
BULLETIN # 105

Manitoba Drug Benefits and Interchangeability Formulary Amendments

The following amendments will take effect on
August 22, 2019

The amended Manitoba Specified Drug Regulation and Drug Interchangeability Formulary Regulation will be available on the Manitoba Health website

<http://www.gov.mb.ca/health/mdbif> on the effective date of August 22, 2019

Bulletin 105 is currently available for download:

<http://www.gov.mb.ca/health/mdbif/bulletin105.pdf>

Please also refer to the **psv/excel files*** found on the Manitoba Health website under "**Notices**" here:

| 02468689 | Auro-Cefixime | cefixime | 100 mg/5 mL | Oral Suspension | AUP |
| 02482576 02482584 | Sandoz Amoxi-Clav | amoxicillin/clavulanic acid | 500 mg/125 mg 875 mg/125 mg | Tablet | SDZ |

Part 3 Additions

The following products will be considered for Pharmacare reimbursement upon an individual prescriber/patient request basis.

| | | | | | |
|----------------------|------------------------|-------------|---------------|--------|-----|
| 02475375 02475383 | Apo-Ambrisentan | ambrisentan | 5 mg 10 mg | Tablet | APX |
|----------------------|------------------------|-------------|---------------|--------|-----|

For the treatment of patients with at least World Health Organization functional class III idiopathic pulmonary arterial hypertension (PAH) or pulmonary hypertension associated with connective tissue disease who have failed on vasodilators. Maximum dose is 10 mg daily.

| | | | | | |
|----------|-------------------------------------|--------------------|---------------|-----|-----|
| 02292165 | Duodopa (Criteria Update) | levodopa/carbidopa | 20 mg/5 mg/mL | Gel | ABB |
|----------|-------------------------------------|--------------------|---------------|-----|-----|

For the treatment of patients with advanced levodopa-responsive Parkinson's disease:

- o who do not have satisfactory control of severe, debilitating motor fluctuations and hyper-/dyskinesia despite optimized treatment with available combinations of Parkinson's medicinal products,
- o and for whom the benefits of this treatment may outweigh the risks associated with the insertion and long-term use of the percutaneous endoscopic gastrostomy-jejunostomy (PEG-J) tube required for administration.

Initiation Criteria:

1. The patient experiences severe disability associated with at least 25% of the waking day in the off state bothersome levodopa-induced dyskinesias, despite having tried frequent dosing of levodopa (at least five doses per day).

Time in the off state, frequency of motor fluctuations, and severity of associated disability should be assessed by a movement disorder subspecialist and be based on an adequate and reliable account from longitudinal specialist care, clinical interview of a patient and/or care partner, or motor symptom diary.

2. The patient has received an adequate trial of maximally tolerated doses of levodopa, with demonstrated clinical response.

3. The patient has failed adequate trials of each of the following adjunctive medications if not contraindicated and/or contrary to the clinical judgment of the prescriber: a catechol-O-methyl transferase (COMT) inhibitor a dopamine agonist, a monoamine oxidase (MAO-B) inhibitor, and amantadine.

4. The patient is able to administer the medication and care for the administration port and infusion pump. Alternatively, trained personnel or a care partner must be available to perform these tasks reliably.

5. The patient does not have a contraindication to the insertion of a percutaneous endoscopic gastrostomy-jejunostomy (PEG-J) tube.

6. The patient does not have severe psychosis or dementia.

Renewal Criteria:

1. The duration of approval is one year.

2. The patient continues to benefit from treatment. The patient should continue to demonstrate a significant reduction in the time spent in the off state and/or in ongoing, bothersome levodopa-induced dyskinesias, along with an improvement in the related disability.

Discontinuation Criteria:

It is expected that physicians will continue to monitor their patients and discontinue Duodopa if the patient is no longer benefiting from treatment, as described for renewal criteria, or if Duodopa is no longer appropriate.

Administration Criteria:

Requests for Duodopa initiation will be limited to movement disorder subspecialists who have appropriate training in the use of Duodopa and are practising in clinics that provide ongoing management and support for patients receiving treatment with Duodopa.

| | | | | | |
|----------------------------------|-----------------------------------|----------------|--------------------------------------|-----------|-----|
| 02462850 02462869 02462877 | Erelzi (New Indication) | etanercept-seb | 50 mg/mL 50 mg/mL 25 mg/0.5 mL | Injection | SDZ |
|----------------------------------|-----------------------------------|----------------|--------------------------------------|-----------|-----|

Psoriatic Arthritis:

For treatment of patients over 18 years of age who have active psoriatic arthritis who have failed treatment with at DMARD least 3 therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARD's must also be tried. Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

Request for coverage must be made by a specialist in rheumatology.

Erelzi will be the preferred etanercept option for all etanercept-naïve patients prescribed an etanercept product for Psoriatic Arthritis. Preferred means the first etanercept product to be considered for reimbursement for etanercept-naïve patients.

Patients will not be permitted to switch from Erelzi to another etanercept product or vice versa, if previously trialed and deemed unresponsive to therapy.

| | | | | | |
|----------|---------------|--------------------------|-------------|--------|-----|
| 02475774 | Juluca | dolutegravir/rilpivirine | 50 mg/25 mg | Tablet | VII |
|----------|---------------|--------------------------|-------------|--------|-----|

As a complete regimen to replace the current antiretroviral (cARV) regimen for the treatment of human immunodeficiency virus (HIV-1) infection in adults who are virologically stable and suppressed (HIV-1 RNA less than 50 copies per mL).

| | | | | | |
|----------------------|----------------|-----------|---------------------------------|-----------|-----|
| 02460521 02460548 | Kevzara | sarilumab | 150 mg/1.14 mL 200 mg/1.14mL | Injection | SAA |
|----------------------|----------------|-----------|---------------------------------|-----------|-----|

For the treatment of patients over 18 years of age who have moderate to severe active rheumatoid arthritis who have failed treatment with at least 3 DMARD (disease modifying antirheumatic drug) therapies, one of which is methotrexate and/or leflunomide unless intolerance or contraindications to these agents is documented. One combination therapy of DMARDs must also be tried.

Initial application information should include information on disease activity such as the number of tender joints, swollen joints, erythrocyte sedimentation rate and C-reactive protein value.

| | | | | | |
|----------|---------------|-----------------|----------|-----------|-----|
| 02459132 | Movapo | apomorphine HCL | 10 mg/mL | Injection | PAL |
|----------|---------------|-----------------|----------|-----------|-----|

For the acute, intermittent treatment of hypomobility “off” episodes (“end-of-dose wearing off” and unpredictable “on/off” episodes) in patients with advanced Parkinson’s disease (PD), if the following criteria are met:

- Apomorphine should only be used as adjunctive therapy in patients who are receiving optimized PD therapy (levodopa and derivatives and dopaminergic agonists) and still experiencing “off” episodes.
- Patients should be under the care of a neurologist who is experienced in the treatment of Parkinson’s Disease (PD).
- If the patient is not a good candidate for treatment with dopaminergic agonists, please provide detail as to why (i.e., those with cognitive impairment and impulsivity)

| | | | | | |
|----------|----------------|-------------|----------|-----------|-----|
| 02467224 | Ocrevus | ocrelizumab | 30 mg/mL | Injection | HLR |
|----------|----------------|-------------|----------|-----------|-----|

For the treatment of patients who have relapsing-remitting multiple sclerosis (RRMS) or for the management of adult patients with early primary progressive multiple sclerosis (PPMS), when prescribed by a neurologist from the Manitoba MS Clinic.

| | | | | | |
|--|----------------|------------|--------------------------------|---------|-----|
| 02459698 02459701 02459728 02459736 | Orfadin | nitisinone | 2 mg 5 mg 10 mg 20 mg | Capsule | SOB |
|--|----------------|------------|--------------------------------|---------|-----|

For the treatment of adult and pediatric patients with hereditary tyrosinemia type-1 (HT-1) in combination with a dietary restriction of tyrosine and phenylalanine, if the following criterion and conditions are met:

Clinical criterion:

- For use in patients with an established diagnosis of HT-1

Conditions:

- The drug is prescribed by a physician with experience in the diagnosis and management of HT-1.

| | | | | | |
|--|------------------|------------|---------------------------------|--------|-----|
| 02458039 02458047 02458055 02458063 | Venclexta | venetoclax | 10 mg 50 mg 100 mg Kit | Tablet | ABV |
|--|------------------|------------|---------------------------------|--------|-----|

As monotherapy in patients with chronic lymphocytic leukemia (CLL) who have received at least one prior therapy and who have failed a B-cell receptor inhibitor (BCRi)

Patients should have good performance status and treatment should be continued until disease progression or unacceptable toxicity.
