Hi Krystal;

Our comments are as follows:

The OFC recommends that the proponent to:

- Comply with The Elevator Act and Regulation,
- Comply with the Manitoba Fire Code, and
- Submit Fire Safety Plan and obtain required permits from the Authority Having Jurisdiction.

To: Penner, Krystal (SD)
Subject: RE: Request for review/comment - Grain Elevator - BP and Sons - Hanover - File 5946.00

Hello Krystal,

I have reviewed the subject EAP. The following are my comments.

1. The proposal did not sufficiently describe the activities at the development. It only indicate that it is a corn processing facility.
 - a. What are the processes involved?
 - b. Volume of corn processed.
 - c. Detail processing activities taking place.
 - d. Is loading/ unloading by truck or train?
 - e. If truck any traffic issues? And any potential dust for unpaved road?
2. Source of particulate emission specially dust is not sufficiently described. There are various potential sources including but not limited to grain loading and unloading area. For a proper dust mitigation assessment, the potential sources and any available dust control mechanism should be provided in detail.
3. mitigation of odour from wet and moldy corn is not clear as the EAP provide recommendation rather than a proposal.

SUBJECT: BP & Sons Grain and Storage Inc. (City of Morden)
File No. 5946.00

Community & Regional Planning have no concerns regarding the continued operation of a grain elevator located at 275 South Railway, Lot 2, Block 3, Plan 31765 in the City of Morden.

The MSTW Development Plan By-law No. 1-2014 designates the proposed site as Urban Employment Area. The proposal generally conforms to Development Plan Urban Employment Areas Policies.

The City of Morden Zoning By-law No. 08-2017 zones the proposed site as "MG" Industrial General. The land use of a grain elevator is identified as a permitted use in the "MG" zone.

Thank you for the opportunity to review this notice.

BP & Sons Grain and Storage Inc. - Morden. Client File No 5946.00 - EAP Review Comment

Environmental Compliance and Enforcement branch has reviewed the above-mentioned environment act proposal and has the following comments:

- The proposal identified dust as one of the major concerns associated with this operation. While some dust control devices are in place, it appears the devices are not very effective. The proponent must evaluate the effectiveness of the dust control devices at the various sections of the facility that have potential for dust generation (loading/unloading/storage areas and drying units) and develop plan to improve the effectiveness of the dust management for the different sections of the operation. A maintenance / inspection schedule for all dust management systems must be prepared and adopted. In addition, an alternate dust management system or system shutdown plan should be put in place in the event of dust control device breakdown.
- The proposal identified spoiled/waste corn in the compost storage as a source of odour within the operation. It was not clear in this proposal whether the spoiled corn is composted at the site or transported to another location for composting. If composting is taking place at the site, the proponent should prepare and submit a compost management plan for approval. Depending on the quantity of material been composted, a composting permit may be required. If composting is taking place outside the facility, the proponent must ensure that the spoiled/waste corn storage is managed such that odour emission is minimized - probably frequent and regular removal and sealed storage cover. The spoiled/waste corn must only be transported to approved composting or waste disposal facility.
- The proponent must ensure adequate and timely grain clean –up around and within the operation to minimize the potential for rodent infestation and odour emission.
- The proponent must ensure that petroleum products are stored in approved containers and in secure storage with a secondary containment at all times. The proponent must maintain MSDS of all chemicals handled at the operation.

Subject: Request for review/comment - Grain Elevator - BP and Sons - Hanover - File 5946.00

Your review and comments would be appreciated for the Proposal submitted pursuant to The Environment Act available online at:

<https://www.gov.mb.ca/sd/eal/registries/5946bpsons/index.html>

I am the contact person assigned to co-ordinate review and assessment of the Proposal. Please indicate if you are unable to review the proposal. A non-reply will be considered as indicating your department has reviewed the proposal and has no concerns.

Any comments you have on the Proposal should be emailed by November 19, 2018 **No hard copies will be provided**

Special Note for this review – section 3.2.2 of the EAP references a Groundwater Monitoring Report cited as “AMEC Environment and Infrastructure, 2012”. The client has provided the report but indicated the report remain confidential to government so it will not be posted on the public registry. Please advise if you would like to see the report and arrangements will be made to have a copy provided for your review.

Thank you.

SUBJECT: BP & Sons Grain and Storage Inc. – Grain Elevator (File 5946.00)

Air Quality Section has reviewed the above proposal and provides the following comments:

- It is recommended that additional details on the dust control (suppression) system would be provided including system component, description of operation/collection/disposal of dust etc.
- In the absence of Manitoba regulation, Saskatchewan's "Grain and Feed Handling Industry Guideline" may be used as reference for controlling dust emissions from the facility.
