## **South Pierson Unit No. 1 2020 Waterflood Progress Report**

### Section 1

a) Refer to attachments for production rate, injection rate, GOR and WORs for pool and patterns.

b) Refer to attachments for cumulative volumes of oil, gas, and water produced and injected fluids for the patterns and injected fluids.

c) Refer to attachments for wellhead injection pressures for each injection well.

d) There were no reservoir pressure surveys conducted to report for the 2020 calendar year within SPU1. The last pressure was taken in 2019.

e) Refer to attachments for South Pierson Unit # 1 well servicing summaries.

f) Refer to attachments for VRRs and Cum VRRs for the patterns and pool.

g) Produced water and source water is currently being filtered utilizing a bag-type filtration system prior to injection into Unit 1. The clean Tilston source water being used is compatible with Spearfish fluids and reservoir rock.

h) CNRL began utilizing a conventional bag-type system in 2015 which along with the higher quality Tilston source water has significantly improved the quality of the injection water. Injection rates have also improved in the Unit as the result of a number of clean outs and workovers on injection wells.

i) CNRL is continually trying to improve the injectivity into the Spearfish formation, and will continue to perform injector workovers in order to improve the injection rates in the Unit and to improve the effectiveness of the waterflood. In 2020 CNRL drilled 5 horizontal infill wells. No new injector wells were added to the waterflood in 2020. CNRL will continue to evaluate infill drilling opportunities within SPU 1 and plans to drill 2 HZ infill wells in 2022. There are also plans to convert 3 vertical producers and 2 Horizontals to injection wells in 2022.
