Gimli, MB R0C 1B0
Cell: (204) 641-1331

**Application for Licence
To Construct Water Control Works**

Water control works are defined as any dyke, dam, surface or subsurface drain, drainage, improved natural waterway, canal, tunnel, bridge, culvert, borehole or contrivance for carrying or conducting water.

Applicant Name(s): _____
 E-mail: _____ Contact #: _____
 Landowner Name: _____
 Landowner Mailing Address/Phone #: _____

The Water Rights Act

- 3(1) Except as otherwise provided in this Act or the regulations, no person shall
- (a) in any manner whatsoever use or divert water, unless he or she holds a valid and subsisting licence to do so; or
 - (b) construct, establish, operate or maintain any works, unless he or she holds a valid and subsisting licence to do so; or
 - (c) control water or construct, establish, operate or maintain any water control works, unless he or she holds a valid and subsisting licence to do so.

Location of Works

Municipality: _____ Conservation District: _____
 Parish: _____ River / Wood Lot: _____

Quarter	Section	Township	Range	E / W

Other description(s): _____

Identify water body, natural waterway or drain into which the water will outlet: _____

Proposed works are located on: Private Property Municipal Property Crown Lands
 The applicant is the: Registered Landowner Lessee Other

Description of Works

Choose all applicable

<input type="checkbox"/> Reconstruct drain	<input type="checkbox"/> Construct protection dyke	<input type="checkbox"/> Construct dam	<input type="checkbox"/> Engineered project
<input type="checkbox"/> Install tile drainage	<input type="checkbox"/> Construct new drain	<input type="checkbox"/> Install culvert	<input type="checkbox"/> Remove culvert
<input type="checkbox"/> Install tile drainage	<input type="checkbox"/> Reset existing culvert	<input type="checkbox"/> Relocate culvert	<input type="checkbox"/> Install gated culvert

Other description(s): _____

Will drainage / lowering of a slough, pond or lake be undertaken? Yes No
 Has a survey been completed for these works? (If yes please attach) Yes No

Location Plan

Please include a photo, sketch, plans or drawings that depict an accurate representation of the intended works. Please be sure to include the flow direction, north arrow, description and location of the works and / or and industry accepted engineering plan and construction standards. Aerial photo can be requested through your Water Resource Officer.

Approvals

Will the proposed works cause water to leave your land? Yes No
 If yes do you have the necessary approvals? (Please attach) Yes No
 Municipality Conservation District Highways Affected Landowner (s)

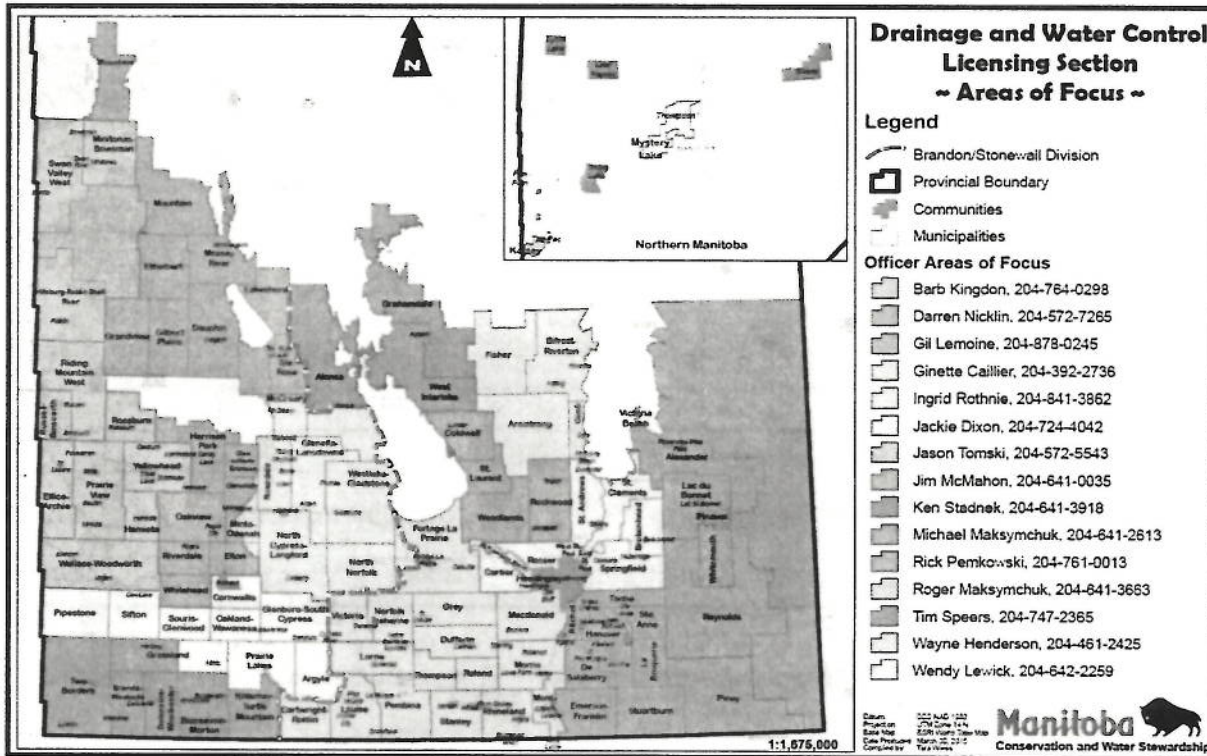

Landowner approval

The legal title holder for the land parcel noted below understands and agrees to the proposed drainage works as explained by the applicant.

Dear Ms. Winsor:

**SUBJECT: Hudson Bay Mining and Smelting Co., Ltd. Anderson Tailings Impoundment
Area Expansion**

On September 6, 2016, the Canadian Environmental Assessment Agency (the Agency) received information from Manitoba Sustainable Development pertaining to the proposed Hudson Bay Mining and Smelting Co., Ltd. Anderson Tailings Impoundment Area Expansion. Under the *Canadian Environmental Assessment Act, 2012* (CEAA 2012) proponents of physical activities that meet or exceed the thresholds stipulated in the *Regulations Designating Physical Activities* are required to submit project descriptions to the Agency. Based on the information provided, the proposed project does not appear to be a designated physical activity under the *Regulations Designating Physical Activities*.

Should you require additional information, please do not hesitate to contact me at 780-495-2174 or matthew.dairon@ceaa-acee.gc.ca.

Sincerely,

Matthew Dairon
Project Manager, Prairie Northern Region

E-MAIL: Holly.Cote@gov.mb.ca

SUBJECT: Request for review/comment – HBMS Anderson Tailings Mgmt File: 1644.10
HRB FILE: AAS-16-10987

In response to your e-mail regarding the above-noted EAP, the Historic Resources Branch has reviewed the document and found that the provisions addressing heritage resources is insufficient for this draft.

While the potential to impact significant heritage resources was deemed low in this area, the Historic Resources Branch must be immediately contacted if an archaeological site is encountered during development. Please replace "A qualified archaeologist" with "the Historic Resources Branch" (see section 6.11.3 Heritage Resources Pg. 110).

If at any time heritage resources are encountered in association with these lands during development, the Historic Resources Branch may require that an acceptable heritage resource management strategy be implemented by the developer to mitigate the affects of development on the heritage resources.

If you have any questions or comments, please feel free to contact as above.

Holly Cote

Cc: Winsor, Jennifer (SD); Cholodnuik, Seth (SD)
Subject: FW: Request for review/comment - HBMS Anderson Tailings Mgmt File: 1644.10 Due Date October 7, 2016

Please see attached comments from NW Region, modified from NW Region Environment Officer comments:

The potential adverse effects of this proposed project are stated to be negligible to moderate. The land to be inundated lies within the active mining area in use for the existing Anderson Tailings impoundment area which access is controlled by HBMS. No concerns with the expansion zone.

Crown land work permit required for any works on Crown Land, obtained from local Conservation Office in Snow Lake.

This expansion is required as the facility is nearing capacity. As the impoundment fills, the tailings rise closer to the surface raising the risk of acid generation, and releases. This expansion will reduce these risks. This proposed expansion will improve water level control, significantly increase flood management capacity, and accommodate additional tailings storage.

The CEC 766 for this facility is was issued in 1977 (39 years ago). This is a major expansion which is to occur in 3 stages (stage A, B, & C).

Environmental Approvals to determine if there is a major alteration to the licence or the old CEC rescinded and replaced with a new updated Environment Act Licence.

Mike

Subject: FW: Request for review/comment - HBMS Anderson Tailings Mgmt File: 1644.10

Good morning Jennifer:

I am not sure if you received these comments as I originally forwarded them to Don rather than yourself. Anyhow, here they are...

I have reviewed the proposed Anderson Tailings impoundment expansion. The potential adverse effects of this proposed project are stated to be negligible to moderate. The land to be inundated lies within the active mining area in use for the existing Anderson Tailings impoundment area which access is controlled by HBMS. I have visited this proposed expansion area and have no concerns with the expansion zone.

This expansion is required as the facility is nearing capacity. As the impoundment fills, the tailings rise closer to the surface raising the risk of acid generation, and releases. This expansion will reduce these risks. This proposed expansion will improve water level control, significantly increase flood management capacity, and accommodate additional tailings storage.

The CEC 766 for this facility is was issued in 1977 (39 years ago). This is a major expansion which is to occur in 3 stages (stage A, B, & C).

I recommend that the old CEC rescinded and replaced with a new updated Environment Act Licence.

Winnipeg, MB R3C 1A5

RE: HBMS Anderson Tailing Impoundment Expansion
Client File No. 1644.10

Dear Ms. Braun:

Manitoba Infrastructure (MI) has reviewed the proposal under the *Environment Act* noted above and has the following concerns/comments associated with the proposed development:

MI is concerned with the potential change in flow rates (i.e. Peak flows from TIA control structure) into the adjacent ditches and recently replaced culvert crossing at PR 392. A hydraulic study/drainage plan prepared by a Professional Engineer should be provided to MI for review and approval.

The proponent should be informed that, under the Highways and Transportation Act, any new, modified or relocated access connection onto a PR will require a permit from Manitoba Infrastructure. A permit may also be required for:

1. Any construction (above or below ground level) within 38.1 m (125 ft) of the right of way;
2. Any plantings within 15.2 m (50 ft) from the edge of the right of way;
3. Discharge of water or other liquid materials into the ditch on PR 392.

The proponent should contact Devon Little (204-677-0684 or Devon.Little@gov.mb.ca) for further information regarding permitting, drainage plan/hydraulic study needs.

Thank you very much for providing us the opportunity to review the proposal.

Sincerely,

A handwritten signature in blue ink that reads "Ryan Coulter".

Subject: File 1644.10 – Anderson Tailings Impoundment Area Expansion

The above noted proposal has been reviewed by the Water Quality Management Section of the Department of Sustainable Development.

The proposal is to expand an existing tailings disposal facility to accommodate tailings from the Lalor Mine project as it is noted the existing facility is reaching its capacity. It is noted the facility is Scheduled as per Schedule 2 of the *Metal Mining Effluent Regulation* pursuant to the *Federal Fisheries Act*. Subaqueous tailings would continue to be deposited to prevent oxidation of waste material.

Some of the figures referred to in the report appear to be missing. These include Figures 1-16. There are also reference to multiple figures with the same figure number such as Figure 15 which refers to both a figure of the site location and water quality copper data. It is requested that the missing figures be provided for review.

The proposal assumes that the mineralogy of the tailings from future mining will be similar to historic deposition in the tailings facility. Should this assumption change the proponent may have to re-evaluate treatment options. Ongoing monitoring will provide an indicator in any change in the efficacy of the tailings facility.

There could have been more analysis in the proposal on the effect of the environment on the project. While it is understood the proposed dams will improve the ability of the facility to withstand a severe flood. Are there any areas of permafrost which may be affected by flooding and a warming climate which could impact the stability of the structures or lead to issues with erosion or slumping of shorelines?

It is noted HBMS commits to developing a detailed water quality monitoring plan including erosion and sediment control measures prior to commencing construction. It is requested that the proponent provide a copy of this document for review.

It is noted the discharges from the facility are regulated by the Metal Mining Effluent Regulations and Clean Environment Commission Order number 766. Discharge limits between these two instruments

are not entirely congruent. It is recommended that when the discharge limits noted in the two regulatory instruments differ that the stricter criteria be applied.

With respect to protecting water quality, clauses providing the same intention as those in the Reed Mine Environment Act License No. 3065 are recommended to be adapted to be part of a revised license for this facility. Recommended clauses include 1, 2, 6, 15, 17, 20, 39, 40, 41, Appendix B, Appendix C, and Appendix D of the Reed Mine Environment Act License No. 3065. Reduced frequency monitoring of Radium 226 would be acceptable in accordance with the conditions noted in the MMER. I remain disposed to provide wording of the specific clauses if needed.

Although the Environment Act Proposal indicates increases in downstream mercury concentrations in aquatic biota are unlikely, verification of this is required during the project. Monitoring mercury levels in fish in Anderson Bay and Wekusko Lake before and after the final inundation phase (Stage C) of the Project should be considered as a condition of a License. The proponent should consider measuring selenium concentrations in fish as an additional parameter.

Thank you for the opportunity to comment on this proposal.
