Human Papillomavirus (HPV)							◆◆			
Meningococcal Conjugate Quadrivalent (Men-C-ACYW-135) ²							◆			
Tetanus, Diphtheria, Pertussis (Tdap)								◆	●	
Tetanus, Diphtheria (Td)									◆	Every 10 years
Pneumococcal Polysaccharide (Pneu-P-23)										◆ Lifetime dose
Influenza (Flu)	All Manitobans 6 months of age and older are eligible for influenza vaccine each year. For current information on the seasonal influenza vaccine, visit www.manitoba.ca/health/flu/index.html									

◆ = A single vaccine dose given.

● = Tdap vaccine is available for adults who are due for their tetanus booster and have not had a pertussis-containing vaccine in adulthood and pregnant women in every pregnancy between 27 and 32 weeks gestation.

¹ = Children with high risk medical conditions and those living in First Nations communities should be immunized at 2, 4, 6 and 18 months.

² = Starting September 2019, a meningococcal vaccine that will protect against four strains will be offered as part of Manitoba's School-based Immunization Program in grade 6.

**A different schedule may be needed for high risk individuals, or if one or more doses of a vaccine are missed.
For more information about immunization talk to your health care provider or visit:
www.manitoba.ca/health/publichealth/cdc/div/index.html**
