

Topigs Norsvin GN2021 Project

We are the world's most innovative swine genetics company.

We are international and are present in 54 countries with 700 employees.

Topigs Norsvin Canada's head office is located in Oak Bluff, MB.

Our mission is to provide continuous genetic improvement to cover the world's porcine protein needs using the least possible resources. Research, innovation, and dissemination of genetic progress are cornerstones of our company.

Our Delta Canada Research Centre opened in 2018 in Woodlands, Manitoba. It is the heart of our Research and Development Program to create maximum genetic progress.

We use state of the art technology including CT scanning of live, high health breeding boars. We conduct live animal testing and scoring for carcass and meat quality, feed efficiency, health, robustness, and productivity.

We are excited about the future.... and the prospect of having the \$22.0 million GN2021 Project locate in WestLake-Gladstone. If developed in 2021, it will become an integral part of Delta Canada's Research & Development Program. GN2021 will provide candidate breeding stock for continuous genetic testing and selection while also ensuring high animal welfare with low environmental impact.

We propose a 1,600 Sow Farrow to Nursery and 10,000 space Finisher operation spaced over 2-3 sites. It will also create up to 25 new jobs and boost the local economy.

It was a pleasure to have met you today to briefly introduce ourselves and the GN2021 project concept. But we are sorry if we missed you today. We are still early in our project planning. We have not prepared a formal proposal or application for development approval at this time. We simply wish to reach out to you to inform you that we are scouting for possible locations and opportunities.

We plan to provide another opportunity for you to learn more about the project and for us to obtain your views and answer any initial questions.

In the meantime, if you wish to contact us, we may be reached at:
