

International Atomic Energy Agency, 1991. *Alpha gamma ray spectrometer surveying*. Technical Reports Series 222. IAEA, Vienna.

Figure 1 is a map of the study area in the North Atlantic, showing a grid of 12x6 cells. The map is bounded by 58°00'N to 59°30'N latitude and 96°00'W to 98°00'W longitude. Each cell contains a station ID (e.g., 59P01, 59P02) and a data source (e.g., GSC of 1991, GSC of 2001). A red box highlights the area around station 59P03, which is associated with GSC of 1991 and GSC of 2001. The map also shows the coastline of the United States and the Gulf of Mexico.
