

A close-up photograph of a dark, textured rock surface, possibly a sedimentary or metamorphic rock. The rock is dark grey to black, with numerous small, light-colored (white or yellowish) mineral inclusions and veins. There are several distinct, rounded, light-colored patches, likely representing fossilized remains or mineral concretions. A prominent, irregular, light-colored patch is visible in the upper right quadrant. The rock surface is cracked and shows signs of weathering. A small, white, rectangular label with the text "12-87-504" is attached to the bottom center of the rock.
