running water is not available, chemical hand cleaner shall be provided by the Contractor.

22.3 Sanitary conditions on the work site shall be the legitimate concern of the Project Safety Committee. Any concern over the adequacy of sanitary conditions which cannot be mutually resolved on the work site shall be referred to the Project Safety Committee for resolution. If the matter is not resolved to the satisfaction of this Committee, the Co Chairpersons shall advise the Senior Site Representative of Manitoba Hydro and the applicable Contractor(s) of the concern.

ARTICLE 23 - INJURIES ON THE JOB

23.1 An employee, who is injured during the performance of his work shall suffer no loss of pay for the time he was required to be absent on that shift to receive medical or first aid treatment.

23.2 An employee, who as a result of an injury incurred in the performance of his work requires medical attention off the work site, and due to the injury, is unable to return to work on that day, shall be paid to the end of the full shift on which he was injured. The Contractor may require that a medical certificate be furnished confirming that the employee was unable to return to work on that day.

23.3 The Contractor shall direct the employee's foreman or steward to gather the injured employee's tools and place them in his tool box and store same in a securely locked facility.

23.4 The employee must report to the Contractor, at the first opportunity, any accident or injury.

23.5 If transportation is required to take an injured employee from the work site to the closest first aid or medical facility, and return following receipt of treatment therefrom, it shall be provided by the Contractor.

ARTICLE 24 - BULLETIN BOARDS

24.1 The Council may post notices about union activities on the bulletin boards designated for their use. Notices shall be signed by the appropriate official of the Council.

ARTICLE 25 - STANDARD OF WORK AND LIMITATIONS

25.1 There shall be no limit on production of employees nor restriction on the full use of proper tools or equipment and there shall not be any task work or piecework.

ARTICLE 26 - TERMINATION OF EMPLOYMENT

26.1 Resignation

26.1.1 An employee who intends to resign shall provide the Contractor with at least one (1) hour's notice.

26.1.2 If the employee provides the Contractor with at least eight (8) calendar days notice, the Contractor shall pay the employee and issue his Separation Slip on the employee's last scheduled day of work. Pay shall include all wages and Vacation and Statutory Holiday Pay owing to the employee.

26.1.3 Article 26.5.1.1 shall apply in instances where the employee does not provide eight (8) calendar days notice.

26.2 Discharge and Lay-Off

26.2.1 The Contractor shall give an employee one (1) hour's paid notice of lay-off.

26.2.2 An employee who is discharged by the Contractor shall receive one (1) hour's pay in lieu of notice.

26.2.3 For the one (1) hour's pay relative to discharge and lay-off, the employee shall pack his tools and:

a) Follow the Contractors clearance procedures in accordance with 26.3 and;

b) In the case of camp residents, obtain a camp clearance slip in accordance with 26.4.

26.3 Contractor's Clearance

26.3.1 The Contractor shall advise all employees of the system to be followed for the return of the Contractor's equipment, tools or other issued items at the time of termination of employment.

26.4 Camp Clearance

26.4.1 An employee residing in the camp shall return the following items to the designated office of the Camp Operator following termination of employment:

a) Bedding/equipment issued to the employee for which a receipt will be issued;

b) The employee's room key for which the key deposit shall be refunded.

26.4.2 Concurrently, the Camp Operator shall issue a Camp Clearance Slip to the employee which must be presented to the Contractor.

26.5 Issuance of Pay and Record of Employment

26.5.1 Provided an employee has complied with the Contractor's clearance system, and in the case of a camp resident has obtained a Camp Clearance slip, the Contractor shall:

26.5.1.1 In the case of resignation and discharge:

a) Issue the employee's Record of Employment and;

b) Pay the employee all monies owing or alternately mail the employee's pay cheque within four (4) working days from the date of termination. In the latter case, the employee's pay shall be forwarded by registered mail, addressed as directed by the employee.

26.5.1.2 In the case of Lay-Off:

a) Issue the employee's Record of Employment and;

b) Pay the employee all monies owing.

26.6 If for any reason an employee's Record of Employment cannot be issued by the Contractor at the time of termination, the Contractor shall forward the Record of Employment:

a) With the employee's paycheck where same has not been issued at Site;

b) Within four (4) working days where the employee was paid at the time of termination. The Record of Employment shall be forwarded by registered mail, addressed as directed by the employee.

26.7 If transportation is not available from the Project Site at the time of termination of employment, the former employee may continue to receive room and board in the camp until transportation is available.

26.7.1 If the employee has been laid off, there will be no charge for this room and board.

26.7.2 In the event of discharge or resignation, the former employee will be charged for this room and board at a cost to be set by the Camp Operator.

ARTICLE 27 - APPENDICES

27.1 The wage rates and conditions set out in the Appendices shall apply to work under this Agreement.

27.2 Wage rates and those special conditions which are defined in the clause "Escalation and Reference" in each Appendix will be adjusted in accordance with Article 30.

27.3 Notwithstanding the "Escalation and Reference" provisions set out in each Appendix, conditions of employment which would otherwise qualify as an escalatory item shall not be introduced or escalated in this Agreement, if the application of such conditions of employment would effectively only apply to work under this Agreement.

27.4 The provisions and intent of Articles 9 and 10 of this Agreement shall not be altered as a result of the "Escalation and Reference" provisions set out in each Appendix.

ARTICLE 28 - ADDITIONAL CLASSIFICATIONS

28.1 Either a Contractor or a Local Union may request the establishment of a new classification in an Appendix. Such a request shall be in writing, to the President of the Council and the Managing Director of the Association, and particulars shall be provided as to the necessity of establishing a new classification.

28.2 The President and Managing Director will arrange for a meeting of the Joint Appendix Review Committee (J.A.R.C.)(see Article 30) and this meeting shall be held within ten (10) working days from the date of receipt of the written request, or as otherwise mutually agreed to. The J.A.R.C. will consider whether or not a new classification should be established and if so, the wage rate for such a classification and its effective date, however such effective date shall not be earlier than the date the request was received by the J.A.R.C.

28.3 If the J.A.R.C. is unable to agree on the issues referred to in Article 28.2, the provisions of Article 31 shall be followed.

ARTICLE 29 - AGREEMENTS BEING USED FOR REFERENCE PURPOSES

29.1 Where a collective agreement(s) is referred to in the Escalation and Reference Section of an Appendix, and by virtue of the provisions of that Section, certain terms and conditions of employment in that agreement(s) are used to adjust corresponding terms and conditions in the Appendix, such an agreement(s) shall be known as an 'agreement(s) being used for reference purposes'.

29.2 If during the term of this Agreement, an agreement(s) being used for reference purposes ceases to exist, the Joint Appendix Review Committee shall meet within thirty (30) calendar days from the date of notification from either Party for purposes of establishing new or revised reference provisions for that Appendix. If agreement cannot be reached, the procedure set out in Article 31 shall be followed.

ARTICLE 30 - ADJUSTMENT OF APPENDICES

30.1 Adjustments to Appendices shall be made in accordance with the Section "Escalation and Reference" in each Appendix of this Agreement.

30.2 A Joint Appendix Review Committee shall be established and comprised of an Association Appendix Review Committee and a Council Appendix Review Committee each consisting of up to three (3) members of the Association and Council, respectively. Each committee shall appoint its own chairperson. The Association Appendix Review Committee and the Council Appendix Review Committee may each appoint an “Industry Advisor” and a “Council Advisor”, respectively, who may attend any meetings convened to consider any matters in respect of the adjustment of an Appendix.

30.3 The Association Appendix Review Committee and the Council Appendix Review Committee are authorized, as agents, to execute on behalf of the Association and the Unions, respectively, any adjustment authorized by virtue of this Article, including any adjustment that embodies the award of a Mediator appointed under the provisions of Article 31.

30.4 The following procedure shall be followed when adjustments are to be considered pursuant to the clause "Escalation and Reference" in each Appendix of this Agreement.

30.4.1 Upon the signing of a new agreement(s) being used for reference purposes, the Council shall forthwith notify the Association Appendix Review Committee in writing of any conditions of employment eligible for adjustment in the applicable Appendix, and at the same time the Council shall provide the Association with a copy of the said agreement(s). If necessary, at the request of either Committee, the Joint Appendix Review Committee shall meet, within ten (10) days following receipt of the request to meet, for purposes of resolving any matter in dispute relative to the adjustment of an Appendix.

30.4.2 To avoid undue delays in implementing changes to conditions of employment that the Parties have agreed to, an Appendix may be adjusted (and then executed and distributed) to include only such agreed changes on condition the Appendix would be subject to further adjustments, if required, to accommodate the award of a mediator. (see Article 31).

30.4.3 Notwithstanding any other provision in this Agreement, in the event of a strike or lockout by the Parties signatory to the agreement(s) being used for reference purposes, the effective date of any term or condition of employment eligible for adjustment will be the date of signing of the agreement being used for reference purposes or a memorandum of agreement related thereto, whichever is the earlier, when retroactivity, relative to these dates, is provided in the agreement being used for reference purposes.

30.5 Should the Joint Appendix Review Committee be unable to agree on adjustments regarding wage rates or other conditions of employment eligible for adjustment, the procedure in Article 31 shall be followed.

30.6 The processes set out in this Article shall not be considered to be notice by the Parties pursuant to the provisions of Section 61(3) of the Labour Relations Act of Manitoba.

ARTICLE 31 - MEDIATION

31.1 The procedure set out below shall only be followed when the Association or the Council (including their respective Appendix Review Committees) are unable to reach agreement on the issues or conditions specifically referred to in the Articles of this Agreement as being eligible for mediation under this Article 31.

31.2 Either the Association or the Council shall, within ten (10) days following their last meeting, notify the other in writing of its intention to refer a matter to mediation.

31.3 Within five (5) working days following receipt of the notice, the parties shall meet:

a) To appoint a Mediator;

b) To attempt to commit to writing:

i) The points that have been agreed upon;

ii) The points that have not been agreed upon.

If the parties are unable to agree upon a single Mediator, then the Minister of Labour for the Province of Manitoba shall be requested to appoint the Mediator.

31.4 The Mediator shall call a meeting within fourteen (14) days following his appointment. The parties shall present evidence and argument to the Mediator, without representation by counsel. The Mediator shall render his award and serve it upon the Parties within thirty (30) working days following this meeting.

31.5 The award of the Mediator shall be final and binding upon the Parties, and implemented within ten (10) working days after the day on which it was served upon the Parties.

31.6 The Mediator shall not be authorized to extend, modify or amend this Agreement, other than the issues or conditions referred to in 31.1, or any part of an Appendix, other than the items referred to in the clause "Escalation and Reference" in each Appendix.

31.7 The expenses of the Mediator and the mediation meeting facilities shall be shared equally by the Council and Association, and each party shall pay its own costs of participating in the mediation.

ARTICLE 32 - INTERPRETATION OF THE AGREEMENT

32.1 This Agreement shall be restricted to interpretation by the Association, the Council, an arbitrator appointed under the provisions of Article 8, and a mediator appointed under the provisions of Article 31.

ARTICLE 33 - CAMP AND RECREATION FACILITIES

33.1 Any camp standards negotiated between Manitoba Hydro and the Council prior to commencement of each Project shall apply on that Project Site. If no camp standards are negotiated prior to commencement of a Project, meetings will be held between Manitoba Hydro and the Council to review the camp and recreation facilities that will be provided at the Project Site.

ARTICLE 34 - WAGE INDEMNIFICATION

34.1 This Article shall only be relied on to satisfy an employee's claim to wages, when wages are not paid as a result of the inability of a Contractor to pay wage debts as they fall due in accordance with the terms and conditions of this Agreement.

34.2 The Association will indemnify the following:

a) Wages and benefits owing to an employee in accordance with the terms and conditions of this Agreement;

b) Any monies owing and intended for remittance to a Union or Trust Fund, as the case may be, as provided for in this Agreement.

34.3 If valid claims are made under this Article, the Association will indemnify such claims to a maximum of five hundred thousand dollars ($500 000.00) per Contractor.

34.4 If a claim is to be initiated, the following mandatory procedures shall be followed:

a) The Council will notify the Association, in writing, that a wage default has occurred and such notification shall be provided within twenty (20) calendar days the date wages were due and payable under the terms of this Agreement;

b) Officers of the Association and Council shall meet, as soon as possible, but in any event within ten (10) calendar days from the date of notification of default. The purpose of this meeting shall be to confirm that the provisions of this Article apply and if so, to jointly document all information necessary for:

i) The processing of claims under this Article;

ii) The initiating of claims for the recovery of unpaid wages under one or more of the following Provincial Legislative Enactment's:

- The Builders' Liens Act
- The Construction Industry Wages Act
- The Payment of Wages Act
- Other Acts that may be applicable at the time

Additionally, within this ten (10) calendar day period, the Association and the Council will decide as to the Act or Acts under which claims will be filed for the recovery of unpaid wages. If a dispute arises on this matter, claims shall be filed under all Acts.

The Association will provide and pay for the services of legal counsel, when such services are required.

c) Pursuant to (b) above, claims for unpaid wages shall be filed in accordance with the Act or Acts and the following:

i) In the case where the Act allows the Council to act in the capacity of an agent, the Council will file the claims;

ii) In the case where the Act prescribes that the employee to whom wages are owed must file the claim, the Council will be responsible for advising the employee of this requirement and the employee will provide the Council with a copy of the completed claim, so filed, within five (5) working days from the date of filing.

34.5 Subject to Article 34.6, the time limits set out in Article 34.4 may be extended by mutual consent of the Parties.

34.6 A claim for a wage debt made under this Article by, or on behalf of, an individual employee shall be deemed invalid in the event a corresponding claim is not made under and in accordance with the Act or Acts, as set out in Article 34.4.

34.7 Subject to Article 34.6, and provided that specific information as to the amount owed to an employee has been agreed upon by the Council and the Association, a joint account shall be established by the Parties in which the Association will deposit the aggregate of all verified claims to a maximum of five hundred thousand dollars ($500 000.00). Payment to the joint account shall be effected no later than sixty (60) calendar days from the date of filing of claims under the Act(s).

34.8 Subject to the limitations set out in this Article, funds in the joint account shall only be used to reimburse the difference between the amounts set out in Article 34.2, and the amounts recovered under the Acts referred to in Article 34.4(b)(ii).

34.9 Any funds remaining in the joint account after all claims have been processed shall revert to the Association.

ARTICLE 35 - COUNTERPARTS

35.1 This Agreement may be executed by the Parties in separate counterparts each of which when so executed and delivered shall be an original but all such counterparts shall together constitute one and the same instrument.

ARTICLE 36 - SUCCESSORS

36.1 This Agreement shall inure to the benefit of and be binding upon the Parties, and each of their assigns and successors.

IN WITNESS WHEREOF the parties hereto have executed this Agreement to take effect as of and from the 7th day of October, 2005.

APPENDICES

APPENDIX NO. 1 - Labourers

BURNTWOOD/NELSON AGREEMENT

MANITOBA HYDRO PROJECT CONSTRUCTION AND SPECIALIZED WORKERS (LABOURERS)

Local Union 1258

*** Note – See Letter of Agreement #30, for additional information regarding Appendix 1, Section 4 (wages)
*** Note – See Letter of Agreement #45, for additional information regarding Appendix 1 (Concrete Finisher and Red Seal Cement finisher classifications)
*** Note – See Letter of Agreement #49, for additional information regarding Appendix 1 (Training Trust Fund)
*** Note – See Letter of Agreement #52, for additional information regarding Appendix 1 (Foreman Coordinator)
*** Note – See Letter of Agreement #61, for additional information regarding Appendix 1 (Blaster wage enhancement)

1. Hours of Work and Overtime

a) Hours Monday through Friday

Nine (9) hours shall constitute a day's work for four (4) days Monday through Thursday, and eight (8) hours shall constitute a day's work for Friday.

The regular first shift shall normally be scheduled within the period from 7:00 a.m. to 6:00 p.m.

b) Overtime - Monday through Friday

If more than the recognized daily hours are worked in any day or shift on:

i) Monday through Thursday, such time shall be paid at the rate of time and one-half for the first three (3) hours, and double time for hours worked thereafter in any one day;

ii) Friday, such time shall be paid at the rate of time and one-half for the first four (4) hours, and double time for hours worked thereafter in any one day.

c) Overtime - Saturdays, Sundays and Holidays

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid for all hours worked.

On Sundays, and Holidays as specified in Article 17, double time shall be paid for all hours worked.

2. Shift Conditions

On any job that a second shift is worked, an employee shall be paid a shift premium of 0.067 of his standard hourly rate of pay for each hour worked at straight time provided, the shift extends beyond 6:00 p.m. and ends before 12:00 midnight.

On any job that a shift is worked completely within the period 6:00 p.m. to 7:00 a.m., or where a shift continues past 12:00 midnight or where a shift starts before 6:00 a.m., an employee shall be paid a shift premium of 0.105 of the standard hourly rate of pay for each hour worked at straight time.

Shift Premiums will only apply on hours worked at straight time.

The starting and quitting time of all shift work will be decided by the Contractor.

Overtime payment for shift work will be in accordance with the provisions as set out above.

3. Travelling Time

Any time spent travelling by an employee in excess of fifteen (15) minutes going to work and fifteen (15) minutes returning from work will be paid at straight time rates. Travelling time shall be measured from the employee's assigned marshalling point on the Project to the work site.

4. Wages

The following wage rates will become effective on the date shown:

4.1 Non-Trainees (i.e., employees not covered by 4.2 below)

	Effective				
	May 1, 2016	**May 1, 2017**	**May 1, 2018**	**April 21, 2019**	**May 1, 2019**
Blaster (with Provincial Blaster Certificate)	31.63	32.45	33.31	41.30	42.39
Powderman	31.26	32.07	32.92		33.79
Driller – Diamond, Wagon & Air Track Etc.	31.26	32.07	32.92		33.79
Rock Scaler (Vertical Faces)	25.75	26.42	27.12		27.84
Jackhammer & Air Tool Operator	25.75	26.42	27.12		27.84
Concrete Worker: a) Vibrator Operator b) Screedman, Floatman	 26.69 25.77	 27.39 26.44	 28.11 27.14		 28.85 27.86
Concrete Finisher (per LOA 45)	29.43	30.21	31.01		31.83
Red Seal Cement Finisher (per LOA 45)	33.28	34.17	35.08		36.01
Small Mixer Operator (including operators of grout mixers and gunnite tools) and Mortarman	24.98	25.63	26.31		27.01
Pipelayer, Caulker on Tile and Concrete Pipe	24.98	25.63	26.31		27.01
Portable Compressor & Small Pump Operator (2" discharge and under)	24.82	25.46	26.13		26.82
Driller's Helper	24.75	25.39	26.06		26.75
General Construction Labourer* with 6 months or more accumulative experience on building construction in the industrial, commercial or institutional sectors	25.44	26.10	26.79		27.50
General Construction Labourer* with less than six 6 months experience	22.67	23.26	23.87		24.50
Certified General Labourer	28.01	28.50	29.15		29.83
Heavy Construction Labourers **	21.69	22.25	22.84		23.45

Flagman, Spotter	18.55	19.03	19.53		20.05

*General Construction Labourer includes, but is not limited to, wreckers, barmen, form strippers, labourers assisting carpenters and labourers involved in applying grout prior to a concrete pour and in curing and green cutting of concrete.

** Heavy Construction Labourer includes, but is not limited to, labourer's work on all clearing, excavation, grading, backfilling associated with heavy construction, dewatering and foundation preparation work including cleaning of rock surfaces in preparation for the 1st concrete pour; labourer's work associated with washing, screening and crushing plants.

In respect of the General Construction Labourer Classifications, the number of persons employed in the (b) classification compared to the (a) classification shall not exceed the ratio of unskilled to skilled labourers prescribed in the Construction Industry Wages Act. When a contractor appoints a Labour Foreman, he shall be paid fifteen percent (15%) over the highest classification base wage rate working under his direct supervision.

When a contractor appoints a Lead Hand, he shall be paid seven percent (7%) over the individual's base wage rate**.**

4.2 Trainees

a) A trainee means any person who is hired to participate in a contractor's formally structured on-the-job training program in any classifications set out in the Appendix, the nature of which are not designated trades (ie designated as being appropriate for apprenticeship or certification or both pursuant to the Apprenticeship and Trades Qualifications Act of the Province of Manitoba);

b) Trainees shall be paid a percentage of the rate in effect for the classification for which the employee is being trained in accordance with the following:

0 – 1200 hours	60%
1201 – 2400 hours	77%
2401 – 3600 hours	96%

If the duration of the training program is less than 200 hours (or 400 hours or 600 hours, as the case maybe), the employee's rate shall be increased to 100% of the rate in effect for that classification, effective on the first working day following the employee's successful completion of the training program.

c) Prior to implementing any formal on-the-job training programs for any classifications set out in the Appendix, the Contractor shall provide the Association and the Council with the following information:

i) The classification for which on-the-job training will be instituted and the scheduled commencement date of the training;
ii) The duration of the training.

d) The Contractor may employ one (1) trainee for every three (3) Labourers of total "Labourers" on each work site.

e) An employee who is hired in a non-training classification may be re-assigned to a formal on-the-job training program under the following conditions:

i) An employee requests, in writing, to participate in the Contractor's formal on-the-job training program and the Contractor approves the request;

ii) The Contractor requests that an employee be re-assigned to a formal on-the-job training program and the employee and the Council are in agreement with the re-assignment.

f) An employee who is re-assigned in accordance with (e) above shall be deemed to be a trainee and paid in accordance with the provisions of (b) above;

g) The Contractor shall provide each employee who successfully completes the Contractor's formal on-the-job training program with a letter confirming the type of training received and the corresponding number of hours the employee spent in such training.

5. Annual Vacation and Vacation Pay

Annual vacation will be arranged as provided in The Employment Standards Code of Manitoba.

Vacation Pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked.

Vacation pay allowance will be paid to an employee on his regular pay day.

6. Pay in Lieu of Statutory Holidays

Whether or not an employee works on any of the Statutory Holidays under Article 17, he shall receive in lieu of paid holidays, four and a half percent (4.5%) of his standard hourly rate for each hour worked. The employee shall be paid this amount every payday.

7. Trust Funds

Pension Plan

The Contractor, on behalf of each employee, and each employee covered by the Appendix, shall contribute the amounts set out below to the Specialized Workers' Pension Trust Fund. Contributions shall apply to all hours worked and shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective	May 1, 2016	$2.39 per hour
Effective	May 1, 2017	$2.49 per hour
Effective	May 1, 2018	$2.64 per hour
Effective	May 1, 2019	$2.74 per hour

The Employee's contribution shall be:

Effective	May 1, 2013	$0.60 per hour

Health & Welfare

The Contractor, on behalf of each employee, and each employee covered by the Appendix, shall contribute the amounts set out below to the Specialized Workers' Health and Welfare Trust Fund. Contributions shall apply to all hours worked and shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective	May 1, 2016	$0.50 per hour
Effective	May 1, 2017	$0.55 per hour
Effective	May 1, 2018	$0.55 per hour
Effective	May 1, 2019	$0.60 per hour

The Employee's contribution shall be:

Effective	May 1, 2013	$0.70 per hour

Submission of Trust Funds

The Contractor shall forward the above Trust Fund contributions to the designated Administrators of each plan on or before the fifteenth day (15th) of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

8. Trusteed Training Fund Provision

Provided:

a) The Local Union to which employees covered by this Appendix belong establishes a Training Trust Fund in which employees covered by this Appendix are eligible to participate;

b) Written verification is forwarded to the Association and the Council by the Board of Trustees of each plan confirming:

i) Proviso (a), above;

ii) That Trust Agreements have been executed and registered.

As the above conditions have been met, a trusteed training fund will be introduced into this Appendix on the following basis:

The contractor, on behalf of each employee, shall respectively contribute the amounts set out below to the Construction and Specialized Workers Union Local 1258, Training Trust Fund. Contributions shall apply to all hours worked (regular and overtime).

The contractor's contribution shall be:

Effective October 17, 2016 $0.25 per hour

Contractor contributions to the fund will be discontinued immediately if one or more of the following occurs:

i) The fund ceases to be governed by a trust;

ii) The provisions of the trust are not fulfilled;

iii) Employers are no longer represented on the Board of Trustees.

- In the event either the Association or the Council has reason to believe that one or more of the conditions described in (i), (ii), or (iii) above have occurred, the matter shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor contributions in trust.

Submission of Trust Funds

The contractor shall forward the above Trust Fund contributions to the designated Administrator of the Plan on or before the fifteenth (15th) day of each month following the month in which contributions were made.
A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

9. Escalation and Reference

9.1 Wages Rates

The wage rate for all classifications in this Appendix shall be adjusted by a percentage, equivalent to and effective on the dates of any adjustment in wage rates, calculated on a percentage basis, which are negotiated from time to time for the classification of "General Labourer" by the Construction and Specialized Workers' Union, Local Union 1258, and the Construction Labour Relations Association of Manitoba.
In applying the percentage adjustment, the resultant wage rate shall be rounded to the nearest cent.

9.2 Vacation and Statutory Holiday Pay

Vacation and Statutory Holiday Pay shall be adjusted to be consistent with that negotiated between the Construction and Specialized Workers' Union, Local Union 1258, and the Construction Labour Relations Association of Manitoba.

9.3 Pension Plan and Health and Welfare

The Pension Plan and Health and Welfare Plan contributions will be adjusted to be consistent with the contributions negotiated from time to time by the Construction and Specialized Workers' Union, Local Union 1258, and the Construction Labour Relations Association of Manitoba, subject to the restrictions set out in Section 9.3.2.

9.3.2 The Contractor's contributions to the Pension and Health and Welfare Plans may be applied on a per hour worked basis, however, the Contractor's contribution rate for any overtime hours shall not be greater than the contribution rate in effect for straight time hours.

9.4 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

9.5 The provisions of 9.1 to 9.3 inclusive shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 1a – Security Guards

CONSTRUCTION AND SPECIALIZED WORKERS
(SECURITY GUARDS)

Local Union 1258

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #3, for additional information regarding Appendix 1A (Labourers being union affiliate for Security Guards)
*** Note – See Letter of Agreement #32, for additional information regarding Appendix 1A, Section 7 (Wages)

1. Hours of Work and Overtime

Due to the nature of the work employees covered by this Appendix may be required, if requested by the Contractor, to work up to twelve (12) hours per day or shift for six (6) consecutive days.

Nine (9) hours shall constitute a day's work for four (4) consecutive days, eight (8) hours shall constitute a day's work for the following consecutive day, and four (4) hours shall constitute a day's work for the following consecutive day. If more than the recognized daily hours are worked on any day or shift on these first six (6) days, such time shall be paid for at the rate of time and one-half.

On the seventh day, and on Holidays (Article 17), time and one-half shall be paid for all hours worked. Such overtime on the seventh day and on Holidays shall be applied to all hours worked on shifts that commence on or subsequent to 00:00 hours and prior to 24:00 hours of the calendar day on which the seventh day or Holiday falls.

Work schedules setting out the shift to be worked and the starting time of such shifts shall be posted in a place accessible to all employees.

An employee will be assigned a minimum of one (1) day of rest per work week.

2. Meal Breaks

In the event the Contractor requests an employee to remain on duty during a meal break, he shall be paid during the meal break at the applicable rate of pay.

3. Shift Conditions

An employee directed to work a night shift shall be paid a premium of twenty five cents (25¢) for each hour worked at the straight time rate provided, the majority of the shift is worked between the hours of 6:00 p.m. and 7:00 a.m.

Shift premium will only apply on hours worked at straight time.

4. Call Out

When an employee completes his regular shift, leaves the job and is subsequently called out for unscheduled work by the Contractor, he shall be paid a minimum of two (2) hours at the rate of time and one-half.

5. Rest Time

When an employee has not been provided with a break of at least eight consecutive hours between shifts, excluding any call out time of two (2) hours or less, he shall be paid time and one-half for all hours worked on the succeeding shift.

6. Travelling Time

Any time spent travelling by an employee in excess of fifteen (15) minutes both going to and returning from work will be paid at straight time rates. Travelling time shall be measured from the employee's assigned marshalling point on the Project to the work site.

7. Wages

Wage rates shall be as follows:

a) Security Guards (other than Trainees)

Effective	(1) Starting Rate	(2) Rate After 90 Days
May 1, 2016	$17.17	$17.84
May 1, 2017	$17.60	$18.28
May 1, 2018	$18.05	$18.74
May 1, 2019	$18.51	$19.22

On hire, Security Guards shall be paid the applicable "starting rate" set out in column (1). On the ninety first (91st) day of continuous employment on a project site, the employee's wage rate shall be increased correspondingly to that set out in column (2).

When an employee is rehired by a Contractor to work on the project site on which he had previously qualified for the rate set out in column 2, the employee shall be paid the rate set out in column 2.

When the Contractor appoints a Lead Hand, the employee so appointed shall receive a minimum of one dollar ($1.00) per hour above the highest hourly rate in effect in respect of Security Guards under his supervision.

b) Trainees

A person who is hired for participation in a formal on the job training program shall be paid an hourly rate equal to ninety percent (90%) of the 'Starting Rate' for security guards in effect at the time of hire, rounded to the nearest one cent (1¢).

The trainee shall be paid this rate until he has completed ninety (90) calendar days of continuous employment on the Project. However, if a trainee is laid off before having completed the said ninety (90) calendar days, and is subsequently rehired, the trainee shall be credited with the time previously worked. For any employment subsequent to the completion of the ninety (90) calendar day training period, the employee shall be advanced in pay scale to the applicable 'Starting Rate' for security guards.

A trainee shall generally be under the supervision and direction of qualified security guards during the training period and shall not be required to assume the duties and responsibilities of qualified security guards excepting:

i) When such assignments are for training purposes and the time required to perform same does not exceed three (3) hours;

ii) When such assignments are necessitated as a direct result of the unexpected absence of qualified security guards, provided the work assignment is consistent with the trainee's level of development and the assignment does not exceed one shift.

8. Vacation and Vacation Pay

Annual vacation will be arranged as provided in the Employment Standards Code for the Province of Manitoba.

Vacation Pay will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked.
Vacation pay allowance will be paid to an employee on his regular pay day.

9. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays, four and a half percent (4.5%) of his total gross wages, exclusive of overtime earned in the calendar year. The employee shall be paid this amount not later than the 31st day of December of the calendar year or upon termination of his employment whichever day is the earlier.

10. Other Conditions of Employment

a) Union Membership

Provided a Security Guard Employee covered by this Agreement is willing to become a Member of the Union in accordance with Article 12.2.1, Union Membership shall not be denied.

b) Supply of Uniforms

i) The Contractor shall supply uniforms (as may be required by the Contractor) for which the employee will not be charged, except as noted below;

Uniforms shall not include footwear, underwear, gloves and/or mitts.

ii) Furnished uniforms, excluding shirts, shall be cleaned and maintained at the Contractor's expense;

iii) Uniforms and equipment issued by the Contractor shall be returned by the employee, on termination of employment, to the senior authority of the Contractor on the Project Site. An employee shall be held responsible for proven negligent misuse or damage to uniforms and equipment.

c) Bonding

When requested by the Contractor, it shall be a condition of employment that Security Guards must qualify for and become bonded. In this case, the potential employee shall upon request fill in the necessary application, and the costs of such bonding shall be paid by the Contractor.

d) Personal Contracts

Any individual contract or agreement between a Contractor and an employee which sets out terms and conditions of employment in variance with the terms and conditions of employment contained in this Agreement shall be null and void in respect of employees covered by this Appendix while they are employed under this Agreement.

11. Pension and Health and Welfare Trust Funds

Pension Plan

The contractor on behalf of each employee, and each employee covered by this Appendix, shall respectively contribute the amounts set out below to the Labourers union (or directly to the Pension provider as necessary), local 1258, Pension Trust Fund. Contributions shall apply to all hours worked (regular and overtime). Employee contributions shall be collected at the source as a payroll deduction

The Contractor's contribution shall be:

Effective	November 15, 2015	$0.50 per hour

The Employee's contribution shall be:

Effective	November 15, 2015	$0.50 per hour

Health & Welfare

The contractor on behalf of each employee, and each employee covered by this Appendix, shall respectively contribute the amounts set out below to the Labourers union (or directly to the H&W provider as necessary), local 1258, Health and Welfare Trust Fund. Contributions shall apply to all hours worked (regular and overtime). Employee contributions shall be collected at the source as a payroll deduction

The Contractor's contribution shall be:

Effective	November 15, 2015	$0.60 per hour

The Employee's contribution shall be:

Effective	November 15, 2015	$0.60 per hour

Submission of Trust Funds

The Contractor shall forward the above Trust Fund contributions to the designated Administrators of each plan on or before the fifteenth day (15th) of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded

12. Escalation and Reference

12.1 Wage Rates

As provided in Section 12.2, the wage rates for all classifications in this Appendix shall be adjusted by a percentage, equivalent to the percentage adjustment in wage rates and in the employers' contribution rate to pension and health and welfare plans negotiated from time to time for the classification of "General Labourer" (hereinafter referred to as the Reference Classification) by the Construction and Specialized Workers' Union, Local Union 1258, and the Construction Labour Relations Association of Manitoba.

12.2 Method of Calculating Percentage Adjustment of Classifications

The percentage adjustment of the Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired W) + (Expired P) + (Expired H\&W)}} \times 100$$

Where:

- Change means the increase or decrease in that benefit.
- W means wage rate.
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last percentage adjustment was calculated.

12.2.1 In calculating the percentage adjustment of the Reference Classification, the result shall be rounded to the nearest hundredth of a per cent.

12.2.2 Effective Date of Adjustments

When changes to W or W and P and/or H&W in the agreement being used for reference purposes occur on the same date, the percentage adjustment of all such changes shall be calculated to determine the percentage adjustment by which wage rates in the Appendix are to be adjusted and the foregoing shall be the effective date of the resultant wage rates.

When changes to P and/or H&W are not effective on the effective date of any changes to W in the agreement being used for reference purposes, such changes shall be deemed to be effective on the date of a change to W next occurring, and the procedures set out above shall be followed.

When: a) there are no changes to W but there are changes to P and/or H&W, or b) there are changes to P and/or H&W but no subsequent changes to W during the term of the agreement being used for reference purposes, the calculated percentage adjustment shall be effective on the effective date of such changes in the agreement being used for reference purposes.

12.2.3 In applying the percentage adjustments, the resultant wage rates shall be rounded to the nearest cent.

12.3 Vacation and Holiday Pay

The percentage figure set out in Sections 8 and 9 of this Appendix, shall be adjusted to be the same as that in effect in Appendix No. 1 of this Agreement.

12.4 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

12.5 The provisions of 12.1 to 12.3 inclusive shall be adjusted by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 2 – Crane Operators

INTERNATIONAL UNION OF OPERATING ENGINEERS

Local Union 987
Conditions Applicable to Crane Operators

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #33, for additional information regarding Appendix 2 (Telebelt Classification addition)
*** Note – See Letter of Agreement #42, for additional information regarding Appendix 2 (Tower Crane trade improvement trust fund)

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days, Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double the regular straight time hourly rate for all hours worked thereafter.

On Saturdays, except as provided in Article 15.2**,** Sundays, and Holidays as specified in Article 17, double time shall be paid for all hours worked.

2. Shift Conditions

If the conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.), then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A premium of .067 of the regular straight time rate will be paid for each shift hour worked on a shift that cannot be done within the said normal hours except that on those shift hours which are worked between 12:00 midnight and 6:00 a.m. a premium of .142 of the regular straight time rate will be paid. Shift premium will not be paid on any overtime hours worked.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the Contractor.

3. Travel Time

Any time spent travelling by an employee in excess of fifteen (15) minutes going to work and fifteen (15) minutes returning from work will be paid at straight time rates. Travelling time shall be measured from the employee's assigned marshalling point on the Project to the work site.

4. Wages

Wage Rates shall be as follows:

4.1 Journeyman Status (i.e., Non-Trainees)

	Effective May 1, 2016	Effective May 1, 2017	Effective May 1, 2018	Effective May 1, 2019
Whirley, Tower, Climbing and Powerhouse Overhead Bridge Crane Classifications				
Operators of all Powerhouse Overhead Bridge Cranes and Operators of Climbing and Tower Cranes	$43.31	$44.46	$45.65	$46.87
Tower &Climbing Crane Apprentices				
1st year 0-750 hours - 55% of Tower Crane Operator Rate of Pay	$23.82	$24.46	$25.11	$25.78
1st year 751-1500 hours - 60% of Tower Crane Operator Rate of Pay	$25.98	$26.68	$27.39	$28.12
2nd year 1501-2250 hours – 70% of Tower Crane Operator Rate of Pay	$30.32	$31 .12	$31.96	$32.81
2nd year 1701-3400 hours – 75% of Tower Crane Operator Rate of Pay	$32.48	$33.35	$34.24	$35.15
New Journeyman 0-900 hours – 85% of Tower Crane Operator Rate of Pay	$36.81	$37.79	$38.80	$39.84
New Journeyman 901-1800 hours – 95% of Tower Crane Operator Rate of Pay	$41.14	$42.24	$43.37	$44.53
Mobile Crane Operators				
Class 1- Up to 50 ton and boom truck over 25 ton	$38.42	$39.44	$40.50	$41.58
Class 2 – 51 ton to 99 ton	$40.51	$41.59	$42.70	$43.84
Class 3 – 100 ton to 199 ton	$41.91	$43.03	$44.18	$45.36
Class 4 - 200 ton to 300 ton Crane Operators shall receive a premium of two and a half (2.5¢) cents per ton over the Class 4 rate while operating cranes over 300 ton capacity.	$43.31	$44.46	$45.65	$46.87
Mobile Crane Apprentices				
1st year 0-1700 hours - 60% of Class 1	$23.05	$23.67	$24.30	$24.95
2nd year 1701-3400 hours – 70% of Class 2	$28.36	$29.11	$29.89	$30.69
3rd year 3401-5100 hours – 80% of Class 3	$33.53	$34.43	$35.34	$36.29

Boom Truck Hoist Classifications				
Operators of Boom Truck Hoists up to 25 tons	30.74	31.56	32.40	33.27
Operators of Boom Truck Hoists > 25 tons	$38.42	$39.44	$40.50	$41.58

Note: The above classifications include operators of cranes converted for the placing of concrete (creter, telebelt or similar) and cranes adapted for pile driving and foundation boring. *** For these positions a hoisting ticket and/or red seal are not required for their operation.

When two (2) powerhouse overhead bridge cranes are being operated and the Contractor, pursuant to the provisions of Article 4, has assigned the operation of the first crane to the Operating Engineers, Local 987 and the second crane to the I.B.E.W., Local 2085, if the wage rate of the first crane operator is less than the wage rate of the second, the wage rate of the first crane operator shall be adjusted to be equal with the second, during the period both cranes are being operated as aforementioned.

All mobile and crawler crane operators must:

i. Be able to operate efficiently with maximum boom and jib.

ii. Be fully knowledgeable of all applicable safety requirements and regulations.

iii. Be able to perform routine maintenance on the equipment operated.

iv. Be able to set up and move the crane with due consideration for footing conditions, machine level and the positioning of outriggers, etc.

v. Be able to lift maximum loads safely at all positions of radius.

vi. Be able to control swing load out.

vii. Be able to assemble and dismantle jibs and booms.

viii. Be able to adjust both clutches and brakes (conventional) and inspect cables.

4.2 Mobile Crane Premiums

In respect of the classifications set out in Section 4.1 (b) above, a crane operator assigned to operate a mobile and crawler crane with a lattice boom (conventional crane) shall be paid the following premium while operating such equipment:

While operating a crane in Class 1 and 2, operators shall receive a $2.50 per hour premium if the crane has a lattice boom, or tower attachment, over the Class 1 or 2 rate.

While operating a crane in Class 3 or 4, operators shall receive a $3.50 per hour premium if the crane has a lattice boom, or tower attachment, over the Class 3 or 4 rate.

While operating a crane with a "super lift" attachment and/or a "luffing jib", operators shall receive a $2.00 per hour premium over the base rate.

4.3 Crane Foreman

When the Contractor appoints a Crane Foreman, the person so appointed shall receive a minimum of fifteen per cent (15%) per hour above the employee's existing rate.

4.4 Crane Operator Apprentices

The Contractor may employ one (1) Apprentice for every one (1) Journeyman employed by the Contractor as Crane Operators. Crane Operator Apprentices (except Boom Truck Hoist Operator Apprentices and Tower Crane Operator Apprentices) shall be paid the following, or the minimum wage rates prescribed in the Trade of Crane and Hoisting Equipment Operator Regulations, whichever is more favourable to the Apprentice:

0 to 1700 hour	- 60% of ***Class 1*** Journeyman
1701 - 3400 hours	- 70% of ***Class 2*** Journeyman
3401 - 5100 hours	- 80% of ***Class 3*** Journeyman

In order for an Apprentice to qualify for the next step on the Apprentice Scale, the Apprentice must successfully complete 1700 hours of practical and technical training.

Boom Truck Hoist Operator Apprentices shall be paid the following percentages of the applicable rate for a certified boom truck hoist operator as set out in Section 4.1 (c) above, or the minimum wage rates prescribed in the Trade of Crane and Hoisting Equipment Operator Regulations, whichever is more favourable to the Apprentice:

1st year - 60%
2nd year - 80%

Tower Crane Operator Apprentices shall be paid the following percentages of the applicable rate for a tower crane operator as set out in Section 4.1 (a) above, or the minimum wage rates prescribed in the Trade of Crane and Hoisting Equipment Operator Regulations, whichever is more favourable to the Apprentice:

1st year - 60%
2nd year - 80%

5. Rest Period

If an employee is not provided with at least an eight (8) hour rest period between shifts, the employee shall be paid at the applicable overtime rate until such time as an eight (8) hour break occurs.

If an employee is required to work through his lunch period he shall be paid at the applicable overtime rate for that period of time.

6. Callouts

An employee called out for work after he has competed his regular shift and has departed from the job site shall be paid a minimum of four (4) hours at the applicable overtime rate.

7. Vacation and Statutory Holiday Pay

Each employee shall be paid an amount equal to ten and a half percent (10.5%) of his gross wages (i.e., straight time and overtime wages) of which four and a half percent (4.5%) shall be in lieu of pay for the Statutory and General Holidays set out in Article 17.

Vacation pay and pay in lieu of Statutory Holidays shall be paid to each employee on his regular pay day. Such payments shall be considered as advance payments and in the case of vacation pay, full payment of all vacation with pay owing to the employee pursuant to the Employment Standards Code for the Province of Manitoba.

8. Pension and Health and Welfare Trust Funds

(a) Pension Trust Fund

The Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Operating Engineers (987) Pension Trust Fund. Contributions shall apply to all hours worked. Contributions for all Apprentices shall be pro-rated at the applicable Apprentice percent to Journeyman rate, i.e. as a first year Apprentice will be paid at 55% of the Journeyman rate of pay, the Contractor will also therefore contribute a pension contribution for the Apprentice at 55% of the amount that a Journeyman is to receive (the same rationale is applicable for each step on the Apprentice Wage Scale). Employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective May 1, 2016	$5.60 per hour
Effective May 1, 2017	$5.95 per hour
Effective May 1, 2018	$6.31 per hour
Effective May 1, 2019	$6.69 per hour

The employee's contribution shall be:

- Nil

(b) Health and Welfare Trust Fund

The Contractor shall contribute to the Operating Engineers (987) Health and Welfare Trust Fund the amount set out below for each hour worked by all employees covered by this Appendix:

Effective May 1, 2016, $1.65 per hour
Effective May 1, 2017 $1.70 per hour
Effective May 1, 2018 $1.75 per hour
Effective May 1, 2019 $1.80 per hour

(c) Trade Improvement Trust Fund

(1) Subject to (2) below, the Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Operating Engineers (987) Trade Improvement Trust Fund. Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

- Effective May 1, 2016 - 65¢ per hour
- Effective May 1, 2017 - 65¢ per hour
- Effective May 1, 2018 - 65¢ per hour
- Effective May 1, 2019 - 65¢ per hour

The Employee's contribution shall be:

- Nil

(2) Contractor and Employee contributions to the Fund will be discontinued immediately if one or more of the following occurs:

(i) the Fund ceases to be governed by a Trust,

(ii) the provisions of the Trust are not fulfilled,

(iii) Employers are no longer represented on the Board of Trustees,

(iv) The Trade Improvement Fund is not included in any of the following Collective Agreements:

- Heavy Equipment Rental Agreement
- The General Contractors Heavy Equipment Trade Division Agreement
- Heavy Equipment Industrial/Mechanical Agreement

(3) In the event either the Association or the Council has reason to believe that one or more of the conditions described in (i), (ii),(iii), or (iv) above has occurred, the matter shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor and Employee contributions in trust.

(d) Submission of Trust Funds

The Contractor shall forward the above Trust Fund Contributions to the Operating Engineers (Local 987) Pension Trust Fund, Health and Welfare Trust Fund, and Operating Engineers Trade Improvement Trust Fund to:

Coughlin and Associates Ltd.
100-175 Hargrave Street
Winnipeg, MB R3C 3R8

The said amounts will be submitted by the fifteenth (15th) day of the month following the month in which the hours were worked.

9. Log Book

Provided the Union supplies Crane Operators with appropriate log books, and the log book is submitted to the Contractor by the employee, the Contractor will record therein, in the space allocated for such purposes, the type and capacity of the Crane being operated by that employee, and the period of time the employee was operating such equipment.

10. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- after twenty-eight (28) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3. Travel time shall be paid at the employee's straight time rate and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

11. Escalation and Reference

11.1 Wage Rates

(a) Whirley and Tower and Climbing and Powerhouse Overhead Bridge Crane Classifications

The wage rates for the classifications in Section 4.1 (a)(i), in this Appendix shall be adjusted by an amount equal to and effective on the dates of any adjustments in wages rates for the Class No. 6, 151 to 200 ton capacity (or the equivalent thereof) Crane Operator negotiated from time to time by the International Union of Operating Engineers, Local 987 and the Construction Labour Relations Association of Manitoba (C.L.R.A.) and set out in the Heavy Equipment Industrial/Mechanical (I/M) Collective Agreement, and the wage rates for the classifications in Section 4.1 (a)(ii), in this Appendix shall be adjusted by an amount equal to and effective on the dates of any adjustments in wages rates for the Class No. 4, 200 – 300 ton capacity (or the equivalent thereof) Crane Operator negotiated from time to time by the International Union of Operating Engineers, Local 987 and the Construction Labour Relations Association of Manitoba (C.L.R.A.) and set out in the Heavy Equipment Industrial/Mechanical (I/M) Collective Agreement.

(b) Mobile and Crawler Crane Classifications

The wage rates for each weight capacity grouping of Mobile and Crawler Crane classifications**,** and tonnage premiums for cranes over 200 tons as set out in Section 4.1(b) shall be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for the weight capacity grouping of Mobile and Crawler Crane classifications and tonnage premiums for cranes over 200 tons corresponding thereto negotiated from time to time by Local 987 and the C.L.R.A. and set out in the Heavy Equipment Industrial/Mechanical Agreement (I/M Agreement).

(c) Boom Truck Hoist Classifications

The wage rates for each weight capacity grouping of Boom Truck Hoist classifications as set out in Section 4.1(c) shall be adjusted by a percentage equal to and effective on the dates of any increases or decreases to wage rates for the Class 2, 25 ton or greater capacity (or equivalent thereof) Crane Operator negotiated from time to time by Local 987 and the C.L.R.A. and set out in the Heavy Equipment Industrial/Mechanical Agreement (I/M Agreement).

(d) Apprentices

The wage rates for Apprentices (except Boom Truck Hoist Operator Apprentices and Tower Crane Operator Apprentices) shall be adjusted to be consistent with the said Heavy Equipment Industrial/Mechanical Agreement (I/M Agreement).

(e) Lattice (Conventional) Boom Premium

The lattice boom premium set out in Section 4.2 shall be adjusted by an amount equal to and effective on the dates of any adjustments in the lattice boom premium negotiated from time to time by the aforementioned Parties and set out in the I/M Agreement, provided such premium continues to be considered, by the Parties to the I/M Agreement, an intrinsic component of wage rates, otherwise, payment of the premium shall be discontinued and pursuant to Article 30, the premium shall be deleted from this Appendix.

11.2 Overtime

Overtime payments, subject to the restrictions set out in Section 11.5, will be adjusted to be consistent with overtime conditions in the I/M Heavy Equipment Collective Agreement save and except that overtime at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

11.3 Vacation and Holiday Pay

The percentage figure set out in the Vacation and Holiday Pay Section of this Appendix shall be adjusted to be the same as that negotiated from time to time by the Heavy Equipment I/M Trade Division of the Construction Labour Relations Association of Manitoba and the Operating Engineers, Local 987.

11.4 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be adjusted to be consistent with corresponding conditions of employment negotiated by Local 987 and the C.L.R.A. and set out in the I/M Agreement:

(a) the registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 11.4.1).

(b) the trusteed trade improvement plan (subject to the provisions of Section 8(c)(2) and the restrictions set out in Section 11.4.1).

(c) the time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3).

(d) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 11.4.2).

11.4.1 The Contractor's contribution to any of the plans referred to in Section 11.4(a) and (b) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

11.4.2 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

11.5 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

11.6 The provisions of 11.1 to 11.4 inclusive shall be dealt with by following the procedure set out in Article 30 of this Agreement.

11.7 Notwithstanding anything contained in this Agreement or in this Appendix, in the event that the wage rate for Class 4, 200 – 300 ton capacity, (or equivalent thereof) Crane Operators in the I/M Agreement differs from the wage rate for Class 1 Tower and Climbing Crane Operators in the Collective Agreement between the Construction Labour Relations Association of Manitoba (C.L.R.A.), General Contractors Heavy Equipment Trade Division, and the International Union of Operating Engineers, Local 987, and/or the wage rate for Class 6, 151 to 200 ton capacity, (or equivalent thereof) Crane Operators in the I/M Agreement differs from the wage rate for Class 2 Tower and Climbing Crane Operators in the Collective Agreement between the Construction Labour Relations Association of Manitoba (C.L.R.A.), General Contractors Heavy Equipment Trade Division, and the International Union of Operating Engineers, Local 987, the Joint Appendix Review Committee shall meet within 30 days to determine if the I/M Agreement is still an appropriate Agreement to be used for reference purposes. If the Joint Appendix Review Committee cannot reach agreement, the matter shall be resolved under the provisions of Article 31 (Mediation).

APPENDIX NO. 2a – Equipment Operators

INTERNATIONAL UNION OF OPERATING ENGINEERS

Local Union 987
Equipment Operators and Allied and Support Services

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #42, for additional information regarding Appendix 2A, (Tower Crane trade improvement trust fund)
*** Note – See Letter of Agreement #43, for additional information regarding Appendix 2A, Section 4 (Power Engineer classification and wage adjustment)
*** Note – See Letter of Agreement #62, for additional information regarding Appendix 2A, (Heavy Duty Diesel Mechanics wage enhancement)

1. Hours of Work and Overtime

(a) Hours Monday through Friday

Nine (9) hours shall constitute a day's work for four (4) days Monday through Thursday, and eight (8) hours shall constitute a day's work for Friday.

The regular first shift shall normally be scheduled within the period from 7:00 a.m. to 6:00 p.m.

(b) Overtime - Monday through Friday

If more than the recognized daily hours are worked in any day or shift on:

(i) Monday through Thursday, such time shall be paid at the rate of time and one-half for the first three (3) hours, and double time for hours worked thereafter in any one day.

(ii) Friday, such time shall be paid at the rate of time and one-half for the first four (4) hours, and double time for any hours worked thereafter.

(c) Overtime Saturdays, Sundays and Holidays

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid for the first ten (10) hours worked and double time for any hours worked thereafter.

On Sundays, and Holidays as specified in Article 17, double time shall be paid for all hours worked.

(d) Day-off, Other Than Sunday

When an employee is required to work shifts to accommodate the continuous operation of compressors, pumps, boilers or other such equipment, an employee can be assigned a day of rest, other than Sunday.

In this case, for purposes of applying provisions 1 (a), (b) and (c) above, the assigned day of rest shall be recognized as a Sunday and the subsequent six (6) consecutive days as Monday through Saturday.

2. Shift Conditions

On any job that a second shift is worked, an employee shall be paid a shift premium of 0.067 of his standard hourly rate of pay for each hour worked at straight time provided the shift extends beyond 6:00 p.m. and ends before midnight.

On any job that a shift is worked completely within the period 6:00 p.m. to 7:00 a.m., or where a shift continues past midnight, or where a shift starts before 6:00 a.m., an employee shall be paid a shift premium of 0.105 of the standard hourly rate of pay for each hour worked at straight time.

Shift premiums will only apply on hours worked at straight time.

The starting and quitting time of all shift work will be decided by the Contractor.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

3. Travelling Time

Any time spent travelling by an employee in excess of fifteen (15) minutes going to work and fifteen (15) minutes returning from work will be paid at straight time rates. Travelling time shall be measured from the employee's assigned marshalling point on the Project to the work site.

4. Wages

Wage rates shall be as follows:

4.1 Non-Trainees (i.e., employees not covered by 4.2 and 4.3 below)

CLASSIFICATION	Effective June 28, 2019
GROUP 1	
Operators of shovels, clamshells and draglines:	
a) 10 cu.yd. and up to and including 15 cu.yd.	$ 34.49
b) 5 cu.yd. and up to but not including 10 cu.yd.	$ 33.77
c) under 5 cu.yds.	$ 32.91
GROUP 2	
Operator of backhoes and gradalls:	
a) 10 cu.yd. and up to and including 15 cu.yd	$ 33.90
b) 5 cu.yd. and up to but not including 10 cu.yd.	$ 32.91
c) 2½ cu.yd. and up to but not including 5 cu.yd.	$ 30.82
d) under 2½ cu.yd.	$ 28.95
GROUP 3	
Operators of crawlers and wheel type loaders including loaders converted for forklifting:	
a) 10 cu.yd. and up to and including 15 cu.yd. capacity	$ 30.28
b) 5 cu.yd. and up to but not including 10 cu.yd. capacity	$ 28.67
c) under 5 cu.yd. capacity	$ 27.90
GROUP 4	
Operators of crawler and wheel type tractors with attachments such as ripper and/or dozer and/or scraper etc.:	
a) D-10, D-9 in tandem, (or equivalent)	$ 29.20
b) D-9 or under, (or equivalent)	$ 28.58

GROUP 5	
Operators of self-propelled wheeled type scrapers (all types):	
a) 30 cu.yd. and up to and including 45 cu.yd.	$ 28.45
b) under 30 cu.yd. capacity	$ 27.54
GROUP 6	
Operators of Batch Plants:	
a) over 200 cu.yd. per hour rated capacity	$ 32.77
b) over 100 cu.yd. per hour including 200 cu.yd. per hour rated capacity	$ 30.58
c) over 50 cu.yd. and up to and including 100 cu.yd. per hour rated capacity	$ 28.33
d) 50 cu.yd. rated capacity and under	$ 27.31
GROUP 7	
Operators of crusher, screening and washing plants with rated capacity:	
a) 100 cu.yd. per hour and up	$ 28.45
b) Under 100 cu.yd. per hour	$ 27.54
GROUP 8	
Operators of conveyor belts and conveyor type loader (Barber Greene, Kohlman or similar types):	$ 27.31
GROUP 9	
Operators of inboard or outboard boats with motors rated:	
a) over 225 HP	$ 27.77
b) 225 HP and under	$ 25.99
GROUP 10	
Operators of motor graders:	
a) Finishing	$ 29.18
b) Other	$ 27.77
GROUP 11	

Operators of truck-mounted foundation boring machines:	
a) over 100 HP	$ 28.54
b) 100 HP and under	$ 27.54
GROUP 12	
Operators of Forklifts and Dinky locomotives:	
a) Forklifts	$ 27.31
b) Dinky locomotives	$ 28.45
GROUP 13	
Operators of:	
a) Tuggers, powerhoists, and Bullmooses	$ 29.89
b) Electrical hoisting equipment,fixed or travelling, with remote or suspended controls, up to and including 30 ton capacity	$ 29.18
c) Boom Truck Hoists, including Hiabs, hydra lifts, or similar of less than 7300 kilogram capacity*	$ 29.18
GROUP 14	
Operators of grout plants, concrete pumps, air drills and diamond drills:	$ 27.20
GROUP 15	
Operators of self-propelled vibratory compactors and tractor hauled compactor units:	
a) over 100 HP	$ 26.89
b) 100 HP and under	$ 26.30
GROUP 16	
Air compressor attendants:	
a) 1000 CFM and over	$ 26.89
b) under 1000 CFM	$ 26.30
GROUP 17	
Pump attendants:	
a) 6" discharge and over	$ 26.89
b) 2" to under 6" discharge	$ 26.30
GROUP 18	
Heavy Duty Gas and Diesel Mechanics:	

a) with a certificate of qualification	$ 35.33
b) without a certificate of qualification	$ 32.86
GROUP 19	
Serviceman	$ 28.45
GROUP 20	
Drill Doctor (Drill Mechanic):	
a) Hydraulic Drills	$ 32.21
b) Airtrac Drills	$ 32.09
c) Bit Sharpener	$ 28.95
GROUP 21	
Welders:	
a) CWB certified	$ 33.88
b) Non-certified	$ 33.21
GROUP 22	
Mechanic's helpers, welder's helpers, serviceman's helpers and oiler's	$ 24.76
GROUP 23	
Power Engineer:	
a) Third Class	$ 29.09
b) Fourth Class	$ 28.33
GROUP 24 *	
Power Engineer:	
a) Fourth Class*	$ 40.65

* Per LOA 43, the classification of Power Engineer, level 4, has been re-established. This pay group 24, will be in effect only by employer BBE, who is completing the general civil work at the Keeyask Generating Station. On completion of the BBE contract, pay group 24 will become null and void, and will be deleted.

When the Contractor appoints a Mechanic or Equipment Foreman, the person so appointed shall receive a minimum of ten per cent (10%) per hour above the highest paid rate of those employees being supervised.

*For boom truck hoists in excess of 7,299 kgs., see Appendix 2.

If dredging work is undertaken, at the request of either the Association or Council, the

Joint Appendix Review Committee will establish Operating Engineer Classifications associated with dredging, and rates of pay for such classifications.

4.2 Heavy Duty Mechanic Apprentices and Boom Truck Hoist Operator Apprentices

Heavy Duty Mechanic Apprentices shall be paid the following percentages of the rate for a certified heavy duty mechanic, as set out in (A) above.

1st year - 60%
2nd year - 70%
3rd year - 75%
4th year - 85%

Unless otherwise agreed to by the Council and the Association, the number of apprentices who may be employed by a Contractor shall not exceed one (1) apprentice for every three (3) qualified heavy duty mechanics employed.

Boom Truck Hoist Operator Apprentices shall be paid the following percentages of the rate for a certified boom truck hoist operator as set out in Group 13, d),above, or the minimum wage rates prescribed in the Trade of Crane and Hoisting Equipment Operator Regulations, whichever is more favourable to the Apprentice:

1st year - 60%
2nd year - 80%

The number of apprentices who may be employed by a Contractor shall not exceed one (1) apprentice for every one (1) certified Boom Truck Hoist Operator employed.

4.3 Trainees

(a) A trainee means any person who is hired to participate in a contractor's formally structured on-the-job training program in any classifications set out in the Appendix, the nature of which are not designated trades (ie designated as being appropriate for apprenticeship or certification or both pursuant to the Apprenticeship and Trades Qualifications Act of the Province of Manitoba).

(b) Trainees shall be paid a percentage of the rate in effect for the classification for which the employee is being trained in accordance with the following:

1 - 200 hours	60 %
201 - 400 hours	70 %
401 - 600 hours	80 %
601 or more hours	90 %

If the duration of the training program is less than 200 hours (or 400 hours or 600 hours, as the case maybe), the employee's rate shall be increased to 100% of the rate in effect for that classification, effective on the first working day following the employee's successful completion of the training program.

(c) Prior to implementing any formal on-the-job training programs for any classifications set out in the Appendix, the Contractor shall provide the Association and the Council with the following information:

i. the classification for which on-the-job training will be instituted and the scheduled commencement date of the training

ii. the duration of the training.

(d) The number of trainees shall not exceed twenty-five percent (25%) of the total number of employees employed by a Contractor and covered by this Appendix except as may otherwise be agreed to by the Association and the Council.

(e) An employee who is hired in a non-training classification may be re-assigned to a formal on-the-job training program under the following conditions:

(i) an employee requests, in writing, to participate in the Contractor's formal on-the-job training program and the Contractor approves the request;

(ii) the Contractor requests that an employee be re-assigned to a formal on-the-job training program and the employee and the Council are in agreement with the re-assignment.

(f) An employee who is re-assigned in accordance with (e) above shall be deemed to be a trainee and paid in accordance with the provisions of (b) above.

(g) The Contractor shall provide each employee who successfully completes the Contractor's formal on-the-job training program with a letter confirming the type of training received and the corresponding number of hours the employee spent in such training.

5. Vacations and Vacation Pay

Annual vacation will be arranged as provided in The Employment Standards Code for the Province of Manitoba.

Vacation Pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked.

Vacation pay allowance will be paid to an employee on his regular pay day.

6. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays under Article 17, he shall receive in lieu of paid holidays, four and a half percent (4.5%) of his standard hourly rate for each hour worked. The employee shall be paid this amount on his regular payday.

7. Pension and Health and Welfare Trust Funds

(a) Pension Trust Fund

The Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Operating Engineers (987) Pension Trust Fund. Employer contributions for all Apprentices and Trainees shall be pro-rated at the applicable Apprentice to Journeyman or Trainee to Non-trainee wage rate. Contributions shall apply to all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective July 3, 2016	$4.30 per hour
Effective May 1, 2017	$4.50 per hour
Effective May 1, 2018	$4.65 per hour

The employee's contribution shall be:

- nil.

(b) Health and Welfare Trust Fund

The Contractor shall contribute to the Operating Engineers (987) Health and Welfare Trust Fund the amount set out below for all hours worked by all employees covered by this Appendix:

Effective May 1, 2018	$1.70 per hour
Effective June 29, 2019	$1.80 per hour

(c) Submission of Trust Funds

The Contractor shall forward the above Trust Fund Contributions to the Operating Engineers (Local 987) Pension Trust Fund and Health and Welfare Trust Fund. The said amounts will be submitted by the fifteenth day of the month following the month in which the hours were worked.

8. Trade Improvement Trust Fund

(a) Subject to (b) below, the Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Operating Engineers (987) Trade Improvement Trust Fund. Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

- Thirty cents per hour.

The Employee's contribution shall be:

- nil**.**

The Contractor shall forward the above contributions to the Operating Engineers (987) Trade Improvement Trust Fund by the fifteenth (15th) day of the month following the month in which the hours were worked.

(b) Contractor and Employee contributions to the Fund will be discontinued immediately if one or more of the following occurs:

(i) the Fund ceases to be governed by a Trust,

(ii) the provisions of the Trust are not fulfilled,

(iii) Employers are no longer represented on the Board of Trustees,

(iv) the Trade Improvement Trust Fund is not included in any of the following

collective agreements:

- Heavy Equipment Rental Agreement
- The General Contractors Heavy Equipment Trade Division Agreement
- Heavy Equipment Industrial/Mechanical Agreement

(c) In the event that either the Association or the Council has reason to believe that one or more of the conditions described in (b) above has occurred, the matter shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor and employee contributions in trust.

9. Escalation and Reference

9.1 Wage Rates

9.1.1 General Approach

Subject to and in accordance with the conditions set out below, and subject to any adjustments arising from the application of Section 9.3, the sum of the wage rates and Contractors' contributions to pension and health and welfare plans set out in Section 4 and Section 7 (Group 1 to 23 inclusive) of this Appendix will be adjusted by a percentage equivalent to the weighted percentage adjustment in wage rates and in the employers' contribution rate to pension and health and welfare plans negotiated from time to time for each of the Reference Classifications set out in 9.1.2.

9.1.2 Reference Classifications and Weighting

The Reference Classifications and the weighting of these classifications shall be as follows:

Reference Classification	Weighting Factor
The Crane Operator classification incorporating those Crane Operators operating cranes of sixty (60) ton capacity - as set out in the Industrial/Mechanical Agreement negotiated and executed by the Construction Labour Relations Association (CLRA) of Manitoba and the Operating Engineers, Local 987.	25%
Journeyman Sheet Metal Worker - as set out in the Agreement negotiated and executed by the CLRA of Manitoba and Sheet Metal Workers, Local Union 511.	25%
Journeyman Carpenter - as set out in the Agreement negotiated and executed by the CLRA of Manitoba and the Carpenters,	25%

Local Union 343.	
General Labourer - as set out in the Agreement negotiated and executed by the CLRA of Manitoba and the Construction and Specialized Workers' Union, Local Union 1258.	25%

9.1.3 Method of Calculating Weighted Percentage Adjustment of Reference Classifications

The weighted percentage adjustment of each Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired W) + (Expired P) + (Expired H\&W)}} \times 100 \times \text{Weighting Factor}$$

Where:

- Change means the increase or decrease in that benefit.
- W means wage rate
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last weighted percentage adjustment was calculated.
- Weighting factor means the factor assigned to a particular Reference Classification as set out in 9.1.1.

9.1.3.1 In calculating the weighted percentage adjustment of a Reference Classification, the arithmetic result shall be rounded to the nearest hundredth of a percent.

9.1.4 Effective Date of Wage Rate Adjustments and Adjustments to Pension and Health and Welfare Plans and Application of the Formula

9.1.4.1 Effective Date of Wage Rate Adjustments

When the wage rate adjustment of a Reference Classification(s) is effective on the first of any month, then the wage rate adjustment of the hourly rates in this Appendix shall be effective on that date.

When the wage rate adjustment of a Reference Classification(s) is not effective on the first of any month, it shall be deemed to be effective on the first of the month following, and the wage rate adjustment of hourly rates in this Appendix shall be effective on that date.

9.1.4.2 Effective Date of Adjustments to the Employers' Contribution Rate to Pension and/or Health and Welfare Plans

When the adjustment to the employers' contribution to the pension and/or health and welfare plans of a Reference Classification(s) is effective on the effective date, or pursuant to 9.1.4.1 the deemed effective date, of any wage rate adjustment of any Reference Classification, then such adjustment shall be calculated and taken into account on that date. If this is not the case, then such adjustment shall be calculated and taken into account on the closest following effective date of a wage rate adjustment.

9.1.4.3 In applying the weighted percentage adjustment, the resultant wage rate shall be rounded to the nearest cent, following which, any adjustment required by virtue of Section 9.3 shall be introduced to yield the new wage rate schedule that will apply in this Appendix.

9.2 Vacation and Statutory Holiday Pay

Vacation and Statutory Holiday Pay shall be adjusted to be consistent with that negotiated between the Labourers' International Union of North America, Local 1258**,** and the Construction Labour Relations Association of Manitoba. However, such Vacation and Statutory Holiday Pay shall not be less than six percent (6%) and four percent (4%), respectively, of the employee's straight time hourly rate.

9.3 Pension and Health and Welfare

9.3.1 Subject to the conditions set out below, Pension and Health and Welfare Contributions shall be adjusted to be consistent with contributions in effect in the Heavy Equipment Industrial/Mechanical Agreement negotiated by the CLRA of Manitoba and the Operating Engineers, Local 987. Notwithstanding the above, with respect to the pension plan, the Council may elect to adjust by an amount less than the increases stipulated from time to time in the said Heavy Equipment I/M Agreement.

9.3.2 The Contractor's contribution to the Pension and Health and Welfare Plans

may be applied on a per hour worked basis; however, the Contractor's contributions rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

9.3.3 Pursuant to 9.3.1, when the negotiated effective date of any adjustment to the Contractor's contribution rate to either the Pension or Health and Welfare Plans does not occur on the effective date of an adjustment to wage rates in this Appendix, at the option of the Operating Engineers, Local 987, the implementation of such an adjustment may be delayed so that it coincides with the effective date of the next subsequent adjustment to wage rates. Notification, in writing, specifying that the Operating Engineers are electing to exercise this option shall be provided by the Council Appendix Review Committee to the Association Appendix Review Committee at the time and under the conditions set out in Article 30.5.1.

9.3.4 Any adjustment to the Contractor's contribution rate to the Pension and/or Health and Welfare Plans will be dealt with as follows:

9.3.4.1 When the effective date of the adjustment to either Plan coincides with an adjustment date for wage rates in this Appendix, the resultant hourly rates (i.e., the hourly rates resulting from the application of the weighted percentage adjustment factor) will be reduced by the amount of the increase (or increased by the amount of any decrease) in the Contractor's contribution rate to the Plans.

9.3.4.2 When the effective date of the adjustment to either Plan does not coincide with an adjustment date for wage rates in this Appendix, the hourly wage rates in this Appendix will be reduced by the amount of the increase (or increased by the amount of any decrease) in the Contractor's contribution rate to the Plans.

9.3.4.3 In the event the Local 987 Union requests a reduction in the Contractors' contribution to the pension plan, with the decrease being accounted for by increasing the hourly rates, the request shall be only permitted to the extent the Contractors' contribution is greater than the employers' required contribution to the pension plan set out in the Heavy Equipment I/M Agreement described in section 9.3.1.

9.4 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

9.5 Wage rates, Vacation and Holiday Pay, and Pension and Health and Welfare

contributions shall be adjusted by following the procedure set out in Article 30.

APPENDIX NO. 3 – Teamsters, Chauffeurs, Warehousemen and Helpers

INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, WAREHOUSEMEN AND HELPERS OF AMERICA

Local Union 979

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #10, for additional information regarding Appendix4, section 7

1. Hours of Work and Overtime

(a) Hours Monday through Friday

Nine (9) hours shall constitute a day's work for four (4) days Monday through Thursday, and eight (8) hours shall constitute a day's work for Friday.

The regular first shift shall normally be scheduled within the period from 7:00 a.m. to 6:00 p.m.

(b) Overtime - Monday through Friday

If more than the recognized daily hours are worked in any day or shift on:

i) Monday through Thursday, such time shall be paid at the rate of time and one-half for the first three (3) hours, and double time for hours worked thereafter in any one day.

ii) Friday, such time shall be paid at the rate of time and one-half for the first four (4) hours, and double time for hours worked thereafter.

(c) Overtime - Saturdays, Sundays and Holidays

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid for the first ten (10) hours worked and then double time for any hours worked thereafter.

On Sundays, and Holidays as specified in Article 17, double time shall be paid for all hours worked.

2. Shift Conditions

On any job that a second shift is worked, an employee shall be paid a shift premium of 0.067 of his standard hourly rate of pay for each hour worked at straight time provided, the shift extends beyond 6:00 p.m. and ends before midnight.

On any job that a shift is worked completely within the period 6:00 p.m. to 7:00 a.m., or where a shift continues past midnight or where a shift starts before 6:00 a.m., an employee shall be paid a shift premium of 0.105 of the standard hourly rate of pay for each hour worked at straight time.

Shift Premiums will only apply on hours worked at straight time.

The starting and quitting time of all shift work will be decided by the Contractor.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

3. Travelling Time

Any time spent travelling by an employee in excess of fifteen (15) minutes going to work and fifteen (15) minutes returning from work will be paid at straight time rates. Travelling time shall be measured from the employee's assigned marshalling point on the Project to the work site.

4. Wages

Wage rates will be paid as follows:

4.1 Non-Trainees (i.e., employees not covered by 4.2 below)

CLASSIFICATION	Effective May 1, 2017	Effective May 1, 2018	Effective May 1, 2019	Effective May 1, 2020
GROUP 1 Belly dump trucks End-dumps (Rock Wagon) Euclid or similar Low Beds Wheeler tractor Hauling units	**$28.95**	**$29.68**	**$30.32**	**$30.07**
GROUP 2 Semi-trailers Fuel Trucks A-Frame; Boom Truck	**$28.36**	**$29.07**	**$29.70**	**$29.45**

Hoists, including Hiabs, Hydra lifts, or similar of less than 7300 kilogram capacity; Transit Mix Trucks Truck Mechanic Partsman				

CLASSIFICATION	Effective May 1, 2017	Effective May 1, 2018	Effective May 1, 2019	Effective May 1, 2020
GROUP 3 Tandem Trucks Buses Forklifts Water Trucks Winch Trucks Truck Serviceman Warehouse person - after 6 months	**$27.85**	**$28.55**	**$29.17**	**$28.92**
GROUP 4 Trucks under 5-ton rating Manhaul Trucks Passenger Vans Warehouse person - Starting Rate Swamp Buggy Mechanic's and Serviceman's helper	**$27.30**	**$27.99**	**$28.59**	**$28.34**
GROUP 5 a) Boom Truck Hoists, including Hiabs, Hydro lifts, or similar of 13,600 kilogram capacity or greater (Operator must be certified or Apprentice)	**$31.29**	**$32.08**	**$32.77**	**$32.52**
b) Boom Truck Hoists, including Hiabs, Hydra lifts, or similar of 7,300 kilogram to 13,599 kilogram capacity (Operator must be certified or Apprentice)	**$29.82**	**$30.58**	**$31.23**	**$30.98**

Utility Driver *	**$31.29**	**$32.08**	**$32.77**	**$32.52**

* Utility Driver - A person hired as a Utility Driver shall be qualified to operate any of the equipment listed in Groups 1 to 5, inclusive.

When a contractor appoints a Truck Foreman or Warehouse Foreman, the employee so appointed shall receive a minimum of one dollar ($1.00) per hour above the highest rate of those employees being supervised.

In the event additional mechanic classifications are required in this Appendix, the scale of wage rates for such classifications shall be established by the Joint Appendix Review Committee on request from either the Council or the Association.

Fire retardant coveralls will be supplied to fuel truck drivers and their helpers.

4.2 Trainees

(a) A trainee means any employee who is hired to participate in a contractor's formally structured on-the-job training program in any classifications set out in the Appendix, the nature of which are not designated trades (ie designated as being appropriate for apprenticeship or certification or both pursuant to the Apprenticeship and Trades Qualifications Act of the Province of Manitoba).

(b) Trainees shall be paid a percentage of the rate in effect for the classification for which the employee is being trained in accordance with the following:

1 - 200 hours	60 %
201 - 400 hours	70 %
401 - 600 hours	80 %
601 or more hours	90 %

If the duration of the training program is less than 200 hours (or 400 hours or 600 hours, as the case maybe), the employee's rate shall be increased to 100% of the rate in effect for that classification, effective on the first working day following the employee's successful completion of the training program.

(c) Prior to implementing any formal on-the-job training programs for any classifications set out in the Appendix, the Contractor shall provide the Association and the Council with the following information:

i) the classification for which on-the-job training will be instituted and the scheduled commencement date of the training

ii) the duration of the training

(d) The number of trainees shall not exceed twenty-five percent (25%) of the total number of employees employed by a Contractor and covered by this Appendix except as may otherwise be agreed to by the Association and the Council.

(e) An employee who is hired in a non-training classification may be re-assigned to a formal on-the- job training program under the following conditions:

(i) an employee requests, in writing, to participate in the Contractor's formal on-the-job training program and the Contractor approves the request;

(ii) the Contractor requests that an employee be re-assigned to a formal on-the-job training program and the employee and the Council are in agreement with the re-assignment.

(f) An employee who is re-assigned in accordance with (e) above shall be deemed to be a trainee and paid in accordance with the provisions of (b) above.

(g) The Contractor shall provide each employee who successfully completes the Contractor's formal on-the- job training program with a letter confirming the type of training received and the corresponding number of hours the employee spent in such training.

4.3 Boom Truck Hoist Operator Apprentices

Boom Truck Hoist Operator Apprentices shall be paid the following percentages of the rate for a certified boom truck hoist operator as set out in Group 5 (b)above or the minimum wage rates prescribed in the Trade of Crane and Hoisting Equipment Operator Regulations, whichever is more favourable to the Apprentice:

1st year - 60%
2nd year - 80%

The number of apprentices who may be employed by a Contractor shall not exceed one (1) apprentice for every one (1) certified Boom Truck Hoist Operator employed.

5. Vacation and Vacation Pay

(a) Annual vacation will be arranged as provided in The Employment Standards Code for the Province of Manitoba.

(b) Vacation Pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked.

(c) Vacation Pay Allowance will be paid to an employee on his regular pay day.

6. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays under Article 17, he shall receive in lieu of paid Holidays, four and one half percent (4.5%) of his standard hourly rate for each hour worked. The employee shall be paid this amount on his regular payday.

7. Health and Welfare and Pension Trust Funds

*** Note – See Letter of Agreement #10

(a) Health and Welfare

The Contractor on behalf of each employee, and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Teamsters, Local 362 Health and Welfare Plan. Contributions shall apply to all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective	May 1, 2019	$2.70 per hour
Effective	May 1, 2020	$2.95 per hour

The employee's contribution shall be: nil.

Submission of Trust Funds

The Contractor shall forward the above Trust Fund contributions to the designated Administrator of the Plan on or before the fifteenth day (15th) of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

(b) Pension Plan Provision

The Contractor on behalf of each employee, and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Teamsters, Local 362 Pension Plan. Contributions shall apply to all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective	May 1, 2019	$3.00 per hour

The employee's contribution shall be: nil.

Submission of Trust Funds

The Contractor shall forward the above Trust Fund contributions to the designated Administrator of the Plan on or before the fifteenth day (15th) of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

8. Trusteed Training Fund Provision

Provided:

(a) the Local Union to which Teamsters belong establishes a trusteed training fund, and

(b) written verification is forwarded to the Association and the Council by the Board of Trustees of the fund confirming;

(i) proviso (a), above

(ii) that Trust Agreements have been executed and registered,

a trusteed training fund will be introduced into this Appendix on the basis that it will be solely funded by employee contributions.

9. Escalation and Reference

9.1 Wage Rates

9.1.1 General Approach

Subject to and in accordance with the conditions set out below, and subject to any adjustment arising from the application of Section 9.3, the sum of the wage rates and Contractors' contributions to pension and health and welfare plans set out in Section 4 and Section 7 of this Appendix will be adjusted by a percentage equivalent to the weighted percentage adjustment in wage rates and in the employers' contribution rate to pension and health and welfare plans negotiated from time to time for each of the Reference Classifications set out in 9.1.2.

9.1.2 Reference Classifications and Weighting

The Reference Classifications and the weighting of these classifications shall be as follows:

Reference Classification	**Weighting Factor**
The Crane Operator classification incorporating those Crane Operators operating cranes of sixty (60) ton capacity - as set out in the Industrial/Mechanical Agreement negotiated and executed by the Construction Labour Relations Association (CLRA) of Manitoba and the Operating Engineers, Local 987	25%
Journeyman Sheet Metal Worker - as set out in the Agreement negotiated and executed by the CLRA of Manitoba and Sheet Metal Workers, Local Union 511.	25%
Journeyman Carpenter - as set out in the Agreement negotiated and executed by the CLRA of Manitoba and the Carpenters, Local Union 343.	25%
General Labourer - as set out in the Agreement negotiated and executed by the CLRA of Manitoba and the Construction and Specialized Workers' (Labourers), Local Union 1258.	25%

9.1.3 Method of Calculating Weighted Percentage Adjustment of Reference Classifications

The weighted percentage adjustment of each Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired H\&W)}} \times 100 \times \text{Weighting Factor}$$

Where:

- Change means the increase or decrease in that benefit.
- W means wage rate
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last weighted percentage adjustment was calculated.
- Weighting factor means the factor assigned to a particular Reference Classification as set out in 9.1.2.

9.1.3.1 In calculating the weighted percentage adjustment of a Reference Classification, the arithmetic result shall be rounded to the nearest hundredth of a percent.

9.1.4 Effective Date of Wage Rate Adjustments and Adjustments to Pension and Health and Welfare Plans and Application of the Formula

9.1.4.1 Effective Date of Wage Rate Adjustments

When the wage rate adjustment of a Reference Classification(s) is effective on the first of any month, then the wage rate adjustment of the hourly rates in this Appendix shall be effective on that date.

When the wage rate adjustment of a Reference Classification(s) is not effective on the first of any month, it shall be deemed to be effective on the first of the month following, and the wage rate adjustment of hourly rates in this Appendix shall be effective on that date.

9.1.4.2 Effective Date of Adjustments to the Employers' Contribution Rate to Pension and/or Health and Welfare Plans

When the adjustment to the employers' contribution to the pension and/or health and welfare plans of a Reference Classification(s) is effective on the effective date, or pursuant

to 9.1.4.1 the deemed effective date, of any wage rate adjustment of any Reference Classification, then such adjustment shall be calculated and taken into account on that date. If this is not the case, then such adjustment shall be calculated and taken into account on the closest following effective date of a wage rate adjustment.

9.1.4.3 In applying the weighted percentage adjustment, the resultant wage rate shall be rounded to the nearest cent, following which, any adjustment required by virtue of Section 9.3 shall be introduced to yield the new wage rate schedule that will apply in this Appendix.

9.2 Vacation and Statutory Holiday Pay

Vacation and Statutory Holiday Pay shall be adjusted to be consistent with that negotiated between the Labourers' International Union of North America, Local 1258, and the Construction Labour Relations Association of Manitoba. However, such Vacation and Statutory Holiday Pay shall not be less than six percent (6%) and four percent (4%), respectively, of the employee's straight time hourly rate.

9.3 Health and Welfare and Pension

9.3.1 Subject to the conditions set out below, Health and Welfare and Pension contributions shall be adjusted to be consistent with contributions required in respect of Members of Local 979 covered by this Appendix and participating in the Teamsters Local 362 Health and Welfare Plan and Pension Plan.

9.3.2 The Contractor's contribution to the Health and Welfare and Pension Plans may be applied on a per hour worked basis; however, the contractor's contributions rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

9.3.3 Pursuant to 9.3.1, when the negotiated effective date of any adjustment to the Contractor's contribution rate to the Health and Welfare and/or Pension Plans does not occur on the effective date of an adjustment to wage rates in this Appendix, at the option of the Teamsters Local 979, the implementation of such an adjustment may be delayed so that it coincides with the effective date of the next subsequent adjustment to wage rates. Notification, in writing, specifying that the Teamsters are electing to exercise this option shall be provided by the Council Appendix Review Committee to the Association Appendix Review Committee in accordance with the provisions of Section 9.3.5.

9.3.4 Any adjustment to the Contractor's contribution rate to the Health and Welfare and/or Pension Plans will be dealt with as follows:

9.3.4.1 When the effective date of the adjustment to the Plan coincides with an adjustment date for wage rates in this Appendix, the resultant hourly rates (i.e., the hourly rates resulting from the application of the weighted percentage adjustment factor) will be reduced by the amount of the increase (or increased by the amount of any decrease) in the Contractor's contribution rate to the Plan.

9.3.4.2 When the effective date of the adjustment to the Plan does not coincide with an adjustment date for wage rates in this Appendix, the hourly wage rates in this Appendix will be reduced by the amount of the increase (or increased by the amount of any decrease) in the Contractor's contribution rate to the Plan.

9.3.5 Notification, in writing, of any adjustment to the Health and Welfare and/or Pension Plans shall be provided by the Council Appendix Review Committee to the Association Appendix Review Committee at least twenty (20) calendar days in advance of the proposed implementation date of such adjustment. If such notification is not provided, the effective date of the adjustment shall be deemed to be twenty (20) calendar days from the date of receipt of the notification.

9.4 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

9.5 Wage rates, Vacation and Holiday Pay, and Health and Welfare contributions shall be adjusted by following the procedure set out in Article 30.

APPENDIX NO. 4 - Carpenters

UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA

Local Union No. 343 (Carpenters)

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #8, for additional information regarding Appendix 4, section 4
*** Note – See Letter of Agreement #50, for additional information regarding Appendix 4 (Scaffolder Classification)
*** Note – See Letter of Agreement #51, for additional information regarding Appendix 4 (Foreman Coordinator)

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any one shift, then such additional hours shall be paid for at the rate of time and one-half the regular straight time hourly rate to a maximum of ten (10) hours, all hours worked after ten (10) shall be paid at double-time the straight time hourly rate for all subsequent overtime hours on that shift..

On Saturdays, except as provided in Article 15.2, time and one-half of the regular straight time hourly rate shall be paid for the first eight (8) hours, and double of the regular straight time hourly rate shall be paid beyond eight (8) hours.

On Sundays and Holidays, as specified in Article 17, double the regular straight time hourly rate shall be paid.

For purposes of computing overtime premium applicable for Saturday, Sunday and holiday work the following rules shall apply:

Saturday overtime premium is due from 6:00 a.m. Saturday until 6:00 a.m. Sunday.
Sunday overtime premium is due from 6:00 a.m. Sunday until 6:00 a.m. Monday.
Holiday overtime premium is due from 6:00 a.m. on the holiday until 6:00 a.m. the following day.

2. Shift Conditions

If the conditions are such that work on a particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then nine (9) hours, or eight (8) hours, as the case may be, may be worked during any hours and may constitute a regular shift on that job.

Any shift, the hours of which fall completely within the period from 7:00 a.m. to 12:00 midnight, shall be free of shift premium.

A shift premium of .142 of the straight time hourly rate shall be paid for 50% of all hours worked at the straight time rate on any shift commencing prior to twelve midnight and terminating subsequent thereto and in which four (4) hours or less are worked between 12:00 midnight and 6:00 a.m.

A shift premium of .142 of the straight time hourly rate shall be paid for all straight time hours worked on any shift commencing prior to 12:00 midnight and terminating subsequent thereto and in which more than four (4) hours are worked between 12:00 midnight and 6:00 a.m.

A shift premium of .142 of the regular straight time hourly rate shall be paid for any straight time hours worked on any shift which commences at or after 12:00 midnight and prior to 4:00 a.m.

A shift premium of .142 of the regular straight time rate shall be paid for all straight time hours worked up to 6:00 a.m. on any regular shift which commences at or after 4:00 a.m. Shift premium shall not be paid on any overtime hours worked.

Overtime payment for shift work shall be in accordance with the provisions as set out above.
The starting and quitting time for shift work will be decided by the Contractor.

3. Rest Period

If an employee is not provided with at least an eight (8) hour of rest period between shifts, the employee shall be paid double time rates until such time as an eight (8) hour break occurs.

4. Wages

Wages rates shall be as follows:

	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Certified Carpenter Base Wage Rate (Enhanced Journeyman Carpenter)	$35.48	$36.43	$37.48	$38.58
Other (non-certified) Carpenter	$31.12	$31.97	$32.92	$33.91
Industrial Scaffolder	$37.26	$38.12	$38.69 (effective March 17, 2019)	$39.27

Definition of a Journeyman Carpenter:

It is agreed that the definition of a Journeyman Carpenter under this Agreement is a Carpenter who:

a) Has a Certificate of Qualification under the Apprenticeship Act of Manitoba;

b) Has a Certificate of Proficiency under the Apprenticeship and Trades

Qualifications Act of Manitoba. *(Issued by the Province of Manitoba);

c) Has a Certificate of Exemption issued by the Carpentry Trade Improvement Committee. ** (The Committee formed by the Construction Labour Relations Association of Manitoba and the Union, whose terms of reference include promoting and encouraging qualification under the Apprenticeship and Trades Qualifications Act.).

* Certificates from other Provinces or Countries which are equivalent to the above noted Manitoba Certificates in the opinion of the Carpentry Trade Improvement Committee, will be accepted after approval by the Committee, whose decision will be final.

** The Committee may issue a Certificate of Exemption to any Member of the Union who is considered a satisfactory carpenter.

Carpenter Apprentices:

"Apprentice" means an employee indentured in the Trade of Carpentry as specified by the Apprenticeship and Trades Qualifications Act of the Province of Manitoba.

Apprentices shall work with the tools of the trade and shall be under the supervision of a Journeyman. The ratio of apprentices to Journeymen shall be one to one or as laid down from time to time by the Apprenticeship and Trades Qualifications Act of the Province of Manitoba.

Should a shortage of Journeymen exist and the Union is unable to supply the Contractor's needs for qualified workers, then a joint application will be made to waive the ratio requirements of the Act.

Carpentry apprentices shall be paid the percentage of the Journeyman Carpenter's rate per hour as laid down from time to time by the Apprenticeship Board of Manitoba.

Currently these rates are as listed below:

Classification	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Journeyman Base Rate	$34.58	$35.53	$36.58	$37.68
4th Yr Apprent (90%)	$31.12	$31.98	$32.92	$33.91
3rd Yr Apprent (75%)	$25.94	$26.65	$27.44	$28.26
2nd Yr Apprent (65%)	$22.48	$23.09	$23.78	$24.49
1st Yr Apprent (55%)	$19.02	$19.54	$20.12	$20.72

Foremen:

When the Contractor appoints a working carpentry foreman, he shall be paid the percentage set out below above the Journeyman rate rounded to the nearest five cents (5¢). Midpoint results shall be adjusted upward to the next five cents (5 ¢)

Eighteen percent (18%)

	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Foreman Rate	$41.70	$42.83	$44.06	$45.35

A “Lead Hand” Journeyman Carpenter shall receive $2.00 per hour in addition to the base Journeyman rate. The Contractor will have the sole discretion to appoint Lead Hands as well as the assignment of their job-site responsibilities but will ensure that a lead hand is not responsible for more than fifteen (15) Carpenters.

	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Lead Hand Rate	$37.48	$38.43	$39.48	$40.58

Scaffolder Apprentices:

"Apprentice" means an employee indentured in the Trade of Scaffolding as specified by the Apprenticeship and Trades Qualifications Act of the Province of Manitoba.

Pre-apprentice *	1 – 450 hours	50% of journeyman rate
1st year	451 – 1350 hours	60% of journeyman rate
2nd year	1351 – 2700 hours	70% of journeyman rate
3rd year	2701 – 4050 hours	80% of journeyman rate
4th year	4051 – 5400 hours	90% of journeyman rate

5. Vacation and Vacation Pay

The annual vacation will be arranged as provided in the Manitoba Employment Standards Code.

Payment for the annual vacation will be as provided in the above noted Code or on the basis of six percent (6%) of the employee's standard hourly rate for each hour worked, whichever is more favorable to the employee.

Advance payment in lieu of pay at time of vacation in the amount set forth above shall be added to each employee's wages each pay period.

6. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid holidays, four percent and a half (4.5%) of his standard hourly rate for each hour worked. The employee shall be paid this amount on his regular pay day.

When Christmas Day, Boxing Day, New Year's Day or Canada Day falls on a Saturday or Sunday that is a non-working day, the closest following working day(s) will be observed. However, this provision shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when such Holidays occur.

7. Trust Funds

The Contractor, on behalf of each employee, and each employee covered by this Appendix, shall contribute the amounts set out below to the Carpentry Trade Pension Trust Fund (Manitoba) and the Local Union 343 Welfare Trust Fund (Manitoba). Contributions shall apply to all hours worked. Employee contributions shall be collected at the source as a payroll deduction. Employer hourly pension contributions for Apprentice classifications will be based on the Certified Journeyman contribution amount multiplied by the applicable in-year percentages identified in Section 4 under “Carpenter Apprentices”.

A) Carpentry Trade Pension Trust Fund (Manitoba):

	Contractor's Contribution	Employee's Contribution
Effective May 1, 2016	$3.69 per hour	$1.16 per hour
Effective May 1, 2017	$3.69 per hour	$1.16 per hour
Effective May 1, 2018	$ 3.69 per hour	$1.21 per hour
Effective May 1, 2019	$ 3.69 per hour	$1.31 per hour

B) Local Union Welfare Trust Fund (Manitoba):

	Contractor's contribution	Employee's Contribution
Effective May 1, 2016	$0.83 per hour	$0.33 per hour
Effective May 1, 2017	$0.83 per hour	$0.33 per hour
Effective May 1, 2018	$0.83 per hour	$0.33 per hour
Effective May 1, 2019	$0.83 per hour	$0.33 per hour

Contributions shall be submitted by the Contractor to the Administrator of the Fund on or before the 15th day of the month following the month for which such contributions are payable. The Administrator shall supply reporting forms to the Contractor.

8. Carpentry Trade Improvement Plan

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Carpentry Trade Improvement Plan. Contributions shall apply to all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

	May 1, 2016	**May 1, 2017**	**May 1, 2018**	**May 1, 2019**
Employer Contribution per hour worked	$0.45	$0.45	$0.45	$0.45
Employee Contribution per hour worked	$0.05	$0.05	$0.05	$0.05

The total sum so collected shall be remitted to "The Carpentry Trade Improvement Committee" once each month, not later than the 15th day of the month following.

The money will be used by the Carpentry Trade Improvement Committee to promote apprenticeship and improve the qualifications of the Carpenters working within the area covered by this Agreement.

9. UBCJA Per Capita Contribution

All Employers shall deduct the sum of Five Cents ($.05) per hour from all employees who are a member of the local and shall remit that sum to the Union by the fifteenth (15) day of the month following the month in which the work was performed. This employee deduction shall be in addition to the working dues that an employee pays and should be included in the working dues deduction reporting that the Union receives each month

10. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 shall be:

- After thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at one-half of the employee's straight time hourly rate and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

11. Tools

Employees shall supply the ordinary hand tools of the trade. Power tools, including bits and/or attachments, mitre boxes, special augers and bits and any devices such as powder actuated tools shall be supplied by the Contractor.

If any power wood working machines or power wood working tools are used, they shall be supplied by the Contractor. Only employees who are qualified to use powder actuated devices, as required by the Workplace Safety & Health Act shall be permitted to use such devices.

12. Escalation and Reference

12.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the United Brotherhood of Carpenters and Joiners of America, Local Union 343 and the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

12.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;
b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;
c) Height pay including that associated with swing stage work.

12.2 Other Conditions of Employment

Except as otherwise noted, the following conditions employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 12.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted; and in lieu of such a provision the following shall be substituted: “the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee”;

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 12.2.1).;

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 12.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;
i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 12.2.3:
i) Building fund;
ii) Trade improvement plans including educational and apprenticeship funds;
iii) Industrial promotion funds.

m) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

n) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 12.2.4).

12.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

12.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

12.2.3 The Contractor's contribution to any of the plans referred to in Section 12.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

12.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

12.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

12.4 The provisions of 11.1 and 11.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 4a - Millwrights

UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA

Local Union No. 1443

Millwrights, Machine Erectors, Industrial Mechanics, Maintenance

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 6:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for any hours worked thereafter in that day or shift.

On Saturdays, except as provided in Article 15.2, Sundays and on Holidays as specified in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (6:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

Shift work shall be defined as work assignments lasting two (2) or more days all or part of the working time being outside the normal working hours, Monday to Friday inclusive. All shift work shall be paid at the rate of time plus ten percent (10%). Shift work premium will not be paid on any overtime hours worked.

Overtime payment for shift work shall be in accordance with the provisions set forth above.

The starting and quitting time for shift work will be decided by the Contractor.

3. Rest Period

If an employee is not provided with at least an eight (8) hour rest period between shifts, the employee shall be paid at the appropriate overtime rate until such time as an eight (8) hour break occurs.

4. Wages

Wage rates shall be as follows:

a) Journeyman Millwrights:

May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
$ 37.50	$ 38.86	$ 40.26	$ 41.71

b) Foremen:

When a working Millwright Foreman is appointed by the Contractor, a Millwright with a Certificate of Qualification from the Province of Manitoba or an inter-provincial Certificate will be given preference.

The first Foreman will be responsible for up to fifteen Millwright employees, and subsequent Foremen will be responsible for up to a maximum of fifteen Millwright employees. Millwright Foremen shall be paid between one hundred and five percent (105%) and one hundred and twenty percent (120%) of the Journeyman rate, in the discretion of the Contractor

c) General Foreman

When the Contractor appoints a General Foreman, he shall be paid between one hundred and twenty percent (120%) and one hundred and thirty-five percent (135%) of the Journeyman rate, in the discretion of the Contractor. A General Foreman shall be appointed at a minimum crew size of forty-five Millwright employees.

d) Apprentices

The scale of wages for Apprentices indentured on or after November 22, 1995 shall be:

1st year 50% of the Journeyman's prevailing wage rate.
2nd year 60% of the Journeyman's prevailing wage rate.
3rd year 70% of the Journeyman's prevailing wage rate.
4th year 80% of the Journeyman's prevailing wage rate.

A year shall consist of a minimum of 1600 hours actually worked.

Apprentices shall take the prescribed courses established by the Apprenticeship Branch of the Manitoba Department of Advanced Education and Training. If an Apprentice fails to successfully complete each course, he shall not qualify for advancement and shall remain at the same rate of pay until he has successfully completed that course.
The Contractor may employ one (1) apprentice for every three (3) journeymen employed.

5. Trade Qualification

A journeyman Millwright means a person in possession of a Certificate of Qualification issued by the Province of Manitoba, or an inter-provincial Certificate issued by any Department of Labour in Canada.

A Millwright who is hired to perform welding work shall hold a valid welding certification required by the employer.

An employee whose C.W.B. certification expires while in the employ of the Contractor shall take the test to re-certify on the Contractor's time. If the employee resigns within 45 days the time taken for testing shall be deducted from his last pay cheque. The cost of the test shall be paid for by the Millwright Trade Improvement Trust Fund.

6. Vacations and Vacation Pay

The annual vacation will be arranged as provided in the Manitoba Employment Standards Code.

Payment for the annual vacation will be as provided in the above noted Code or on the basis of six percent (6%) of the employee's gross earnings for all hours worked.

Vacation Pay shall be paid every pay period or upon termination of employment, whichever is sooner.

7. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, an employee shall receive in lieu of paid holidays, four and a half percent (4.5%) of the employee's gross earnings for all hours worked.

Except Remembrance Day, if one (1) of the above referenced Holidays falls on a Saturday, where Saturday is a non-working day, or Sunday, the closest following working day(s) will be observed. However, this provision shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday(s) occurs.

The employee shall be paid this amount on his regular pay day.

8. Millwright Industry Trust Funds

The Contractor and each employee shall respectively contribute the following amounts to each Trust Fund listed below.

Contributions shall apply on all hours earned (e.g., when double time is in effect, contributions shall be doubled).

Employee contributions shall be collected at the source as a payroll deduction.

a) Health and Welfare Fund

The Employer and the employee shall contribute the amounts (per hour earned) detailed below for each Journeyman as follows:

	May 1, 2016	**May 1, 2017**	**May 1, 2018**	**May 1, 2019**
Employer	$ 1.77	$ 1.77	$ 1.77	$1.77
Employee	$ 0.18	$ 0.21	$ 0.25	$ 0.29

b) Pension Fund

The Employer and the employee shall contribute the amounts (per hour earned) detailed below for each Journeyman as follows:

	May 1, 2016	**May 1, 2017**	**May 1, 2018**	**May 1, 2019**
Employer	$ 6.14	$ 6.14	$ 6.14	$ 6.14
Employee	$ 0.25	$ 0.50	$ 0.75	$ 1.00

Pension contributions for Apprentices shall be based on the following formula:

1st Year	50% of Journeyman Contribution
2nd Year	60% of Journeyman Contribution
3rd Year	70% of Journeyman Contribution
4th Year	80% of Journeyman Contribution

c) Regional Council Training Trust Fund

Contributions to the Regional Council Training Trust Fund will be as follows (per hour worked):

	May 1, 2016	**May 1, 2017**	**May 1, 2018**	**May 1, 2019**
Employer	$ 0.39	$ 0.39	$ 0.39	$ 0.39
Employee	$ 0.27	$ 0.29	$ 0.31	$ 0.33

d) UBCJA Per Capita Contribution

Contributions to the UBCJA Per Capita Contribution is an Employee Deduction of five cents (.05) per hour worked of all members of Local 1443. The Employee deduction shall be in the addition to the working dues that the Employee pays and should be included in the working dues deduction reporting that the Union receives each month.

Contributions shall be submitted to the Administrator of each Fund on or before the 21st day of the month following the month in which contributions are payable. Reporting forms will be supplied by the Administrator for purposes of listing employees and corresponding contributions. The Contractor will complete the form and remit same with the contribution cheque for each fund.

9. Safety Clothing

Personal work clothes are to be supplied by the employee.

The Contractor will supply welders with welding gloves, welding goggles, arc welding helmet, replaceable glass shields for helmets, welding sleeves, and, if required by Manitoba Hydro, fireproof coveralls.

The employee must accept responsibility for safety equipment issued by the Contractor and must report the loss or damage of same to the Contractor.

One (1) pair of coveralls will be supplied to an employee who is requested to work in an area which is mutually agreed to be extremely dirty. This pair of coveralls will be returned to the Contractor upon the completion of the work to be performed in the dirty area.

10. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After twenty eight (28) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

11. Tools

The following basic tools must be provided by the Millwright and the Apprentice, as described by his level:

	Description	
*1	1" Outside Micrometer	4th Year
*1	6" Precision Scale	3rd Year
*1	50' Steel Tape	4th Year
*1	6" Vernier Calliper or dial caliper .001 scale	2nd Year
1	Set Feeler Gauge 3 ½ to 4” long	2nd Year
2	Plumb Bobs	3rd Year
1	Set Caliper up to 6"	3rd Year
1	10' Steel Tape	1st Year
1	Set Divider to 12"	3rd Year
1	Scriber	2nd Year
2	Ball Peen Hammers, 12 oz. and 32 oz.	1st and 2nd Year
1	1 lb. deal blow	3rd Year
1	Hack Saw	3rd Year
1	Set of Punch and Chisels	2nd Year
1	Pair Tin Snips (aircraft type)	2nd Year
1	Pair of Pliers – slipjoint, long nose, diagonal sidecutters	1st Year
1	Set Allen Head Wrenches to 3/8"	2nd Year
1	Set 1/2" Drive Sockets to 1 1/8"	1st Year
1	Set assorted Screw Drivers	1st Year
2	Pair Vice Grip Pliers	1st Year, 3rd Year
2	Tommy Bar	2nd Year, 3rd Year
1	Set Combination Wrenches to 1 1/8"	1st Year
1	Set Adjustable Wrenches to 12" (8”, 10”, 12”)	2ndYear, 3rd Year, 4th Year
2	Tool boxes	1st Year, 3rd Year
2	Locks	1st Year, 3rd Year

11.1 Loss of Tools

The Contractor will reimburse an employee fifty percent (50%) of the cost of replacing those tools identified above with an asterisk when they are broken on the job, providing the employee supplies proof of such breakage to the Contractor.

The Contractor will be responsible for compensation for tools destroyed by fire or loss by breaking and entering when stored in a location provided by the Contractor.

Claims for lost or destroyed tools must be submitted in writing with list of such tools and value thereof, and substantial evidence of loss, satisfactory to the insurance company. Such list must be submitted within ten (10) days of loss unless reason satisfactory to the insurance company can be shown for not having done so.

12. Escalation and Reference

12.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the United Brotherhood of Carpenters and Joiners of America, Local Union 1443 (Millwrights, Machine Erectors, Industrial Mechanics) and the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

12.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Height pay including that associated with swing stage work.

12.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 12.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of

such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 12.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 12.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 12.2.3:

   i) Building fund

   ii) Trade improvement plans including educational and apprenticeship funds

   iii) Industrial promotion funds.

m) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

n) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 12.2.4).

12.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

12.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

The aforementioned limitation shall not apply to a pension or health and welfare plan in effect in this Appendix on January 1, 1989 and in which higher employer contribution levels were required in respect of overtime hours compared to straight time hours. This exemption shall remain in effect provided required employer contributions to such plans do not change to a single contribution rate relative to straight time and overtime hours.

12.2.3 The Contractor's contribution to any of the plans referred to in Section 12.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

12.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

12.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

12.4 The provisions of 12.1 and 12.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 5 – Painters Division

INTERNATIONAL BROTHERHOOD OF PAINTERS AND ALLIED TRADES

Local Union 739, Painters Division

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday, such time shall be paid at the rate of time and one-half of the straight time hourly rate.

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid.

On Sundays and on Holidays as specified in Article 17, double time shall be paid.

2. Shift Conditions

If the conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then nine (9) hours or eight (8) hours, as the case may be, may be worked during any hours and may constitute a regular shift on that job.

When an employee is required to work such shift hours on a shift that cannot be done within the said normal hours, the employee shall be paid a shift premium of .066 of the regular straight time hourly rate for each hour worked at the straight time rate.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time for all shift work will be decided by the Contractor.

3. Wages

Wage rates shall be as follows:

Effective Date:	May 1, 2019 to April 30, 2020	May 1, 2020 to April 30, 2021	May 1, 2021 to April 30, 2022
Certified Industrial Journeyman Painter (Sandblasting/Spraying)			
General Foreman	33.73	34.32	34.91
Journeyman	30.66	31.20	31.71
3rd Year (85%)	26.06	26.52	26.98
2nd Year (75%)	23.00	23.40	23.91
1st Year (55%)	16.86	17.16	17.46
Certified Industrial Journeyman Painter (Brush and Rollers)			
General Foreman	32.23	32.80	33.37
Journeyman	29.30	29.82	30.34
3rd Year (85%)	24.91	25.35	25.79
2nd Year (75%)	21.98	22.36	22.76
1st Year (55%)	16.12	16.40	16.69

Unqualified painters with proof of five (5) years in the trade shall receive sixty-five percent (65%) of the applicable journeyman rate

c) Foremen

When the Contractor appoints a working foreman, the foreman shall be paid:

- Commercial – five (5%) increase for crew size of 4 or more – ten (10%) increase for crew size over 8
- Industrial – five (5%) increase for crew size 3-4 including foreman – ten (10%) increase for crew size of 5 or more
- Crew size does not include dedicated safety watch personnel

d) Apprentices

0 to 1800 hours - 55% of the journeyman rate
1801 to 3600 hours - 75% of the journeyman rate
3601 to 5400 hours - 85% of the journeyman rate

The Contractor may employ one (1) apprentice for the first Journeyman employed and one additional apprentice for every two (2) Journeymen employed thereafter.

4. Premiums

The following premiums shall apply:

- Exterior (not including bridges) 85 feet and over - fifty cents (50¢) per hour

- Under slung bridge work - one dollar ($1.00) per hour.

5. Vacation and Vacation Pay

Annual vacation will be arranged as provided in The Employment Standards Code for the Province of Manitoba.

Vacation Pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked, except first and second year Apprentices who shall receive four percent (4%) of the standard hourly rate for each hour worked.

Advance payment in lieu of pay at time of vacation in the amount set forth above shall be added to each employee's wages on each pay period.

6. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays under Article 17, he shall receive in lieu of paid Holidays four and a half percent (4.5%) of his standard hourly rate for each hour worked.

7. Trust Funds

a) Health and Welfare

The Contractor shall contribute the amount set out below to the International Brotherhood of Painters and Allied Trades, Sign Workers and Painters Division, Local 739, Health and Welfare Trust Fund for all hours worked by all employees covered by this Appendix.

Effective May 1, 2019 $1.50 per hour

Health and Welfare contributions commence after 390 hours. Trust Fund contributions shall be remitted by the 15th of the month following the month in which contributions were collected to the following address:

Local 739 Health and Welfare Trust Fund
c/o Coughlin and Associates Ltd.
PO Box 764 Winnipeg, MB R3C 2L4
Phone No.(204) 942-4438

b) Pension

Except as provided below, the Contractor shall contribute the amount set out below for all hours worked by all employees covered by this Appendix to the International Brotherhood of Painters and Allied Trades Union and Industry

Effective	May 1, 2019	$4.00 per hour

It is agreed that all new apprentices (first and second year) shall not be participants in the Pension until they have attained 2,400 hours while working for the Contractor or a contractor signatory to the Agreement being used for reference purposes.

A Unified remittance form shall be supplied by the Union to the Contractor and such form shall make provision for the listing of each employee's name, social insurance and number of hours worked. The completed remittance form, and the pension trust fund contributions and the Apprenticeship and Employee Development Fund (see Section 7 (c) below) contributions shall be forwarded to the 'I.B.P.A.T. Local 739 Benefit Trust Funds' at the following address:

Local 739 Health and Welfare Trust Fund
c/o Coughlin and Associates Ltd.
PO Box 764 Winnipeg, MB R3C 2L4
Phone No.(204) 942-4438

Contributions shall be remitted by the 15th of the month following the month in which contributions were collected.

c) Apprenticeship and Employee Development Fund

a) Subject to (b) below, the Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Provincial Apprenticeship and Employee Development Fund.

Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:	15 cents per hour
The Employee's contribution shall be:	5 cents per hour

b) Contractor and Employee contributions to the Fund will be discontinued immediately if one or more of the following occurs:

i) The Fund ceases to be governed by a Trust;

ii) The provisions of the Trust are not fulfilled;

iii) Employers are no longer represented on the Board of Trustees.

c) In the event that either the Association or the Council has reason to believe that one or more of the conditions described in (b) above has occurred, the matter shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor and employee contributions in trust.

8. Tools

The following tools and equipment shall be provided by all employees:

	Description
	White Overalls
	Broad Knife (1 3" and 1 5" to 6")
1	Putty Knife
1	Scraper
1	Hammer
1	Nail Set
1	Phillips Screw Driver
4	Robertson Screw Drivers (#1, 2, 3 & 4)
2	Flat Screw Drivers (large and small)
1	Hard Hat (approved under the Workplace Safety and Health Act)
1	Hand Sander
1	Pliers
1	Paint Brush spinner
2	Pot Hooks
1	Suitable Footwear (approved under the Workplace Safety and Health Act)

In addition to the foregoing, Spray Mechanics shall supply 1 - 10" and 8" crescent wrench and a Respirator (respirator of a type approved by the Contractor, the Union and the Workplace Safety and Health Division).

In addition to the above tool lists, Sandblasting Mechanics shall supply 1 - 8" pipe wrench.

If such an employee reports to work and is not in possession of the above noted tools and overalls, the Contractor shall supply same, for which the employee will be charged at cost.

A lock box is to be supplied by the Employer for the use of the Employees on the job site.

The Employer will be responsible for compensation for tools and equipment destroyed by fire or lost by breaking and entering from a storage place provided by the Employer.

Responsibility for normal wear and tear of tools and equipment supplied by the Employer is accepted by the Employer on return of broken or worn tools and equipment.

Claim for lost or destroyed tools and equipment must be submitted in writing with list of such tools and equipment and value thereof, and substantial evidence of loss. Such list must be submitted within five (5) working days of loss unless good reason can be shown for not having done so.

9. Escalation and Reference

9.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Brotherhood of Painters and Allied Trades, Local 739, Painters Division and the Member Firms of the Manitoba Painters Negotiating Council, except that the Non-certified painter rate shall remain at 90% of the Certified Journeyman Painter rate throughout the term of this Agreement.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, and apprentices.

9.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, or other types of trainees who may be employed;

c) Height pay including that associated with swing stage work.

9.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties.

a) Shift premium but excluding any shift premium applicable to overtime

hours;

b) Pay in lieu of Holidays;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 9.2.1);

e) Rest provisions between shifts;

f) Provisions governing special trade related tests;

g) Safety clothing;

h) Tool lists and provisions governing loss of such tools on the Project.

9.2.1 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

9.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

9.4 The provisions of 9.1 and 9.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 5a – Glassworkers Division

INTERNATIONAL BROTHERHOOD OF PAINTERS AND ALLIED TRADES

Local Union 739, Glass Workers Division

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday, such time shall be paid at the rate of time and one-half of the straight time hourly rate, up to a combined total of 12 hours, after which the rate of pay shall be two times the straight time hourly rate.

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid for the first 8 hours, after which the rate of pay shall be two times the straight time hourly rate.

On Sundays and on Holidays as specified in Article 17, double time shall be paid.

2. Shift Conditions

If the conditions are such that work on a particular job cannot be done during the regular daily hours, (7:00 a.m. to 6:00 p.m.) then nine (9) hours or eight (8) hours, as the case may be, may be worked during any hours and may constitute a regular shift on that job. Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time for all shift work will be decided by the Contractor.

3. Callout

When emergency calls are made after completing the regular shift, the employee shall be paid at the applicable overtime rate, however, the employee shall not be paid less than the equivalent of four hours at the employee's straight time rate for any one (1) callout.

4. Wages

Wage rates shall be as follows:

(a) Journeyman Glass and Metal Mechanics

	May 1, 2016	May 1, 2017	May 1, 2018
Journeyman	$31.38	$31.87	$32.36

(b) Apprentices

			May 1, 2016	May 1, 2017	May 1, 2018
1st Period	0-900 hours	50% of Jnmn	$15.69	$15.94	$16.18
1st Period	901-1800 hours	55% of Jnmn	$17.26	$17.53	$17.80
2nd Period	1801-2700 hours	60% of Jnmn	$18.83	$19.13	$19.42
2nd Period	2701-3600 hours	65% of Jnmn	$20.40	$20.72	$21.04
3rd Period	3601-4500 hours	70% of Jnmn	$21.97	$22.31	$22.66
3rd Period	4501-5400 hours	75% of Jnmn	$23.54	$23.91	$24.27
4th Period	5401-6300 hours	80% of Jnmn	$25.11	$25.50	$25.89
4th Period	6301-7200 hours	85% of Jnmn	$26.68	$27.09	$27.51

The ratio of apprentices to journeymen shall not exceed three (3) apprentices for each journeyman employed.

Any employee who does not have a journeyman certificate and who is not an apprentice will be evaluated by the Contractor on the basis of experience, range of experience and proficiency and slotted into the apprenticeship program.

(c) Leadhands

When a working leadhand is appointed by the Contractor he shall be paid a premium of one dollar and twenty-five cents ($1.25) per hour in addition to his normal rate.

5. Height Premium

A premium rate of one dollar ($1.00) per hour, in addition to the normal rate, shall be paid for all work performed from a swing stage.

6. Vacation and Vacation Pay

The annual vacation will be provided in accordance with the Employment Standards Code for the Province of Manitoba.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each regular hour worked. This vacation pay allowance will be paid to an employee on his regular paydays, and shall be considered as advance payment for any vacation taken by the employee pursuant to the Employment Standards Code for the Province of Manitoba.

7. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, an employee shall receive in lieu of paid Holidays, four and a half percent (4.5%) of the employee's standard hourly rate for each hour worked to a maximum of forty (40) hours per week. An employee shall be paid such amounts on each regular pay.

8. Trust Funds

(a) Health and Welfare

The Contractor and each employee shall respectively contribute the amounts set out below to the Local Union 739 Health and Welfare Trust Fund. Contributions shall be based on hours worked**.** Employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective May 1, 2016	$1.18 per hour
Effective May 1, 2017	$1.23 per hour
Effective May 1, 2018	$1.28 per hour

The employee's contribution shall be:

- 22 cents per hour

(b) Pension

The Contractor shall contribute the amount set out below to the International Brotherhood of Painters and Allied Trades Union and Industry Pension Fund (Canada). Contributions shall apply to all hours worked by all employees covered by this Appendix.

The Contractor's contribution shall be:

Effective May 1, 2016	$2.00 per hour
Effective May 1, 2017	$2.15 per hour
Effective May 1, 2018	$2.30 per hour

Contributions are to commence only when the employee achieves the status of 3rd period (70%) apprentice.

Contributions shall be remitted to the Administrator of each Fund by the 15th of the month following the month for which contributions are payable. Contributions shall be accompanied by a reporting form listing the employee's name and the respective amount remitted.

9. Safety Clothing

When the Contractor determines that protective clothing or equipment is necessary, he will provide the clothing and equipment to the employee without cost. However, if the clothing or equipment is lost or, in the judgement of the Contractor damaged beyond use through negligence or carelessness of the employee, the Contractor may replace the damaged or lost clothing or equipment at the expense of the employee.

10. Tools

A journeyman shall supply the following hand tools, which shall be of professional grade:

Quantity	Description
1 set	Allen Keys Metric
1 set	Allen Keys Standard
1 only	Chalk String
1 only	Chisel - Wood
1 only	Chisel - Cold
1 only	Rat Tail File
1 only	Flat File
1 only	Small Round File
1 pair	Glass Pliers
1 only	Hacksaw
1 only	Hammer - Claw
1 only	Level - 2 Foot
1 only	Level - 4 Foot
1 only	Measuring Tape
1 only	Nail Set
1 pair	Pliers
1 pair	Glass Pliers
1 only	Plumb Bob
1 only	Pry Bar
1 only	Razor Knife
1 only	Screwdriver - Rob. - Green
1 only	Screwdriver - Rob. - Yellow
1 only	Screwdriver - Rob. - Red
1 only	Screwdriver - Rob. - Black
1 only	Screwdriver - Phil. - CP - 1
1 only	Screwdriver - Phil. - CP - 4
4 only	Screwdriver – Flat
1 only	Square - Combination
2 only	Tap Handles - 1/4"
1 only	Vice Grip
1 only	Crescent Wrench
1 only	Side cutters or Tin snips
1 only	Set of Stubby Screwdrivers
1 only	Caulking Gun
1 only	Pop Rivet Gun

If an employee is not in possession of the required tools above-noted, the Contractor shall supply them and charge them, at cost, to the employee.

The Contractor shall replace Employees' tools, if turned in, that are broken or worn due to normal use.

An apprentice shall be required to purchase the above tools during the first three (3) months of his apprenticeship.

The Contractor shall provide all power tools. The employee shall cooperate to keep said power tools in good condition.

11. Escalation and Reference

11.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Union of Painters and Allied Trades, Local Union 739, Glassworkers Division and the Management signatory, Quality Glass Installations.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

11.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

(a) definitions and qualificational requirements for applicable classifications.

(b) ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

(c) height pay including that associated with swing stage work.

11.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

(a) shift premium but excluding any shift premium applicable to overtime hours.

(b) pay in lieu of Holidays.

(c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: 'the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee'.

(d) registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 11.2.1).

(e) rest provisions between shifts

(f) provisions governing special trade related tests

(g) safety clothing

(h) tool lists and provisions governing loss of such tools on the Project.

11.2.1 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

11.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

11.4 The provisions of 11.1 and 11.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 5b – Floor Covering Division

INTERNATIONAL BROTHERHOOD OF PAINTERS AND ALLIED TRADES

Local Union No. 739, Floor Covering Division

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for five (5) days, Monday until Friday inclusive.

Except as provided in Article 15.2, overtime at the rate of time and one-half of the standard hourly rate shall be paid for all hours worked in excess of forty five (45) hours per week and for all hours worked on Saturdays.

On Sundays and Holidays as specified in Article 17, double time shall be paid.

2. Wages

Wage rates shall be as follows:

a) Journeyman Floor Covering Installers

Effective	May 1, 2016	$30.08 ***
Effective	May 1, 2017	$30.84 ***
Effective	May 1, 2018	$31.60

*** Note, no 2016 increase will be applied. Increases noted with an effective date of May 1, 2017, will only be effective January 1, 2018 (ie/ retro only to Jan 1, 2018)

b) Apprentices:

First Level	55% of the Journeyman Rate
Second Level	70% of the Journeyman Rate
Third Level	87.5 % of the Journeyman Rate
(until achievement of Journeyman status)	

A Journeyman means a person who holds a certificate of qualification or proficiency from a Provincial Apprenticeship system or from a source recognized by the Contractor or has acquired the skills of the trade by working in the trade for a period of not less than six years, and is proficient in performing all of the following tasks:

- Self-levelling and latex floor patching;
- Installation of carpet with a minimum six inch repeat pattern;

- Liquid welding;
- Installation of composite vinyl flooring with epoxy cement;
- Installation with automatic and hand welding of composition flooring;
- Mono-bound installation.

3. Vacation and Vacation Pay

Annual vacation will be arranged as provided in the Manitoba Employment Standards Code.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked, except first and second year apprentices and Improvers who shall receive four percent (4%) of the standard hourly rate for each hour worked.

Advance payment in lieu of pay at time of vacation in the amount set forth above shall be added to each employee's wages each pay period.

4. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays under Article 17, he shall receive in lieu of paid Holidays, four percent and a half (4.5%) of his standard hourly rate for each hour worked. The employee shall be paid this amount not later than the 31st day of December of the calendar year or upon termination of his employment whichever day is the earlier.

5. Health and Welfare

The employee shall contribute the amounts set out below to the Local Union 739 Health & Welfare Trust Fund. Contributions shall be based on hours worked. Employee contributions shall be collected at the source as a payroll deduction.

The employee contributions shall be:

Effective May 1, 2017 $1.45 per hour (*** Note – retro dates on these premiums shall only apply back to Jan 1, 2018)
Effective May 1, 2018 $1.50 per hour

Health and Welfare Trust Fund contributions shall be remitted by the 10th of the Month following the month in which contributions were collected to the following address:

Local 739 Health and Welfare Trust Fund
PO Box 764
Winnipeg, MB R3C 3R8

6. Pension Provision

Provided:

a) The Local Union to which Carpet and Resilient Floor Tile Layers belong establishes a health and welfare plan and/or a pension plan in which employees covered by this Appendix are eligible to participate;

b) Written verification is forwarded to the Association and the Council by the Board of Trustees of each plan confirming:

i) Proviso (a), above;

ii) That Trust Agreements have been executed and registered.

A pension plan will be introduced into this Appendix on the following basis:

At the time of introduction of the health and welfare plan and/or the pension plan,the hourly rates for all classifications in this Appendix shall be reduced by the amount of the contractor's contribution to the said plan or plans. At the option of the Council, contributions to the plan or plans shall be made up by employee contributions or a combination of contractor and employee contributions. The Council shall advise the Association of the required contractor and/or employee contributions at the time the plan or plans are established.

Pension and/or health and welfare contributions shall be subject to adjustments, however all contributions shall continue to be made as outlined above and the effective date of such adjustments shall correspond to an effective date of changes to wages (See Section 7.1).

7. Escalation and Reference

7.1 Wage Rates

As provided in Section 7.2, the wage rates for all classifications in this Appendix shall be adjusted by a percentage, equivalent to the percentage adjustment in wage rates and in the employers' contribution rate to pension and health and welfare plans negotiated from time to time for the classification of journeyman painter (brush and rollers)(hereinafter referred to as the Reference Classification) by the International Brotherhood of Painters and Allied Trades, Local 739, Painters Division, and the Member Firms of the Manitoba Painters Negotiating Council.

7.2 Method of Calculating Percentage Adjustment of Classifications

The percentage adjustment of the Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired W) + (Expired P) + (Expired H\&W)}} \times 100$$

Where:

- Change means the increase or decrease in that benefit.
- W means wage rate.
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last percentage adjustment was calculated.

7.2.1 In calculating the percentage adjustment of the Reference Classification, the result shall be rounded to the nearest hundredth of a per cent.

7.2.2 Effective Date of Adjustments

When changes to P and/or H&W in the agreement being used for reference purposes occur on the same date, the percentage adjustment of all such changes shall be calculated to determine the percentage adjustment by which wage rates in the Appendix are to be adjusted and the foregoing shall be the effective date of the resultant wage rates.

When changes to P and/or H&W are not effective on the effective date of any changes to W in the agreement being used for reference purposes, such changes shall be deemed to be effective on the date of a change to W next occurring, and the procedures set out above shall be followed.

When: a) there are no changes to W but there are changes to P and/or H&W, or b) there are changes to P and/or H&W but no subsequent changes to W during the term of the agreement being used for reference purposes, the calculated percentage adjustment shall be effective on the effective date of such changes in the agreement being used for reference purposes.

7.2.3 In applying the percentage adjustments, the resultant wage rates shall be rounded to the nearest cent.

7.3 Vacation and Holiday Pay

The percentage figure set out in Sections 3 and 4 of this Appendix, shall be adjusted to be the same as that in effect in Appendix No. 5 of this Agreement.

7.4 The provisions of 7.1 and 7.2 above shall be adjusted by following the procedure set out in Article 30 of this Agreement.

7.5 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

APPENDIX NO. 6 – Insulator Workers

INTERNATIONAL ASSOCIATION OF HEAT AND
FROST INSULATORS AND ALLIED WORKERS

Local Union No. 99

BURNTWOOD/NELSON AGREEMENT

Revised August 10, 2018

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half of the straight time hourly rate for the first two hours worked and double the straight time hourly rate for all hours worked thereafter.

On Saturdays and Sundays, except as provided in Article 15.2, all hours worked shall be paid at the rate of one and one-half (1½) times the regular straight time hourly rate.

On Holidays as specified in Article 17, double time shall be paid.

2. Shift Conditions

If the conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then nine (9) hours, or eight (8) hours, as the case may be, may be worked during any hours and may constitute a regular shift on that job.

An employee who works the majority of his hours between 4:00 p.m. and 12:00 a.m. will receive shift premium at the amount of two dollars ($2.00) per hour above the standard hourly rate for all consecutive hours worked. In the case of an employee working the majority of his hours between 12:00 a.m. and 8:00 a.m. he will receive shift premium at the amount of two dollars ($2.00) per hour above the base hourly rate for all consecutive hours worked.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

Shift premium shall not be paid on any overtime hours worked.

The starting and quitting time of all shift work will be decided by the contractor.

3. Wages

Wage rates shall be as follows:

a) Journeyman Insulator - Industrial

	May 1, 2019***	May 1, 2020	May 1, 2021
Journeyman 'A'	$31.89	TBA	TBA
Journeyman 'B' (only to be used for calculation of Apprentice rates)	$30.00	TBA	TBA
1st Year Apprentice (58%)	$17.40	TBA	TBA
2nd Year Apprentice (69%)	$20.70	TBA	TBA
3rd Year Apprentice (81%)	$24.30	TBA	TBA
4th Year Apprentice (92%)	$27.60	TBA	TBA

*** As a wage reduction from prior years, although the effective date is May 1, 2019 no recovery of wages will be completed.

TBA – will be announced through Wage Re-Opener 1 and Wage Re-Opener 2 in the applicable years.

b) Foreman Premium
When the Contractor appoints a journeyman as a working foreman he shall be paid, in addition to the journeyman's rate, the applicable amount set out below:

In charge of:

Four (4) to fifteen (15) employees, 105% to 120% of the journeyman rate, in the discretion of the Contractor.

c) General Foreman Premium
A General Foreman will receive between 120% to 135% of the base Journeyman rate (as determined by the employer). A General Foreman can be appointed at the discretion of the employer, or will be appointed at a minimum crew size of forty-five (45) members.

d) Apprentices

1st year - 58% of Journeyman's rate
2nd year - 69% of Journeyman's rate
3rd year - 81% of Journeyman's rate
4th year - 92% of Journeyman's rate

A fourth year Apprentice must work at the trade for four (4) years and pass any trade examinations before he can become a Journeyman Insulator.

The ratio of Apprentices to Journeymen employed by a Contractor may equal one journeyman to one Apprentice.

When the Union is unable to supply competent and qualified Journeymen, contractors may use fourth year Apprentices to expedite the job.

No Apprentice shall be made up to Journeyman status by the Union or advanced in pay scale by the contractor until he has completed his full allotment of time at the trade as set forth above. For purposes of computing apprentice pay scales 1800 hrs. shall equal one (1) year's credit. The Union will issue each Apprentice with a log book. The contractor will, once a year or on termination of employment, whichever comes first, fill in the number of hours worked at each aspect of the trade in the employee's log book together with a report on the employee's aptitude for the trade, his progress in learning the trade and his attitude.

4. Height Premiums

Employees working on swing stages or bosun chairs shall not receive a premium.

5. Vacation and Vacation Pay

Annual vacation will be arranged as provided in The Employment Standards Code for the Province of Manitoba.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked.

Advance payment in lieu of pay at time of vacation in the amount set forth above shall be added to each employee's wages on each pay period.

6. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays four and a half percent (4.5%) of his gross hourly rate for each hour worked (gross hourly rate shall be deemed to mean his base hourly rate plus the 6% for vacation pay). The employee shall receive this allowance at the time and under the conditions set forth in the Employment Standards Code for the Province of Manitoba. [Gross hourly rate shall be deemed to mean his standard hourly rate plus six percent (6%) of same].

7. Trust Funds

Health and Welfare

The Contractor and each employee shall contribute the amounts set out below to the Manitoba Multiple Trade Health and Welfare Trust Fund. Contributions shall apply to all hours worked and shall be collected at the source as a payroll deduction.

Effective May 1, 2015:

The Contractor's contribution shall be:	$0.55
The Employee's contribution shall be:	$0.55

Pension Fund

The Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Manitoba Multiple Trade Pension Trust Fund for all hours worked by all employees covered by this Appendix. The employee's contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Effective May 19, 2013 $2.30 per hour

The Employee's contribution shall be:

Effective May 1, 2019 $2.75 per hour

Note: The Contractor's contributions to the Manitoba Multiple Trade Pension Trust Fund will be prorated for Apprentice Insulators in accordance with the following percentages:

Apprentices

1st year	-	58% of Journeyman's rate
2nd year	-	69% of Journeyman's rate
3rd year	-	81% of Journeyman's rate
4th year	-	92% of Journeyman's rate

Contributions to the above Pension Fund and Health and Welfare Fund shall be submitted each month by the 15th of the month following the month for which contributions are collected.

8. Insulators Health Hazards Fund

The Contractor shall deduct at the source the amount set out below for each hour worked by each employee covered by this Appendix, and remit same in a single lump sum payment to the Insulators Health Hazards Fund c/o the Local Union by the 15th of the month following the month in which contributions are collected. The Union shall supply satisfactory deduction forms suitable to the Contractor.

The Employee's contribution shall be: 2¢ per hour

9. Safety Equipment and Tools

The Contractor shall furnish and maintain without charge to the employee:

- All necessary power tools
- All necessary protective devices
- Hand cleaner and protective face cream
- Special brushes and staple gun
- All metal cutting tools that are worn out or damaged due to work on - stainless steel metal

The employee shall be responsible for the return in good condition of all protective devices, power tools, tools and protective clothing issued by the Contractor. The Contractor accepts the responsibility for normal wear and tear. The employee may be charged depreciated replacement cost for lost or abused items.

The Contractor will provide work gloves (leather palm) upon the request of the employee. The employee will return worn-out work gloves to the Contractor prior to receiving a new pair. The Contractor will provide coveralls to employees who are working with foam glass, mastics and bulk adhesive products. The employee will return worn-out coveralls to the Contractor prior to receiving a replacement pair at no charge and will return the coveralls when the work in question is completed.

An approved respirator shall be furnished by the Contractor on request. Replacement respirators will be provided at no cost, only when the used respirator is turned in to the Contractor's representative, and is obviously unfit for further use. If the used respirator is not turned in the cost of the new respirator will be deducted from the employee's pay. A supply of respirator filters shall be available at no cost to the employee.

Tools

The Contractor will be responsible for compensation for tools destroyed by fire or lost by breaking and entering from a storage place provided by the Contractor. Claims for lost or destroyed tools must be submitted in writing with a list of such tools and the value thereof, along with substantial evidence of loss. This list must be submitted within five working days of loss unless good reason can be shown for not having done so.

The following basic tools must be provided by the employee:

Description			
	3rd & 4th Year	2nd Year	1st Year
1 tool pouch or carryall	X	X	X
1 16 ft tape	X	X	X
1 pair 7" or 8" nippers	X	X	X
1 knife	X	X	X
1 banana knife or utility knife	X	X	X
1 scissors	X	X	X
2 Metal Masters (M1 & M2)	X	X	X
1 pointer trowel, 5" or 6"	X	X	X
1 pruning saw	X	X	
1 keyhole saw	X	X	
1 scratch awl	X		
1 hammer	X		
1 set of dividers	X		
1 screwdriver set	X		
1 12" tin snips	X		
1 flat trowel, 4 1/2" x 11"	X		

10. Escalation and Reference

10.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Association of Heat and Frost Insulators and Allied Workers, Local Union No. 99 and the Insulating Contractors Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

10.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Height pay including that associated with swing stage work.

10.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 10.3);

b) Shift premium but excluding any shift premium applicable to overtime;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 10.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 10.2.2);

f) Rest provisions between shifts;

g) Provisions governing special trade related tests;

h) Safety clothing;

i) Tool lists and provisions governing loss of such tools on the Project;

j) The following trusteed Plan, which shall be subject to the restrictions set out in Section 10.2.3: Insulators Health Hazards Fund.

10.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

10.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

10.2.3 The Contractor's contribution to the plan referred to in Section 10.2 (j) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

10.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

10.4 The provisions of 10.1 and 10.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 7 - Lathers

Manitoba Regional Council of Carpenters, Lathers,
Millwrights and Allied Workers

Local Union 343 (Lathing and Drywall)

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any one (1) day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half.

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid.

On Sundays, and on Holidays, as set out in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then nine (9) hours, or eight (8) hours, as the case may be, may be worked during any hours and may constitute a regular shift on that job.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the contractor.

3. Wages

Wage rates shall be as follows:

3.1 Interior Systems Mechanics: (formerly Lathers and Drywall Applicators)

(a) Journeyman Interior Systems Mechanic**:**

Effective	
January 1, 2017	$30.45 per hour

(b) Working Foremen

When a working Foreman is appointed by the Contractor, the person so appointed must be a qualified Journeyman Interior Systems Mechanic and will be paid fifteen (15%) percent above the Journeyman's wage rate.

(c) Height Premiums

All employees working on swing stages or bosom chairs shall receive four (4) percent of the certified Journeyperson rate, in addition to his/her regular rate of pay.

(d) Apprentices

First six months	50% of Journeyman’s rate
Second six months	60% of Journeyman’s rate
Second year	65% of Journeyman’s rate
Third year	70% of Journeyman’s rate
Fourth year	80% of Journeyman’s rate

The ratio of Apprentice to Journeyman shall be a minimum 1:1 ratio of journeymen to apprentices.

The Union will issue each Apprentice with a log book. The Contractor will, once each year or on termination of employment, whichever comes first, fill in the number of hours worked at each aspect of the trade in the employee's log book together with a report on the employee's aptitude for the trade, his progress in learning the trade and his attitude.

4. Rest Period

When an employee has not been provided with a full eight (8) hours rest period between shifts, the employee will be paid at double the straight time hourly rate for all hours worked until such time as an eight hour break occurs.

5. Vacations and Vacation Pay

Annual Vacation will be arranged as provided for in the Employment Standards Code for the Province of Manitoba.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked, except as set out below.

A person hired who is not a journeyman and who was not a Member of the Union as of May 1, 1990 will receive Vacation Pay at the rate of four percent (4%) of the employee's standard hourly rate for each hour worked.

Advance payment in lieu of pay at time of vacation in the applicable amount set forth above shall be added to each employee's wages on each pay period.

6. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays four and a half percent (4.5%) of his standard hourly rate for each hour worked. The employee shall receive this allowance at the time and under the conditions set forth in the Employment Standards Code.

7. Trust Funds

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Manitoba Multiple Trade Health and Welfare and Pension Trust Funds. Contributions shall apply to all hours worked. The employee's contributions shall be collected at the source as a payroll deduction.

(a) Health and Welfare

Contractor's contribution	83 cents per hour worked
Employee's contribution	25 cents per hour worked

(b) Pension Fund

Contractor's contribution	$1.50 per hour worked

Contributions to the above pension fund and health and welfare fund shall be submitted each month by the 15th of the month following the month for which contributions are collected.

(c) Training Trust Fund

(a) Subject to (b) below, the Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Training Trust Fund. Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

Thirty cents per hour.

The Employee's contribution shall be:

Five cents per hour.

The Contractor shall forward the above contributions to the Training Trust Fund by the fifteenth (15th) day of the month following the month in which the hours were worked.

(b) Contractor and Employee contributions to the Fund will be discontinued immediately if one or more of the following occurs:

(i) the Fund ceases to be governed by a Trust,

(ii) the provisions of the Trust are not fulfilled,

(iii) Employers are no longer represented on the Board of Trustees.

(c) In the event that either the Association or the Council has reason to believe that one or more of the conditions described in (b) above has occurred, the matter shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor and employee contributions in trust.

8. Tools

(a) Tools and equipment to be supplied by Journeyman Interior Systems Mechanics**:**

1 Tool box 10" x 10" x 20" preferred
1 Pair of Nippers (Todds #4)
1 Pair of Aircraft Snips (Wiss)
1 Lathers Hatchet
1 5/8" Cold Chisel
1 Plumb Bob minimum weight 2 lb.
1 Hack Saw Frame and #32 blades

1 Gypsum Knife and pouch
1 24" x 18" Steel Square
1 100 foot nylon line
1 Screw Driver (or combination preferred)
1 Drywall Saw (Keyhole)
1 25 foot or 50 foot Tape
1 Level 2 feet long
1 16 foot Steel Tape (3/4")
1 Pair of Snips (#8 Wiss)
1 3/4" Cold Chisel
1 Taper Punch
1 Stub Nail Magnet
1 Lathers nail bag and belt
1 45 - Sliding Square
1 Chalk Line Dispenser and Chalk
Marking pencils or the equivalent
1 2 lb. Ball Peen Hammer
1 Hard Hat
1 Pair Safety Goggles
1 Pair Safety Shoes
1 Screw Gun (Safety approved)
1 100' Extension Cord (Safety approved)

All other power tools shall be supplied by the Contractor.

(b) Interior Systems Mechanics Apprentices' Tools

When hiring an Apprentice the Contractor agrees to supply a basic set of tools at cost to the Apprentice. Payment for these tools by the Apprentice shall be made during the first month of employment. A full set of tools must be acquired by the Apprentice within his first year of apprenticeship.

The basic set of tools required consists of the following:

1 Lath Hatchet
1 5/8" Cold Chisel
1 16' Measuring Tape (3/4")
1 #8 Todd Pattern Nippers
1 Wallboard Knife and Blades
1 Pair Safety Goggles
1 Screw Gun (Safety approved)
1 Crescent Type Hack Saw Frame
1 Nail Bag
1 #8 Wiss Brand Cutting Snips
1 Pair of Aircraft Snips (Wiss)
1 Hard Hat
1 Pair Safety Shoes
100' Extension Cord (Safety approved)

(c) Interior Systems Mechanics Journeymen assigned Drywall Applications and Apprentices' Tools

1 Tool Box 10" x 10" x 20" and Lock
1 Wallboard Knife and Blades
1 Board Lifter
1 Plumb Bob
1 Cold Chisel
1 16" x 24" Steel Square
1 Tool Pouch
1 Sharpening Stone (Approved Notches)
1 Hammer Type Stapler
1 Pair of Aircraft Snips (Wiss)
1 T Square
1 16' Measuring Tape (3/4")
1 Pair Safety Goggles
1 Hard Hat1 Screw Gun (Safety approved)
1 100' Extension Cord (Safety approved)
1 Wallboard Saw
1 Approved Wallboard Hatchet
1 2' Level
1 Chalk Line and Dispenser
1 Hack Saw
1 Combination Screw Driver
1 Keyhole Saw
1 Notched Adhesive Spreader
1 Taper Punch
1 Pair of Nippers
1 Set of Kwik Cutters
1 Pair Safety Shoes

All other power tools shall be supplied by the Contractor.

When hiring an Apprentice the Contractor agrees to supply a basic set of tools at cost to the employee. Payment for these tools by the employee shall be made during the first month of employment. A full set of tools must be acquired by the employee within his first year of employment.

9. Escalation & Reference

9.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the Manitoba Regional Council of Carpenters, Lathers, Millwrights and Allied Workers, Local Union 343, and the Drywall and Lathing Trade Divisions of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

9.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

(a) definitions and qualificational requirements for applicable classifications.

(b) ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

9.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

(a) shift premium but excluding any shift premium applicable to overtime hours.

(b) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: 'the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee'.

(c) pay in lieu of Holidays.

(d) registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 9.2.1).

(e) rest provisions between shifts

(f) provisions governing special trade related tests

(g) safety clothing

(h) tool lists and provisions governing loss of such tools on the Project.

9.2.1 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

9.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

9.4 The provisions of 9.1 and 9.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

NOTE: THIS REPRESENTS AN INTERIM ESCALATION OF THIS APPENDIX NO. 8, UNTIL SUCH TIME AS IT IS SUPERSEDED BY A PERMANENT ESCALATION ONCE THE APPROPRIATE REFERENCE AGREEMENT IS IN HAND.

APPENDIX NO. 8 - Plasterers

THE OPERATIVE PLASTERERS AND CEMENT
MASONS INTERNATIONAL ASSOCIATION

Local Union No. 222 (Plasterers)

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any one (1) day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half.

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid.

On Sundays, and on holidays, as set out in Article 17, double time shall be paid.

2. Shift Conditions

If the conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then nine (9) hours, or eight (8) hours, as the case may be, may be worked during any hours and may constitute a regular shift on that job.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the contractor.

3. Wages

Wage rates shall be as follows:

(a) Journeyman Plasterers

Effective June 1, 2009, $23.70 per hour

Effective January 1, 2010, $24.65 per hour

(b) Working Foreman

When the Contractor appoints a working Plasterer Foreman, he shall receive a minimum of seventy cents (70 cents) per hour above the Journeyman's wage rate.

(c) Plastering Trade Trainees

The rate for a Trainee Plasterer's shall be:

Trainee 1 (1st 1200 hours):

effective June 1, 2009 - $14.25 per hour

effective January 1, 2010 - $14.75 per hour

Trainee 2 (between 1200 and 2400 hours):

effective June 1, 2009 - $19.00 per hour

effective January 1, 2010 - $19.70 per hour

The Contractor may employ one (1) Plastering Trainee for each Journeyman Plasterer employed.

When a person is hired as an experienced Plasterer's Helper the employee will be required to carry the following tools, all of which must be maintained in good condition.

Hammer	Pliers
Pointing Trowel	Wash Brush
Shingle	Small Saw
Scraping Trowel	

4. Rest Period

When an employee has not been provided with a full eight (8) hours rest period between shifts, the employee will be paid at double the straight time hourly rate for all applicable hours worked until such time as an eight hour break occurs.

5. Vacation and Vacation Pay

Annual vacation will be arranged as provided in The Employment Standards Code for the Province of Manitoba.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked, except as set out below.

A person who is not a Journeyman and who was not a Member of the Union as of May 1, 1990, will receive Vacation Pay at the rate of four percent (4%) of the employee's standard hourly rate for each hour worked.

Advance payment in lieu of pay at time of vacation in the applicable amount set forth above shall be added to each employee's wages on each pay period.

6. Payment in Lieu of Holiday

Whether or not an employee works on any of the holidays under Article 17, he shall receive in lieu of paid holidays four percent (4%) of his standard hourly rate for each hour worked. The employee shall be paid this allowance at the time and under the conditions set forth in the Employment Standards Code.

7. Trust Funds

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Manitoba Multiple Trade Health and Welfare and Pension Trust Funds. Contributions shall apply to all hours worked. The employee's contributions shall be collected at the source as a payroll deduction.

a) Health and Welfare

Contractor's contribution	10 cents per hour
Employee's contribution	70 cents per hour

b) Pension Fund

Contractor's contribution	50 cents per hour
Employee's contribution	80 cents per hour

Contributions to the above pension fund and health and welfare fund shall be submitted each month by the 15th of the month following the month for which contributions are collected.

c) Training Trust Fund

a) Subject to (b) below, the Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Training Trust Fund. Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:	two cents per hour
The Employee's contribution shall be:	two cents per hour

The Contractor shall forward the above contributions to the Training Trust Fund by the fifteenth (15th) day of the month following the month in which the hours were worked.

b) Contractor and Employee contributions to the Fund will be discontinued immediately if one or more of the following occurs:

i) The Fund ceases to be governed by a Trust;

ii) The provisions of the Trust are not fulfilled;

iii) Employers are no longer represented on the Board of Trustees.

c) In the event that either the Association or the Council has reason to believe that one or more of the conditions described in (b) above has occurred, the matter shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor and employee contributions in trust.

8. Tools & Equipment

All journeymen and apprentices shall provide the following tools:

	Description
	hawk
2	plastering trowels and point trowels
1	soft bristle brush for finishing work (minimum width 6")
1	small tool brush
	metal angle float
	wood float
1	carpet or sponge rubber float
	chalkline
	spirit level
	tinsnips
	square rule
	hatchet
	hammer
	saw
	browning brush
	mitre rod
	scratcher
	foundation marker
	white coveralls

9. Escalation and Reference

9.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the Operative Plasterers and Cement Masons International Association Local 334, (Plasterers) and the Plastering Contractors Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

9.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

9.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Shift premium but excluding any shift premium applicable to overtime hours;

b) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

c) Pay in lieu of Holidays;

d) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 9.2.1);

e) Rest provisions between shifts;

f) Provisions governing special trade related tests;

g) Safety clothing;

h) Tool lists and provisions governing loss of such tools on the Project.

9.2.1 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

9.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

9.4 The provisions of 9.1 and 9.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 8a – Cement Masons

THE OPERATIVE PLASTERERS AND CEMENT MASONS INTERNATIONAL ASSOCIATION

Local Union No.222 (Cement Masons)

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #9, for additional information regarding Appendix 8A

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday through Thursday, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any one (1) day or shift, Monday to Thursday, such time shall be paid at the rate of time and one-half for the first three (3) hours and double time for hours worked thereafter in any one (1) day.

If more than the recognized daily hours are worked on Friday, such time shall be paid at the rate of time and one-half for the first four (4) hours and double time for hours worked thereafter.

On Saturdays, except as provided in Article 15.2, time and one-half shall be paid.

On Sundays and holidays as specified in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then nine (9) hours or eight (8) hours, as the case may be, may be worked during any hours and may constitute a regular shift. When a shift ends between 6:00 p.m. and 7:00 a.m. an employee shall receive 1.09 times his normal rate for all hours worked at straight time. Shift work premium will not be paid on any overtime hours worked.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the Contractor.

3. Wages

(a) Journeyman Cement Masons:

Effective May 1, 2019 $34.81

(b) Foreman:

When the Contractor appoints a working foreman, he shall receive a minimum of $1.25 (one dollar and twenty-five cents) per hour above the Journeyman's wage rate. In the discretion of the Contractor, the amount may be higher.

(c) Pre-apprentice:

i) The contractor may employ one (1) pre-apprentice for each Journeyperson employed.

ii) Pre-apprentices may be employed for a maximum of 500 hours. The employer shall maintain a log book for all hours worked as a pre-apprentice. The contractor shall forward a copy of the employee's log book to the union upon their request.

iii) The wage scale of pre-apprentices shall be;

First 500 hours (55% of the Journeyperson rate.)

(d) Apprentices:

i) The Contractor may employ one (1) apprentice for every Journeyman employed.

ii) The term of apprenticeship in the trade is two levels, with each level consisting of a period of at least 12 months during which the apprentice must complete 1,800 hours of technical training and practical experience.

iii) The scale of wages for apprentices shall be:

Level 1 (0 - 1800 hours) - 65% of the Journeyman's rate
Level 2 (1801 – 3600 hours) - 80% of the Journeyman's rate

iv) The Contractor will maintain a log book on each apprentice and hours to be credited towards that employee's apprenticeship will be entered on a weekly basis. The Contractor will provide the log book to the apprentice upon termination of employment and will forward to the Union a copy of the log book entries indicating the number of hours credited to that apprentice.

v) Apprentices shall provide the hand tools set out in the Tool Section of this Appendix.

4. Vacation and Vacation Pay

Annual vacation will be arranged as provided in The Employment Standards Code for the Province of Manitoba.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked, except as set out below.

Advance payment in lieu of pay at time of vacation in the applicable amount set forth above shall be added to each employee's wages on each pay period.

5. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays under Article 17, he shall receive in lieu of paid Holidays, four percent (4%) of his standard hourly rate for each hour worked. The employee shall be paid this allowance at the time and under the conditions set forth in the Employment Standards Code.

6. Trust Funds

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Manitoba Multiple Trade Health and Welfare and Pension Trust Funds. Contributions shall apply to all hours worked. The employee's contributions shall be collected at the source as a payroll deduction.

(a) Health and Welfare

Contractor's contribution	55 cents per hour
Employee's contribution	70 cents per hour

(b) Pension Fund

Contactor's contribution	$1.99 (one dollar and ninety-nine cents per hour)
Employee's contribution	80 cents per hour

(c) Employee contributions for pre-apprentice workers shall be optional.

Contributions to the above Pension Fund and Health and Welfare Fund shall be submitted each month by the 15th of the month following the month for which contributions are collected.

7. Tools

Cement Masons shall provide the following hand tools:

2 hand trowels (one 14" and one 16")
1 pointing trowel
1 hand float
1 chipping hammer
1 brush (5" or 6")
1 chalk line
1 spirit level
1 tape (minimum 12' or 4 m)
1 edger
1 jointer

8. Escalation and Reference

8.1.1 General Approach

Subject to and in accordance with the conditions set out below, and subject to any adjustments arising from the application of Section 8.2, the wage rates set out in this Appendix will be adjusted by a percentage equivalent to the weighted percentage adjustment in wage rates and in the employers' contribution rate to pension and health and welfare plans negotiated from time to time for each of the Reference Classifications set out in 8.1.2.

8.1.2 Reference Classifications and Weighting

The Reference Classifications and the weighting of these classifications shall be as follows:

Reference Classification	Weighting Factor
The Journeyman Carpenter Classification as set out in the Agreement negotiated and executed by the CLRA of Manitoba and the United Brotherhood of Carpenters and Joiners of America, Local Union 343.	100%

8.1.3 Method of Calculating Weighted Percentage Adjustment of Reference

Classifications

The weighted percentage adjustment of each Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired W) + (Expired P) + (Expired H\&W)}} \times 100 \times \text{Weighting Factor}$$

Where:

- Change means the increase or decrease in that benefit.
- W means wage rate.
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last weighted percentage adjustment was calculated.
- Weighting factor means the factor assigned to a particular Reference Classification as set out in 8.1.2.

8.1.3.1 In calculating the weighted percentage adjustment of a Reference Classification, the arithmetic result shall be rounded to the nearest hundredth of a percent.

8.1.4 Effective Date of Wage Rate Adjustments and Adjustments to Pension and Health and Welfare Plans and Application of the Formula

8.1.4.1 Effective Date of Wage Rate Adjustments

When the wage rate adjustment of a Reference Classification(s) is effective on the first of any month, then the wage rate adjustment of the hourly rates in this Appendix shall be effective on that date.

When the wage rate adjustment of a Reference Classification(s) is not effective on the first of any month, it shall be deemed to be effective on the first of the month following, and the wage rate adjustment of hourly rates in

this Appendix shall be effective on that date.

8.1.4.2 Effective Date of Adjustments to the Employers' Contribution Rate to Pension and/or Health and Welfare Plans

When the adjustment to the employers' contribution to the pension and/or health and welfare plans of a Reference Classification(s) is effective on the effective date, or pursuant to 8.1.4.1 the deemed effective date, of any wage rate adjustment of any Reference Classification, then such adjustment shall be calculated and taken into account on that date. If this is not the case, then such adjustment shall be calculated and taken into account on the closest following effective date of a wage rate adjustment.

8.1.4.3 In applying the weighted percentage adjustment, the resultant wage rate shall be rounded to the nearest cent, following which, any adjustment required by virtue of Section 8.2 shall be introduced to yield the new wage rate schedule that will apply in this Appendix.

8.2 Pension and Health and Welfare

8.2.1 The Contractor's responsibility for contributions to the Pension and Health and Welfare Trust Funds referenced in Section 6 of this Appendix shall be no greater than one dollar and 99 cents ($1.99) per hour worked, and 55 cents per hour worked, respectively. In the event that the Operative Plasterers and Cement Masons International Association Local Union No. 222 requires increased contributions to its Pension and/or Health and Welfare Trust Funds, the total amount of said increase will be deducted from the employees' wages or become an employee contribution.

8.2.2 The Contractor's contribution to the Pension and Health and Welfare Plans may be applied on a per hour worked basis; however, the Contractor's contributions rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

8.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

8.4 The provisions of Sections 8.1 and 8.2 shall be dealt with by following the

procedure set out in Article 30 of this Agreement.

APPENDIX NO. 9 - Bricklayers and Allied Craftsmen

INTERNATIONAL UNION OF BRICKLAYERS AND ALLIED CRAFTSMEN

Local Union No. 1 of Manitoba

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

Overtime for Bricklayers and Masons

If more than the recognized daily hours are worked in any day or shift, such time shall be paid at the rate of time and one half for the first two (2) hours and double the regular straight time hourly rate for all hours worked thereafter in that shift.

On Saturdays, except as provided in Article 15.2, and on Sundays and Holidays as set out in Article 17, double time shall be paid.

Overtime for Tilesetters, Terrazzo Layers and Stone Setters

If more than the recognized daily hours are worked in any day or shift, such time shall be paid at the rate of time and one half.

On Saturdays (except as provided in Article 15.2) and Sundays, time and one half shall be paid. On Holidays as set out in Article 17, double time shall be paid excepting Good Friday, Thanksgiving Day, Civic Holiday, and Victoria Day for which time and one-half shall be paid.

2. Shift Conditions

If the conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then nine (9) hours, or eight (8) hours as the case may be, may be worked during any hours and will be deemed to constitute a regular shift on that job.

For Bricklayers and Masons, a premium of fifteen (15%) of the regular straight time rate will be paid for each shift hour worked on a shift that cannot be done within the said normal working hours. Shift premium will not be paid on any overtime hours worked.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the Contractor.

3. Wages

Wage rates shall be as follows:

3.1 Bricklayers and Masons

(a) Journeyman Bricklayers and Masons

Effective:	May 1, 2019	October 1, 2019	May 1, 2020	October 1, 2020	May 1, 2021	October 1, 2021
Journeyman	$38.27	$38.52	$38.77	$39.02	$39.27	$39.52
Apprentice						
3rd Year 90%	$34.44	$34.67	$34.89	$35.12	$35.34	$35.57
2nd Year 75%	$28.70	$28.89	$29.08	$29.27	$29.45	$29.64
1st Year 60%	$22.96	$23.11	$23.26	$23.41	$23.56	$23.71

(b) Bricklayer and Masonry Foreman

When the Contractor appoints a working foreman, that Foreman shall be paid an hourly rate fifteen (15%) above the Journeyman's rate, rounded to the nearest five (5) cents. Mid point results shall be rounded upwards to the next five cents (55).

(c) Bricklayer and Masonry Apprentices

Bricklayer Apprentices registered with the Department of Labour shall be paid the rate as laid down from time to time by the Apprenticeship Board of Manitoba as follows:

1st year	60% of Journeyman's rate (1,600 Hrs)
2nd year	75% of Journeyman's rate (1,600 Hrs)
3rd year	90% of Journeyman's rate (1,600 Hrs)

A registered Bricklayer or Masonry Apprentice shall be deemed not to have completed his apprenticeship until he has passed the final examination for his Manitoba Certificate of Qualification. Failing this, the said Apprentice will remain in the third year category of his apprenticeship in status and pay rate, until such time as he obtains his certificate.

No second or third year Apprentice shall be advanced to the next years pay rate unless he has passed his regular school courses for that year and has served the necessary qualifying time.

When an apprentice passes the examination and has the required hours the apprentice shall immediately thereafter receive wages at the next level of apprenticeship.

The ratio of apprentices to journeymen shall not exceed one apprentice for every two journeyman bricklayers employed.

3.2 Tilesetters, Terrazzo Layers and Stone Setters

(a) Journeyman Tilesetters, Terrazzo Layers, and Stone Setters

NOTE: The wages set out for 3.2 (a) represents an interim escalation based on the ICI Construction and Wage Schedule till such time as an appropriate agreement is in hand

Effective January 1, 2014
$23.60/hr

(b) Foremen - Stone, Tile and Terrazzo Trades

When the Contractor appoints a working foreman that foreman shall be paid at least fifteen cents (15¢) per hour above the Journeyman's rate.

(c) Apprentices - Stone, Tile and Terrazzo Trades

Apprentices training in the Marble Tile and Terrazzo trades shall be paid the rate as laid down from time to time by the Apprenticeship Board of Manitoba as follows:

1st year	50% of Journeyman's rate
2nd year	55% of Journeyman's rate
3rd year	65% of Journeyman's rate
4th year	75% of Journeyman's rate

No Apprentice shall be made up to Journeyman status by the Union or advanced in pay scale by the Contractor until he has completed his full allotment of time at the trade. For purposes of computing Apprentice pay scales, 1800 hours shall equal one (1) year's credit. The Union will issue each Apprentice with a log book. The Contractor will, once each year or on termination of employment, whichever comes first, fill in the number of hours worked together with a report on the employee's aptitude for the trade, his progress in learning the trade and his attitude.

(d) Qualified Grouter

effective May 1, 2006
$12.30/hr

A qualified Grouter is an Apprentice who, after the normal second year of apprenticeship, the Contractor, the Union and the Apprentice have mutually agreed that apprenticeship training should be discontinued and the person placed in the Grouter category.

The duties of the Grouter may include:

1. For all products that fall within the jurisdiction of the union:

- Grouting
- e.g., quarry tile; slate; brick; marble; granite; etc.
- Mixing of all materials
  - e.g., cement bed; plaster; terrazzo; epoxy systems; etc.
- Preparation work
  - e.g., cleaning of floor slabs prior to installation of products.
- Cutting to size
  - e.g., marble tile and slab; quarry tile; etc.
- Grinding of terrazzo.
- Drilling of anchor holes and edging, finishing, and bullnosing work in relation to marble and granite slabs.
- All typical helper functions that are required for the trade.

(e) Tile and Terrazzo Trainees

To encourage and promote the development of future tradesmen in the tile and terrazzo industry, certain personnel may be employed at the discretion of the Employer in this category. Persons with some experience in the trade wishing to enter into the apprenticeship training program, may do so at any time once he has completed the minimum of one (1) year within this Trainee category. The Employer has the right to determine where a new apprentice will fall on the current Apprentice wage scale. The union agrees that all Trainees do not have to join the Union as a condition of employment, and further that the Employer is not obligated to deduct Union dues for Trainee employees during the one (1) year training period. Once the one (1) year training period has been completed, the Employer shall commence deducting the applicable Union dues. The Employer shall notify the Union when new trainees are hired.

The Trainee hourly rate of pay shall be: $10.38

4. Height Premiums

Bricklaying and masonry employees working on swing stages or bosun chairs shall receive the following premiums:

Over 45 feet	=	50¢ per hour
Over 150 feet	=	75¢ per hour

5. Vacation and Vacation Pay

Annual vacation will be arranged as provided in the Employment Standards Code for the Province of Manitoba.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked.

Advance payment, in lieu of pay at the time of vacation, in the amount set forth above, shall be added to each employee's wages on each pay period.

6. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays, four and one half percent (4.5%) of his standard hourly rate for each hour worked. The employee shall be paid this amount at each pay period and under the conditions set forth in the Employment Standards Act.

7. Health and Welfare and Pension Trust Funds

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Manitoba Multiple Trade Health and Welfare Trust Fund and the Manitoba Multiple Trade Pension Trust Fund. Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

(a) Contributions for Bricklayers and Masons

(i) Health & Welfare Contributions

Contractor's Contribution for Journeyman and Apprentice

Effective July 2, 2013 - $1.25 per hour

Employee's Contribution

nil.

(ii) Pension Contributions

Effective: May 1, 2019		
	Employer Contribution	Employee Contribution
Journeyman	$6.30	$1.25
Apprentice		
3rd Year 90%	$5.67	$1.13
2nd Year 75%	$4.73	$0.94
1st Year 60%	$3.78	$0.75

(b) Contributions for Stone, Tile and Terrazzo Trades

i) Health & Welfare Contributions

	Contractor's Contribution	Employee's Contribution
Effective May 1, 2006	$1.05 per hour	80 cents per hour
Effective October 1, 2006	$1.09 per hour	80 cents per hour

ii) Pension Contributions

	Contractor's Contribution	Employee's Contribution
Effective May 1, 2006	$3.02 per hour	$1.00 per hour
Effective October 1, 2006	$3.27 per hour	$1.00 per hour

Contributions to the Masonry Trust Fund and to the Manitoba Multiple Trade Health and Welfare Trust Fund shall be submitted each month by the 15th of the month following the month for which contributions are collected.

8. Rest Period

If an employee is not provided with at least an either (8) hour rest period between shifts, The employee shall be paid at double the regular straight time hourly rate until such time as an eight (8) hour break occurs.

9. Industry Funds

In recognition of the importance of advancing and promoting the interests of the masonry trade and industry in general, all for the mutual benefit of the members of the Masonry Trade Division (the "Division"), the Union and its members, and the Manitoba Masonry Institute (Contractors Section) (M.M.C.A) and its members, the parties hereto agree that certain contributions hereinafter set forth shall be made to the M.M.C.A and to the Union

to promote such objectives.

The Contractor shall contribute: the sum of thirty cents (30¢) per hour for each hour worked by its employees.

The total of both the employee contributions, if any, and employer contributions shall be forwarded to the M.M.C.A. not later than the 15th day of the month following the month in which such deductions or contributions were made, together with the "employer report form" to be supplied by the M.M.C.A.

10. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix No. 9 for Bricklayers and Masons shall be:

- After thirty-five (35) calendar days.

The return transportation time period referred to in Article 19.2.1 for this Appendix No. 9 for Tilesetters, Terrazzo Layers, and Stone Setters shall be:

- after forty (40) calendar days for a first tour of duty, and after thirty-five (35) calendar days for each consecutive tour of duty thereafter.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at one half of the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

11. Tools

Journeymen and apprentices shall be required to supply the ordinary hand tools of the Trade. The following tools shall be the minimum requirement for each and every bricklayer.

All tools shall be kept in good condition at all times. The bricklayer must replace any tools, which are not in good condition, within a reasonable period of time. Employers may replace employee tools and deduct the cost of the tool from the employee’s paycheque if tools are not replaced in a reasonable period of time.

1	Brick hammer	2	Flat jointers
1	Mash hammer	1	Trowel

2	Chisels 10" and 6"	1	Hand brush
1	Pointing trowel		Tool box or bag
1	Bolster or brick set	1	Four foot level
1	Two foot level	1	100' line
2	Convertible round jointers	1	Raker
1	Combination Imperial/Metric Rule or Tape, Line Pins or Corner Blocks		

Mason lines will be provided by the Contractor.

Tilesetters shall provide the following tools:

Water level – 30’ long min.	Tool box c/w lock
Rubber mallet	Mortar hook
2’ aluminum level	Pliers
Wood saw	Plaster trowel
Hole cutting hammers	Pencil and sharpener
Notched trowels	Light extension cord – 50’ long
2’ square	4’ aluminum level
Manual operated tile cutter & wheel	Claw hammer
Screw drivers	Hack saw
Assortment of chisels	Tile nippers
Chalk line	Pointing trowel
Tin snips	Rubber float
Wonderboard knife	

Terrazzo workers shall provide the following tools:

2’ aluminum level		1	Pointing trowel
Hack saw		1	Pound hammer
Chalk line			Wood saw
Pliers		2	Flat trowels
Tin snips			Claw hammer
Assorted chisels			Light extension cord – 50’ long
Too box c/w lock			Wonderboard knife
Rubber mallet			

Marble setters shall provide the following tools:

4’ aluminum level	Small grind stone
Hack saw	Screw drivers
Assortment of chisels	Chalk line
2’ square	Light extension cord – 50’ long
Plaster bowl	Claw hammer
2’ aluminum level	Pliers
Wood saw	Pencils and sharpener

Pointing trowels	Small clamps
Tin snips	Tool box c/w lock
Pound hammer	Rubber mallet
Wonderboard knife	

12. Escalation and Reference

12.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Union of Bricklayers and Allied Craftsmen, Local Union No. 1 of Manitoba and the Manitoba Masonry Institute and the Manitoba Masonry Contractors Association (relative to Brick and Stone Masonry) and the Marble, Tile and Terrazzo Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

12.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

(a) definitions and qualificational requirements for applicable classifications.

(b) ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

(c) height pay including that associated with swing stage work.

12.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

(a) overtime payments (subject to the restrictions set out in Section 12.3)

(b) shift premium but excluding any shift premium applicable to overtime hours.

(c) Vacation and Vacation Pay - such provisions may include any provisions

relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: 'the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee'.

(d) pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 12.2.1).

(e) registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 12.2.2).

(f) callout provisions.

(g) rest provisions between shifts

(h) personal effects insurance provisions

(i) provisions governing welding and other special trade related tests

(j) safety clothing

(k) tool lists and provisions governing loss of such tools on the Project.

(l) the following trusteed plans, each of which shall be subject to the restrictions set out in Section 12.2.3:
i) building fund
ii) trade improvement plans including educational and apprenticeship funds.

(m) the time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3).

(n) travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 12.2.4).

12.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

12.2.2 The Contractor's contribution to any pension and health and welfare plan

may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

12.2.3 The Contractor's contribution to any of the plans referred to in Section 12.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

12.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

12.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

12.4 The provisions of 12.1 and 12.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 10 – Sheet Metal

THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION

Local Union 511 (Sheet Metal Workers)

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday, such time shall be paid at the rate of time and one-half for the first two (2) hours, and double time for hours worked thereafter in that shift.

On Saturdays, except as provided in Article 15.2, Sundays and on Holidays, as specified in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A premium of 6.6% of the regular straight time rate will be paid for each shift hour worked on a shift that cannot be done within the said normal hours except that on those shift hours which are worked between 12:00 midnight and 6:00 a.m. a premium of 14.2% of the regular straight time rate will be paid. Shift premium will not be paid on any overtime hours worked.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the contractor.

3. Wages

Wage rates shall be as follows:

WAGES			
Classification	3 - July-16	1-May-17	1-May-18
Senior Journeyperson (100%)	$39.84	$40.57	$41.38
Journeyperson	$38.34	$39.07	$39.88
Fourth Year	$33.07	$33.67	$34.35
Third Year	$29.08	$29.62	$30.21
Second Year	$25.10	$25.56	$26.07
First Year	$19.92	$20.29	$20.69
Pre-Apprentice Level 2 (1001-1800 Hrs)	$18.95*	Jan 1, 2017 $19.55*	$19.55*
Pre-Apprentice Level 1 (0-1000 Hrs)	$15.94	$16.23	$16.55
Classified Shop Worker	$15.94	$16.23	$16.55
Welder 1	$33.86	$34.48	$35.17
Welder 2	$29.88	$30.43	$31.04
Welder 3	$25.90	$26.37	$26.90
Helpers	$31.87	$32.46	$33.10
*** CWIA General Construction Labourer Trainee 2 Min. Rate**			

d) Chargehand Premium

When the Contractor appoints a working Chargehand, he shall be paid the following premiums:

When in charge of at least 2 other persons and up to 4 persons 3%/hr
When in charge of at least 5 other persons and up to 10 persons 5%/hr
When in charge of at least 11 other persons and up to 20 persons 7%/hr
When in charge of 21 persons and over 10%/hr

above the employee's regular rate of pay.

Pre-Apprentice Level 1 wage for a maximum of one thousand (1000) hours (this classification does not pay employee or receive Employer contributions for Pension Plan or Health & Welfare Plans for the first one thousand (1000) hours). After one thousand (1000) hours, employee and Employer Pension Plan and Health and Welfare Plan contributions commence.

All pre-apprentices shall be registered with the Union and be given first priority when a new apprentice is to be indentured into the industry. The maximum hours a pre-apprentice shall remain in this classification is 1800 hours. Upon completion of 1800 hours, a pre-apprentice shall be indentured as a first year apprentice or reclassified.

All apprentices must successfully complete their in-school training in order to qualify for the applicable rate of pay. Pay increases based solely on hours will only apply to those apprentices who through "no fault of their own" are unable to attend classes. Apprentices refusing to attend school shall have their apprenticeship contract cancelled.

4. Worker Ratios

For the first Journeyman employed the Contractor may employ one (1) Apprentice. Once three (3) Journeymen and three (3) Apprentices are hired, the Employer may hire one Pre-Apprentice.

No ratio is applicable to Welders but the Contractor agrees that, while Welders may do other work incidental to their trade, this category will not be used to subvert the intent of the worker ratio system.

The parties hereto agree that the maximum number of Apprentices em0ployed in the field shall not exceed one Apprentice for each Journeyman employed and the maximum number of Classified shop Workers and/or Apprentices employed in the shop will not exceed four Apprentices or Classified Shop Workers for each shop Journeyperson employed.

5. Vacation and Vacation Pay

The annual vacation will be arranged as provided in the Manitoba Employment Standards Code.

Payment for the annual vacation will be on the basis of six percent (6%) of the employee's gross wages. Gross wages shall be defined as being all regular straight time hourly wages plus all overtime premium wages and all shift work premium wages.

Vacation pay allowance will be paid to employees on their regular pay day. Such payment shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

6. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays, four and a half percent (4.5%) of his gross wages, as defined above.

If a Holiday falls on a Saturday which is a non-working day or Sunday, then the closest following work day will be observed. However, this provision shall not apply to Remembrance Day nor shall it apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

7. Trust Funds

The Contractor and each employee will contribute the amounts set out below to the Sheet Metal Workers Employee Benefits Funds. Contributions shall apply to all hours worked by each employee covered by this Appendix. Employee contributions shall be collected at the source as a payroll deduction.

a) Sheet Metal Workers Pension Fund

PENSION						
	3-July-16		1-May-17		1-May-18	
Classification	**Employer/Hr**	**Employee/Hr**	**Employer/Hr**	**Employee/Hr**	**Employer/Hr**	**Employee/Hr**
Sr. Journeyperson	$ 0.60	$ 4.90	$ 0.60	$ 5.20	$ 0.60	$ 5.50
Journeyperson	$ 0.60	$ 4.90	$ 0.60	$ 5.20	$ 0.60	$ 5.50
4th Yr Apprentice	$ 0.50	$ 4.07	$ 0.50	$ 4.32	$ 0.50	$ 4.57

b) Health and Welfare Fund*

HEALTH & WELFARE		
	EMPLOYEE	EMPLOYER
July 3, 2016	$ 0.63	$ 0.63
May 1, 2016	$ 0.63	$ 0.63
May 1, 2017	$ 0.63	$ 0.63

c) Education Training Fund

	EE CONTRIBUTION	ER CONTRIBUTION
Education Training Fund	$ 0.10	$ 0.10

*Note - Pre-Apprentice Pension and Health and Welfare contributions and Contractor Pension and Health and Welfare contributions on their behalf do not commence until a Pre-Apprentice has completed 1,000 hours.

The Contractors shall forward the above contributions to the Administrator of the Fund not later than the 10th day of the month following the month in which contributions are payable. Reporting forms shall be supplied to the Contractor by the Union.

8. Benevolent Fund

The contractor shall deduct at the source as a payroll deduction from each employee covered by this Appendix the amounts set out below, and remit same to Local Union 511 Benevolent Fund:

FUND NAME	EE CONTRIBUTION	ER CONTRIBUTION
Benevolent Fund	$ 0.02	$ -

This fund shall be used to provide:

a) Assistance to members in paying Health and Welfare premiums where required;

b) Up grading courses for tradesmen;

c) Other benevolent services for and on behalf of members.

This fund shall not be disbursed for purposes that can work against the better interest of the Contractors.

All benevolent contributions are to be forwarded to the office of the Administrator, 438 Higgins Avenue, Winnipeg, Manitoba, R3A 1S5, prior to the 10th day of the month following the month in which contributions are payable. Reporting Forms shall be provided to the Contractor by the Union.

9. Building Trades Council and Western Conference Funds

The contractor shall deduct at the source as a payroll deduction from each employee covered by this Appendix, an amount of 6¢(*) per hour for each hour or part hour of employment and remit same to the Sheet Metal Workers International Association, Local Union 511, 438 Higgins Avenue, Winnipeg, Manitoba, R3A 1S5.

FUND NAME	EE CONTRIBUTION	ER CONTRIBUTION
Building Trades Council Fund	$ 0.05	$ -
Western Canadian Conference Sheet Metal Workers	$ 0.01	$ -

(*) i.e., 5¢ in respect of the B.T.C. Fund and 1¢ in respect of the W.C. Fund.
These monies will be remitted to the fund by the 10th day of the month following the month in which the contributions are payable. Remittance forms shall be provided by the Union to the Contractor.

10. Personal Effects Insurance

When an employee is required to reside in a construction camp, the cost of insurance against loss of his personal effects by fire, to a maximum of one thousand dollars ($1000.00), will be reimbursed by the Contractor on presentation of a paid premium receipt.

11. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

12. Tools

Journeymen, Helpers, and Apprentices shall supply the ordinary hand tools of the trade and to maintain same in first class condition at all times as a condition of employment.

The Union agrees to participate in the enforcement of this provision against any of its members who fail to supply and maintain the above noted tools in first class condition.

The ordinary hand tools of the trade are:

a) Standard List

		Apprentices Year				Journeyman
		1	2	3	4	
1.	1 – 25' tape measure	x	x	x	x	x
2.	1 – Setting hammer (16 oz. square face)	x	x	x	x	x
3.	1 – Aviation snips (left hand)	x	x	x	x	x
4.	1 – Aviation snips (right hand)	x	x	x	x	x
5.	1 – Scratch awl	x	x	x	x	x
6.	2 – Locking pliers (vice grips) Standard and Wide nose	x	x	x	x	x
7.	Flat screwdrivers (2 sizes)	x	x	x	x	x
8.	1 - Square point screwdriver(Robertson #6 and #8)		x	x	x	x
9.	1 – Phillips screwdriver (standard)		x	x	x	x
10.	1 – Slip joint plier 8"		x	x	x	x
11.	1 - Hacksaw frame		x	x	x	x
12.	1 – 10" adjustable wrench (crescent)			x	x	x
13.	1 - 12" spirit level				x	x
14.	1 - Combination square			x	x	x
15.	1 - Chalk line/plumb bob				x	x
16.	1 - Pop riveter				x	x
17.	1 - Set hexagon keys (Allen keys)				x	x
18.	1 - Hand punch (small Whitney)					x
19.	1 - Battery Operated Drill (14.4 volt)		x	x	x	x
20.	1 - Uni-Shear			x	x	x

13. Escalation and Reference

13.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the Sheet Metal Worker's International Association, Local Union 511 and the Sheet Metal Contractor's Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

13.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Height pay including that associated with swing stage work.

13.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 13.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: “the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee”;

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 13.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 13.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 13.2.3:

   i) Building fund;

   ii) Trade improvement plans including educational and apprenticeship funds;

   iii) Industrial promotion funds.

m) The Plans set out in Section 8 and 9 of this Appendix, subject to the limitation that these Plans will be solely funded by the employee and all required contributions shall be collected at the source as a payroll deduction;

n) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

o) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 13.2.4).

13.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

13.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

13.2.3 The Contractor's contribution to any of the plans referred to in Section 13.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

13.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

13.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

13.4 The provisions of 13.1 and 13.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 10a - Roofers

INTERNATIONAL ASSOCIATION OF SHEET METAL, AIR, RAIL AND TRANSPORTATION WORKERS (SMART) LOCAL UNION 511 (SHEET METAL WORKERS)

Local Union 511 (Roofing Section)

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Nine (9) hours shall constitute a day's work for four (4) days Monday to Thursday inclusive, and eight (8) hours shall constitute a day's work for Friday. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half.

On Saturdays and Sundays, except as provided in Article 15.2, time and one-half shall be paid for all hours worked.

On Holidays, double the regular straight time hourly rate shall be paid for all hours worked.

2. Wages

Wage rates shall be as follows:

Classification	Effective May 1, 2016	Effective May 1, 2017	Effective May 1, 2018
Journeyman Roofer	$33.70	$34.80	$35.95
Roofer #1	$30.33	$31.32	$32.36
Roofer Apprentices			
3rd Year	$26.96	$27.84	$28.76
2nd Year	$23.59	$24.36	$25.17
1st Year	$20.22	$20.88	$21.57
Classified Worker			
Classified Worker (Over 2400 hrs)	$23.75	$24.45	$24.45
Step 2 (1201 hrs to 2400 hrs @ 55%)	$18.95	$19.55	$19.55
Step 1 (first 1200 hrs @ 50%)	$16.85	$17.40	$17.98

The classifications covered are defined as follows:

1) Journeyman: As defined by the Manitoba Apprentices and Trades Qualification Act (Roofer Regulation). Recognized by a Certificate of Qualification in the trade of Roofer.

2) Roofer #1: An experienced Roofer with a minimum of 3,600 hours of roofing practice capable of performing 90% of the duties of a Journeyman Roofer (a non-ticket Journeyman).

3) Apprentice: As defined by the Roofer Trade Regulation. Must have a minimum of 2,000 hours of roofing experience prior to registering.

4) Classified Worker: A worker with limited or no roofing experience capable of performing entry level tasks or single job specific skills.

Classified Worker (first 1,200 hours) shall not be eligible for Employer or Employee pension contributions and Health and Welfare contributions.

Foreman Premium:

When the Contractor appoints a working foreman, he shall be paid a premium of:

Effective May 13, 2013: $4.00 per hour.

3. Vacation and Vacation Pay

Annual vacation will be paid to employees on the basis of six percent (6%) of the gross wages excluding overtime earned.

Vacation pay allowance will be paid to employees on their regular pay day. Such payment shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

4. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays under Article 17, he shall receive in lieu of paid Holidays, four and a half percent (4.5%) of his total gross wages, exclusive of overtime earned in the calendar year. The employee shall be paid this amount on his regular payday.

5. Trust Funds

Health and Welfare Fund

The employee and the Contractor shall contribute the amounts set out below to The Sheet Metal Workers and Roofers Health and Welfare Plan. Contributions shall apply to all hours worked. The employee's contribution shall be deducted from the employee's regular pay cheque.

	Employer Contributions	Employee Contributions
Effective May 1, 2016	$0.88/hr	$0.60/hr
Effective May 1, 2017	$0.88/hr	$0.62/hr
Effective May 1, 2018	$0.88/hr	$0.63/hr

Pension Fund

The employee and the Contractor shall contribute the amounts set out below to the Sheet Metal Workers and Roofers Pension Fund. Contributions shall apply to all hours worked. The employee's contributions shall be deducted from the employee's regular pay cheque.

Effective May 1, 2016

	Employer Contributions	Employee Contributions
Journeyman	$2.05/hr	$1.35/hr
Roofer #1	$1.85/hr	$1.28/hr
3rd Apprentice	$1.64/hr	$1.20/hr
2nd Apprentice	$1.44/hr	$1.13/hr
1st Apprentice	$1.23/hr	$1.05/hr
Classified Worker	$1.13/hr	$1.02/hr
Classified Worker Step 2	$1.13/hr	$1.02/hr

Payments and reporting forms for both of the above funds to be received by the Administrator of the Sheet Metal Workers and Roofers Health and Welfare and Pension Trust Funds not later than the 15th of the month following the month for which contributions are being made.

Training Fund

The Contractor and each employee will contribute the amounts set out below to the trusteed industry training fund:

Contractor's Contribution 10¢ per hour worked
Employee's Contribution 10¢ per hour worked

6. Benevolent Fund

The contractor shall deduct at the source as a payroll deduction the amount set out below for each hour worked by each employee covered by this Appendix and remit same to Local Union 511 Benevolent Fund:

2¢ per hour

This fund shall be used to provide:

a) Assistance to members in paying Health and Welfare premiums where required.

b) Up-grading courses for tradesmen.

c) Other benevolent services for and on behalf of members.

This fund shall not be disbursed for purposes that can work against the better interest of the Contractors.

All benevolent contributions are to be forwarded to the office of the Administrator, 438 Higgins Ave. Winnipeg, Manitoba R3A 1S5, prior to the 10th day of the calendar month following the period for which contributions are being reported.

Combination Reporting Forms shall be provided to the Contractor by the Union.

7. Building Trades Council and Western Conference Funds

The Contractor shall deduct at the source as a payroll deduction an amount of 6¢* per hour worked (or any part thereof) from each employee covered by this Appendix and same shall be remitted by the Contractor to the International Association of Sheet Metal, Air, Rail, and Transportation Workers (SMART), Local Union 511, 438 Higgins Ave. Winnipeg, Manitoba R3A 1S5.

* i.e. 5¢ in respect of the B.T.C. Fund and 1¢ in respect of the W.C. Fund.

These monies will be remitted to the fund by the 10th day of the month following that which contributions cover, in the manner provided by the Unified Remittance Form.

8. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After twenty eight (28) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

9. Tools

Journeymen, Roofer #1, Apprentices, and Classified Workers Step 1 and Classified Worker Step 2 shall supply the following tools of the trade:

		Description
Classified Workers Step 1	1	Utility Knife
	1	Insulation Knife
	1	Tool Belt (to hold knives)
	1	25’ Tape
		Personal Protective Equipment (safety hard hat, safety boots, and other normal protective equipment)

Additionally, Classified Workers (Step 2), Journeymen, Roofer #1, and Apprentices shall supply:

		Description
Classified Workers Step 2	1	Claw Hammer
	1	Pointed Trowel
	1	8” Crescent Wrench
	1	Screw Driver
	1	Tool Belt (to hold tools)

The Contractor will be responsible for compensation for tools destroyed by fire or lost by breaking and entering from a storage place provided by the Contractor. Claims for such lost or destroyed tools must be submitted in writing with a list thereof, their value, and substantial evidence of loss. Claims must be submitted within ten days of the date of loss unless good reason can be shown for not having done so.

10. Escalation and Reference

10.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Association of Sheet Metal, Air, Rail and Transportation Workers (SMART), Local Union 511 (Roofing Section) and the Roofing Contractors Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

10.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Height pay including that associated with swing stage work.

10.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 10.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: “the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee”;

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 10.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 10.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 10.2.3:

   i) Building fund;

   ii) Trade improvement plans including educational and apprenticeship funds;

   iii) Industrial promotion funds.

m) The Plans set out in Section 6 and 7 of this Appendix, subject to the limitation that these Plans will be solely funded by the employee and all required contributions shall be collected at the source as a payroll deduction;

n) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

o) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 10.2.4);

10.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

10.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

10.2.3 The Contractor's contribution to any of the plans referred to in Section 10.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

10.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

10.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

10.4 The provisions of 10.1 and 10.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 10b – Sheeters, Deckers and Cladders

INTERNATIONAL ASSOCIATION OF SHEET METAL, AIR, RAIL AND TRANSPORTATION WORKERS (SMART) LOCAL UNION 511 (SHEET METAL WORKERS)

Local Union 511 (Sheeters, Deckers and Cladders Section)

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive, the maximum regular workweek shall be forty (40) hours. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the maximum daily hours are worked in any one (1) day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half (1 1/2x) of the straight time hourly rate.

Time and one-half (1 ½X) shall be paid up to a maximum of ten (10) hours worked in any calendar week, Monday to Friday. Double (2X) time for all hours worked thereafter. Double (2X) time for all work on Saturdays, Sundays, and holidays

On Saturdays, except as provided in Article 15.2, Sundays and holidays, as specified in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A premium of 10% of the regular straight time rate will be paid for each shift hour worked on a shift that cannot be done within the said normal hours. Shift premium will not be paid on any overtime hours worked.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the Contractor.

3. Wages

Classifications

1) Journeyman: A worker whom has accumulated a minimum of 7,200 hours working at the trade and holds a valid Certificate of Qualification issued by the Province or the Sheeter/Decker Training Committee, hereinafter referenced to as the S.D.T.C;

   i) Journeyman 'A' classification shall encompass all work of 200 squares of metal wall panels, insulated roof panels, and roof deck over 500 squares;

   ii) Journeyman 'B' classification shall encompass all work under 200 squares of metal wall panels, insulated roof panels, and roof deck under 500 squares and all packaged building systems;

2) Sheeter Decker Cladder Skilled Tradesperson 2: A worker will remain in this classification for a maximum of 1200 hours working at the trade, and once completed with be reclassified as a Journeyman A or B.

3) Sheeter Decker Cladder Skilled Tradesperson 1: A worker will remain in this classification for a maximum of 1200 hours working at the trade.

4) SDC General Construction Labourer 2: Once a worker has completed the appropriate period of time as a SDC General Construction Labourer 1, the worker will be classified as a SDC General Construction Labourer 2 and will remain in this classification for a period of 1500 working hours.

5) SDC General Construction Labourer 1: Once a worker has completed the appropriate period of time as a SDC General Construction Labourer Trainee 2, the worker will be classified as a SDC General Construction Labourer 1 and will remain in this classification for a period of 1500 working hours.

6) SDC General Construction Labourer Trainee 2: Once a worker has completed the appropriate period of time as a SDC General Construction Labourer Trainee 1, the worker will be classified as a SDC General Construction Labourer Trainee 2 and will remain in this classification for a period of 1200 working hours.

7) SDC General Construction Labourer Trainee 1: A SDC General Construction Labourer Trainee 1 will remain in this classification for a maximum of 1200 working hours.

Notes: Sheeter Decker Cladder (SDC) General Construction Labourer will occur on a progressive fashion. The issue will be discussed between the Local Union and the Contractor with respect to the employee's further movement up the classification scale.

Percentages

1)	Journeyman (B)	96% of Journeyman A rate
2)	SDC Skilled Tradesperson 2	85% of Journeyman A rate
3)	SDC Skilled Tradesperson 1	80% of Journeyman A rate
4)	SDC General Construction Labourer 2	75% of Journeyman A rate
5)	SDC General Construction Labourer 1	67% of Journeyman A rate
6)	SDC General Construction Labourer Trainee 2	55% of Journeyman A rate
7)	SDC General Construction Labourer Trainee 1	45% of Journeyman A rate

Wage Rates

	Effective 2016 05 01	Effective 2017 05 01	Effective 2018 05 01
Journeyman A	$37.09	$38.33	$39.63
Journeyman B	$35.61	$36.80	$38.04
SDC Skilled Tradesperson 2	$31.53	$32.58	$33.69
SDC Skilled Tradesperson 1	$29.67	$30.66	$31.70
SDC General Construction Labourer 2	$27.82	$28.75	$29.72
SDC General Construction Labourer 1	$24.85	$25.68	$26.55
SDC General Construction Labourer Trainee 2	$20.40	$21.08	$21.80
SDC General Construction Labourer Trainee 1	$16.69	$16.69	$17.83

Ratio

1. A minimum of one (1) Journeyman or Skilled Tradesperson must be employed on each job for every one (1) SDC General Construction Labourer Trainee employed.

2. No ratio applies to Sheeter Decker Cladder Skilled 1 and/or 2

Chargehand Premium:

i) When the Employer places an employee in charge of the production of three (3) or more other employees and delegates to him/her the general supervision of a job or project the employee shall receive a Chargehand Premium of an additional four dollars ($4.00) per hour (effective May 1, 2016).

4. Vacation and Vacation Pay

The annual vacation will be arranged as provided in the Employment Standards Code for the Province of Manitoba.

Payment for the annual vacation will be as provided in the above noted Act or on the basis of six (6%) of the employee's gross earnings. Gross earnings shall be defined as earnings at the standard hourly rate for all straight time hours worked plus earnings at the overtime premium hourly rate for all overtime hours worked.

Vacation pay allowance will be paid to employees on their regular pay day. Such payment shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

5. Pay in Lieu of Holidays

Whether or not an employee works on any of the holidays set out in Article 17, he shall receive in lieu of paid holidays, four and a half (4.5**)** percent of the employee's gross earnings, as defined above.

Where Christmas Day, New Year's Day or Canada Day falls on a Saturday or Sunday that is a non-working day, the parties may, by mutual consent agree to an alternate day off. However, this shall not apply to any employee who is on Christmas Leave, an Isolation Leave or any other type of leave of absence when any of these Holidays occurs.

6. Trust Funds

Health and Welfare Fund

The employee and the Contractor shall contribute the amounts set out below to the Administrator of the Sheet Metal Workers and Roofers Health and Welfare Plan. The employee's contribution shall be deducted from the employee's regular pay cheque. Contributions shall apply to all hours worked.

The Contractor's contribution will be:

Effective	May 1, 2016	$0.78 per hour
Effective	May 1, 2017	$0.78 per hour
Effective	May 1, 2018	$0.78 per hour

The Employee's contribution will be:

Effective	May 1, 2016	$0.60 per hour
Effective	May 1, 2017	$0.62 per hour
Effective	May 1, 2018	$0.63 per hour

Pension Fund

The employee and the Contractor shall contribute the amounts set out below to the Administrator of the Sheet Metal Workers and Roofers Pension Fund. The employee's contribution shall be deducted from the employee's regular pay cheque. Contributions shall apply to all hours worked.

The Contractor's contribution shall be:

	May 1, 2016	May 1, 2017	May 1, 2018
Journeyman A	$2.40	$2.40	$2.40
Journeyman B	$2.40	$2.40	$2.40
SDC Skilled Tradesperson 2	$2.04	$2.04	$2.04
SDC Skilled Tradesperson 1	$1.92	$1.92	$1.92
SDC Gen. Const Labourer 2	$1.80	$1.80	$1.80
SDC Gen. Const Labourer 1	$1.61	$1.61	$1.61
SDC Const. Labourer Trainee2	$1.32	$1.32	$1.32
SDC Const. Labourer Trainee	$1.08	$1.08	$1.08

The Employee's contribution shall be:

May 1, 2016	May 1, 2017	May 1, 2018
$1.20	$1.20	$1.20

Payments and reporting forms for both of the above funds to be received by the Administrator (Local 511) not later than the 10th of the month following the month for which contributions are applicable.

Training Fund

The Employee and the Contractor shall contribute the amounts set out below to the Administrator of the Sheet Metal Workers and Roofers Industry Training Fund. The employee's contribution shall be deducted from the employee's regular pay cheque. Contributions shall apply to all hours worked.

The Contractor's contribution shall be: 15¢ per hour

The Employee's contribution shall be: 5¢ per hour

7. Benevolent Fund

The contractor shall deduct 2¢ per hour worked from the employee's wages and remit same to Local Union 511 Benevolent Fund. This fund shall be used to provide:

a) Assistance to members in paying Health and Welfare premiums where required;

b) Up grading courses for tradesmen;

c) Other benevolent services for and on behalf of members.

This fund shall not be disbursed for purposes that can work against the better interest of the Contractors.

All benevolent contributions are to be forwarded to the office of the Administrator, 438 Higgins Avenue, Winnipeg, Manitoba, R3A 1S5**,** prior to the 10th day of the calendar month following the period for which contributions are being reported. Combination Reporting Forms shall be provided to the Contractor by the Union.

8. Building Trades Council, Western Conference and Market Recovery Funds

The Contractor shall deduct thirty-one (31¢)* per hour worked (or any part thereof) from the employees' wages and remit same to the Sheet Metal Workers International Association, Local Union 511**,** 438 Higgins Avenue, Winnipeg, Manitoba, R3A 1S5.

* i.e. five cents (5¢) in respect of the B.T.C. Fund, one cent (1¢) in respect of the W.C. Fund and twenty-five cents (25¢) in respect of the Market Recovery Fund.

These monies will be remitted to the fund by the 10th day of the month following that which contributions cover, in the manner set out in the Unified Remittance Form.

9. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After twenty eight (28) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall

receive such payment pursuant to the provisions of Article 19.1.2.6.

10. Tools

Journeymen and Apprentices shall supply the ordinary hand tools of the trade. They shall be:

	Description
1	Pair straight snips
1	Pair tinner snips left hand
1	Pair tinner snips right hand
1	Tinners hammer
1	Pair vice grips standard jaw
1	Pair vice grips wide jaw
1	Flat screwdriver
1	25’ tape measure
1	4’ level
1	Crescent wrench 10”

11. Escalation and Reference

11.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Association of Sheet Metal, Air, Rail and Transportation Worker (SMART), Local Union 511 (Sheeters, Deckers and Cladders Section) and the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

11.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Height pay including that associated with swing stage work.

11.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 11.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 11.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 11.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 11.2.3:

   i) Building fund;

   ii) Trade improvement plans including educational and apprenticeship funds;

   iii) Industrial promotion funds.

m) The Plans set out in Section 7 and 8 of this Appendix, subject to the limitation that these Plans will be solely funded by the employee and all required contributions shall be collected at the source as a payroll deduction;

n) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

o) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 11. 2.4).

11.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

11.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

11.2.3 The Contractor's contribution to any of the plans referred to in Section 11.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

11.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

11.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be

introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

11.4 The provisions of 11.1 and 11.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 11 – Boilermakers

INTERNATIONAL BROTHERHOOD OF BOILERMAKERS,
IRON SHIPBUILDERS, BLACKSMITHS, FORGERS AND HELPERS

Local Union 555

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half of the straight time rate for the first two (2) hours and double time for hours worked thereafter in any one (1) day.

On Saturdays, except as provided in Article 15.2, Sundays and on Holidays, as set out in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may a regular shift on that job.

For the purpose of defining the shifts, the first shift shall be the day shift. The second shift shall be the afternoon shift and shall follow the first shift. The third shift shall be the night shift and shall follow the second shift.

An employee working on the second or third shift shall be paid the shift premium set out below, and such premium shall apply to all hours worked at the straight time rate on such shifts:

$3.75 per hour

Shift premium shall not apply on overtime hours.

The starting and quitting time of all shift work shall be decided by the Contractor.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

3. Rest Period

If an employee is required to return to work before an eight (8) hour break occurs, the employee will be paid at the applicable overtime rates until such time as an eight (8) hour break occurs.

4. Wages

Wage rates shall be as follows:

Classification	Effective May 5, 2019	Effective June 1, 2019*	Effective May 3, 2020**	Effective May 2, 2021**
General Foreman	46.92	46.83	47.62	47.62
Foreman	43.17	43.08	43.88	43.88
Assistant Foreman	39.42	39.33	40.11	40.11
Journeyman	37.92	37.83	38.61	38.61
3rd Year Apprentice	34.05	33.95	34.75	34.75
2nd Year Apprentice	28.21	28.11	28.94	28.94
1st Year Apprentice	22.39	22.30	23.14	23.14
Helper	N/A***	N/A***	N/A***	N/A***

** The rates 2021 will be subject to a Canadian CPI review in 2021.
*** No rates identified for this classification. If you employ a Boilermakers Helper, please contact your HPMA representative

5. Apprentices

The number of Apprentices that may be employed on the job shall not exceed the ratio of one (1) Apprentice to four (4) Journeymen, however, there may be situations where this ratio is impractical in which case the Association and Council must consult and come to a mutual agreement.

Apprentices shall not progress to Journeyman wage rate until they have successfully completed their Certificate of Qualification (CFQ) or Boilermaker Red Seal where applicable.

Apprentices shall be given the support of Journeymen and Foremen and under the guidance of the Journeyman, Apprentices may perform rigging, fitting, welding, layout work or any other part of the trade of a Journeyman Boilermaker.

Apprentice intakes will consist of up to twenty-five percent (25%) Helmets to Hardhats (H2H) candidates if available.

6. Welding Tests

Any Welder possessing a current Provincial Government welding certificate of qualification, who is required to take a Provincial Government test shall be paid for the time required to take the test including materials and inspector fees. Should a secondary test be required by the Contractor, the employee shall be paid for the time required to take such a test.

Any Welder possessing a current Provincial Government welding certificate of qualification who is instructed to proceed to take tests necessitating his having to travel outside the city limits of the city in which he resides shall be reimbursed in an amount necessary to compensate him for travelling time and transportation expenses.

Welders passing a test will be furnished a copy of the test papers from the Contractor or party requiring a test within thirty (30) days, or upon completion of the job whichever is sooner, provided they are available at that time; otherwise the Contractor will provide a letter confirming the test and results.

When a Welder is required to perform a test of a type other than a standard Provincial test, the Contractor shall, on request, make available suitable material to allow a brief period of practice prior to taking the actual test.

When a Welder is to take an official Provincial test on which the issuance or reissuance of his certificate will depend, he shall not be required to do so under conditions which would unfairly affect his ability to perform the test.

For other tests, the Contractor may prescribe test conditions approximating, but not exceeding, conditions which may be encountered on the job.

Welders required to take any test shall be allowed to complete the test.

7. Vacation and Vacation Pay

Each employee shall receive six percent (6%) of his gross wages as vacation allowance. Gross wages shall include straight time and overtime earnings; shift premium; reporting time as per Article 16; and all travel time applicable under this Agreement. The vacation allowance shall be paid on regular paydays.

8. Payment in Lieu of Holidays

Holiday allowances shall be credited to the employee's account at four percent and one half (4.5%) of his gross wages. Gross wages shall include straight time and overtime earnings; shift premium; reporting time as per Article 16; and all travel time applicable under this Agreement. The Holiday allowance shall be paid on regular paydays.

9. Health and Welfare Fund

The Contractor shall contribute the amounts set out below to the Boilermakers National Health and Welfare Fund of Canada for all hours worked, and hours paid for travel and reporting time, by all employees covered by this Appendix on the following basis:

The Contractor's contribution shall be:

Effective June 1, 2019 $3.35 per hour for hours paid at straight time
*Effective date for payroll adjustments will be November 1, 2019.

Effective May 3, 2020 $3.45 per hour for hours paid at straight time

Contributions payable on overtime hours worked shall be calculated by multiplying the above contribution rate by a factor of 1.5 or 2.0 to correspond to the overtime rate being paid to the employee.

10. Pension

The Contractor shall contribute the amounts set out below to the Boilermakers' National Pension Fund for all hours worked, and hours paid for travel and reporting time, by all employees covered by this Appendix on the following basis.

The Contractor's contribution shall be:

Effective July 15, 2018 $5.25 per hour for hours paid at straight time
*Effective date for payroll adjustments will be October 8, 2018.

Contributions payable on overtime hours worked shall be calculated by multiplying the above contribution rate by a factor of 1.5 or 2.0 to correspond to the overtime rate being paid to the employee.

11. Trade Improvements (Apprenticeship Fund)

The Contractor shall contribute the amounts set out below to the Apprenticeship Fund for all hours earned, and hours paid for travel and reporting time, by all employees covered by this Appendix on the following basis:

Twenty cents per hour

12. Educational Training Fund

The Contractor shall contribute the amounts set out below for all hours earned and hours paid for travelling and reporting time, by all employees covered by this Appendix, to both Educational Training Funds on the following basis:

	Educational Training Fund #1	Educational Training Fund #2
June 1, 2019	$0.45/hour	$0.41/hour
May 3, 2020	$0.45/hour	$0.41/hour

13. National Apprenticeship and Educational Training Fund

The Contractor shall contribute the amounts set out below for all hours earned and hours paid for travelling and reporting time, by all employees covered by this Appendix, to the National Apprenticeship and Educational Training Fund on the following basis:

Effective July 15, 2018 $0.31 per hour for hours paid at straight time
*Effective date for payroll adjustments will be October 8, 2018.

14. Union Promotion Fund

The Contractor shall contribute the amounts set out below to the Union Promotion Fund for all hours earned, including hours paid for travel and reporting time, by all employees covered by this Appendix on the following basis:

Ten cents per hour

Contributions to this Fund shall be remitted to the Winnipeg office of Local Union 555.

Except as outlined below, provisions of the Fund shall not be subject to any further changes except by mutual agreement of the parties.
In the event the Fund is deleted from the Agreement being used for reference purposes, it shall be deleted from the Appendix No. 11 effective on the date of deletion or conversion, as the case may be.

15. Industrial Promotion Fund

Employees shall contribute the amounts set out below to the Industrial Promotion Fund, "Helmets to Hardhats (H2H)" for all hours worked, by all employees covered by this Appendix on the following basis:

One cent per hour

Contributions to this Fund shall be remitted to the Winnipeg office of Local Union 555.

16. Submission of Contributions to Funds

The Local Union will assist the Contractor in obtaining reporting forms for the various Funds set out above. The forms will indicate the information required and, where such information is not otherwise provided, the location to which contributions should be forwarded. Submissions must be made by the 15th of the month following the month in which contributions are payable.

17. Safety Clothing

When required by the work to be performed, the Contractor shall supply to the employee at no cost the following; hard hats, sweat bands, liners, welding and burning goggles, non-prescription safety glasses, appropriate welding gloves, welding helmets, appropriate welding leathers (i.e. jackets, capes and/or sleeves) and leatherfaced gloves (unless special processes dictate otherwise).

In addition to the above, Welders capes shall be kept available for temporary issue to Welders when engaged on work requiring additional protection, such as but not limited to arc-air gouging and overhead welding.

An employee shall not be charged for the above items provided they are returned in reasonable condition, or if lost or damaged for reasons beyond the employee's control, such loss or damage is reported immediately.

18. Personal Effects Insurance

The Contractor shall indemnify an employee to a maximum of four hundred dollars ($400.00) for personal effects, which are damaged or destroyed by fire on the job site.

19. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 20.2.1 for this Appendix shall be:

- after thirty-five (35)calendar days.

20. Escalation and Reference

20.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time (for application in Manitoba) by the International Brotherhood of Boilermakers, Iron Shipbuilders, Blacksmiths, Forgers and Helpers, and the Boilermakers Contractors' Association.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

20.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

(a) definitions and qualificational requirements for applicable classifications.

(b) ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

(c) height pay including that associated with swing stage work.

20.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

(a) overtime payments (subject to the restrictions set out in Section 20.3)

(b) shift premium but excluding any shift premium applicable to overtime hours.

(c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: 'the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee'.

(d) pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 20.2.1).

(e) registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 20.2.2).

(f) callout provisions.

(g) rest provisions between shifts

(h) personal effects insurance provisions

(i) provisions governing welding and other special trade related tests

(j) safety clothing

(k) tool lists and provisions governing loss of such tools on the Project.

(l) the following trusteed plans, each of which shall be subject to the restrictions set out in Section 20.2.3:
  (i) building fund
  (ii) trade improvement plans including educational and apprenticeship funds
  (iii) industrial promotion funds.

(m) the time period between Isolation Leaves (subject to the restrictions of Article 20.2.1.3).

(n) travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 20.2.4).

20.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

20.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

The aforementioned limitation shall not apply to a pension or health and welfare plan in effect in this Appendix on January 1, 1989 and in which higher employer contribution levels were required in respect of overtime hours compared to straight time hours. This exemption shall remain in effect provided required employer contributions to such plans do not change to a single contribution rate relative to straight time and overtime hours.

20.2.3 The Contractor's contribution to any of the plans referred to in Section 20.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

20.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 20.1.2.5.1, 20.1.2.5.2 and 20.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 20.1.2.6.

20.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

20.4 The provisions of 20.1 and 20.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 12 – Iron Workers

THE INTERNATIONAL ASSOCIATION OF BRIDGE
STRUCTURAL AND ORNAMENTAL IRON WORKERS
Local Union 728

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days, Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift on Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for any hours worked thereafter on that day.

On Saturdays, except as provided in Article 15.2, Sundays and Holidays, as specified in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on a particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A shift premium of $3.30/hr. will be paid for each straight time hour of a regular single shift that is worked between 10:00 PM and 6:00 AM.

An employee assigned to any second or third shift shall be paid a shift premium for each hour worked at the straight time rate on such shifts as follows:

Effective May 1, 2019 - $3.00

Shift premium shall not apply to any overtime hours worked.

The foregoing premiums shall not apply to shifts worked on Saturdays, Sundays and Holidays in which overtime rates are in effect.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the Contractor.

3. Callouts

An employee called out for work after he has completed his regular shift and has gone home shall be given not less than four (4) hours work, or if the work is not available, shall be paid for four (4) hours at the applicable overtime rate.

4. Rest Period

When an employee has completed his shift and is recalled to a job without having had a break of at least eight (8) hours, he shall be paid at a rate of double time until such time as a break of eight (8) hours occurs.

5. Wages

Wage rates shall be as follows:

(a) Journeymen, Structural Ironworkers and Ironworker Welders

May 1, 2019	May 1, 2020	May 1, 2021
$39.90	$39.90	$39.90

(b) Foremen

When the Contractor appoints a Foreman, he shall be paid not less than, effective May 1, 2010, $5.00 per hour, above the rate for a Journeyman Structural Iron Worker for up to a 3-man crew, and $7.50 per hour for a 4-man crew or more. The Contractor shall have discretion to appoint Foremen to suit the particular circumstances of the job. However, when ten (10) employees covered by this Appendix are employed and a Foreman has not been appointed, the Contractor shall appoint a Foreman.

(c) General Foreman

At the Employers discretion, should they choose to employ a General Foreman, they will be paid not less than the base wage rate for Journeyman Ironworker plus double the extra rate for Foremen

(d) Apprentices

At intervals of 1800 hours, including hours worked and in-school training hours, each Apprentice's rate will be reviewed by the Erection Foreman/Superintendent and the Apprentice will be given increases, if his ability warrants, on the following basis:

APPRENTICES		May 1, 2019	May 1, 2020	May 1, 2021
5400 or more hours	100%	$39.90	$39.90	$39.90
Level 3 Apprentice (3600-5399 hours)	85%	$33.92	$33.92	$33.92
Level 2 Apprentice (1800-3599 hours)	70%	$27.93	$27.93	$27.93
Level 1 Apprentice (0-1799 hours)	60%	$23.94	$23.94	$23.94

Apprentice Ironworkers will receive a pro-rated amount of the Journeyman Employer Pension contribution for each year of this agreement based on his percentage to Journeyman rate.

The Contractor will employ a minimum of one (1) Apprentice for every four (4) Journeymen where practical and available. The ratio of Apprentices to Journeymen may be adjusted higher by mutual agreement between the Contractor and the Union.

6. Trade Qualifications

a) Journeyman

A journeyman structural ironworker must be experienced in structural steel erection of all kinds including buildings, bridges, tanks, towers etc., have a thorough working knowledge of all erection tools and equipment used in the trade and be able to perform the necessary work operations in a safe and workmanlike manner, including:

i) Assemble and reeve erecting cranes, travelers, guy and stiff leg derricks and move travelers, all under the general direction of his supervisor;

ii) Hook on, climb, connect and signal the hoisting engineer;

iii) Erect scaffolds, fit and bolt joints in proper fashion preparatory to riveting and perform riveting operations;

iv) Carry out all the miscellaneous tasks which arise on erection jobs, such as tying knots, burning, drilling and reaming, etc.

A journeyman ironworker welder must be able to qualify under Class 'O' of the current Canadian Standards Association Code. He must be able to adjust his welding machine, have a thorough working knowledge of all tools and equipment used in the trade, and be able to perform, in a safe and workmanlike manner, operations such as:

i) Climbing;

ii) Erection of scaffolding for welding;

iii) Fit-up work for welding;

iv) Understanding welding symbols and procedures;

v) Burning and chipping.

7. Vacation Pay and Pay in Lieu of Holidays

Each employee shall receive an amount equal to ten and a half percent (10.5%) of his gross earnings of which four and a half percent (4.5%) shall be in lieu of paid Statutory Holidays. Each employee shall be entitled to four (4) weeks annual vacation to be taken at a time mutually agreed upon by the Contractor and the employee.

Vacation pay allowances shall be paid to employees on their regular pay day. Such payments shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

8. Trust Funds

a) Health and Welfare

The Contractor shall contribute to the Iron Workers Central Welfare Trust Fund (Manitoba) the amounts set out below for each hour worked by each employee covered by this Appendix:

Effective	May 1, 2019	$1.86
Effective	May 1, 2020	$1.96

b) Pension Plan

The Contractor shall contribute to the Iron Workers Central Pension Fund (Manitoba) the amounts set out below for each hour worked by each employee covered by this Appendix:

	May 1, 2019	May 1, 2020	May 1, 2021
JOURNEYMAN	$7.05	$7.05	$7.05
Level 3 Apprentice	$5.29*	$5.29	$5.29
Level 2 Apprentice	$4.23*	$4.23	$4.23
Level 1 Apprentice	$3.53*	$3.53	$3.53

*As this reduction in contributions is effective May 1, 2019, we will not recover any overpayments to that date. The reduction will take place on a go forward date only.

Note: The Contractor's contributions to the Iron Workers Central Pension Fund (Manitoba) will be prorated for Apprentice Ironworkers in accordance with the percentage to Journeyman wage rate as outlined in Section 5(c) of this Appendix. Contributions to the Iron Workers Central Welfare Fund (Manitoba) and the Iron Workers Central Pension Fund (Manitoba) shall each be forwarded by the Contractor by the 15th day of the month following the month in which the hours were worked.

9. Trade Improvement and Apprenticeship Fund

The Contractor shall contribute the amount set out below to the Iron Workers Trade Improvement Fund (Manitoba). Contributions shall apply to all hours worked by all employees covered by this Appendix:

Effective	May 1, 2019	40 cents per hour
Effective	May 1, 2020	30 cents per hour

The Contractor shall forward such contributions by the 15th day of the month following the month in which the hours were worked.

10. Travel Time

Where the distance between the marshalling point and the work site exceeds twenty (20) kilometers, any time spent travelling beyond this twenty (20) kilometers radius at the start end of the shift shall be paid at the employee's straight time rate.

11. Safety Clothing

The Contractor will supply rod pouches, welding helmets, safety glasses, welders gloves or mitts, whichever is appropriate, and all safety equipment as directed by the Manitoba Occupational Safety Act, when ironworkers are required to perform welding and burning work.

The cost of any equipment listed above which is not returned on termination of employment will be collected from the employee by a payroll deduction.

12. Clothing Insurance and Protective Clothing

a) The Contractor will reimburse the employee for all reasonable losses associated with fire or theft (in the job trailer and/or the gang box) of the employee's working clothes and working equipment (i.e. rigging belts, crescent wrenches, tapes, bullpins, 1 ¼ inch spud wrenches) at the work site, provided appropriate receipts are provided.

The Contractor will reimburse the employee for all reasonable losses associated with fire of the employee's belongings and working equipment at the camp site, provided appropriate receipts are provided, to a one time employee maximum of $500.00. To qualify for the $500.00 coverage, the employee must submit a list of his personal effects, prior to becoming a resident of the camp, to the Contractor;

b) On abnormally dirty maintenance, revamp and repair work, in which the employee's clothes may be abnormally or permanently damaged, the Contractor shall supply and maintain the necessary protective clothing at no cost to the employee.

c) Where and when necessary the Employer shall supply rain gear, rubber footwear or any other safety footwear that is required other than the regular CSA approved (Green Triangle) Safety Boots which the employee is required to supply. All supplied items will be returned to the Employer at the conclusion of the job in question and any non-returned items will be deducted from the employees final pay cheque

13. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

14. Escalation and Reference

14.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Association of Bridge, Structural and Ornamental Iron Workers, Local 728 and the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

14.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualification requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Ratios stipulating when a foreman, lead-hand, chargehand, or pusher is to be appointed; however, if such a ratio is less than ten (10) to one (1) (i.e., the number of persons being supervised relative to the supervisor) when incorporating this provision in this Appendix, the ratio shall be ten (10) to one (1).

14.1.2 The appointment of General Foreman shall be at the sole discretion of the Contractor.

14.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the Local and the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 14.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: “the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee”;

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 14.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to

the restrictions set out in Section 14.2.2);

f) Callout provisions;

g) Rest provisions between shift;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 14.2.3:

i) Building fund;

ii) Trade improvement plans including educational and apprenticeship funds;

iii) Industrial promotion funds.

m) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

n) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 14.2.4).

14.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

14.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours. The aforementioned limitation shall not apply to a pension or health and welfare plan in effect in this Appendix on January 1, 1989 and in which higher employer contribution levels were required in respect of overtime hours compared to straight time hours. This exemption shall remain in effect provided required employer contributions to such plans do not

change to a single contribution rate relative to straight time and overtime hours.

14.2.3 The Contractor's contribution to any of the plans referred to in Section 14.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

14.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

14.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

14.4 The provisions of 14.1 and 14.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 12a - Rodmen

THE INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL AND ORNAMENTAL IRONWORKERS

Local 728 (Rodmen)

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for hours worked thereafter in any one (1) day.

On Saturdays, except as provided in Article 15.2, Sundays and on Holidays, as set out in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on a particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A shift premium of $3.30/hr. will be paid for each straight time hour of a regular single shift that is worked between 10:00 PM and 6:00 AM.

An employee assigned to any second or third shift shall be paid a shift premium for each hour worked at the straight time rate on such shifts as follows:

Effective May 1, 2019 - $3.00

Shift premium shall not apply to any overtime hours worked.

The foregoing premiums shall not apply to shifts worked on Saturdays, Sundays and Holidays in which overtime rates are in effect.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

The starting and quitting time of all shift work will be decided by the Contractor.

3. Callouts

An employee called out for work after he has completed his regular shift and has gone home shall be given not less than four (4) hours work, or if the work is not available shall be paid for four (4) hours at the applicable overtime rate.

However, the Contractor may call out employees to unload or to do such work as may be necessary to protect property during inclement weather. If this occurs, the employee shall be paid not less than two (2) hours at the applicable rate of pay for each time the employee is called out.

4. Rest Period

When an employee completes his regular shift and is recalled to a job without having had at least eight (8) hours rest time, he shall be paid at the rate of double time until such time as an eight (8) hour rest time occurs.

5. Wages

Wage rates shall be as follows:

a) Journeymen Reinforcing Rodmen

	May 1, 2019	May 1, 2020	May 1, 2021
Journeyman	$36.21	$36.21	$36.21

b) Foremen

When the Contractor appoints a Journeyman as a Foreman, he will be paid not less than $5.00 per hour more than the rate for Journeymen for up to a 3 man crew, and not less than $7.50 per hour more than the rate for Journeymen for a 4 man crew or more.

c) General Foreman

At the Employers discretion, should they chose to employ a General Foreman, they will be paid not less than the base wage rate for Journeyman Ironworker plus double the extra rate for Foremen

d) Apprentices

At intervals of 1800 hours which will include hours worked and in school training hours, each Apprentice's rate will be reviewed the Contractor and the Union, and the Apprentice will be given increases, if his ability warrants, on the following basis:

Apprentices		May 1, 2019	May 1, 2020	May 1, 2021
5400 or more hours	100%	$36.21	$36.21	$36.21
Level 3 Apprentice (3500 – 5399 hours)	85%	$30.78	$30.78	$30.78
Level 2 Apprentice (1800 – 3599 hours)	75%	$27.16	$27.16	$27.16
Level 1 Apprentice (0 – 1799 hours)	65%	$23.54	$23.54	$23.54

The Contractor will employ a minimum of one (1) Apprentice for every four (4) Journeymen where practical and available. The ratio of Apprentices to Journeymen may be adjusted higher by mutual agreement between the Contractor and the Union.

The Union will provide apprentices with log books. Following hiring, an apprentice will submit his log book to the Contractor and the Contractor will record therein, in the space allocated for such purposes, the type and extent of trade related training the apprentice has received while in the employ of the Contractor.

6. Trade Qualifications

Journeyman Rodman:

A Journeyman Rodman must be experienced in the fabricating, placing and tying of reinforcing steel including the placing of reinforcing steel in all types of reinforced concrete structures. He must have a thorough working knowledge of tools and equipment used in the trade as laid down in the CRSI Recommended Practice for Placing Reinforcing Bars, l959. Journeymen must be able to perform the following operations in a safe and workmanlike manner:

a) Sling, climb and signal the hoist operator;

b) Erect scaffolding or tie the necessary knots and sling scaffolds when necessary;

c) Place reinforcing steel in accordance with recognized ACI Standards under the direction of his supervisor;

d) Read and interpret bar lists, placing drawings, cutting sheets;

e) Operate bending and cutting machines under direction of his supervisor;

f) Work with a hickey;

g) Measure off work under direction of his supervisor.

All Employees:

All employees are required to furnish the following tools: Pliers, Wire Reel, Wire cutters, Tape measure/ruler, and appropriate rigging belt to carry tools. Such tools, when broken on the job, not through employee negligence, shall be replaced by the Contractor provided the broken tool is immediately provided to the Contractor at that time.

An employee may have deducted from his outstanding wages the cost of tools and equipment for which he signed yet failed to return to the Contractor.

7. Vacation Pay and Pay in Lieu of Holidays

Each employee shall receive an amount equal to ten and a half percent (10.5%) of his gross earnings of which four and a half percent (4.5%) shall be in lieu of paid Statutory Holidays. Each employee shall be entitled to four (4) weeks annual vacation to be taken at a time mutually agreed upon by the Contractor and the employee.

Vacation pay allowances shall be paid to employees on their regular pay day. Such payments shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

8. Trust Funds

a) Health and Welfare

The Contractor shall contribute to the Ironworkers Central Welfare Trust Fund (Manitoba) the amounts set out below for each hour worked by each employee covered by this Appendix:

Effective	May 1, 2019	$1.86
Effective	May 1, 2020	$1.96

b) Pension

The Contractor shall contribute to the Ironworkers Central Pension Fund (Manitoba) the amounts set out below for each hour worked by each employee covered by this Appendix:

		May 1, 2019	May1, 2020	May 1, 2021
Journeyman		$6.00	$6.00	$6.00
Apprentice Level 3		$4.59	$4.59	$4.59
Apprentice Level 2		$4.05	$4.05	$4.05
Apprentice Level 1		$3.51	$3.51	$3.51

*As this reduction in contributions is effective May 1, 2019, we will not recover any overpayments to that date. The reduction will take place on a go forward date only.

Contributions to each of the above named funds shall be submitted by the Contractor by the 15th of the month following the month in which the hours were worked.

9. Trade Improvement and Apprenticeship Fund

The Contractor shall contribute the amount set out below to the Ironworkers Trade Improvement Fund (Manitoba). Contributions shall apply to all hours worked by all employees covered by this Appendix:

Effective	May 1, 2019	40 cents per hour
Effective	May 1, 2020	30 cents per hour

The Contractor shall forward such contributions by the 15th day of the month following the month in which the hours were worked.

10. Personal Effects Insurance

The Contractor will reimburse the employee for all reasonable losses associated with fire or theft (in the job trailer and/or the gang box) of the employee's working clothes and working equipment (i.e. belts, spool reels, tape measure, wire cutters, and cutting pliers) at the work site, provided appropriate receipts are provided.

The Contractor will reimburse the employee for all reasonable losses associated with fire of the employee's belongings and working equipment at the camp site, provided appropriate receipts are provided, to a one time employee maximum of $500.00. To qualify for the $500.00 coverage, the employee must submit a list of his personal effects, prior to becoming a resident of the camp, to the Contractor.

11. Travel Time

Where the distance between the marshalling point and the work site exceeds twenty (20) kilometres, any time spent travelling beyond the twenty (20) kilometre radius at the start and end of a shift shall be paid at the employee's straight time rate.

12. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After twenty-nine (29) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

13. Escalation and Reference

13.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Association of Bridge, Structural and Ornamental Ironworkers, Local Union No. 728 and the Ironworkers - Reinforcing Contractors Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, lead-hand, charge-hand, pusher, journeyman, apprentices, helpers and trainees.

13.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

13.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of

employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 13.3;

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays;

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 13.2.1);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The jointly trusteed Trade Improvement and Apprenticeship Fund set out in Section 9 of this Appendix (subject to the restrictions set out in Section 13.2.2);

m) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

n) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 13.2.3).

13.2.1 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the

required contribution rate for Contractors in respect of straight time hours.

13.2.2 The Contractor's contribution to the plan referred to in Section 13.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

13.2.3 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

13.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

13.4 The provisions of 12.1 and 12.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 13 – Electrical Workers

THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS

Local Union 2085

BURNTWOOD/NELSON AGREEMENT

Wage Rates and Conditions for Electrician's Work

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for all hours worked thereafter.

On Saturdays, except as provided in Article 15.2, Sundays and Holidays, as specified in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

Shift work shall be defined as scheduled work assignments lasting two (2) or more days, and in which the working hours of the shift are, in whole or in part, outside of the period from 7:00 a.m. to 6:00 p.m., Monday to Friday inclusive.

An employee shall receive 1.10 times his standard hourly rate for all hours worked at straight time. The shift differential shall not apply on overtime hours.

The starting and quitting time of all shift work shall be decided by the Contractor.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

3. Wages, Definitions and Qualificational Requirements

3.1 Wages

Wage rates shall be as follows:

	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Journeyperson	$40.90	$42.33	$43.81	$45.34
Apprentices				
1st Year	$16.36	$16.93	$17.52	$18.14
2nd Year	$20.45	$21.17	$21.91	$22.67
3rd Year	$26.59	$27.51	$28.48	$29.47
4th Year	$32.72	$33.86	$35.05	$36.27

3.2 Definitions and Qualificational Requirements

** See Letter of Agreement No. 66

Journeyman Electrician: An electrical worker who has four (4) or more years experience in the trade and has a current class H Journeyman Electrician's licence under the Province of Manitoba.

Registered Apprentices: Apprentices shall be registered in the Province of Manitoba and work and be paid in accordance with the Manitoba Apprenticeship and Tradesmen's Qualifications Act and this Agreement.

The number of apprentices who may be employed by a Contractor in this trade shall not exceed the following:

(i) A Contractor who is engaged in or carries on a business of electrical construction and who employs one (1) working Journeyman or is himself a working Journeyman, may employ one (1) Apprentice, and one (1) additional Apprentice for every two (2) additional working Journeymen employed. Notwithstanding the above, a 1:1 Journeyman to Apprentice ratio may be utilized if mutually agreed to between the Contractor and Local 2085. Requests for a 1:1 ratio shall not be unreasonably denied.

Foreman: When the Contractor appoints a foreman, he shall be a Journeyman Electrician and a Member of Local 2085. The Contractor shall have discretion to appoint Foremen to suit the particular circumstances of the job. However, for every ten (10) employees so employed, the Contractor shall appoint a Foreman. A Foreman shall receive between 105% to 120% of the Journeyman rate, in the discretion of the Contractor.

General Foreman: When the Contractor appoints a General Foreman, he shall be Journeyman Electrician and a member of Local 2085. The Contractor shall appoint a General Forman at a minimum crew size of 45, and shall receive between 120% and 135% of the Journeyman rate, in the discretion of the Contractor.

Cable Splicer: A Journeyman Electrician who has been qualified by training and admitted to the status of Journeyman Cable Splicer by the Union. Cable Splicers shall undertake work in connection with lead covered cables, and other high voltage cables 2300 volts and higher, involving preparation, splicing and termination.

Journeyman Electrician - Welder: When a Contractor requests an employee to perform welding, he shall be a member of the I.B.E.W., Local 2085 who has completed a recognized plate welders course recognized by the Union and received a certificate of proficiency.

If the Contractor requires any additional examining or testing, or special certificate, the employee's time required for testing and cost of the examination will be borne by the Contractor. Should an employee's special certificate expire while he is in the employ of the Contractor, the cost of the required retest and the time required to take same (up to a maximum of three (3) hours) shall be paid by the Contractor, provided the employee has worked for that Contractor for a minimum of thirty (30) days prior to the retesting. If the employee quits within thirty (30) days of the retesting he will be required to repay the total cost.

4. Vacation and Vacation Pay

Each employee shall be entitled to four (4) weeks annual vacation to be taken at a time mutually agreed upon by the Contractor and the employee.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of gross earnings.

Vacation pay shall be paid every pay period or upon termination of employment, whichever is sooner.

5. Payment In Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays four and a half percent (4.5%) of his gross earnings. Gross earnings shall be exclusive of subsistence and transportation expenses. Such allowance shall be paid to an employee on his regular pay day or upon termination of employment, whichever is the sooner. If a Holiday falls on a Saturday or Sunday which is a non-working day, the closest following work day will be observed. However, this provision shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

6. Trust Funds

6.1 Health and Welfare

The contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Local 2085 Health and Welfare Fund for all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

The Employer and Employee contribution shall be:

	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Employer	$1.00/hr	$1.00/hr	$1.00/hr	$1.00/hr
Employee	$0.65/hr	$0.65/hr	$0.65/hr	$0.65/hr

6.2 Pension Fund

The Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Local 2085 Pension Fund for all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

Employer and Journeyman Employee Contributions:

	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Employer	$4.50/hr	$4.50/hr	$4.50/hr	$4.50/hr
Journeyman Employee	$1.00/hr	$1.25/hr	$1.50/hr	$1.75/hr

Effective May 1, 2007, and for the duration of this agreement, the Contractor and each **apprentice** shall respectively contribute the amounts set out below to the Local 2085 Pension Fund for all hours worked. Employee contributions shall be collected at the source as a payroll deduction:

	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
1st Year Apprentice				
Contractor	$1.80/hr	$1.80/hr	$1.80/hr	$1.80/hr
Employee	$0.40/hr	$0.50/hr	$0.60/hr	$0.70/hr
2nd Year Apprentice				
Contractor	$2.25/hr	$2.25/hr	$2.25/hr	$2.25/hr
Employee	$0.50/hr	$0.63/hr	$0.75/hr	$0.88/hr
3rd Year Apprentice				
Contractor	$2.93/hr	$2.93/hr	$2.93/hr	$2.93/hr
Employee	$0.65/hr	$0.82/hr	$0.98/hr	$1.14/hr
4th Year Apprentice				
Contractor	$3.60/hr	$3.60/hr	$3.60/hr	$3.60/hr
Employee	$0.80/hr	$1.00/hr	$1.20/hr	$1.40/hr

Group Registered Retirement Savings Plan

The employee shall contribute the amounts set out below to the Local 2085 Group Registered Retirement Savings Plan for all hours worked by Journeymen Electricians. Contributions shall be collected at the source as a payroll deduction.

$1.25 per hour

6.4 Industry Education Trust Fund

The Contractor shall contribute the amounts set out below to the Electrical Industry Education Trust Fund. Contributions shall apply to all hours worked by each employee covered by this Appendix:

25 cents per hour

7. Submission of Trust Funds

Payment and reporting forms shall be forwarded to the Administrator not later than the 10th of the month following the month for which contributions are being made.

8. Height Provision

Employees performing work at elevations of forty-five (45) feet (13.72 metres) or more above the immediate surroundings or when working over water on head gates, bridges and spillways, where there are no rigid platforms or scaffolds, shall be paid at the prevailing rate plus one-half times the regular rate. This shall include work performed in or above any openings of twenty-four (24) inches (60 cm) or larger at this height.

All rigid platforms, scaffolds and accesses shall meet Workplace Health and Safety Regulations. Any mobile lifts (except for scissor lifts with outriggers) shall not be considered rigid platform lifts.

Where height pay is required, there shall be a minimum of one (1) hour.

9. Callout

An employee who is called out to perform work after completing his regular shift shall be paid a minimum of two (2) hours at the prevailing overtime rate.

10. Rest Period

Employees must take a minimum rest period of eight (8) hours between shifts. Where employees are specifically requested to return to work before the expiration of eight (8) hours, all work performed shall be paid for at the applicable overtime rate, and such overtime rates shall continue for all work performed until a full eight (8) hour rest period has been observed.

11. Travel Time

Where the distance between the marshalling point and the work site exceeds sixteen (16) kilometres, any time spent travelling beyond the sixteen (16) kilometres shall be paid at the straight time rate.

12. Medical Payment

When an employee is required by the Contractor to take a medical examination he shall be reimbursed four (4) hours pay at the regular rate.

13. Personal Effects Insurance

When an employee is required to reside in a construction camp the cost for insurance against loss of his personal effects by fire, to a maximum of two thousand dollars ($2000.00) will be reimbursed on presentation of a paid premium receipt.

14. Safety Clothing

Protective clothing and safety equipment including safety hat, safety toe rubber boots, welding jackets and gloves, safety goggles, masks etc. are to be supplied at no cost to the employee.

If the Contractor requires the employees to work in the rain, wet weather clothing will be supplied at no cost to the employee.

In areas where acids, chemicals, excessive grease or dust prevail, protective clothing shall be supplied at no cost to the employee.

The employee must accept reasonable responsibility for safety equipment issued by the Contractor and must report the loss, or damage of any of the items so issued to the Contractor.

15. Safety Provisions

All work on energized circuits shall be as per the Workplace Safety and Health Act.

16. Tools

The following tools shall be supplied by the employee:

1 Hammer	1 Tool Box
1 9-inch Level	1 Hack Saw Frame
3 Blade screw Drivers	1 (8 inch) Diagonal Cutters
1 Centre Punch	3 Robertson Screw Drivers
1 10-inch water pump pliers	1 Tool Pouch
1 8-inch Linesman Type Pliers	1 Knife
1 Needle Nose Pliers	

1 (1 inch by 16) foot metric/standard Steel Tape

* 1 Current Code Book	* 1 set wrenches Combination 1/4" – 3/4 “
* 1 Voltage Tester - 110-550 Volts	* 1 nut driver set
* 1 Set Allen Wrenches - up to 1/2-inch size	* 1 Chalk Line
* 1 Stubby Screw Driver set	* 1 drywall saw
* 1 flashlight ‘AA’ (batteries supplied by Contractor)	
* 1 small wire strippers	* 1 12” combination square
* 1 Philips Screwdriver	* 1 Tap Wrench Handle
* 1 Tin Snips	

*Except first year Apprentices.

17. Loss of Tools

An Electrician's tools are his means of livelihood and the workers shall keep same in good condition at all times. Any of the tools listed under the heading "Tools" that are lost by theft resulting from breaking or entering or destroyed by fire will be replaced by the Contractor provided the tools are stored in a properly secured place designated by the Contractor.

The employee must accept reasonable responsibility for the tools furnished by the Contractor and will be given sufficient time to put these tools in their designated place. He must report the breakage or loss of any of these tools immediately to his supervisor. An employee found misusing company tools may be held responsible.

18. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- after thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

19. Escalation and Reference

19.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Brotherhood of Electrical Workers, Local Union 2085 and the Electrical Contractors Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

19.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

(a) definitions and qualificational requirements for applicable classifications.

(b) ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

(c) ratios stipulating when a foreman, leadhand, chargehand, or pusher is to be appointed; however, if such a ratio is less than ten (10) to one (1) (i.e., the number of persons being supervised relative to the supervisor) when incorporating this provision in this Appendix, the ratio shall be ten (10) to one (1).

(d) height pay including that associated with swing stage work.

19.1.2 The appointment of General Foreman shall be at the sole discretion of the Contractor.

19.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

(a) overtime payments (subject to the restrictions set out in Section 19.3)

(b) shift premium but excluding any shift premium applicable to overtime hours.

(c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: 'the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee'.

(d) pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 19.2.1).

(e) registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 19.2.2).

(f) callout provisions.

(g) rest provisions between shifts

(h) personal effects insurance provisions

(i) provisions governing welding and other special trade related tests

(j) safety clothing

(k) tool lists and provisions governing loss of such tools on the Project.

(l) the following trusteed plans, each of which shall be subject to the restrictions set out in Section 19.2.3:

(i) building fund

(ii) trade improvement plans including educational and apprenticeship funds

(iii) industrial promotion funds.

(m) the time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3).

(n) travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 19.2.4).

19.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

19.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

19.2.3 The Contractor's contribution to any of the plans referred to in Section 19.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

19.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

19.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

19.4 The provisions of 19.1 and 19.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

19.2.3 The Contractor's contribution to any of the plans referred to in Section 19.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

19.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

19.4 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

19.5 The provisions of 19.1 and 19.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

Wage Rates and Conditions for Lineman's Work

At the request of either the Association or the Council, the Joint Appendix Review Committee will meet to establish wage rates and other conditions of employment for Linemen's work. If agreement cannot be reached, the procedure set out in Article 31 shall be followed

APPENDIX NO. 13a - IBEW

THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS

JOURNEYPERSON LINEMAN/CABLE SPLICER AND ASSOCIATED COLLECTOR LINE TRADES

Local Union 2085

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #29, for additional information regarding Appendix 13A

General Scope and Recognition

1. This Appendix shall only apply to Contracted on-site construction work associated with the installation of collector lines as defined under Article 2.1 of the Agreement

Wage Rates and Conditions for Electrician's Work

2. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for all hours worked thereafter.

On Saturdays, except as provided in Article 15.2, Sundays and Holidays, as specified in Article 17, double time shall be paid.

3. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

Shift work shall be defined as scheduled work assignments lasting two (2) or more days, and in which the working hours of the shift are, in whole or in part, outside of the period from 7:00 a.m. to 6:00 p.m., Monday to Friday inclusive.

An employee shall receive 1.10 times his standard hourly rate for all hours worked at straight time. The shift differential shall not apply on overtime hours.

The starting and quitting time of all shift work shall be decided by the Contractor.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

4. Wages, Definitions and Qualification Requirements

4.1 Wages

Classification	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Journeyperson Lineman	42.32	43.62	44.98	46.36
Journeyperson Cablesplicer	42.32	43.62	44.98	46.36
Apprentice				
4th year – 80%	$ 33.86	$ 34.90	$ 35.98	$ 37.09
3rd year – 65%	$ 27.51	$ 28.35	$ 29.24	$ 30.13
2nd year – 50%	$ 21.16	$ 21.81	$ 22.49	$ 23.18
1st year – 40%	$ 16.93	$ 17.45	$ 17.99	$ 18.54
Goundman I	$ 27.69	$ 28.54	$ 29.42	$ 30.33
Groundman II	$24.09	$ 24.49	$ 25.24	$ 26.02
Utilityman	$ 22.36	$ 23.05	$ 23.76	$ 24.02

4.2 Definitions and Qualification Requirements

a) Journeyman Lineman

A person who has worked for (3) or more years at line work, and who is capable of undertaking any work required to construct transmission lines on poles, towers and structures.

b) Apprentice Lineman

A person who is training to become a Journeyman Lineman through a recognized training program and is governed by the Trades Qualification and Apprenticeship Act or any successor legislation. An apprentice shall be permitted to use all tools and be under the strict supervision of a Journeyman Lineman.

c) Groundman I

A person who is experienced in assisting the Lineman by performing all aspects of transmission line work which can be done from the ground including but not limited to tower assembly and erection, requisitioning, handling and transporting of materials, the setting of poles and anchors, the stringing of cables, etc.

d) Groundman II

A person who is learning the Groundman duties or who is employed on the assembly of components for erection by others and whose job experience does not encompass all of the training required of a Groundman I.

e) Utilityman

A worker without specific lineman or groundman skills who may assist linemen or groundmen, and who may perform other unskilled work as assigned.

f) Journeyman Cable Splicer

A Journeyman Powerline Technician or Journeyman Electrician who through experience and training and is in receipt of an IHSA approved certificate, or equivalent, is a specialist in all facets of splicing high voltage cable

g) Foreman

When the Contractor appoints a foreman, he shall be a Journeyman Electrician and a Member of Local 2085. The Contractor shall have discretion to appoint Foremen to suit the particular circumstances of the job. However, for every ten (10) employees so employed, the Contractor shall appoint a Foreman. A Foreman shall receive between 105% to 120% of the Journeyman rate, in the discretion of the Contractor.

h) General Foreman

When the Contractor appoints a General Foreman, he shall be Journeyman Electrician and a member of Local 2085. The Contractor shall appoint a General Forman at a minimum crew size of 45, and shall receive between 120% and 135% of the Journeyman rate, in the discretion of the Contractor.

5. Vacation and Vacation Pay

Each employee shall be entitled to four (4) weeks annual vacation to be taken at a time mutually agreed upon by the Contractor and the employee.

Vacation pay allowance will be accumulated for the credit of each employee at the rate of six percent (6%) of gross earnings.

Vacation pay shall be paid every pay period or upon termination of employment, whichever is sooner.

6. Payment In Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays four and a half percent (4.5%) of his gross earnings. Gross earnings shall be exclusive of subsistence and transportation expenses. Such allowance shall be paid to an employee on his regular pay day or upon termination of employment, whichever is the sooner.

If a Holiday falls on a Saturday or Sunday which is a non-working day, the closest following work day will be observed. However, this provision shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

7. Trust Funds

7.1 Health and Welfare

The contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Local 2085 Health and Welfare Fund for all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

Employer and Employee Contributions:

	May 1, 2016	May 1	2016	May 1
Employer	$1.00/hr	$1.00/hr	$1.00/hr	$1.00/hr
Employee	$0.65/hr	$0.65/hr	$0.65/hr	$0.65/hr

7.2 Pension Fund

The Contractor and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Local 2085 Pension Fund for all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

Employer and Employee Contributions:

JOURNEYPERSONS				
	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
Employer	$4.50/hr	$4.50/hr	$4.50/hr	$4.50/hr
Employee	$1.00/hr	$1.25/hr	$1.50/hr	$1.75/hr

APPRENTICES				
	May 1, 2016	May 1, 2017	May 1, 2018	May 1, 2019
1st Year Apprentice				
Contractor	$1.80/hr	$1.80/hr	$1.80/hr	$1.80/hr
Employee	$0.40/hr	$0.50/hr	$0.60/hr	$0.70/hr
2nd Year Apprentice				
Contractor	$2.25/hr	$2.25/hr	$2.25/hr	$2.25/hr
Employee	$0.50/hr	$0.630/hr	$0.75/hr	$0.88/hr
3rdYear Apprentice				
Contractor	$2.93/hr	$2.93/hr	$2.93/hr	$2.93/hr
Employee	$0.65/hr	$0.82/hr	$0.98/hr	$1.14/hr
4th Year Apprentice				
Contractor	$3.60/hr	$3.60/hr	$3.60/hr	$3.60/hr
Employee	$0.80/hr	$1.00/hr	$1.20/hr	$1.40/hr

7.3 Group Registered Retirement Savings Plan

The employee may contribute the amounts set out below to the Local 2085 Group Registered Retirement Savings Plan for all hours worked by Journeymen Electricians. Contributions shall be collected at the source as a payroll deduction.

$1.25 per hour

8. Submission of Trust Funds

Payment and reporting forms shall be forwarded to the Administrator not later than the 10th of the month following the month for which contributions are being made.

9. Callout

An employee who is called out to perform work after completing his regular shift shall be paid a minimum of two (2) hours at the prevailing overtime rate.

10. Rest Period

Employees must take a minimum rest period of eight (8) hours between shifts. Where employees are specifically requested to return to work before the expiration of eight (8) hours, all work performed shall be paid for at the applicable overtime rate, and such overtime rates shall continue for all work performed until a full eight (8) hour rest period has been observed.

11. Travel Time

Where the distance between the marshalling point and the work site exceeds sixteen (16) kilometres, any time spent travelling beyond the sixteen (16) kilometres shall be paid at the straight time rate.

12. Medical Payment

When an employee is required by the Contractor to take a medical examination he shall be reimbursed four (4) hours pay at the regular rate.

13. Personal Effects Insurance

When an employee is required to reside in a construction camp the cost for insurance against loss of his personal effects by fire, to a maximum of two thousand dollars ($2000.00) will be reimbursed on presentation of a paid premium receipt.

14. Safety Clothing

Protective clothing and safety equipment including safety hat, safety toe rubber boots, welding jackets and gloves, safety goggles, masks etc. are to be supplied at no cost to the employee.

If the Contractor requires the employees to work in the rain, wet weather clothing will be supplied at no cost to the employee.

In areas where acids, chemicals, excessive grease or dust prevail, protective clothing shall be supplied at no cost to the employee.

The employee must accept reasonable responsibility for safety equipment issued by the Contractor and must report the loss, or damage of any of the items so issued to the Contractor.

15. Safety Provisions

All work on energized circuits shall be as per the Workplace Safety and Health Act.

16. Tools

The following tools shall be supplied by the employee:

The following tools will be supplied by Linemen, Cable Splicer's, and Apprentices:

1 – set of belt and spurs, and a fall restricting system for pole climbing in accordance with E&USA and/or CSA Standards.
1 – harness with D in centre of back in accordance with E&USA and/or CSA Standards.
1 – skinning knife
1 – 10" adjustable wrench
1 – 12" adjustable wrench
1 – large screwdriver, 8" shank, 5" handle
1 – pair 9" offset cutting pliers
1 – ball peen hammer
1 – 6' folding wooden ruler or a non-conducting equivalent
1 – nut & bolt bag
1 – ratchet handle with sockets (sizes as required)
1* – pair of lineman gloves

These additional tools will be supplied by Splicers:

6 screwdrivers, Robertson and standard Types
1 – pair 8" diagonal pliers
1 – pair 8" long nose pliers
1 – tool box
1 – adjustable hacksaw frame
1* - set of cable preparation knives

* - the Contractor shall replace knives and gloves when they are worn out.

17. Loss of Tools

An Electrician's tools are his means of livelihood and the workers shall keep same in good condition at all times. Any of the tools listed under the heading "Tools" that are lost by theft resulting from breaking or entering or destroyed by fire will be replaced by the Contractor provided the tools are stored in a properly secured place designated by the Contractor.

The employee must accept reasonable responsibility for the tools furnished by the Contractor and will be given sufficient time to put these tools in their designated place. He must report the breakage or loss of any of these tools immediately to his supervisor. An employee found misusing company tools may be held responsible.

18. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- after thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

19. Escalation and Reference

19.1 Wage Rate Provisions

19.1.1 Reference Classifications and Weighting

The Reference Classifications and the weighting of the classification shall be as follows:

Reference Classification	Factor
Appendix 13 The International Brotherhood of Electrical Workers - Local Union 2085	100%

19.1.2 Method of Calculating the Percentage Adjustment of Reference Classification

The weighted percentage adjustment of each Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired W) + (Expired P) + (Expired H\&W)}} \times 100 \times \text{Weighting Factor}$$

Where:

- Change means the increase or decrease in that benefit.
- W means wage rate
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last weighted percentage adjustment was calculated.
- Weighting factor means the factor assigned to a particular Reference Classification as set out in 19.1.1.

19.1.3 In calculating the weighted percentage adjustment of a Reference classification, the arithmetic result shall be rounded to the nearest hundredth of a percent.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, journeypersons, apprentices, groundman and utility workers.

19.1.4 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

(a) definitions and qualification requirements for applicable classifications.

(b) ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

(c) ratios stipulating when a foreman, leadhand, chargehand, or pusher is to be appointed; however, if such a ratio is less than ten (10) to one (1) (i.e., the number of persons being supervised relative to the supervisor) when incorporating this provision in this Appendix, the ratio shall be ten (10) to one (1).

(d) height pay including that associated with swing stage work.

19.1.5 The appointment of General Foreman shall be at the sole discretion of the Contractor.

19.2 Health and Welfare and Pension

19.2.1 Subject to the conditions set out below, Health and Welfare and Pension contributions shall be adjusted to be consistent with contributions required in respect of Members of Local 2085 covered by this Appendix and participating in the Local 2085 Health and Welfare Plan and Pension Plan(s).

19.2.2 The Contractor's contribution to the Health and Welfare and Pension Plans may be applied on a per hour worked basis; however, the contractor's contributions rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

19.2.3 Pursuant to 19.2.1, when the negotiated effective date of any adjustment to the Contractor's contribution rate to the Health and Welfare and/or Pension Plans does not occur on the effective date of an adjustment to wage rates in this Appendix, at the option of the Local 2085, the implementation of such an adjustment may be delayed so that it coincides with the effective date of the next subsequent adjustment to wage rates. Notification, in writing, specifying that Local 2085 are electing to exercise this option shall be provided by the Council

Appendix Review Committee to the Association Appendix Review Committee in accordance with the provisions of Section 19.2.5.

19.2.4 Any adjustment to the Contractor's contribution rate to the Health and Welfare and/or Pension Plans will be dealt with as follows:

19.2.4.1 When the effective date of the adjustment to the Plan coincides with an adjustment date for wage rates in this Appendix, the resultant hourly rates (i.e., the hourly rates resulting from the application of the weighted percentage adjustment factor) will be reduced by the amount of the increase (or increased by the amount of any decrease) in the Contractor's contribution rate to the Plan.

19.2.4.2 When the effective date of the adjustment to the Plan does not coincide with an adjustment date for wage rates in this Appendix, the hourly wage rates in this Appendix will be reduced by the amount of the increase (or increased by the amount of any decrease) in the Contractor's contribution rate to the Plan.

19.2.5 Notification, in writing, of any adjustment to the Health and Welfare and/or Pension Plans shall be provided by the Council Appendix Review Committee to the Association Appendix Review Committee at least twenty (20) calendar days in advance of the proposed implementation date of such adjustment. If such notification is not provided, the effective date of the adjustment shall be deemed to be twenty (20) calendar days from the date of receipt of the notification.

19.3 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

(a) overtime payments (subject to the restrictions set out in Section 19.3)

(b) shift premium but excluding any shift premium applicable to overtime hours.

(c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: 'the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee'.

(d) pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 19.3.1).

(e) registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 19.3.2).

(f) callout provisions.

(g) rest provisions between shifts

(h) personal effects insurance provisions

(i) provisions governing welding and other special trade related tests

(j) safety clothing

(k) tool lists and provisions governing loss of such tools on the Project.

(l) the following trusteed plans, each of which shall be subject to the restrictions set out in Section 19.3.3:

(i) building fund

(ii) trade improvement plans including educational and apprenticeship funds

(iii) industrial promotion funds.

(m) the time period between Isolation Leaves (subject to the restrictions of Article 19.3.1.3).

(n) travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 19.3.4).

19.3.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

19.3.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

19.3.3 The Contractor's contribution to any of the plans referred to in Section 19.3 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

19.3.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

19.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

19.4 The provisions of 19.1, 19.2, and 19.3 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 14 – Plumbers and Pipefitters

UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICE OF THE PLUMBING AND PIPE FITTING INDUSTRY OF THE UNITED STATES AND CANADA

Local Union 254

BURNTWOOD/NELSON AGREEMENT

Revised Aug 8, 2018

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. to 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift on Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for hours worked thereafter.

On Saturdays, except as provided in Article 15.2, the first eight (8) hours will be paid at the rate of one and one-half (1½) times the applicable base rate, and double (2x) the applicable base rate thereafter.

Sundays and Holidays as set out in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A shift premium of ten percent (10%) of the regular straight time rate will be paid for each shift hour worked at the straight time rate. The shift premium shall not apply on overtime hours.

The starting and quitting time of all shift work shall be decided by the Contractor.

Shifts shall be scheduled to continue for at least two (2) consecutive working days.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

3. Wages

Wage rates shall be as follows:

a) Journeyman

	June 2, 2018	May 1, 2019	May 1, 2020
Journeyman	$40.84	$41.35	41.86

b) Apprentices

The scale of wages for apprentices shall be:

	June 2, 2018	May 1, 2019	May 1, 2020
Apprentice			
5th Year 93.5%	$38.19	$38.66	$39.14
4th Year 80%	$32.67	$33.08	$33.49
3rd Year 70%	$28.59	$28.95	$29.30
2nd Year 60%	$24.50	$24.81	$25.12
1st Year 50%	$20.42	$20.68	$20.93

Apprentices shall take the prescribed courses of the Piping Industry Training Committee of Manitoba. If an Apprentice fails to successfully complete each course, he shall not qualify for advancement and shall remain at the same rate of pay until he has successfully completed that course.

The ratio of Apprentices to Journeymen shall be in accordance with the Apprenticeship and Trades Qualifications Act.

c) Foreman and General Foreman

When the Contractor appoints a Foreman, he shall be paid a minimum of ten percent (10%) above the Journeyman's rate.

The first Foreman will be responsible for up to a maximum of fifteen (15) Journeymen; subsequent Foremen will be responsible for up to a maximum of thirteen (13) Journeymen.

When the Contractor appoints a General Foreman he shall be a journeyman member of Local Union 254 and will not be required to work with the tools of the trade.

The minimum rate of wages for General Foremen shall be fifteen percent (15%) above the Journeyman's rate when in charge of less than sixty (60) Journeymen and twenty five percent (25%) when in charge of sixty (60) or more Journeymen.

4. Vacation and Vacation Pay

Each employee after completing two tours of duty shall be entitled to three (3) weeks annual vacation to be taken at a time mutually agreed upon by the Contractor and the employee.

Vacation pay shall be six percent (6%) of total base rate earnings.

Vacation pay allowance will be paid to employees on their regular pay day. Such payments shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

5. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays, four percent and a half (4.5%) of his total base rate plus vacation pay earnings. Such allowance shall be paid to employees on their regular pay day.

If a Holiday falls on a Saturday which is a non working day, or Sunday, the closest following work day(s) which is not a paid Holiday will be observed. However, this provision shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

6. Trust Funds

6.1 Health and Welfare

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Local 254 Health & Welfare Fund. The employee's contribution shall be collected at the source as a payroll deduction. Contributions shall apply to all hours earned.

Contractor's Contribution - effective May 1, 2016 -	91¢ per hour
Employee's Contribution - effective May 1, 2016 -	$1.03 per hour

6.2 Pension Fund

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Local 254 Pension Fund. The employee's contribution shall be collected at the source as a payroll deduction. Contributions shall apply to all hours earned.

Effective June 2, 2018		
	Contractor's Contributions	Employee's Contribution
Journeyman	$6.61	nil
Apprentice		
5th Year 93.5%	$6.18	nil
4th Year 80%	$5.29	nil
3rd Year 70%	$4.63	nil
2nd Year 60%	$3.97	nil
1st Year 50%	$3.31	nil

6.3 Training Fund

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Local 254 Training Fund. Employee contributions shall be collected at the source as a payroll deduction. Contributions shall apply to all hours worked.

Contractor's Contribution – effective May 1, 2016 - 51¢ per hour
Employee's Contribution – effective May 1, 2016 - 17¢ per hour

6.4 Industrial Promotion Fund

The Contractor shall contribute the amount set out below to the Industrial Promotion Fund. Contributions shall apply to all hours worked by all employees covered by this Appendix.

44¢ per hour.

6.5 Payment of all Trust Fund Contributions

Contributions to all trust funds shall be submitted monthly and will be accompanied by completed reporting forms supplied by the Administrator of the Local 254 Piping Industry Trusts Fund on or before the 10th day of the month following the month for which such contributions are payable. Such forms shall list employees and hourly contributions for each employee. A copy of the above mentioned form is to be retained by the Contractor and the remaining copies to be forwarded with one (1) cheque made payable to "The Piping Industry Trusts Fund" covering all contributions, to the Administrator of the Local 254 Piping Industry Trusts Fund.

7. Callouts

An employee who is called out to perform work after completing his regular shift, shall be paid for such work at double time, but in no case shall an employee be paid less than two (2) hours at double time.

8. Rest Period

If an employee is requested to work after the completion of his regular shift and is not provided with at least an eight (8) hour rest period between shifts, the employee shall be paid double time rates until such time as an eight (8) hour break occurs.

9. Welding Tests

A Journeyman Welder required for certified welding shall report to the job site equipped with an unexpired certificate of qualification valid under the Provincial Regulations for a minimum of forty-five (45) calendar days from the date of hire.

If the Contractor requires any additional examining or testing, or if an existing employee is requested by the Contractor to re-test for a special certificate, the employee's time required for testing and cost of the examination or test will be borne by the Contractor.

Should an employee's certificate expire while he is in the employ of a Contractor, the cost of the required annual re-test and the time required to take same (up to a maximum of three (3) hours) shall be paid by the Contractor, provided the employee has worked for that Contractor for a minimum of forty-five (45) calendar days immediately prior to the expiry date of the certificate. If the employee resigns within forty-five (45) days of the re-test, the employee will be required to repay the total cost.

When a Welder has been trained for a special certificate, and tested at the Contractor's expense, and the Welder quits within forty-five (45) days of the tests, then the cost of testing time paid by the Contractor will be deducted from monies due the employee. The costs of all testing materials and equipment shall be borne by the Contractor.

Welders who perform special tests, shall be paid a minimum of four (4) hours pay up to a maximum of eight (8) hour for each successful test.

10. Personal Effects Insurance

When an employee is required to reside in a construction camp, the cost for insurance against loss of his personal effects by fire, to a maximum of two thousand dollars ($2000.00), will be reimbursed on presentation of a paid premium receipt. To qualify for the insurance coverage an employee must submit a list of his personal effects on becoming a resident of the camp when such list is requested by the Contractor or the Operator of the camp.

11. Safety Clothing

a) When an employee is required to work in hazardous (e.g. asbestos, fiberglass) or especially dirty areas, the Contractor shall furnish proper protective clothing, including coveralls. Failure to comply, the employee must be reimbursed for loss or damage to his footwear or clothing;

b) When employees are required to do grinding, welding or other work requiring protective devices, all such protective gear will be supplied by the Contractor. Where the necessary protection devices are supplied for carrying out the work referred to above, but not utilized by the members performing the work, the employee shall first receive a written warning and if not adhered to, he shall be subject to dismissal;

c) Employees required to work in wet locations (crawl spaces, etc.) or work outdoors in inclement weather, shall be issued with sanitized rubber boots and rain gear by the Contractor;

d) Welders helmets, goggles, protective leather sleeves and welding gloves or mitts, but not Welders leather jackets and pants, shall be included in the term safety equipment and safety clothing. In the case of Metatarsal boots, the Contractor will contribute 100% of the cost.

Welders jackets shall be made available for temporary issue to Welders when engaged on work requiring additional protection such as, but not limited to, arc-air gouging and overhead welding, etc.;

e) All hard hats, sweat bands, winter liners, safety equipment, safety clothing, rainwear, etc., issued to an employee will be returned to the Contractor at the conclusion of the job for which it was issued. The Contractor accepts responsibility for normal wear and tear on receipt of the worn out articles. Any employee losing or abusing equipment, clothing, safety tools or devices issued to him, may have the cost of these articles deducted from his pay.

12. Tools

Plumbers and apprentices will supply all necessary tools of their trade up to and including a 10 inch wrench. Steamfitters and pipefitters and their apprentices will supply a 25 foot tape, torpedo level and pliers.

13. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

14. Escalation and Reference

14.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada Local Union 254, and the Mechanical Contractors Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

14.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Ratios stipulating when a foreman, leadhand, chargehand, or pusher is to be appointed; however, if such a ratio is less than ten (10) to one (1) (i.e., the number of persons being supervised relative to the supervisor) when incorporating this provision in this Appendix, the ratio shall be ten (10) to one (1);

d) Height pay including that associated with swing stage work.

14.1.2 The appointment of General Foreman shall be at the sole discretion of the Contractor.

14.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 14.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 14.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 14.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 14.2.3:

   i) Building fund;

   ii) Trade improvement plans including educational and apprenticeship funds;

   iii) Industrial promotion funds.

m) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

n) Travel time associated with the taking of an Isolation Leave, and the

hourly rate at which travel time will be paid (subject to the restrictions set out in Section 14.2.4).

14.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

14.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

The aforementioned limitation shall not apply to a pension or health and welfare plan in effect in this Appendix on January 1, 1989 and in which higher employer contribution levels were required in respect of overtime hours compared to straight time hours. This exemption shall remain in effect provided required employer contributions to such plans do not change to a single contribution rate relative to straight time and overtime hours.

14.2.3 The Contractor's contribution to any of the plans referred to in Section 14.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

14.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

14.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

14.4 The provisions of 14.1 and 14.2 above shall be dealt with by following the

procedure set out in Article 30 of this Agreement.

APPENDIX NO. 14a – Refrigeration Section of P & P

UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICES
OF THE PLUMBING AND PIPE FITTING INDUSTRY
OF UNITED STATES AND CANADA

Local Union 254, Refrigeration Section

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. to 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for all hours worked thereafter.

On Saturdays, except as provided in Article 15.2, Sundays and holidays as specified in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A premium of 0.125 of the regular straight time rate will be paid for each shift hour worked at the straight time rate. The shift premium shall not apply on overtime hours.

The starting and quitting time for shift work will be decided by the Contractor.

Overtime payment for shift work shall be in accordance with the provisions set forth above.

3. Wages

Wage rates shall be as follows:

	June 20, 2018	May 1, 2019
Journeyman Refrigeration Workers	$39.83	$40.25
Apprentice 5th year (93%)	$37.04	$37.43
Apprentice 4th year (83%)	$33.06	$33.41
Apprentice 3rd year (73%)	$29.08	$29.38
Apprentice 2nd year (65%)	$25.89	$26.16
Apprentice 1st year (55%)	$21.91	$22.14

Apprentices will be employed in accordance with the terms and conditions laid down by the Apprenticeship Division of the Department of Labour.

4. Vacation and Vacation Pay

Vacation pay shall be six percent (6%) of the employee's gross earnings.

Vacation pay allowance will be paid to employees on their regular pay day. Such payments shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

5. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays, four and a half percent (4.5%) of his gross earnings.

The employee shall receive this allowance with his regular pay.

6. Trust Funds

6.1 Health and Welfare

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Local 254 Health and Welfare Trust Fund. The employee’s contribution shall be collected at the source as a payroll deduction. Contributions shall apply to all hours earned.

Contractor: effective May 1, 2016 - $0.91 per hour

Employee: effective May 1, 2017 - $1.03 per hour

NOTE
For purposes of the BNA and in acknowledgement of the receipt of the most recent Refrigeration Costing Model, the amounts shown above will not be applied retroactively. May 1, 2016 will be the acknowledged effective date.

6.2 Pension Fund

The Contractor shall contribute the amounts set below to the Local 254 Pension Fund. The Contractor's Contributions shall apply to all hours earned.

Contractor's Contribution
Effective June 20, 2018 will be $7.94 per hour
Effective May 1, 2019 will be $8.03 per hour

Note: All Apprentice Pension Contributions are based on the relative percent to Journeyman rate identified in Section 3 of this Appendix.

NOTE
For purposes of the BNA and in acknowledgement of the receipt of the most recent Refrigeration Costing Model, the amounts shown above will not be applied retroactively. May 1, 2016 will be the acknowledged effective date.

6.3 Submission of Contributions

Contributions shall be submitted monthly, and will be accompanied by forms supplied by the Administrator of the Local 254 Piping Industry Trusts Fund, on or before the 10th day of the month following the month for which such contributions are payable. Such forms will list employees and hourly contributions for each employee. A copy of the above mentioned forms will be retained by the Contractor and the remaining copies will be forwarded with one cheque made payable to "The Piping Industry Trusts Fund" covering all health and welfare contributions, and one (l) cheque made payable to the Administrator of the Local 254 Refrigeration Pension Plan.

7. Rest Period

If an employee is requested to work after the completion of his regular shift and is not provided with at least an eight (8) hour rest period between shifts, the employee shall be paid double time rates until such time as an eight (8) hour break occurs.

8. Safety Clothing

The Contractor will supply all safety equipment and devices required by the Safety Regulations including respirators, goggles for grinding, welding sleeves and gloves for welders, protective rain gear and disposable hearing protection when same is required. When employees are required to work in hazardous areas, the Contractor shall furnish proper protective clothing. Should the Contractor not provide the protective clothing, the employee will be reimbursed for loss or damage to his footwear or clothing. Personal clothing is to be supplied by the employee.

The employee must accept the responsibility for the safety equipment issued by the Contractor under the same conditions as set forth for tools and must report the loss of damage of any of the items so issued to the Contractor.

9. Welding Tests

A Journeyman Welder required for certified welding shall report to the job site equipped with an unexpired certificate of qualification valid under the Provincial Regulations for a minimum of forty-five (45) calendar days from the date of hire.
If the Contractor requires any additional examining or testing, or if an existing employee is requested by the Contractor to re-test for a special certificate, the employee's time required for testing and cost of the examination or test will be borne by the Contractor.

Should an employee's certificate expire while he is in the employ of a Contractor, the cost of the required annual re-test and the time required to take same (up to a maximum of three (3) hours) shall be paid by the Contractor, provided the employee has worked for that Contractor for a minimum of forty-five (45) calendar days immediately prior to the expiry date of the certificate. If the employee resigns within forty-five (45) days of the re-test, the employee will be required to repay the total cost.

When a Welder has been trained for a special certificate, and tested at the Contractor's expense, and the Welder quits within forty-five (45) days of the tests, then the cost of testing time paid by the Contractor will be deducted from monies due the employee. The costs of all testing materials and equipment shall be borne by the Contractor.

10. Tools

The Contractor agrees to pay the employee fifty percent (50%) of the cost of tool insurance, up to a maximum of six thousand dollars ($6000.00) worth of coverage, upon submission of a receipt from the employee. If an employee leaves the employ of the Contractor within six (6) months of such payment being made, the Contractor may deduct said payment from any monies due the employee. In the event of a claim being made for lost or stolen tools, the Contractor agrees to pay one hundred percent (100%) of the deductible.

Any claim for lost or destroyed tools must be submitted in writing with a list of such tools and value thereof, and substantial evidence of loss, satisfactory to the insurance company. Such list must be submitted within ten (10) days of loss unless reason, satisfactory to the insurance company, can be shown for not having done so.

Journeymen and Apprentices shall supply the tools of the trade as per the following list:

	Description
	Tool box
	Refrigeration test manifold
	Pocket thermometer
	Crescent wrenches (set consisting of 6”, 8”, 10”)
	Refrigeration socket set
	Tube cutters (1/4” to 1 1/8”)
	Refrigeration flaring kit
	Screw drivers (complete set)
	Combination wrenches (box and open end, 3/8” to 5/8”)
	Plier (needle nose, channel locks, combination, vise grips)
	Pipe wrenches (8” and 14”)
	Side cutters
	Hammer
	Volt-ammeter
	Allen wrenches (set 1/16” to 1/2”)
	Hack saw
	Keyhole saw
	Pinch off tool
	Swedging kit (1/4”, 3/8”, 1/2”, 5/8”)
	Tinsnips
	Punch and chisel set
	Tape measure (10’)
	Flashlight
	Electronic Leak Detector
	Nut Driver (1/4 inch to 1/2 inch Sizes
	Cordless Drill

11. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.
Travel time shall be paid at 75% of the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

12. Escalation and Reference

12.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the United Association of Journeymen and Apprentices of the Plumbing and Pipefitting Industry of the United States and Canada, Local Union 254, Refrigeration Section, and the Refrigeration Contractors Trade Division of the Construction Labour Relations Association of Manitoba.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

12.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

12.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 12.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision, the following shall be substituted: "The scheduling of time-off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays;

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 12.2.1);

f) Callout provisions;

g) Rest provisions between shifts;

h) Provisions governing welding and other special trade related tests;

i) Safety clothing;

j) Tool lists and provisions governing loss of such tools on the Project;

k) Trusteed trade improvement plans including educational and apprenticeship funds. The Contractor's contribution to such plans may be applied on a per hour worked basis however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

l) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

m) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 12.2.2).

12.2.1 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

The aforementioned limitation shall not apply to a pension or health and welfare plan in effect in this Appendix on January 1, 1989 and in which higher employer contribution levels were required in respect of overtime hours compared to straight time hours. This exemption shall remain in effect provided required employer contributions to such plans do not change to a single contribution rate relative to straight time and overtime hours.

12.2.2 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

12.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

12.4 The provisions of 12.1 and 12.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 14b – Sprinkler System Installers

UNITED ASSOCIATION OF JOURNEYMEN AND APPRENTICE OF THE PLUMBING AND PIPE FITTING INDUSTRY OF THE UNITED STATES AND CANADA

Local Union 254

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #25, for additional information regarding Appendix 14B

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. to 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift on Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for hours worked thereafter.

On Saturdays, except as provided in Article 15.2, Sundays and Holidays as set out in Article 17, double time shall be paid.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A shift premium of fifteen percent (15%) of the regular straight time rate will be paid for each shift hour worked at the straight time rate. The shift premium shall not apply on overtime hours.

The starting and quitting time of all shift work shall be decided by the Contractor.

Overtime payment for shift work shall be in accordance with the provisions as set out above.

3. Wages

Wage rates shall be as follows:

a) Journeyman

Effective Date	Hourly Wage
May 1, 2019	$42.49 per hour
May 1, 2020	$43.17 per hour
May 1, 2021	$43.85 per hour

b) Apprentices

The scale of wages for apprentices, effective May 1, 2010, shall be:

1st year*	50% of the Journeyman rate
2nd year	60% of the Journeyman rate
3rd year	70% of the Journeyman rate
4th year	80% of the Journeyman rate

Apprentices shall be registered in the Province of Manitoba and work in accordance with the Manitoba Apprenticeship and Tradesmen's Qualifications Act and this Agreement. If an Apprentice fails to successfully complete an Apprenticeship level, he shall not qualify for advancement and shall remain at the same rate of pay until he has successfully completed that level.

The ratio of Apprentices to Journeymen shall be in accordance with the Apprenticeship and Trades Qualifications Act.

*The first three months for a 1st year Apprentice shall be a probationary period. During this probationary period, neither the Apprentice nor the Contractor shall make contributions to the Pension Plan.

c) Foreman and Lead Hand

The selection and appointment of Foremen is the sole responsibility of the Contractor and the Union shall not interfere in any way in the selection of Foremen. Where there are five or more men employed, a Foreman shall be designated. He shall be paid fourteen percent (14%) above the Journeyman's rate.

Where there are four men employed, a Lead Hand shall be designated. He shall be paid ten percent (10%) above the Journeyman’s rate.

It is understood and agreed that when five or more men are employed (and a Foreman is designated as provided above), there will be no Lead Hand designated.

4. Vacation and Vacation Pay

Vacation pay shall be six percent (6%) of total base rate earnings.

Vacation pay allowance will be paid to employees on their regular pay day. Such payments shall be considered as advance payment for any vacation taken by the employee under the conditions provided in the Employment Standards Code for the Province of Manitoba.

5. Payment in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays, four percent (4%) of his total base rate earnings. Such allowance shall be paid to employees on their regular pay day.

If a Holiday falls on a Saturday which is a non working day, or Sunday, the closest following work day(s) which is not a paid Holiday will be observed. However, this provision shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

6. Trust Funds

6.1 Health and Welfare

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to the Local 254 Health & Welfare Fund. The employee's contribution shall be collected at the source as a payroll deduction. Contributions shall apply to all hours earned.

Contractor's Contribution	May 1, 2019	$1.89 per hour
	May 1, 2020	$1.89 per hour
	May 1, 2021	$1.89 per hour
Employee's Contribution		Nil

Should the Trustees of the Health & Welfare Fund adjust the Contractors' contributions to the said Fund, the adjustment (increase or decrease) shall be deducted from the wage rate (in the case of an increase) or added to the wage rate (in the case of a decrease).

6.2 Pension Fund

The Contractor and each employee covered by this Appendix shall contribute the

amounts set out below to the Sprinkler Industry Pension Fund. The employee's contribution shall be collected at the source as a payroll deduction. Contributions shall apply to all hours earned.

Contractor's Contribution	May 1, 2019	$7.25 per hour
	May 1, 2020	$7.25 per hour
	May 1, 2021	$7.25 per hour
Employee's Contribution	May 1, 2009	$0.05 per hour

6.3 National Sprinkler Industry Funds

The Contractor and each employee covered by this Appendix shall contribute the amounts set out below to a variety of National Sprinkler Industry Funds. Employee contributions shall be collected at the source as a payroll deduction. Contributions shall apply to all hours worked.

Effective May 1, 2019:	Contractor Contributions:
Local Industry Promotion Fund	$0.15
Local Industry Promotion & Org	$0.10
Training Fund	$0.39
UA Sprinkler Admin. Fund	$0.05
UA P.A.C. Fund	$0.01
Helmets to Hardhats	$0.01

Effective May 1, 2019:	Employee Contributions:
Local Building Fund	$0.64
UA National Organizing Fund	$0.10

6.4 Payment of all Trust Fund Contributions

Contributions to all trust funds shall be submitted monthly and will be accompanied by completed reporting forms supplied by the Administrator of the Local 254 Piping Industry Trusts Fund on or before the 10th day of the month following the month for which such contributions are payable. Such forms shall list employees and hourly contributions for each employee. A copy of the above mentioned form is to be retained by the Contractor and the remaining copies to be forwarded with one (1) cheque made payable to "The Piping Industry Trusts Fund" covering all contributions, to the Administrator of the Local 254 Piping Industry Trusts Fund.

7. Tools

Employees shall supply 25 foot tape measure, 8" level, and 8" wrench. The Contractor shall furnish all other necessary tools of their trade, including compulsory safety equipment. Employees shall ensure that tools, equipment, and materials are put in their proper places and chests or lockers are left in a place as secure from theft or damage as possible. Any employee losing or abusing tools or safety equipment issued to him may have the cost of these articles deducted from his pay.

8. Routine Maintenance

As provided in Manitoba Regulation 29/2003 *Trade of Sprinkler System Installer Regulation,* a person is not practicing in the trade when he performs routine maintenance tasks on sprinkler or fixed fire protection systems or performs a task of the trade that he is authorized by another enactment to perform. It is understood and agreed that such work is excluded from Article 2, Scope and Recognition, under Article 2.2 l).

9. Isolation Leave (Return Transportation Time Periods)

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After thirty-five (35) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

10. Escalation and Reference

10.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada Local Union 254, and the Canadian Automatic Sprinkler Association.

Classifications eligible for adjustment may include, foreman, leadhand, journeyman, apprentices, helpers and trainees.

10.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed;

c) Number of employees stipulating when a foreman or leadhand is to be appointed; however, a leadhand need not be designated if less than four men are employed, and a foreman need not be designated if less than five men are employed, and no leadhand will be designated where more than four men are employed.

10.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 10.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision the following shall be substituted: "the scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 10.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 10.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) Tool lists and provisions governing loss of such tools on the Project;

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 10.2.3:

   i) Trade improvement plans including educational, safety, and apprenticeship funds;

m) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

n) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 10.2.4).

10.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

10.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

The aforementioned limitation shall not apply to a pension or health and welfare plan in effect in this Appendix on January 1, 1989 and in which higher employer contribution levels were required in respect of overtime hours compared to straight time hours. This exemption shall remain in effect provided required employer contributions to such plans do not change to a single contribution rate relative to straight time and overtime hours.

10.2.3 The Contractor's contribution to any of the plans referred to in Section 10.2 (l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

10.2.4 Travel time may only apply to the return portion of an Isolation Leave trip

(i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

10.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

10.4 The provisions of 10.1 and 10.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 15 – Office and Professional Employees

CANADIAN OFFICE AND PROFESSIONAL EMPLOYEES UNION

Local Union 342

BURNTWOOD/NELSON AGREEMENT

*** Note – See Letter of Agreement #28, for additional information regarding Appendix 15 (EMS Classifications)
*** Note – See Letter of Agreement #31, for additional information regarding Appendix 15 (Health and Welfare Trust Fund)
*** Note – See Letter of Agreement #47, for additional information regarding Appendix 15 (Relocation of COPE employees)

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days, Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift, such time shall be paid at the rate of time and one-half for the first three (3) hours and double the regular straight time rate for all hours worked thereafter.

Except as provided in Article 15.2, when the Contractor's schedule requires an employee to work every Saturday, such time shall be paid at the rate of straight time for the first four (4) hours, time and one-half for the next seven (7) hours worked, and double time for all hours worked thereafter.

When the Contractor's schedule does not require an employee to work every Saturday, any time worked on a Saturday, except as provided in Article 15.2, shall be paid at the rate of time and one-half for the first eleven (11) hours, and double time for all hours worked thereafter.

On Sundays and Holidays as set out in Article 17, double time shall be paid for all hours worked.

When an employee is required to work in camp facilities providing a service to camp residents, and such services are generally provided on a 7 day per week basis, then that employee may be assigned a day of rest, other than Sunday. In this case, for purposes of applying the conditions set out above, the assigned day of rest shall be recognized as a Sunday and the subsequent six (6) days as Monday through Saturday.

2. Shift Conditions

If conditions are such that work on that particular job cannot be done within the said normal hours (7:00 a.m. to 6:00 p.m.) then eight (8) hours may be worked during any hours and may constitute a regular shift on that job.

A shift premium of 75¢ per hour will be paid for each shift hour worked at the straight time rate. Shift premium will not apply on any overtime hours.

The starting and quitting time of all shift work will be decided by the Contractor. Overtime payment for shift work shall be in accordance with the provisions as set out above.

3. Wages

Wage rates shall be as follows:

A) Non-Trainees (i.e., employees not covered by (B) below)

Classifications	Effective May 1, 2016	Effective May 1, 2017	Effective May 1, 2018	Effective May 1, 2019
Survey Assistant	$ 22.98	$ 23.51	$ 24.10	$ 24.71
Junior Instrumentman	$ 28.93	$ 29.60	$ 30.34	$ 31.12
Instrumentman I	$ 33.28	$ 34.05	$ 34.91	$ 35.80
Instrumentman II	$ 35.54	$ 36.36	$ 37.27	$ 38.23
Quantity Technician	$ 34.74	$ 35.54	$ 36.43	$ 37.36
Junior Draftsman	$ 26.53	$ 27.14	$ 27.82	$ 28.53
Intermediate Draftsman	$ 30.05	$ 30.75	$ 31.52	$ 32.33
Draftsman	$ 33.12	$ 33.89	$ 34.74	$ 35.63
Primacy Care Paramedic	$ 40.66	$ 41.60	$ 42.64	$ 43.73
First Aid Attendant	$ 28.36	$ 29.02	$ 29.74	$ 30.50
Emergency Medical Responder	$ 30.79	$ 31.50	$ 32.29	$ 33.11
Clerk Typist	$ 21.18	$ 21.67	$ 22.21	$ 22.78
Clerk I	$ 22.54	$ 23.06	$ 23.64	$ 24.25
Clerk II	$ 24.64	$ 25.21	$ 25.84	$ 26.50
Project Cost Clerk I	$ 28.44	$ 29.10	$ 29.83	$ 30.59
Project Cost Clerk II	$ 31.87	$ 32.61	$ 33.43	$ 34.28

The principal duties of the above classifications are as set out at the end of this Appendix.

When an employee is assigned to a higher classification, he shall receive the rate for such position from the time of assignment provided the assignment continues beyond the first shift.

When the Contractor appoints a working Instrumentman foreman, he shall be paid 10% above the Instrumentman II rate.

When the Contractor hires or appoints a Senior Draftsman, a Senior First Aid Attendant or a Senior Project Cost Clerk, that employee shall be paid a minimum of $1.00 above the rate of the person with the highest classification being supervised.

B) Trainees

a) A trainee means any employee who is hired to participate in a contractors formally structured on-the-job training program in any classifications set out in the Appendix, the nature of which are not designated trades (ie designated as being appropriate for apprenticeship or certification or both pursuant to the Apprenticeship and Tradesman's Qualification Act of the Province of Manitoba).

b) Trainees shall be paid a percentage of the rate in effect for the classification for which the employee is being trained in accordance with the following:

1 - 200 hours	60 %
201 - 400 hours	70 %
401 - 600 hours	80 %
601 or more hours	90 %

If the duration of the training program is less than 200 hours (or 400 hours or 600 hours, as the case maybe), the employee's rate shall be increased to 100 % of the rate in effect for that classification, effective on the first working day following the employee's successful completion of the training program.

c) Prior to implementing any formal on-the-job training programs for any classifications set out in the Appendix, the Contractor shall provide the Association and the Council with the following information:

i) The classification for which on-the-job training will be instituted and the schedule commencement date of the training;

ii) The duration of the training.

d) The number of trainees shall not exceed twenty percent (20%) of the total number of employees employed by a Contractor and covered by this Appendix except as may otherwise be agreed to by the Association and the Council.

e) An employee who is hired in a non-training classification may be re-assigned to a formal on-the-job training program under the following conditions:

i) An employee requests, in writing, to participate in the Contractor's formal on-the-job training program and the Contractor approves the request;

ii) The Contractor requests that an employee be re-assigned to a formal on-the-job training program and the employee and the Council are in agreement with the re-assignment.

f) An employee who is re-assigned in accordance with (e) above shall be deemed to be a trainee and paid in accordance with the provisions of (b) above;

g) The Contractor shall provide each employee who successfully completes the Contractor's formal on-the-job training program with a letter confirming the type of training received and the corresponding number of hours the employee spent in such training.

4. Vacation and Vacation Pay

Annual vacation will be arranged as provided in the Employment Standards Code for the Province of Manitoba.

Vacation Pay will be accumulated for the credit of each employee at the rate of six percent (6%) of the employee's standard hourly rate for each hour worked.

Vacation pay allowance will be paid to an employee on his regular pay day.

5. Pay in Lieu of Holidays

Whether or not an employee works on any of the Holidays set out in Article 17, he shall receive in lieu of paid Holidays, four and a half percent (4.5%**)** of his standard hourly rate for each hour worked. The employee shall be paid this amount each regular pay period.

6. Callout

An employee called to work outside his regular shift to perform unscheduled overtime shall be paid for such work at double time, but in no case shall an employee be paid less than two (2) hours at double time.

7. Rest Period

An employee shall have a minimum rest period of eight (8) hours between shifts. When employees are specifically requested to return to work before the expiration of eight (8) hours, all work performed shall be paid for at the applicable overtime rate, until a full eight (8) hour rest period has been observed.

8. Pension and Health and Welfare Trust Funds

Provided:

a) The Local Union to which employees covered by this Appendix belong establishes a pension plan in which employees covered by this Appendix are eligible to participate;

b) Written verification is forwarded to the Association and the Council by the Board of Trustees of each plan confirming:

i) Proviso (a), above;

ii) That Trust Agreements have been executed and registered.

A pension plan will be introduced into this Appendix on the following basis:

- at the time of introduction of the health and welfare plan and/or the pension plan, the hourly rates for all classifications in this Appendix shall be reduced by the amount of the contractor's contribution to the said plan or plans, less the sum of twenty cents. At the option of the Council, contributions to the plan or plans shall be made up by employee contributions or a combination of contractor and employee contributions. The Council shall advise the Association of the required contractor and/or employee contributions at the time the plan or plans are established.

  The contractor on behalf of each employee, and each employee covered by this Appendix, shall respectively contribute the amounts set out below to the Canadian Office and Professional Employees (COPE) union, local 342, Health and Welfare Trust Fund. Contributions shall apply to all hours worked (regular and overtime). Employee contributions shall be collected at the source as a payroll deduction.

  The contractor’s contribution shall be:

  Effective May 1, 2016 $0.20 per hour

  The employee’s contribution shall be:

  Effective May 17, 2015 $0.80 per hour

Submission of Trust Funds

The contractor shall forward the above Trust Fund contributions to the designated Administrator of the Plan on or before the fifteenth (15^{th}) day of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

Pension and/or health and welfare contributions shall be subject to adjustments, however all contributions shall continue to be made as outlined above and the effective date of such adjustments shall correspond to an effective date of changes to wages (See Section 9.1). Further, for all adjustments, the hourly rates for all classifications in this Appendix shall be reduced by the full amount of contractor's contribution (not less the sum of twenty cents or any other amount).

9. Escalation and Reference

9.1 Wages Rates

As provided in Section 9.2, the wage rates for all classifications in this Appendix shall be adjusted by a percentage, equivalent to the percentage adjustment in wage rates and in the employers' contribution rate to pension and health and welfare plans negotiated from time to time for the classification of "Journeyman Carpenter" (hereinafter referred to as the Reference Classification) by the United Brotherhood of Carpenters and Joiners of America, Local Union 343, and the Construction Labour Relations Association of Manitoba, as further provided in Section 9.2.

9.2 Method of Calculating Percentage Adjustment of Classifications

The percentage adjustment of the Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired W) + (Expired P) + (Expired H\&W)}} \times 100$$

Where:

- Change means the increase or decrease in that benefit.

- W means wage rate.
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last percentage adjustment was calculated.

9.2.1 In calculating the percentage adjustment of the Reference Classification, the result shall be rounded to the nearest hundredth of a per cent. \

9.2.2 Effective Date of Adjustments

When any change to W or W and P and/or H&W in the agreement being used for reference purposes occur on the same date, the percentage adjustment of all such changes shall be calculated to determine the percentage adjustment by which wage rates in the Appendix are to be adjusted and the effective date of the change(s) in the agreement being used for reference purposes shall be the effective date of the wage rate change in this Appendix.

When changes to P and/or H&W are not effective on the effective date of any changes to W in the agreement being used for reference purposes, such changes shall be deemed to be effective on the date of a change to W next occurring, and the procedures set out above shall be followed, except if there are no subsequent changes to W during the remaining term of the agreement being used for reference purposes, the provisions set out below shall be followed for any changes to P and/or H&W which have not been previously calculated.

Where there are no changes to W but there are changes to P and/or H&W during the term of the agreement being used for reference purposes, the percentage adjustment of such change(s) shall be calculated and the resultant wage rate change in this Appendix shall be effective on the date of the change to P and/or H&W in the agreement being used for reference purposes.

9.2.3 In applying the percentage adjustments, the resultant wage rates shall be rounded to the nearest cent.

9.3 Vacation Pay and Pay in Lieu of Holidays

Vacation pay and pay in lieu of Holidays shall be adjusted to be consistent with corresponding conditions of employment set out in Appendix 4 of this Agreement.

9.4 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

9.5 The provisions of 9.1 to 9.3 inclusive shall be dealt with by following the procedure set out in Article 30 of this Agreement.

PRINCIPAL DUTIES*

Principal duties of the classifications set out in Section 3 will include the following:

1. Survey Assistant

To act as a Rodman in assisting an Instrumentman. May be required to clear brush, and in addition, will act as a Chainman and may use a prism or other surveying equipment.

2. Junior Instrumentman

Performs levelling work within previously established key bench marks and elementary survey work.

3. Instrumentman I

Performs survey work on construction projects utilizing all survey instruments. Survey work may include, but is not limited to, engineering surveys to determine boundaries, grades and elevations generally within previously established bearing controls. May perform topographical surveys and may be required to plot same from field notes, including electronic information.

4. Instrumentman II

Same as Instrumentman I, and in addition, may direct and coordinate work of survey crews.

5. Quantity Technician

Calculates quantities by referring to electronic information, survey notes, reports, specifications and drawings for purposes of progress payment.

6. Junior Draftsman

Performs elementary (including computer assisted) drafting duties using electronic information, topographical survey notes, and/or detailed sketches. Maintains and issues drawings. Operates printing and plotting machines.

7. Intermediate Draftsman

Same as Junior Draftsman, and in addition, prepares and revises final drawings, bills of materials and diagrams from verbal instructions, rough notes and/or sketches. May assist, as necessary, in examining structures or equipment.

8. Draftsman

Same as Intermediate Draftsman, and in addition, prepares layout designs by reference to standards, manuals and catalogues.

9. First Aid Attendant

Provides first aid treatment to sick or injured employees within the scope of first aid principles. Maintains records of occurrence and treatment and ensures the maintenance of first aid facilities and inventory. Refers cases to other medical facilities.

10. Emergency Medical Responder

Holds a valid Manitoba Emergency Medical Responder license. Performs all duties of a First Aid Attendant and in addition holds a valid Class 4 drivers license and has the ability to drive an ambulance. Is able to receive transfer of function from Medical Director for Automatic External Defibrillator, Epi-Pen, Nitro, Ventolin, and Pulse Oximetry.

11. Primary Care Paramedic

Performs all duties of an Emergency Medical Responder and holds a valid Technician-Paramedic license. In addition perform basic management of breathing dysfunctions, perform cardiac monitoring and interpret basic cardiac dysrhythmias, perform manual defibrillation, perform appropriate immobilization techniques, maintain peripheral IV locks or infusions, calculate, monitor and adjust flow rates, manage complications of IV catheters and infusions, manage emergency child birth, and provide basic care to patients with cardiac arrest, cardiovascular, respiratory, neurological, environmental, traumatic, and obstetrical, pediatric and neonate emergencies. Is able to administer ASA, Epinephrine, Narcan, Nitropatch, Entonox, Glucagon, Nitroglycerin, and Salbutamol Salbutamol with appropriate transfer of function from the Medical Director. May also be able to perform additional medical acts as specifically delegated by the Medical Director and in accordance with provincial regulations for the Technician-Paramedic licensing level.

11. Clerk Typist

Performs general clerical duties including: filing, photocopy, switchboard, fax, receptionist, and various computer related duties including compiling, word processing,

storage, retrieval and sorting of information through the use of a personal computer and/or the Contractor's computer systems.

12. Clerk I

May be required to perform any of the duties of a Clerk Typist and in addition performs arithmetic calculations, posts to records, transposes information, and in the case of the camp office, duties such as registrations and collecting and disbursement of room key monies. In addition, take shorthand, types from notes or secretarial office equipment, and prepares memos and letters of a routine nature.

13. Clerk II

May be required to perform any of the duties of a Clerk I and in addition, performs functions of the following nature: processing of time cards, invoices, billings and purchase orders, and inventory control.

14. Project Cost Clerk I

May be required to perform any of the duties of a Clerk II and in addition, performs basic accounting duties including accounts receivable, accounts payable, payroll and basic cost control.

15. Project Cost Clerk II

Same as Project Cost Clerk I, and in addition, performs bank reconciliations, ledger and journal postings, and prepares advanced accounting records, petty cash and other financial reports.

*NOTE: Notwithstanding the Principal Duties set out above, a computer may be utilized by any employee of the Contractor, including persons not covered by this Agreement, to perform any duties associated with their respective positions.

APPENDIX NO. 16 - Caterers

HOTEL, RESTAURANT EMPLOYEES AND BARTENDERS
INTERNATIONAL UNION

Local Union No. 206

BURNTWOOD/NELSON AGREEMENT

*** Note See Letter of Agreement #60, for further information regarding Pension remittances

1. Hours of Work and Overtime

A regular work week shall consist of eight (8) hours per day for five (5) consecutive days and four (4) hours on the sixth (6th) day. Except as provided in Article 15.2, if more than the recognized daily hours are worked on any day or shift on the first six (6) days, such time shall be paid for at the rate of time and one-half. On the seventh day and on Holidays (Article 17) time and one-half shall be paid for all hours worked.

Daily work schedules for all staff will be posted in a place accessible to the employees.

An employee will be assigned a minimum of one (1) day of rest per calendar week.

2. Shift Conditions

a) Split Shift

An employee required to work a split shift shall be paid at the rate of time and one-half of the standard hourly rate for all hours worked after the expiry of twelve (12) consecutive hours measured from the commencement of the shift.

Time off for meal breaks and coffee breaks shall not be considered a break which would constitute a split shift.

b) Split Shift Premium

An employee required to work a split shift shall be paid a premium 25¢ for each hour worked on that shift.

c) Night Shift Premium

An employee required to work a night shift shall be paid a premium of 35¢ for each hour worked at the straight time rate provided the majority of the shift is worked between the hours of 6 p.m. and 6 a.m.

3. Call Out

When an employee completes his regular shift, leaves the job and is subsequently called out for unscheduled work, he shall be paid a minimum of four (4) hours at the rate of time and one-half.

4. Rest Time

When an employee has not been provided with a break of at least eight (8) consecutive hours between shifts, he shall be paid time and one-half for all hours worked until a break of eight (8) hours occurs.

5. Wages

Wage rates shall be as follows:

A) Non-Trainees - (i.e., employees not covered by (B) below)

Classification	Effective May 1, 2016	Effective May 1, 2017	Effective May 1, 2018	Effective May 1, 2019
Chef	$28.32	$29.01	$29.75	$30.52
1st Cook	$27.61	$28.29	$29.01	$29.76
2nd Cook	$24.80	$25.41	$26.06	$26.73
3rd Cook/Short Order Cook	$23.37	$23.94	$24.55	$25.18
Baker	$26.22	$26.86	$27.54	$28.26
Butcher	$26.22	$26.86	$27.54	$28.26
Tapman	$19.38	$19.85	$20.36	$20.88
Head Camp Attendant	$19.38	$19.85	$20.36	$20.88
Head Mess Hall Attendant	$19.38	$19.85	$20.36	$20.88
Head Dishwasher	$19.38	$19.85	$20.36	$20.88
Salad/Sandwich Maker	$18.67	$19.13	$19.62	$20.13
Commissary Attendant	$18.67	$19.13	$19.62	$20.13
Snack Bar Attendant	$18.67	$19.13	$19.62	$20.13
Pot and Dishwasher	$18.52	$18.97	$19.46	$19.96
General Help *	$18.36	$18.81	$19.29	$19.79
Camp Attendant (Janitor)	$18.15	$18.59	$19.07	$19.56

* Includes Laundry Washer, Porter, Mess Hall Attendant, Waiter/Waitress.

When an employee is assigned to a higher hourly rated classification, he shall be paid the higher rate from the time of assignment provided the assignment

continues beyond the first shift.

B) Trainees

a) A trainee means any employee who is hired to participate in a contractor's formally structured on-the-job training program in any classifications set out in the Appendix, the nature of which are not designated trades (ie designated as being appropriate for apprenticeship or certification or both pursuant to the Apprenticeship and Tradesman's Qualification Act of the Province of Manitoba);

b) Trainees shall be paid a percentage of the rate in effect for the classification for which the employee is being trained in accordance with the following:

1 - 200 hours	60 %
201 - 400 hours	70 %
401 - 600 hours	80 %
601 or more hours	90 %

If the duration of the training program is less that 200 hours (or 400 hours or 600 hours, as the case maybe), the employee's rate shall be increased to 100 % of the rate in effect for that classification, effective on the first working day following the employee's successful completion of the training program;

(c) Prior to implementing any formal on-the-job training programs for any classifications set out in the Appendix, the Contractor shall provide the Association and the Council with the following information:

1) The classification for which on-the-job training will be instituted and the schedule commencement date of the training;

2) The duration of the training.

d) The number of trainees shall not exceed twenty percent (20%) of the total number of employees employed by a Contractor and covered by this Appendix except as may otherwise be agreed to by the Association and the Council;

e) An employee who is hired in a non-training classification may be re-assigned to a formal on-the-job training program under the following conditions:

i) An employee requests, in writing, to participate in the Contractor’s formal on-the-job training program and the Contractor approves the request;

ii) The Contractor requests that an employee be re-assigned to a formal on-the-job training program and the employee and the Council are in agreement with the re-assignment.

f) An employee who is re-assigned in accordance with (e) above shall be deemed to be a trainee and paid in accordance with the provisions of (b) above;

g) The Contractor shall provide each employee who successfully completes the Contractor's formal on-the-job training program with a letter confirming the type of training received and the corresponding number of hours the employee spent in such training.

6. Vacation and Holiday Pay

a) Vacation Pay and Holiday Pay shall be combined in an amount equal to ten percent (10%) of gross wages of which four percent (4%) shall be paid in lieu of the Holidays specified in Article 17;

b) Gross wages shall be defined as being all straight time hourly wages plus all overtime premium wages and all shift work premium wages;

c) The Vacation and Holiday Pay Allowance shall be paid to employees on their regular pay day.

7. Health and Welfare and Pension Plan Trust Funds

a) Health and Welfare

The Contractor shall contribute the amount set out below for each hour worked by each employee covered by this Appendix to the Health and Welfare Plan provided for by the Hotel and Restaurant Employees and Bartenders International Union, Local 206:

Effective	October 1, 2013	75¢ per hour worked

b) Pension Plan

The Contractor shall contribute the amount set out below for each hour worked by each employee covered by this Appendix to the Hotel and Restaurant Employees and Bartenders International Union, Local 206 Pension Plan:

Effective	March 3, 2019	65¢ per hour worked

c) Submission of Trust Funds

The Contractor shall forward the above Trust Fund Contributions to the designated Administrators of each plan on or before the 15th day of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

8. Joint Liaison Committee Fund

The Contractor shall contribute the amount of fifteen (15) cents for each hour worked by each employee covered by this Appendix to the Hotel and Restaurant Employees and Bartenders International Union, Local 206 Joint Liaison Committee.

The Contractor shall forward the above contribution to the Authority designated by the Trustees of the Joint Liaison Committee on or before the 15th day of each month following the month in which the contributions were made. A form shall be supplied by the Union for the Contractor to identify the application of all contributions and such form shall indicate the Authority to which the contributions shall be forwarded.
In the event the Joint Liaison Committee Fund ceases to be a trusteed plan, it shall be deleted from this Appendix effective on the date it ceased to be a trusteed plan. The Council shall notify the Association, in writing, immediately upon the said fund ceasing to be a trusteed plan.

9. Uniforms

The Contractor shall supply, on loan, all uniforms to be worn by an employee. The Contractor will launder and repair same free of charge to the employee. However, when the Contractor cannot reasonably arrange to have uniforms laundered, the Contractor will provide a washing machine and accessories for the use of employees.

10. Medical Examinations

A pre employment medical examination, which will be at the expense of the Contractor, will be required for all employees. This examination will normally be given prior to the employee journeying to the Project by a physician designated by the Contractor.

11. Single Rooms

An employee who is hired as a camp attendant (janitor), will be assigned to a single room, provided space is available.

12. Escalation and Reference

12.1 Wage Rate Provisions

12.1.1 General Approach

Subject to and in accordance with the conditions set out below, and subject to any adjustments arising from the application of Section 12.2, the wage rates set out in this Appendix will be adjusted by a percentage equivalent to the weighted percentage adjustment in wage rates and in the employers' contribution rate to pension and health and welfare plans negotiated from time to time for each of the Reference Classifications set out in 12.1.2.

12.1.2 Reference Classifications and Weighting

The Reference Classifications and the weighting of these classifications shall be as follows:

Reference Classification	**Weighting Factor**
The General Construction Labourer classification as set out in the Agreement negotiated and executed by the Construction Labour Relations Association (CLRA) of Manitoba and the Construction and Specialized Workers' Union, Local Union 1258	60%
The Journeyman Carpenter Classification as set out in the Agreement negotiated and executed by the CLRA of Manitoba and the United Brotherhood of Carpenters and Joiners of America, Local Union 343.	40%

12.1.3 Method of Calculating Weighted Percentage Adjustment of Reference Classifications

The weighted percentage adjustment of each Reference Classification shall be determined in accordance with the following formula:

$$\frac{\text{(Change in W) + (Change in P) + (Change in H\&W)}}{\text{(Expired W) + (Expired P) + (Expired H\&W)}} \times 100 \times \text{Weighting Factor}$$

Where:

- Change means the increase or decrease in that benefit.
- W means wage rate.
- P and H&W means the required employers' contribution rate to the pension and/or the health and welfare plan.
- Expired means the rate in effect when the last weighted percentage adjustment was calculated.
- Weighting factor means the factor assigned to a particular Reference Classification as set out in 12.1.1.

12.1.3.1 In calculating the weighted percentage adjustment of a Reference Classification, the arithmetic result shall be rounded to the nearest hundredth of a percent.

12.1.4 Effective Date of Wage Rate Adjustments and Adjustments to Pension and Health and Welfare Plans and Application of the Formula

12.1.4.1 Effective Date of Wage Rate Adjustments

When the wage rate adjustment of a Reference Classification(s) is effective on the first of any month, then the wage rate adjustment of the hourly rates in this Appendix shall be effective on that date.
When the wage rate adjustment of a Reference Classification(s) is not effective on the first of any month, it shall be deemed to be effective on the first of the month following, and the wage rate adjustment of hourly rates in this Appendix shall be effective on that date.

12.1.4.2 Effective Date of Adjustments to the Employers' Contribution Rate to Pension and/or Health and Welfare Plans

When the adjustment to the employers' contribution to the pension and/or health and welfare plans of a Reference Classification(s) is effective on the effective date, or pursuant to 12.1.4.1 the deemed effective date, of any wage rate adjustment of any Reference Classification, then such adjustment shall be calculated and taken into account on that date. If this is not the case, then such adjustment shall be calculated and taken into account on the closest

following effective date of a wage rate adjustment.

12.1.4.3 In applying the weighted percentage adjustment, the resultant wage rate shall be rounded to the nearest cent, following which, any adjustment required by virtue of Section 12.3 shall be introduced to yield the new wage rate schedule that will apply in this Appendix.

12.2 Pension and Health and Welfare

12.2.1 The Contractor's responsibility for contributions to the Pension and Health and Welfare Trust Funds referenced in Section 7 of this Appendix shall be no greater than 65 cents per hour worked , and 35 cents per hour worked, respectively. In the event that the Hotel and Restaurant Employees and Bartenders International Union, Local 206, requires increased contributions to its Health and Welfare Trust Funds, the total amount of said increase will be deducted from the employees' wages or become an employee contribution.

12.2.2 The Contractor's contribution to the Pension and Health and Welfare Plans may be applied on a per hour worked basis; however, the Contractor's contributions rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

12.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages.

12.4 The provisions of Sections 12.1 and 12.2 shall be dealt with by following the procedure set out in Article 30 of this Agreement.

APPENDIX NO. 17 – Elevator Constructors

INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS

Local Union No. 102

BURNTWOOD/NELSON AGREEMENT

1. Hours of Work and Overtime

Eight (8) hours shall constitute a day's work for five (5) days, Monday to Friday inclusive. Said hours shall normally be within the period from 7:00 a.m. until 6:00 p.m.

If more than the recognized daily hours are worked in any day or shift Monday to Friday inclusive, such time shall be paid at the rate of time and one-half for the first two (2) hours and double time for all hours worked thereafter.

On Saturdays, except as provided in article 15.2, Sundays, and holidays as specified in Article 17, double time shall be paid.

2. Wages

Hourly wage rates shall be as follows:

	Effective Dec 7, 2013	Effective Dec 1, 2014	Effective Dec 1, 2015
Mechanic In-Charge (Adjustor) - 112.5%	$48.05	$49.73	$51.31
Mechanic	$42.71	$44.20	$45.61
Helper 3 – 80%	$34.17	$35.36	$36.49
Helper 2 – 70%	$29.90	$30.94	$31.93
Helper 1 – 60%	$25.63	$26.52	$27.37
Helper – 55%	$23.49	$24.31	$25.09
Probationary Helper – 50%	$21.36	$22.10	$22.81

When the Contractor appoints a Mechanic as a Foreman, the person so appointed shall be paid the rate set out above for Foreman.

3. Definitions, Qualifications and Ratios

a) General Conditions

i) There shall be no restrictions placed on the character of work which a Helper may perform under the direction of an Elevator Constructor Mechanic;

ii) The total number of Helpers employed shall not exceed the number of Elevator Constructor Mechanics employed on any one (1) job, except on jobs where two (2) teams or more are working. In such cases, one (1) extra Helper may be employed for the first two (2) teams and an extra Helper for each additional three (3) teams.

However, the Contractor may employ additional Helpers, provided they are under the direction of a Mechanic, for handling and hoisting material and on foundation work. When removing old and installing new cables on existing elevator installations, a contractor may use two (2) Helpers to one (1) Mechanic;

iii) A Helper will not qualify or be raised to the capacity of Mechanic until he has worked for a period of four (4) years in the Elevator Industry and has passed an examination administered by the Joint Examining Committee (a committee consisting of three (3) representatives from the employers referred to in the Escalation and Reference Section of this Appendix and three (3) from the Union);

iv) It is understood that probationary employees (as defined below) may be discharged by the Contractor and such discharges shall not be grievable.

b) Probationary Helper

A newly hired employee without previous mechanical experience shall be deemed to be a probationary employee and classified as a Probationary Helper for a period or periods totalling six (6) months within the aggregate period of not more than nine (9) months. Such a person must be physically fit and possess a high school diploma or the equivalent thereof. He must possess an Emergency Level First Aid Certificate and a C.P.R. Certificate.

The Contractor and the Union will test the ability of a probationary employee during this six (6) month period and if they agree that the employee does not display sufficient aptitude to become a Helper, he shall be discharged.

The probationary period may be worked with more than one (1) employer, and the period of six (6) months probation may cover an aggregate period of not more than nine (9) months;

c) Helper

Upon completion of 6 months in the industry, to the satisfaction of the Employer and the Union, a Probationary Helper shall be classified as a Helper. He shall receive 55% of the Mechanics Rate. For further advancement in the Industry, he shall successfully complete the recognized courses of training as designated by the Local Area Committee;

d) Helper One

Upon completion of 12 months work in the Industry and successful completion of the courses mentioned in c) above, this employee will be classified as Helper One. For further advancement in the Industry, he shall successfully complete the recognized courses of training as designated by the Local Area Committee. He shall receive 60% of the Mechanics Rate and remain in this classification for a further 12 months in the Industry;

e) Helper Two

Upon completion of 24 months work in the Industry and successful completion of the courses mentioned in d) above, this Employee will be classified as Helper Two. For further advancement in the Industry, he shall successfully complete the recognized courses of training as designated by the Local Area Committee. He shall receive 70% of the Mechanics Rate and remain in this classification for a further 12 months in the Industry;

f) Helper Three

Upon completion of 36 months work in the Industry and successful completion of the courses mentioned in e) above, this Employee will be classified as Helper Three. For further advancement in the Industry, he shall successfully complete the recognized courses of training as designated by the Local Area Committee. He shall receive 80% of the Mechanics Rate and remain in this classification for a further 12 months in the Industry.

An individual with one (1) year's previous mechanical experience in the Elevator Industry may be hired as a probationary employee and employed either as a Helper or be paid at the hourly wage rate for a Mechanic for a period of six (6) months at which time he shall be given an examination by the Joint Examining Committee to ascertain if he qualifies as a Mechanic.

If the employee does not pass the examination, he may be discharged if such action is recommended by the Examining Committee, or the Contractor may elect to retain him as a Helper. At the discretion of the Examining Committee, he may be given another examination to qualify as a Mechanic at the end of a further one (1) year period.

The Helper Three must avail himself to be tested as a Mechanic within two years of receiving Helper Three status. Failure to write or successfully complete the Mechanics Exam (as administered by C.E.I.E.P) after the second Attempt, an Employees status will revert to the level of Helper.

4. Vacation and Holiday Pay

The Contractor shall credit each employee with twelve percent (12%) of gross earnings, and this amount shall represent the combined holiday and vacation pay credits. This amount shall be paid to an employee with his regular pay.

For purposes of clarification, the following amounts will be excluded when calculating gross earnings: Contractor contributions to Welfare, Pension and Education Plans.

For accounting purposes, eight percent (8%) shall be deemed to be vacation pay and four percent (4%) shall be deemed to be pay in lieu of Holidays.

The scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee.

When a Holiday falls on a Saturday or Sunday, which is a non-working day, such Holiday shall be observed on the next regular work day. However, this provision shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

5. Welfare Plan

The Contractor, and each Mechanic and Helper in his employ shall respectively contribute the amounts set out below to the Canadian Elevator Industry Welfare Plan. Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

Contractor's Contribution	Employee's Contribution
$1.18 per hour worked	$1.68 per hour worked

6. Pension Plan

The Contractor, and each Mechanic and Helper in his employ shall respectively contribute the amounts set out below to the Canadian Elevator Industry Pension Plan. Contributions shall apply to all hours worked and employee contributions shall be collected at the source as a payroll deduction.

Contractor's Contributions	Employee's Contribution
$2.25 per hour worked	$3.71 per hour worked

7. Educational Fund

The Contractor shall contribute the amount set out below for all hours worked, by all Elevator Constructor Mechanics and Helpers in his employ to the Canadian Elevator Industry Educational Programme:

Contractor's Contributions	Employee's Contribution
$0.31 per hour worked	$0.225 per hour worked

8. Payment for Lost Clothes and Tools

The Contractor will provide a secured area for employees to store tools and clothing and likewise the employee recognizes his responsibility to protect company tools. The Contractor will reimburse Mechanics and Helpers for 75% of the value of tools or clothing lost on the job, subject to the following maximum amounts:

Overcoat	$ 50.00
Other Clothing	$ 60.00
Tools	$600.00

An affidavit, must be submitted to the Local Union and the Contractor by the employee claiming the loss.

9. Isolation Travel (Return Transportation Time Periods) - Expenses

The return transportation time period referred to in Article 19.2.1 for this Appendix shall be:

- After sixty (60) calendar days.

Travel time shall only apply on the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

10. Escalation and Reference

10.1 Wage Rate Provisions

The wage rate for the classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the International Union of Elevator Constructors, on behalf of Local Union 102, the Member Firms of the National Elevator and Escalator Association.

Classifications eligible for adjustment may include general foreman, foreman, leadhand, chargehand, pusher, journeyman, apprentices, helpers and trainees.

10.1.1 Except as otherwise noted, the following provisions will be incorporated or adjusted to be consistent with corresponding provisions negotiated from time to time by the aforementioned Parties:

a) Definitions and qualificational requirements for applicable classifications;

b) Ratios indicating the number of apprentices, helpers, or other types of trainees who may be employed.

10.2 Other Conditions of Employment

Except as otherwise noted, the following conditions of employment will be incorporated or adjusted to be consistent with corresponding conditions of employment negotiated from time to time by the aforementioned Parties:

a) Overtime payments (subject to the restrictions set out in Section 10.3);

b) Shift premium but excluding any shift premium applicable to overtime hours;

c) Vacation and Vacation Pay - such provisions may include any provisions relative to the timing of payment of vacation pay but shall not include any provisions stipulating when vacation time must be granted, and in lieu of such a provision, the following shall be substituted: "The scheduling of time off for vacation shall be arranged by mutual agreement between the Contractor and the employee";

d) Pay in lieu of Holidays and any provisions requiring the transferring and observing of the Holiday on a day, other than the day on which the Holiday falls (subject to the restrictions set out in Section 10.2.1);

e) Registered and trusteed pension and health and welfare plans (subject to the restrictions set out in Section 10.2.2);

f) Callout provisions;

g) Rest provisions between shifts;

h) Personal effects insurance provisions;

i) Provisions governing welding and other special trade related tests;

j) Safety clothing;

k) tool lists and provisions governing loss of such tools on the Project.

l) The following trusteed plans, each of which shall be subject to the restrictions set out in Section 10.2.3:

   i) building fund;

   ii) trade improvement plans including educational and apprenticeship funds;

   iii) industrial promotion funds.

m) The time period between Isolation Leaves (subject to the restrictions of Article 19.2.1.3);

n) Travel time associated with the taking of an Isolation Leave, and the hourly rate at which travel time will be paid (subject to the restrictions set out in Section 10.2.4).

10.2.1 A Holiday set out in Article 17 may be observed on a day, other than the day on which it falls, provided the Holiday falls on a Saturday or Sunday which is a non-working day, in which case the Holiday may be observed on the closest following working day. The transferring of a Holiday shall not apply to any employee who is on Christmas Leave, Isolation Leave or any other type of Leave of Absence when the Holiday occurs.

10.2.2 The Contractor's contribution to any pension and health and welfare plan may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for Contractors in respect of straight time hours.

10.2.3 The Contractor's contribution to any of the plans referred to in Section 10.2(l) may be applied on a per hour worked basis; however, the Contractor's contribution rate in respect of overtime hours shall not be greater than the required contribution rate for contractors in respect of straight time hours.

10.2.4 Travel time may only apply to the return portion of an Isolation Leave trip (i.e. from the employee's T.D.P. to the Project Camp Site). The amount of travel time to be paid shall not be greater than the travel time set out in Articles 19.1.2.5.1, 19.1.2.5.2 and 19.1.2.5.3, as may be applicable. The hourly rate at which travel time may be paid shall not be greater than the employee's straight time rate. Payment of travel time shall be in accordance with the provisions of Article 19.1.2.6.

10.3 Notwithstanding anything contained in this Agreement or in this Appendix, the regular hours of work are not subject to adjustment during the life of this Agreement, and such regular hours of work shall be paid at regular rates of wages. Further, overtime payments at a rate greater than time and one-half will not be introduced in this Appendix in respect of the first two (2) hours of overtime, Monday to Friday inclusive.

10.4 The provisions of 10.1 and 10.2 above shall be dealt with by following the procedure set out in Article 30 of this Agreement.

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 1- Special Employment Measures for Specific Projects

Subject: Implementation of Special Employment Measures for Specific Projects

Whereas:

a) During 2000 and 2001, Manitoba Hydro signed Agreements in Principle (AIPs) with certain First Nations living in the vicinity of the proposed Wuskwatim Generating Station on the Burntwood River and the proposed Gull (Keeyask) Generating Station on the Nelson River and, based on the principles in each AIP, is proceeding to develop Project Development Agreements (PDAs).

b) Each PDA will address, amongst other things, matters related to construction and ownership of the relevant generating station and will identify any special measures to be implemented during construction to facilitate the employment, training and retention of First Nations members and other Northern Aboriginals.

c) PDAs may also be utilized in respect of the development of other new generating stations on the Nelson and Burntwood Rivers, including Notigi. At this time, the sequence and timing of such projects has not been finalized.

d) The signing of any PDA may occur subsequent to the signing and/or effective date of a renewed BNA.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. The Association will notify the Council, in writing, of the particulars respecting any employment related matters referenced in a PDA which:

    a) Address referral, recruitment or placement procedures, retention, and/or on-the-job training provisions, and;

    b) Are adjudged by the Association to be in conflict with existing BNA provisions and accordingly, would require an amendment to the BNA in order to be implemented.

2. Within 20 calendar days of the date of notification as provided above, the Association and the Council will arrange to meet and draft a mutually acceptable, project-specific Letter of Agreement, and the Parties further endeavor to finalize and sign the Letter of Agreement within a further period of 30 calendar days measured from the date of the initial meeting.

3. The Association and the Council will participate, if requested, in any meetings or committees established by Manitoba Hydro to discuss, renew, or assess any of the special measures intended for Northern Aboriginals. In the event meetings are held outside of Winnipeg, the Association shall be responsible for reasonable travel and accommodation expenses incurred by Council representatives.

4. The Association shall defend and indemnify the Council from and against any costs arising from a suit or proceeding that is attributable to special employment measures for Northern Aboriginals as set out in the Collective Agreement or a Letter of Agreement thereto. However, the Association shall have the right to assume full control of any action initiated against either the Association or the Council, or both, including the appointment of legal counsel.

5. The Parties recognize that Article 1.2 enables the Parties to amend any provision in the BNA at any time.

Agreed to this 7th day of October 2005

Allied Hydro Council of Manitoba	Hydro Projects Management Association

D. Martin	D. E. Rogalsky

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 2 - Transfer of Day Off From Sunday to Saturday

Subject: Transfer of Day Off From Sunday to Saturday.

Whereas the Association and the Council are desirous of amending the Agreement to enable those employees working the second and/or night shift to have a more appropriate night off with a view to enhancing social, recreational and other aspects of camp life.

Now therefore, the Association and the Council hereby agree as follows:

1. Subject to (3) below, the Contractor may advance the commencement of the work week for such employees from Monday to Sunday and pay for work performed on Sunday as if it had been performed on Monday and so on, with the result that Saturday would become the normal day of rest. If such an arrangement is initiated and an employee is requested to work on Saturday, such work shall be paid for as if the work was performed on Sunday, except as noted in (2) below.

2. During the calendar work week in which the arrangements set out in (1) above are introduced or discontinued, work on Saturday of that work week shall be paid for as set out in the Appendices of the B.N.A. and work on Sunday of that work week shall be treated as set out in (1) above.

3. Implementation of the foregoing modifications to the work week shall be contingent on:

    a) The Contractor agreeing to such modifications, and;

    b) The Council advising the Contractor that the majority of employees employed by that Contractor are in agreement with such modifications.

4. If the modification to the work week is to be implemented, it shall apply to all applicable shift employees of that Contractor. Further, but subject to (3) above, if a prime Contractor has engaged any Subcontractors, the prime Contractor will encourage such Subcontractors to adopt its work week arrangements.

5. If the modifications to the work week are found to be appropriate, the Association and the Council will promote and encourage its continuance from year to year.

6. If the modifications to the work week are found to be inappropriate, the Council, on behalf of the employees of a Contractor or the Association, on behalf of a Contractor Member, shall advise the other in writing in which case the work week shall be adjusted to be consistent with provisions in the Applicable Appendix of the B.N.A. and this adjustment shall be effected within fifteen (15) working days measured from the date the notification is received.

Agreed to this 7th day of October 2005

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 3 - Security Guards Union Affiliation

Subject: Security Guards - Union Affiliation and Related Matters

Whereas the Association and the Council have agreed that security guards employed on the Project and covered by the Burntwood/Nelson Collective Agreement shall be affiliated with a member Union of the Council.

And Whereas, the Association and the Council have agreed that security guards shall be members of the Labourers' International Union of North America and Local 1258 of this International Union (hereinafter called the 'Union') and will be covered by Appendix 1a of the Collective Agreement.

And Whereas, the Association, the Council and the Union are desirous of prohibiting any impact on the duties of security guards in their employment by virtue of provisions of Constitutions, By Laws, rules or agreements of the Union;

Now Therefore in consideration of the foregoing and the covenants hereinafter set forth, the Association, the Council and the Union hereby agree as follows:

1. The Executive Board of Local Union 1258 and the General Executive Board of the International Union shall not process a charge laid by a union member or officer under the Constitution, By Laws, rules or agreements of the union in respect of the performance of the assigned employment duties of the security guards.

2. Union business and the servicing of Union members shall be conducted separately in respect of employees covered by Appendix No. 1 and Appendix No. 1a.

3. Notwithstanding any provision in the Collective Agreement to the contrary, the Union and the Council shall not require a Contractor to terminate the employment of any security guard by reason of loss of membership in the Union unless such loss of membership is by the employee's own request.

Agreed to this 7th day of October 2005

Allied Hydro Council of Manitoba	Hydro Projects Management Association
G. Bentley	T. Moffat
D. Martin	D. E. Rogalsky

With the concurrence of:

Labourers' International Union of North America and Local Union 1158 of this International Union

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 5 - Adjustment of Isolation Leave Frequency

Subject: Provisions for the Review and Adjustment of Isolation Leave Frequency Set out in Article 19.2.1.1 and 19.2.1.3

1. During the months of January, 2011, January, 2014, and January, 2017, Isolation Leave (Return Transportation Time Periods) provisions in agreements being used for reference purposes for Appendices 2, 4, 4a, 10, 11, 12, 13, 14, and 14a will be reviewed by the Joint Appendix Review Committee. If the frequency of Isolation Leave in not less than two thirds (2/3) of the said agreements being used for reference purposes is 30 calendar days or less on either a first or second tour of duty, then the following sub-articles of Article 19 shall be amended to read as follows:

   19.2.1.1 Frequency When Isolation Leave Frequency Is Not Stipulated In An Appendix

   An employee working on the Project who is covered by an Appendix which does not stipulate Isolation Leave frequency shall have the option of taking an Isolation Leave after forty (40) calendar days from the commencement of his first tour of duty, and after thirty-five (35) calendar days from the commencement of each consecutive tour of duty thereafter. An employee who resigned or was laid-off or discharged and then is re-hired shall be considered to be serving his first tour of duty.

   19.2.1.3 Limitation Relative to Frequency of Isolation Leaves

   Notwithstanding any other provisions set out in this Agreement, the time period between Isolation Leaves may be greater than but shall not be less than thirty-five (35) calendar days from the commencement of an employee's first tour of duty, and thirty (30) calendar days from the commencement of each consecutive tour of duty thereafter. An employee who resigned or was laid-off or discharged and then is re-hired shall be considered to be serving his first tour of duty.

2. Any amendments arising from the application of paragraph 1 above shall be effective on March 1, 2011, March 1, 2014, or March 1, 2017, as the case may be, and will apply to tours of duty which commence on or after the said date.

3. Should the Joint Appendix Review Committee be unable to agree on any matter set out in paragraph 1 above, the procedure set out in Article 31 shall be followed.

Agreed to this 7th day of October 2005

Allied Hydro Council of Manitoba	Hydro Projects Management Association
G. Bentley	T. Moffat

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 6 - Radiography Work

Subject: Radiography Work

Whereas the Council and the Association are desirous of amending the Agreement to establish wage rates and other conditions of employment for employees of Contractors performing radiography work which is not otherwise excluded from this Agreement by virtue of Article 2.2(l) i;

Now therefore the Parties hereby agree as follows:

1. Prior to the arrival of the said employees on the Project, the Joint Appendix Review Committee shall meet and establish wage rates and other conditions of employment.

2. In the event the Joint Appendix Review Committee are unable to agree on wage rates and other conditions of employment, the procedure set out in Article 3l shall be followed.

Agreed to this 7th day of October 2005

BURNTWOOD / NELSON AGREEMENT

Letter of Agreement No. 8 - Scaffolding Specialist Contractors

Revised April 4, 2019

Subject: Scaffolding Specialist Contractors

Whereas the Council has advised the Association that in the event that a sub-contract is awarded to a scaffolding specialist contractor for erecting scaffolding, an additional classification may be required in Appendix 4 (Carpenters).

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. If a sub-contract is awarded to a scaffolding specialist contractor, at the request of either party, the Joint Appendix Review Committee shall meet under the provisions of Article 28 to determine if an additional classification is required. In addition, if it is agreed that a new classification should be established, the Joint Appendix Review Committee shall also consider the introduction of height premium provisions for this classification, if such provisions are unique to this classification.

2. The following amendments will be made to Appendix 4, section 12.1

   12.1 Wage Rate Provisions

   The wage rate for the Carpenter classifications set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the United Brotherhood of Carpenters and Joiners of America, Local Union 343 and the Construction Labour Relations Association of Manitoba.

   The wage rate for the Industrial Scaffolder classification set out in this Appendix will be adjusted by an amount equal to and effective on the dates of any adjustments in wage rates for corresponding classifications which may be negotiated from time to time by the United Brotherhood of Carpenters and Joiners of America, Local Union 343 and the Signatory Scaffold Contractors in Manitoba.

   Initially agreed to this 7th day of October 2005, and the revision on this 4th day of April 2019.

BURNTWOOD / NELSON AGREEMENT

Letter of Agreement No. 10 - Teamsters - Introduction of Pension Plan

Subject: Appendix No. 3 - Teamsters - Introduction of Pension Plan

Whereas the Council has advised the Association that Local Union 979 has established a pension plan in which the employees covered by Appendix No. 3 are eligible to participate;

And whereas written verification has been forwarded to the Association and the Council confirming that Trust Agreements have been executed and registered;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. Appendix No. 3 of this Agreement is hereby amended to delete the following from Section 7 (B):

"Provided:

(a) Local Union 979 establishes a pension plan in which employees covered this Appendix are eligible to participate.

(b) written verification is forwarded to the Association and the Council by the Board of Trustees of the plan confirming:

i) proviso (a), above

ii) that Trust Agreements have been executed and registered,a pension plan will be introduced into this Appendix on the basis that the Contractor's contribution rate to such a plan may be less than but shall not exceed two dollars and thirty-five cents ($2.35) per hour worked. At the time of introduction of the pension plan, the hourly rates for all classifications in this Appendix shall be reduced by the amount the Contractor's contribution to the said plan exceeds the sum of two dollars and thirty-five cents ($2.35).

Subject to the foregoing, at the option of the Council, contributions to the plan shall be made up by employee contributions or a combination of Contractor and employee contributions. The Council shall advise the Association of the required Contractor and/or employee contributions at the time the plan is established.

Pension plan contributions shall be subject to adjustments, however all contributions shall continue to be made as outlined above and the effective date of such adjustments shall correspond to an effective date of changes to wages (See Section 9.3). Further, for all adjustments, the hourly rates for all classifications in this Appendix shall be reduced by the full amount of Contractor's contribution [not less the sum of two dollars and thirty-five cents ($2.35) or any other amount]."

2. Appendix No. 3 of this Agreement is hereby further amended to add the following to Section 7 (B):

"The Contractor on behalf of each employee, and each employee covered by this Appendix shall respectively contribute the amounts set out below to the Teamsters, Local 362 Pension Plan. Contributions shall apply to all hours worked. Employee contributions shall be collected at the source as a payroll deduction.

The Contractor's contribution shall be:

- Effective March 1, 2007, $2.35 per hour.

The employee's contribution shall be: nil.

Submission of Trust Funds

The Contractor shall forward the above Trust Fund contributions to the designated Administrator of the Plan on or before the fifteenth day (15th) of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded."

3. Appendix No. 3 of this Agreement is hereby further amended by deleting the word "a" between the words "and" and "pension" and deleting the words "[see Section 7 (B)]" in Section 9.3.1 such that Section 9.3.1 will now read:

"Subject to the conditions set out below, Health and Welfare and Pension contributions shall be adjusted to be consistent with contributions required in respect of Members of Local 979 covered by this Appendix and participating in the Teamsters Local 362 Health and Welfare Plan and Pension Plan."

BURNTWOOD / NELSON AGREEMENT

Letter of Agreement No. 23 – Keeyask specifics

BETWEEN:

HYDRO PROJECTS MANAGEMENT ASSOCIATION
(hereinafter referred to as the "Association")

OF THE FIRST PART

- and -

ALLIED HYDRO COUNCIL OF MANITOBA
(hereinafter referred to as the "Council")

OF THE SECOND PART.

Letter of Agreement No. 23

Subject: Special Measures for the Keeyask generating station project (the "Project")

WHEREAS on October 7, 2005 the Association and the Council entered into a renewed and revised Collective Bargaining Agreement commonly known as the Burntwood/Nelson Agreement (hereinafter referred to as the "BNA").

AND WHEREAS the Association and the Council recognize that the Project will be owned by a unique partnership (hereinafter called the "Limited Partnership"), consisting of a wholly owned subsidiary of Manitoba Hydro, as general partner, and Manitoba Hydro, and an investment entity owned by Tataskweyak Cree Nation and War Lake First Nation, and investment entities owned by either or both of York Factory First Nation and Fox Lake Cree Nation, as limited partners;

AND WHEREAS in entering into the BNA, the Association and the Council recognized in Letter of Agreement No. 1 that specific projects undertaken under the BNA, and in particular, the Gull (Keeyask) Project, will require, in a project development agreement, special measures to be implemented during construction to facilitate the employment, training, and retention of First Nations members and other Northern Aboriginals which measures might be in conflict with existing BNA provisions relating to referral, recruitment or placement procedures, and/or on-the-job training provisions, and would require an amendment to the BNA in order to be implemented.

AND WHEREAS the Association and Council recognize that the Project will be built in the Split Lake Resource Management Area, in the vicinity of the Tataskweyak Cree Nation, War Lake First Nation, York Factory First Nation and Fox Lake Cree Nation (hereinafter referred to as the "**KCN**");

AND WHEREAS the Association and the Council recognize that 25% of the new entrants to the Manitoba labour force are estimated and expected to be Aboriginal people;

AND WHEREAS the Council and the Association recognize that recruitment, referral, placement, training and retention of Aboriginal employees on the Project as members of the Trade Unions comprising the Council is in their mutual and best interest;

AND WHEREAS the Association and the Council recognize that a successful Aboriginal employment strategy requires Aboriginal input and strategic alliances with Aboriginal organizations in its design and implementation and such an employment strategy must recognize and address important Aboriginal cultural issues at all stages in the recruitment, referral, placement, training and retention process;

AND WHEREAS the Council and the Association recognize that a necessary first step towards achieving positive employment outcomes lies in developing qualified Aboriginal employees in an appropriate learning environment and by providing active on-the-job experience as employee and management representatives on a major project;

AND WHEREAS the success of a recruitment, referral, placement, training and retention strategy for Aboriginal employees requires a reliable and accurate selection process that identifies and hires qualified candidates for appropriate positions;

AND WHEREAS the Association and the Council agree that a successful retention strategy for Aboriginal employees requires an inclusive workplace for Aboriginal employees;

NOW THEREFORE to this end, the Association and the Council hereby agree to amend the BNA, in relation to the Gull (Keeyask) Project only, as follows:

1. The Association membership will include the Limited Partnership for the purposes of Article 3.4 of the BNA.

2. The KCN shall appoint two representatives from their communities (one from Tataskweyak Cree Nation or War Lake First Nation, and one from York Factory First Nation or Fox Lake Cree Nation) to the Project site (hereinafter referred to as the "**Keeyask Site Representatives**") as advisors to the resident Site Manager/Engineer. The Keeyask Representatives shall report to the resident Site Manager/Engineer while on the site, but otherwise shall report to the KCN. The Keeyask Representatives shall be entitled to receive reasonable notice of and to attend pre-job meetings and meetings of any Committee constituted under the BNA for the purposes of the Project in an advisory, non-voting capacity.

3. The Council agrees to appoint a representative to the Advisory Group on Employment (hereinafter called the "AGE") to attend its meetings and to participate in the AGE in accordance with its terms of reference.

4. The Association shall fund the hiring by the Council of an Aboriginal union representative whose function will be to work under the direction of the Council's site representative and within the scope and intent of the AHC mandate for the purposes of, among other things, facilitating union interactions with Aboriginal employees, assisting Aboriginal employees in matters related to discipline directly affecting Aboriginal employees, including assisting with the initiation and advocacy of grievances on behalf of an aggrieved Aboriginal employee, liaising with the major contractors' human relations representatives, liaising with the Keeyask Representative, participating in the AGE and liaising with the Project's third-party retention support provider. One representative of CNP and one representative of both Fox Lake and York Factory will be entitled to participate in the selection process for the hiring of the individual, although the final decision for such hiring will rest with the AHC.

5. The parties agree that no person covered by the BNA shall be subject to discrimination or harassment on the basis of any characteristic referred to in subsection 9(2) of the Human Rights Code of the Province of Manitoba.

   The following procedure shall apply regarding claims of discrimination or harassment:

   (a) The complainant shall contact the site representative of the Council or the Council's Aboriginal representative with the particulars of the complaint. The appropriate Council representative shall forthwith speak to the appropriate representative of the contractor to resolve the complaint;

   (b) If the complaint is not resolved to the satisfaction of the complainant, the site representative of the Council shall forthwith contact the site representative of the Association, in writing, outlining the particulars of the complaint. The two site representatives shall then jointly investigate the complaint, utilizing the assistance of anyone they deem appropriate. Once the investigation is complete, each site representative shall issue a report containing their respective findings and recommendations for actions by the contractor. If the findings and recommendations are the same, they may issue the report jointly;

   (c) Discrimination and harassment complaints shall be governed solely by the above procedures and shall not be subject to Grievance/Arbitration. If the above procedures do not resolve the complaint to the satisfaction of the complainant, his/her recourse shall be to the Human Rights Commission under the *Human Rights Code*.

6. An employee may request June 21st off, without pay, in order to celebrate Aboriginal Solidarity Day. The employee shall make the request, in the manner prescribed by the contractor, at least five calendar days prior to June 21st. The request shall be granted unless, in the opinion of the contractor, the job is required to maintain essential services or complete critical activities. Where the request is granted, the employee will not forfeit any time toward his next isolation leave.

7. The parties acknowledge that the Limited Partnership intends to contract with a third-party service provider to provide retention support services to Aboriginal employees on the Project, both on the job site and in the camp site. These services must be provided without interfering with the progress of work on the Project and in compliance with camp site and safety rules.

8. The parties wish to maximize the number of Aboriginal apprentices and trainees and provide them with an opportunity to complete their apprenticeship or training program. The Association and the Council agree that where practical, contractors and their subcontractors shall combine journeypersons/non-trainees on related subcontracts, so that sufficient journeypersons/non- trainees will be available to permit the maximum number of apprentices/trainees pursuant to the applicable journeypersons/non-trainees to crew ratio stipulated in each Appendix to the BNA, for both designated trades and non-designated trades and services.

9. The Council shall encourage its member unions to approach and recruit Aboriginal apprentices, trainees, and journeypersons to be referred for employment on the Project by the member unions where applicable.

10. The parties agree to discuss and review the journeypersons to apprentice/trainee ratios set out in the Appendices to the BNA. Where agreed, in consultation with the KCN, the Association, the Council, the affected Union and the affected contractor will make joint representations to the Province of Manitoba to adjust apprentice ratios in order to maximize the development of Aboriginal employees in the designated trades.

11. Union site representatives will be required to take appropriate cross-cultural sensitivity and awareness training.

12. Notwithstanding the provisions of Article 13.2 to 13.7 inclusive, all candidates who are members of a KCN, are residents of Manitoba, and are registered with the Province of Manitoba (as the job placement and referral agency for the Project) shall be deemed to be Northern Aboriginals residing within the Churchill/Burntwood/Nelson River Area as described in Article 12.1.1.3(a).

13. In the event of a conflict between this Letter of Agreement and the terms of the Burntwood Nelson Collective Agreement, the terms of this Letter of Agreement shall prevail.

Dated at the City of Winnipeg, in the Province of Manitoba, this 24th day of July, 2009.

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 26 - Adjustment of Isolation Leave

Subject: Adjustment of Isolation Leave Frequency Set out in Article 19.2.1.1 and 19.2.1.3.

Whereas Letter of Agreement No. 5 provided for the review of Isolation Leave (Return Transportation Time Periods) in agreements being used for reference purposes for Appendices 2, 4, 4a), 10, 11, 12, 13, 14, and 14a) during the month of January, 2011;

And Whereas the frequency of Isolation Leave in not less than two thirds (2/3) of the said agreements being used for reference purposes was determined to be 30 calendar days or less on either a first or second tour of duty;

Now therefore, in accordance with the provisions of the said Letter of Agreement No. 5, the Association and the Council hereby amend the following sub-articles of Article 19, effective as of March 1, 2011, to the following:

1. 19.2.1.1 Frequency When Isolation Leave Frequency Is Not Stipulated In Appendix

An employee working on the Project who is covered by an Appendix which does not stipulate Isolation Leave frequency shall have the option of taking an Isolation Leave after forty (40) calendar days from the commencement of his first tour of duty, and after thirty-five (35) calendar days from the commencement of each consecutive tour of duty thereafter. An employee who resigned or was laid-off or discharged and then is re-hired shall be considered to be serving his first tour of duty.

19.2.1.3 Limitation Relative to Frequency of Isolation Leaves

Notwithstanding any other provisions set out in this Agreement, the time period between Isolation Leaves may be greater than but shall not be less than thirty-five (35) calendar days from the commencement of an employee's first tour of duty, and thirty (30) calendar days from the commencement of each consecutive tour of duty thereafter. An employee who resigned or was laid-off or discharged and then is re-hired shall be considered to be serving his first tour of duty.

2. The amendments arising from the application of paragraph 1 above shall be effective on March 1, 2011, and will apply to tours of duty which commence on or after the said date.

Agreed to this 31st day of January, 2011.

Hydro Projects Management Association	Allied Hydro Council of Manitoba Hydro

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 27 - Isolation Leave Frequency

Subject: Keeyask and Keewatinoow - Article 19 Isolation Leave Frequency, Travel Time Associated with Isolation Leaves, and Travel Costs Associated with the Transportation Departure Point (T.D.P) c)

Whereas the Association and the Council have discussed Isolation Leave frequencies and Travel Costs found within Article 19 of the Burntwood Nelson Agreement in light of a potential shortage of workers which may occur from time to time on the Keeyask and Keewatinoow projects;

And whereas they have concluded that, in order to secure job qualified workers the Isolation Leave and Travel costs need to be enhanced for the duration of the Keeyask and Keewatinoow projects;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree that for the duration of the Keeyask and Keewatinoow projects:

1.) Articles 19.2.1.1, 19.2.1.2 shall be amended and read as follows:

Article 19.2.1.1 Frequency When Isolation Leave Frequency is Not Stipulated in an Appendix

An employee working on the Project who is covered by an Appendix which does not stipulate Isolation Leave frequency shall have the option of taking an isolation leave after twenty one (21) calendar days from the commencement of his first and each subsequent tour of duty.

Article 19.2.1.2 Frequency When Isolation Leave Provisions are Set Out in an Appendix

An employee working on the Project who is covered by an Appendix which stipulates Isolation Leave frequency shall have the option of taking an isolation leave after twenty one (21) calendar days from the commencement of his first and each subsequent tour of duty.

2.) The operation of Article 19.2.1.3 will be suspended for the duration of this Letter of Understanding;

3.) The minimum number of unpaid working days granted as isolation leave under Article 19.2.1.5 shall be amended from six (6) to seven (7).

4.) Article 19.2.4 shall be amended and read as follows:

19.2.4 Travel Time Associated with Isolation Leaves

Travel time shall only apply on the return portion of an Isolation Leave trip (ie from the employee's T.D.P. to the Project Camp Site).

The amount of travel time to be paid shall be in accordance with the provisions of Article 19.1.2.5.1 or 19.1.2.5.2, as the case may be, and if applicable, the provisions of Article 19.1.2.5.3.

Travel time shall be paid at the employee's straight time rate, and an employee shall receive such payment pursuant to the provisions of Article 19.1.2.6.

5. The definition of "T.D.P. or Method of Determining T.D.P." shall be amended at item c) to read as follows:

> c) Where a person's normal place of residence at time of hire or rehire is located outside of Manitoba: the Canadian city serviced by an international airport which is closest to a person's normal place of residence, except if that person's normal place of residence is located in a province or territory adjacent to Manitoba and is closer to a T.D.P. located within the area described in b) above, in which case the closest T.D.P. will be utilized.

6. The operation of article 19.1.2.3 (Maximum travel costs payable) is suspended.

7. These amendments shall take effect August 4, 2013;

Agreed to this 17 day of July, 2013.

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 28 - Emergency Medical Classifications

Subject: Emergency Medical Classifications Found Within Appendix 15

Whereas the Association and the Council have discussed the specialized skills and accreditation of the Medical Classifications found within Appendix 15 of the Agreement;

And whereas there is a provincial requirement to provide a standard level of medical care on the Projects covered by the Agreement;

It has been determined that the classifications of First Aid Attendant, Emergency Medical Responder and Primary Care Paramedic have those specific accredited skills that meet the provincial requirement;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree to amend the Agreement as follows:

2.7.1 Notwithstanding any other provision of this Agreement, the provisions of Article 12.1 may be waived by the Emergency Medical and Ambulance Services (EMS) Contractor when hiring First Aid Attendant, Emergency Medical Responder and Primary Care Paramedic, except the Emergency Medical and Ambulance Services (EMS) Contractors shall advise the Council of the names of the persons hired within three (3) working days.

Agreed to this 23 day of April, 2014

BURNTWOOD / NELSON AGREEMENT

Letter of Agreement No. 29 – Addition of Journeyperson Lineman

Subject: Introduction of Appendix 13 a) - Journeyperson Lineman/Cable Splicer and Associated Collector Line Trades

Whereas the Association and the Council have discussed establishing the classification of Journeyperson Lineman/Cable Splicer and Associated Collector Line Trades.

And whereas they have concluded that establishing such a classification is warranted and necessary;

And whereas they have agreed on wage rates and other conditions of employment for Journeyperson Lineman/Cable Splicer and Associated Collector Line Trades,

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. Contracted on-site construction work associated with the installation of collector lines ("the work") shall be covered by the terms and conditions of the Burntwood/Nelson Agreement except as hereinafter stated. The work shall be under the jurisdiction of the I.B.E.W., Local 2085 and the I.U.O.E. Local 987.

2. Article 4 of the Burntwood/Nelson Agreement will not apply to the work, however the contractor, prior to the commencement of the work, shall hold a pre-job conference, attended by representatives of the Council and the Association, to advise all parties of the contractor's work plan.

3. Appendix 13 a), Journeyperson Lineman/Cable Splicer and Associated Collector Line Trades, Attachment 1 to this Letter of Agreement No. 29, shall be established and added to the Agreement;

4. Letter of Agreement 7 – Application of the BNA to work Associated with the Construction of Collector Lines, shall be removed from the Agreement;

5. Crane Operators doing the work shall be covered by Appendix 2 Crane Operators, and Heavy Duty Equipment Operators, Light Equipment Operators, Heavy Duty Mechanics and Servicepersons doing the work shall be covered by Appendix 2a Equipment Operators.

Agreed to this 23 day of May, 2014:

Allied Hydro Council of Manitoba	Hydro Projects Management Association
D. Martin	J. Peterson
	G. Schick

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 30 - Blasters and Drillers compensation

Subject: Burntwood Nelson Agreement – Blasters and Drillers (Appendix 1)

Whereas the Association and the Council have discussed the availability of job qualified workers in certain Burntwood Nelson Agreement (BNA) Classifications;

And whereas they have concluded that there is a shortages of job qualified workers in the below Classifications and the present wage rates in those Classifications need to be enhanced in order to attract and retain job qualified workers;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree to the following for the remainder of the Keeyask and Keewatinohk Projects:

1. Effective October 15, 2014, the wage rate for the following classifications in Appendix 1, Labourers, shall be enhanced to the following:

	April 1, 2015	May 1, 2015
Blaster (with Provincial Blaster Certificate)	$30.00	$30.85
Powderman	$29.65	$30.49
Drillers (Diamond, Wagon & Air Track Etc.)	$29.65	$30.49

Agreed to this 17___day of March, 2015.

Sudhir Sandhu — Jason Peterson

Victor DaSilva — Rob Elder

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 31 - COPE - Health and Welfare Trust Fund

Subject: Appendix No. 15 - COPE - Introduction of Health and Welfare Trust Fund

Whereas the Council has advised the Association that Local Union 342 has established a Health and Welfare plan, in which the employees covered by Appendix No. 15 are eligible to participate;

And whereas written verification has been forwarded to the Association and the Council confirming that Trust Agreements have been executed and registered;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

4. Appendix No. 15 of this Agreement is hereby amended to delete the following from Section 8:

   Provided:

   a) The Local Union to which employees covered by this Appendix belong establishes a health and welfare plan and/or a pension plan in which employees covered by this Appendix are eligible to participate;

   b) Written verification is forwarded to the Association and the Council by the Board of Trustees of each plan confirming:

      i) Proviso (a), above;

      ii) That Trust Agreements have been executed and registered.

   A health and welfare plan and/or a pension plan will be introduced into this Appendix on the following basis:

   - at the time of introduction of the health and welfare plan and/or the pension plan, the hourly rates for all classifications in this Appendix shall be reduced by the amount of the contractor's contribution to the said plan or plans, less the sum of twenty cents. At the option of the Council, contributions to the plan or plans shall be made up by employee contributions or a combination of contractor and employee contributions. The Council shall advise the Association of the required contractor and/or employee contributions at the time the plan or plans are established.

5. Appendix No. 15 of this Agreement is hereby further amended to add the following to Section 8:

Provided:

a) The Local Union to which employees covered by this Appendix belong establishes a pension plan in which employees covered by this Appendix are eligible to participate;

b) Written verification is forwarded to the Association and the Council by the Board of Trustees of each plan confirming:

i) Proviso (a), above;

ii) That Trust Agreements have been executed and registered.

A pension plan will be introduced into this Appendix on the following basis:

- at the time of introduction of the pension plan, the hourly rates for all classifications in this Appendix shall be reduced by the amount of the contractor's contribution to the said plan or plans, less the sum of twenty cents. At the option of the Council, contributions to the plan or plans shall be made up by employee contributions or a combination of contractor and employee contributions. The Council shall advise the Association of the required contractor and/or employee contributions at the time the plan or plans are established.

The contractor on behalf of each employee, and each employee covered by this Appendix, shall respectively contribute the amounts set out below to the Canadian Office and Professional Employees (COPE) union, local 342, Health and Welfare Trust Fund. Contributions shall apply to all hours worked (regular and overtime). Employee contributions shall be collected at the source as a payroll deduction.

The contractor’s contribution shall be:

Effective May 17, 2015 $0.20 per hour

The employee’s contribution shall be:

Effective May 17, 2015 $0.80 per hour

Submission of Trust Funds

The contractor shall forward the above Trust Fund contributions to the designated Administrator of the Plan on or before the fifteenth (15th) day of each month following the month in which contributions were made.
A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

Agreed to this 15th day of May, 2015.

Hydro Projects Management Association	Allied Hydro Council
Angie Adams	Sudhir Sandhu
Jason Peterson	Dustin Czmola

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 32 – Security guard compensation

Subject: Burntwood Nelson Agreement – Security Guards (Appendix 1A)

Whereas the Association and the Council have discussed the availability of job qualified workers in certain Burntwood Nelson Agreement (BNA) Classifications;

And whereas they have concluded that there is a shortage of job qualified workers in the below Classification and the present total compensation in that Classification needs to be enhanced in order to attract and retain job qualified workers;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree to the following for the remainder of the Keeyask and Keewatinohk Projects:

1. Effective November 15, 2015, the wage rate for the following classification in Appendix 1A, Security Guards (other than trainees), shall be enhanced to the following:

Effective date	Starting Rate	Rate after 90 Days
November 15, 2015	$16.76	$17.42

And whereas the Council has advised the Association that Local Union 1258 has established Health and Welfare and Pension plans, in which the employees covered by Appendix No. 1A are eligible to participate;

And whereas written verification has been forwarded to the Association and the Council confirming that Trust Agreements have been executed and registered;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

6. Appendix No. 1A of this Agreement is hereby amended to delete the following from Section 11:

Provided:

a) The Local Union to which Security Guards belong establishes a health and welfare plan and/or a pension plan in which employees covered by this Appendix are eligible to participate.

b) Written verification is forwarded to the Association and the Council by the Board of Trustees of each plan confirming;

i) Proviso (a), above;

ii) That Trust Agreements have been executed and registered.

A health and welfare plan and/or a pension plan will be introduced into this Appendix on the following basis:

- At the time of introduction of the health and welfare plan and/or the pension plan, the hourly rates for all classifications in this Appendix shall be reduced by the amount of the contractor's contribution to the said plan or plans. At the option of the Council, contributions to the plan or plans shall be made up by employee contributions or a combination of contractor and employee contributions. The Council shall advise the Association of the required contractor and/or employee contributions at the time the plan or plans are established.

- Pension and/or health and welfare contributions shall be subject to adjustments, however all contributions shall continue to be made as outlined above and the effective date of such adjustments shall correspond to an effective date of changes to wages (See Section 12.1).

7. Appendix No. 1A of this Agreement is hereby further amended to add the following to Section 11:

Trust Funds

Pension Plan

The contractor on behalf of each employee, and each employee covered by this Appendix, shall respectively contribute the amounts set out below to the Plan Administrator. Contributions shall apply to all hours worked (regular and overtime). Employee contributions shall be collected at the source as a payroll deduction

The Contractor's contribution shall be:

Effective	November 15, 2015	$0.50 per hour

The Employee's contribution shall be:

Effective	November 15, 2015	$0.50 per hour

Health & Welfare

The contractor on behalf of each employee, and each employee covered by this Appendix, shall respectively contribute the amounts set out below to the Plan Administrator. Contributions shall apply to all hours worked (regular and overtime). Employee contributions shall be collected at the source as a payroll deduction

The Contractor's contribution shall be:

Effective	November 15, 2015	$0.60 per hour

The Employee's contribution shall be:

Effective	November 15, 2015	$0.60 per hour

Submission of Trust Funds

The Contractor shall forward the above Trust Fund contributions to the designated Administrators of each plan on or before the fifteenth day (15th) of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded

Agreed to this 15th day of June, 2015.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 33 – Telebelt operator classification

Subject: Burntwood Nelson Agreement – Introduction of Classification to Appendix 2 Crane Operator – Telebelt Operator

Whereas the Association and the Council have discussed establishing the classification of Telebelt Operator.

And whereas they have concluded that establishing such a classification is warranted and necessary;

And whereas they have agreed on wage rates and other conditions of employment for a Telebelt Operator,

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. That the classification of Telebelt Operator is to be added to Appendix 2 Crane Operator – Mobile Crane Operator Class 2 50-99 ton and Class 3 100-199 ton. The wage rate will be dependent upon chassis capacity (i.e. original truck crane capacity) of the equipment.

2. Appendix shall be modified to include the following clarification
   Note: The above classifications include operators of cranes converted for the placing of concrete (creter, telebelt or similar) and cranes adapted for pile driving and foundation boring. *** For these positions a hoisting ticket and/or red seal are not required for their operation.

Agreed to this 27 day of October, 2015.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 34 – Commissioning work

Subject: Commissioning Work

WHEREAS the Association and the Council agree that commissioning activities are important to the success of project work conducted under the BNA;

Now therefore, in consideration of the foregoing, the Association and the Council agree to amend Article 2.12 of the Collective Agreement to include the following:

2.0 (i) During the commissioning process, the Contractor or the vendor of equipment or system being commissioned, may utilize non-bargaining unit employees with specific equipment or systems knowledge and/or specialized skills or abilities required for commissioning or to ensure performance guarantees and warranty obligations are maintained. Commissioning work performed by non-bargaining unit employees shall fall outside the scope of the Agreement. Bargaining unit employees required to perform commissioning work may be required to work in composite crews. Commissioning work executed by bargaining unit employees shall fall within the scope of the Agreement.

(ii) Commissioning is the process by which equipment or facility is tested to verify it functions according to its design objectives or specifications and place into service, which includes work to calibrate, introduce and or release any form of energy (examples; liquid, gas, electricity) and/or test equipment, instruments, processes, systems or a portion of the generating station, spillway structures, switchyards, converter station, electrodes, synchronous condensers or any related structures or equipment.

(iii) That any contractor or manufacturer representatives engaged to perform commissioning work satisfy the terms and provisions of the Apprenticeship Act where applicable to a trade practiced by such personnel.

(iv) It is understood that this Letter is intended to record past practice between the parties and not meant to diminish existing rights of either party.

Agreed to this 1 day of January, 2016

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 35 – Completion bonus

Subject: Completion Bonus Percentage of Base Rate

WHEREAS the Association and the Council have discussed the importance of attracting and retaining a highly skilled workforce to ensure the success of work conducted under the BNA;

Now therefore, in consideration of the foregoing, the Association and the Council agree to amend Article 14.7 of the Collective Agreement to include the following:

ARTICLE 14 – PAYMENT OF WAGES, PREMIUMS AND BONUSES

14.7 The parties agree that given the competitive labour market and the challenges of attracting and retaining a highly skilled workforce, a Completion Bonus of thirteen percent (13%) of an employees' base wage rate shall be paid subject to the following:

i. The Completion Bonus is not part of the wage package and does not attract payment of vacation pay and recognized holiday pay.

ii. The Completion Bonus will be paid for all hours worked.

iii. The Completion Bonus shall be paid accrued as follows:
   a. January 1st – March 31st
   b. April 1st – June 30th
   c. July 1st – September 30th
   d. October 1st– December 1st
   e. December 2nd – December 31st

iv. The Completion Bonus shall be paid as follows:
   a. The amount accrued between January 1st – March 30th shall be paid on the 1st payday after July 1st
   b. The amount accrued between April 1st – June 30th shall be paid on the 1st payday after October 1st
   c. The amount accrued between July 1st – December 1st shall be paid on the 1st payday after December 1st
   d. The amount accrued between December 2nd – December 31st shall be paid on the 2nd payday after December 31st
   e. All amounts owed shall be paid in full at time of layoff

v. Should an employee quit, resign or be terminated for just cause, such employee shall not be eligible for any unpaid Completion Bonus; however, should an employee be required to resign or quit as a result of a medical condition and the employee provides a medical certificate in a form

satisfactory to the Contractor, in these exceptional circumstances the Completion Bonus, subject to the approval of the HPMA and Contractor, will be paid. Further, in the event an employee is required to quit or resign for compassionate reasons, in these exceptional circumstances the Completion Bonus, subject to the approval of the HPMA and Contractor, will be paid. Approval will not be unreasonably withheld.

Agreed to this 1 day of January, 2016

Heiko Wiechern	David W. Clark

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 36 – Isolation leave frequency

Subject: Isolation Leave Frequency

The Association and Council agree to amend LOA Number 27 so that the Contractor, upon agreement of the Association and consent of the Council, which consent will not be unreasonably withheld, may choose any of the Isolation Leave Frequency options as set out below.

In the event the Council withholds consent, the Contractor may refer the matter in writing to the panel established under Article 4.8. The panel in adjudicating the dispute shall follow the procedure set out in Article 4.11(b) and the jurisdiction of the panel shall be limited to determining whether the Union has unreasonably withheld consent. Should the panel determine that the Union has unreasonably withheld consent, the Contractor may implement any of the following Isolation Leave Frequency options.

Appendix Which Stipulates Isolation Leave Frequency

i) An employee working on the Project who is covered by an Appendix which stipulates Isolation Leave frequency shall have the option of taking an Isolation Leave after twenty-one (21) calendar days from the commencement of his or her first and each subsequent tour of duty in which case the Isolation Leave shall be seven (7) days.

ii) An employee working on the Project who is covered by an Appendix which stipulates Isolation Leave frequency shall have the option of taking an Isolation Leave after twenty (20) calendar days from the commencement of his or her first and each subsequent tour of duty in which case the Isolation Leave shall be eight (8) days.

iii) An employee working on the Project who is covered by an Appendix which stipulates Isolation Leave frequency shall have the option of taking an Isolation Leave after nineteen (19) calendar days from the commencement of his or her first and each subsequent tour of duty in which case the Isolation Leave shall be nine (9) days.

Appendix Which Does Not Stipulates Isolation Leave Frequency

i) An employee working on the Project who is covered by an Appendix which does not stipulates Isolation Leave frequency shall have the option of taking an Isolation Leave after twenty-one (21) calendar days from the commencement of his or her first and each subsequent tour of duty in which case the Isolation Leave shall be seven (7) days.

ii) An employee working on the Project who is covered by an Appendix which does not stipulates Isolation Leave frequency shall have the option of taking an Isolation Leave after twenty (20) calendar days from the commencement of his or her first and each subsequent tour of duty in which case the Isolation Leave shall be eight (8) days.

iii) An employee working on the Project who is covered by an Appendix which does not stipulates Isolation Leave frequency shall have the option of taking an Isolation Leave

after nineteen (19) calendar days from the commencement of his or her first and each subsequent tour of duty in which case the Isolation Leave shall be nine (9) days.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 37 - Ability to Regularly Schedule Sundays

Subject: Ability to Regularly Schedule Sundays

WHEREAS the Association and the Council, given construction needs, agree Sunday may be a scheduled workday;

Now therefore, in consideration of the foregoing, the Association and the Council agree to amend Article 15.1 of the Collective Agreement to include the following:

15.1 Except as provided in Appendix 1.a, due to the nature of the Project, employees will normally be required, if directed, to work up to ten (10) hours per day for six (6) days per week. Unless otherwise provided in the Appendices, Sundays may be a regularly scheduled work day.

Agreed to this 1 day of January, 2016

Allied Hydro Council of Manitoba	Hydro Project Management Association
Sudhir Sandhu	Jason Peterson
Heiko Wiechern	David W. Clark

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 38 - Supplementary Workers

Subject: Utilization of Supplementary Workers

Whereas the Council and the Association are parties to the Burntwood Nelson Agreement (BNA); and

Whereas the BNA sets out the terms of conditions of employment for the workers employed for Manitoba Hydro projects; and

Whereas the Council and the Association are in agreement that Manitoba Hydro projects present significant employment opportunities for workers in Manitoba and Canada; and

Whereas the Council and the Association are committed to maintaining a competitive wage and benefits framework to attract and retain the best qualified Manitobans first and then other Canadian workers for the duration of Manitoba Hydro projects; and

Whereas the Council and the Association are committed to maintaining a positive and welcoming project environment that is conducive to attracting and retaining a qualified Canadian workforce;

Whereas the Council and the Association may, from time to time, as circumstances necessitate have dialogue and discussions to review the competitive position of BNA provisions relative to the prevailing conditions in Manitoba and other Canadian jurisdictions; and
The Council and the Association agree that the successful completion of Manitoba Hydro projects may require supplementary labour from other sources to address shortages of skilled and qualified workers;

Whereas the Association and the Council agree that the labour from supplementary sources will only be accessed if qualified Canadian workers are not available;

Now therefore, in consideration of the foregoing, the Association and the Council agree to include LOA 38 to the Collective Agreement, which will include the following:

The Association and the Council agree that should Supplementary Workers be required for employment under the Agreement, the following will apply:

a) Supplementary Workers employed by Contractor(s) on Site shall be permitted mobility from one Contractor on Site to another Contractor on Site should another Contractor on Site require the services of such Supplementary Worker, provided there are no qualified Manitoban workers or qualified Canadian workers available at the time of hire or transfer.

b) Supplementary Workers, if required, will be initially accessed from affiliate American unions, and if such unions cannot supply Supplementary Workers within

six (6) weeks, such Supplementary Workers may then be accessed from other sources.

c) Supplementary Workers will be subject to the same financial package and other terms and conditions of this Agreement as other bargaining unit members, with the exception of, if necessary, adjustment to the financial allocation of benefits, provided there is no change to the gross hourly package. Such adjustments shall be agreed upon with the applicable Local Union, and such Local Union will not unreasonably withhold their consent.

If Supplementary Workers are to be engaged form outside Canada, the Council and its member Unions will cooperate in the Temporary Foreign Worker application process, including the execution of any documents that are reasonably necessary to support an application for utilization of Temporary Foreign Workers to Employment and Social Development Canada or any other regulatory agency.

Agreed to this 1 day of January, 2016

Allied Hydro Council of Manitoba	Hydro Project Management Association
Sudhir Sandhu	Jason Peterson
Heiko Wiechern	David W. Clark

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 39 - Project Labour Management Services Agreement

*** Note – See Letter of Agreement #57, for additional information regarding Letter of Agreement 39 (Management Agreement)

Subject: Project Labour Management Services Agreement

WHEREAS the Council will be the largest supplier of skilled and support labour to contractor members of the Association for construction of Keeyask Generating Station (Keeyask) and Keewatinohk Convertor Station (Keewatinohk), collectively referred to as the Projects;

AND WHEREAS the Association will depend on the efficient supply of qualified labour primarily from members of the Council;

AND WHEREAS the Association and the Council share a mutual interest in the successful and timely completion of the Projects;

AND WHEREAS the Association will require support from the Council in addressing significant project issues such as Aboriginal employment, workplace training, including safety, efficient management of labour issues and managing project labour flow to achieve highest possible efficiency and productivity;

AND WHEREAS the capacity of the Council to support project schedules and delivery objectives is a function of available resources;

AND WHEREAS the Council is currently funded through dues levied on its members assigned to work at the Projects with such dues only being sufficient for service delivery for members;

AND WHEREAS the business relationship between the Association and the Council makes no allowance for project related services provided by the Council, which benefit the Association and Manitoba Hydro;

Now in consideration of the foregoing, the Association agrees to provide direct funding to the Council in accordance with the provisions contained herein.

1. The Council shall administer the funds as set out in paragraph 2 below, as it deems appropriate for initiatives that benefit the Projects. The Council undertakes to only use the funds for services rendered to benefit the Projects and may include the following:

    a) Maintain personnel resource capacity to support the Projects' labour relations in a timely and efficient manner.
    b) Offer a Supervisory Training Program with an objective of providing supervisors with skills, tools and knowledge to maximize the performance of their team in the areas of safety, quality and production while maintaining a work environment based on trust, respect and accountability.

c) Develop and implement training to provide the skills to resolve issues before they become a grievance and to utilize the grievance process as a positive tool to resolve issues without undue resort to arbitration. Other stakeholders will also support this aim. The funds will not be utilized to pay for expenses arising from the arbitration process, nor for any purpose that is contrary to the provisions of the *Manitoba Labour Relations Code*.
d) Develop internal capacity in the Council to support various Association initiatives that will benefit the Projects including workplace safety, respectful workplace policies, diversity and Aboriginal employment initiatives and effective project management.
e) Develop and maintain systems to enhance coordination and communication between its affiliated unions to reduce process delays in matters of importance to the Association, Manitoba Hydro and individual Contractors.
f) Develop capacity to maintain closer liaison between the Association, Contractors and affiliated unions to support timely and efficient labour supply in accordance with the Projects' requirements.
g) Implement systems to maintain closer and more regular contact with the Projects' labour, pre and post-employment, to emphasize and communicate project related issues.
h) Such further and other initiatives related to the success of the Projects, and the advancement of the relationships between the Council, Association, affiliated Unions and effected contractors.

2. The Association shall provide funding to the Council as per the schedule below:

	2016	**2017**	**2018**	**2019**	**2020**	**TOTAL *(over 5 years)***
AHC Administrative Funding	$280,000	$280,000	$230,000	$180,000	$130,000	**$1,100,000**

3. No later than 60 calendar days from the commencement of each calendar year of this Agreement, the HPMA shall provide the annual funding herein to the Council. No later than 30 calendar days from the commencement of each calendar year of this Agreement the Council shall, by letter, outline in reasonable detail the services rendered by the Council to benefit the Projects in the previous year and services planned to be rendered to the benefit of the Projects in the subsequent year. Further the Council shall provide such assurances as may be necessary indicating that its use of the funds has been in accordance with this Agreement.

   In the event of a disagreement in respect of the advancement of funds or of the reporting obligation of the Council, either Party may give a notice to the other to settle the dispute, in an expeditious, final and binding way as per Article 4.10, by referring the matter in writing to the panel established under Article 4.8. The panel shall follow the procedures as set out in Article 4.11(b). The Parties agree that in the event of a dispute, to make best efforts to

resolve the dispute failing which they shall cooperate to schedule and complete such an expedited resolution process.

4. The funding agreement shall expire upon the provision of the final Council report in 2020 and shall only be renewed by mutual agreement of the Association and the Council.

5. In the event that the Projects are cancelled this LOA shall become null and void.

Agreed to this 1 day of January, 2016

Allied Hydro Council of Manitoba	Hydro Project Management Association
Sudhir Sandhu	Jason Peterson
Heiko Wiechern	David W. Clark

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 40 - Amendment to Hiring Procedure

Subject: Article 12 – Amendment to Hiring Procedure and Referral System to Maximize Utilization of Qualified Manitobans

WHEREAS the Parties have agreed in order to maximize utilization of Manitobans, Article 12.1.1.5 should be amended to facilitate the maximization of qualified Manitobans on the Projects.

AND WHEREAS the Parties have agreed that it is important that prior to the Contractor exercising the right pursuant to Article 12.1.1.7, to hire from any sources, the Contractor must consider the resumes of qualified Building Trade members from other parts of Canada.

Now therefore, in consideration of the foregoing the Association and Council agree to amend Article 12 of the Collective Agreement as follows:

12.1.1.5 The Union, on notification of such job vacancies, may then refer any job qualified Manitoban's to the Contractor through a designated office of M.A.E.T.

12.1.1.7 The Contractor may recruit persons to fill job order vacancies where:

a) Job order vacancies remain after following the procedures set out in Article 12.1.1.1 to 12.1.1.6;

or

b) Persons referred pursuant to Article 12.1.1.5 and Article 12.1.1.6 do not report to the Project Site within the stipulated time period; and

c) Contractor has provided notice to the Union within forty-eight (48) hours of the job order vacancy caused by 12.1.1.7(a) or (b). The Union shall have an additional twenty-four (24) hours, measured from the time the Union is notified of the vacancy, to provide resumes of qualified Canadian residents to be considered, which workers identified in their resume, the Contractor may accept or reject at the Contractor's absolute discretion.

Agreed to this 1 day of January, 2016

Allied Hydro Council of Manitoba	Hydro Project Management Association
Sudhir Sandhu	Jason Peterson
Heiko Wiechern	David W. Clark

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 41 – Work teams

*** Note – See Letter of Agreement #54, for additional information regarding Letter of Agreement 41 (Work Teams)

Subject: Work Teams

WHEREAS the Association and the Council have discussed the utilization of Work Teams to support a productive work environment;

WHEREAS the Association and Council acknowledged in the past the Council members have worked cooperatively with Contractors to create Composite Crews to improve productivities and efficiencies;

WHEREAS all parties agree that upon the Council and the affected Council members receiving a written notice of a request for a Work Team from the Contractor or the Association, the Contractor and affected Unions will be provided a reasonable period of time to attempt to achieve an agreement as to the composition of a Work Team;

WHEREAS the parties agree that in the Notice of Implementation of Work Teams the Council and the affected Council members will be provided as much detail as to the scope of the Work Team as reasonably possible and the anticipated duration of the Work Team;

AND WHEREAS the Association and the Council are in agreement that the compilation of Work Teams must be fair;

Now therefore, in consideration of the foregoing, the Association and the Council agree to amend Article 4 of the Collective Agreement to include the following:

4.7 Where a Work Team is to be utilized by the Association and/or Contractor, the following procedures shall be employed:

a) The full process of the mark-up as is set out in this Article shall be applied. This process shall be used to establish the Unions involved in the Work Team;

b) The Association and/or Contractor shall provide fourteen (14) days' notice in writing to the Council and affected Unions designated by the mark-up process of the establishment of a Work Team which notice shall contain the following:

i. A description of the scope of work for which the Work Team is requested with as much detail as reasonably possible;
ii. The proposed composition of the Work Team, including the number of workers per trade and proposed supervision; and
iii. Anticipated duration of the Work Team.

c) The Association and Council agree that during the seven (7) day period following the Notice of Implementation of Work Teams, the affected Unions and Contractor may meet to attempt to achieve agreement as to the composition of the Work Team.

d) Should the parties be unable to achieve written agreement as to the composition of the Work Team, the composition of the proposed Work Team shall be based on the overall percentage each Union has relative to the overall scope of work to be performed by the Work Team as determined by the Association and/or Contractor; The Contractor shall provide to the affected Unions a description of the composition of the proposed Work Team and the implementation date of the Work Team.

e) Any affected Union upon receipt of the Notice of Implementation of the Work Team may dispute the composition of the Work Team or whether there is a material benefit to the Contractor, by referring such dispute to the panel as per Article 4.11(a); and

f) It is understood that Work Teams shall not be implemented unless there is agreement between the affected Unions and the Contractor or until such time a panel convened pursuant to Article 4.8 has made a decision pursuant to a referral by either party.

g) If, during the execution of the work, the nature of the work changes which impacts the composition of the team, a panel may be requested to review the numbers and change them to comply with the percentages deemed appropriate.

4.8 The panel shall consist of three persons who shall serve for the duration of the Project. In the event that any one of the panellists can no longer serve for whatever cause, the Parties agree to forthwith replace their nominee. The Parties shall agree to an independent third party (ITP). If the Parties cannot agree to an ITP, they shall apply to the Minister of Labour and Immigration for the Province of Manitoba, for the appointment of the ITP. The panel shall consist of three persons:

a) One appointed by the Association;

b) One appointed by the Council ; and

c) An ITP who is neither a lawyer nor an arbitrator under the Agreement and is familiar with jurisdiction.

4.9 The panel's jurisdiction is limited to determining the following:

a) The initial or subsequent composition of the Work Team, when and if requested by one of the Parties in accordance with the provisions of this Article.

b) Whether or not there is a material benefit to the Contractor in implementing the requested Work Team. Should the panel determine there is a material benefit to the Contractor through either cost savings, improved efficiencies or other material benefits, the panel shall approve the Work Team.

4.10 Decisions of the panel, by agreement of the Parties, shall be final, binding and not subject to appeal, judicial review or any other form of judicial intervention.

4.11 Decisions of the panel shall be made on an expedited basis:

a) Any dispute as to the initial composition of a Work Team as established under Article 4.7 or as to whether there are material benefits to the Contractor in implementing the Work Team will be referred in writing to the panel within seven (7) days of the Contractor advising the Union in writing of the initial composition of the Work Team. The referral must itemize the issues in dispute. Should a panel be requested, notice in writing of such request shall be provided to each affected Union, the Association and Council;

b) All referrals to the panel will be heard within seven (7) days of such written referral. Each Party shall have the right to present evidence and make representations to the panel, which presentation of evidence and/or making of representation shall be limited to two (2) hours unless such period is extended by a majority of the panel. The panel will render its decision within forty-eight (48) hours of the completion of the hearing. All decisions must be by a majority of the panel;

c) Should the panel determine that there is no material benefit to the Contractor in implementing the proposed Work Team, the Contractor will not be permitted to implement such Work Team and may not submit a request for the same or similar Work Team within ninety (90) days after the panel has rendered its decision and should the panel determine there is a material benefit to the Contractor for the proposed Work Team, the Contractor may implement such Work Team;

d) From time to time, as work advances, the composition of a Work Team may be revisited and adjusted as appropriate by the panel upon request of the Contractor or any Union providing workers to the Work Team. In no event shall a Work Team be revisited within ninety (90) days after the panel has rendered a decision as to the composition of a specific Work Team except in the event there has been a material change in circumstances; and

e) There will be no claims permitted for lost wages, other benefits or premiums as a result of an adjustment to the Work Team, and Work Teams will continue to work cooperatively, without disruption, while any claim to adjust a Work Team is being adjudicated.

4.12 The following shall apply to each Work Team:

a) Each Union shall provide members to work on the Work Team on a pro-rated basis as per the distribution determined by the Contractor or in accordance with this Article;

b) The Union that provides the greatest number of employees to the Work Team shall normally provide the first requested foreperson/general foreperson provided such foreperson/general foreperson has the necessary skills, abilities and experience to lead the Work Team. If more forepersons are requested, such forepersons shall be provided on a pro-rated basis if practical; and

c) All workers assigned to a Work Team will be provided orientation by the Contractor as to the expectations of working on a Work Team, in which orientation the AHC Site Representative and HPMA Site Representative may participate.

A willingness to work on a flexible basis if the needs of the work so dictate, is the essential element of a Work Team. It is understood that while on a Work Team an employee will predominantly perform work in his/her trade or craft but may be required to work outside of his/her trade or craft.

4.13 Work Assignments performed while on a Work Team may not be utilized at subsequent Pre-Job Conferences to claim jurisdiction.

Agreed to this 1 day of January, 2016

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 42 – Tower crane trade improvement trust fund

Subject: Amendments to the Trade Improvement Trust Fund in Appendices 2 and 2A

WHEREAS it is estimated that the Keeyask Project will require twenty (20) tower crane operators per year over the next four (4) years, and the Association and the Council are concerned that the Manitoba labour market does not currently have a sufficient supply of qualified tower crane operators to meet this need;

AND WHEREAS the International Union of Operating Engineers, Local 987 ("Operating Engineers") has proposed a training\upgrading program to address the need for qualified Manitoba based tower crane operators, which program requires the acquisition of a tower crane;

And whereas BBE has agreed to provide additional funding to assist the Operating Engineers in the purchase of the tower crane;

NOW therefore, in consideration of the above, the Association and the Council agree as follows, for the Keeyask General Civil Contract only:

1. Effective the date of signing of an agreement governing the acquisition of a tower crane by the Operating Engineers and the development of the training\upgrading program ("the Training Agreement") the contribution by BBE to the Trade Improvement Trust Fund in Appendices 2 and 2A respectively will increase by an additional $0.35;

2. To make a joint recommendation to Manitoba Apprenticeship respecting the required ratio of journeymen to apprentices reflected in Appendix 2 in the event the current ratio is not achievable during the currency of the Training Agreement;

3. The purpose of the enhanced contributions is to offset the purchase price of the tower crane as contemplated in the Training Agreement;

4. It is understood and agreed that these enhanced contributions shall expire on the earliest of the following events:

    a. Once the balance of the purchase price of the tower crane as defined under the Training Agreement has been recovered by the Operating Engineers;
    b. December 31, 2020;
    c. The Training Agreement is terminated by any of the parties to that Agreement.

Agreed to this 4 day of March, 2016

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 43 – Power engineer classification

Subject: Introduction of Classification to Appendix 2a – Equipment Operator – Power Engineer Classification

Whereas the Association and the Council have discussed establishing the classification of Power Engineer – Class 4 Operator.

And whereas they have concluded that establishing such a classification is warranted and necessary:

And whereas they have agreed on wage rates and other conditions of employment for a Power Engineer Class 4.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. That the classification of Power Engineer is to be added to Appendix 2-a Equipment Operator:

Group 24	April 5, 2016		
Power Engineer Class 4	$37.47		

Agreed to this 5 day of April, 2016.

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 44 – Special measures for hiring apprentices and trainees

Subject: Special Measures for Hiring of Apprentices and Trainees

Whereas the parties share a mutual interest and obligation to support measures necessary to facilitate the employment and retention of Aboriginal workers by facilitating apprenticeship and training programs;

AND Whereas the parties are seeking to expedite the employment and engagement of Aboriginal workers at Manitoba Hydro projects;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree to the following:

i. Notwithstanding any other provision of this agreement, the provisions of Article 12.1 may be waived by Contractors and\or subcontractors when hiring apprentice's and\or trainees into an apprenticeship or training program, provided that the person to be hired is a Northern Aboriginal as defined in Article 13 of the BNA and paragraph 12 of LOA #23.

ii. The Association shall submit to the Council, for consideration, a list of candidates and their corresponding Appendix classification. The Council shall inform the Association within three (3) working days of their decision to approve or deny, in whole or in part, the names found on said list of candidates.

iii. The Association shall advise the Job Referral Service of the names of the candidates within three (3) working days from any approval granted by the Council.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 46 – Personal Risk Assessments
Original July 7, 2016
Amended August 2, 2018

Subject: Personal Risk Assessment/Criminal Record Checks

WHEREAS the onsite workforce required for the Keeyask and Keewatinohk Projects is principally housed in remote camps owned and operated by Manitoba Hydro and the Association and the Council are concerned with the health and safety of all workers both at the worksite and while housed in camp;

And whereas it has been determined that in a very small number of cases, workers engaged to work at the Projects may pose a risk to accepted workplace safety standards;

And whereas Manitoba Hydro is a member of the North American Electric Reliability Corporation (NERC), which requires some positions to be compliant to its regulations through the completion of a PRA;

NOW therefore, in consideration of the above, the Association and the Council agree as follows:

1. All foremen and general foremen covered by the BNA who are hired or re-hired after August 1, 2016 will be required to complete and submit a Personal Risk Assessment Form ("PRA Form") and to provide the required identification to permit the criminal record check to be performed.

2. All employees, including foremen and general foremen, covered by the BNA who were hired prior to August 1, 2016, and who have-not had a break in service exceeding three (3) months will only be required to complete and submit a PRA Form if reasonable cause exists for that request. The Council shall be provided the reasons that lead to a finding of reasonable cause.

3. Employees working in positions deemed to be 'NERC sensitive', as determined by the contractor, will be required to complete and submit a Personal Risk Assessment Form ("PRA Form"). Including providing the required identification to permit the criminal record check, which will be performed prior to employment commencing. A 'Clear' result will be required in order for the potential employee to continue in the hiring process.

NERC Sensitive position is defined as:

- having unescorted physical access or cyber/electronic access to restricted areas within Manitoba Hydro facilities;
- having access to confidential information, including but not limited to procurement information, management strategies, and/or intellectual property;
- access to information and/or technology systems and/or networks;
- the ability to make or influence procurement decisions; and/or
- the apparent authority to speak on behalf of the contractor or Manitoba Hydro

4. Where a PRA Form and supporting identification is required as above, submission of the Form and identification, as well as cooperation with any follow up inquiries generated by the PRA Form or the checks performed is a condition of continuing employment with the HPMA contractor member.

5. To ensure privacy of all employees required to submit a PRA Form, submissions will be made to, and results will be held by Manitoba Hydro Corporate Security. In the event that the results of the PRA are relevant to the employee's continued employment, such information as is reasonably required by the Employer (HPMA contractor member) will be communicated to that Employer and to HPMA.

6. Any employee covered under the BNA who does not have a "Clear" PRA status shall not be eligible for employment. The following table shall be used to determine a “Clear” PRA status.

Clear	Not Clear
• No criminal convictions on record, or • Criminal history present but not serious enough to meet criteria for "Not Clear" • Any conviction for which a pardon has been granted.	• 3 or more summary convictions within the last 10 years • 3 or more summary convictions with more than 10 years from the date of most recent conviction - If there is an unacceptable risk that individual could reoffend in a way that jeopardizes safety or security • Conviction within the last 7 years for an indictable offence(s) punishable by 10 or more years (for example, assault causing bodily harm, drug trafficking. firearms-related offences, other • Crimes of serious violence regardless of the sentence handed out • The applicant has misrepresented their credentials or has provided false information

7. The cost of any requested PRA will be borne by HPMA and the Council or its Affiliated Unions shall not be required to provide any administrative services to support PRA requests.

8. The AHC and its affiliated Unions shall maintain all rights of grievance pursuant to the Burntwood Nelson Agreement respecting the administration of this LOA and the rights of individual workers involved.

9. The HPMA reserves the right, in the future, to require all employees covered by the BNA to undergo a PRA and the AHC reserves its right to challenge such a requirement.

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 47 – COPE relocation of employees

Subject: Appendix 15 – Office and Professional Employees – Relocation of Employees

WHEREAS the workforce required for the Keeyask Project is principally housed in remote camps owned and operated by Manitoba Hydro:

AND WHEREAS due to the number of individuals required to be housed within camp, the general civil contractor, BBE, may temporarily re-assign certain positions covered under Appendix 15 to its' Winnipeg facility. The Contractor shall limit this activity to employees who have indicated Winnipeg as their home community:

AND WHEREAS the Council, the Association, and the Contractor will review any concerns raised by effected employees to determine any adverse effects and address them accordingly:

NOW therefore, in consideration of the above, the Association and the Council agree as follows for the duration of the Keeyask Project:

1. Appendix 15 will continue to apply and to govern the terms and conditions of employment of any positions that are re-assigned;

2. The BNA will continue to apply to any positions that are re-assigned, with the exception of the following articles:

    a. Article 9 Room and Board, however article 9.8 (meal allowance) remains in effect with an agreed upon meal allowance of $20.00 ;
    b. Article 10 Housing Allowance;
    c. Article 19 Transportation and Travel; however Article 19.4 (Christmas Leave) remains in effect;
    d. Article 26.7 Termination of Employment.
    e. LOA 35 – Completion Bonus remains in effect.

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 48 – Layoff subject to recall

Subject: Article 12.4 Layoff subject to Recall

WHEREAS it is anticipated that the length of winter layoffs during the remainder of the Keeyask Project will exceed the existing recall period in article 12.4.2 and it is recognized that greater efficiency during spring ramp up benefits all parties:

NOW therefore, in consideration of the above, the Association and the Council agree as follows for the duration of the Keeyask Project:

1. Article 12.4.2.2 will be amended to read as follows;

   Pursuant to 12.4.2.1 an employee may be recalled for employment by the Contractor provided:

   a) The employee is advised in writing at the time of the lay-off that he is eligible for recall and a copy of this notification is concurrently forwarded to the appropriate Local Union and M.A.E.T. and;
   b) The recall is initiated by the Contractor prior to the expiry of 180 calendar days measured from the date of lay-off.

2. Article 12.4.2.3 will be amended to read as follows:

   When more than one employee in a particular classification (i.e. classifications set out in the Appendices) is on lay-off subject to recall and,

   a) Such employees are involved in a common or collective work assignment, and;
   b) Such employees are not recalled on the same date.

   Then the order of recall shall be the same as the order of employment preference set out in Article 12.1

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 49 – Labourers training trust fund

Subject: Appendix No. 1 – Construction and Specialized Workers Union Local 1258 - Introduction of Training Trust Fund

Whereas the Council has advised the Association that Local Union 1258 has established a Training Trust Fund, in which the employees covered by Appendix No. 1 are eligible to participate;

And whereas written verification has been forwarded to the Association and the Council confirming that Trust Agreements have been executed and registered;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

8. Appendix No. 1 of this Agreement is hereby amended to delete the following from Section 8:

Provided:

a) The Local Union to which Labourers belong establishes a trusteed training fund, and;

b) Written verification is forwarded to the Association and the Council by the Board of Trustees of the fund confirming:

i) Proviso (a), above;

ii) That Trust Agreements have been executed and registered.

A trusteed training fund will be introduced into this Appendix on the following basis:

- The Contractors' contributions to the fund may be less than but shall not exceed 25 cents per hour worked throughout the term of this Agreement,

- Contractor and Employee contributions to the fund will be discontinued immediately if one or more of the following occurs:

i) The fund ceases to be governed by a trust;

ii) The provisions of the trust are not fulfilled;

iii) Employers are no longer represented on the Board of Trustees.

- In the event either the Association or the Council has reason to believe that one or more of the conditions described in (i), (ii), or (iii) above have occurred, the matter

shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor and Employee contributions in trust.

- Contributions to the trusteed training fund shall be adjusted to be consistent with that negotiated between the Labourers' International Union of North America, Local 1258, and the Construction Labour Relations Association of Manitoba. However, the Contractors' contributions shall not exceed 25 cents per hour worked.

9. Appendix No. 1 of this Agreement is hereby further amended to add the following to Section 8:

Provided:

a) The Local Union to which employees covered by this Appendix belong establishes a Training Trust Fund in which employees covered by this Appendix are eligible to participate;

b) Written verification is forwarded to the Association and the Council by the Board of Trustees of each plan confirming:

i) Proviso (a), above;

ii) That Trust Agreements have been executed and registered.

As the above conditions have been met, a trusteed training fund will be introduced into this Appendix on the following basis:

The contractor, on behalf of each employee, shall respectively contribute the amounts set out below to the Construction and Specialized Workers Union Local 1258, Training Trust Fund. Contributions shall apply to all hours worked (regular and overtime).

The contractor's contribution shall be:

Effective October 17, 2016 $0.25 per hour

Contractor contributions to the fund will be discontinued immediately if one or more of the following occurs:

i) The fund ceases to be governed by a trust;

ii) The provisions of the trust are not fulfilled;

iii) Employers are no longer represented on the Board of Trustees.

- In the event either the Association or the Council has reason to believe that one or more of the conditions described in (i), (ii), or (iii) above have occurred, the

matter shall be referred to the Joint Appendix Review Committee. Until the matter is resolved, Contractors shall hold all Contractor contributions in trust.

Submission of Trust Funds

The Contractor shall forward the above Trust Fund contributions to the designated Administrators of each plan on or before the fifteenth day (15th) of each month following the month in which contributions were made.

A form shall be supplied by the Union for the Contractor to identify the application of all contributions, and such form shall indicate the Administrator and the address to which contributions shall be forwarded.

Agreed to this 17th day of October, 2016.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 50 – Scaffolder classification

Subject - Introduction of Classification to Appendix 4 (Carpenters) – Scaffolding Classification

Whereas the Association and the Council have discussed establishing the classification of Scaffolder.

And whereas they have concluded that establishing such a classification is warranted and necessary:

And whereas they have agreed on wage rates and other conditions of employment for a Journeyman Scaffolder and Apprentices.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. That the classification of Journeyman Scaffolder is to be added to Appendix 4 Carpenters:

	May 1, 2016	May 1, 2017
Industrial	$37.26	$38.12

   a. That the pay rates for Scaffolder Apprentices also be added to Appendix 4 Carpenters, with the applicable pay scale percentage:

Pre-apprentice *	1 – 450 hours	50% of journeyman rate
1st year	451 – 1350 hours	60% of journeyman rate
2nd year	1351 – 2700 hours	70% of journeyman rate
3rd year	2701 – 4050 hours	80% of journeyman rate
4th year	4051 – 5400 hours	90% of journeyman rate

Note the addition of this classification does not supersede any ‘pre-job’ or ‘markup’ assignments for the applicable power rigging of equipment.

Agreed to this 7th day of November, 2016.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 51 – Carpenter foreman coordinator

Re: Introduction of Premium to Appendix 4 Carpenters – Foreman Coordinator Premium

Whereas the Association and the Council have discussed establishing a role and premium for a Foreman Coordinator.

And whereas they have concluded that establishing such a role and associated wage premium is warranted and necessary:

And whereas they have agreed on wage premiums and other conditions of employment for a Foreman Coordinator.

And whereas they have agreed this role and premium will be in place only for the construction of the Keeyask Generating Station and Keewatinohk Converter Station.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. That the role of, and wage premium for, a Foreman Coordinator is to be added to Appendix 4 – Carpenters (section 4) with the following description and wages.

   Foreman Coordinator:
   When the contractor appoints a working Foreman Coordinator, s/he shall be paid the percentage set out below above the Certified Carpenter Journeyman rate.

   22% above Certified Journeyman rates, per following:

January 20, 2017	May 1, 2017	May 1, 2018	May 1, 2019
$43.29	$44.44	$45.73	$47.08

2. That the identified span of control will be revised for ‘Lead Hands’ and ‘Foreman’, and a span of control will be added for ‘Foreman Coordinators’, as follows:

   - Foreman Coordinators will be responsible for more than 30 workers
   - Foreman will be responsible for supervising between 11 – 30 workers
   - Lead Hands will be responsible for supervising up to 10 workers

Agreed to this _____ day of _____, 2017.

Letter of Agreement No. 52 – Labourer foreman coordinator

Re: Introduction of Premium to Appendix 1 Labourers – Foreman Coordinator Premium

Whereas the Association and the Council have discussed establishing a role entitled a Foreman Coordinator.

And whereas they have concluded that establishing such a role and associated wage premium is warranted and necessary:

And whereas they have agreed on wage premiums and other conditions of employment for a Foreman Coordinator.

And whereas they have agreed this role and premium will be in place only for the construction of the Keeyask Generating Station and Keewatinohk Converter Station.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. That the wage premium of a Foreman Coordinator is to be added to Appendix 1 – Labourers (section 4) with the following description:

   When a contractor appoints a working Foreman Coordinator, s/he shall be paid 20% over the wage of the highest classification level working under his/her direct supervision.

2. That the following span of control will be added for 'Lead Hands', 'Foreman', and 'Foreman Coordinators', as follows:

   - Foreman Coordinators will be responsible for more than 30 workers
   - Foreman will be responsible for supervising between 11 – 30 workers
   - Lead Hands will be responsible for supervising up to 10 workers

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 53 – Duration of Isolation leave

Subject: Article 19.2.1.5 – Duration of Isolation Leave

WHEREAS all workers covered by the BNA have the right to take four (4) days of additional leaves in certain circumstances in accordance with Article 19.2.1.5;

AND WHEREAS the ability to request an additional four (4) days leave as of right in certain circumstances causes scheduling and productively issues;

AND WHEREAS all parties concerned accept the importance of rights under Article 19.2.1.5 and are committed to providing workers additional time off as and when essential to attend to family emergencies;

AND WHEREAS the Council is prepared to support the project by addressing scheduling and productively issues arising from the utilization of the four-day provision under Article 19.2.1.5;

NOW THEREFORE, in consideration of the above, the Association and the Council agree:

1. The following provisions set out at Article 19.2.1.5 shall be suspended for the duration of and effective dates of this Letter of Agreement:

   "Additionally, provided an employee requests same in writing at least fourteen (14) calendar days prior to the commencement of his Isolation Leave, the Contractor shall grant an additional four (4) calendar days leave without pay in the following circumstances:

   a) When the employee is eligible for his second consecutive Isolation Leave, and every second (2nd) consecutive Isolation Leave thereafter.

   b) When the employee is eligible for an Isolation Leave but elects to continue working and to defer commencement of the Leave for a period equal to the period the employee would have otherwise been required to work to be eligible for consecutive Isolation Leave.

   c) On other occasions the employee is eligible for an Isolation Leave, provided the Contractor and employee mutually agree."

2. In order to establish efficient and productive work crews on the Keeyask Project, BBE Hydro Constructors LP ("BBE"), and their sub-contractors, shall apply LOA 36 sub-paragraph i) to all workers covered by an Appendix to the BNA whether or not the workers are covered by an Appendix which stipulates Isolation Leave frequency.

3. In carrying out the scheduling of Isolation Leaves referred to in paragraph 2 of this LOA, BBE shall make every effort to schedule all in-scope workers for travel on weekdays, which shall mean between Monday to Friday, with the sole exception of any unforeseen circumstances such as weather or other extenuating circumstances.
4. Notwithstanding paragraphs 1, 2 and 3 of this LOA, Contractors and Subcontractors will make every effort to grant additional leave requests by employees as stipulated under Article 19.3. Leave requests made under Article 19.3 shall be reasonably considered and granted provided the employee has submitted the request 49 calendar days prior to commencement of the requested leave. Unexpected leave requests for family emergencies shall be given priority and shall not be unreasonably denied.
5. Employees who are entitled to vacation time shall be required to request the said vacation at least 49 calendar days prior to the commencement of the vacation and shall be limited to taking 7 calendar days of vacation time between June 1st to October 31 of each year.
6. Employees returning from approved leave or vacation, may have their working rotation reduced by the equivalent number of days, at the contractors discretion, either at the beginning or end of their scheduled work rotation to enable the employee to remain on the same working crew
7. For the purposes of paragraph 2 of this LOA, "calendar days" shall be calculated on the same basis as set out at Article 19.2.1.4 a). Specifically, the day on which an employee is scheduled to arrive in camp shall be deemed the first day of his/her rotation.
8. The LOA is subject to the termination clause and conditions of LOA 54 Article 3.
9. All requests for four additional days of leave pursuant to Article 19.2.1.5 approved prior to the effective date of this Letter of Agreement shall remain in effect.
10. The Letter of Agreement shall take effect on April 15, 2017.

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 54 – Work team / Composite crew

Subject: Work Team/Composite Crew

The Hydro Projects Management Association (HPMA) and the Allied Hydro Council (AHC), the "Parties", are committed to working together to facilitate the safe and successful completion of the Keeyask Generating Station and Keewatinohk Converter Station ("the Projects") within schedule and budget;

THEREFORE, the Parties agree as follows:

1. The HPMA and BBE Hydro Constructors (BBE) agree to suspend the implementation of LOA 41 (Work Teams), as it applies to BBE, to allow for meaningful engagement and discussions relating to seeking additional opportunities for project efficiencies. In exchange for this the AHC agrees to execute LOA 53 concurrent with the execution of this LOA.

2. The HPMA and BBE will work with the AHC to seek composite crew work arrangements to improve productivity and efficiencies. Composite crew opportunities may be identified by either party. Their implementation is subject to the mutual agreement of the parties. It is understood that any composite crew(s) in effect prior to the execution of this LOA 54 shall remain in effect and not be subject to the conditions of LOA 54.

3. The HPMA and AHC agree this LOA may be terminated by either party through the service of at least 180 days written notice to the opposing party. In the event of termination, HPMA and BBE reserve its right to execute LOA 41 and in such case the AHC reserves its right to terminate LOA 53. Both Parties agree that the notice to terminate shall not be given prior to September 30, 2017.

4. This Agreement shall come into full force and effect on April 15, 2017.

Agreed to this_day of March 17, 2017

Hydro Projects Management Association Allied Hydro Council of Manitoba Hydro

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 55 – Breaks

Subject: Article 15 - Breaks

WHEREAS the Association, the Council, the Contractors and the Unions ("the Parties") are desirous of carrying out the work under the BNA in an manner which is orderly, harmonious, promotes productivity, is cost effective, and promotes favorable work practices;

AND WHEREAS it is agreed that the Parties desire is to assist Contractors with providing another option in the administration of coffee and lunch breaks;

Now therefore, in consideration of the above, the Association and the Council agree to add the following to Article 15:

15.7 Keeyask contractors may follow the express language of Article 15.5 and Article 15.6 of the BNA or, in lieu thereof, provide breaks in accordance with the following:

a. One (1) paid break and one (1) unpaid break per shift, each of which shall be thirty (30) minutes in duration. The specific timing of each break shall be determined by the Contractor, acting reasonably.

b. Employees shall be provided a total of thirty-five (35) minutes for each break including a maximum of five (5) minutes unpaid walking time between the workstation and the break location (the "Walking Time"). Employees must be back at their tools no later than thirty-five (35) minutes after the break commenced.

c. The Contractor will extend the work day to a maximum of ten (10) minutes. This shall not attract shift premiums stipulated under the appendices.

d. In all cases employees will remain actively engaged in work at their workstation until scheduled breaks begin and be at their workstation ready to resume work at the end of the break period. There will be no further extension of break time or Walking Time.

e. Should the Contractor provide a third break as a result of overtime hours being worked, employees shall receive the allotted break time, plus an additional five (5) minutes unpaid walking time for each break.

f. When an employees is required to work twelve 12 hours or more in any one day the Contractor shall abide by Article 9.8 of the BNA.

15.8 In accordance with 15.7, Contractors may revert to the provision of the BNA by providing the HPMA, AHC, and employees with twenty-one (21) working days' notice of the change.

The effective date of this Letter of Agreement shall be mutually agreed to by the Parties but shall not be any later than 30 days from the signing of this Agreement.

Agreed to this 24 day of January, 2018

Hydro Projects Management Association	Allied Hydro Council of Manitoba Hydro

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 56 – Trade Flexibility

Subject: Trade Flexibility

WHEREAS the Hydro Projects Management Association (the "Association") and the Allied Hydro Council (the "Council") are committed to working together to facilitate the safe and successful completion of the Keeyask Generating Station (the "Project") within schedule and budget;

NOW THEREFORE, in consideration of the above, the Association and the Council agree to

amend the BNA as follows:

1. The nature and flow of work may at times require employees to perform work that is not normally within the purview of an individual employee's trade classification. To avoid material productive time losses per shift, a Contractor may assign an employee to perform work within the employee's skills, abilities, qualifications and competencies that the Contractor deems necessary to achieve the efficiencies contemplated by the parties , regardless of the employee's union affiliation or trade classification on a temporary or, where agreed in paragraph 3 on a permanent basis. Any assignment made under this Agreement shall be deemed not to be in a violation of Article 4 of the BNA and employees may not refuse such assignments on the basis that the work assigned to him belongs within the jurisdiction of another Union.

2. Subject to Article 5 of the BNA, nothing in this Letter of Agreement shall be used to materially reduce the relative proportions of any trades classification.

3. The following is a non-exhaustive list of Flex Assignments that the Contractor may assign to employees:

    a. De-watering – maintenance of de-watered areas (currently in place–permanent);
    b. Light Plants and Generators – maintenance of fuels and other products on various site light plants and generators (currently in place-permanent);
    c. Rock Crushing and Sand Processing – plant based production of concrete materials of rock and sand (currently in place-permanent);
    d. Maintenance Fuel and Lube – maintenance of fuels and other products on various vehicles and other equipment;
    e. Infrastructure Materials Delivery Team – delivery of various materials to and from lay down areas to production areas, and within production areas (currently in place–permanent);
    f. Formwork, Rebar, Embed, Placement (Clean up and fixes) -
    g. Batch Plant – operate and maintain the batch plant in the most timely and

efficient manner possible;

h. Maintenance shop / Field mechanics – repairs and maintenance of light duty vehicles and heavy equipment, both in the maintenance garage, and in the field;
i. Forming and Stripping – receiving, hooking on, stripping, and releasing of formwork at various points of installation.

4. It is acknowledged that Flex Assignments are work dependent and may occur daily and within short succession of one another. It is further acknowledged that Flex Assignments will be made for the purpose of improving productive time in a fair, reasonable and good faith manner.

5. When an employee performs a Flex Assignment pursuant to this Agreement, he shall be paid based on his home classification's rate of pay in accordance with the Appendix to the BNA that applies to his home Union.

6. The Council shall assign a Trade Flexibility Advisor to be the primary point of contact for matters concerning Flex Assignments. The Contractor will notify the Council's designated Trade Flexibility Advisor of any Flex Assignment being made as soon as is reasonably practical and in any event no later than the end of the working day in which the Flex Assignment occurred.

7. If a Contractor experiences lacking cooperation related to Flex Assignments, the Contractor shall immediately notify the Council's designated Trade Flexibility Advisor and the employee's affiliated union such that the Trade Flexibility Advisor and/or Union may counsel the employee(s). Nothing in this Article restricts the Contractor's right to implement corrective or non-corrective action. Up to and including termination of employment, to the employee in response to his behavior.

8. BBE Hydro Constructors' ("BBE") right to utilize Letter of Agreement 41 (Work Teams) and Letter of Agreement 54 (Composite Crews) is hereby suspended.

9. Nothing in this Agreement alters work assignments resulting from the operation of Article 4 of the BNA. However, Flex Assignments made pursuant to this Letter of Agreement are deemed not to be in violation of Article 4 or Article 8 of the BNA or any other document governing the division of work between unions or trades, including the Green Book, and may not be challenged by the Council or any of its member Unions Affiliates under the BNA or any other forum.

10. Starting the month following the month in which this Agreement is executed, the Association shall provide the Council $10,000.00 per month (the "Monthly Funding") for as long as the Agreement is in force. This funding will be made in concert with, and in addition to, Letter of Agreement 39 of the BNA.

11. After every third payment of the Monthly Funding the Council will provide the Association with a receipt reflecting the Monthly Funding received in the previous three months.

12. The Council must use the Monthly Funding to employ a Flex Assignment Advisor. That Advisor will be identified as a site position and work a scheduled rotation set by the Council.

13. The Flex Assignment Advisor shall:

    Role and Function

    - Educate employees on the principles of the BNA; specifically, with respect to the application of trade flexibility on the Project and LOA 56, as detailed below.

    - Relay the expectations of the Project's owner, the Association, the Contractor and the Council with respect to the performance of Flex Assignments.

    - Provide visible site based representation to each of the Unions while ensuring the benefits of productivity and efficient time management are fully achieved through the appropriate utilization available labour.

    - Jointly identify workplace opportunities for improved productivity and efficiency in the utilization of labour based upon individual skills, capability and competencies regardless of jurisdictional assignments.

    Reporting Structure

    - The Flex Assignment Advisor shall report to the Council's CEO.

    - Have authority to liaison, coach and advise all Parties, subject to the ultimate authority of the incumbent and each individual Union.

    - Have no traditional Labour Relations responsibilities or vested authority under the BNA as a Site Representative.

    - Be independent of any Union so that information can be represented without bias.

Duties and Accountabilities

- Provide new and existing employees an overview of LOA 56 and the Contractor's ability to implement Flex Assignments on the Project. Specific attention and education of new/existing employees, including out of province employees operating on travel cards will be paramount to avoid jurisdictional disputes.

- Educate employees on, and promote the Flex Assignment model's execution on the Project site, the drivers for it (trade pride; demonstration of quality, adaptability and value provided by provincial building trade affiliates) and the expectation of employee support and adherence to its principles.

- Participate in joint planning and development of the Flex Assignment roll out program advising on the documents provided by Contractors, Manitoba Hydro, the Association.

- Provide Contractor, Manitoba Hydro and the Association with any and all presentations and documentation prepared by the Council and the Trades Flexibility Advisor for their respective review.

- Actively participate with project leadership in the joint identification and realization of opportunities to obtain 'best for project' outcomes as they relate to both direct and indirect labour and material management programs.

- Provide professional assistance and support in the communication of the progress and status of the Flex Assignment program to key stakeholders.

- Make themselves available to attend scheduled and ad-hoc meetings, specific to BBE Hydro Constructors, including but not be limited to:

    - Daily
        - POD (Plan Of the Day)
        - Superintendent activity and planning review

    - Weekly
        - Management
        - BBE Stewards

    - Monthly
        - Project progress and challenges discussion (general) with MH/HPMA/AHC/BBE

- Monthly (min TBD may move to alternating)
  - Forum with AHC/Affiliate Unions/HPMA/MH/BBE and/or other BBE Sub-Contractors

Goals and Expectations

- Support the implementation of the existing nine (9) initial combined crew efficiency programs and facilitate and identify future opportunities within the Powerhouse structure (and other identified facilities);

Benchmarks and Feedback

- Provide the following benchmarks and feedback:
  - the number of confirmed crew efficiencies implemented (from the existing nine (9) currently in process);
  - demonstrated performance improvement as a result of implementing the new role; and
  - continued Labour Relations harmony in concert with improved productivity.

15 In the event the Association terminates this Letter of Agreement pursuant to this paragraph, it may cease Monthly Funding Payments effective the date of termination, except that it shall provide the Council with a pro-rated Monthly Funding Payment for the month in which termination of this Letter of Agreement occurred.

16 Prior to the implementation of the Letter of Agreement, and every six months thereafter the Association shall provide the Council with its latest projected workforce estimates by trades classification. The Association shall continue to provide the Council the actual hours utilized by each trade classification on a quarterly basis.

17 The Association and Council agree this Letter of Agreement may be terminated by either party through the service of at least 180 days written notice to the other party. Both parties agree that the notice to terminate the Letter of Agreement shall not be given prior to July 1, 2019.

18 The effective date of this Letter of Agreement shall be mutually agreed to by the parties but shall not be any later than 30 days from the signing of this Agreement.

Agreed to this _____ day of _____, 2018

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 58 – Project Labour Management Services Agreement

*** Note – See Letter of Agreement #57, for additional information regarding Letter of Agreement 39 and 57 (Management Agreements)

Subject: Project Labour Management Services Agreement

WHEREAS the Council will be the largest supplier of skilled and support labour to contractor members of the Association for construction of Keeyask Generating Station (Keeyask) and Keewatinohk Convertor Station (Keewatinohk), collectively referred to as the Projects;

AND WHEREAS the Association will depend on the efficient supply of qualified labour primarily from members of the Council;

AND WHEREAS the Association and the Council share a mutual interest in the successful and timely completion of the Projects;

AND WHEREAS the Association will require support from the Council in addressing significant project issues such as Aboriginal employment, workplace training, including safety, efficient management of labour issues and managing project labour flow to achieve highest possible efficiency and productivity;

AND WHEREAS the capacity of the Council to support project schedules and delivery objectives is a function of available resources;

AND WHEREAS the Council is currently funded through dues levied on its members assigned to work at the Projects with such dues only being sufficient for service delivery for members;

AND WHEREAS the business relationship between the Association and the Council makes no allowance for project related services provided by the Council, which benefit the Association and Manitoba Hydro;

AND WHEREAS the Council and their Affiliate Unions shall take all reasonable measures and exercise best efforts to ensure the successful implementation and ongoing operation of: LOA 55 – Work Breaks and LOA 56 - Trade Flexibility;

Now in consideration of the foregoing, the Association agrees to provide direct funding to the Council in accordance with the provisions contained herein.

1. The Council shall administer the funds as set out in paragraph 2 below, as it deems appropriate for initiatives that benefit the Projects. The Council undertakes to only use the funds for services rendered to benefit the Projects and may include the following:

    a) Maintain personnel resource capacity to support the Projects' labour relations in a timely and efficient manner.

b) Offer a Supervisory Training Program with an objective of providing supervisors with skills, tools and knowledge to maximize the performance of their team in the areas of safety, quality and production while maintaining a work environment based on trust, respect and accountability.
c) Develop and implement training to provide the skills to resolve issues before they become a grievance and to utilize the grievance process as a positive tool to resolve issues without undue resort to arbitration. Other stakeholders will also support this aim. The funds will not be utilized to pay for expenses arising from the arbitration process, nor for any purpose that is contrary to the provisions of the *Manitoba Labour Relations Code*.
d) Develop internal capacity in the Council to support various Association initiatives that will benefit the Projects including workplace safety, respectful workplace policies, diversity and Aboriginal employment initiatives and effective project management.
e) Develop and maintain systems to enhance coordination and communication between its affiliated unions to reduce process delays in matters of importance to the Association, Manitoba Hydro and individual Contractors.
f) Develop capacity to maintain closer liaison between the Association, Contractors and affiliated unions to support timely and efficient labour supply in accordance with the Projects' requirements.
g) Implement systems to maintain closer and more regular contact with the Projects' labour, pre and post-employment, to emphasize and communicate project related issues.
h) Such further and other initiatives related to the success of the Projects, and the advancement of the relationships between the Council, Association, affiliated Unions and effected contractors.

2. The Association shall provide funding to the Council as per the schedule below:

a)

	2016	**2017**	**2018**	**2019**	**2020**	**TOTAL *(over 5 years)***
AHC Administrative Funding	$280,000	$280,000	$230,000	$180,000	$130,000	**$1,100,000**

b)

	2018*	**2019**	**2020**	**2021**	**Total (over 4 years)**
AHC Administrative Funding	$1,000,000	$1,000,000	$1,000,000	$1,000,000	$4,000,000

*Due 60 days past the signing of this LOA

3. No later than 60 calendar days from the commencement of each calendar year of this Agreement, the HPMA shall provide the annual funding herein to the Council. No later than 30 calendar days from the commencement of each calendar year of this Agreement the Council shall, by letter, outline in reasonable detail the services rendered by the Council to benefit the Projects in the previous year and services planned to be rendered to the benefit of the Projects in the subsequent year. Further the Council shall provide such assurances as may be necessary indicating that its use of the funds has been in accordance with this Agreement.

   In the event of a disagreement in respect of the advancement of funds or of the reporting obligation of the Council, either Party may give a notice to the other to settle the dispute, in an expeditious, final and binding way as per Article 4.10, by referring the matter in writing to the panel established under Article 4.8. The panel shall follow the procedures as set out in Article 4.11(b). The Parties agree that in the event of a dispute, to make best efforts to resolve the dispute failing which they shall cooperate to schedule and complete such an expedited resolution process.

4. The funding agreement shall expire upon the provision of the final Council report in 2021 and shall only be renewed by mutual agreement of the Association and the Council.

5. In the event that the Projects are cancelled this LOA shall become null and void.

Agreed to this 24 day of January, 2018

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 59 – Appendix 8A – Cement Masons Apprenticeship changes

Subject: Article 8A – Cement Masons – Adjust Apprenticeship Training levels

WHEREAS Hydro Projects Management Association (the "Association") and the Allied Hydro Council (the "Council") have discussed amendments to regulations for the trade of Cement Masons.

And whereas they have concluded the amendments of Cement Masons Apprentices is warranted and necessary.

And whereas they have agreed on the necessary changes to apprenticeship levels, wage rates and other conditions of employment for Cement Masons Apprentices.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

10. Appendix No. 8A is hereby amended to delete the following from Section 3:

ii) The scale of wages for apprentices shall be:

Level 1 - 60% of the Journeyman's rate
Level 2 - 70% of the Journeyman's rate
Level 3 - 85% of the Journeyman's rate

11. Appendix No. 8A is hereby amended to add the following to Section 3:

iii) The term of apprenticeship in the trade is two levels, with each level consisting of a period of at least 12 months during which the apprentice must complete 1,800 hours of technical training and practical experience.

iii) The scale of wages for apprentices shall be:

Level 1 (0-1800 hrs) - 65% of the Journeyman's rate
Level 2 (1801 – 3600 hrs) - 80% of the Journeyman's rate

12. Further, the following addition has also been made to Section 3:

(c) Pre-apprentice;

iv) The contractor may employ one (1) pre-apprentice for each Journeyperson employed.

v) Pre-apprentices may be employed for a maximum of 500 hours. The employer shall maintain a log book for all hours worked as a pre-apprentice. The contractor shall forward a copy of the employee's log book to the union upon their request.

vi) The wage scale of pre-apprentices shall be;
First 500 hours (55% of the Journeyperson rate.)

13. Appendix No. 8A is hereby further amended to add the following to Section 6:

(c) Employee contributions for pre-apprentice workers shall be optional.

Agreed to this __19_____ day of _December_, 2018.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 60 – Workers United – Pension deduction changes

Subject: Appendix No. 16 – Workers United, Local 206 - Caters

Whereas the Council and Local 206 has advised the Association that the employee contribution of the Pension Fund is no longer an eligible deduction under the Plan;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

14. Appendix No. 16 of this Agreement is hereby amended to the following:

a) That the employee contribution of $0.20 (twenty cents) per hour shall cease to be a deduction on March 3, 2019
b) The employer contribution under Section 7b) shall be reduced to $0.65 (sixty-five cents) per hour, in accordance to Section 12.2.1.

Agreed to this _____ day or February, 2019.

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 61 – Burntwood Nelson Agreement – Blasters wage enhancement

Whereas the Association and the Council have discussed the availability of job qualified workers in certain Burntwood Nelson Agreement (BNA) Classifications;

And whereas they have concluded that there is a shortages of job qualified workers in the below Classification and the present wage rate requires to be enhanced in order to attract and retain job qualified workers;

That LOA 30 shall be deemed to be null and void as the wage adjustments for Powderman and Drillers have been formally incorporated into Appendix 1 Section 4. Subsequently, the wage rate noted below for Blasters shall continue to be escalated based on the CLRAM reference agreements to be negotiated in 2019.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree to the following for the remainder of the Keeyask Projects:

1. Effective April 21, 2019, the wage rate for the following classifications in Appendix 1, Labourers, shall be enhanced to the following:

	April 21, 2019
Blaster (with Provincial Blaster Certificate)	$41.30

Agreed to this 12th day of April, 2019.

Allied Hydro Council of Manitoba

Hydro Projects Management Association

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 62 – Heavy Duty Gas and Diesel Mechanics Wage Enhancement

Whereas the Association and the Council have discussed the availability of job qualified workers in certain Burntwood Nelson Agreement (BNA) Classifications;

And whereas they have concluded that there is a shortages of job qualified workers in the below Classification and the present wage rate requires to be enhanced in order to attract and retain job qualified workers;

And Whereas the HPMA and BBE recognize that this work is the proper jurisdiction of the Operating Engineers (OE);

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree to the following for the remainder of the Keeyask Projects:

1. Effective June 30, 2019, the wage rate for the following classifications in Appendix 2a Group 18, shall be amended to the following:

	June 30, 2019
Group 18	
Heavy Duty Diesel Mechanics	
a) with a certificate of qualification	$ 41.19
b) without a certification of qualification	$ 38.77

2. Effective June 30, 2019 a new classification will be added to Group 18:

c. with Licensed Service vehicle	$70.00 per hour * i, ii

i. This per hour add-on is not subject to the conditions of Appendix 2a: sections 5, 6, 7, 8, or 9. Furthermore, it is agreed that the add-on is not subject to Schedule C (calculations of union dues) or LOA 35 Completion Bonus.

ii. Individuals under this classification shall be required to supply their own Licensed Service vehicle which will have the following minimum equipment items in good working order:
   a. Service truck with GVW of 8.8tonne or greater
   b. Deck mounted, securable tool storage
   c. Powered crane with minimum capacity of 2,500LBS
   d. Air compressor (Minimum 30CFM) and associated hose-ware
   e. 12-24 volt battery booster/charger
   f. Oxy-Acetylene torches and gas retaining rack
   g. Arc welder with generator power capacity
   h. Air powered tools wrenches, sockets etc.
   i. Mechanical hand-tools (Metric and Imperial) required

iii. The contractor and individual hired under this classification shall meet upon arrival at the Project site to determine the following:

a. The contractor shall inspect and photograph the service truck to ensure it meets the qualifications as outlined under sub section ii and is in good working order;

b. The individual shall supply the contractor with a complete inventory of tools in compliance with Article 21. The Contractor shall not be responsible for any theft of tools. The individual employee must take all reasonable steps to secure them within the rig and hold his/her own insurance for same. Premiums being covered within the service truck rate.

3. Vendor Technicians/HD Mechanics - BBE Hydro Constructors LP has sub-contracted SMS and Toromont Cat who will perform regular maintenance work outside of their current warrantee work of the Kamatsu and Cat fleet vehicles. These subcontracted third party service providers will be limited to four rigs to conduct their operations (two day shift two night shift). Work may be performed both in the workshop and in the field. The OE agree to the use of the third party service providers on a without precedent and prejudice basis for any other purpose other than the intent of this LOA.

4. BBE agrees to pay a $250.00 (two hundred and fifty dollars and zero cents) permit fee per vendor service vehicle per week on the 15th of every month, beginning from January, 1, 2019 until the requirement of supplemental rig units is no longer required. This fee will be paid directly to OE 987.

5. The permit fee under section 4 shall remain in effect until December 31, 2020 or upon 30 days' notice of cancellation.

6. The HPMA, AHC and OE agree to discuss the applicability and the terms of the LOA prior to October 1, 2020 to determine if it should be renewed for another year. If the Parties do not engage on or before the October 1, 2020 the LOA shall automatically be considered null and void as of Dec.31, 2020 (for all provisions of the LOA including the use of the third party service providers).

Agreed to this 28 day of June, 2019.

Allied Hydro Council of Manitoba	Hydro Projects Management Association

BURNTWOOD/NELSON AGREEMENT

Letter of Agreement No. 63 - Article 8A – Cement Masons – Adjust Reference Classifications for Escalations

WHEREAS Hydro Projects Management Association (the "Association") and the Allied Hydro Council (the "Council") have discussed amendments to the Escalation and Reference process for the trade of Cement Masons.

And whereas they have concluded that amendments to the Cement Masons Escalation process is warranted and necessary.

And whereas the JARC committees identified in Appendix 30 of the BNA have agreed on changes to the Reference Classification used for escalations in the Cement Masons Appendix.

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree as follows:

1. This Letter of Agreement will take effect for any escalations to be calculated on May 1, 2020 and later.

2. The Allied Hydro Council and Cement Masons union local 222, and the Hydro Projects Management Association have agree to reduce the number of reference classifications noted in Appendix 8a, article 8.1.2., from three to one.

3. Appendix No. 8a, Article 8.1.2 of this Agreement is hereby amended to remove the weighting and use of the Reference Classifications of General Construction Labourer and Journeyman Sheet Metal Worker. The weighting used for the Journeyman Carpenter shall be amended from 30% to 100%.

Agreed to this 26 day of February 2020.

Allied Hydro Council of Manitoba Hydro Projects Management Association

Sudhir Sandhu	Tony Landry
George Emery	Bo Hancox

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 64 - COVID 19 Special Measures

WHEREAS the Association and the Council have discussed the importance of maintaining a safe and healthy work environment for all workers;

AND WHEREAS the Association and Council agree it is desirable to continue construction work at the site during this infectious disease travel restricted and temporary scale back;

AND WHEREAS appropriate government entities (Federal, Provincial, and/or Municipal), or the project owner, have recommended or restricted travel to and from site, large gatherings of people, or other strategies to stem the spread of infectious disease, the Association and Council agree to create specific terms and conditions in the workplace, including a temporary compensation stipend under the BNA for employees voluntarily agreeing to remain at site for this undetermined and temporary scale back period;

Now therefore, in consideration of the foregoing, the Association and the Council agree to add the following Articles to the Collective Agreement which state the following:

1. This LOA regarding special measures resulting from the COVID 19 pandemic lock down will take effect on March 19, 2020 and remain in effect till May 19, 2020, inclusive. Extensions to this timeframe may be agreed to by both parties anytime prior to the expiry of this Agreement.

2. Reasonable efforts shall be made to provide transportation, or allow employees to make their own arrangements, permitting the worker to exit Site on request. Exiting employees unable to return to site due to ongoing access restrictions will be laid off. Per LOA 35, article 14.7. All Completion Bonus amounts and earned Stipend payments owed shall be paid out at time of layoff, or as reasonably practicable thereafter.

3. Any employee agreeing to stay on site to continue work during the COVID 19 infectious disease scale back, will be provided with a $100 daily stipend. Scheduled days off (noted in Article 4) work where the employee remains at the project site, but does not work, would accrue the stipend.
   To enact this stipend, the Association will identify the effective start and end dates when this stipend will be provided by contractors.

   As a stipend, this payment will not accrue any fringe benefits as required under an employee's Appendix. Although not an exhaustive list, this stipend will not accrue such benefits as Pension, Health and Welfare, Vacation and Statutory Holiday Pay, or various training or union promotion Funds. Union dues will not be deducted. It is a taxable benefit and will be subject to regulatory deductions such as Income Tax, CPP, and EI.

4. For the duration of this Agreement, contractors, in consultation with crews, shop stewards, and employees remaining at Site, can elect to work one of the following work rotation options:

a) Work six consecutive days followed by one mandatory day off provided the day off does not fall on a Saturday or Sunday (exception NMS who has regularly worked a 6/1 schedule with a weekend day off); or
b) Work 21 consecutive days followed by a minimum of two days off. In the event an off day(s) is scheduled on a Saturday and/or Sunday, the next one and/or two days worked will be paid at the applicable overtime premium.

5. Employees have the right to use up to five (5) personal wellness days, consecutive or non-consecutive, during the term of this Agreement. These days shall accrue the stipend, but not accrue wages. Any sick days taken pursuant to a note issued by the Site Nurse Practitioner, shall also accrue the stipend, but not accrue wages.

6. The parties agree that should medical exigencies, provincial or federal regulations, or any other special measure so dictate, all necessary action shall be taken to follow any direction or orders issued by governing authorities in Canada.

7. Nothing in this LOA shall be construed as a waiver of work jurisdiction of each trade and any jurisdictional issues shall continue to be managed pursuant to LOA 56 – Trade Flexibility.

Agreed to this 20th day of March, 2020.

Allied Hydro Council of Manitoba	Hydro Project Management Association
Sudhir Sandhu	Tony Landry
	Bo Hancox

BURNTWOOD / NELSON AGREEMENT (BNA)

Letter of Agreement No. 65- COVID 19 Return to Operational Continuance – Enhanced Normal Protocol

Original May 20, 2020
Revised May 28, 2020

Subject: COVID 19 Return to Operational Continuance – Enhanced Normal Protocol

WHEREAS the Association and the Council have discussed the importance of maintaining a safe and healthy work environment for all workers;

AND WHEREAS the Association and Council agree it is desirable to continue construction work at the site while creating safe operational and travel practices;

AND WHEREAS the project owner has developed enhanced travel safety protocols for entry onto the Project site to stem the spread of infectious disease;

AND WHEREAS the parties intend to maximize the complement of Manitobans with non-Manitobans and out of country workers and/or travellers to be limited to meet essential and unavoidable requirements, all travellers may be subject to specific travel recommendations and/or restrictions, the Association and Council agree to create specific terms and conditions in the workplace;

Now therefore, in consideration of the foregoing, the Association and the Council agree to add the following Articles to the Collective Agreement which state the following:

1. With the exception under Part 1(a) herein, Letter of Agreement 64 is rescinded in full effective May 19, 2020 and replaced with this revised Letter of Agreement 65, effective May 29, 2020.

    a. The one-hundred ($100) dollar stipend payable to employees pursuant to LOA 64 will remain in effect for individual(s) who remain on Site beyond May 19, 2020 and shall continue to be paid until the individual(s) leave Keeyask or voluntarily revert to another work rotation permitted under the BNA or LOA 65. However, such payment shall not continue under any circumstances after June 15, 2020.

2. Employees from within and outside of the Province of Manitoba will be required to follow enhanced travel and safety protocols as follows: (All steps have been created in consultation with, and vetted by Province of Manitoba Public Health officials). The sufficiency and appropriateness of these protocols is solely the discretion and responsibility of Manitoba Public Health.

    a. Manitobans and non-Manitobans who have remained in Manitoba for the past twenty-one (21) days or more and travel to Keeyask by air transportation arranged by contractors or the project owner, shall be required to complete a health screening questionnaire and undergo a COVID-19 (namely ‘PCR testing’) screening prior to

boarding the scheduled flight. Presence of the COVID-19 virus shall disqualify an individual from travelling to Site and the individual(s) shall be provided medical assistance as needed.

b. Manitobans and non-Manitobans who have remained in Manitoba for the past twenty-one (21) days or more and travel to Keeyask by ground transportation from within Manitoba shall be required to complete a health screening questionnaire and undergo a COVID-19 (namely 'PCR testing') screening immediately upon arriving at Keeyask. Following screening, employees shall be isolated in a Keeyask dormitory room until the results are returned by the lab. Presence of the COVID-19 virus shall disqualify an individual from working and arrangements shall be made to safely transport the affected individual(s) for treatment.

c. Manitobans who have travelled outside Manitoba within fifteen (15) days of date of scheduled return to work and non-Manitobans who are travelling to Manitoba for work at Keeyask shall, to be eligible for work at Keeyask, undergo a health screening questionnaire and shall be required to self-isolate at their home residence or in Winnipeg for a combined fourteen (14) days or other period of time as recommended by Manitoba Public Health officials.

   Following the period of self-isolation, the individual(s) shall undergo a COVID-19 (namely 'PCR testing') screening and upon confirmation being deemed 'clear' of the COVID-19 virus, the individual(s) shall be transported by charter flight to Keeyask. Presence of the COVID-19 virus shall disqualify an individual from travelling to Site and the individual(s) shall be provided medical assistance as needed.

PCR screening – Polymerase Chain Reaction (PCR) screening can detect very small amounts of viral genetic material in a sample. The sample is taken as a nasal swab, which will be administered for Manitoba Hydro and its contractors by a third-party organization.

Self-Isolate – Used to help prevent the spread of disease to other people, though you have no symptoms. During self-isolation, you are responsible for yourself and are to avoid situations with other people (practice physical/social distancing 2 meters). If you need to go outside of the home or room, it should be by yourself, and physical/social distancing (2 meters) must be followed. For further information on self-isolation please refer to the following Government of Manitoba fact sheet. https://www.gov.mb.ca/asset_library/en/coronavirus/factsheet-isolation-selfmonitoring-returningtravellers-contacts.pdf

Isolate – You have been directed to isolate in a designated room i.e. assigned room in hotel or camp. You are required to stay in your room, not go in public areas i.e. arctic corridor, hotel lobby, outside (unless approved) and not have contact with other people. Behave as if you have been infected, especially if you have symptoms. You are treated as if you are infected until test result proves otherwise.

3. Payment of Travel time, hotel accommodation and meals, and screening and transportation to site

Manitobans with a TDP of Winnipeg and travelling to Keeyask by air shall have their travel time paid in accordance with Article 19.1.2.5.3 increased to eight (8) hours pay at straight time rates for the day of travel into or within Winnipeg followed by screening and transportation to Keeyask, where all steps are conducted in one day. The eight-hour payment will be considered travel time and eligibility for benefits is as currently practiced. Presence of the COVID-19 virus shall disqualify an individual from working and arrangements shall be made to safely transport the affected individual(s) for treatment.

Manitobans with a TDP of Winnipeg and travelling to Keeyask by air where screening and transportation are conducted on separate days will require an overnight stay in hotel and shall be paid an additional eight (8) hours pay. This payment shall be in addition to the regular travel allowance of five (5) hours. Accommodation and meal reimbursement will be completed in accordance with Article 19.1.2.4 unless otherwise provided by the project owner or contractor. The payments will be considered travel time and eligibility for benefits is as currently practiced. Presence of the COVID-19 virus shall disqualify an individual from working and arrangements shall be made to safely transport the affected individual(s) for treatment.

Non-Manitobans requiring overnight accommodations prior to screening and transportation to Keeyask by air will be paid travel time from their TDP to Winnipeg in accordance with Article 19.1.2.5, plus eight (8) hours pay at straight time rates for the day of screening and travel to Keeyask (note, screening may occur the day prior to transportation to site). Accommodation and meal reimbursement will be completed in accordance with Article 19.1.2.4 unless otherwise provided by the project owner or contractor. Other than BNA Appendices that require application of some benefits to TDP, both the travel hours (5 hours) and the eight-hour payment for screening and transportation will be considered travel time and eligibility for benefits will be as currently practiced.

4. Manitobans, and non-Manitobans who qualify under Part 2b., who are required to isolate at the Keeyask project camp after completing a COVID 19 test and prior to reporting for work, shall receive a daily stipend of $350.00 for days they are not otherwise paid travel hours and/or wages. Employees will be paid travel time from their TDP to the project site in accordance with Article 19.1.2.5. This will largely apply to employees who self-drive to site or are transported to site by shuttle and are required to complete a COVID 19 test upon arrival.

   As a stipend, these payments will not accrue any fringe benefits as required under an employee's Appendix. Although not an exhaustive list, this stipend will not accrue such benefits as Pension, Health and Welfare, Vacation and Statutory Holiday Pay, or various training or union promotion Funds. Union dues will not be deducted. It is a taxable benefit and will be subject to regulatory deductions such as Income Tax, CPP, and EI.

5. Article 19 and Letters of Agreement 5, 26, 27, 36, and 53 will be adjusted to reflect the following.

   In order to maintain eligibility for employment at Keeyask, Non-Manitobans upon first recall and after each turnaround thereafter, shall repeat the applicable self-isolation period up to 14 days at the employee's residence. As such, the regular rotation of 21 days shall be followed 14 days of self-isolation to establish eligibility for return to Keeyask. Each employment period of 21 days shall be followed by 7 days (BNA Isolation Leave) and 7 days of COVID

19 self-isolation. The 7 days of BNA Isolation Leave must be as self-isolated time for eligibility to return to the project site (this totals the required 14 days of self-isolation time as required).

6. All employees while working at site may elect to waive their option for Isolation Leave under Article 19 and various Letters of Agreement such as 27 and 36, as well as Article 4 if this LOA. Employees choosing to waive the option for an Isolation Leave as approved by their contractor, will work a six (6) day per week schedule. The scheduled off day will be at the discretion of the contractor.

7. Letter of Agreement 35 will be subject to a one-time adjustment in accrual dates.

   The completion bonus payment targeted for the 1st payday after July 1st (per LOA 35, Article 14.7, section iv.) a.)), will be adjusted on a one-time basis in 2020. The adjustment is to pay accrued completion bonus earnings from January 1 – May 19, 2020, instead of January 1 – March 31.

8. Employees have the right to use up to three (3) personal wellness days, consecutive or non-consecutive, during the term of this Agreement. These days shall be unpaid.

9. Should COVID 19 continue to evolve and authorized public health or government officials impose additional restrictions that render this LOA inoperable or impermissible under prevailing law, the Association may terminate this LOA with 96 hours written notice to the Council. However, any individuals who remain working at Keeyask after such termination shall continue to be paid in accordance with this LOA until their next turnaround.

Agreed to this revision on 28th day of May 2020.

Allied Hydro Council of Manitoba	Hydro Project Management Association

BURNTWOOD/NELSON AGREEMENT (BNA)

Letter of Agreement No. 66- Introduction of Classification to Appendix 13 – Winders & Brazers

Subject: Introduction of Classification to Appendix 13 – Winders & Brazers

WHEREAS the Association and the Council have agreed to create a new classification within Appendix 13 for Winders and Brazers recognizing the specialized and specific work they perform;

AND WHEREAS they have discussed the availability of job qualified workers with these skills and abilities;

AND WHEREAS they have concluded that there is a shortage of job qualified workers with these skills and abilities both Provincially and Nationally, and requires independent conditions to enhance the ability to attract and retain job qualified workers;

AND WHEREAS they have concluded that establishing such classification is warranted and necessary;

Now therefore, in consideration of the foregoing, the Association and the Council hereby agree to the following, specific to Winders & Brazers classification only, for the remainder of the Keeyask Projects:

1. The job classification of 'Winder / Brazer' shall be added to Appendix 13, Article 3.1. The established wage level will be equal to the wage level for an Electrical Journeyperson.

2. In consideration of lay-off exceptions outlined in Article 12.4.1.2, when a reduction of workers is required, the contractor and IBEW 2085 union hall representative will meet to discuss a proposed layoff order. Consideration will be given to productivity; however, the contractor will endeavor to retain externally recruited Winder / Brazers (via transfer in or stage 4 named hire processes) and union referred members on a 1:1 ratio basis. Specifically, for every one externally recruited and retained Winder / Brazer, one union hall referred member will also be retained. The order of which will be determined by the contractor.

Agreed to this 26th day of August 2020.

INTRODUCTION

PURPOSE

This guide contains job descriptions and related information for classifications of workers likely to be required by contractors for the construction of a Northern Hydro Development Project.

This information package is intended to provide information to:

- Persons considering employment opportunities on a Project in order to understand the general nature of the work required, the types of jobs that could be available and the qualifications required for these jobs
- Persons involved in the referral services for the Project to understand the various occupations in order to be better able to match potential applicants with contractors' job orders
- Persons involved in the planning of training programs and for individual job seekers who are arranging their educational and career plans and are considering potential employment on the construction of hydroelectric generating stations and other large civil construction-type projects

CONTENTS

The Burntwood/Nelson Agreement (BNA) is the collective agreement that applies to construction of Northern Hydro Development Projects. The information on the various occupations is organized according to the relevant occupational group appendix under the BNA. All jobs described in this information package must be filled in accordance with the referral and hiring provisions of the BNA. A table of contents is included for quick reference to specific occupations. For each occupation, a job description is provided that includes the designated title of the occupation and the BNA Appendix to which it belongs. The job description also provides a general overview of the duties, responsibilities, qualifications and experience anticipated to be required of applicants for the position.

The information presented in this package represents an estimation only, based on current trade regulations and past experience on Northern Hydro Development Projects. It is important to note that these job descriptions will be subject to review and revision by individual project contractors after the work has been awarded. In some cases the duties and qualifications will vary from what is found in these descriptions. This will depend on factors such as the type and size

CAUTION: These job descriptions will be subject to review and possible revisions by individual project contractors after the work is awarded, and the duties and qualifications may vary from what is found in these descriptions. *For a detailed explanation of the possibility for changes see the Introduction to this information package.*

Press **Home** to return to the TABLE OF CONTENTS

of equipment, and the methods, procedures and technology used on a Project. Contractors will determine specific job qualifications and requirements when a Project is being built.

NATURE OF THE WORK

All potential applicants should be aware that construction of a Northern Hydro Development Project is demanding work. Candidates must be physically fit and willing and able to perform challenging work in a high productivity environment, often under inclement weather conditions. Work weeks typically consist of 6 consecutive 9-hour days followed by one day off. Work on a Project typically requires extended periods (e.g. up to 40 calendar days) at the Project site.

CAUTION: These job descriptions will be subject to review and possible revisions by individual project contractors after the work is awarded, and the duties and qualifications may vary from what is found in these descriptions. *For a detailed explanation of the possibility for changes see the Introduction to this information package.*

JOB DESCRIPTION

(BNA APPENDIX 1 - Labourers)

JOB TITLE:

BLASTER

DUTIES & RESPONSIBILITIES:

- Assembles, plants and detonates explosive charges to loosen soil and rock
- Loads explosives in blast holes by hand or directs the movement of bulk explosives trucks to lead holes
- Determines quality, type and amount of explosives required
- Marks location and stakes out pattern of holes to be drilled
- Issues drilling instructions for depth and placement of blast holes
- Selects and arranges detonators to control the blast
- Assembles primer charges and blasting cap and places them with main explosive charges in drill holes
- Fills collar of drill hole with mud or clay and tamps
- Connects wires, detonating cord or fuses into series
- Directs helpers to place safety mat over charge to suppress rock fragments during blast
- Extends lead wires away from charge and tests electrical circuits with portable galvanometer
- Ensures that explosives and accessories are handled and stored in accordance with regulations
- Ensures that safety regulations are being observed and sounds horn, whistle or other signal for area to be cleared of workers and equipment
- Connects wires to blasting machine and pushes handle or button or lights fuse to detonate charge
- May be required to compile records of blasting and keep inventory of blasting agents on hand
- Supervises Powderman

QUALIFICATIONS & OTHER REQUIREMENTS:

- Must have unlimited Provincial Blaster's Certificate
- Must have additional experience in rock blasting on large civil construction projects, including experience with sequential blasting

CAUTION: These job descriptions will be subject to review and possible revisions by individual project contractors after the work is awarded, and the duties and qualifications may vary from what is found in these descriptions. *For a detailed explanation of the possibility for changes see the Introduction to this information package.*

JOB DESCRIPTION

(BNA APPENDIX 1 - Labourers)

JOB TITLE:

CONCRETE WORKER: VIBRATOR OPERATOR, SCREEDMAN, PUDDLER, FLOATMAN, GREEN CUTTER

DUTIES & RESPONSIBILITIES:

VIBRATOR OPERATOR:

- Operates a portable vibrating machine up to 6” to properly consolidate fresh concrete

PUDDLER:

- Tamps freshly poured concrete with hand tools or machine vibrator

FLOATER:

- Smoothes exposed surfaces of freshly poured concrete with hand tools or trowelling machine
- May pull screed or template over surface to spread concrete to specified depth
- May install bolts or other fixtures in concrete

GREEN CUTTER:

- Cuts lines in concrete using power cutter, edging tools, jointers and straightedges

QUALIFICATIONS & OTHER REQUIREMENTS:

- Physically able to hold and operate the machines
- Willingness to perform physically demanding work
- Able to work at heights
- Experience on larger concrete pours may be required

CAUTION: These job descriptions will be subject to review and possible revisions by individual project contractors after the work is awarded, and the duties and qualifications may vary from what is found in these descriptions. *For a detailed explanation of the possibility for changes see the Introduction to this information package.*

JOB DESCRIPTION

(BNA APPENDIX 1 - Labourers)

JOB TITLE:

DRILLER (DIAMOND, AIR TRACK, WAGON AND HYDRAULIC)

DUTIES & RESPONSIBILITIES:

- Operates rotary or percussion type mobile drills powered by air, electric or diesel hydraulic systems to bore blast holes in rock or obtain soil and rock samples
- Couples water or air hose or electric line to drill
- Adjusts controls to start drill and to govern rotary speed or percussion rate, feed pressure and air pressure according to type of rock being drilled
- Positions additional rods by hand and operates drill to attach rod to drill string
- Changes bits or sampling equipment using wrenches and drill controls
- Reports and describes drill malfunctions and breakdowns

QUALIFICATIONS & OTHER REQUIREMENTS:

- Experience as a drill operator, operating specific types of equipment being used on the project

CAUTION: These job descriptions will be subject to review and possible revisions by individual project contractors after the work is awarded, and the duties and qualifications may vary from what is found in these descriptions. *For a detailed explanation of the possibility for changes see the Introduction to this information package.*

(BNA APPENDIX 1 - Labourers)

JOB TITLE:

GENERAL CONSTRUCTION LABOURER A (BUILDING CONSTRUCTION)

DUTIES & RESPONSIBILITIES:

- Performs a variety of building construction labouring tasks including:
- Loads and unloads construction materials and moves materials to work areas
- Cleans up scrap, burns surplus materials, and cleans equipment and tools
- Signals truck drivers and other operators to dump on excavation sites
- Erects barricades
- Cleans, sorts and piles materials
- Uses simple tools such as wrecking bars, strippers, etc.
- Tends conveyor belts
- Strips concrete forms and disassembles other structures
- Provides assistance in other activities on site as directed

QUALIFICATIONS & OTHER REQUIREMENTS:

- Less than six months experience performing labouring tasks on building construction in the industrial, commercial or institutional sectors
- Willing and able to do heavy manual labour
- Willing to take instructions from a variety of personnel
- May be required to work at heights

CAUTION: These job descriptions will be subject to review and possible revisions by individual project contractors after the work is awarded, and the duties and qualifications may vary from what is found in these descriptions. *For a detailed explanation of the possibility for changes see the Introduction to this information package.*

Do Unions Cause Business Failures?*

John DiNardo

University of Michigan, Ann Arbor and NBER

David S. Lee

UC Berkeley and NBER

March 2003

Abstract

Estimating the causal effect of unionization on business survival rates is difficult in the absence of large, representative data on establishments with union status information. It is also confounded by selection bias, because unions may tend to organize at highly profitable enterprises that are more likely to survive. Using new data on more than 27,000 establishments that faced organizing drives in the U.S. during 1983-1999, this paper utilizes a regression discontinuity design to estimate the impact of unionization on the probability of employer dislocation. Survival probabilities of employers where unions *barely* won the election (e.g. by one vote) are compared to those where the unions *barely* lost. The analysis yields a surprising result: *little or no* union effect on business dislocation rates over 1- to 18-year horizons.

* An earlier version of the paper "The Impact of Unionization on Establishment Closure: A Regression Discontinuity Analysis of Representation Elections" is on-line as *NBER Working Paper #8993*, June 2002. We thank David Card, Larry Katz, Enrico Moretti, Morris Kleiner, participants of the University of Michigan Labor Workshop and the NBER Labor Studies Summer Institute for helpful comments and suggestions, Matthew Butler and Francisco Martorell for outstanding research assistance, Hank Farber for providing election data, and Christina Lee for reading previous drafts.

1 Introduction

It is widely understood that unions raise the cost of labor by raising members' wages above market rates.[1] Unions also impose other costs on employers - limiting discretion in hiring and firing, for example, and altering the structure of pay differentials across skill groups. A key question for understanding the social costs of unionization is whether the wage premiums and other costs of unionism create large or small distortions in the allocation of labor.[2] These distortions can take the form of reduced employment at unionized firms, or most dramatically, an accelerated pace of business failures.

The potentially adverse effects of unions on firm survival are acknowledged by employers and employees alike. During union organizing drives, firms routinely threaten to close a plant if the union drive is successful [Bronfenbrenner 2000]. Employees seem to take these threats seriously: the risk of plant closure is cited as the leading cause of union withdrawal from organizing attempts [Commission for Labor Cooperation 1997]. Such risks are arguably higher now, in light of rapidly expanding trade with low-wage countries such as China and Mexico, and increasing international capital mobility.[3]

Despite the clear theoretical presumption and strong anecdotal evidence, the magnitude of the effect of unions on establishment or firm survival is uncertain. One limiting factor is the absence of large, representative data sets that track establishments over time and provide information on union status.[4] A second and even more important concern is the fact that unionization is nonrandom. Depending on the correlation between factors associated with higher or lower risks of survival, and higher or lower likelihood

[1] See Lewis [1986].

[2] The presence of a "deadweight welfare loss" to unionization is a staple of textbook treatments of unionization. Even Freeman and Medoff [1984] - whose emphasis is on the possible "efficiency enhancing" aspect of trade unionism - stipulate the existence of such a welfare loss. More recently, the cross-country analysis of Nickell and Layard [1999] suggest that a change from 25 to over 70 percent of the workers covered by collective bargaining is associated with a doubling of the unemployment rate. Lalonde, Marschke, and Troske [1996], using a "difference-in-difference" approach with LRD data, find successful organization is associated with significant declines in subsequent employment and output.

[3] The Commission for Labor Cooperation, a tri-national organization created under the North American Agreement on Labor Cooperation ("NAALC") in response to labor issues related to NAFTA, called for a study on the impact of plant closings on union organizing in the three countries.

[4] This has led researchers to use creative data collection methods to examine these questions. For example, Freeman and Kleiner [1990] conducted on-site interviews of 364 establishments that experienced representation elections in the Boston and Kansas City NLRB districts. Bronars and Deere [1993] construct a dataset of NLRB elections to COMPUSTAT data to construct a panel of 85 firms over a 20-year period. Freeman and Kleiner [1999] also use COMPUSTAT to construct a sample of 319 firms. Lalonde, Marschke, and Troske [1996] match NLRB representation elections to a subset of manufacturing establishments that are continuously operating in the LRD to create samples with 500 to about 1100 observations.

of unionization, the observed correlation between union status and survival may overstate or understate the true effects of unions. Two competing phenomena may induce opposite selectivity biases. On the one hand, unions may tend to organize at highly profitable enterprises that are more likely to survive. On the other, a union organizing drive may be more likely to succeed when a firm is poorly managed, or has faced recent difficulties.

In this paper, we present quasi-experimental evidence on the causal effect of unionization on the probability of business failures/re-locations, using a new database that is representative of U.S. establishments at risk of being unionized. Our analysis is based on the fact that most new unionization occurs as a result of a secret ballot election. By law, a majority vote in favor of the union requires management to recognize the union and bargain "in good faith". This process creates a natural set of comparisons between establishments that faced elections where the union *barely* won (say, by one vote) and those that faced elections where the union *barely* lost (by one vote). As in other regression discontinuity designs, the comparison between near winners and near losers eliminates any confounding selection and omitted variable biases, and allows us to devise credible and transparent estimates of the effect of unions on firm survival.[5]

Our analysis yields a surprising result: we estimate a very small union recognition effect on employer survival, on the order of 1 percent. The estimates are stable across different time horizons (from 1- to 18-years), and across industry, and different establishment sizes. Moreover, we find strong empirical support for the basic requirement of our research design. Close winners and losers look similar in industry composition, size of the bargaining unit, and other pre-determined characteristics.

A potential concern is that unions that barely lose elections nonetheless have a relatively good chance of eventually becoming recognized, while those that barely win face a high risk of decertification. The "treatment" of a *close* union victory would have little long-run consequence to the firm, which would naturally lead to small long-run effects on business survival. We find no empirical support for this hypothesis. There is a striking discontinuity in the relationship between the union vote share and our independent

[5] Regression discontinuity designs are described in Thistlethwaite and Campbell [1960] and Campbell [1969], and formally examined as an identification strategy recently in Hahn, Todd, and van der Klaauw [2001]. More recent examples include Angrist and Lavy [1998], and van der Klaauw [1996].

proxy for union presence (the filing of a contract expiration notice) many years after the election.

One explanation for the small effect of unions on firm survival is that the costs imposed by newly organized unions are small.[6] This possibility would seem at odds with the extensive literature on union wage premiums and other research showing significant effects on profitability.[7] It would also be at odds with the fact that NLRB representation elections are nearly always contentious. Why would employers spend resources on resisting an organizing drive if unions did not impose significantly higher future costs? And why would unions spend resources on organizing if there were nothing to gain from a victory? A simple model of optimal union organizing actually suggests that these potential gains should be *larger* when the vote is close than when the union is certain to prevail. A larger wage gain is needed to offset the lower probability of winning the election, in order to justify the fixed costs of an organizing drive. All of this suggests that the costs of new unionization are likely to be important.

We therefore conclude that unions likely do not affect businesses by making them more susceptible to failure or re-location, despite the fears of many employers and employees. While not affecting the survivability of a firm, unions could nonetheless cause slower employment growth. Our data provide limited evidence on this "within-firm" effect: we estimate a negative employment response of 7 percent among surviving establishments, but with standard errors of the same magnitude. Our estimates on employment can rule out the large magnitudes that would be needed to fully explain the decline in union density since the early 1980s. On the other hand, even with the more than 27,000 establishments in our data set, we cannot rule out either small or moderate-sized elasticities.

The paper is organized as follows. Section 2 describes our empirical strategy, and summarizes our main findings. Section 3 discusses the conditions for a valid regression discontinuity design in our context, and outlines a simple economic model to describe the interaction of employers, unions, and workers in the context of a representation election. Section 4 places our analysis in the context of industrial relations in the U.S., and describes some important aspects of our data. We present the main results in Section 5, discuss

[6] Freeman and Kleiner [1990] find in their survey of 364 firms, quite modest wage effects associated with new unionization, in contrast to that implied by the typical study based on micro data on individuals.

[7] For example, see Ruback and Zimmerman [1984], and Abowd [1989].

their economic implications in Section 6, and suggest directions for future research in Section 7.

2 Regression Discontinuity Analysis of Establishment Survival and Unionization: Basic Facts

We begin by briefly describing our research design and summarizing our main results. Our regression discontinuity analysis suggests that there is virtually no *causal* impact of unionization on survival rates of business establishments.

The primary challenge of identifying the impact of unionization is one of isolating exogenous variation in the union "status" of an establishment, while keeping all other pre-determined characteristics of the establishment "constant". A simple comparison of survival rates between unionized and non-unionized firms suffers from the potential endogeneity of union status. For example, firms with larger economic rents may be more likely to survive, and *because* of those rents, are more likely to generate worker demand for a union.

In this paper, we exploit a distinctive feature of the union recognition process in the U.S. that we argue generates "as good as randomized" variation in union status. In the U.S. the obligation of employers to bargain "in good faith" with a union is almost alwasy determined through a majority secret-ballot vote amongst the workers; this "representation election" is overseen by the National Labor Relations Board (NLRB). We argue that it is plausible that there is at least some degree of unpredictability regarding the eventual vote tally, so that the firms and unions involved in elections where the union *barely won* (say, by one vote) are likely to be *ex ante* comparable to those firms and unions involved in elections where the union *barely lost* (by one vote). If this is true – that they are comparable "in all other ways" – then the difference in the survival rates subsequent to the election can be attributed to a causal impact of the union certification.

Figure Ia graphically summarizes our main empirical finding. Using data on NLRB representation elections conducted between 1983 and 1999, it plots the proportion of employers that are still in business by the year 2001, by the actual share of the votes in favor of the union. Each dot represents an average

among elections within a 0.05 interval of the vote share. All points to the left of the 0.50 line represent establishments where the union lost the certification election, and those to the right represent union victories. If unionization substantially impacted ability of the employer to remain economically viable – a claim frequently touted by employers during organizing drives [Bronfenbrenner 1994, Kleiner 2001] – we would expect to see a sharp drop in survival rates at the 0.50 threshold. No drop is evident in Figure Ia.

We interpret this smooth empirical relation through the 0.50 threshold as evidence that there is little or no causal effect of union status on employer survival. Two alternative explanations to the pattern in Figure Ia are 1) employers in which the union *barely* won and lost are *not ex ante* comparable, perhaps because there is *no unpredictability* in the outcome of the election, and that there is "sorting" of unions and employers on either side of the 0.50 threshold and 2) the *intensity* of the "treatment" is small among the employers and unions involved in close elections – that is, an employer that prevents union certification by 1 vote must make wage concessions as large as they would have had the union won by 1 vote.

As we will discuss in greater detail in later sections, there are several reasons why the two interpretations are difficult to reconcile with the implications of a simple economic model of the election process, as well as with the empirical evidence we present. First, if the exact vote tally could be predicted with complete certainty, it is difficult to explain why a union would expend resources to ultimately lose an organizing drive. At the very least, if vote tallies could be perfectly predicted for a substantial *fraction* of the election cases (and if there were systematic "sorting" around the 0.50 threshold) we would expect to see a sharp drop in the relative frequency of observed elections in which the union barely lost an election. In fact, as Appendix Table II and Appendix Figure I show, union losses are at least as common as union victories, and the distribution of vote shares looks approximately normal, centered around 0.40, with no sharp drop in the relative frequency of bare union losses.

More importantly, we present evidence below that employers and elections, in fact, look quite similar along many pre-determined characteristics on either side of the 0.50 threshold, as predicted by our implicit assumption of "as good as random" assignment. As one example, Figure Ic plots averages of our "union presence before the election" proxy – an indicator of whether a contract expiration notice

was filed prior to the election – against the election vote share for the union.[8] The figure reveals no sharp change in pre-election "union presence" around the 0.50 percent threshold, suggesting that at least along this dimension, employers involved in close wins and losses appear comparable.

Furthermore, the economic model we outline below illustrates that while the expected union wage could be expected to be higher given a higher probability that the union will win, we might also expect employers to offer a higher *non-union* wage in order to persuade some workers to vote against the union. Therefore, the *gap* between the expected union and non-union wage may not necessarily rise with the probability of a union victory. Actually, the *minimum* union-non-union wage gap needed in order to justify the unions' costs of conducting an organizing drive must be *larger* for elections in which there is a *lower* probability of a union victory. Put simply, it would be unlikely that an election would be conducted if the union had nothing to gain from winning (i.e. if the expected "treatment" is zero).

More importantly, we present evidence that is inconsistent with the hypothesis that union certification among close elections is ineffectual in altering union power. Figure Ib is analogous to Figure Ic, except we plot averages of our proxy for "union presence" *subsequent* to the NLRB representation election. It exhibits a striking discontinuity at the 0.50 threshold, suggesting that the certification has a significant causal influence in altering union power. Thus, it is evident in the data that something *is* "at stake" among these election cases.

The remainder of the paper explains in greater detail the above reasons why we interpret our findings as evidence of little or no *causal* impact of unionization on employer survivorship.

3 Econometric Framework

3.1 Reduced-Form Regression Discontinuity Framework

In the context of union representation elections, the internal validity of our regression discontinuity analysis primarily depends on two assumptions: 1) that the "treatment" (union recognition) is a known, discontinu-

[8] The sample for the figure includes only those employers that have survived as of the year 2001. Below we discuss how to interpret these graphs in light of sample selection bias.

ous function of an observed variable (the votes for the union), and 2) that there is at least *some* unpredictable component of the exact vote tally that has a smooth continuous distribution. U.S. labor law ensures 1); the importance of 2) is discussed below within a reduced-form econometric framework. We outline sufficient stochastic assumptions for identifying union effects in our context.

Suppose an employer outcome, such as the propensity of the establishment to survive, is determined by the equation

$$y_j^* = X_j\gamma + WIN_j\beta + \varepsilon_j \tag{1}$$

where $y_j^*$is the survival propensity, and WIN_j is an indicator variable determining whether the union won the representation election for employer j. X_j denotes all other pre-determined characteristics (observable and unobservable) that influence establishment survival and ε_j an independent error term.

It is clear that a "regression" of y_j^* on WIN_j will in general yield an inconsistent estimate of β if any components of X_j also determine WIN_j. As one example, X_j could represent the magnitude of the firm's economic rents, and it is plausible that unions are more likely to prevail in organizing drives in firms that enjoy high rents, because workers are less concerned that a union-induced wage gain will harm the economic viability of the employer. In particular, the NLRB election process implies that WIN_j is determined by

$$\begin{aligned} WIN_j &= \begin{cases} 1 \text{ if } V_j > \frac{1}{2} \\ 0 \text{ if } V_j \leq \frac{1}{2} \end{cases} \\ V_j &= v\left(X_j\right) + U_j \end{aligned} \tag{2}$$

where V_j is the vote share for the union, and $v\left(\cdot\right)$ is a function of X_j.[9]

The endogeneity of X_j is clear here. Another way of viewing the problem is that the distribution of X_j, conditional on a union win, will in general be different from the distribution conditional on a union loss. More formally, (assuming that X_j has finite and discrete support) $\Pr\left[X_j = x | V_j > \frac{1}{2}\right]$ will generally not equal $\Pr\left[X_j = x | V_j \leq \frac{1}{2}\right]$ for any x.

[9] To be more precise, one could let $V_j = \Lambda\left(v\left(X_j\right) + U_j\right)$ where Λ is a transformation from the real line to the $[0, 1]$ interval.

On the other hand, if U_j is continuously distributed, the distribution of X_j conditional on a *bare* union victory will be arbitrarily close to the distribution conditional on a *bare* union loss. That is,

$$\Pr\left[X_j = x | V_j = \frac{1}{2} + \Delta\right] \approx \Pr\left[X_j = x | V_j = \frac{1}{2} - \Delta\right] \tag{3}$$

for all x in the support of X_j, as Δ approaches zero.[10] This is the sense in which examining closer and closer elections can result in employers involved in union victories and losses becoming more similar along all other observable and unobservable characteristics. Thus, a test of the continuity of the distribution of U_j is to examine if elections appear different along observable pre-determined characteristics of employers involved in elections just below and above the 0.50 threshold.

In practice, rather than specifying functional forms for the distributions of $X_j\gamma$ and ε_j to estimate a normalized β, we will directly estimate $\Pr\left[Survival | V_j = \frac{1}{2} + \Delta\right] - \Pr\left[Survival | V_j = \frac{1}{2} + \Delta\right]$ (the discontinuity "gap" at 0.50 illustrated in Figures Ia-Ic). It is clear that a negative (positive) difference implies a negative (positive) impact β of unionization on employer survival propensities.

3.2 Conceptual Framework

While our data are not sufficiently rich to allow estimation of a dynamic structural model of union and firm behavior, we present a simple economic model provides a framework for interpreting our estimates and for describing the election context. Drawing upon ideas in Rosen (1969), we present a simple economic framework that describes the first-order objectives and constraints of the various participants in the NLRB election process.[11] Below, we show that the key identifying assumption (continuity of the distribution of U_j at $V_j = \frac{1}{2}$) is a natural consequence of this simple economic model of the election process.

Consider the structural relation between employer survival propensities and the wage W_j

$$y_j^* = \alpha W_j + \varepsilon_j \tag{4}$$

[10] To see this, note that the density of $v(X_j) + U_j$ conditional on X_j – $f(v|X_j = x)$ – is continuous in v. Therefore, by Bayes' Law, $\frac{f(v|X_j=x)\cdot\Pr[X_j=x]}{\sum f(v|X_j=x)\cdot\Pr[X_j=x]} = \Pr[X_j = x | v(x) + U_j = v]$ is continuous in v. Actually, all that is needed is continuity in v at $v = \frac{1}{2}$

[11] The model presented below has a similarity to those used to model final offer arbitration [see Farber, 1980; Ashenfelter and Bloom 1984]. Here, the union and management put forth wage "offers" optimally, given expectations of the preferences of the voters/employees, which are unknown to the two bargaining parties. The outcome of the election is akin to the decision process of an "arbitrator".

α is assumed to be negative, so that a higher wage leads to a higher probability that the employer is forced to shut down. Note however, that even if α is negative, given the necessarily non-linear relation between a probability and W_j, it could very well be that the marginal effect of W_j on the *probability* of survival could be small.

As in Ashenfelter and Johnson (1969), we assume that there are three separate agents, 1) the employer, 2) the union leadership, and 3) the workers – the voters – in the potential bargaining unit. Management and the union each offer different levels of wages to the workers, and the workers vote for or against the union, based on those choices, so that we have

$$\begin{aligned} W_j &= W_j^U WIN_j + W_j^N \left(1 - WIN_j\right) \\ WIN_j &= 1\left(V_j > \frac{1}{2}\right) \end{aligned} \tag{5}$$

where W_j^U and W_j^N are the wages offered by the union and management, respectively. This implies the relation

$$y_j^* = \alpha W_j^N + \alpha\left(W_j^U - W_j^N\right) WIN_j + \varepsilon_j \tag{6}$$

so that the causal effect of the union is represented by $\alpha\left(W_j^U - W_j^N\right)$.

Workers When considering whether or not to vote in favor of the union, the worker weighs the benefit of gaining a higher wage against the costs of a potentially higher probability that she will not retain employment at the firm. A lower probability of retaining the job may arise either because the union will induce the employer to shut down or move, or induce the employer to scale back employment. Indeed, a worker may find the wage (and its consequences) offered by the management to be more reasonable and individually desirable. We describe the aggregate voting behavior of the workers as

$$V_j = v\left(W_j^U, W_j^N\right) + U_j \tag{7}$$

where $v\left(\cdot\right)$ translates the offered wages into a predictable component of the ultimate vote tally, and U_j is the unpredictable (by all agents in the model) component of the union vote share.[12]

[12] Again, we could be more precise instead specifying $G^{-1}\left(V_j\right) = v\left(W_j^U, W_j^N\right) + U_j$, where G is a one-to-one transformation from the real line to the $[0, 1]$ interval.

The shape of $v(\cdot)$ characterizes the workers' preferences. We assume that $\frac{\partial v}{\partial W_j^U}$ and $\frac{\partial v}{\partial W_j^N}$ are both negative, capturing the notion that if the union raises the offer, it will lose the voters who are indifferent between the union's and management's offers. Similarly, the management can gain more "no" votes by promising a higher wage W_j^N.

Employer The management seeks to maximize profits, weighing the benefits of offering a lower wage against the cost that lowering the wage induces a higher probability that the union will win, resulting in a higher wage W_j^U. The firm's optimal choice of W_j^N can be expressed as

$$W_j^{N*} = \arg\max_{W_j^N} H\left(W_j^N, W_j^U, \Pr\left[WIN_j = 1\right]\right) \tag{8}$$

where $H(\cdot)$ is the employer's objective function. An example of a specific form for the objective function is the expected profits, given the employer's and union's wage offers:

$$H\left(W_j^N, W_j^U, \Pr\left[WIN_j = 1\right]\right) = \pi\left(W_j^N\right)\Pr\left[WIN_j = 0\right] + \pi\left(W_j^U\right)\Pr\left[WIN_j = 1\right] \tag{9}$$

where $\pi(\cdot)$ is the profit function.

Union The union leadership seeks to raise wages above that offered by the employer, but by offering higher wages, it reduces the probability of winning the election. The union's optimal choice of W_j^U facing the firm's offer W_j^N can be written as

$$W_j^{U*} = \arg\max_{W_j^U} J\left(W_j^U, W_j^N, \Pr\left[WIN_j = 1\right]\right) \tag{10}$$

where $J(\cdot)$ is the union's objective function. An example of a possible form for this objective function is the expected net benefit (expressed in dollars) for the union:

$$J\left(W_j^U, W_j^N, \Pr\left[WIN_j = 1\right]\right) = -c + \Pr\left[WIN_j = 1\right] U\left(W_j^U - W_j^N\right) \tag{11}$$

where c is a fixed cost to conducting an organizing drive, and $U(\cdot)$ is a benefit function with $U(0) = 0$.[13]

In a Nash equilibrium, in anticipation of how the workers will vote (on average), and given the correct expectation of the other party's wage offer, union and management optimally choose their wage

[13] In principle, $U(\cdot)$ could be decreasing in the wage gap at some point, if the union also gives weight to the employer's survival and/or the level of employment. However, it is easy to imagine that in many election cases $U(\cdot)$ is increasing in the wage gap in equilbrium.

offers to maximize their objective functions.

Implications It is clear from Equation 11 that if the outcomes of elections were known *ex ante* with certainty – if there were no U_j component – we should expect to observe no elections in which unions lose, if conducting an organizing drive is costly. In fact, as shown in Appendix Table II, over the sample period, the average vote share for the union and win rates are around 0.48 and 0.427, respectively. Furthermore, if in a large fraction of election cases, the outcome of a potential election were perfectly foreseen, we would expect to see a sharp drop in the relative frequency of a "close" union election loss. Appendix Figure I shows that empirically there is no such sharp drop; the distribution of vote shares is approximately normal, centered around 0.35 to 0.40. Our framework provides an intuitive explanation for these patterns: for every election, there is *some* ex ante probability (however small) that the union will prevail. In other words, there is some unpredictability in the final vote count. This would explain why unions would participate in elections that they so happen to eventually lose.

Furthermore, presuming the existence of an unpredictable component U_j to the ultimate vote share, the framework above implies that the distribution of U_j would be continuous at $V_j = v\left(W_j^{U*}, W_j^{N*}\right) + U_j = \frac{1}{2}$. This is because a *discontinuity* in the distribution of U_j at $V_j = \frac{1}{2}$ is *inconsistent* with the optimality of W_j^{U*} and W_j^{N*} for the union and management. This is because such a discontinuity would imply that $\Pr\left[WIN_j = 1\right]$ would be discontinuous in W_j^U and W_j^N at W_j^{U*}, W_j^{N*}.[14] As evident from Equations 9 and 11, if this were the case, W_j^{U*} (W_j^{N*}) would not be optimal, since the union (management) could lower (raise) wages by an arbitrarily small amount to affect a sharp rise (fall) in the probability of a union victory.[15] Intuitively, no firm or union would settle with making a wage offer that could be altered a tiny amount in order to cause a discontinuous increase in the probability that the election would result in their favor. Thus, the existence of Nash Equilibria gives a theoretical justification of the validity of the regression discontinuity approach described above.

[14] To see this, note that $\Pr\left[WIN_j = 1\right] = F\left(v\left(W_j^{U*}, W_j^{N*}\right) - \frac{1}{2}\right)$, where $F\left(\cdot\right)$ is the cdf of $-U_j$. A discontinuity in the distribution of $-U_j$ at $V_j = \frac{1}{2}$, implies that $F\left(\cdot\right)$ is discontinuous at $v\left(W_j^{U*}, W_j^{N*}\right) - \frac{1}{2}$. As long as $v\left(W_j^{U*}, W_j^{N*}\right)$ is a continuous function of its arguments at W_j^{U*}, W_j^{N*}, then $\Pr\left[WIN_j = 1\right]$ is discontinuous in W_j^U, W_j^N at W_j^{U*}, W_j^{N*}.

[15] This is true as long as the profit function $\pi\left(\cdot\right)$ and benefit function $U\left(\cdot\right)$ are continuous.

Nevertheless, we reiterate that the internal validity of the design can be empirically evaluated. It is a testable proposition whether or not the examination of close elections yields "treated" and "control" employers that look comparable along the observable dimensions of X_j.[16]

4 Background

4.1 Institutional Background: the industrial relations climate and the NLRB Election Process

Our sample of establishments is limited to the employers that are at risk for becoming "unionized." Thus, before proceeding any further, it will be instructive to place our analysis in the context of labor relations and the conduct of representation elections in the U.S.

The administration of fair, secret ballot elections to determine union recognition is one of the chief responsibilities of the NLRB, the most significant administrative agency to be a consequence of the National Labor Relations Act (NLRA) – the Wagner Act – of the 1930s. The law has been changing continuously since its enactment, most notably with the passage of Taft–Hartley Acts in 1947 (which among other things, provided for temporary government seizure of struck facilities in the event of a strike that creates an "emergency") and the Landrum–Griffin Act of 1959 (which among other things, outlawed a number of successful union tactics including "secondary boycotts"). In principle, the NLRA provides a neutral setting in which the right for workers to bargain collectively is enforced.

It is important to note that where U.S. law gives workers the right to unionize, an NLRB representation election is not required. In general, nothing prevents an employer from recognizing a union without the formalities of an election. Voluntary recognition of a union, however, is thought to be quite rare, and employers generally will attempt to resist an organizing drive. With data on firms who faced NLRB elections in the early 1990s, Brofenbrenner (1994) documents that most employers used multiple tactics to delay or deny a collective bargaining agreement. Among the most common are

[16] As in any empirical investigation, it is impossible to rule out violation of the identifying assumption, but we *can* test the restriction of the research design that *observable* characteristics are roughly balanced between the union-win and union-loss groups of employers.

1. “Captive meetings”. While employers are prohibited from directly firing workers because of lawful union activity, at captive meetings employers are allowed to inform workers of the possible (dire) consequences of unionization, including making the business more susceptible to closure.
2. Firing union activists. While “prohibited," the penalty imposed on employers, if found guilty, is generally quite minor – reinstatement with back pay. Indeed, the costs have been perceived as so minor that Freeman (1985) observes that the notices that firms are required to post when they engage in illegal firing are referred to as “hunting licenses."
3. Hire a “management consultant" who advises employers on a variety of tactics to discourage unionization.[17]
4. Alleging unfair labor practices, disputing the choice of bargaining unit, etc.[18]

Against this backdrop of employer opposition to unionization, it is perhaps not surprising that there is no single path to an NLRB election and eventual recognition of the union by the employer. Nonetheless, it is useful to describe a prototypical scenario that results in a establishment agreeing to bargain with its workers through a labor union:

1. A group of workers decide to try to form a union. These workers contact a labor union and ask for assistance in beginning an organizing drive.
2. In collaboration with the union, the employees begin a “card drive." The purpose of the card drive is to be able to petition the NLRB to hold an election. Unions generally seek to get cards from at least 50 percent of the workers in the 6 month period of time usually allowed (although in principle, only 30% is required to be granted an election by the NLRB.)
3. After the cards have been submitted, the NLRB makes a ruling on whether the people the union seeks to represent have a “community of interest” – basically form a coherent group for the purposes of bargaining. The NLRB makes a determination of which categories of employees fall within the union’s “bargaining unit.” Often the parties will differ on the appropriate bargaining unit – employers generally prefer larger and more heterogenous groupings than do unions.
4. Next, the NLRB holds an election at the work site (with exceptions to account for such things as the vagaries of employment seasonality). A simple majority (50 percent plus 1 vote) for one union is all that is required to win.[19]
5. Within 7 days after the final tally of the ballots, parties can file objections to how the election was conducted. In principle, with sufficient evidence that the election was not carried out properly, the NLRB can rule to invalidate the outcome of an election, and conduct another one thereafter. Specific ballots cannot be challenged after the voting is completed.
6. If after this, a union still has a simple majority, then the employer is, in principle, obligated to negotiate “in good faith.”

Two aspects of the industrial relations climate deem our sample of establishments particularly ap-

[17] For a colorful, albeit idiosyncratic discussion see Levitt (1993).

[18] In the case of graduate students at universities, for example, employers have often attempted to argue – sometimes successfully – that graduate student employees are not “employees" but “students receiving financial aid." Another example is employers arguing that its employees are not workers but “independent contractors" who are not covered by the provisions of NLRA.

[19] If two unions split the vote 50-50, they both lose, and neither become certified.

propriate for an analysis of the impact of unionization on employer outcomes.

First, that employers are thought to generally oppose organization drives [Kleiner 2001] suggests that both parties have "something at stake" in the outcome of the election. For example, we expect that both the union and management are expecting that a union win will generally lead to higher wages, more benefits, or better working conditions, at the cost of the employer. If very little were at stake, and if the elections themselves were *pro forma* events, then we would not expect to see a significant employer response to a union election victory. Such a finding would say more about the small size of the "treatment" ("unionization") than the potential magnitude of distortions caused by an aggressive union. This seems unlikely, however, since we analyze establishments which faced NLRB elections. Such a focus would seem likely to select establishments where union-management relations are contentious since in the overwhelming majority of cases the management of such establishments always has the option of *voluntarily* recognizing the union *without* a (costly) NLRB election. Thus, it would seem more reasonable to assume that the outcome of the election is far from inconsequential to both parties.

Second, combined with a contentious atmosphere, the secret-ballot nature of the vote undoubtedly generates a certain amount of uncertainty in the outcome of the election, particularly when the vote is expected to be close. As shown in Section 3 a certain degree of uncertainty is a crucial element to our theoretical and econometric framework. The assumption of some randomness to the vote would likely not be justified if union certification could be secured through a public petition. For example, if all that was required were 50 percent or more signatures, one could imagine that the sample of establishments/unions where the unions submitted a petition with 51 percent of the signatures would be very different from a (peculiar) group of establishments/unions where the workers submitted signatures that totalled 49 percent. By contrast, it is very easy to imagine in a secret-ballot context that those unions that won 26 out of 50 votes in a secret-ballot election possessed virtually the same *ex ante* chance of winning as unions that obtained 25 out of 50 votes (and lost).

4.2 Data Set Construction: the NLRB, FMCS, and InfoUSA, Inc.

Deferring the details to the Appendix, we summarize here the most important features of the dataset used in the analysis. First, electronic records on all representation election cases handled by the NLRB in the fiscal years from 1984 to 1999 were obtained. These records have information such as the dates of the filing of the petition, the election, and the closing of the case, as well as the eventual vote tallies, as well as other characteristics such as the size of the voting unit, and the primary industry of the establishment in question.

Importantly, these files contain the establishment name and exact address. The names and addresses alone were submitted to a commercial marketing database company called InfoUSA, Inc. InfoUSA maintains an annually updated list of all active business establishments (with a telephone listing) in the United States. The basis for their database is the consolidation of virtually all telephone books in the country. InfoUSA makes a brief call to each establishment at least once a year, to verify their existence, and to update their information on various items such as 1) the total number of employees at the establishment, 2) the estimated sales volume of the establishment, 3) the primary product of the business, and various other characteristics. If InfoUSA found a record in their current database (as of May, 2001) with the same name and address, they appended their information to the record. They were not given any information beyond the name of the business and the street address.

This merged data was then additionally merged to a database of all contract expiration notices between 1984 and February, 2001 – more than 500,000 case records – obtained from the Federal Mediation and Conciliation Service (FMCS) through a Freedom of Information Act (FOIA) request. According to the U.S. Code of Federal Regulations (29 CFR 1425.2)

> In order that the Service may provide assistance to the parties, the party initiating negotiations shall file a notice with the FMCS Notice Processing Unit ... at least 30 days prior to the expiration or modification date of an existing agreement, or 30 days prior to the reopener date of an existing agreement...

Thus, in principle, parties to collective bargaining agreements are required to file so-called "30-day notices" with the FMCS. This was used to obtain our proxy for the "presence" of a union at the establishment – both before and after the election – under the presumption that contracts eventually expire,

typically after two or three years.

There are a few important limitations to our data. First, our data do not constitute a true panel dataset. We only observe "survival" or "death" as of one point in time - in the year 2001. We know little about what happens between the time of the election and 2001, except the observation of contract expirations at that particular location. While we do observe a few "baseline" characteristics from the NLRB election file, InfoUSA does not retain historical records, so we do not have detailed employment and sales data for period between the election and the year we observe survival status (2001).

Second, since we are measuring employer "survival" as a match (by name and address) in the InfoUSA database, there will undoubtedly be some measurement error. Consequently, we will inevitably treat some firms as having "died", when instead we have simply been unable to match them. However, while this may mean that estimates of the *level* of survival rates may be downward biased, it is highly unlikely that establishments with close union winners are systematically less or more likely to match to the InfoUSA database than counterpart close union losers, except if there is a true impact of union certification on survival probabilities.

Likewise, our measure of "union presence" will also likely be biased in *levels*, although this is unlikely to have important consequences for our comparison of close winners to close losers. For example, we understate the extent of unionization to the extent that our matching algorithm fails to locate a match in the FMCS data when such a match exists or to the extent that noncompliance with the law (regarding notifying the FMCS when a contract expires) is widespread. Alternatively, we overstate the extent of unionization to the extent that our matching algorithm produces "false positive" matches. Although the levels may be mis-measured, it seems reasonable to assume that these sources of measurement error are unlikely to be systematically different between close winners and close losers. On balance, we believe the benefits of being able to compare the bare winners and losers on the basis of some other measure of "union presence" other than the legal certification that *necessarily* results from winning the election outweighs the inability to obtain an accurate measure of the overall *level* of union presence.

4.3 Descriptive Statistics

Since the primary outcome of interest in this analysis is the survival probability of the employer, we first provide a broad picture of what our data implies about exit rates of establishments over time. Three important patterns emerge from our sample of establishments that experience NLRB representation elections: 1) as might be expected, establishments' survival probabilities decline as one examines longer and longer intervals, 2) employers where the organizing campaign succeeded have, on average, a lower probability of surviving than those where the union was defeated, and 3) establishments' death/exit rates appear to be the dominant component to the overall decline in the total employment they provide over time. Table I illustrates these basic patterns.

Table I and the subsequent analysis in this paper is essentially based on the universe of establishments that experienced NLRB representation elections between 1983 and 1999.[20] The first column of Table I shows that in this sample, as would be expected, the probability of survival declines significantly as one examines longer and longer intervals. For example, the table shows that among the employers that experienced NLRB representation elections in 1984, roughly 28 percent of them were still in existence as of the year 2001. By contrast, about 58 percent of establishments that experienced an election in 1999 had survived as of 2001. The survival probability grows monotonically as we examine more recent elections; this would be expected if the establishments that experienced elections were, on average, comparable over time. The implied exit rates are comparable to other estimates from existing research that utilizes establishment-level longitudinal data.[21]

The next three columns of Table I show that establishments where unions were recognized are, on average, less likely to survive both in the short- and long-run. For example, among elections that occurred in 1999, 54 percent of those employers where the union won were still "alive" by the year 2001, compared

[20] The NLRB election data are representation election cases that are disposed within the fiscal years from 1984 to 1999; thus, most of the elections were held between the years of 1983 and 1999, with a few elections occuring before 1983.

[21] For example, Dunne, Roberts, and Samuelson [1989] report a 5-year exit rate of about 40 percent, as calculated from Census of Manufacturing data (1967-1977). And an analysis of food-manufacturing plants by McGuckin, Nguyen, and Reznek [1998] imply a 10-year exit rate of about 60 percent in the LRD from 1977 to 1987. As seen in Table I, the corresponding implied exit rates in our data are 48 and 59 percent respectively.

to 61 percent for the non-unionized employers. There is also a difference in survival rates 13 years after the election (elections in 1988). Averaging across all years yields a statistically significant difference of 3 percentage points. Presumably, this difference reflects a combination of both the *causal* impact of union recognition on survival, and the likelihood that there are systematic differences between employers that won or lost the election.

Taken together, the fifth and ninth columns in Table I suggest that in this sample, employer death or exit is a significant component in the decline of total employment provided by employers over time.[22] Among employers that faced elections in 1984, the average employment level - where "dead" employers are counted as having zero employment - is about 61, while the corresponding numbers for elections conducted in the late 90s are over 100.[23] By contrast, the average log employment (ninth column) *conditional on survival by 2001* appears to be relatively stable over time. This implies that much of the decline over time in the average employment provided by establishments operates through the "deaths" of employers.[24]

Finally, the differences between the 10th and 11th columns show that, conditional on survival, employment levels are much smaller among employers where the union was victorious. Again, this difference (an average of 0.22 in logs over the entire sample period) presumably reflects a combination of both the causal impact of unionization on employment levels, and a selection bias resulting from systematic differences between employers that do and do not successfully resist an organizing campaign.

A more detailed examination of the differences between employers where the union won or lost the election reveals three additional patterns: 1) establishments where unions won are significantly smaller, in terms of sales volume as measured in 2001, than those where unions lost, 2) across establishments, the election outcome is significantly associated with our own proxy of union presence constructed from the FMCS data, and 3) the election outcome is also associated with several other pre-determined characteristics of the establishment (e.g. industry, size of the voting unit).

---

[22] The employment variable is employment level, as of the year 2001. The variable comes from the InfoUSA, Inc. database.

[23] All "dead" establishments were assigned zero employment. There are 17622-16355=1267 missing values for employment among the surviving employers as of 2001.

[24] Longitudinal evidence indicates that establishment "deaths" alone can account for a significant share of job destruction in the manufacturing sector. On average, 25 percent of job destruction in the manufacturing sector is due solely to establishment "deaths" [Davis and Haltiwanger 1992]. The rate appears to be higher in other sectors of the economy [Pivetz, Searson, and Spletzer 2001]

Table II provides the details of these findings. The fifth row reports that employers where the union wins produce roughly 35 percent less in sales compared to cases where the union lost. Row (6) in Table II also shows that the outcome of the representation election is highly correlated with our proxy for union presence. This computation is made among the restricted sample of surviving (as of 2001) establishments. Among "union-loss" establishments we observe a contract expiring a approximately 10 percent of the time. When the union wins the election, on the other hand, there is a 36 percent chance that we will observe a union contract ending after the election.

The rest of Table II provides good reason for the analyst to resist interpreting the union-won/loss differences in rows (1) - (5) as causal effects of union certification. For example, the establishments where the union won are about 15 to 20 percent smaller than the "union-loss" establishments, as measured by the number of eligible voters or the ultimate number of votes cast in the NLRB election. In light of these differences, it is thus not surprising that we observe differences in employment *after* the election, in the same direction, and of roughly the same magnitude.

Similarly, row (7) of Table II reveals that we are more likely to detect the presence of a union *before the election* among establishments where the union won recognition compared to employers where the union lost: the respective proportions of pre-election "union presence" are 0.179 and 0.095.

In addition, employers differ by election outcomes on a number of other dimensions; these differences give more reason to maintain some doubt in any causal interpretation of the comparisons in rows (1) - (5) of Table II. For example, as row (12) of Table II indicates, establishments where the union won the election are much less likely (33 versus 42 percent) to be classified in the manufacturing sector. Moreover, as rows (13) and (14) of Table II indicate, establishments where the union won are more likely to be in the service sector (35 percent in "union-win" establishments versus 22 percent for "union-loss" establishments) and the voting unit less likely to be classified by the NLRB as "truck drivers". On the other hand, measures of state economic conditions are not strongly related to the outcome of the election. The union won/loss differences in the levels and changes in the unemployment rate and the log(employment) level are statistically but not economically significant.

In sum, Table II provides evidence that *caution the analyst against* making inferences about the impacts of union certification on employer outcomes from simple differences in outcomes by election outcome.[25] The evidence is suggestive that union recognition by election may be *negatively selected* – that unions are more likely to prevail in a representation election in smaller, and potentially *less* robust establishments. This would be consistent with the notion that larger establishments with greater resources may be more able to resist organizing drives. However, this interpretation of Table II is at best speculative without an independent estimate of the causal effect of union certification.

5 Estimates of the Impact of Unionization

5.1 Evidence on Validity of the Regression Discontinuity Design

As mentioned above, if the regression discontinuity design is valid, employers involved in close union wins should be similar, on average, to those involved in close union losses, in terms of their pre-determined characteristics – whether or not they are observed by the econometrician. As in any empirical analysis, assessing whether "unobservables" are balanced is impossible. However, we can at least assess whether or not the regression discontinuity design is succeeding in balancing *observable* determinants of establishment survival. Our empirical analysis reveals that the examination of close elections *does* result in "treatment" and "control" establishments that appear to be otherwise similar on observable dimensions.

Table III reports differences in characteristics of the employer, by union victory/loss, in the overall sample, and by sub-samples that isolate closer and closer elections. For example, in elections where the union lost, the average number of eligible voters is about 113, compared to about 92 where the union eventually won. That difference remains large when we examine elections where the union won between 25 and 75 percent of that vote. But it drops in half when we focus on the comparison among elections where the union won between 35 and 65 percent of the vote. The same holds true in percentage terms. The difference in terms of the log of the vote cast falls from -0.19 to about -0.10 when we move from the first

[25] The researcher might be tempted to conduct the analysis conditional on the pre-determined characteristics such as industry, and size of voting unit, under the presumption that the election outcome is random conditional on those covariates. Besides being somehwat ad hoc, by "using up" the covariates, this approach has the drawback of eliminating any possibility of gauging the internal validity of the comparison.

to third set of columns.

The differences in these average characteristics become even smaller when we focus our attention on all elections where the share of the vote for the union is between 0.45 and 0.50. For twenty-person votes, this means the outcome was decided by one vote. Table III shows that, for example, the differences in the pre-election size of the employer (as measured by the number of eligible voters and votes cast) fall to 2 or 3 (on bases of more than 100). Employers involved in union losses are more likely to be classified as manufacturing establishments in the overall sample (first set of columns), but that difference falls to a statistically insignificant -.025 when examining elections decided by the narrowest margin (the fourth set of columns). The monotonically decreasing differences, as one compares closer and closer elections, is also true for the proportion of employers categorized as service sector establishments, and for the proportion of voting units classified by the NLRB as "trucking".

Table III also shows that as one examines closer elections, the estimated standard errors rise, which would be expected, since the number of observations used for the analysis necessarily declines. At some point, restricting the sample to even closer elections will result in *no* observations for analysis. This illustrates the well-known trade-off between bias and variance in non-parametric estimation of an unknown conditional expectation function. Indeed, the averages in the last set of columns can be interpreted as kernel regression estimates using a uniform kernel of bandwidth 0.05. Insofar as the slope of the true conditional expectation function (of the variables with respect to the vote share) is nonzero, *any* kernel regression estimate will necessarily be biased in finite samples.

A simple alternative way of using data points away from the 0.50 threshold to estimate population means at the threshold, is to specify a flexible-form parametrization of the underlying function. Figures IIa, b, and c illustrate the results from regressing the corresponding dependent variables on a fourth-order polynomial in the vote share, including a dummy variable $V_j > 0.50$, and the dummy variable interacted with a linear term in V_j. The predicted values of those regressions are super-imposed upon local averages by 0.05 intervals.

Figure IIa, IIb, and IIc reveal 1) that the predicted values from the polynomial come reasonably

close to the local averages, 2) there is a generally smooth empirical relation between, for example log(total votes cast), the probability that the employer is a manufacturing or service sector establishment, and the observed vote share, and 3), there is no striking discontinuity in any of these relations at the 0.50 threshold.

Overall, Table III and Figures IIa-c lend credence to the interpretation of any discontinuity in *post-election* outcomes as the causal effect of union recognition.

5.2 Effects on Survival Rates

The survival rate differences between union victories and losses, by the margin of victory/loss, are reported in the first row of Table III. It shows that the modest difference in survival probabilities in the overall sample falls to a point estimate of -0.023 in the second set of columns. It falls further to -0.014 in the third set of columns, and when the sample is restricted to elections where the union vote share is between 0.45 and 0.55, the difference becomes a statistically insignificant, -0.007 with a estimated standard error of 0.015. Given the magnitude of the standard error, the estimate is consistent with both a negative effect of up to -.037, as well as a positive impact of up to 0.023 at conventional levels of significance.

Similar to Figures IIa-c, Figure Ia reveals a relatively smooth relation between the fraction of surviving employers and the vote share for the union, with no apparent discontinuity at the 0.50 threshold. Again, the polynomial specification (the same specification used in Figures IIa-c) yields predicted values that closely track the local averages by vote share. The polynomial specification also yields a causal estimate of around -0.007 with a standard error of 0.014.

Robustness to Alternative Specifications Our causal estimates of the impact of unionization of employer survival are robust to a variety of different specifications. The robustness of the estimates to varying specifications is in fact an implication of a valid regression discontinuity design. Intuitively, *if examining close elections generates "as good as randomized" variation in union status, then not only should union status be independent of pre-determined "baseline" characteristics (Table III), but the inclusion of those characteristics as covariates in a regression analysis should not significantly alter the point estimates of the effect of certification.*

Table IV provides evidence that the estimates are indeed robust to various specifications. The estimate that results from the basic polynomial specification (depicted in Figure Ia) is reported in Column (1) (top panel) of Table IV. The first row of Table IV demonstrates that the estimate of the impact of union recognition on survival probabilities is robust to the inclusion of any combination of pre-determined characteristics, with the estimates ranging from -0.003 to -0.007. In Column (2), a set of election-year dummy variables is included. In Column(3) state dummies are additionally included, and in Column (4) industry dummies and unit dummies (indicating how the NLRB classified the primary type of worker in the bargaining unit) are included. In Columns (5) and (6) our proxy for the presence of a union *before* the election is included (since it is pre-determined as of the election date), as is the log of the number of eligible voters in the bargaining unit. It is important to note that the significant coefficient on the pre-election union presence dummy should not be interpreted as a *causal effect*, but simply indicative that this proxy appears to absorb some of the "residual" variance in the dependent variable.

We consider one final robustness check. If the regression discontinuity design is valid, we can replace the survival indicator with a "residualized" version of the indicator (the residuals from a regression of the survival indicator on all the covariates) and find a similar estimate. Indeed, when we use the resulting residuals as the dependent variable in a polynomial specification in the vote share (as in Column (1)), Column (7) shows that the estimate is -0.007 – nearly identical to the other estimates in the first row.

Estimates of Heterogeneous Effects We next examine the extent to which the "treatment" effect of unionization, as discussed above, varies along three potentially important ways. By analogy to Ordinary Least Squares with a binary treament variable and other covariates, we examine whether there any interesting "interactions" between the treatment and other exogenous covariates. As the results from Table V make clear, however, the data cannot reject the hypothesis that the estimated "treatment" effect of unionization, as presented above, are constant along the three dimensions we explore.

First, since we observe survival at one point in time (the year 2001), the "overall" estimate we obtained is an average of 2- through 18-year survival rates. Since a *positive* effect on survival in the short-

run could be canceling out a long-run *negative* effect (or vice versa), it is instructive to stratify the analysis by groups of years. The 2nd row of the first column presents the estimate from Column (6) of Table IV. The 3rd row reports that among elections that were held before 1988, the corresponding effect of union recognition on the probability of survival is about -0.022 with a standard error of 0.020. The following three rows report the interaction effects for the periods 1988-1991, 1992-1995, and after 1995, respectively. The interactions effects are small and statistically insignificant.[26]

Second, the effect could potentially vary significantly by industry. The next three rows in the first column of Table V show that the effects are slightly larger for service sector establishments, but again the interactions are not jointly statistically significant. Third, the effects could vary by the size of the voting unit (a rough proxy for initial size of the establishment). The final three rows of Table V show that the estimates are positive (0.005) for voting unit sizes between 20 and 40 workers, and are slightly negative (0.005-0.032=-0.027) for units between 40 and 100. But all interactions are not statistically meaningful at conventional levels of significance.

The second column reports that the estimates of the overall effect and the various interactions do not change significantly, when we use an alternative measure of establishment survival. As mentioned in Section 4, we consider that an establishment has survived as of 2001 if the company name and address matches an entry in the InfoUSA database. However, in principle, if bare losers are much more likely than bare winners to undergo an ownership change – and hence change their name – then our primary measure of establishment survival may mask a true effect on establishment closure. A comparatively robust way to address this issue is to consider that an establishment has survived if *any* establishment is present at that exact address as of the year 2001 – irrespective of whether the company name changes. The second column of Table V reports the estimates from using this measure (Survival (2)), and shows that the estimates mirror that of the first column.[27]

On balance, while we cannot rule out small heterogeneous effects by these three observable di-

[26] Specifically, the specification was the same as Column (6), except year dummies were replaced with time-period dummies, their interactions with the WIN_j indicator and their interactions with V_t.

[27] Apparent from the first row, the obvious exception, as expected, is that the proportion of establishments that have *any* business (regardless of name) as of the year 2001, is significantly higher, at about 0.643.

mensions due to the magnitudes of the sampling errors, we interpret the estimates as indicating that our main estimate is not being wholly driven by a particular sub-sample, as defined along these observable dimensions.

5.3 Further Evidence on the Consequences of Union Recognition

It is tempting to conjecture that a union that barely wins a representation election possesses the same degree of "bargaining power" as a union that barely lost. After all, even if the NLRA mandates that the employer bargain "in good faith" with the union as the exclusive representative of the workers in the unit, there is no guarantee that a first contract will be secured. Also, since nothing prevents a losing union from attempting another organizing drive (as long as one year has passed since the first election), one might conjecture that the outcome of a *close election* may in the long-run have no effect on the extent of union presence or power at the employer.

As we discuss in greater detail in Section 6, this conjecture is difficult to reconcile with the simple economic framework we have outlined above. Among other reasons, it is difficult to explain why a union would undergo a costly organizing campaign if the outcome of the election was inconsequential for the union.

More importantly, this conjecture is strongly inconsistent with our analysis of the data we have collected on post-election union presence. Specifically, while we do not directly observe the securing of a first contract, we observe the expiration of a first contract (and expirations of subsequent contracts). Thus, our post-election "union presence" variable is whether or not we observe at the employer's location an FMCS contract expiration notice subsequent to the date of the election. The second to last row of Table III shows that there is a large difference in the probability of observing an expiration notice between union victories and losses. That difference becomes smaller, when examining closer elections, but remains a highly statistically significant 0.159 when examining elections with a union vote share between 0.45 and 0.55. In fact, our post-election "union presence" variable is the only variable in Table III where the differences remain large when examining the closest of elections.

The behavior of our post-election "union presence" proxy also stands out in our graphical analysis of the data. Figure Ib shows a smooth empirical relation between the vote share and the probability of observing a contract expiration notice – everywhere except at the 0.50 threshold, where there is a sharp jump in that probability from about 0.12 to 0.28. By contrast, the last row of Table III and Figure Ic, suggest no corresponding striking change for our pre-election "union presence" variable (an indicator of whether we observe a contract expiration notice at the address of the employer *before* the election). These figures suggest that the outcome of the representation election is far from inconsequential – that there is a permanent *causal* effect of a union victory on this particular proxy of union power. Also, the effect on our post-election union presence proxy is robust to alternative specifications, as shown in Table IV. This would be expected if the assumptions of the regression discontinuity design were valid. The estimates of the effect of union recognition on the probability that we observe a contract expiration notice at the establishment are precisely estimated and range from 0.132 to 0.152. Note from the comparison of Columns (3) and (5) or (4) and (6) that the inclusion of the *pre-election* union proxy does not meaningfully affect the union recognition effect, despite its own independent predictive power (t-statistic over 20).[28]

Some care needs to be taken in interpreting these findings in Table III and Figures Ib and Ic, because the averages are computed using the sample of establishments that have survived as of the year 2001. In principle, this induces a censored sample selection problem. In the same way that wages are not observed for the non-employed, our post-election union presence variable – and any other measure of union presence – is defined only for those surviving establishments[29], there is therefore the potential that the discontinuity in Figure Ib is an artifact of sample selection bias [Heckman 1976].

However, in this particular context, the sample selection bias problem may not be important after all. Lee [2002] shows that if a treatment is "as good as randomized", and if treatment affects sample selection in a monotonic way, then equal probabilities of selection in the treatment and control group imply that there is *no* sample selection bias. These two conditions are applicable here: 1) the maintained hypothesis

[28] Again, the coefficient on the pre-election union presence variable is not to be interpreted as a causal effect; rather it is more properly thought of as a partial correlation; its inclusion "absorbs" residual variation.

[29] Actually, we do have some information for those that are not in business as of the year 2001, but we do not know when, between the date of the election and 2001, the establishment shut down.

is that the regression discontinuity design generates "as good as randomized" variation in the union status treatment, and the data fail to reject the restrictions implied by that hypothesis, and 2) Equations 1 and 5 both satisfy the monotonicity condition in Lee [2002]. Given that we estimate little or no effect of union recognition on survival (here, sample selection), this suggests that there is little or no sample selection bias in our causal estimate of the effect of union recognition on post-election union presence.

Furthermore, Lee [2002] shows that if the selection probabilities are the same, the independence and monotonicity conditions imply that the *selected sample* of treated and control populations should possess similar distributions of baseline (or pre-determined) characteristics. Such a pattern is apparent in these data, as shown in Appendix Table III, which is analogous to Table III, except that it restricts the sample to establishments that have survived as of the year 2001.[30]

Finally, since the evidence suggests that sample selection bias may not be important, we proceed by examining union impacts on four other measures of employer outcomes: the levels of employment and estimated sales volume, as well as the logs of both variables. Table V reports regression discontinuity estimates for these outcomes. Overall, the results are mixed; the employment and sales responses are small relative to the overall variability in outcomes across establishments. However, the estimated standard errors are too large to rule out economically meaningful negative or positive effects on employment.

The third column reports regression discontinuity estimates for the level of employment, where we have assigned "0" to those establishments that have closed by the year 2001. The point estimate is essentially 0 with a standard error of 8. While the null hypothesis of a zero effect cannot be rejected at conventional levels of significance, neither can a negative response of about 13 employees – about 15 percent of the mean (83.4).

The fifth column reports the estimates for estimated sales volume, where again we have assigned "0" to establishments no longer in existence. The estimates imply a positive impact on sales volume on the order of $250,000 dollars, but it is not statistically different from zero. Furthermore, a substantial

[30] Technically, it also conditions on having non-missing employment information. There are some suriving establishments that did not report employment levels.

negative effect (of about $2.6 million, about 20 percent of the mean) could not be ruled out at conventional levels of significance. As with employment, the cross-sectional variability in sales is quite significant, and suggests that even large, economically meaningful effects on sales are small, relative to the cross-sectional heterogeneity in output across establishments, even while including industry dummies.

The fourth and sixth columns report the discontinuity estimates for the log of employment and sales volume, respectively; hence, "dead" or "0 employment" establishments are necessarily dropped from the sample. The null hypothesis that the effects are zero cannot be rejected at conventional levels of significance, but the estimated standard errors are themselves of economically significant magnitudes. Nonetheless, we are able to statistically rule out large effects: for example, a 25 percent negative effect on employment and a 20 percent positive effect on sales volume.

6 Economic Implications

We believe that our estimates constitute an important step in empirically assessing the magnitude of economic distortions caused by unions. Considering it as a first step to providing a broader picture of the causal effects of unions (while adequately considering the potential biases induced by self-selection and omitted variables), we are hesitant to draw strong inferences regarding the magnitude of potential welfare losses. However, it is instructive to consider our findings' implications in light of five issues of economic interpretation.

6.1 Is the "treatment" small?

An alternative explanation of the lack of effects on survival rates is that the wage demands by unions, on average, are themselves small – too small to have a measurable impact on employer survival rates. It is tempting to conjecture that even though a union election win causes greater union presence (as measured by the existence of a contract), a union that barely wins an election cannot negotiate wages any larger than what would have been offered by the management had the union barely lost.

However, the notion that the gap between the union and management offered wage is small among close elections, and large among votes where the union happens to overwhelming win, is not a robust

prediction of our framework of optimizing employers and unions. Within our framework, it is possible to generate specific examples where such a prediction would hold, given specific assumptions about the shapes of the objective functions for the employer and union, the shape of $v(\cdot)$, and the distribution of $-U_j$. On the other hand, it is just as easy to generate the opposite prediction – that the gap in the wage offers $W_j^U - W_j^N$ *declines* with an exogenous increase in the probability of a union victory.

To see this, suppose that δ_j is a parameter that characterizes how much the workers care about wages so that we have $v\left(W_j^U, W_j^N, \delta_j\right)$ where $\frac{\partial v}{\partial \delta_j} > 0$. Now suppose that the union leadership has a limited range of credible wage offers; to make the example stark, suppose that it is (correctly) expected by all agents that if the union wins, the wage W_j^U will be fixed at $\overline{W_j^U}$. In this case, the equilibrium is determined solely by the management's counter-offer wage. One can show that there are some reasonable assumptions under which $\frac{\partial W_j^{N*}}{\partial \delta_j} > 0$ and $\frac{\partial \Pr[WIN_j=1]}{\partial \delta_j}$, which would imply that the wage gap $W_j^{U*} - W_j^{N*}$ *diminishes* with an exogenous increase in the probability that the union will win.[31] Intuitively, faced with an exogenous increase in wage demands on the part of the workers (increase in δ_j), fearing the prospect of paying the high union wage, management offers a larger non-union wage in order to reduce the chance of losing the election to the union. In equilibrium, the probability of a union victory does increase, but it is moderated by the management's optimal response. Therefore, in this case, we would expect to see a *larger* wage difference among close elections (where the probability of a union victory is more moderate) compared to elections in which the union overwhelmingly won (in which the probability was higher).

There is another reason to expect that $W_j^{U*} - W_j^{N*}$ may even be larger with a lower probability of the union winning: a union requires a larger minimum gain $W_j^{U*} - W_j^{N*}$ in order to justify a costly

[31] Let $v\left(W_j^U, W_j^N, \delta_j\right) = -W_j^U - W_j^N + \delta_j$. Then the first-order conditions for the employer amounts to the equation $\frac{f(v)}{1-F(v)} - \frac{\frac{\partial \pi\left(W_j^N\right)}{\partial W_j^N}}{\pi\left(W_j^U\right) - \pi\left(W_j^N\right)} = MB(v) - MC\left(W_j^N\right) = 0$, where $f(\cdot)$ and $F(\cdot)$ are the density and cdf for $-U_j$. The first term can be interpreted as the marginal benefit from raising the offered wage, which reduces the probability that the union will win, and the second term can be though of as the marginal costs (due to lower profits). An interior solution is guaranteed if $\frac{f(v)}{1-F(v)}$ and $\frac{\frac{\partial \pi\left(W_j^N\right)}{\partial W_j^N}}{\pi\left(W_j^U\right) - \pi\left(W_j^N\right)}$ are decreasing and increasing, respectively, in W_j^N. This will be true if $-U_j$ is normally distributed and $\frac{\partial^2 \pi\left(W_j^N\right)}{\left(\partial W_j^N\right)^2} < \frac{\left(\frac{\partial \pi\left(W_j^N\right)}{\partial W_j^N}\right)^2}{\pi\left(W_j^N\right) - \pi\left(W_j^U\right)}$. By the implicit function theorem $\frac{\partial W_j^N}{\partial \delta_j} = \frac{\frac{\partial MB}{\partial v}}{\frac{\partial MB}{\partial v} + \frac{\partial MC}{\partial W_j^N}}$ which will be positive but less than 1. Therefore, an increase in δ_j leads to an increase in the offered wage W_j^N and in the equilibrium probability that the union will win.

organizing drive. This is immediately apparent from Equation 11, which shows that the expected benefit – itself a product of the probability and the benefit function $U(\cdot)$ – needs to exceed c to justify having an election in the first place. Put simply, the lower probability that the union will prevail, the larger wage gain is needed to justify the costs of organizing.

For these reasons, it seems more plausible that the outcome of the election is far from inconsequential to both the employer and the union, perhaps *especially* among close elections (where the *ex ante* probabilities of a union win are more moderate). However, whether or not the outcome of a representation election has any measurable impact on compensation and working conditions is ultimately an empirical question. Future research could show that the outcomes of elections *are* inconsequential in terms of altering compensation and working conditions, which would suggest that the conventional wisdom regarding how unions affect wages would need to be re-evaluated.

6.2 Is the effect "economically" small?

Our analysis obtains estimates around -0.01, and the null hypothesis of "no effect" cannot be rejected at conventional levels of statistical significance. However, it is also instructive to consider whether or not the estimates are consistent with an alternative null hypothesis – *that the decline in the union sector in the U.S. in recent years is entirely attributable to the union impact on employer survival*.

Such "back-of-the-envelope" calculations require a great deal of abstraction. However, suppose we consider an economy initially made up of N_0 establishments with identical, constant hazard rate of closure of d per year, and a constant inflow of bN_0 establishments per year. Normalizing $N_0 = 1$, it is straightforward to show that the number of establishments at time t is represented by

$$n(t) = \lambda + (1 - \lambda) e^{-dt} \tag{12}$$

where $\lambda = \frac{b}{d}$, so that if $b = d$, the number of establishments remains constant over time.[32]

Over the period from 1983 to 1998, union density among private sector workers fell by approximately 40 percent. The implied baseline hazard rate from our data of establishments implies a constant

[32] This follows from a the differential equation $n'(t) = dn(t) + b$.

hazard of $d = 0.10$.[33] This implies $\lambda = \left(0.6 - e^{-0.10(15)}\right) \frac{1}{1-e^{-0.10(15)}} = 0.485$. Thus, if the decline of the union sector was entirely due to the union effect on the ability of establishments to survive (i.e. if the establishments were not unionized, λ would be 1), then the causal effect of union recognition would have to be a doubling of the hazard rate d. With a base hazard rate of 0.10, this implies that we should expect causal estimates of the 1-15 year survival rates to be on the order of -0.20.[34] To the contrary, however, our causal estimates are around -0.01 and we are able to reject magnitudes larger than -0.04.

Thus, our estimates cast considerable doubt on the proposition that the primary mechanism of recent union decline is through union effects on establishment closure. Of course, these rough calculations should be viewed with caution, as they are based on a number of compositional, aggregation, and behavioral assumptions – the empirical relevance of which can only be assessed with large-scale micro-data on establishments in the U.S.

6.3 The Impacts of Union Threat

Our estimates of the impacts of unionization are *conditional* on having an NLRB election, and our model makes it clear that we are identifying the impacts of $W_j^U - W_j^N$ on survival rates. As our model makes explicit, however, there is another potential impact of unions, which is the distortion due to "union threat" [Rosen 1969]. In other words, employers may face a higher closure rate because their own offered wage W_j^N is forced to be significantly higher than the competitive market wage W_j^M. There are two components to the "overall" impacts of unionization: one component is the effect that arises when wages are pushed from W_j^M to W_j^N, and the other component – which we have estimated in this paper – results when wages are increased from W_j^N to W_j^U. Since we find little evidence of effects on survival of the second kind, we conclude that evidence of large union effects on closure would more likely be found in analyses of union threat effects.

However, our theoretical framework cautions against making the conjecture that threat effects

[33] Actually, our data seem to fit a Weibull baseline better; however, as usual, it is difficult to know whether the empirical duration dependence is "real" or an artifact of unobserved heterogeneity. The 10 percent hazard rate is also roughly consistent with exit rate estimates from Dunne, Roberts, and Samuelson [1989] and McGuckin, Nguyen, and Reznek [1998].

[34] This can be seen by comparing the survivor function $e^{-.1t}$ and $e^{-.2t}$ over a 15-period interval.

should necessarily be larger than the union effects that we have estimated in this analysis. To see this, suppose that the firm will survive only if y_j^* in Equation 4 exceeds some scalar a. Then the probability of closure is $\Pr[Closure] = F(a - \alpha W_j)$, where $F(\cdot)$ is the cdf of ε_j. $\frac{d\Pr[Closure]}{dW_j} = -f(a - \alpha W_j)\alpha$ and $\frac{d^2\Pr[Closure]}{dW_j^2} = f'(a - \pi(W_j))\alpha^2$; the sign of the second derivative depends on the shape of the distribution of the error term, and can easily be positive, which would mean that a marginal impact on closure rises with the wage. Thus, a wage increase that results from a union victory, which is *incremental* on top of an already existing above-market wage due to union threat – could easily lead to a larger effect on closure, compared to the effect induced by an equally sized wage gain due to union threat.

Ultimately, the magnitude of the union threat effect requires empirical investigation.

6.4 Is "no effect" in survival rates consistent with monopoly unionism?

Put simply, yes. There are many margins on which unions could cause allocative distortions. First, even if employers' probabilities of closure are entirely unaffected, they could cut their level of employment. This could be occurring *within* every establishment in the union sector. Second, even if employment is not affected, if the employer's production techniques are constrained by the terms of a contract or union threat, productivity and hence output could fall.

It is instructive to consdier a benchmark for what one might expect to observe in the analogous case where adjustments occur primarily through the "intensive" margin of employment. Interpret $\lambda = \frac{(1-\Delta)b}{d} = 1 - \Delta$ in terms of the proportion of total employees at an establishment, so that Δ is now the "within-employer" response. If we assume that the inflow of new establishments equals the hazard rate, under the null hypothesis that the sole reason for the union decline was due to an intensive margin effect, we would expect the measured causal impact of union certification on employment to be about a 50 percent decline in the level of employment at the establishment. [35] Even given the imprecision of our intensive margin estimates, however, we can easily reject an effect of such magnitude. On the other hand, we cannot rule out a smaller negative intensive margin employment effect of unionization of, say, 15 percent. Given the

[35] Alternatively, if the effects were on the margin of affecting the appearance of establishments in the union sector, it is easy to show that if it entirely explained recent union decline in the U.S., the effect would be a quite large effect of 0.50 in probability.

often cited estimate of the union wage effect of 15 percent [Lewis, 1963] this would imply a labor demand elasticity of -1.

The magnitude of intensive margin effects is a topic for future research. But examining the extensive margin is a pre-requisite to examining the intensive margin. Even in the ideal scenario (from a purely scientific standpoint) where union recognition were randomly assigned, it would not be straightforward to estimate intensive margin effects on employment if the "treated" employers were more likely to "die" and hence "drop out of the sample". Our findings that there are negligible survival effects and that among the survivors both the bare winners and losers look similar along observable characteristics; this suggests that the sample selection issue may well be a second order issue.

6.5 Is "no effect" unsurprising?

Finally, it may be tempting to argue on purely theoretical grounds that the question of whether or not union recognition impacts employer survival is a non-issue in the first place, if we assume that workers and unions are rational. After all, unionized workers also lose if an employer is forced to close its operations.[36] This is certainly true in the unrealistic case that unionization led to closure with complete certainty. But if the union effect works through a negative impact on the *probability* of survival, a large effect (say a doubling of a hazard rate of 0.10) could easily be consistent with rationally behaving workers and unions.[37] Thus, arguments purely based on the presumed rationality of workers are not informative in bounding the union effects on employer survival.

Nonetheless, the notion that the organizing workers and union leadership may be behaving rationally – and have a direct stake in maximizing the viability of the employer – has important implications. Indeed, not only could the union be interested in reducing the risk of closure, but they could be interested

[36] This is pointed out in Kuhn [1986] and Freeman and Kleiner [1999].

[37] If the worker's outside option is equivalent to the firm's non-union wage offer, then it is trivial that any worker will prefer to vote for the union, even if there are substantial effects of the wage on closure rates, as long as there is some probability that the establishment will still exist so that they can obtain the union wage.

If the worker's outside option is below the firm's offered wage, then for the indifferent worker (under risk neutrality) we would have $\frac{W_N - W_M}{1-\delta(1-d)} = \frac{W_u - W_M}{1-\delta(1-2d)}$, where W_U, W_N, and W_M denote the union, firm's non-union wage offer, and outside options, respectively, and δ is the discount factor, and d is the constant hazard rate for the establishment. If $W_U - W_N$ were 0.10 in logs and δ was 0.95, and d were 0.10, then $W_N - W_M$ would have to be about 0.06 (in logs) – a plausible number – in order for the worker to be indifferent.

in maximizing the profitability of the business – insofar as it would lead, for example, to a larger wage bill for the workers. Indeed, this possibility has been the focus of the "efficient contracts" literature (McDonald and Solow (1981), Brown and Ashenfelter (1986), MacCurdy and Pencavel (1986), Card (1986), Abowd (1989), Abowd and Lemieux (1993)). The efficient contracts model departs conceptually from the monopoly union/"right–to–manage" model by observing that union members could value both the level of employment and the wage. And if the firm enjoys some economic rents – through monopoly power in the product market, for example – the monopoly union outcome is "inefficient" in the sense that at least one of the two parties can be made better off without making the other party worse off. In some situations – when there is a "strongly efficient" contract – there is a possibility that unions do not lower employment, but instead act to redistribute rents from firms to workers.

7 Conclusion

This study meets two important challenges of credibly estimating the magnitude of the causal effects of unions. First, we have constructed a large data set that represents a virtual universe of establishments facing potential unionization, linked to comprehensive database on survivorship on businesses. Using over 27,000 observations, we have also exploited a feature of the NLRB election process to produce quasi-experimental estimates that are likely to be free of selection and omitted variable biases. Our results suggest that establishment closure is not the main mechanism of the employment reallocation response to unionization. Rather, it seems more likely that employers respond by reducing employment.

In the existing literature, there is a fair amount of variation in estimates of "within-firm" employment responses to unionization.[38] It would seem fruitful to utilize this study's research design to learn more about this margin of employment adjustment. There is also some uncertainty regarding the labor costs imposed by unions. The existing literature suggests that union wage premiums are large, and that unions have

[38] Estimates range from no effect to signficant effects. For example, Lalonde, Marschke and Troske [1996] suggest there is significant negative employment response. Card [1990] examines indexed and non-index union contracts and finds a significant negative employment response to higher real wages. On the other hand, Bronars and Deere [1993] examine a panel of publically-traded firms and finds no systematic relation between union growth and firm growth. Freeman and Kleiner [1990] find only modest employment effects (and modest wage effects) associated with new unionization.

significant effects on profitability [Ruback and Zimmerman 1984; Abowd 1989]. At the same time there is some evidence indicating only modest wage gains associated with new unionization [Freeman and Kleiner 1990; Lalonde, Marschke, and Troske 1996]. A useful avenue for future research is to use NLRB election data, as we have here, to explore the impact of unionization on: the level and distribution of wages, capital investment, and total factor productivity.

Appendix A.

There are three sources of information that were merged for the analysis. We first describe how our data from the National Labor Relations Board (NLRB) was matched to firm data from InfoUSA. Next we describe how the result of this matching process, henceforth the "NLRB/InfoUSA data" was matched to data from the Federal Mediation and Conciliation Service (FMCS).

A.1 The NLRB to InfoUSA match

First, electronic records on all representation election cases handled by the NLRB in the fiscal years 1984 to 1999 were obtained. These records contain information such as the dates of the filing of the petition, the election, and the closing of the case, as well as the eventual vote tallies, as well as other characteristics such as the size of the voting unit, and the primary industry of the establishment in question. Most importantly the file contains information on the name and street address at which the representation election was held.

These 139,881 records were then matched by name and address to a commercial marketing database company called InfoUSA, Inc. Before being sent to InfoUSA, however, the address fields were first "standardized" using a program called "Mailers $+4$ Postal Automation Software." For example, "1 Broad Street" was changed to "1 BROAD ST". This was done to facilitate matching the NLRB data to the data from InfoUSA.

As discussed in the text, InfoUSA maintains an annually updated list of all business establishments (with a telephone listing) in the United States. The basis for their database is the consolidation of virtually all telephone books in the country. InfoUSA makes a brief call to each establishment at least once a year, to verify their existence, and to update their information on various items such as 1) the total number of employees at the establishment, 2) the estimated sales volume of the establishment, 3) the primary product of the business, and various other characteristics.

We submitted the name and address information from our "address standardized" NLRB data to InfoUSA who matched as many of the submitted records to their current database (as of May, 2001) and then appended their information to the record. Apart from the name and address information, no other

information was given to InfoUSA.

Before merging this data to our data from the Federal Mediation and Conciliation Service (described below) the data were cleaned for duplicates. There were three types of duplicates: 1) genuine duplicates – more than one NLRB case with a specific employer, 2) duplicates which where an artifact of the fact that our NLRB data came in two files: one contained data from 1977 to 1991 and the other contained the records for 1984-1999. Most of the duplicate pairs therefore occurred for the years 1984–1991, although their were some duplicate pairs in other years because of the fiscal/calendar year distinction; 3) a very small number of duplicates where two records containing exactly the same information.

A.2 The NLRB/InfoUSA to FMCS match

The most difficult task was to take this NLRB and InfoUSA matched data and merge it to a database of 563,565 expiration notices between 1984 and February, 2001 obtained from the Federal Mediation and Conciliation Service (FMCS) through a Freedom of Information Act (FOIA) request. Like the NLRB data the addresses were standardized using "Mailers $+4$ Postal Automation Software."

Many of the FMCS address could not be standardized. Reasons included:

- The ZIP Code was invalid or does not match the city name.
- Canadian ZIP Code
- Unknown Street. No street could be found within the city that matches the street name given in the address field.
- Non-delivery Address. The location given in the address field physically exists in the city but the post office has indicated that there are no houses there. This may occur when one side of the street has railroad tracks or a river along side it.
- Address Out of Range. The address was not within the delivery range.
- Multiple Addresses. The national database found two or more possible ranges for the address.
- Multiple Components. More than one component of your address was in error. Address components are the pre-direction, post-direction, and suffix.
- No Data Available for City. Address data for this city is not in the database.

We chose to keep all FMCS records that had successfully standardized addresses, and ran an automatic matching algorithm to link NLRB/InfoUSA records to the resulting database. The matching involved matching by address and employer name. Our algorithm first involved removing spaces, punctuation, and

frequently used words in company names (i.e., INCORPORATED, BROTHER, COMPANY, etc.). From this we created two separate strings of a length which we could vary: the first sub-string started from the beginning and the second sub-string begins from the end and went in reverse order. The longer the string, the more "stringent" the test for two records to be declared a "match." Matches could occur when the first sub-strings matched or when the second sub-strings matched.

Depending on whether the address was standardized, we varied the length of the comparison string – when addresses were standardized then we enforced a less stringent standard than those which were unable to be standardized. Our final algorithm (using only the standardized data) used strings of length 5.

A.3 Sample Selection and Variable Construction

First, in order to minimize measurement error in our survival indicator, we keep only those NLRB records that have a non-missing street address, and those addresses that were successfully standardized using our address standardization software. In addition, we keep all elections in which 20 or more votes were cast. Appendix Table I reports the means and standard deviations of the variables for the entire merged database and the restricted sample used for the estimation. The table shows that the means are reasonably similar between the two samples, except in the variables that reflect the scale of the employer (number of eligible voters, votes cast, employment, sales volume).

Finally, great care was taken to construct the vote share for the union. There is a problem with simply computing the ratio of the number of votes for the union to the total number of votes. This is because there is substantial variability in the number of votes cast, and a union victory is secured by obtaining strictly more than 50 percent of the vote (plus 1 vote). Consider all elections where an even number of votes are cast. Elections with any number of votes cast could result in exactly 50 percent of the vote. However, it is *impossible* that an election with less than 100 votes cast could have a vote share between 50 and 51 percent of the vote. This *mechanically* induces a discontinuity in the size distribution at the 50 percent threshold of the vote share, and this is entirely an artifact of the fact that the vote share is not *literally* continuous, and instead has finite and discrete support, with the support changing with the number of votes cast.

Thus, we made a minor adjustment to the vote share variable in order eliminate this problem. For every case where there was an *even* number of votes cast, an amount equal to $0.5/(\#$ votes cast$)$ was subtracted from the vote share. For example, if 25 out of 50 votes were for the union, the vote share became 0.50 - 0.01 = .49; 26 out of 50 votes meant a vote share of 0.52 - .01 = 0.51. Cases where an odd number of votes cast were unadjusted. This minor adjustment restores symmetry in the support for vote share, and the new "vote share" variable still possesses the property that strictly more than 0.50 implies a union victory. Finally, the vote share was "binned" so that all vote shares between 0.50 and 0.55 were assigned the vote share of 0.525, shares between 0.45 and 0.50 were assigned the share of 0.475, and so forth. In this way, vote shares were standardized to the support for the elections with the smallest number of votes cast (20).

A completely different approach is to abandon the use of the vote share completely, by focusing on the *absolute* vote count, and comparing elections in which the union either won or lost by literally 1 vote. This eliminates this "integer problem", but at the same time tends to push larger establishments away from the threshold that determines victory (generating a pronounced U-shape in the average size of the establishment, with respect to the absolute vote margin of victory/loss). This was the approach used in DiNardo and Lee [2001]; it should be noted that the results reported there are qualitatively and quantitatively similar to the results in this paper, suggesting that our findings are not sensitive to the method used to address the integer problem.

Obs.	27622	15818	11804		26355	15104	11251		10265	6092	4173	

Note: Standard errors in parentheses. Entries are outcomes, as of 2001, of establishments that experienced an NLRB certification election in a given year. In the middle four columns, zero is assigned to the employment of "dead" establishments; 27622-26355=1267 establishments survived but did not report employment levels. "Loss" and "Win" indicates the outcome of the NLRB rerpresentation election. Details of the sample selection criteria are in the Data Appendix.

Table II: Means of Establishment and Election Outcomes and Characteristics, by Representation Election Outcome, 1983-1999

			(0.01)	(0.01)	(0.01)	(0.01)
20	Change in UR (2000 - Election Year)	27622	-2.09	-2.13	-2.04	0.08
			(0.01)	(0.01)	(0.02)	(0.02)

Note: Standard errors in parentheses. Details of the merged data from the NLRB, FMCS, and InfoUSA are in the Data Appendix. Rows 2 and 4 impute 0 for non-surviving establishments (some data are missing for surviving esetablishments). Rows 6 and 7 contain only the establishments that survive to the year 2001. Presence of Union post-election (pre-election) indicates whether or not a union at the location of the establishment filed a contract expiration between the election date and 2001 (between the beginning of the FMCS data and the date of the election).

Table III: Establishment Survival, Union Presence, and Pre-determined Characteristics, by Vote Share for the Union

	---	---	---	---	(0.004)	(0.004)	---
Year Dummies	No	Yes	Yes	Yes	Yes	Yes	---
State Dummies	No	No	Yes	Yes	Yes	Yes	---
Industry Dummies	No	No	No	Yes	No	Yes	---
Unit Dummies	No	No	No	Yes	No	Yes	---

Note: N=27622 for upper panel, N=11532 (includes only those establishments that survive by 2001) for lower panel. Robust standard errors in parentheses. Upper panel refers to survival, as of 2001, as the dependent variable; lower panel refers to the observation of a contract expiration after the election. All specifications are least squares regressions, for the upper (lower) panel include a 4th order polynomial in the vote share, a dummy variable for win/loss and the dummy variable interacted with the linear term in the vote share. Column (7) regresses the residuals - from an initial regresssion of survival (presence of union) on all the covariates - on a 4th order polynomial in the vote share, a dummy variable for win/loss and the dummy variable interacted with the linear term in the vote share. Details of the data set in the Data Appendix.

Table V: Reduced-Form Results: Impact of Certification on Establishment Outcomes, Overall, and by Year of Election, Industry, and Voting Unit Size

Manitoba's outdated labour laws

By: Darrel Reid

August 2, 2016

Rewind to 1960s Manitoba when the rotary phone was gaining in popularity, the minimum wage was about 75 cents an hour and the first cable TV was hooked up.

This was the era in which the practice of project labour agreements (PLAs) gained a foothold. Manitoba was building hydro dams and wanted to make sure it had a steady, stable source of skilled workers to draw from, especially in remote regions.

Back then, this monopoly was granted in exchange for labour peace. While a lot has happened in the half-century since then, Manitoba's antiquated labour laws have stayed pretty much the same.

Finally, that is about to change.

"We want more Manitoba companies to participate in our bidding process," PC Leader Brian Pallister declared during his election campaign. "The better the participation, the better value for money."

Premier Pallister believes levelling the playing field could save taxpayers as much as $12 million by increasing competition that makes tax dollars go further on infrastructure projects and encourages investment and job growth.

It's refreshing to hear fairness and value for hardworking taxpayers are the principles that should be guiding public policy in

Manitoba. For too long, that's not how it's been.

For example, under the PLA in 2004, all workers were advised they had to pay union dues if they wanted to work on the Red River Floodway expansion project.

The same currently applies to Manitoba Hydro.

MEMBER LOGIN

In order to work on any one of a number of large-scale hydroelectric projects, workers have to pay union dues, like it or not. This policy has even forced unionized employees to switch unions. The PLA for the Bipole lll Transmission Line and Keeyask Generating Station required all workers to belong to a select union. It's a monopoly that all too often leads to cost overruns and delays on many large-scale public infrastructure projects.

As the new Manitoba government begins to revamp lopsided labour laws, the Lake Manitoba flood control channel seems a practical place to start. Described as a top priority during his campaign, Pallister vowed if elected his party would do what it takes to build the $495-million project in five years. This is an opportunity for the new government to save millions in flood claims and reduce construction costs by openly tendering the project to all who qualify to work on it, not just those who carry the right union card.

Although traditionalist union members beg to differ, it's hard to argue that ending forced unionization is anything but the right thing to do.

Opening government tendering to all experienced companies and workers whether they have a craft union or alternative union affiliation, or otherwise, is fair and democratic.

When there's fair competition, workers, employers and taxpayers all benefit. Besides, there are far more skilled workers employed by alternative union and non-union contractors than there were in the 1960s, which is why the rationale for PLAs simply no longer applies.

Restoring workers' rights and allowing a tendering process that's fair, open and competitive in Manitoba, would be a welcome change that's long overdue.

———

The economic impact of competition

Karen Ellis and Rohit Singh

Key points

- Competitive markets deliver better market outcomes, but competition can be constrained by government policy and anti-competitive business practices, with economic costs
- Governments should assess and factor in the likely impact of their policy decisions on competition
- Competition authorities can play an important role in advocating for pro-competition reforms, investigating anti-competitive practices, and building a stronger competition culture and evidence base

Overseas Development Institute

ODI is the UK's leading independent think tank on international development and humanitarian issues.

ODI Project Briefings provide a focused and specialised summary of a project, a country study or regional analysis.

This and other ODI Project Briefings are available from www.odi.org.uk

How do government policies and business practices affect the degree of competition in a given market? How does competition, in turn, affect market outcomes, such as prices, innovation and access to services?

With funding from the UK Department for International Development, ODI has compared economic performance in four product markets – sugar, cement, beer and mobile phone services – across Bangladesh, Ghana, Kenya, Viet Nam and Zambia. These countries have very different policy frameworks and competition climates, and the study shows this has a significant impact on competition, market outcomes, and economic performance in the different countries. Here we look at the findings for each product market in turn, then discuss broader conclusions on the role of competition.

The sugar market

Sugar is an important agricultural product in many countries, and part of the staple diet in most, as well as being a source of rural livelihoods. As a result, the state is heavily involved in the sugar industry in some countries, including Bangladesh, Kenya and Viet Nam. In all three countries, however, the state-led sugar industries exhibit low productivity and poor performance, and the use of obsolete technology and inefficient farming methods mean poor cane yields and sugar outputs. All three are struggling to compete and survive in the face of competition from sugar that is either privately produced or imported. They need substantial levels of costly government subsidisation, which is unlikely to be sustainable in the long run, thus jeopardising many livelihoods.

In stark contrast, Zambia, which has a private sector-led sugar industry, produces the highest amounts of sugar per hectare of the five countries, (three times higher than Viet Nam which is the next most efficient country). This very profitable, internationally competitive industry is expanding to take advantage of new export opportunities, and has the potential to create new jobs and growth. This suggests that private sector incentives and management expertise are important for creating a successful, efficient and internationally competitive sugar industry.

Significant reform is needed to achieve a healthier sugar sector in Bangladesh, Kenya and Viet Nam but this could put some of the existing sugar mills out of business. Localised interests would make this deeply unpopular politically, and therefore hard to achieve, despite being in the best interests of the country as a whole. This demonstrates the importance of mobilising interest groups that stand to gain from reform, such as consumer groups and the business community, to offset vested interests opposed to change.

Despite Zambia's success in creating a growing, private sector-led industry, it still has very high domestic sugar prices when compared to other countries – well above the price that Zambian sugar sells for on international markets. This is the result, at least in part, of the monopolistic market structure of the industry within Zambia, where one firm wields significant market power and is protected from external competition by barriers to imports. The Zambian Competition Commission has investigated this, but has been unable to tackle the problem effectively so far, perhaps because the government may have vested interests in the industry's profitability.

Ghana also used to have a state-led sugar industry, but it collapsed in the early 1980s as a result of low productivity and poor performance. The country now imports all its sugar, and there are allegations of a cartel amongst sugar importers. These allegations are unsubstantiated, however, and cannot be properly investigated as there is no competition authority in Ghana.

The Ghanaian Government faces a dilemma as there are two potential new entrants into the sugar industry, which could generate jobs and revenue. However, these new entrants are requesting protection from sugar imports, which could increase domestic prices and undermine the competitiveness of Ghanaian-produced sugar in future. This demonstrates the possible trade-off between attracting new investment by promising protection, and promoting a market environment that will create the right incentives to ensure a good economic performance.

The cement market

The price and availability of cement matters. Cement is vital for construction and infrastructure development, which in turn underpin growth, industrialisation and private sector development, and also represent a significant proportion of government spending.

The cement sector is often highly concentrated because of its cost structure and the need for large scale production if the industry is to be efficient. As a result, the market often suffers from limited competition and has been a source of concern for competition authorities across the world. In addition, the cement sector is often dominated by multinational firms, which operate on a regional basis, often ensuring monopoly profits by agreeing not to compete with each other in the same countries. This challenge to cross border competition could be tackled through regional competition authorities, or through wider policy coordination.

The study identified a range of potential competition problems in Ghana, Kenya and Zambia:

- issues of joint ownership amongst the three Kenyan cement firms, which the Kenyan competition authority has been monitoring – the authority has been active in preventing further consolidation
- allegations about supply constraints by the monopolist cement firm in Zambia during a cement shortage which were investigated by the Zambian Competition Commission
- price hikes in Ghana, with allegations that this was due to the market dominance and price leadership of one of the two players in the market, though the absence of a competition authority in Ghana means this has not been investigated.

In comparison, there seems to be a much greater degree of both price and non-price competition in Bangladesh and Viet Nam, which have cement industries that are less highly concentrated with many different market players. The two Asian nations enjoy the lowest prices of the five countries, and significant non-price competition, with cement firms trying to attract customers by offering credit, technical support and various promotions. It seems that even though there is a high minimum efficient scale of production in cement which suggests having fewer firms is more efficient, the competitive stimulus of having many players in the market generates stronger incentives for reduced prices and efficient production.

The price of cement in Zambia has fallen by almost 10% since 2008, coinciding with the entry of a new market player in 2009 to compete with the incumbent monopoly. This happened at a time when cement prices rose in the other four countries, showing that the introduction of competition can have a significant and immediate impact on prices.

The beer market

Beer is consumed throughout much of the developing world, including by the poor. The market is usually highly concentrated, as a result of its cost structure and the importance of marketing and brand loyalty, which represent barriers to entry. It is, therefore, another industry that is plagued by anti-competitive practices in many countries, and, ideally, it needs monitoring by a competition authority.

Like the cement industry, beer prices are highest in Zambia, with its concentrated market and monopoly beer producer, and lowest in the least concentrated market (Viet Nam, with seven beer producers), and non-price competition also seems strongest in the least concentrated markets: nevertheless, competition problems abound:

- Many anti-competitive practices were identified in Kenya, including territorial allocation, exclusive dealership and price fixing. A price war had been followed by a regional carve-up, with two producers agreeing to avoid competing in Kenya and Tanzania, and to instead share in each other's monopoly profits in the other country, by buying shares in each other.
- In Zambia the competition authority has imposed conditions on the monopoly beer producer, to prevent abuse of its dominant position. They have also identified various barriers to entry, and have investigated issues relating to resale price maintenance and exclusive dealership.
- There have been allegations of price leadership in Ghana, although its two beer firms seem to compete quite fiercely and its beer prices are considerably lower than in Kenya and Zambia, which have monopolies.
- There have also been allegations of exclusive dealing and the abuse of dominance by beer players in Viet Nam, including a case where a new entrant was driven out allegedly as the result of exclusive dealing arrangements that prevented the effective distribution of their product.

The mobile telephony market

Substantial evidence now exists of the development benefits of mobile telephony. These include: improved connectivity that has enabled countries to leapfrog the need to develop fixed line infrastructure, providing connectivity to many people for

the first time; its role in reducing transaction costs for both households and enterprises; facilitating job creation and private sector development; and enhancing access to financial services.

The mobile phone market is relatively young, and evolving fast. Regulation is important for competition in this area, and regulators are grappling with how best to handle this fast changing market.

The analysis of the introduction of competition in the mobiles market in each case study country finds that competition drives rollout of services, increased market penetration, and falling prices. A competitive environment strengthens incentives to design services to meet the needs of customers, including price and product promotions for poor customers, and value added services with additional development benefits, such as money transfer services.

Until recently, Kenya has had a relatively concentrated market compared to the other four countries, and prices were relatively high. However, competition in the market increased through the entry of two new players in 2008/09, and since then tariffs have fallen by as much 50%.

Zambia has the lowest mobile penetration rate and highest tariffs of the five countries. The market is performing relatively poorly, at least in part because of a lack of competitive neutrality in relation to the government monopoly that controls the international gateway. The government charges high tariffs to private operators to access the gateway, which means that private operators have to subsidise their international calls to be price competitive with the state firm.

In Ghana there appears to be intense competition between the operators. The country has good mobile penetration and relatively low prices, and an effective regulator that has facilitated a competitive market. There has been good regulation of interconnection and the liberalisation of the international gateway, as well as an effective form of a universal access fund. The lack of these elements has slowed down market development in other countries.

The Vietnamese mobiles market is heavily dominated by state owned enterprises, but the operators do appear to compete fiercely with each other, and the sector is performing fairly well.

Bangladesh has a relatively competitive mobiles market and the lowest tariffs across the five countries. There are some regulatory concerns, however, such as a regulated price floor, which is not in line with international best practice, and has been set at less than the regulated termination charge. This puts smaller mobile operators and new entrants at a disadvantage and highlights the importance of considering potential competition impacts when taking regulatory decisions.

Overall conclusions

The study has shown that markets characterised by more competition, with more players, more dynamic entry and exit, and more intense rivalry for customers (e.g. through price promotions, special offers, and marketing campaigns etc.) tend to deliver better market outcomes. These outcomes include lower prices and better access to services for consumers, including other businesses that rely on these products as inputs for their own enterprises. It is also important to ensure that domestic production is internationally competitive, and can, therefore, generate increased exports, foreign exchange, jobs and industrial growth. The introduction of competition – or indeed even the prospect of increased competition – can have a significant and immediate impact on prices.

However, the research has also shown that competition is often constrained, for various reasons. Problems such as market dominance and anti-competitive practices are very common in some markets, and competition authorities have an important role to play in monitoring, publicising and tackling such behaviour.

It is also clear, however, that the role of the state is very important in determining competition and market outcomes – perhaps more important than the behaviour of business itself. The influence of the state can take various forms: regulation; state ownership and privatisation; price controls or subsidisation; other policy mechanisms such as import protection or industrial policy; or corrupt business deals and ownership by individual politicians or their families.

Sometimes the involvement of government is self-serving, while at other times it is essentially benevolent in nature. In some countries and markets, there is a close relationship between business and government, as government actors seek to share in some way in the profits of businesses, (e.g. through ownership or taxation etc.). This gives government an incentive to protect those businesses from competition. In these situations the relationship between business and government seems in practice to determine commercial success more than market competition, and competition authorities may face political barriers to addressing competition problems.

This kind of relationship between government and big business creates a powerful economic elite, with vested interests in opposing pro-competition, pro-growth reforms. One way to tackle vested interests who oppose reform, is to establish and facilitate coordination amongst other interest groups who stand to gain from reform. This includes household and industrial consumers and potential new entrants to the market. Competition authorities can build the evidence base, which can be used to help mobilise such interest groups to lobby for reform. Thus, where political difficulties and resourcing and capacity constraints make legal enforcement problematic for competition authorities in developing countries, they can still play a valuable role in promoting competition through advocacy and evidence building, and engagement with other government

agencies to ensure that policy is pro-competitive.

In sum, competition improves the performance of markets, generating better outcomes including lower prices, greater productivity and competitiveness leading to industrial growth and jobs, and better access to services. It can undermine the dominance of a few powerful players, allowing new enterprises to gain a foothold in the market, and underpinning private sector development and employment creation.

Appropriate policies are crucial to create the conditions within which competition can thrive, and competition authorities can help to build a culture of competition, and increase awareness of competition issues amongst policy-makers and the public.

Policy recommendations

- Government policies should create competitive market conditions. This means assessing and factoring in the competition impacts of a wide set of policies, including trade policy, industrial policy, privatisation, regulation, state ownership, subsidisation and investment promotion. Competition authorities can help by raising concerns when government policy may have negative competition impacts.
- Regulatory bodies should take into account the competition impacts of regulation to avoid undermining the market and weakening economic performance. One way to achieve this is to implement a process for regulatory impact assessment to examine the competition implications of such issues as regulation of tariffs and interconnection, infrastructure sharing, and the implementation of a universal access fund.
- Governments should consider establishing competition laws and competition authorities, which can investigate anticompetitive practices, build a stronger competition culture, and advocate for pro-competition reforms.
- Competition authorities can help to build the evidence base on competition problems and associated costs, and publicise the findings that will inform and mobilise interest groups to lobby in favour of reform, in order to offset vested interests opposed to change. These interest groups may include household and industrial consumers and potential new entrants to the market.
- Tools such as DFID's Competition Assessment Framework can be used to guide competition analysis and help build capacity and understanding of competition issues in developing countries.
- The poor performance of the state-led sugar industries in Bangladesh, Kenya and Viet Nam, as compared with the successful, internationally competitive, private sector-led sugar industry in Zambia, demonstrates the superior performance that can be achieved through private management incentives. Steps to a healthier sugar sector in these countries would include the establishment of efficient new entrants, a reduction of state intervention in the sector, an end to bail-outs, a reduction in trade protection, and an acceptance that some of the existing sugar mills will go out of business. Social safety nets and retraining programmes might help to make such reform more politically acceptable.
- Competitive neutrality between state and private sector players can help to ensure a competitive market outcome. This is likely to become an increasingly important issue in Viet Nam, which is still heavily dominated by state players, as reform continues, but is also an issue elsewhere e.g. in relation to the Zambian mobile telephony market.
- A reduction of import tariffs can help to stimulate competition where there is limited domestic competition.
- Regional competition authorities and regional cooperation are needed to tackle competition problems caused by multinational companies, who sometimes seek to minimise competition by taking a strategic approach to cross-border production decisions.

Written by Karen Ellis, Head of ODI's Business and Development programme (k.ellis@odi.org.uk) and Rohit Singh, ODI Research Officer (r.singh@odi.org.uk).

Project information

This Project Briefing draws on research carried out in Bangladesh, Ghana, Kenya, Viet Nam and Zambia in 2008 and 2009. The methodology used for assessing competition in each market was in line with the approach set out in the Competition Assessment Framework published by the UK Department for International Development (DFID) in 2008. In addition to the general conclusions on the impact of competition on economic performance, the research has generated a set of findings and policy recommendations for each country, published in five separate country summary notes.

The Benefits of P3s

Why do P3s work?

P3s are a long-term performance-based approach for procuring public infrastructure where the private sector assumes a major share of the responsibility in terms of risk and financing for the delivery and the performance of the infrastructure, from design and structural planning, to long-term maintenance.

P3 projects involve greater consideration of whole life cycle:

P3s put into an integrated contract the entire life-cycle -- design, build and operate and maintain; this ensures that overall cost and risk is considered; for example, design takes into account of cost to build, maintain and operate and avoid white elephants.

P3 projects engage the expertise of the private sector:

The private sector has the experience and expertise to deliver large projects. They bring innovation and learnings from other projects. Many Canadian and international firms have developed significant expertise developing and executing P3s, which can be employed for the benefit of taxpayers.

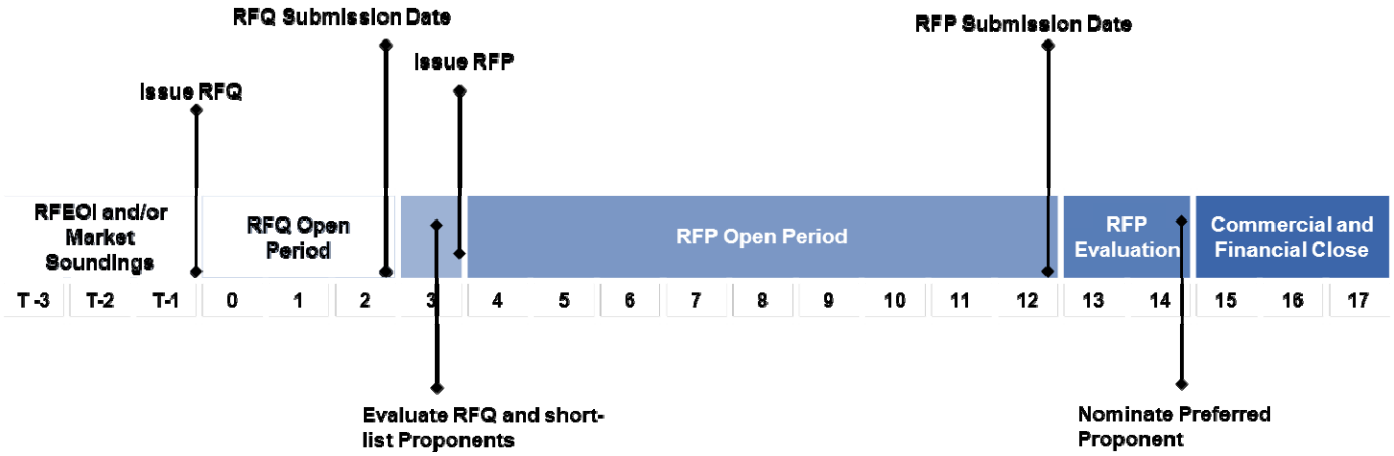
P3 projects ensure private sector capital is at risk, bringing capital market discipline and incentives:

Most importantly, P3 projects require private sector capital to be at risk. The public sector pays only when the infrastructure is available and performs. This generally means that no payments are made until the infrastructure is built and a substantial portion is paid over the life of the asset, if it is properly maintained and performs. This “skin in the game” means that taxpayers are not on the financial hook for cost overruns, delays or any performance issues over the assets life. It also means that the profit motive is harnessed to ensure effective results. Finally, this requires the private sector to raise both equity and debt capital, meaning that there is substantial oversight by lenders and investors in both the upfront due diligence and project execution. This is a discipline that the public sector cannot match.

P3 projects allow the public sector to focus on its core business:

The public sector’s core focus should be on the defining the output it wants (i.e., *x* litres of clean water, *y* traffic capacity). Leave it to the private sector to provide the most effective solution to deliver on those outputs.

On-Time & On-Budget Delivery	• Payment triggered by completion • P3s have a proven track record
Accountability	• Performance standards • One contractor to deal with
Risk transfer	• Transfer of key risks to the private sector • Design, construction, lifecycle maintenance risks
Fiscal planning certainty	• Foreseeable payments over life of asset • Cost certainty for up to 30 years
Focus on Outcomes & Core Business	• Enables governments to focus on outcomes, instead of inputs. • Core competencies of public and private sectors
Investment in upfront planning	• Forces disciplined planning process
Integration	• Encourages private sector to take a long-term approach
Innovation	• Greater scope for creativity and innovation – design, construction, operations, and maintenance



Canada – A Global Leader in P3s

Factors contributing to Canada's Emergence as a P3 Infrastructure Leader

Dedicated P3/Infrastructure Procurement Agencies	The creation of dedicated P3 agencies in a variety of Canadian jurisdictions has hastened the maturity of the Canadian P3 market. These agencies have aggregated project pipelines to stage and deliver consistent and sustainable deal flow and have imposed the application of accepted project methodologies, deal structures and documentation which reduce bidding costs and reinforce success, which in turn strengthen deal flow.
Sustained Pipeline of Projects	The Canadian market has learnt that in order to position itself above its global competitors for infrastructure providers, it needs to capture the private sector's attention through a sustained and consistent pipeline of projects. The existance of the provincial organizations has aggregated project pipelines to stage and deliver consistent and sustainable deal flow. As we have identified in our analysis below, 57 P3 projects have been in procurement since 2009 covering almost every sector.
Application to Greater Number of Asset Classes	The overwhelming acceptance of the P3 delivery model in Canada has led to its application beyond simple vertical infrastructure and into transport, information technology and communications, water, recreation and culture and other sectors.
Government Support & Potential Application of P3s by Other Public Sector Sponsors (Municipalities, First Nations)	Provincial governments and the federal government in Canada remain supportive of P3s as a means of replacing critical outdated infrastructure on-time and on-budget. The federal government's support for municipal and First Nation P3s also demonstrates the active support and efforts to expand the use of P3s into relatively new infrastructure spaces.
Highly Competitive Market	The Canadian private sector has been actively participating in P3 projects across the country. Competitive tension between bidders has remained high, with very few P3 projects failing due to lack of private sector interest. Competition in the Canadian P3 infrastructure space has also increased over the last 5 – 6 years due to the arrival of a significant number of large foreign multinational corporations bidding P3 opportunities. The procurement processes (RFQ, RFP) adopted by the dedicated agencies continue to ensure sufficient levels of high quality competition.
P3 Friendly Legislative and Policy Frameworks	Legislative and policy frameworks are an international best practice adopted by many of Canada's leading P3 jurisdictions (e.g. BC, Ontario, Quebec) and are the foundation for a robust P3 program and market because they ensure that all infrastructure investments are at least considered for a P3 delivery approach. In addition, these frameworks: • Ensure policy alignment across government departments; • Send positive signals to the market; • Provide transparency and clarity for stakeholders and the public; • Provide solid procurement principles; and • Create market confidence in tender and contracting law practices that are supportive of P3 projects.
Development and Application of Market Accepted Methodologies and Contracts	In Canada, P3 agencies have been responsible for crafting deal methodologies and structures accepted by the market, including: • Fair and rigorous procurement processes; • Well defined deal structures with market tested risk allocation; • Comprehensive value for money methodologies; • Tested and financeable payment mechanisms; and • Standard contractual documentation. Well established methodologies and deal structures have been important for two reasons: a) they have imposed discipline on public sector project sponsors, ensuring careful consideration of project suitability to a P3 delivery approach and a high degree of planning and development; and b) P3s can be expensive for both the public and private sectors. Standardized methodologies and accepted deal structures have helped to "template" transactions and reduce costs for both the public and private sectors. This has been accomplished through workshops, standardized contracts, and using financial, legal and technical advisors conversant with the P3 methodology.

Average Procurement Timelines

Procurement Stage	Typical Length of Time
RFQ	1.5 to 3 months open period
RFQ Evaluation	1 month
RFP	7 to 11 months open period
RFP Evaluation	1-2 months
Time between Nomination of Preferred Proponent and Financial Close	2 to 4 months

Distribution of P3 Projects in Procurement by Sector (2009-2011)

Sector	Number of Projects	Percentage of Total Projects
Hospitals & Healthcare	23	40%
Transportation	12	21%
Justice & Corrections	11	19%
Recreation & Culture	4	7%
Education	2	4%
Communication	1	2%
Defence	1	2%
Energy	1	2%
Real Estate	1	2%
Government Services	1	2%

Distribution of P3 Projects in Procurement by Jurisdiction and Procurement Method (2009-2011)

Procurement Method	AB	BC	MB	NB	NS	ON	PEI	QC
Alternative Service Delivery						1		
Build Finance						4		
Design Build Finance		1				5		
Design Build Finance Operate	2	1						
Design Build Finance Maintain	2	6	2	1		22		4
Design Build Finance Operate Maintain		1		1		2		
To be decided		1		1*	1*		1*	

Distribution of P3 Projects in Procurement by Procurement Method (2009-2011)

Procurement Method	Number of transactions	Type of Transaction
Alternative Service Delivery (ASD)*	**1**	**1 Government Services**
Build Finance (BF)*	**4**	**4 Hospitals & Healthcare**
Design Build Finance (DBF)	6	4 Recreation & Culture 2 Transportation
Design Build Finance Operate (DBFO)	3	3 Transportation
Design Build Finance Maintain (DBFM)	37	1 Defense 2 Education 18 Hospitals & Healthcare 11 Justice & Corrections 1 Real Estate 4 Transportation
Design Build Finance Operate Maintain (DBFOM)	4	3 Transportation 1 Hospitals & Healthcare
To be decided (TBD)/Other	2	1 Communication* 1 Energy

*Note: These models are not considered P3s by all Canadian jurisdictions, including PPP Canada.

PPP Canada

Achieving better value, timeliness and accountability to taxpayers through public-private partnerships.

Who We Are

PPP Canada was created as a Crown Corporation by the Government of Canada to improve the delivery of public infrastructure by achieving better value, timeliness and accountability to taxpayers, through public-private partnerships (P3s).

PPP Canada's operations focus on building P3 procurement knowledge and capacity amongst federal departments, and leveraging greater value for money from federal investments in provincial, territorial, municipal and First Nations infrastructure with the P3 Canada Fund.

Advancing Provincial, Territorial, Municipal and First Nation P3s: The P3 Canada Fund

The P3 Canada Fund is the first infrastructure program, anywhere in Canada, which directly targets P3 projects. The $1.2 billion Fund is a merit-based program with the objective of supporting P3 infrastructure projects that achieve value for Canadians, develop the Canadian P3 market and generate significant public benefits.

PPP Canada has to date announced over $109 million in funding commitments to seven P3 projects; examples include:

Chief Peguis Trail Extension

- Winnipeg, MB
- Federal funding: $25.00 Million
- Procurement Model: Design - Build - Finance - Maintain (30 - year concession term)
- P3 Canada Fund Infrastructure Category: Local Road Infrastructure

- This project will extend the Chief Peguis Trail an additional 3.7 kilometres to relieve the traffic pressure on residential streets. The Project also included the construction of noise walls and berms to reduce traffic noise; landscaping; and multi-use pathways to encourage walking and cycling. Construction of the project has been completed approximately one year in advanced of the scheduled completion date.

On July 12, 2010, a joint announcement was held with the Province of Manitoba and the City of Winnipeg, where Public Safety Minister Vic Toews announced that the Government of Canada would contribute up to $25 million to support the extension of the Chief Peguis Trail in Winnipeg to relieve traffic pressure on residential streets. The total capital value of the project is $108.5 million. The remainder of the project's construction costs will be financed by the Province of Manitoba, City of Winnipeg and DBF2 Limited Partnership (DBF2), the private consortium selected to design-build-finance and maintain the roadway and structures.

This P3 model is expected to have estimated value for money savings of approximately $31 million (17. 6%) over a traditional procurement.

Evan Thomas Water and Wastewater Treatment Plant

- Kananaskis County, AB
- Federal funding: $9.95 Million
- Procurement Model: Design-Build-Finance-Operate-Maintain
- P3 Canada Fund Infrastructure Category: Wastewater Infrastructure

- The proposed project will include upgrades that will address the treatment plant's current capacity constraints; bring the treatment plant back to environmental compliance; replace the aging infrastructure; and deliver public health benefits through the introduction of leadership standards for the area's potable water.

Once selected, the private sector partner will design, construct and provide partial financing for the Evan-Thomas Water and Wastewater Treatment Facility project. The partner will also be responsible for operations and maintenance of the new water treatment plant, the new wastewater treatment plant, and the water storage and distribution systems for 10 years after construction is completed.

Downtown Eastside Housing Renewal Project

- Vancouver, BC
- Federal funding: $29.10 Million
- Procurement Model: Design - Build - Finance - Maintain (30 - year concession)
- P3 Canada Fund Infrastructure Category: Brownfield Redevelopment Infrastructure

- The project will include the renovation and restoration of 13 provincially-owned Single Room Occupancy hotels into safe, clean social housing units, in Vancouver's Downtown Eastside.

This project will respond to the current housing restraints of the Downtown Eastside; reduce the number of people at risk of homelessness; improve living conditions for residents; restore the heritage features of these century old buildings; and deliver invaluable social benefits to its residents.

Once selected, the successful proponent will be required to design, build, finance, and maintain the project. The P3 contract transfers considerable risk which is anchored by the requirement for construction and long-term financing.

Advancing Federal P3s

In addition to our work under the Fund, PPP Canada has been given the mandate to support federal P3 procurements by providing expertise and advice through the mandatory P3 screen. The Federal Screen will assess the potential for large federal capital projects as P3s. On a go forward basis, infrastructure projects with a life span of 20 years or more and having capital costs of $100 million or more will be subject to the screen. If it is determined that there is P3 potential for the project, the procuring department will then be required to develop a procurement proposal that includes a P3 among the possibilities.

There is high potential for a reasonable flow of P3 projects at the federal level, as shown by the departments exploring P3s. Ultimately, the P3 procurement of services, and other non-traditional P3 arrangements, may present the largest opportunity in the federal market.

Prospective clients for PPP Canada services among the federal market segments will largely come from Departments and agencies that are only periodic or intermittent procurers of major capital assets – with the latter group requiring greater efforts and support from PPP Canada.

In addition to supporting procuring departments, PPP Canada's federal business line strategy focuses on creating strategic partnerships with key federal policy leaders to create clarity and consistency in decision-making and P3 procurement practices.

Two months after opening, Saskatchewan Hospital North Battleford needs entire roof replacement

Access Prairies Partnership, the consortium that constructed the hospital under a P3 model, "recommends full replacement of the entire roof as the best way to address the problem."

TRENDING

The Saskatchewan government is defending its decision to build the $407-million Saskatchewan Hospital North Battleford using a public-private partnership after the new facility's roof failed two months after it opened, necessitating a complete replacement.

It is not clear how long the fix will take, how much it will cost, or how much it will disrupt the facility's 140-odd patients, but government officials say the failure — which allowed water to leak into the building — was "unforeseeable" and taxpayers won't be on the hook to repair it.

“If this was a traditional build, from the government standpoint, this would be a huge problem, because you’d likely be into some kind of legal argument over who’s responsible for what cost,” Health Minister Jim Reiter told reporters Wednesday afternoon in Saskatoon.

“Right now, it’s very clear: The taxpayers aren’t going to be on the hook for any of this,” Reiter said, referring to the P3 model wrapping every cost associated with a major capital project such as the hospital into a single build-and-maintain contract.

STORY CONTINUES BELOW

The head of the Crown corporation responsible for major infrastructure projects said he believes the “best team” won the government’s P3 procurement process, and that experts hired to oversee and assess plans could not have identified the potential failure.

“It was a new product and they’re realizing now that they took on some significant risk in using that product,” SaskBuilds CEO Kyle Toffan said of the “innovative” modular roofing panels selected by the consortium that built the facility, Access Prairies Partnership.

SaskBuilds project director Jill Zimmer said staff noticed leaks in the building during spring melt, which were subsequently traced to shrinkage in the insulation beneath the roof itself. Zimmer didn’t say how much water entered the building but said it was “not significant.”

According to the province, the first leak was detected on March 13 and the contractor, after conducting inspections, recommended the roof be replaced on May 14.

A spokeswoman for Access Prairies Partnership did not respond to a request for comment.

Construction on the hospital began in late 2015 and was originally expected to be done in June 2018. Last spring, however, the government said the project would be delayed by two to three months due to “a subcontractor unable to deliver according to the overall schedule.”

The province said at the time that taxpayers will not be liable for any cost overruns associated with construction delays, and that the contractor would be fined about $1.25 million for each month the project was delayed. Toffan said Wednesday more fines could be coming.

Government officials have also said repeatedly that P3 projects are delivered on time and on budget. Reiter said he believes the project remains on budget because "the contract calls for keeping the government whole," including costs associated with moving patients within the facility.

"With these latest delays it's concerning (Reiter) can not provide certainty around timelines for repairs or what the impact on patient care will be," Saskatchewan NDP Health Critic Vicki Mowat said in a statement.

"I think using the model we did clearly paid off," Reiter said.

The SHNB was designed to replace North Battleford's century-old psychiatric hospital and two correctional facilities. It opened March 8. As of this week, around 130 of its psychiatric care beds were occupied, along with 10 of the 96 beds in the secure correctional wing.
